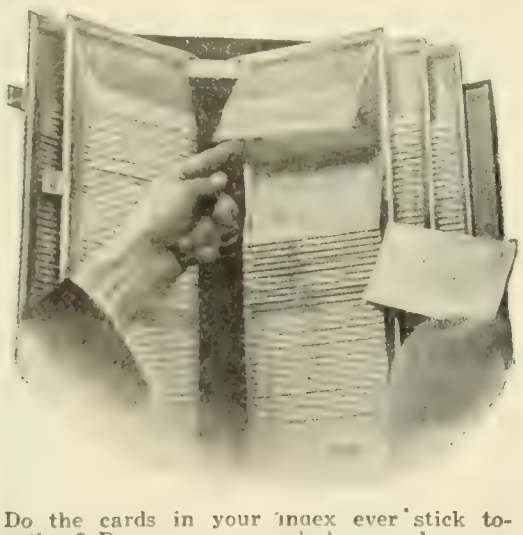
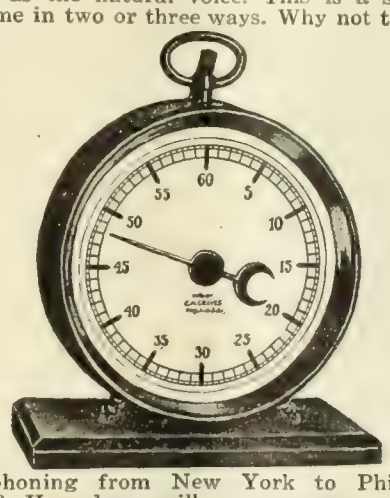
Nine Ways of Saving Time

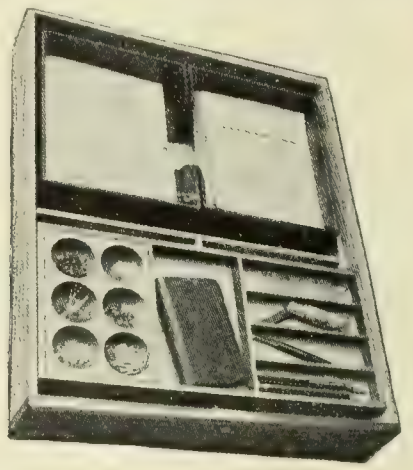
Write to the Manager of The Independent Plan and Purchase Department for information about these devices



After you have decided on an up-to-date vertical filing case for your correspondence you will want to be sure that the plan of filing is adequate for the amount of business your office handles. Look at the guides pictured in this drawer. Note the careful arrangement, giving you quick access to the papers you want, how small the chan[illegible] of misplacing when returning papers to the file

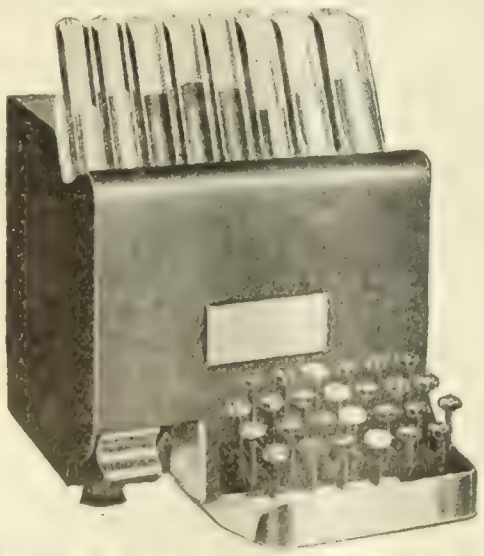


As you sit at your desk, you can press a button, and can be in communication with all the heads of departments at once. You speak to them all at the same time just as tho they were grouped about your table—and they all hear your words clear and distinct as the natural voice. This is a saving of time in two or three ways. Why not try it?

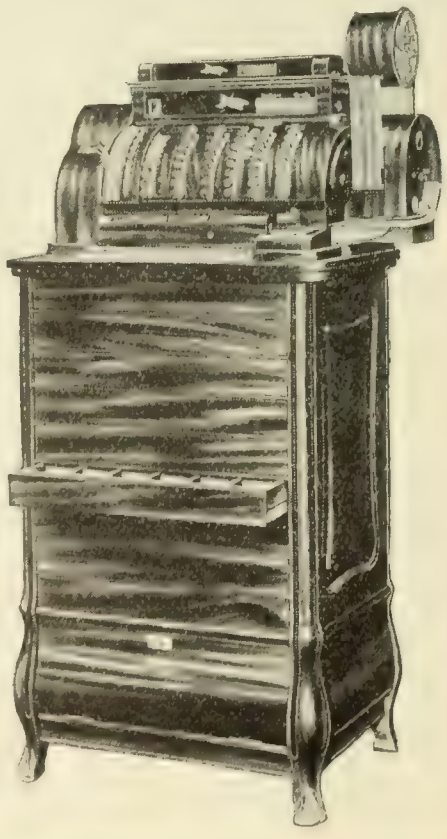


Important dates are sometimes made a long time ahead. There are conventions, committee meetings, directors' meetings, conferences, there are men coming to see you, there are men you must call on. Have you a plan by which *all* these matters can be laid before you as each day comes? Can you tell all you have to do today and look ahead a week and find open spots? You can if you use this device

Do the cards in your index ever stick together? Do you or your clerks ever lose any time finding cards on this account? Suppose the first line—that is the name—on every index card in your files, no matter how many they are, was always visible, like this



Telephoning from New York to Philadelphia? How long will your message take? What is the toll-rate? Can you be sure that you use all the time you pay for, or do you stop sooner than you need to, feeling that your allotted time is up? There is a device that will save money on your long-distance calls by keeping accurate count of actual time used, and of interruptions, so that you can be sure the charge is correct



A clear desk is much to be desired. The fewer encumbrances the better. Can you always put your hand on your pencil, can you always find your ink-eraser, can you always be sure where your desk note-book is? Suppose you had a drawer in your desk made to hold all these easily misplaced articles, as well as other small things, would you use it? You would

You don't keep your business letters folded and in their envelopes, of course—but you may not have installed an easy-running letter file. These upright files are made of wood throughout, of metal, or of wood and metal

Small coins are a bother to handle when making up a pay-roll or when making change at the counter. If you could be sure of doing this accurately by pressing buttons on a machine you would at least investigate the machine and find out what it will surely do. Such a machine as that is shown here

This complete triple-printer cash register has separate total and cash drawer for each of nine clerks. At the end of a day the proprietor can tell the number of customers each clerk has waited on, and if the cash doesn't balance this machine will tell who made the mistake. This register gives a printed receipt, or prints on sales-slip the kind of sale: cash, charge, or received on account; clerk's initials, amount of sale, the number of the transaction and the date

President of Great News Service at 28

A few years ago a cub reporter—now head of an organization supplying news to more than 700 daily papers.

"You start at $8 a week," said the city editor of an Indianapolis paper to Roy W. Howard.

"Thank you," beamed the youngster. He had been getting up at three in the morning to deliver papers and a job as cub reporter was a big advance.

Two years later this young man became sporting editor of an Indianapolis paper. In another year he had been promoted to telegraph editor and was later made news editor of an important Cincinnati daily.

On his 28th birthday, January 1st, 1912, he was elected president of the United Press Associations, the greatest organization in the world for the gathering and distribution of news.

The knowledge that carries men thru

From cub reporter to executive head of this great news service was a long step on the road to business success. Mr. Howard was able to take it in a few years because he realized the importance of knowing *fundamentals.*

First, he mastered the fundamentals underlying his chosen line of work. Then the same vision that made him master of the news end of his profession convinced him that to become a successful executive he must have a thoro grasp of the fundamentals underlying *all* departments of business. So he enrolled for the Modern Business Course and Service of the Alexander Hamilton Institute, taking advantage of this proven short cut to business knowledge.

How men succeed

All successful men must master these fundamental business principles. Once they have mastered them they go forward rapidly. Men who have not mastered them remain half-way successes—their knowledge is not broad enough for a *big* job.

It is this same broad grasp of business that the Alexander Hamilton Institute is today giving to more than 60,000 progressive business men thruout the world.

Based upon the experience of thousands of successful men

The Institute collects, classifies and transmits thru the Modern Business Course and Service the best thought and practice in modern business. It gives you a thoro and sound training in the fundamental principles underlying all departments of business.

In our national crisis today the need for this broad executive training is rapidly increasing. Men in all branches of business are being called upon to assume the work of others and to fill more responsible positions. This demand for trained executives will be even greater in the coming struggle for world markets. For men and women who are prepared there will be more opportunities than ever before to succeed in a big way.

The kind of men enrolled

Presidents of big corporations are often enrolled for the Modern Business Course and Service along with ambitious young men in their employ. Among the 60,000 subscribers are such men as E. H. Behrend, President of the Hammermill Paper Co.; N. A. Hawkins, Manager of Sales, Ford Motor Co.; William C. D'Arcy, President of the Associated Advertising Clubs of the World; A. T. Hardin, Vice-President of the New York Central Lines; Melville W. Mix, President of the Dodge Mfg. Co., and scores of others equally prominent.

In the Standard Oil Co., 291 men are enrolled in the Alexander Hamilton Institute; in the U. S. Steel Corporation, 450; in the National Cash Register Co., 194; in the Pennsylvania Railroad, 108; in the General Electric Co., 300—and so on down the list of the biggest concerns in America.

Advisory Council

Business and educational authority of the highest standing is represented in the Advisory Council of the Institute. This Council includes Frank A. Vanderlip, President of the National City Bank of New York; Judge E. H. Gary, head of the U. S. Steel Corporation; John Hays Hammond, the eminent engineer; Jeremiah W. Jenks, the statistician and economist, and Joseph French Johnson, Dean of the New York University School of Commerce.

"Forging Ahead in Business"

A careful reading of the interesting book, "Forging Ahead in Business," which we will send you free, will show you how to prepare for the increasing number of business opportunities that are bound to come during the next few years. Every man with either a business or a career to guide to bigger, surer success, should read this book. Simply fill out and send the coupon below.

THE NEW ART OF HIRING AND FIRING

MONTHLY ARTICLE OF THE NATIONAL INSTITUTE OF EFFICIENCY

BY J. DOMINICK HACKETT

THE shipbuilding industry, the munition factories and the steel foundries are all hampered in production and, in spite of the present intense need, men are coming and going, "hired and fired," with astonishing frequency. No wonder, then, that the "Labor Turnover" is the most crucial subject in industry at the moment, and a fitting one for intensive investigation.

Words spring into usage as if by magic. Such a one is "Turnover" as applied to labor by those who are deeply concerned with the human element in industry. Not till the shadow of war prevented hundreds of thousands of men from reaching our shores did the shortage of labor cause employers to examine the whole field with a critical and discerning eye. The first point discovered—or, rather, rediscovered, for it is as old as the hills—was that it cost much real money to hire and train even the common workmen.

Now, even the world outside the ranks of employers themselves, deeply concerned in all that pertains to the efficiency of industry, is asking just what is meant by this "Labor Turnover" about which so much fuss is being made in manufacturing circles. This is fitting, for we are all concerned.

"Turnover" is the phrase used in industry to express the great numerical loss of men suffered thru the ebb and flow of labor. Investigators who have set their minds to study the human problem have found that for every unit of a thousand men nearly three thousand have to be employed in the course of a year to keep the unit up to full strength. In this "Turnover" there is a great economic loss for both capital and labor. It has been clearly demonstrated that every workingman loses from $20 to $30 between jobs and every employer loses about twice as much in hiring and training a new man to take his place. Of course there is a great variation for individual jobs. A silk manufacturer found it cost him $70 to hire and train a broad silk weaver, $50 to train a spinner and so on thru the whole list. Very often, however, no benefit was gained because the employees quit soon after the period of training was completed. Imagine the aggregate loss to the individual and to industry: nearly a quarter of a million dollars in a plant where only a thousand men are employed. It went into many millions in the Ford plant before they "did something."

Knowing the extent and cost of turnover are but steps in the right direction; the next point is to discover and apply the remedy. This consists in getting the right sort of laborer, keeping him if you can and, if he departs, utilizing the knowledge of the cause of departure in order to retain the other workers in contentment.

Among those who have recognized the importance of anchoring their labor supply, it is becoming the custom now to make a comprehensive study of employment, beginning with the source of labor. From the period of men's application till that of their departure, their careers are studied with care, both individually and collectively. The location of dwelling in relation to the plant, transportation, age, nationality, hight and other points are matters for consideration. The applicant is "introduced" with much formality and informed that complaints will be carefully considered. From exact specifications, previously compiled, he is placed in the position which seems to suit him best. Promotion is held out as an inducement to "stay put" and his possible advances in pay are specified. He is instructed what to do in case of accident and informed of the educational facilities in the neighborhood, in case he should desire to study. All such moves tend to reduce the human turnover of the plant.

FOUNDED on the theory that you cannot reduce turnover till you have adequately diagnosed its cause, is the careful tabulation of the reasons why men leave their jobs. An analysis of many thousand reasons, actually recorded, has made it possible to eliminate the inessential and classify the essential into a short and usable list.

In all industry about 75 per cent of those who leave voluntarily quit their work and, on the average, not more than 15 per cent are discharged. The remainder are laid off thru seasonal or occasional work. When this balance is not maintained an inquiry is instituted as to the true significance of the change.

Excessive discharge may indicate that the employment methods are at fault, that some foremen are inconsiderate or that the limited labor supply necessitates the hiring of men who would not be taken on in normal times. A high percentage of voluntary quitters shows, possibly, that men are not satisfied with conditions as to work or pay. In either case the employer is mighty glad to find out which. He is not satisfied merely to learn that the work was found to be unsatisfactory. He desires to know specific complaints. These are carefully followed up so that unnecessarily bad conditions may be improved. Considerable expenditures for alterations often cost less than hiring and training new men. Damp floors may be drained. Windows may be enlarged to give more air. Dust may be removed by suitable exhaust systems so that the employee works in more comfort and does not find it necessary to look for a better job elsewhere.

A distinction is even drawn between men who quit because the pay is too small and between those who leave for better pay at another plant. When the aggregate number of these two classes increases, it indicates that the pay schedule needs revision. In this manner strikes are anticipated by the shrewd employer and much loss on both sides is avoided.

The personal reasons why men quit can all be recorded and grouped under the lowest number of essential headings so that the resultant statistics are an exact picture of conditions. If a large number quit because of bad housing conditions, it indicates that a comprehensive building scheme may be an absolute economic necessity in order to stabilize the force.

Time was when men were laid off without any other consideration than the immediate reduction in labor cost; no one had visualized the other expenses involved. Nowadays executives go to great lengths to equalize production in order to maintain the balance of their force. It has even been found advisable to acquire an unusual line of work to fill in during slack times in order to insure a steady supply of work. It is rather sad to reflect that so many men have been discharged merely on the unrestrained judgment of the foreman. That custom is now undergoing a change. It is recognized that while a foreman has the authority to decide that a man is unsuitable for him, he has no right to consider he is unfit to work in any other portion of the plant.

The machinery for hiring, supervising and holding labor is best handled by a centralized employment department, in charge of a competent man versed in everything that pertains to the human relation in industry. Heretofore, perhaps, twenty foremen had absolute authority in hiring and firing. The plan did not work. Foremen do not and can not keep comprehensive records upon which the science of employment is based. Therefore, the employing function is now being concentrated and already the effect is demonstrating that specialization in employment methods, for the reduction of labor turnover, is a success.

SELECTING SUCCESSFUL COMMITTEES

By Edward A. Filene

President of William Filene Sons Co. of Boston

A man to make the best success on an important committee should—

First: Have been successful in his own business or profession. This does not mean that he must be the richest or most powerful man in the city. But he must have advanced—"risen"—a long distance. (If he is a bootblack he should own his own stand and it should be the most successful in town.)

Second: Have public spirit. That is, he should have shown interest and activity in public affairs, backed up by a genuine desire to further the community welfare.

Third: Be able to work successfully with other men. This includes those elements of personality and qualities of mind which enable a man to work with other people in a harmonious and constructive fashion without friction and without arousing antagonism.

From among those having these qualifications select for the committee representatives of each interest likely to be affected by the committee's work, choosing those who, in the opinion of competent judges after analysis, are best fitted. Because I have found after an experience with many committees that, of those chosen by the usual method or lack of method, many fail, I have made this analysis with the hope that it may be of use.

Learn Paragon Shorthand

at Home in 7 Evenings

For $5.00

For Busy Executives
For Business Beginners

You have often wished you knew shorthand. You realize what its mastery would mean to you in efficiency, in advancement. But like thousands of others, you have dreaded the months of study, the memory tax, the complicated systems of shading, the necessity of writing on specially-ruled paper, the excessive cost.

All that is done away with now, in the Paragon System of Shorthand. The entire system consists of

The Paragon Alphabet;
Twenty-six simple word-signs;
Six prefix abbreviations;
One general rule for contractions.

That is all. The simple explanations and exercises are divided into seven lessons, each of which you can grasp in an evening. Then speed comes with practice.

7 LESSONS
Each one a model of remarkable simplicity; speed comes with practice.

7 EVENINGS
A short period of study each day assures speedy knowledge of shorthand.

SEE HOW ABSURDLY SIMPLE IT ALL IS

Shorthand, to be practical, must be available everywhere, if you have note-book along or no; so Paragon is written without ruled lines, on any scrap of paper.

With your hand flying over the sheet you simply cannot make alternate light and heavy strokes; so in Paragon all "shading" is omitted. Thus we assure speed.

Use of the old "disjoined vowel" method forces you to make several marks for one word; all Paragon words are written with one quick symbol. And these symbols, as in long hand, can have only one possible meaning—you can read your Paragon notes after ten years or ten minutes with equal clearness. There's memory-ease for you—and simplicity.

Secure Disinterested Testimony

Ask your office stenographer—she will probably tell you that according to many old-fashioned methods one symbol may mean two or three entirely different words or sounds, depending on its "position" above, on, or below the line; even then, this symbol in each of its various "positions" if shaded might have a certain meaning, if unshaded still another. Fancy trying to untangle all those rules for just *one* symbol when you are using *scores* of symbols and what you seek is *speed*. She will acknowledge that most systems contain scores of arbitrary word-signs, all of which must be tediously memorized; that even when remembered many of them may have various meanings. And she will probably be unable to read her notes written last month—"Impossible," you may expect to hear her say. Nor is it likely she can now recall all the bewildering "ticks" and "signs" that she labored so long and so hard to learn.

These methods were quite good when the telegraph was yet an experiment—when mere time was disregarded in commercial institutions. But present-day business demands speed, simplicity and accuracy. And so Paragon was invented.

Twenty-five Years of Tested Proven Success

A quarter-century ago Mr. A. Lichtentag, former court reporter, later teacher and business man, of New Orleans, broke away from the old shackles and devised the Paragon System of Shorthand. From that day to this he has been teaching the Paragon System in his school in New Orleans, and by mail. Thousands of young ambitious men and women, who had failed to learn the old complicated forms of shorthand, mastered Paragon with ease. They have since become court stenographers, newspaper reporters, assistants to business heads, and in some cases have become big executives in prominent concerns. Thousands of grateful letters, now in our files, all unsolicited, attest this encouraging fact.

Comparative tests in Atlanta public schools showed that of several hundred boys and girls, only 47 were able to master the old systems of shorthand. But of 63 taking Paragon 61 *passed the examinations successfully*. In one school 28 began Paragon, 25 graduated. Another school, after two years of the old system, had NO graduates. Now Atlanta and other cities are teaching shorthand by the Paragon System—no other is officially recognized in their city schools. You can't get away from facts like these.

Former Price of the Paragon Course Was $25

The inventor of the Paragon System of Shorthand had taught the course by mail for twenty years for $25. By extraordinary international arrangements with the inventor, the King Institute is selling his identical Paragon Course heretofore sold at $25 for

Only $5 Now—This Is Your Opportunity

Business houses everywhere feel acutely the shortage of capable stenographers; salaries are constantly being advanced to tempt and encourage proficient operators. And still there are too few to satisfy the demand for those able to fill the better positions.

Our Money-Back Guarantee Assures You Satisfaction

Send Only $5.00

with the coupon and the complete Course will be sent you. Then if you cannot learn Paragon, your money will be refunded.

TRY THIS LESSON

Take the ordinary longhand letter *d* Eliminate everything but the long downstroke and there will remain / This is the Paragon symbol for D. It is always written **downward.**

From the longhand letter *e* rub out everything except the upper part—the circle—and you will have the Paragon E. ∘

Write this circle at the **beginning** of / and you will have Ed. ∘/

By letting the circle remain **open** it will be a **hook,** and this **hook** stands for **A.** Thus ∘/ will be **Ad.** Add another **A** at the end, thus ∘/ and you will have a girl's name, **Ada.**

From *o* eliminate the initial and final strokes and *o* will remain, which is the Paragon symbol for **O.**

For the **longhand** *m* , which is made of 7 strokes, you use this **one** horizontal stroke —

Therefore, —∘ would be **Me.**

Now continue the **E** across the **M,** so as to add **D**—thus —∘/ and you will have **Med.** Now add the **large** circle for **O,** and you will have —∘/ (medo), which is **Meadow,** with the silent **A** and **W** omitted.

You now have 5 of the characters. There are only 26 in all. Then you memorize 26 simple word-signs. 6 prefix abbreviations and one rule of contractions. That is all.

Used in Government Service

"I learned Paragon Shorthand from the *home-study course*—the lessons alone—without any further aid whatever. At the end of a week I could write the system nicely. I am now using it in the Government service, Treasury Department, Washington, D. C., and am getting along O. K. On account of my efficiency as stenographer, my salary has been increased to $1,400. I owe my rapid advancement to Paragon Shorthand."—E. C. ALLEY, Room 426, Winder Bldg., Washington, D. C.

Used in Court Reporting

"I have been the Official Court Reporter for the Ninth Judicial District of Louisiana for a number of years, using Paragon Shorthand exclusively. Some years ago I learned this system in seven lessons. With Paragon Shorthand I am able to do any kind of work with as great rapidity as the occasion may demand."—J. MARTIAN HAMLEY, Lake Providence, La.

Used in Public Schools

"As a result of competitive tests, Paragon Shorthand was unanimously adopted as the exclusive system for the Atlanta High Schools. The classes we have already graduated in Paragon are by far the best we have turned out during my twelve years' connection with the schools."—W. C. LOWE, Head of the Shorthand Departments, 18 Avery Drive, Atlanta, Ga.

Paragon is also being taught in the High Schools of Alton, Ill., Lafayette, Ind., Johnstown, Pa., and elsewhere.

Used in Big Corporations

"I am getting along fine with Paragon Shorthand. It is all you claim for it. It is easy to write, and as for speed—there's no limit."—JOHN WALLER, JR., Standard Oil Company, Sugar Creek, Mo.

Used by Business Men

"I am using Paragon Shorthand in making my notes in the daily routine of the work. It is of incalculable help in aiding me in making my own notes of private business matters relating to my work in auditing, and I wish I had taken it up long since."—JOHN F. CAHILL, Auditor, Florence Elec. Light & Utilities Co., Florence, S. C.

NEWS OF EFFICIENCY

CONDUCTED BY THE NATIONAL INSTITUTE OF EFFICIENCY

THE EFFICIENT EMBARGO

In the old brownstone building on K Street, in Washington, D. C., that was once the headquarters of the Department of Justice, more than two hundred persons are at work under the direction of the Export Administrative Board disposing of export licenses. The task is an enormous one, owing to the fact that regulations recently issued by President Wilson permit very few cargoes to leave American ports without definite permission. A few days ago more than four thousand applications for export licenses came to the offices of the Export Board in a single mail, and nearly all were passed upon before work was closed for the night.

After the Embargo Act became law President Wilson created an Export Council, consisting of three members of the Cabinet and Food Administrator Hoover, with general authority to administer the law. The routine work of the Council was turned over to the Bureau of Foreign and Domestic Commerce of the Department of Commerce. Nobody realized then how much work was involved in keeping food and munitions from the Germans. Within a short time the Bureau of Foreign and Domestic Commerce was swamped with extra work and the President was compelled to establish a special Export Administrative Board to take care of it. This body is directly under the Export Council and is not connected with any Cabinet department. Its chairman is Vance McCormick, the man who conducted the Democratic campaign last fall.

Working under the authority of the Export Board are a number of special bureaus run by volunteer experts: men who give their time and, what is more important, their brains to the service of the Government for a nominal salary. There are, for example, experts in agriculture, in metals production and so forth, each with his personal staff of clerks. Not all of the applications for export license reach the headquarters of the Export Board in Washington; many are handled by the branch offices in New York, Boston, Chicago, St. Louis, San Francisco, New Orleans and Seattle. The number of these branch offices will probably be increased in the future. Of course, some licensing questions, involving delicate issues of international policy, are referred to the Export Council or even to the President himself.

OUR HALF USED LAND

Prof. J. P. Goode, of the University of Chicago, pointed out in a recent address before a teachers' institute in Pittsburgh the extent to which the American still falls short of efficiency in developing the agricultural resources of the nation. He declared that an acre of new land in America produces less after the first year than an acre in Japan or China which has been in constant use for thousands of years. In this country ninety bushels of potatoes to the acre is considered good, but in Germany the average acre of potato land produces two hundred bushels.

Fortunately, if nature in the United States has challenged us at least it has not stinted us. Dr. Goode estimated that if all our arid land were irrigated we could feed some twenty-five million people by their produce and that a similar gain might be expected if good land, now lying waste, were put to use. He predicted that with the intelligent development of all our agricultural resources the United States may in time support in comfort a population of 250,000,000.

MOBILIZED BOTANISTS

An important phase of preparedness of which we have heard less than we should is represented by the botanical raw products committee of the National Research Council. Prof. E. M. East, of Harvard University, is chairman. The activities of the committee include the collection of data on all plants having economic value and the dissemination of this information to importers and manufacturers; the discovery of new geographic sources of plants and the increased cultivation of economically valuable plants grown in the United States to meet trade needs; investigations to discover the value of substitutes and equivalents for plants now used, and the discovery of new uses for these plants. The committee has made use of data cataloged at various research institutions such as the Philadelphia Commercial Museum, the Bussey Institute at Harvard, the United States Bureau of Foreign and Domestic Commerce, the Department of Agriculture and the Missouri Botanic Gardens. This has enabled the committee to begin work at once in coöperation with the manufacturers without the delay incident to gathering material.

QUICK LOADING

President E. P. Ripley, of the Santa Fé railroad system, has devised an ingenious and picturesque plan to keep the freight cars on the railroad working at full capacity. The cars are decorated with red, white and blue "service stripes" printed horizontally on cardboard 12 by 18 inches. On the stripes appears in black the following appeal:

Load Me Quickly
Load Me to Capacity
Unload Me Promptly
and
Help Win the War.

All the thought of the Railroads War Board is required in the immense task of keeping the cars loaded and moving. During the last ten days of August 7000 extra empty freight cars were moved into the Southern and Southwestern states to protect the movement of grain and food products and to facilitate the transportation of lumber to the shipyards and the new army cantonments. The commission on car service of the Railroads' War Board has distributed 113,420 cars to the parts of the country where they were most needed during the four months since the beginning of May.

AN OPENING FOR ARTISTS

At the request of General Pershing a Camouflage Corps is being organized by the American Corps of Engineers for service at the front. Artists who have already been drafted for other branches of the army may, if eligible, be transferred to camouflage work. There are openings for commissioned and non-commissioned officers, all expenses are paid and salaries are according to rank. Previous military training is not essential. Names of those wishing to volunteer may be sent to D. Putnam Brinley, of New Canaan, Connecticut.

Camouflage is the newest of the war industries and an excellent example of the specialized efficiency which is the outstanding characteristic of modern war. Essentially, it is what the artists call an "arrangement" of shapes and colors so that the object which it is desired to conceal melts into the background as a tiger melts into the background of the forest or a polar bear into his environment of Arctic snow. The Germans have recently experimented by streaking the body and wings of their aeroplanes with bright colors. Instead of using dull or neutral tints, as in khaki or field-gray uniforms, these aeroplanes are daubed in the crudest blues, yellows, greens and reds to dazzle the observer and cause him to judge distance incorrectly.

USING OUR BOY POWER

Young men between the ages of sixteen and twenty-one not now employed are called upon by President Wilson to serve the nation by joining the United States Boys' Working Reserve. The object of this organization, acting under the auspices of the Department of Labor, is to induce boys and young men to spend some of their time at productive work without, if possible, interrupting their studies in school and college.

STEAM EFFICIENCY

An interesting article by Prof. Robert M. Anderson, of the Stevens Institute of Technology, shows how great has been the recent increase in the efficiency of the steam engine. The Corliss engine which was exhibited at the Centennial Exposition in 1876 was then justly regarded as the greatest triumph of the engine builder. It occupied 54,000 cubic feet of space and was designed to develop 1400 indicated horsepower. To obtain one horse-power required the expenditure of 2.2 pounds of coal. The best modern steam turbines of equal capacity occupy only 115 cubic feet of space and consume nine-tenths of a pound of coal in developing one horse-power.

There is still, however, much room for improvement in bringing all engines in use up to the standard of the best models. Mr. V. H. Manning, Director of the Bureau of Mines, Department of the Interior, declares that the average engine efficiency at the present time is at least twenty-five per cent below that of the latest types, which implies a waste of a quarter of the coal production of the nation. On this basis 150,000,000 tons of coal would be saved in the United States every year if all consuming plants were of the most approved design.

THE NEW COAL DICTATOR

Dr. Harry Augustus Garfield is a strong competitor for the all-round efficiency record and also a good example of the importance of heredity. He is the eldest son of President Garfield. He has been in his time a teacher of Latin and Roman history, a successful lawyer, a professor of contracts in a law school, a professor of politics, the president of the Cleveland Chamber of Commerce and president of Williams College. Recently he served as chairman of President Wilson's wheat price committee. Now at the age of fifty-four he has undertaken a task which for difficulty, complexity, thankless drudgery and endless criticism can only be compared with that of Food Administrator Hoover. Coal Administrator Garfield has not hitherto devoted much of his career to mining costs and profits but no doubt the President thinks that a man who has mastered so many different tasks might as well undertake another. The confident and capable manner in which he has already met and solved some of the problems of fuel distribution seems to justify the President's choice.

GHOSTS AND THE TIME

(*Continued from page 129*)

notice anything unusual here at midnight. One of them started the tale and screech-owls, or something like them, did the rest. As for the face at the window—I didn't see it, for I was holding on for my life—that was likely due to the fall of the sunlight on waves in the glass. That sort of thing, you know,"—

"Lord!" broke in Mr. Bloggs, "look at the horse!"

They had come within thirty feet of George, and beheld him settled back and straining at his halter in evident terror. His eyes glared at something apparently ahead. He drew long, shuddering breaths.

"Sick," said the doctor.

"Scared," said Mr. Bloggs, "scared at something, and scared blue."

They untied the trembling animal and led him down the road, where, an eighth of a mile distant, they found Mr. Hunt and a very silent negro.

That night their chairs were again together, and the talk went to what had happened in the morning.

"Of course it was ridiculous," the doctor said, "our searching that shanty. I did feel an ass."

"I really can't see," the clergyman said, "why you should. Anything that strikes ignorant people as mysterious and crawly—anything ill-understood—ought, I think, to be looked into to *get* it understood. Whatever there is back ought to be dragged out. Why shouldn't you look?"

"Answering that," replied Dr. Henderson, "because to look is to take seriously old and pestilent superstitions—things of a lower level—which ought to be left to die and helped to die. To look at such things is like taking off your clothes and putting on a breech-clout."

"I give you up," said Mr. Hunt. "You are one of those scientifically-minded people that I just give up. You are all for looking into things and probing things to the bottom, but this one thing you won't look at at all. You just say there's nothing in it. To explain it is the best way to prove that, I should say. And then there *is* something like a psychical world, isn't there?"

The doctor smiled.

"Do you remember," he asked, "what Thoreau on his death-bed said to his friend Parker Pillsbury? Pillsbury asked him if he saw anything on the other side—he was very nearly gone—and Thoreau whispered, 'One world at a time, Parker.' That's what I think; and I notice that when people fool with another world they generally go—well, dippy. I haven't any room for gods or ghosts. All I know is—Being Alive. That is man's appropriate job. Anything else is—er—not intended."

"Delicious," said Mr. Hunt. "Perfectly delicious! Of course without gods nothing can be 'intended.'"

The doctor looked a little foolish, and Mr. Bloggs took a hand.

"I guess," he said, "that there's just about as much gooseflesh ready to rise on people as there ever was. I heard a man say in a lecture—it was at Pontiac—that there was a French woman once—Madam Somebody—who said she was all thru believing in ghosts, but was afraid of them, just the same. That's about the way, I reckon, with most of us. I *did* have chills down my spine this morning and no mistake—whether it was ripples in the glass or not—and I'm not so dead sure that horse was sick. I guess there is a whole lot of things we don't know about, and I judge they ought to be looked into. But not by most of us unless we come up against them—like this morning. I wouldn't be a quitter

Some Definitions of a

Perfect Food

The Scientist Says:

It must contain every food element needed, minerals and vitamines included. And all in the right proportions.

The Doctor Says:

It must be easily and completely digestible. The ideal food would have every food cell broken.

The Housewife Says:

It must be ever-ready, fit for any meal, a varied dish, and one which everybody welcomes.

The Children Say:

It must make real food as good as desserts or confections. And be something mother never will forbid.

Puffed Wheat

Puffed Rice

and Corn Puffs

Each 15c Except in Far West

The three Puffed Grains supply a wide variety. They are served with cream and sugar, mixed with fruit, or in bowls of milk. They are eaten dry like peanuts. They are used like nut-meats on ice cream, as wafers in all soups.

Those who know their hygienic value serve them all day long.

THE STONE SCHOOL
Cornwall-on-Hudson, Box 5, New York
FIFTY-FIRST YEAR
A School in the Heart of the Open Country. For Boys from 9 to 19.

LOCATION: 56 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating,
WORK: ... for College or Business. Last year all graduates in 12 leading colleges. Each boy studied physically and ... classes: A teacher for every six boys.
ATHLETICS: Two ... for all sports, under supervision: hiking, ... life, swimming pool.
... *Catalog sent on application.*

ALVAN E. DUERR, Headmaster

when that happens—I'd look, all right—but as for hunting up such things, that isn't for me. I think there's cussed little in this spiritualist business. I went to a seance once, and my brother Wesley—so they said—talked to me thru the medium. It was all about blue suspenders! Yet I think even such things ought to be looked into—to see what they are."

"You are two against one," said the doctor, "and we can't get together. I say the way to kill superstition is to ignore it—and the way to perpetuate it and get caught in it is to attend to it, never mind with what high-sounding talk about 'psychical research' and all that. Of course we have the legacy of the past in us somewhat—the superstition that there is something somewhere beyond being alive, which is the one solid fact a man can go on. Better let our current Religion take care of the legacy. It's really doing it mighty well, for it has shaved the other-world business down to two big ghost-stories—one nineteen hundred years behind us and the other on ahead, after we're dead—leaving our life here for living, as it should be left.

"An original apologetic," said Mr. Hunt, with an edge to his voice. "I assume that you think that there is no reality for us outside this life and this world."

"I think there is plenty of reality in the two," replied the doctor, "plenty for anybody. As for secrets beyond, we shall make those out only when we make out what Mr. Wells calls 'the secret of the jumping cat within the human skull'—which will be never."

"Speaking of cats," said Mr. Bloggs, as the three rose from their chairs, "we had one once—his name was Seth—and he used to have fits—the worst kind—and when he'd get thru rearing around and come to himself again, he'd back, all tuckered out and draggled, into a corner—always *back*, understand. Seemed to think something had tackled him from the outside, and he was going to guard against another attack. Maybe that's the way it is here. Maybe *I* had something like a fit—something inside—after the coon's story this morning, and thought it was outside."

"I think it very likely," said Dr. Henderson, "and I think your analogy would cover a lot of other cases, too."

"I'm not so sure, tho," went on Mr. Bloggs, "I'd 'a'bet I saw something—I'd almost bet *now* I saw something. Then there was the horse. I'm not so darn sure."

"*That*, I think," said the clergyman, "covers more cases than your cat. The hard churchmen, of course,"—here a bow to the doctor—"say bosh, and some people talk about the subliminal consciousness or dual personality as explanatory of strange things which come bolting into life—which is much the same, I think, as saying a thing 'goes by electricity'; but the real creed of the time on the 'supernormal'—which is, of course, just old-fashioned ghosts—is in your admirable phrase. We are—no matter how emancipated—'not so darn sure'."

"It's crawly anyway," said Mr. Bloggs, "crawly, anyway you look at it. Ghosts inside you are as bad as ghosts outside. Good night."

Mr. Hunt, slowly preparing for bed, paused and addrest himself.

"I wonder," he said, "I wonder if this doctor is right, and there is nothing in it all. I wonder if my doctor was right with his big medical word for what happened to me. I wonder if Mr. Bloggs's cat explains everything."

Then, after a moment:

"I wonder if there's something outside of life which oughtn't to get at life, and which beats life down if it does."

York, Pennsylvania

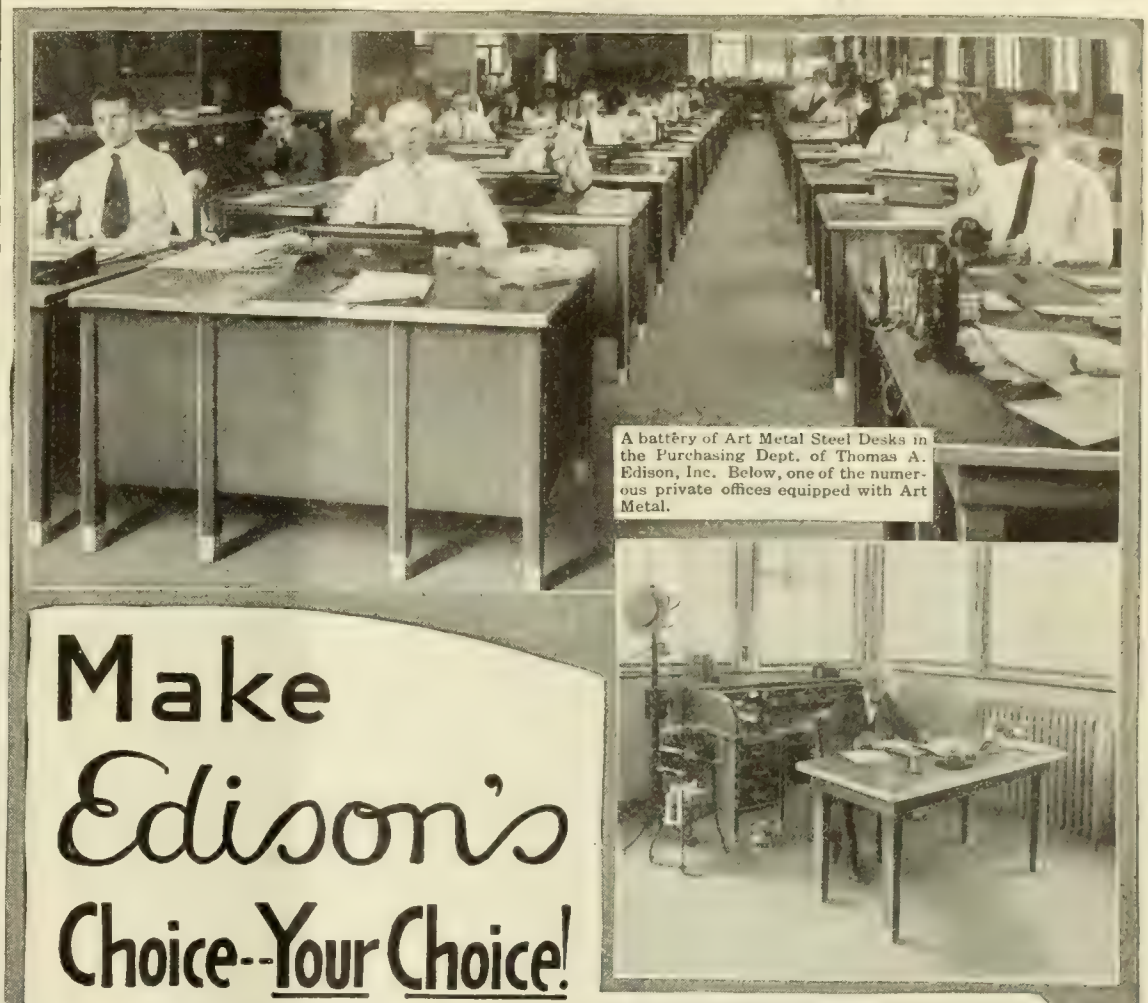
IS PRICE FIXING POSSIBLE?

(*Continued from page 134*)

it is desirable that this bill be enacted into law in order to remove any doubt as to the President's powers as affecting prices to the public. For it is maintained in some quarters that the power of the President can be applied only to the purchase of commodities for the immediate use and purpose of military and naval procedure.

Among the methods of fixing prices there are two which are most discussed.

One is to determine a maximum price—a fixed price for commodities, so high that it will give a fair return to the high-cost man and a better return to the low-cost man and bring about, therefore, a very large percentage of all possible production—or else a minimum price, to guarantee production. Thus the Government has fixed varying prices in different districts, from $1.90 to $3.25 as the most that a coal operator may receive for run-of-mine bituminous coal at the mouth of the mine, a "maximum price."



This first plan has merit in the fact that it is very simple in operation. It is put into effect simply by determining and fixing the price. Its disadvantage in many industries lies in the fact that the low-cost producer makes a very large profit whereas the high-cost producer makes much less profit—so little, conceivably, that all production is not brought out.

There has also been considered a second plan. This consists in pooling. That is, to the cost of production of a commodity is added a fair profit, larger for the efficient producer than for the inefficient, in order, by thus putting a premium upon efficiency, to extend it. These prices, which are based upon cost of production plus a profit, are, in the plan suggested in the coal situation by the Federal Trade Commission, multiplied by the amounts produced at each price. The total is added. The selling price is ascertained by dividing the total production by the number of units. If five men produced all the coal in the United States, to take an illustration, one, let us say, might produce coal at 80 cents a ton, another at $1, another at $1.40, the fourth at $1.80, the fifth at $2. Clearly, in this illustration, it would be necessary to fix a price high enough to give a profit on the two-dollar cost, or the owner of the two-dollar mine would not produce. Let us imagine a price of $2.20, then. If this price obtained the operator who could produce coal at 80 cents a ton would make a profit of $1.40 on every ton, tho the man who produced at $2 would be making only 20 cents a ton.

The Government might, then, fix varying prices, consisting of cost plus a profit. The first operator might be given a profit of forty cents, the next of thirty-five, the third of twenty-five, the fourth of twenty-two, the fifth of only twenty.

But if the Government purchased all the coal of all the mines at these varying prices, in the selling of it confusion would result. The Federal Trade Commission therefore suggested that the total prices paid by the Government might be divided by the total production of coal: The average price to the consumer would then be less than $2.20, all would receive coal at the same price and each producer would be getting a fair profit.

This plan assures the entire production possible. It gives the low-cost producer a higher profit than the high-cost producer. Its chief difficulty lies in the matter of administration and in its requirement of a very high degree of coöperation between business and industry and Government. It would require pooling, tho it would be pooling not in restraint but in furtherance of trade.

REMARKABLE REMARKS

EMPEROR WILHELM—He will give us victory.

MAUDE ADAMS—Never wear more than three colors at one time.

DAVID LLOYD-GEORGE—We will bomb Germany with compound interest.

DR. DUDLEY A. SARGENT—Woman is biologically more of a savage than man.

HERBERT HOOVER—If we are to have ascending prices, we must have ascending wages.

VICE-PRESIDENT MARSHALL — If this were a Democratic world, I would keep silent.

JOHN PURROY MITCHEL—I will make the fight one against Hearst, Hylan and the Hohenzollerns.

PRESIDENT JAMES A. B. SCHERER—The greatest need in the United States today is publicity.

COLONEL E. M. HOUSE—At all conferences those come home best who are best equipped.

GENERAL LEONARD WOOD—We must finish it on the other side, or it will be finished here.

LISSIE C. FARMER—Old discarded bathtubs make good dripping places for wet umbrellas.

GERTRUDE ATHERTON—Are we really a hopeless race as far as tact and manners are concerned?

GENERAL VON HINDENBURG—Our people's existence and position in the world are still at stake.

VISCOUNT ISHII—A closed door in China has never been and never will be the policy of my Government.

DARWIN P. KINGSLEY—Since 1832 Belgium has been the keystone in the arch of international good faith.

ROGER W. BABSON—Banks urge the people to save more money, but they do not urge them to make more money.

SECRETARY BAKER—The neat and even elegant appearance of the American soldier is maintained without hard work.

CONGRESSMAN J. Y. SANDERS—No man is big enough to put politics into our conduct of this war; no man ought to be little enough to try.

ROGER W. BABSON—I defy you to show me one of the thousands of national and state banks that has ever aided the working people to get better wages.

WOODROW WILSON—Perhaps I am the only person in high authority among all the peoples of the world who is at liberty to speak and hold nothing back.

NICHOLAS MURRAY BUTLER—Any human being who asks for anything short of unconditional surrender is asking us to organize for another still greater war.

ASSISTANT SECRETARY OF AGRICULTURE VROOMAN—Often in addressing garden clubs in the cities, I cannot be sure whether I am before gardeners or roof-gardeners.

OTTO H. KAHN—He who, secretly or overtly, tries to thwart the declared will and aim of the nation in this holy war is a traitor and a traitor's fate should be his.

K. K. KAWAKAMI—The West expects the East to open its doors to the exploitation of the white race, but reserves the right to slam its own doors in the faces of Orientals.

SECRETARY LANE—Ten or fifteen years from now you do not want your sons to have to say, "I went to war and took my chances, father stayed at home and made a fortune."

HERMANN FERNAU—Every victorious war means for the victorious nation a loss of political liberties whilst for the vanquished it is a fountain of inspiration and democratic progress.

H. G. WELLS—There can be permanent peace in the world only when tropical and sub-tropical Africa constitute a field free to the commercial enterprize of every one irrespective of nationality.

You have to eat three olives before you like olives

AFTER you have dictated two or three letters to The Dictaphone, it will become as natural as talking into the telephone.

In one to three days, you wouldn't part with The Dictaphone. Every letter you dictate is an easy-going chat to your correspondent. Your letters take on the same business-like sparkle that your straight business talk has.

The Dictaphone chucks the wasteful pad and pencil in the desk-drawer. It makes of the stenographer a happier operator. Her production shoots up 50% more letters a day. The mechanical cost of each letter shoots down one-third.

One final point. The progressive manufacturers, who were the first to see the high-efficiency value of the adding machine, were the first to use The Dictaphone. Ask them if they would part with it.

Any Dictaphone expert can show you, in fifteen minutes, that The Dictaphone system of handling correspondence will mean big saving of time and money. Call up The Dictaphone man nearest to you. If you can't locate him, write to

WILL THE GERMAN FLEET COME OUT?

(*Continued from page 128*)

on the single cast of the submarine die. There stands the High Sea Fleet of Germany still waiting in her harbors for the signal for battle.

It has been freely stated that when the time ("Der Tag") comes, and not before, no matter in the past what goads or challenges may have been silently borne, the whole array will go forth. All of which might sound gallant and heroic, if one could only get rid of the carking and growing suspicion that if the time has not come already it is mighty near when the Imperial German navy will be pushed out by the German people themselves. Besides the submarine disappointment, there are other potent factors working to the same end. Haig's drive is threatening Zeebrugge and other North Sea German bases, and if these fall, not only are the submarines cut off from harbors and supply sources, but the invasion of Germany from a new side is to be considered. There are that great army which we are rapidly getting into shape, and the vast numbers of destroyers for which millions have already been appropriated by Congress, to add to the menace. And for perhaps speedier persuasion we are about to build great armed aeroplanes which, it is confidently asserted, can reach the western battle lines in Europe within forty hours after leaving the North American Continent and then be immediately available for attack on ships, buildings, troops or to fight other aircraft. They can make a speed of a hundred miles per hour and after crossing the Atlantic can maintain it for over a hundred hours before their machinery will need rest and repair. Even more ominous is the recent actual mutiny in five ships of the German fleet at Wilhelmshaven, infected, it seems, by similar outbreaks in the demoralized Russian warships. There never was such iron discipline in the Russian navy as has existed in the German, and when mutiny in the latter reaches such a point, that the crew of a great 18,000 ton dreadnaught deliberately murder the captain—as the crew of His Majesty's ship "Westfalen" has just done—the rottenness and the danger of it all cannot be palliated or hidden, nor can the German people—let alone their enemies—be fooled about it by smooth phrases uttered in the Reichstag. St. Vincent and Nelson both said that warships could not be kept for long periods in harbors without serious injury to the morale of their men. And these men have been quartered in barracks on shore, idle, save for occasional periods of target practise, within mine protected areas of the Baltic. Their deterioration was inevitable and the proof of it is now glaring.

Suppose that under the pressure of this state of affairs, and a fierce demand from the populace that the last card of all be played, the German fleet goes out. Then what? So far as is known the power of the battle fleet has not materially changed since the beginning of the war. It then included thirty-seven battleships, with three building, and presumably since completed and divided equally between the dreadnaught and pre-dreadnaught classes. Whether new battleships have been actually added since is questionable. So also the actual battleship losses at the battle of Jutland are not known. Admiral Jellicoe said that two dreadnaughts and one older battleship were "seen to sink," but excepting, as to the antiquated "Pommern," the German Admiralty has made no admission. The main fighting force is, of course, in the

TO INSURE proper workmanship we allow only skilled mechanics —from our factory branches—to install Chamberlin Strips. *We alone maintain this policy.* That is why we give a 10-YEAR GUARANTEE. (But they outlast the building. Strips installed over 20 years ago are as serviceable as new.) Twice as many Chamberlin Strips in use as all others combined—proof they are the best.

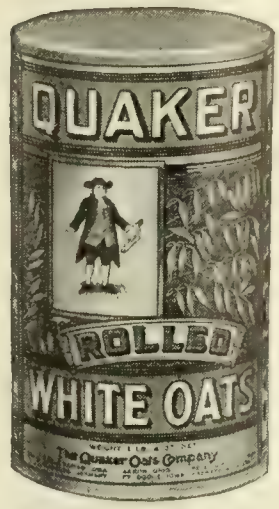
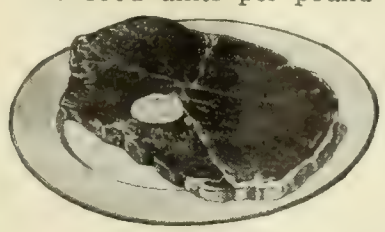
twenty dreadnaughts, the oldest launched in 1908. How many battle cruisers Germany has is not known. The loss of the "Lützow" at the battle of Jutland was admitted and there is still much dispute over the fate of the "Van der Tann," "Moltke," "Seydlitz" and "Derfflinger." The "Hindenburg" has been completed since the war began and there is said to be a doubtful "Bismarck." If six German battle cruisers do actually exist in serviceable condition they represent fifty-two heavy guns of 11 and 12 inch caliber, but they are of less speed and weaker armament than the corresponding British ships of the same class. In armored cruisers of the old type, Germany's losses have been severe, and she has left but one, the "Roon." Fifteen out of thirty-four light cruisers are gone. If they have been replaced, the British estimates of the smaller German craft are thirty light cruisers, and between 160 and 180 destroyers.

As to the fleet of our ally, Great Britain, the present writer does not know its strength, and would not tell it if he did. Before the war the British navy was about sixty per cent stronger in capital ships than the German navy. Its published losses include eleven battleships and three battle cruisers. Just before the war Great Britain was building fourteen battleships and one battle cruiser. Most of these have already been heard of in action, and a great many more have been added, so that the preponderance of the British over the German fleet has materially increased. Some say, counting all classes of vessels, that a million tons have been built, and that the end is not yet.



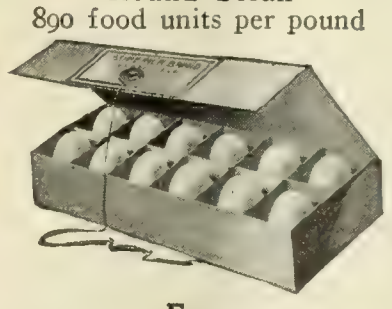
Of course, no one supposes that the German fleet will emerge with any expectation of victory. It will be merely self-immolation, in order to allow the Potsdam gang to tell the people that "now that we have exhausted our last resource, peace and bankruptcy must, of course, follow, when we trust our superhuman efforts will be unsparingly rewarded and our jobs permanently secured." The Teutonic naval tacticians and strategists are dreaming of a battle cruiser—preferably the "Hindenburg"—slipping out of the fight to range the stormy reaches of the Atlantic and keep our troopships shivering in our harbors. But there are several English battle cruisers much faster and better armed than the "Hindenburg," whose pleasure it will be to interfere with her thoughtful attentions. And, finally, we have the forecast of Admiral Breusing, of the Imperial German Navy, as to this greatest of all naval battles. Hear him about it:

"The fight will degenerate into a mêlée of the wildest description, ship fighting ship and using every method of destruction. The German fleet will probably enter into this close action, already possessing an advantage, due mainly to its excellent gun material, which England simply cannot equal. Whoever wins in this struggle, it is certain that the defeated side will leave all its ships and men at the bottom of the sea, while the victors will return home a ruined fleet."

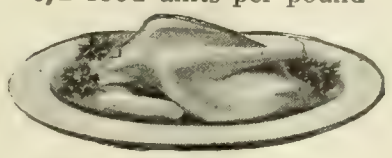


If the "mêlé" occurs in which "ship is fighting ship" in which event the most elementary rules of modern naval tactics will be grievously violated—a ruined fleet for one commander and the bottom of the sea for the other, will be no more than they deserve. No—but there will be an artistry in the team-work, and in tactical movements, and in the range-finding, and in the salvo-firing, such as the world has never before seen, and our ally will win. May our ships be there to help him!—simply because he will "get there first with the most men."

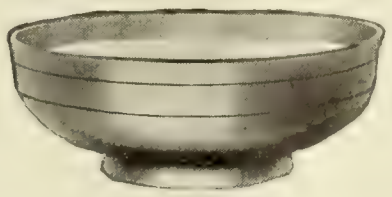
Pound for Pound



Mark How Oats Excel



1810 food units per pound



Round Steak
890 food units per pound

Eggs
672 food units per pound

Chicken
765 food units per pound

Milk
314 food units per pound

Save 75%

Note how the oat—as a nutrient—looms above costlier foods.

Measured by cost it looms very much higher.

Bacon and Eggs cost five times as much.

Steak and Potatoes cost five times as much.

Average Mixed Diet costs four times as much.

For the same nutrition Quaker Oats costs 75 per cent less than the average of your foods. Each dollar spent for it saves an average of $3.

In food value the oat holds the pinnacle place. In cost it stands at the bottom.

Other staple foods have in late months advanced, some five times as much as oats.

So these are times to use more oats. Not in porridge only, but in bread and muffins, in cookies and pancakes—in place of flour. Use them to thicken soups. They yield a wondrous flavor.

Quaker Oats

Flaked from Queen Grains Only

And these are times to insist on Quaker Oats. We use in the making just the rich, plump oats, and we get but ten pounds from a bushel.

The result is a flavor which has made this brand a world-wide favorite. Yet it costs in America no extra price.

Make your oat foods twice as welcome by using these luxury flakes.

12c and 30c per package in United States and Canada, except in Far West and South where high freights may prohibit

ENTER THE LIBERTY MOTOR TRUCK

BY CLARKSON LLOYD

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

LIMA, OHIO, is at present enjoying a newly found place in the sun. For in one of Lima's factories has just been completed the first of the new motor trucks built to the Government specifications issued last spring.

The new Liberty truck is an assembled product. Some sixty odd manufacturers have been making parts for it. Extreme secrecy has attended all the operations. No one manufacturer has been allowed to scan the drawings of the complete assembly. None knows what other company has supplied any other part. As each separate piece was finished it was rushed to Lima by military messengers or sent by registered mail. Even the assembling room was without wall-windows, which might have betrayed some secret to greedy alien eyes, and was guarded day and night by armed men. Under such circumstances it is small wonder that Lima was moved to give a large patriotic demonstration upon the occasion of the truck's first official road tests. Nor is it surprizing that all good citizens between Lima and the East are keeping their weather eyes open for the monster vehicle en route for the Atlantic States on its first endurance trip.

When you remember the highly romantic atmosphere in which the Liberty Motor was developed—and this, it is said, is the motive power of the new truck—and add it to the almost equally romantic conditions surrounding the development of the truck you have a story well calculated to fire the just enthusiasm of the Allies and to quench the waning bumptiousness of Kaiser Bill.

OF course, the outstanding feature of the new army truck is the fact that it *is* an assembled product and that all the other army trucks to follow will be exactly like it. This gives us an enormous advantage which is not enjoyed by our Allies. England and France are using trucks of a number of different makes. Italy is using two or three different models, turned out by separate makers. This means that mishaps in one particular factory may cause a serious delay in delivery of a number of machines. If, for example, the Fiat plant should catch fire and be damaged, some parts of the Fiat trucks under construction will, of necessity, be held up in process of manufacture. In this country, on the other hand, even if half a dozen of the parts making factories should be destroyed, it would be possible to set other plants at work producing the parts without any great loss of time.

But this is not the most important benefit we shall derive from the standardization of our army trucks. Where we shall score most heavily will be in the matter of maintenance. With each truck exactly like every other truck, down to the minutest detail, training a force of drivers and repair men is automatically simplified. For if a man knows the mechanical workings of one machine, he is familiar with all of them. French and English drivers have had to master not alone the fundamentals of gasoline engines, but the tricky differences between certain kinds of ignition systems, carburetors and the like. Then again, we shall save time and money when it comes to repairs and replacing parts. Suppose two trucks are damaged, and imagine that one has a disabled engine, while the other has a smashed up rear end. Since both are alike all that is necessary is to put the good engine into the chassis containing the damaged one and you have a perfectly good truck. If the two were of different makes both would be laid up until new parts could be procured.

There is an important lesson in this for business men who operate more than one truck. More and more large truck users are learning it. In many cases the knowledge has cost them a lot of money and was slowly acquired. In three words, here is the lesson: Standardize Your Equipment. Take plenty of time. Find the truck best adapted to your needs—which means the truck that does all you want done at the lowest cost—and then, as your needs grow, build your fleet of the same model. You will have less trouble with your drivers, you will lose less time in the repair shop, you will have a definite basis for estimating costs. And you will have to deal with only one truck company and only one service station.

For the wholehearted way in which the motor industry has come forward to help the Government in every possible way the men in it are highly to be commended. Many of the biggest men in the automobile and motor truck world have given up all other interests in order to give the United States and its Allies the benefit of their experience and counsel. In making individual parts for the Liberty Motor Truck they are putting at our disposal valuable patents, discoveries and the boundless resources of their vast organizations. As is, of course, perfectly just and natural, the manufacturers have stipulated that the Liberty Trucks shall never be put on the market commercially. Even if this were done, however, private users would not find them suitable for business use. Their design is strictly an army design. For ordinary use they are too heavy and too greedy in the matter of gasoline and oil.

It has just been announced that such Liberty Trucks as come thru the war in running condition will be used by the Government in the parcels post service. This is a splendid idea. Putting motor trucks into the parcels post service will increase the value of it to many communities which are lacking in adequate railroad facilities.

PEOPLE interested in the motor industry are speculating a little about the Liberty motor. They question whether an engine designed under the stress and in such a hurry can really be the last word in aviation engines. Granting the eminence of Messrs. Vincent and Hall, the two engineers who were locked in a hotel room with instructions to stay there until the design was completed, and who emerged in a few days with a complete design, some measure of skepticism may, after all, seem justified. It is said that the Liberty motor has been based on all the knowledge and experimentation and achievements of the best engineers in Europe. That is good. But the knowledge of the best engineers of Europe had been at the disposal of American designers for a long time. And yet, according to advices from the other side of the Atlantic, no aviation engine made in this country could be trusted for flying purposes. Now, if our best men, at leisure, could not turn out a creditable motor, is it logical to expect them to do so in a few days under pressure?

THE Liberty motor, like the truck, is to be a standardized article. Its designers built with rapid, quantity production in mind. We are spending $640,000,000 for airplanes. We are determined to make them in thousands in order that we may effectually blind the enemy while seeing all ourselves. But there is one important thing to remember in the midst of our enthusiasm for this great program. One airplane that will give consistent service is worth a million that cannot be relied on. Only a few days ago the papers printed a statement of a man prominent in Allied military affairs. In effect, he said: "If America is going to send us large numbers of airplanes she must put real engines into them. Otherwise we don't want them."

Let us not be too hasty in our acclaim of the Liberty engine. Two or three successful trial flights do not prove that it is worthy. The fact that two great engineers designed it under extraordinary circumstances does not prove that it is worthy. Every one knows that new designs invariably contain what is technically known as "bugs." It takes time to discover the "bugs" and still more time to eliminate them.

Our Government has just been offered the American manufacturing rights of the famous Sunbeam-Coatalen engine which is being used successfully by hundreds of British flyers. It is a known quantity. On the fighting line Sunbeam airplane engines are sworn by. Would it not be a good, sane, efficient plan for the United States to power its new airplane fleet with American-made Sunbeam engines until the Liberty motor has thoroly proved itself? It might cost less in the end.

SOME months ago The Independent predicted that motor trucks would be used more and more as long distance freight carriers. The prediction is being slowly but surely borne out. Recently a freight line has been established between New York and Philadelphia. A very ingenious plan is used in connection with it. Two trucks start simultaneously every day—one from New York and the other from Philadelphia. Each carries a cargo. Halfway between the two cities they meet. Their cargoes are exchanged. Then they turn around and return to the city they started from. By this arrangement each driver covers ground with which he becomes increasingly familiar. Each can live steadily in his own home instead of spending alternate nights at home and away. Needless to say shippers have been quick to take advantage of the new line, which assures them of prompt deliveries and ensures them against railroad freight embargoes. Here is a business which should be profitable almost anywhere.

Ask the Director anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give in this department an opinion as to the relative merits of various makes of cars or accessories, it is always ready to give full and impartial information about any individual product.

The Untiring FEDERAL

Night and day, winter or summer, bad weather or good, you will find the Federal saving time, human energy and money on the big jobs of haulage,

—haulage that requires a certainty of performance which brooks no excuses for delay—on-time deliveries which are assured only by the sound mechanical construction of a proven motor truck.

Federals are used by firms which can be depended upon for results. With them, the untiring Federal is an asset written prominently among the profit-making factors of their business.

INTERCHANGEABLE-TYPE

Writing Machine

The five lines above were written—just as they appear here—on the Multiplex Hammond, each style and size changed INSTANTLY!

A REVELATION IN TYPEWRITERDOM!

The Multiplex Hammond is unquestionably the most remarkable typewriter in existence. Why? *Because of its versatility.*

Think of it—"Just Turn the Knob" and you can change from ordinary Roman to Italics—INSTANTLY!—or from large Gothic to Miniature—INSTANTLY!—or from English to Russian—INSTANTLY!

There are hundreds of type sets—including all the languages of the world—also special characters for mathematicians, engineers, physicians, etc.

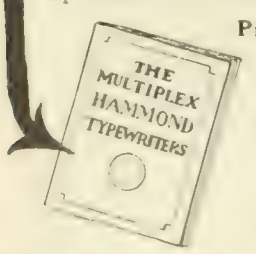
It is, in fact—

"Everybody's Typewriter"

MULTIPLEX HAMMOND

Many Typewriters In One—Type Changed Instantly

Business Executives:—Individuality of typed page. All commercial type sets and all languages can be used *on one machine.* Variable letter spacing for different sizes of type; extra condensing for loose-leaf manuals, card records, and statistics.



Literary People:—Have an instantly changeable type system. Two sets always on the machine; Roman and Italics, or any language.

Special Correspondence: Private Secretaries: Refined and aesthetic typed page. All languages on one machine.

Linguists:—The world's languages on one machine.

College Professors and Students:—Beautiful typed page. All languages. Commercial and Mathematical type sets all on one machine.

Clergymen: Variety of type sizes for sermon "outlines." Beautiful type page. Special Professional Discount.

President Wilson Uses It

All original manuscript of President Wilson is prepared on the Multiplex Hammond. He used it—PERSONALLY—while at Princeton. Later, as Governor of New Jersey and now, at the White House, he still uses it PERSONALLY!

It's PORTABLE: For Those Who TRAVEL

Only 11 lbs.

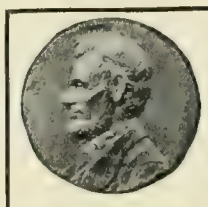
PEACE WITH VICTORY

(*Continued from page 127*)

and improved. Then Germany settled down to a period of peace to digest the territory which by these three wars had been absorbed. Bismarck's purpose in maintaining the superiority of his army was to retain what had been taken by blood and iron, and at the same time, by a period of prolonged peace, to give to Germany a full opportunity for industrial development and the self-discipline necessary for the highest efficiency.

Bismarck had been keen enough in his diplomacy to await the opportunity that events presented for seeming to be forced into a war which he had long planned. This was the case with Denmark. This was the case with Austria. This was the case with France. German diplomacy has lost nothing of this characteristic in the present war. Germany did not plan the killing of the Austrian Crown Prince and his consort, but immediately that that presented the likelihood of war, Germany accepted it as the opportunity for her to strike down her neighbors, Russia and France, and to enlarge her power. She gladly gave her consent to the ultimatum of Austria to Serbia that was sure to bring on war, and then posed as one driven into war by the mobilization of Russia. She knew that Russia was utterly unprepared. She knew that France was unprepared. She knew that Great Britain was unprepared. She herself was ready to the last cannon and the last reservist. Therefore, when appealed to by Great Britain and by all the other powers to intervene and prevent Austria from forcing a universal war, Germany declined to act. Not a telegram or communication between Germany and Austria has ever been given to the public to show the slightest effort to induce delay by Austria. While Germany would pose as having acted only as Austria's ally and as unwilling to influence her against her interest and independent judgment, the verdict of history unquestionably will be that the war is due to Germany's failure to prevent it and to her desire to accept the opportunity of the assassination of the Crown Prince as a convenient time to begin a war she long intended. She alone is responsible for the incalculable destruction of this war. She led on in the armament of the world that she might rule it. She promoted, therefore, the armament of other nations. Her system was followed, tho not as effectively by other countries in pure defense of their peace and safety. And now, her Emperor, her Prussian military caste and her wonderful but blinded people, have the blood of the millions who have suffered in this world catastrophe on their hands. The German military doctrine, that when the interests of the state are concerned, the question is one of power and force, and not of honor or obligation or moral restraint, finds its most flagrant examples in Germany's conduct of this war. Her breach of a solemn obligation entered into by her and all the powers of Europe, in respect to Belgium's neutrality, was its first exhibition. It was followed by the well proven, deliberate plan of atrocities against the men, women and children of a part of Belgium in order to terrorize the rest of the population into complete submission. It was shown in the prompt dropping of bombs on defenseless towns from Zeppelins and other air craft; in the killing of non-combatant men, women and children by the naval bombardment of unfortified towns; in the use of liquid fire and poisoned gases in battle. All of these had been condemned as improper in declarations in the Hague treaties.

Under Bismarck the Reptile fund used to



FOR SALE

This noted charming estate. One of the finest near New York. On 13 miles from city, via all modern Automobile roads, 18 acres attractive and fertile land. Brook runs through property.

The Dutch Colonial Stone House, with two extensions, has unique charm throughout; lawn picturesquely terraced. Very large and beautiful rooms. Three bathrooms; Mott fixtures; steam heat; electricity. Large garage and barns. Very choice property at most attractive price.

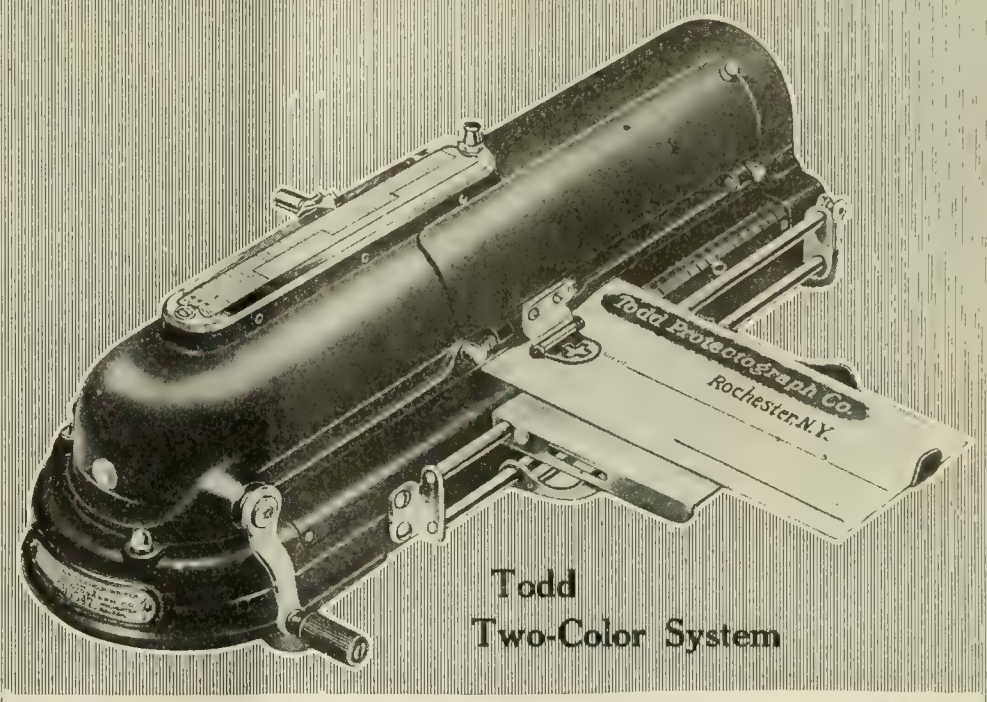
bribe the press and for the maintenance of a spy system was enlarged and elaborated, so that German bribery has extended the world over, and the German espionage has exceeded anything known to history. The medieval use by the Hohenzollerns of dynastic kinship has paralyzed the action of the peoples of Greece and Russia. And now we know by recent revelation of the aid that Swedish diplomats are furnishing to Germany in her submarine warfare against neutral ships, and that it is made possible by the influence of the German consort of the Swedish King.



When the war began Germany was able to convince her people and to convince many in the world that the issue in the war was not the exaltation of the military power of Germany and the expanding of her plan of destiny, but that it was a mere controversy between the Teuton and the Slav, and Germany asked with great plausibility, "Will you have the world controlled by the Slav or by the German?" Those who insisted that the issue was one of militarism against the peace of the world, of democracy against military autocracy, of freedom against military tyranny, were met with the argument, "Russia is an ally. She is a greater despotism and a greater military autocracy than Germany." As the war wore on, the real issue was cleared of this confusion. Russia became a democracy. The fight was between governments directed by their peoples on the one hand, and the military dynasties of Germany, Austria and Turkey on the other.

President Wilson says the Allies are fighting to make the world safe for democracy. Some misconception has been created on this head. The Allies are not struggling to force a particular form of government on Germany. If the German people continue to wish an Emperor, it is not the purpose of the Allies to require them to have a republic. Their purpose is to end the military policy and foreign policy of Germany that looks to the maintenance of a military and naval machine with its hair trigger preparation for use against her neighbors. If this continues, it will entail on every democratic government the duty of maintaining a similar armament in self defense or what is more likely, the duty will be wholly or partly neglected. Thus the policy of Germany, with her purpose and destiny, will threaten every democracy. This is the condition which it is the determined purpose of the Allies, as interpreted by President Wilson, to change.

How is the change to be effected? By defeating Germany in this war. The German people have been very loyal to their Emperor because his leadership accords with the false philosophy of the state and German destiny, with which they have been indoctrinated and poisoned. A defeat of the military machine, a defeat of the Frankenstein of the military dynasty, to which they have been sacrificed, must open their eyes to the hideous futility of their political course. The German Government will then be changed as its people will have it changed to avoid a recurrence of such a tragedy as they have deliberately prepared for themselves.

Men who see clearly the kind of peace which we must have, in order to be a real and lasting peace, can have no sympathy with a patched up peace, one made at a council table, the result of diplomatic chaffering and bargaining. Men who look forward to a League of the World to Enforce Peace in the future can have no patience with a compromise that leaves the promoting cause of the present awful war unaffected and unremoved. This war is now being fought by the Allies as a League to Enforce Peace. Unless they compel it by

Protectograph
Check Writer

Todd
Two-Color System

FIFTY ONE DOLLARS SIX CENTS
AMOUNT-WORDS, RED-DENOMINATIONS BLACK

The Standard Check Protection

The Protectograph—Todd patents—embodies Todd's original "shredding" principle, which first gave *real* protection against check raising.

Our latest 1918 model Protectograph Check Writer protects the full amount in the body of the check. Writes amount in Dollars and Cents (in words—not figures), exact to the penny, in two vivid colors—a complete word to each stroke of the handle. This is the fastest, most efficient, legible and uniform method of writing and protecting amounts on checks, drafts, bills of lading, etc.

This model, illustrated above, has automatic spacing, automatic feed, automatic release, enduring bronze type, improved inking, dozens of important improvements, covered by exclusive patents. Price $40.

Other Protectograph models in all sizes and prices up to $75—a model for every business and individual requirement.

The Todd System extends to furnishing owners of Todd machines with special PROTOD Chemical-Fibre checks and drafts made to your own specifications. Ask for samples and prices.

Check raising is a very real danger to every business man who does not use the Protectograph. You might lose by *one* check fraud the profits on many years' hard work. Others have. You can profit by their experience. Let us send you a confidential book on check swindles, written by a celebrated detective. Free to any responsible business man who encloses this coupon with his business letterhead.

WALK ON YOUR HEAD

I'm just a plain business man; never studied medicine nor anatomy; but I believe I have made the most remarkable health discovery of all time!

Two years ago I was an **old man** afflicted with piles, dyspepsia, insomnia, catarrh and general lassitude; to-day I am 67 years **young.** My afflictions and "oldness" are **absolutely gone.** My rejuvenation convinces me that I have discovered the most simple and efficacious health restorer known to man. Nothing like it ever before published.

It is neither food nor drink; no concoction nor contrivance of any kind; no expense and no trouble at all.

My wonderful health discovery has given me the Vital Force, the Appetite, the Digestion, the Sleep, the Abundant energy of an acrobat. The medical examiner of one of America's largest insurance companies says I am "as good a risk as a man of 35."

My illustrated booklet tells the complete story of how, at 65 years, I found

Youth and Better Health

On receipt of Three Dollars ($3.00) I will mail you a copy. My physician endorses it, and my confidence in its efficacy is so unbounded I welcome you to submit it to your physician, as I did to mine. If he disapproves of it, I will refund your money without question.

I've been manager of Caw's Pen & Ink Co. for 40 years, and in offering my great discovery, I shall adhere to the well known policy of the Caw's Company to give full value. Remit by check, money order, bank draft or registered letter.

victory, they do not enforce it. They do not make the military autocracies of the world into nations fit for a World League, unless they convince them by a lesson of defeat.

When the war came on there were a few in the United States who felt that the invasion of Belgium required a protest on the part of our Government, and some indeed who felt that we should join in the war at once. But the great body of the American people, influenced by our traditional policy of avoiding European quarrels, stood by the Administration in desiring to maintain a strict neutrality. I think it is not unfair to say that a very large proportion of the intelligent and thinking people of the United States—and that means a great majority—sympathized with the Allies in the struggle which they were making. But many with us of German descent, prompted by a pride in the notable advance in the world of German enterprize, German ingenuity, German discipline, German efficiency, and regarding the struggle as an issue between Teuton and Slav, extended their sympathy to their Fatherland. As conscientiously as possible, the Administration and the country pursued the course laid down by international law as that which a neutral should take.

International law is the rule of conduct of nations toward one another, accepted and acquiesced in by all nations. The right of non-combatants on commercial vessels, officers, crew and passengers, either enemy or neutral, to be secure from danger of life has always been recognized and never contested. Nevertheless, Germany sank without warning 150 American citizens, men, women and children, and sent them to their death by a submarine torpedo, simply because they happened to be on English or American commercial vessels. We protested and Germany halted for a time. We thought that if we condoned the death of 150, we might still maintain peace with that power. But it was not to be, and after more than a year Germany announced her purpose to resume this murderous and illegal course toward innocent Americans. Had we hesitated, we would have lost our independence as a people. We would have subscribed abjectly to the doctrine that might makes right. Germany left no door open to us as a self-respecting nation except that which led to war.

Germany's use of the submarine brought us into the war. But being in, we recognize as fully as any of our Allies do, its far greater issue to be whether German militarism shall continue after this war to be a threat to the peace of the world, or whether we shall end that threat by this struggle in which we are to spend our life's blood. We must not, therefore, be turned from the stern necessity of winning this war.

When the war began and its horrible character was soon disclosed, there were many religious persons who found their faith in God shaken by the fact that millions of innocent persons could be headed into this vortex of blood and destruction without the saving intervention of their Creator. But the progress of the war has revealed much, and it has stimulated our just historic sense. It shows that the world had become thru the initiative of Germany and the following on of the other nations afflicted with the cancer of militarism. God reveals the greatness of His power and His omnipotence not by fortuitous and sporadic intervention but by the working out of his inexorable law. A cancer if it is not to consume the body must be cut out, and the cutting out of it necessarily involves suffering and pain in the body. The sacrifices of lives and treasure are inevit-

able in the working out of the cure of the world malady. But we must win the war to vindicate this view.

We are at a danger point. England and France and Russia since 1914 have been fighting the battle of the world and fighting for us of America. The three years or more of war have drained their vitality, strained their credit, exhausted their man power, subjected many of their non-combatants to suffering and destruction, and they have the war weariness which dulls the earlier eager enthusiasm for the principles at stake. Now specious proposals for peace are likely to be most alluring to the faint hearted, and most powerful in the hands of traitors. Russia, rid of the Czar, is torn with dissensions and the extreme socialists and impractical theorists, blind to the ultimate destruction of their hopes that a loss of this war will entail, are many of them turning for a separate peace.

The intervention of the United States by her financial aid has helped much, but her armies are needed and she, a republic unprepared, must have the time to prepare.

With us at home the great body of our people are loyal and strong for the war. Of course, a people, however intelligent, when very prosperous and comfortable, and not well advised as to the vital concern they have in the issue of a war across a wide ocean and thousands of miles away, it takes time to convince. But we have, for the first time in the history of our republic, begun a war right. We have begun with a conscription law, which requires service from men of a certain age from every walk of life. The lessons of the three years of the war are being learned and applied in our war equipment and in neutralizing, by new construction, the submarine destruction of commercial transports. Adequate measures for the raising of the money needed to finance the war and finance our Allies have been carried thru Congress or are so near enactment as to be practically on the statute book. Food conservation is provided for. But, of course, it takes time for a hundred million of peace lovers and non-militarists to get ready, however apt, however patriotic, however determined. It is in the period of the year before the United States can begin to fight that the strain is to come in Europe. But Germany is stopped on the western and Italian fronts. The winter coming will be harder on her than on the Allies. "It is dogged that does it." Stamp on all proposals of peace as ill-advised or seditious and then time will make for our certain victory.

When the war is won the United States will wish to be heard and will have a right to be heard as to the terms of peace. The United States will insist on a just peace, not one of material conquest. It is a moral victory the world should win. I think I do not mistake the current of public sentiment thruout our entire country, in saying that our people will favor an international agreement by which the peace brought about thru such blood and suffering and destruction and enormous sacrifice shall be preserved by the joint power of the world. Whether the terms of the League to Enforce Peace as they are will be taken as a basis for agreement, or a modified form, something of the kind must be attempted. Meantime, let us hope and pray that all the Allies will reject all proposals for settlement and compromise and adhere rigidly and religiously to the principle that until a victorious result gives security that the world shall not be again drenched in blood thru the insanely selfish policy of a military caste of a nation ruling a deluded people intoxicated with material success and power, there will be no peace.

To any stack of "Y and E" sections you can add other sections as your requirements grow, as shown in the illustration, which includes 15 half-width and 2 full sections. In a single stack you can thus have any of the following:

Vertical	Document	Legal Blank	Cupboard
Card Record	Com'c l Report	Drawings	Roller Book
Shannon	Ins. Policy	Pigeonhole	Tack-Map
Check	Storage	Box Drawer	Engravings, etc.

Particulars about any of these, on request. Check Coupon.

Use Wood Filing Cabinets

There Is a "Y and E" Cabinet for Every Purpose

"Y and E" Wood Filing Cabinets, like "Y and E" Steel Cabinets, are built to stand the roughest handling ever given to filing cabinets in an office, and in *any* climate. Built so they neither *warp, split, stick,* crack nor rack loose; and they give much better fire protection than the ordinary steel filing cabinet, of the single-wall type.

Fire heats the interior of a single-wall cabinet like an incinerator, bursts open the seams and chars the papers to ashes right through the wall. Wood, on the other hand, is not a heat conductor. It takes a big fire even to char the outer surface of a wood cabinet, while the interior remains cool until the cabinet is consumed.

Papers are more valuable than the cabinet where you file them. The only type of cabinet better than "Y and E" wood for fire protection is our own "Fire-wall" steel —an exclusive invention with double steel walls having cellular asbestos and dead-air chambers between—exactly the same in principle as a safe.

From Alaska down to Panama and on to Argentine "Y and E" wood filing cabinets are giving absolute satisfaction to all lines of business. They are the handsomest equipment possible to make—they are warm, not icy like steel—they are easy to take care of—and they give 100% *service.* Under the varnish is all that quality and skill can put there. Check coupon and attach to letterhead for complete information.

High quality usually presupposes high prices, but you pay no more for "Y and E" equipment—plus "Y and E" System Service—than for equipment of inferior quality with no service at all! That is why so many concerns use "Y and E" exclusively, with absolute satisfaction.

What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 24th year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. A dollar bill mailed at our risk will bring you the Pathfinder for a full year, or simply send **15c** to show that you might like such a paper, and we will send the Pathfinder on probation **13** weeks. The fee does not repay us, but we are glad to invest in new friends. **Pathfinder, Box 39, Washington, D.C.**

WAR WORK FOR EVERYBODY

(*Continued from page 137*)

war on waste. Organize a paper-saving club; follow the example of the school children of Decatur, Illinois, who collected 105,860 pounds of waste paper and old magazines as their war economy work, selling the same for $1,014.56. Or, found a baby beef or pig club in your community; these organizations are helping to save meat for soldiers; it is said the lives of 500,000 calves are thus saved each year in Texas alone; write for particulars to the Bureau of Animal Industry, Department of Agriculture, Washington, D. C. Or, find a vacant lot, borrow it, be a "potato patriot," work for prizes given by the Woodcraft League, founded by Ernest Thompson Seton, located at Greenwich, Connecticut.

17. Learn to chew your food, make yourself do it as a regular habit. You should live five years longer, do more and better work. And you will find you will need about 20 per cent less food, a saving which would support a child now starving in France or Belgium. A Horace Fletcher book on mastication would be a good war time investment.

18. Give the price of some of your pleasures to the Red Cross. A little negro boy in Pittsburgh had saved $1 for a grand Fourth of July celebration; when he heard about the Red Cross, he gave up his dollar like a little man. A tiny girl in a very poor family gave three pennies—all she had in the world; she said, "A man told us in school that a penny would fix up one hurt for a soldier. That's enough for three hurts." How many hurts of a soldier could you bind up with the money you spend on soda, candy, peanuts, toys and moving pictures?

ELDERLY MEN

If you are over sixty, have perhaps more time than strength, weigh the following suggestions.

19. Prepare to take the place of a younger man, thus freeing him for service. Catalog your industrial training or professional experience, locate firm needing such help, apply for position.

20. Stop growing old. Read books on preserving youth, health, vigor, by young old men, such as Cornaro, Peebles, Bennett, others. Last April a young man out in Ohio celebrated his ninety-fourth birthday by planting a war garden! A retired Virginia skipper of ninety-seven put to sea again, offered his ship to the Government, and is now helping to feed the Allies. Your age is largely in your mind.

21. Organize community garden project. Canvass whole neighborhood for vacant lots; get owners' consent for use in gardening; draw a map showing sites; have mayor, newspaper editors, business men, pastors, teachers approve plan; mobilize garden army of school children, Boy Scouts, young and old men and women. Announce the $5000 in prizes for canned vegetables offered by National Emergency Food Garden Commission—particulars from the secretary, P. S. Ridsdale, 210 Maryland Building, Washington, D. C.

22. Start a community forum or civic association, to improve home conditions on various lines. Titles of articles and books on community betterment and information on methods of beginning and carrying on such work may be had by writing the Independent Efficiency Service.

23. Look up various ideas in the article "The Man Beyond the Military Age," published in *Ladies' Home Journal*, June, 1917.

24. Found a war work bureau, or com-

munity war council. See that everybody over ten in the community has a copy of this article. Obtain, put in the town library, all literature mentioned here. Hold weekly war meetings. Run column of announcement, progress, advice in your local paper.

WOMEN

25. Register for national service under the Women's Committee, Council of National Defense, Washington, D. C. Obtain particulars and registration blank from the chairman, Dr. Anna Howard Shaw.

26. Obtain from Department of Agriculture, Washington, D. C., the Food Thrift Series of publications, giving many valuable suggestions for home economy.

27. If you handle food in the home, join the United States Food Administration. Write the Food Administrator, Washington, D. C., for free membership card. No dues or fees. Hang the Hoover home war tag in your window.

28. Learn family food economy. Send 10 cents to Dr. John Dill Robertson, Commissioner of Health, City Hall, Chicago, for pamphlet "Living on 31 Cents a Day." Also mail 10 cents to American School of Home Economics, West Sixty-ninth Street, Chicago, for pamphlet "Seven-Cent Meals."

29. Join the Red Cross. Apply to local chapter. If none exists, found one—only six workers required to organize. Dues from $1 a year up. If desired, take individual membership—apply to American Red Cross, Washington, D. C.

30. Knit for the soldiers in every spare minute. Carry your knitting as a war badge of honor. Make at least one of the 500,000 woolen weather-guards needed immediately by the boys at the front. Particulars and instructions from local chapter Red Cross, or Comforts Committee, Navy League, Washington, D. C.

31. Plan, train yourself, to do a man's work; release him to go to the front. As war workers, women are now chemists, farmers, wireless operators, bank clerks, railway employees, draftsmen, gardeners, munition makers, photographers, carpenters, messenger "boys," elevator "men," dock hands. Learn about employment opportunities for you, from National League for Woman's Service, 257 Madison Avenue, New York.

32. Find what other women's organizations are doing—then take your choice. Get literature from the following: National Special Aid Society, 259 Fifth Avenue, New York; Militia of Mercy, 4 West Forty-ninth Street, New York; National American Women's Suffrage Association, Washington, D. C.; National W. C. T. U. Bureau of Publicity, Evanston, Illinois; National Board Y. W. C. A., 600 Lexington Avenue, New York.

33. Do effective home reading. Get particulars of War Library for Women, being established by Miss Ida M. Tarbell, Women's Committee, Council of National Defense, Washington, D. C. Also read current magazines for women that feature war work, such as *Ladies' World*, *Woman's Home Companion*, *Delineator*, *Modern Priscilla*, *Good Housekeeping*.

34. Prepare now for next season's food campaign. Get pamphlet on garden making, from your state agricultural college; also read instructions on canning and drying vegetables and fruit, from National Emergency Food Garden Commission, Maryland Building, Washington, D. C. (Enclose 2 cents postage for the latter.)

35. Consult local officials of women's clubs, charitable organizations, defense and relief societies on war problems, needs, of your home and neighborhood. Adapt service to circumstances.

36. Learn how bravely and well other women have done war duties. Read Char-

80 To 100 Words a Minute Typewriting Speed Guaranteed Or You Pay Nothing !

Stenographers Can Now Earn $25 to $40 Per Week

If you are a stenographer or typewriter user, earning less than $25 a week, you are losing money every week. Look about you at the stenographers who are earning bigger salaries than yours and you will find that *they typewrite more rapidly and more accurately than you!* Employers pay for the *amount and quality* of finished work turned out each day. The average stenographer typewrites 30 to 40 words a minute and earns $8 to $15 a week. The expert typewrites 80 to 100 words a minute and earns $25 to $40 per week. The difference in their salary is due to the difference in their speed and accuracy in typewriting!

The New Way in Typewriting—Entire Course on Trial

The New Way in Typewriting is amazingly easy for anyone to learn. There are only 10 easy lessons, which can be studied at home in part of your spare time! And you may take the entire Course on trial. If the New Way in Typewriting does not enable you to typewrite at the rate of 80 to 100 words a minute, the Course will not cost you a penny! That is our legal binding guarantee to *you!* We have made arrangements with the Lagonda National Bank to refund money direct to students who are in any way dissatisfied.

Salary Increased 40%—Then 20% More

"Since writing the letter you saw, telling of a 40% increase, I have had another increase of 20%." C. E. Verrall, care Martin & Hall, Architects, Providence, R. I.

Salary Doubled Claims Justified

"I have progressed rapidly and today am filling the position of Chief Clerk to the Department of Parks and Public Property, in this city, my salary being exactly double what it was."—Anna S. Cubbison, 109 Hoerner St., Harrisburg, Pa.

Writes Over Eighty Words per Minute

"It brought my speed up to over 80 words per minute and increased my salary by over 25%."—I. G. Hipsley, 6224 South Park Ave., Chicago.

Now Earns $150.00 a Month

"I was getting $70 per month when I took up the Course. I am now drawing $150.00."—A. H. Gardiner, 429 Hawthorne Place, Madison, Wis.

The New Way in Typewriting is a revolutionary new method based on Gymnastic Finger Training. The reason most stenographers typewrite so slowly and inaccurately is because their fingers are not flexible enough, are not nimble enough, are not dextrous enough, are not quick enough. The New Way in Typewriting gives the flexibility, speed and nimbleness of the expert pianist's fingers—speed and accuracy that enable musicians to run their fingers over the keys faster than the eye can follow! There is nothing else like the New Way in existence. It is as different from the old "touch" system as night is from day. Many hundreds of so-called "touch" operators have studied the New Way and without exception have doubled and trebled their speed—and salaries!

MAIL COUPON OR POSTAL

It costs you nothing to get the facts about the New Way in Typewriting. Send in your name today. We are right now making a special offer to new students in every locality. Let us tell you what hundreds of other stenographers have done. Do not be content with a low salary—do not be content with low speed and difficult typewriting. Increase your speed and accuracy in typewriting and earn $25 to $40 a week as our thousands of students and graduates are doing! Write today before you turn this page. Address

New York, N. Y.

lotte Kellogg's book, "Women of Belgium." Introduction by Herbert C. Hoover. All profits go to Belgium Relief Commission. At local book stores.

GIRLS

37. Join the Camp Fire Girls of America, numbering over 100,000 members, now calling themselves the "Minute Girls of 1917." This remarkable organization is a girls' home clearing house for instructions and suggestions from the Department of Agriculture, Department of Labor, Children's Bureau, Red Cross, and other patriotic sources. War program endorsed by President Wilson. Every girl should be interested. National headquarters at 461 Fourth Avenue, New York.

38. Look up the fine work of the Girls National Honor Guards, organized by Theodora Booth, granddaughter of General William Booth, founder of the Salvation Army. Chief aim is first aid, national or local. Includes both popular and unique forms of patriotism. Address 34 West Twenty-eighth Street, New York.

39. Follow the example of 200 girls in the Carnegie Institute of Technology of Pittsburgh. They went to bed an hour earlier, rose an hour earlier, spent the extra morning hour making Red Cross hospital garments.

40. Take care of small children, while women having charge of them do special war work. Particulars from Camp Fire Girls of America, 461 Fourth Avenue, New York, and suggestions from Little Mothers Aid Association, 236 Second Avenue, New York.

41. Learn war-time cookery. Send 4 cents, stamps, with self-addrest return envelope to the "My America" Editor of *The Ladies World*, 25 West Forty-fourth Street, New York, for copy of Mabel D. Purdy's booklet, "My America Food Book," also particulars of *My America League*, a girls' patriotic organization.

42. Specialize in food preservation, start a canning club contest. The champion Mother-Daughter Club of Leavenworth, Kansas, put up 9838 quarts of vegetables last year, average cost 14 cents a quart, estimated profit $2420. Find what *you* could do. Ask States Relations Service, Department of Agriculture, Washington, D. C.

43. Cut down little forms of self-indulgence, put money saved into war service or relief.

THE FAMILY

The natural unit of home defense and patriotic effort is the family. Go over this article with your family, decide what each member can do, then coöperate in spirit, conference, action.

44. Share in food conservation—don't leave it all to mother. Delegate someone to secure all available literature from the Food Administrator and the Department of Agriculture, both Washington, D. C., also from the Agricultural Department and the Home Economics Department of your state university. Devote one evening a week to family study of the food problem.

45. Economize in other ways leading to victory. Burn gas or wood if possible, and save coal, the great wartime fuel. Keep smaller number of fires going, by living in fewer rooms, and help cut down the yearly waste in America of $500,000,000 worth of fuel. For home and warm weather use, buy canvas or cloth-top shoes with synthetic soles and heels, to save leather needed by the army. (Foot-wear shod with Neolin or Rinex composition may be had at almost any shoe store.) Look up nearest junk man, arrange to sell old papers, rags, bottles, worn-out clothing; give proceeds to war relief society.

46. Get this habit, suggested by advice

30 Years
Without Bran

Folks who live without bran often suffer. It shows in dull days, headaches, bad complexions, often. Or in some laxative habit.

The older you get the more often you need it.

Pettijohn's is a delightful way to supply it every day. Let one week show you the result.

Pettijohn's

Rolled Wheat—25% Bran

A breakfast dainty whose flavory flakes hide 25 per cent unground bran.

Pettijohn's Flour — 75 per cent fine patent flour with 25 per cent bran flakes. Use like Graham flour in any recipe.

Both sold in packages only. (1709)

SABER AND SONG
A BOOK OF POEMS BY
WILLIAM THORNTON WHITSETT

DR. WILLIAM LYON PHELPS: "I have just read the volume of poems, and am glad to express my admiration both for the fine poetic, idealistic, and religious spirit in the book, and also for its excellent technique."

EDITH M. THOMAS: "The contents present a wonderfully varied range of subjects, of measures and treatments—from Ode to Sonnet, from stately narrative poem to the delicate whimsical lyric."

ELLA WHEELER WILCOX: "'Saber and Song' gleams and ripples; it is full of beauty."

JOSEPHINE PRESTON PEABODY: "A fine, true note you strike here from all the tense strung cords of life."

"A very notable addition to American poetry for this year." "An unusual book." "A book that will live and grow."

At Bookstores generally. 164 pp. postpaid, cloth, $1.25. Address
Whitsett Institute Whitsett, North Carolina

DIVIDENDS

AMERICAN TELEPHONE AND TELEGRAPH COMPANY

A dividend of Two Dollars per share will be paid on Monday, October 15, 1917, to stockholders of record at the close of business on Saturday, September 29, 1917.

G. D. MILNE, Treasurer.

WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY.

A dividend of one and three-quarters per cent. (87½ cents per share) on the COMMON stock of this Company for the quarter ending Sept. 30, 1917, will be paid Oct. 31, 1917, to stockholders of record as of Oct. 5, 1917.

H. F. BAETZ, Treasurer.

New York, September 26, 1917.

How to Use Our Plan and Purchase Dept.

I. Look over all departments of your business organization with a view to helping your workers, by finding the weak spots and showing them better ways and methods. You may find the spots easier to locate than the remedy.

II. Write to the Plan and Purchase Department for the free Check List, which provides you with a list of items likely to help you.

III. Check the items you want to know about, those you think you can use. Write on the blank pages the details of your problem.

IV. As promptly as possible after receiving your request we will make reply, drawing upon our files of information and the experience of expert counsellors to give you helpful suggestions.

Independent Efficiency Service
119 West 40th Street New York City

of General Pershing. Look for "Notice to Readers" from Postmaster General Burleson, printed on covers of magazines that you take (such as that on cover of The Independent). Stick a 1 cent stamp on the notice. When you have read the magazine, hand it to any postal employee for transmission to our soldiers or sailors at the front. Select a member of the family to see to this regularly.

47. Make every child in your family a member of the Junior Red Cross, lately formed to enlist 20,000,000 American school children in health, food, supply and relief work. Invite your neighbors' children to join. Dues only 25 cents a year. Apply for membership to American Red Cross, Washington, D. C.

48. Start a First Aid class in your home—get instructions from local branch of Red Cross. Write Bureau of Supplies, American Red Cross, Washington, D. C., for catalog describing First Aid Boxes for home use; at same time send 34 cents for copy of General First Aid Book.

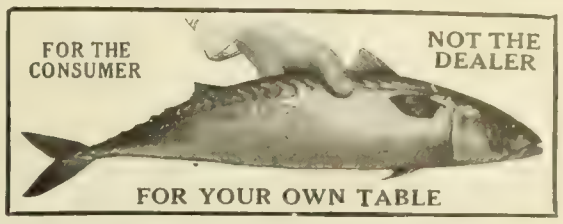
49. If a training camp is near your town, open your home to the boys, help to supply wholesome pleasure and recreation. For details of plan, with other patriotic ideas offered women and girls of your family, write Woman's Home Companion, New York City, for Companion Directory of Service, and particulars of Hour-a-Day Club.

50. Put a War Savings Bank on the parlor mantel, with a big sign above, so visitors may see. Every month while the war lasts, deposit one day's family income in the bank, then take family vote on how money shall be spent for promotion of war work.

EVERYBODY

Apart from the classifications just made, certain things appear that any one may do, and we hope everyone will consider.

51. Mail 20 cents to the secretary of Columbia University, Morningside Heights, New York City, for the "Directory of Service," Columbia War Paper No. 9. Read through, follow good suggestions, loan book to friends.



52. Write a cheery, newsy letter once a week to a soldier from your locality. Make all the news good news. Keep out small troubles, imaginary griefs, childish condolences. Eighty per cent, according to official estimate, of the letters received by army men are pictures of gloom; result, the efficiency of the troopers falls to freezing point, they become discouraged, dissatisfied—it is said that more than half the desertions are caused by gloom letters. Before mailing letters or parcels to soldiers in camp or abroad, get from local postmaster proper form of address.

53. If you have a relative or friend at the front, send him in token of remembrance some article of real utility every few days. Among desirable gifts are these: lead pencils, writing pad and envelopes, reading matter, games, book of postage stamps, small mirror, towels, small wash rags, handkerchiefs, socks, heavy tan shoe laces, common pins, medium and large safety pins, court plaster, small rubber sponge, toilet articles that come in tin containers.

54. Donate a few good books to local boys in training camp, collectively. For kinds of books wanted, inquire at nearest library, or branch of Y. M. C. A. Send books to one or the other of these agents. If neither is near you, write for instructions to George C. Utley, secretary, the American Library Association, 78 East Washington Street, Chicago.

55. Watch the Independent War Service Question Box for answers to other readers. Let us help you solve your war problem and increase your war efficiency.

Salt Mackerel
CODFISH, FRESH LOBSTER

FAMILIES who are fond of **FISH** can be supplied **DIRECT** from **GLOUCESTER, MASS.**, by the **FRANK E. DAVIS COMPANY**, with newly caught, **KEEPABLE OCEAN FISH**, choicer than any inland dealer could possibly furnish.

We sell **ONLY TO THE CONSUMER DIRECT**, sending by **EXPRESS RIGHT TO YOUR HOME.** We **PREPAY** express on all orders east of Kansas. Our fish are pure, appetizing and economical and we want **YOU** to try some, payment subject to your approval.

SALT MACKEREL, fat, meaty, juicy fish, are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

CODFISH, as we salt it, is white, boneless and ready for instant use. It makes a substantial meal, a fine change from meat, at a much lower cost.

FRESH LOBSTER is the best thing known for salads. Right fresh from the water, our lobsters simply are boiled and packed in **PARCHMENT-LINED CANS.** They come to you as the purest and safest lobsters you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

FRIED CLAMS is a relishable, hearty dish, that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

FRESH MACKEREL, perfect for frying, **SHRIMP** to cream on toast, **CRABMEAT** for Newburg or deviled, **SALMON** ready to serve, **SARDINES** of all kinds, **TUNNY** for salad, **SANDWICH FILLINGS** and every good thing packed here or abroad you can get direct from us and keep right on your pantry shelf for regular or emergency use.

With every order we send **BOOK OF RECIPES** for preparing all our products. *Write for it.* Our list tells how each kind of fish is put up, with the delivered price so you can choose just what you will enjoy most. Send the coupon for it now.

THE secret of his remarkable record for satisfactory adjustments was his strategy in typing out the document on his Corona, in full sight of the claimant, and thus bringing matters to a conclusion in one interview.

—fold it up—take it with you—typewrite anywhere

THOSE same unique qualities of convenience and portability, which commend Corona for use at the office or afield, are no less valuable in the quiet comfort of your home.

With a whole, long evening before you, take out Corona and concentrate, free from interruption, on the bigger aspects of your work, so often buried beneath the daily routine. Think out your problems on Corona and watch the solution grow before your eyes—always in clear, legible, business-like form, easy to review and revise.

Corona weighs but six pounds. It can be carried in one hand, and when you travel it travels with you, your *personal* writing machine. So simple that anyone can operate it, and never in the way, for when it's not in use, you can *fold* Corona into its neat traveling case, or tuck it away in a desk drawer. Complete with case, Corona costs $50. Described in our interesting booklet No. 23, sent on request.

THE NEW PLAYS

Lombardi L. T. D., by Frederick and Fannie Hatton, is a typical Broadway, and therefore artificial, comedy. Its noteworthy feature is the portrayal by Leo Carillo of a genuinely fine type of Italio-American. (Morosco Theater.)

Cheer Up is the title of this year's offering at the largest playhouse in the world. There is only one Hippodrome in America and no visitor to New York should fail to take it in. Gorgeous spectacle and unique entertainment. (The Hippodrome.)

HOW TO STUDY THIS NUMBER

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. COMPOSITION.

The Story of the Week.

1. At a parents' meeting in your school you are to make a speech to aid in selling Liberty Bonds. Take for your topic, "Germany is on the edge of disorganization." Show how the buying of Liberty Bonds will shorten the war.
2. Prepare a similar address on the topic: "America is preparing to use her full strength at once."
3. Write a short composition on the theme, "Our American women are loyal and patriotic."
4. Write a spirited argument in which you show that there can be no lasting peace without victory.
5. Write a short paragraph on the topic, "The American navy is doing effective work in the Great War."
6. Write a short expository paragraph concerning the war situation in Mesopotamia and the east.
7. Give a short oral explanation of the purposes and methods of the War Trade Board.

Editorial Articles.

1. Read "Anti-Suffrage Varieties." Then write a short story in which you express the thought of the article in the form of a conversation. Your story should have a suitable introduction, and a suitable conclusion.
2. Show in what ways "The Lady and the Tiger" is a good example of satire.

Out from the First Line Trenches. By Captain David L. Keith.

1. Imagine that you are the person to whom Captain Keith wrote the letter. Write him a suitable answer.

Victory and the Road to Peace. By Newton D. Baker.

1. Write a brief of the article, writing the brief in such a way as to emphasize the point to which the article leads.

A Number of Things. By Edwin E. Slosson.

1. Here is a humorous article on an everyday subject. Write a somewhat similar article on a school subject.

Creative Chemistry. By Edwin E. Slosson.

1. Write a topical outline of the entire article. On what principles has the article been constructed?
2. Point out examples of the following: use of specific instance; allusion; personification; humor; metaphor; direct quotation; reference to authority; unusual phrasing; clearness gained by reference to the commonplace; simile.
3. Write a short composition on a technical subject, writing it in such a way that it will interest a sixth grade grammar school student.

SECTION II. LITERATURE.

Fleur-de-lis. By Harold Lowther Alcock.

1. How do you account for the exquisite beauty of the first two lines?
2. Explain the three or four metaphors in the poem.
3. What is the spirit of the poem? What is its purpose?

What the Old Leaf Said. By John Crowe.

1. In what ways does the poem resemble Tennyson's "Gareth and Lynette"?
2. Point out and explain examples of metaphor and of personification.
3. What attitude does the poem take toward life? toward death? toward purpose in life?
4. What is said concerning youth? manhood? old age? Why did the poet use metaphor?
5. Point out the most beautiful lines. In what different ways is the poem beautiful? In what ways is it optimistic?

The New Books.

1. Tell something concerning the works of the following: Poe; Wilkie Collins; Maeterlinck; Samuel Butler; Bernard Shaw.
2. Explain the following expressions: monographs; Gothic romance; were-wolves; posthumously; admirable satire; whimsy; subtle ironies; rich philosophy; handbook; compilation; a courageous, romantic, naïve story; the touch of comedy.

SECTION III. WORD STUDY.

1. Give the meaning and the derivation of every one of the following words prominent in the news of the week: torpedo, contingent, coalition, camouflage, Socialist, Reichstag, Entente, Flanders, topographical, Tammany, notorious, Chancellor, negotiations, pacifist.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. American Military Preparations—"Victory and the Road to Peace."

1. "We have mobilized our financial power, . . . our man power, . . . our industrial power." Indicate briefly how we have done each of the three.
2. "More than a million men were under arms . . . on September 1st." Classify, as far as you can, the groups into which these men are divided.
3. Discuss the various problems of organization which the War and Navy Departments have had to meet in the last six months.
4. What evidences of military and naval preparations have you seen in your own community since the declaration of war?

II. The Liberty Loan—"What Sacrifice?," "To the Wise and Otherwise," "Liberty Loan on Last Lap."

1. Sum up the arguments for buying Liberty Bonds; leaving out all considerations of patriotic duty why are these bonds a wise investment?
2. Would you advise all holders of bonds of the first issue to exchange them for bonds of the second? Why?
3. What conclusions do you draw from a comparison of the people's subscription to the second Liberty Loan in this country and to Germany's seventh war loan?

III. The Problem of City Government—"The Lady and the Tiger," "Government by Murder," "Can the Tiger Change His Stripes?"

1. From what you know of the history of Tammany Hall, is the description, "A reformed tiger that has changed his stripes," a fair one?
2. From a study of the editorial and such New York City papers as you can procure, make a summary of the issues in the present campaign and of the position taken by each of the four candidates.
3. What impression do you get of municipal conditions in Philadelphia? Can you get any additional facts which either confirm or refute the description given in the above article?
4. Compare the status of municipal politics in your own community with that which exists in New York and Philadelphia.
5. Study the anti-Tammany cartoons under "Cartoon Comment." Which makes the strongest impression on you? Why?
6. What do you know about Boss Tweed's Ring of Graft; when was it in control in New York; what were the outstanding features of its administration?

IV. Woman Suffrage—"Anti-Suffrage Varieties."

1. Make a serious statement of the anti-suffrage arguments indicated in the editorial. What is the value of stating the case as it is done in this editorial?
2. Answer each of the objections to suffrage indicated in the editorial by facts in refutation or by counter arguments if you can.

V. German Government and the War—"German Peace Terms," "Doubtful Days in Germany."

1. Name the various political parties in Germany. What is the present attitude of each of these parties toward the war?
2. It is often said that the war was forced upon Europe by a combination of the Junkers and the commercial classes in Germany. What interest had each of these classes in bringing on the war? What is the present attitude of each?
3. Do you see any political reason why Germany should continue to extend her conquests into Russia when she is being so hard prest on the western front?
4. Why are all positive proposals for peace coming from Germany at present and none of them from the Allies?

VI. Land as a Factor in Production—"Feeding the Soil."

1. Compare the economic condition of the farmers in your own neighborhood with the condition of farmers in the same neighborhood twenty or twenty-five years ago. What has brought about the change?
2. After you have examined the article "Feeding the Soil," (a) write a paragraph indicating the importance of fertilizers in agricultural production; (b) one on past, present and future sources of commercial fertilizers.
3. Read the discussion of the topic, "Land as a Factor in Production," in your [illegible] text-book. What does the last paragraph in Dr. Slosson's article add to the discussion?

Sons and Fathers Meet at Billiards
—MAN TO MAN!

Play Carom and Pocket Billiards *in your home* and rear red-blooded boys. Unite *all* members of your family in life-long comradeship. Homes need the protection of these fascinating pastimes shared in common—you owe your boys and girls your own society.

Parents who secured home tables for their young folks write us that they themselves can hardly wait each day for the "Billiard Hour."

BRUNSWICK
HOME BILLIARD TABLES

Not toys, but scientific Carom and Pocket Billiard Tables with fast Monarch cushions, accurate angles and ever-level playing beds.

Handsome designs in oak and mahogany. Regular or folding styles in sizes to fit all homes.

Easy Terms—Balls, Etc., Free

Brunswick prices range from $35 upward, according to size and design. Popular Purchase Plan lets you play while you pay—on low monthly payments.

Expert Book of 33 Carom and Pocket Games and High Class Outfit of Balls, Cues, etc., given with every Brunswick.

Send for Billiard Book Free

Learn how billiards exhilarates mind and body, aids digestion and—how it keeps boys off the street.

See the tables in attractive color reproductions and get our low price and home trial offer. All contained in our color-book, "Billiards—The Home Magnet." Send your address today without fail for free copy.

THE BRUNSWICK-BALKE-COLLENDER CO.
Dept. 54V, 623-633 S. Wabash Ave., Chicago

"Baby Grand"

DEALERS: Write for agency proposition without delay.

THE BRUNSWICK-BALKE-COLLENDER CO.
Dept. 54V, 623-633 S. Wabash Ave., Chicago

You may send me free proof of your color book—"BILLIARDS—The Home Magnet," and tell about your home trial offer.

The Independent

WITH WHICH IS INCORPORATED

HARPER'S WEEKLY

WHAT SACRIFICE?

WHAT have *you* sacrificed to help win the war?

What voluntary contribution have *you* made to our heroic task of making the world safe?

What are *you* doing that hurts, to defeat the dread menace of German militarism, German arrogance, German faithlessness, German ruthlessness?

What have *you* given of yourself or your abundance to make your nation triumphant in its glorious crusade for humanity?

What *will* you give?

Cannot you save a dollar every week for the next fifty weeks?

Buy a fifty-dollar Liberty Bond and pay for it with that dollar a week.

Can you save two dollars a week? Buy a hundred-dollar bond. Ten dollars a week? A five-hundred-dollar bond.

It may mean sacrifice. But sacrifice for a glorious cause is the finest thing in the world.

Belgium has sacrificed, France has sacrificed, England has sacrificed. Our young men in France, in the training camps and cantonments, are ready to make the supreme sacrifice and make it with a smile.

Shall those of us who cannot offer ourselves and our lives begrudge the little sacrifice that saving money by buying Liberty Bonds involves?

What will *you* save and invest on behalf of liberty, democracy, humanity?

What sacrifice will *you* make?

GERMAN PEACE TERMS

EVERY day brings confirmation of the wisdom of Wilson in drawing a distinction between the German Government and the German people. The incredulity and ridicule which this idea at first aroused in England and even in America are dying away in face of the repeated proofs of a popular movement to force the Government to relinquish its designs of conquest and consent to make peace on more moderate terms. On the last Sunday in September an outdoor demonstration in favor of peace without annexations was held in Frankfort-on-the-Main and other cities in which over fifty thousand persons took part. The most significant thing about these demonstrations is that they are held under the joint auspices of two opposing political parties, the Socialist party and the Clerical party. These parties have hitherto hated and distrusted each other. The Socialists and other radical parties of the Left regarded the Clericals as bigoted and reactionary opponents of all progress. On the other hand the Clerical, Catholic or Center party looked upon the Socialist party as an atheistical and pestilential faction, enemies alike of Church and State. The Government has for the last fifty years kept its autocratic power by balancing between these opposing parties, which together command a large majority of the Reichstag.

But on July 19, the day when the administration changed and Michaelis replaced Bethmann-Hollweg as Imperial Chancellor, the Left and Center parties of the Reichstag forgot their ancient enmity and came together in support of a peace resolution containing the following clauses:

THE CLERICAL AND SOCIALIST PEACE TERMS

Germany took up arms in defense of its liberty and independence and for the integrity of its territories. The Reichstag labors for peace and a mutual understanding and lasting reconciliation among the nations. Forced acquisitions of territory and political, economic and financial violations are incompatible with such a peace. The Reichstag rejects all plans aiming at an economic blockade and the stirring up of enmity among the peoples after the war. The freedom of the seas must be assured. Only an economic peace can prepare the ground for the friendly association of the peoples. The Reichstag will energetically promote the creation of international juridical organizations.

This resolution was adopted in the Reichstag by a vote of 214 to 116. The incoming Chancellor did not explicitly accept the terms of the Reichstag resolution, but in his opening speech he profest similar aims and concluded by saying: "These aims may be attained within the limits of your resolution as I interpret it." Later, in his reply to the Pope, he affirmed his desire "in accordance with his Holiness' desires and the peace resolution of the Reichstag on July 19 to find a practical basis for a just and lasting peace."

These vague endorsements naturally did satisfy the Socialist and Clerical majority, while on the other hand they brought down upon the new Chancellor the anger of the Pan-German or imperialist party. But again the Reichstag resolutions, tho showing a considerable advance toward reasonable peace terms, did not go far enough in this direction to satisfy the pacifist or independent faction of the Socialist party. In that memorable session of July 19, Hugo Haase, the spokesman of the Independent Social Democrats, vigorously criticized the majority resolution because it failed to mention "the one word that can draw a clear line between peace and imperialism—the right of self-determination of all peoples." Haase proposed instead the following resolution, which was tabled:

PEACE TERMS OF THE INDEPENDENT SOCIALISTS

The Reichstag seeks a peace without annexations of any kind or indemnities, based on the right of self-determination of all peoples. It demands the restoration of Belgium and compensation for all wrongs done to her.

The Reichstag demands the immediate initiation of peace negotiations on the basis of this program: an international agreement for general disarmament, freedom of international trade as well as unrestricted international intercourse; an international agreement for the protection of workmen from exploitation; recognition

CARTOON COMMENT

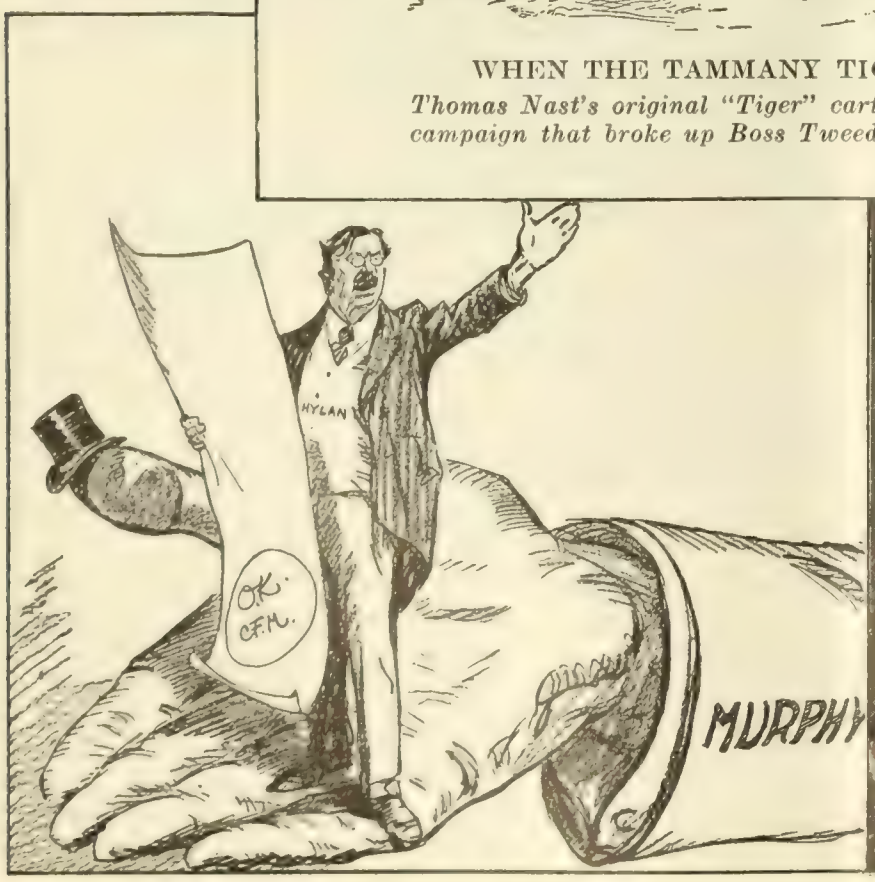
CAN THE TIGER CHANGE HIS STRIPES?

THE PUPPET CANDIDATE

Hylan makes his little speech and does the appropriate stunts as a candidate for mayor, while Hearst and Murphy pull the strings down where the public can't see them. The cartoon below, by Kirby in the New York "World" suggests somewhat the same association of boss and candidate

TAMMANY

Tammany is getting hungry; the administration of New York City under Mayor Mitchel has brought lean years to those wont to live on favoritism and graft. And in the elections this fall Tammany sees a chance to reinstate itself. The Republican party has nominated former State Senator William M. Bennett; Mayor Mitchel is running independently, on a record of clean and efficient administration that ought to insure his reëlection. The editorial on the opposite page will tell you more about it



WHEN THE TAMMANY TIGER FIRST BROKE LOOSE

Thomas Nast's original "Tiger" cartoon, first of his famous series in the campaign that broke up Boss Tweed's Ring of Graft in New York City

"LA VILLE, C'EST MURPHY"

The Big Boss of New York, with Hylan sneaking in behind the tiger robe, is cleverly caricatured by Cesare in the New York Evening "Post." Below, the Public Welfare Committee's appeal to the voters to "remove this menace from the greatest city on earth"

of the equal rights for all the inhabitants of any state, irrespective of sex, race, speech or religion; protection of national minorities; an international tribunal for compulsory arbitration.

For the execution of this peace program and for the attainment of peace, the immediate raising of the state of siege is the most urgent pre-requisite. Equally indispensable is the complete democratization of the whole constitution and government of the empire and its constituent states, which can only find a final and sure issue in the creation of the social republic.

Besides these pacifistic movements in the Clerical and Socialist parties there are also active in Germany various organizations working primarily for peace. Four of these, the German Peace Society, the New Fatherland League, the National Women's Committee for a Lasting Peace and the People's Rights Committee, have united upon the following as the essentials of a just and durable peace:

THE TERMS OF THE PEACE PARTIES

(1) The recognition of the right of national minorities to equality of treatment in politics, trade and culture.

(2) The promotion, as far as possible, of unfettered international commerce, free trade and the "open door."

(3) The prevention of the exhausting and dangerous competition in armaments by an international agreement for a general disarmament.

What is the real meaning of these well-sounding words and how much confidence can be placed in them we should not presume to say. Doubtless if it came to putting them in concrete terms it would be found that German interpretation and application of them would be widely different from those of the Allies. But on the other hand we cannot dismiss them altogether as a hypocritical reversal of profession under threat of defeat. It may well be, as the Allied press is disposed to think, that the Government is permitting these pacific manifestations as a form of *camouflage* to cover some treacherous scheme or new aggression. But even assuming that, it is reasonable to suppose that most of the supporters of these resolutions are sincere because, as we all know, they are not new principles but the same as were profest by the same people long before the war. The Social Democrats of Germany have always opposed monarchy and militarism and altho they have supported both during the war they doubtless hate them worse than ever by this time. In the election of 1912 the Social Democrats polled four and a quarter million votes and sent 110 representatives to the Reichstag. They would have had a much larger representation if the country had not been gerrymandered in the interests of autocracy. Herr Erzberger, leader of the Centrists, declares that the new coalition of Center and Left will be joined by the Liberals when the Reichstag reconvenes December 5 and will compel the Government to accept their peace terms.

The German Peace Society, unlike some of the American peace societies, regards it as its duty to try to stop wars as well as to prevent them and has made energetic protests against the annexation plans of the Pan-Germans. The founder of the German Peace Society, Dr. Alfred Fried, recipient of the Nobel Peace Prize in 1911, moved from Berlin to Switzerland when the war broke out so he could have a freer hand and has there continued the publication of his journal, *Friedenswarte* (The Watch Tower of Peace). A volume of his recent writings, "The Restoration of Europe," was published last year in America. In April, 1915, a number of leading theologians met in Berlin and formed a new peace society, the Friendly Circle (*Freundeskreis*). The German branch of the World Alliance publishes a quarterly of wide circulation, The Oak (*Die Eiche*), which quotes such conciliatory utterances as can be found in the Allied press to counteract the bitter utterances which alone are quoted by the German press in general. Before the war the most powerful and popular of the anti-militarist novels, such as "Down With Your Arms!" by Baroness von Suttner and "The Story of a Little Garrison," were written in German, and since those who wrote and those who read such literature were persecuted for it we cannot doubt their sincerity. But no fiction could equal the actual horrors of army life as they have been experienced in the present war, so the anti-militarist sentiment must have been intensified and extended altho it is now concealed by the censorship and the flaming patriotism that has swept over the land.

Considering the repression of the press which has always prevailed in Germany and the disposition in every country to prevent the free expression of opinions antagonistic to a war in which the country is engaged, it is surprizing that there should have been so many manifestations of a disposition to renounce national ambitions and make peace on reasonable terms. There is, of course, no way of knowing whether the great body of the German people incline toward the Pan-German program or toward such more moderate views as we have quoted and referred to, but, whether the pacifically disposed faction be large or small, it is all we have to work with if we are to follow the President's policy of making a permanent peace with the German people, and it is therefore important that we should know what they have to say.

THE LADY AND THE TIGER

ONCE upon a time a fair maiden of Gotham was chained to a rock to await the fiery breath and lacerating jaws of a dragon. Who came to her rescue? A gallant knight on horseback? A fairy prince? No. A tiger, a reformed tiger that had changed his stripes and resolved to lead a better life. You don't believe this story? Neither do we!

The wise men thus interpret the ancient legend. The maiden in question was the City of New York. The dragon was Corporate Wealth. The chivalrous tiger was Tammany. The Tammany candidate for Mayor is actually basing his campaign upon this fairy tale. We learn that Mayor Mitchel for some mysterious reason resolved to turn the city administration over to the Trusts. To effect this nefarious purpose he hired a number of Experts (who are, if possible, even wickeder than the Trusts) and induced them to recommend the Board of Education to sell the schools to Rockefeller. What a retired oil magnate wanted with a lot of schools is a matter of conjecture. When Rockefeller gained possession of the schools he introduced a devilish device known as the Gary system which was warranted, so Candidate Hylan gravely assures us, to prevent any poor child from becoming a poet or a corporation lawyer when he grows up. So far the matter is plain enough. But now begins the miracle. Tammany Hall, which in its days of office grew fat on contracts and was on the best of terms with all sorts of private corporations, was suddenly moved with compunction. It exposed the sinister intrigues of the reformers and demanded municipal ownership, the extinction of Corporate Wealth, and the restoration of the good old days when there were no wicked Experts and the children were never bothered with these new-fangled physical exercizes in the schools. And we are expected to believe that, once restored to power, Tammany will refuse to renew any of its old-time friendships with speculators, contractors, public service corporations and others of the Wicked Rich.

Dear voter, do you believe in fairies? Of course you do. But do you believe in tigers?

PURE DEMOCRACY

THE good citizens of Massachusetts now have a unique opportunity to show what kind of a democracy America is going to make the world safe for.

The Constitutional Convention is nearing its close and the great issue before it is the adoption or rejection of the Initiative and Referendum. It is needless to say that all the forces of reaction are rallying against this measure of pure democracy.

We are constantly paying tribute to the men who founded our government. But a government is not a mechanical

framework that once built runs itself. Accordingly the Reformer has appeared, who in crises has the courage and statesmanship to shatter an outworn government and build a new one to fit new needs. The Reformer shares honors with the Founder.

But the men in whose hands the success of this Initiative Referendum measure lies have a chance to do a service even greater than that of the Founder or Reformer, for they may introduce into our laws a measure that will make the government so flexible and so responsive to the needs of each succeeding generation that all progress will come gradually, at the time it is most needed, and not with that violent, inefficient agitation that goes with the periodic outbreaks of disturbing reform movements. We fully realize that the initiative and referendum are only means to ends. Experience shows that they will not do as much as their friends expect or their enemies fear. But the people have never yet voted to reject them when the opportunity has been presented, and in the states and nations where they are in operation, they have never been repealed.

We recommend to the gentlemen of the Constitutional Convention of Massachusetts that the people be given a chance to vote on this question. We suspect they can be trusted to vote for their best interests.

ANTI-SUFFRAGE VARIETIES

THE strange human species known as the Anti-Suffragist has hitherto defied every attempt at classification, partly by the ambiguity of its language and partly by the profound absence of any real reason for its existence. The zoölogical editor of The Independent has at last been able, however, to divide the species into four general varieties, and few if any specimens have been discovered which do not conform to at least one of these types.

Most numerous is the Anti-Suffragist Traditional. This type includes the majority of the men and at least nine-tenths of the women who are opponents of the reform. The man says: "Who ever heard of women voting?" The woman echoes him thus: "I have never voted and I am sure I wouldn't like it." She is ignorant, poor lady, of the fact that she has really been voting all her life: in the family council, in the church meeting, in the literary or social club, even in the anti-suffrage society. The Anti-Suffragist Traditional is not principled against women's voting; he (or she) is simply a victim of the fear of the unknown and opposes woman suffrage exactly as he would oppose any other change from the act of creation down. Once political equality is established this variety conforms contentedly and would even resent any change in the new system.

Less common but more active in his habits is the Anti-Suffragist Accidental, a type with many sub-varieties. In this class is the man or woman who thinks that no woman in the world should vote because one of the sex broke a window in London and another stood at a gate in Washington. The Anti-Suffragist Accidental once heard a woman make a speech from a soap-box that contained a remark to which he objected, or he read in a paper that all was not well in Colorado where the women vote, or he discovered that one of the suffrage leaders was a Socialist or a pacifist or something. On pretexts as frail as these thousands of opponents of suffrage rest their case.

The Anti-Suffragist Incidental is worthy of more respect. He opposes equal suffrage because it is inconsistent with some pet theory which indirectly involves the suffrage issue. He sometimes holds, for instance, that only soldiers should vote, or that each household should cast but one vote, or that too many people vote anyway and an illogical restriction is better than none, or that all government and voting should be abolished. The consistent anarchist is necessarily an anti-suffragist. The Anti-Suffragist Incidental is always wrong-headed but he is often clever and, from his own standpoint, logical. Within this class must also be included many persons with eccentric views on the nature of woman; that women are traditionally conservative and opponents of reform, that women are radical and unbalanced, that women would corrupt politics because they are naturally tricky and unscrupulous (you remember Kipling's "Female of the Species"?), or that politics would corrupt women because it is abstention from degrading political activity that has made women more idealistic and conscientious than men.

Last but not least is the Anti-Suffragist Sinister. There are not many of this type in existence, but they are very active, very cunning, very liberal in contributing to anti-suffrage funds and very regular in their attendance at the ballot box. Here belong the saloon keepers, gamblers, red light district men and gangsters who fear the entrance of women into politics. Unlike all other types of anti-suffragist, the Anti-Suffragist Sinister knows exactly what he is about and just what he wants. This enables him to make effective use of his better educated and more respectable allies and turn their efforts to his own purposes.

THAT SCRAP OF PAPER

ONE of our readers has reminded us that the notorious phrase "a scrap of paper" was not first used in respect to the treaty by which Germany guaranteed the neutrality of Belgium. Apparently it represents an old Prussian tradition. On referring, at her suggestion, to our file of *Harper's Weekly* we found an article sketching the career of Emperor William I, the first ruler of the German Empire, in the issue of March 26, 1887. From it we learned, or recalled to our memory, the fact that when William and the Prussian Diet quarreled over the budget of 1862 this monarch disregarded the refusal of the people's representatives to grant appropriations and spent the money without their consent. He was, of course, reproached with this defiance of law, but that did not worry a ruler so intimately in the confidence of the "good old German God." He replied that he would do his duty as he saw it without regard to "scraps of paper called constitutions."

The German people of that generation were not so thoroly broken to the yoke as they are today and there is no telling how they might have answered the tearing up of that particular scrap of paper if a man named Bismarck had not come to the rescue of King William. By his brilliant foreign policy Bismarck, in the course of less than a decade, made the King of Prussia the German Emperor, distracted the attention of the people wholly from domestic politics to wars of conquest and established the principle that, whenever the will of the ruler conflicted with the terms of a popular constitution, the constitution must go to the waste-basket. The dishonored scrap of paper of 1862 fastened despotism on Germany and so made possible the Great War and the scrap of paper incident of 1914.

TO THE WISE AND OTHERWISE

TO win the war, our Government needs money. And what is more, the Government will get it.

But what the Government cannot get by voluntary loans, it will get by taxation. From this alternative there is no escape.

Those who subscribe to the Liberty Loan not only will have performed a patriotic duty, but, at the end of the war, they will possess as many dollars in bonds as they have subscribed dollars for the loan.

If this loan is not fully subscribed the difference must be raised by taxation, and those who have not subscribed must in the end pay their money to the Government in taxes along with everybody else and have no securities to show for it.

A word to the wise is unnecessary.

THE STORY OF THE WEEK

American Naval Losses Vice-Admiral Sims has notified the Navy Department that on October 16 an American destroyer was attacked by a German submarine while on patrol duty in European waters. The explosion of the torpedo injured the ship, killed a gunner's mate and injured five other men, but the destroyer was able to reach port. This is the first time in the course of the war that an American naval vessel has been hit by the enemy. On several occasions, however, naval gun crews on armored merchant ships have been killed or wounded in conflicts with German U-boats.

On the following day the Germans struck another blow at the American navy. The American transport "Antilles," on its homeward voyage, encountered a German submarine and was torpedoed. The submarine that fired the torpedo was not seen from the deck and the blow was delivered most effectively abreast of the engine room of the ship. Within five minutes the "Antilles" was submerged. Of 237 persons on board at the time 167 were saved. Only thirty-three of the enlisted men of the army were on the ship and seventeen of these were rescued. The "Antilles" was accompanied at the time by a convoy of patrol vessels, an escort which normally affords complete protection.

The silent effectiveness of the patrol work done by the destroyers of the United States and of the Entente Allies is proved by the decrease in the number of vessels sunk in the last three months as compared with the earlier months of unrestricted submarine warfare. During the week ending October 14, twelve British ships of more than 1600 tons and six smaller vessels fell victims to German mines and torpedoes. This is a decrease of two in the number of large ships lost and an increase of four in the number of small ships as compared with the report for the week ending October 7. The U-boat warfare in the Mediterranean is not yet at an end. Italy lost four ships during the week ending October 14.

It is rumored that Germany will soon proclaim a zone of unrestricted submarine warfare near the coasts of the United States, Canada and Cuba. The task of maintaining a suboceanic blockade so far from German home ports and over so vast an area will be a most difficult one, but it is pointed out that, since the essential supplies of the British and French are now largely imported from America, a blockade in the western Atlantic will be also in effect a blockade of France and Great Britain.

THE GREAT WAR

October 15—Eighteen British vessels sunk during past week. Germans take Arensburg on Oesel Island.

October 16—German Kaiser visits Constantinople. Polish regency chosen. American destroyer damaged by German U-boat.

October 17—Germans advance on Oesel Island. American transport "Antilles" sunk on home voyage.

October 18—Russian battleship sunk. Germans occupy Moon Island.

October 19—Russian Government announces removal of capital to Moscow. Evacuation of Reval begun.

October 20—French wreck five Zeppelin raiders. Germans sink two British destroyers off Shetland Islands.

October 21—Russian fleet escapes from Moon Sound. British shell Ostend.

Liberty Loan on Last Lap By the end of the third week of the Liberty Loan campaign subscriptions amounting to about $1,200,000,000 had been officially reported to the Treasury Department by the various local banks, but since many reports were delayed the actual amount that had at that time been subscribed was estimated at nearly $2,000,000,000. This rate of subscription would not have realized the desired sum in the time allowed for the bond sales, but a special effort was made during the last week of the loan campaign, to reach all the people who had not yet bought bonds. On October 12, President Wilson issued a proclamation designating October 24 as Liberty Day and requesting that "on the afternoon of that day patriotic meetings be held in every city, town and hamlet." Many thousands of volunteer workers undertook to give the utmost possible publicity to the second Liberty Loan. The first Liberty Loan campaign was even slower in getting started and yet realized an oversubscription of more than fifty per cent by a flood of subscriptions during the last week, and a similar result was expected for the second. A $400,000,000 issue of short-term Treasury certificates of indebtedness, the largest ever offered to the public, was oversubscribed early in October.

In the meantime, Germany realized

© *Underwood & Underwood*

THE FIRST AMERICAN TRANSPORT SUNK

The "Antilles," homeward bound, was torpedoed and sunk by an unseen submarine on October 17. Of the 237 persons on board 167 were saved This photograph of the "Antilles" was taken in a French port at the end of her first crossing with American troops

12,430,000,000 marks ($3,107,500,000) on the latest of seven war loans. During the course of the Great War the German Government has raised 72,411,000,000 marks ($18,102,750,000) by loans.

Nearly all of this sum has been subscribed by the German people, as there have been few foreign countries where German bonds have been able to find a market.

The War in the Baltic The outstanding military event of the week has been the German occupation of the group of Baltic islands which lies between the Gulf of Finland and the Gulf of Riga just off the Esthonian coast. Oesel Island, the largest of the group, has been the scene of no little fighting. On October 15 the Germans captured Arensburg, the chief city of Oesel Island, and isolated a Russian force on the Svorb peninsula in the extreme south of the island. This body of men, cut off from all hope of succor, was closely invested by the Germans by land and sea and finally forced to surrender. The Germans claim that on Oesel Island they captured ten thousand prisoners and fifty cannon. The Germans occupied also Runo Island in the Gulf of Riga, Moon Island between Oesel Island and the mainland, and Dagö Island.

The occupation of the Baltic islands was not effected without a struggle for supremacy between the Russian and the German fleets. In one skirmish the Germans lost two torpedo boats and the Russians one. In a fight between battleships the Russians found themselves outranged by the guns of the enemy and before they could withdraw the Germans battered the "Slava" till the crew was forced to abandon the vessel and let her sink. The lost warship was a vessel of 13,500 tons, dating back to the period of the Russo-Japanese War. At least fifty-five German war vessels of various classes are said to have taken part in the conquest of the Baltic Islands.

The naval successes of the Germans are not surprizing when the superior tonnage of the German fleet is taken into consideration. Germany has dominated the Baltic for the greater part of the war, and, in spite of mutinies and sullen discontent, it is probable that discipline is better kept in the German fleet than in the Russian. Premier Kerensky, indeed, felt it necessary to address a special appeal to the Russian sailors warning them that their lax discipline had in effect made them involuntary allies of the enemy. What seems to require explanation is why the British, who have the largest navy in the world and who could draw upon the fleets of their numerous allies to reinforce their blockade in the North Sea, permitted Germany to gain and hold the supremacy of the Baltic. The British papers are now criticizing the British Government for its negligence in the matter, but there is a possible explanation in the ease with which a numerically inferior fleet, such as the German, could hold the narrow entrance to the Baltic by means of mines, submarines and torpedo boats.

PETROGRAD IN DANGER

While a German army, whose present position is indicated by the heavy black line east of Riga, is advancing north from the Dvina River, another army has occupied Oesel Island and the smaller islands in its neighborhood. These islands may be used as bases for a march on Petrograd by way of Esthonia or for a naval attack by way of the Gulf of Finland

What is the Russian Capital? Twice during the Great War the Russian capital has been changed; the first time in name only, from St. Petersburg to Petrograd, but now a real change has been determined upon. The Russian Government announced on October 19 that Moscow would soon be made the new capital. The transfer will probably be completed by the middle of November. Of course, there is an obvious reason for the change of capital in the recent German successes at Riga and in the Baltic. It is by no means certain that the Germans intend to advance as far into the interior of northern Russia as Petrograd, but if they should do so it is important to the Russian cause that the men who are charged with the administration of the affairs of the nation be in some safer city. During the first year of the Great War, the French Government moved from Paris to Bordeaux. Paris was not taken by the Germans and the French Government was soon restored to its old capital, but every one agreed that the transfer of the seat of government had been a reasonable precaution. The capitals of Belgium, Serbia, Montenegro and Rumania are still in German hands, and the rulers of these nations are occupying temporary headquarters in other places.

Nemesis Overtakes Zeppelin Raiders On the night of October 19 a fleet of German Zeppelins raided London. They approached with muffled engines and succeeded in dropping a number of bombs on the city before they were driven away. Twenty-seven persons were killed and fifty-three injured by the exploding bombs.

Altho none of the Zeppelin airships came to grief during the raid on England, as soon as the news of their presence over France was known a general warning was sent out and airplanes and anti-aircraft gunners awaited their approach with grim expectation. Five German airships during the course of the night were destroyed or captured by the French, and two more were compelled to land. No bombs were dropt in France by the Zeppelins, which were practically at the mercy of the French gunners and airmen from the moment they crost above the French coast. For several months past the Zeppelin has been little used by the Germans in making aerial raids, as it affords altogether too big and too costly a target. The airplane seems better adapted to the work and has been freely employed by the Germans in their recent attacks on England.

HOW FRANCE IS BEING FED

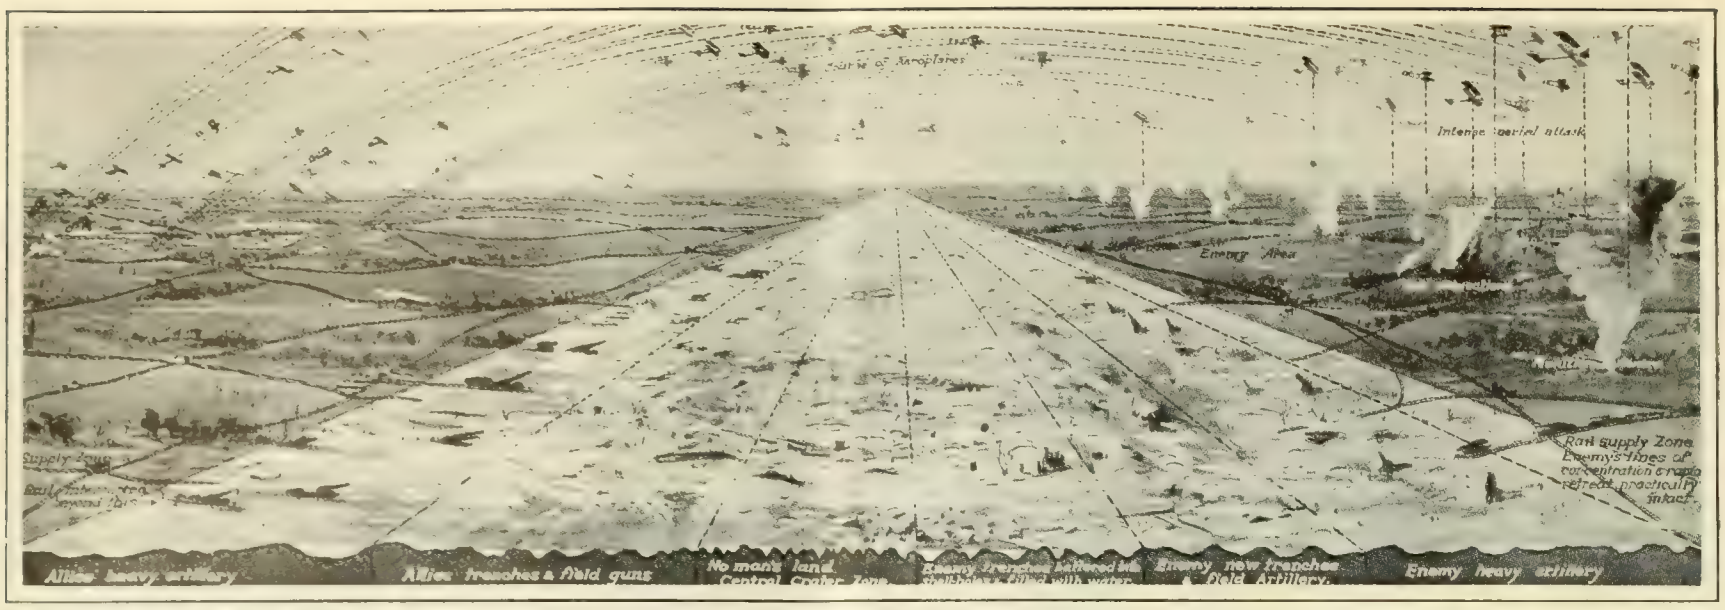
More wheat is one of the crying needs in France these days—on the United States falls a big responsibility in meeting it. But help comes, too, from other sources. Witness these stores of wheat being collected at Gibraltar and shipped to France

The War in East Africa

In only one part of the world is a campaign now being carried on apart from the continuous battlefield which stretches from Flanders to Mesopotamia. This is in German East Africa, the last of the German overseas colonies, where an obstinate little force of Germans and natives have for more than three years resisted the African forces of the British, French, Belgians and Portuguese. Very little is known about the campaign in this distant corner of the world, and an important British dispatch from General Northey, dated March 10, 1917, was first made public only a few days ago. From it we learn of a British invasion of the German colony in 1916. By the end of July the region between Lakes Tanganyika and Nyasa, an area of "20,000 square miles of very rich and fertile country," was in British hands. There were a number of small battles with the enemy, and during the month of October alone the Germans lost over six hundred soldiers dead on the field or surrendered to the British. Several cannon and machine guns were captured. Both Germans and British have complained of the treatment of captives taken by the opposing armies in the East African campaign.

There can be little question that the few German regiments in East Africa would long ago have been annihilated by superior forces if the campaign had been fought in a land of good roads and railroads. So far as can be learned, the Germans have usually come out second best in the conflicts in East Africa, but the nature of the country has enabled them to avoid battle for months at a time. As General Northey puts the case: "None of the roads are more than improved native paths, and the country is all hilly and mountainous, much of it being dense bush and very unhealthy. It must also be remembered that, up to our own frontier, all supplies had to be brought either thru Rhodesia, some 600 miles from the nearest railway, by native porters, or from Chinde up the Zambesi, thru Nyasaland and up the lake, a distance of 700 miles."

Sultan Welcomes Kaiser



The German Kaiser, who earned as a young man the nickname of "der Reise Kaiser" (the travel-Emperor), has now gone to Turkey. On October 16 he was welcomed at Constantinople by the Sultan, the Imperial Princes, the Grand Vizier, Ministers of State, and other prominent Turkish dignitaries. After a visit to the city, he inspected the fortifications on the Dardanelles. The Kaiser's visit at the present time is worthy of note, because of the military situation in the Near East. The recent victory of the British at Ramadie in Mesopotamia seems to open the way for an advance on Mosul, an important Turkish city rather more than eighty miles north of the present British positions, and some fifty miles south of a Russian army. Should Mosul be captured, the British and Russian armies would be able to join forces and together dominate the entire eastern frontier of Asiatic Turkey. Hitherto the inactivity of the Russians has prevented the British from extending their lines beyond Samara.

Egypt has a new Khedive. Prince Fuan has been selected by the British Government as successor to his brother, Hussein Kemal, who died on October 9. The political importance of the Egyptian situation is considerable, as Egypt is a British protectorate inhabited largely by Mohammedans and bordering on the Ottoman Empire. Altho the Egyptian Khedive is a nominal ruler, he is in reality "camouflage" for the British administration of the country. Hussein Kemal's predecessor was driven from power for siding with Germany and Turkey, and since then the native government has not attempted to oppose British overlordship. In fact, the British army is now using Egypt as a base for the invasion of Turkey by way of Palestine. An army of Arabian rebels, allied with the British, now holds the railroad line east of the Red Sea as far north as the city of Ma'an, which is about a hundred miles south of Jerusalem.

Doubtful Days in Germany

At the very moment when the German navy was winning the greatest victory that has yet fallen to its share, defeating Russian warships in the Baltic and facilitating the landing of an army on Russian soil, came the news of fresh mutinies of German sailors. From Dutch sources it was learned that German soldiers in the Belgian port of Ostend had refused to go on board submarines when ordered to do so and had thrown their commanding officer into the sea. Thirty mutineers were removed in handcuffs to Bruges for trial by court martial. By way of Switzerland another report came telling of riots in the ports of Pola and Fiume. The Austrian sailors killed some of their officers and also fought with German submarine crews who were stationed with them. These mutinies, taken in connection with the earlier outbreak at Wilhelmshaven, show an unexpected degree of demoralization on the part of the German naval forces.

The political results of the troubles in the fleet have thus far been of more importance than their military effect. Vice-Admiral von Capelle's attempt to place the blame for the Wilhelmshaven mutiny on the Independent Socialists led to a storm of criticism in the Reichstag that compelled his resignation and even endangers the position of Chancellor Michaelis. The German Socialist majority, which has hitherto supported the war, now threatens to make common cause with the Independent Socialists to force Michaelis out of office by voting against the new war credits which will be demanded of the Reichstag in December. Another reason for Socialist resentment is that no political reforms have been granted, in spite of the vague promises of the Government, and even the joint conference committee of representatives from the Reichstag and the Bundesrat has been abandoned. The food situation also is causing no little apprehension. The total wheat harvest is 40 per cent less than in normal years and other crops have done even more poorly. Almost complete reliance is placed on the potato harvest. On the other hand, the German Government can still point to spectacular victories in Russia to distract the people's attention from the

AN AEROPLANE BRIDGE

The difficulty of establishing any sort of communication or of advancing over territory broken by the terrific artillery bombardment has been one of the big problems on the western front. And the answer, as frequently happens, seems to be aeroplanes. This diagram, drawn by G. Bron, illustrates the enormous possibilities of their use over No Man's Land to continually worry the enemy—"no broken bridge should be allowed to be repaired, no wrecked railway suffered to become active again. There must be permanent and maintained destructiveness"

retreat in Flanders, short harvests, naval mutinies and the political conflicts in the Reichstag.

Polish Independence Proclaimed

The Russian Minister of Foreign Affairs, M. Terestchenko, has made the most important Russian declaration of war aims since the formulation of the principle "no annexations or indemnities" immediately after the revolution. He declared at a meeting held in observance of the centenary of the death of Kosciusko that the Entente Powers favored "the independence of an indivisible Poland." Previous to the revolution, the Russian Government insisted that the Russian Czar should also be King of Poland, altho it was willing that the different parts of Poland should be united and that the country should have its own constitution and elect most of its own officials. But the Russian Republic, apparently, does not insist upon any political connection whatever with Poland. Very possibly the Russian people might be glad to have a close federal relation with their Slavic brothers to the west, but the fact that at the present time no Russian army occupies any part of the lands which are predominantly Polish in population has reconciled the Russians to any solution of the Polish problem which does not involve the Germanization of the country.

The German Kaiser and the Austrian Emperor after consultation have agreed upon the membership of the Council of Regency of the Kingdom of Poland. The three members of this council are Alexander von Laeksoki, Archbishop of Warsaw; Prince Lubomirski, the mayor of Warsaw, and Josef Honostrowski, a wealthy landowner. All three are members of the Polish aristocracy, but while the war lasts they will be mere agents of the military authorities of the Central Powers. A greater measure of home rule is promised for Russian and Austrian Poland after the war, but the Central Powers will concede neither independence nor national unity. By the present plan, Prussian Poland will remain a mere German province and the other two-thirds of the nation will be united under the Austrian crown. What the Polish people think about the rival programs of the two warring alliances can hardly be open to question, and the recent organization of a considerable volunteer force of Poles on the French front is evidence of Polish enthusiasm for the cause of the Entente Allies, but, on the other hand, as the Central Powers now occupy the territory in question, they alone are able to put their plan into practical effect while the fortune of war remains what it is.

Peace Without Victory

The fact that some of the Entente Allies did not permit the representation of their countries at the Stockholm Socialist Conference has not prevented the organizing committee of the Conference from stating the peace basis of international Socialism. The manifesto of the committee declares that experience has shown war to be a futile method of solving political questions, and urges that the peace which will conclude the war should be based on agreement rather than military victory. The formula of peace "without annexations or indemnities" is indorsed. It is stipulated, however, that fines levied on occupied territories in contravention of international law should be repaid and that restoration of territories laid waste by war may be effected thru an international fund to which all belligerents would contribute. "No annexations" is not taken to imply no territorial changes, for Balkan boundaries are to be reorganized on the basis of nationality and the destiny of Alsace-Lorraine settled by a plebiscite taken at some fixt date after the peace settlement. There is also to be an independent Poland, but Prussian Poland is not, apparently, to obtain more than local autonomy. Bohemia, Finland, Ireland, and the Italian districts of Austria are to have home rule. A special indemnity is allowed in the case of Belgium; but one German contention, that Flanders should have a separate administration from the Walloon provinces, is granted. All nations should adopt the principles of international federation, compulsory arbitration, and universal disarmament. Taken as a whole, this peace basis is slightly favorable to the Allies, altho it does not go further than many Austrians and Germans are now willing to follow. At many points it shows a striking similarity to the Pope's peace message.

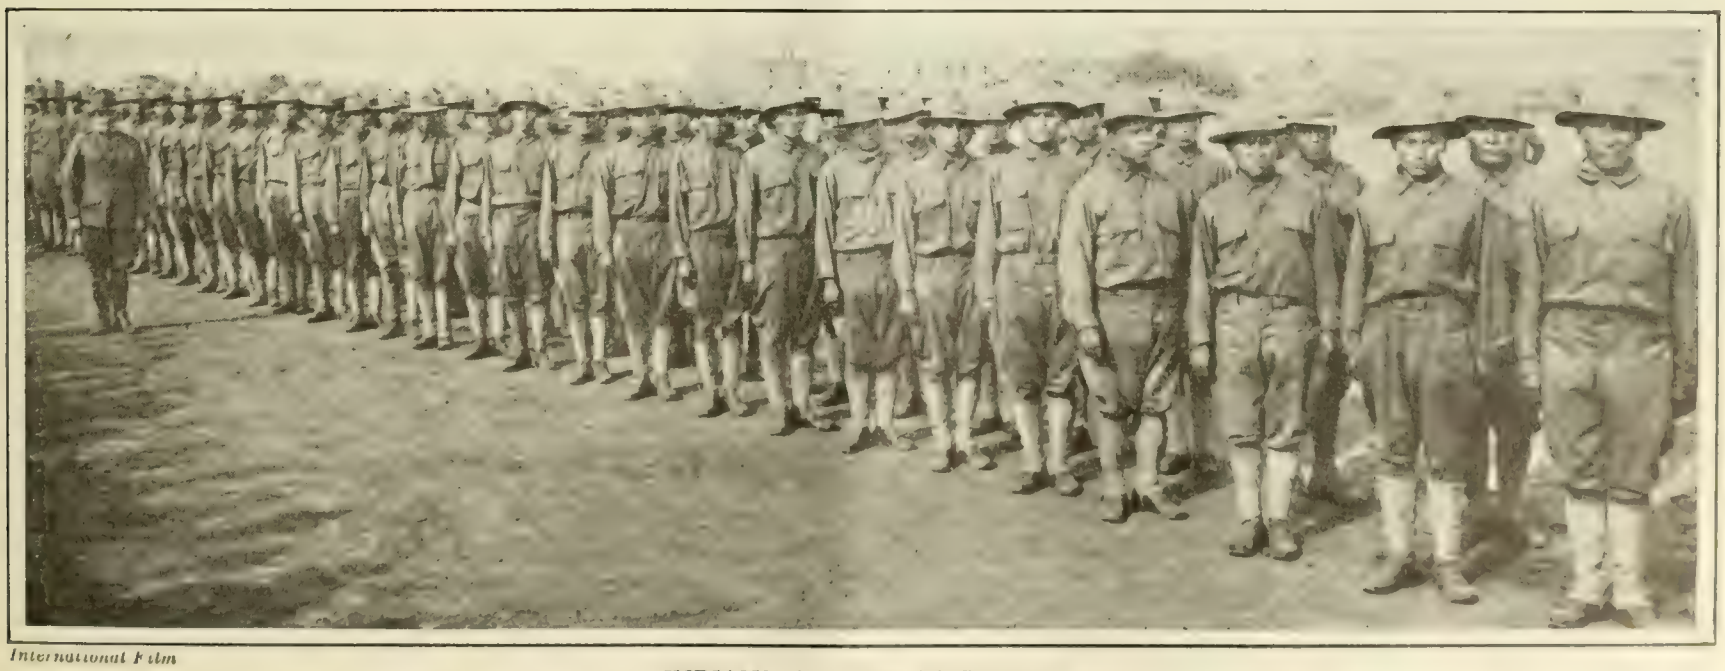
Dutch Threaten Commercial Reprisals

The effect of the licensing system of the Entente Allies on Dutch public opinion has naturally been a most unfortunate one. The Dutch greatly resent the detention of their ships in American ports, and none the less so that the export license system is admitted even by pro-German papers in The Netherlands to be perfectly in accordance with international law. Julius Van der Wielen, head of the Dutch commission now in the United States, has declared that if it is impossible to get grain from America the farmers will be compelled to kill off a large part of their live stock and sell it where they can, even to Germany. What has angered the Dutch particularly is the recent restriction imposed by Great Britain on cable communication with The Netherlands. In retaliation, it was said, Dutch shipping to England might be stopped. The British action in preventing the transmission of commercial cablegrams to Holland was itself a retaliatory measure adopted until such time as the Dutch prevented the transit of sand, gravel and scrap metal from Germany to Belgium by way of Holland. The British claimed that these materials were used for strictly military purposes. The Dutch replied that when satisfactory proof of this was forthcoming the traffic would be stopped, but that until such proof was given the Government would not interfere.

Canada's Union Government

Premier Borden of the Dominion of Canada has completed the reorganization of his "win-the-war" coalition cabinet. The Liberals hold five of the ten posts in the new administration, but the section of the Liberal Party which is still loyal to its old leader, Sir Wilfrid Laurier, continues in opposition and refuses to be represented in the Dominion Cabinet. Premier Borden has announced the political platform on which he will stand during the approaching general elec-

tion. The most important issue is the principle of compulsory military service. The Borden ministry and all the Conservatives and Liberals who support it, favor the immediate enforcement of the draft law without any compromise or concession to its opponents. Other recommendations of the platform include civil service reform, restriction of war profits, extension of the franchise to women, establishment of Government steamship lines and a program of railroad development. Sir Wilfrid Laurier, it is understood, will not oppose the enforcement of the draft law, but he will demand a popular referendum before another contingent of drafted men is called to the colors. He will have behind him the French Canadian population of Quebec, but his chances for overthrowing the Borden ministry seem slight in view of the fact that so many of the Liberal leaders from other provinces have given their support to the coalition ministry.



Wilson Picks War Trade Board On October 14, President Wilson chose a new War Trade Board with more extensive powers than the Exports Administrative Board which it displaces. Vance McCormick, chairman of the old board, retains his position. Other members of the War Trade Board are Dr. Alonzo Taylor, Thomas D. Jones, Beaver White, and Frank C. Munson. Under the provisions of the Trading with the Enemy Act all commercial relations between a citizen of the United States and any person residing in any part of the world occupied by the military forces of an enemy nation or an ally of such nation are forbidden under severe penalties. Special license may, however, be issued thru the War Trade Board authorizing persons to transact business with enemies or their allies. The War Trade Board is also empowered to license business concerns, other than insurance companies, owned by enemies or their allies to do business within the United States and to "assume or use other names than those by which they were known at the beginning of the war." The President's order also establishes a War Trade Council, consisting of the Secretaries of State, Treasury, Agriculture, and Commerce, the Food Administrator and the Chairman of the Shipping Board. This body will not have charge of any of the details of administration handled by the War Trade Board, but will advise the latter on questions of policy.

President Wilson's proclamation makes effective other provisions of the Trading with the Enemy Act. The Secretary of the Treasury is empowered to regulate the exportation of gold, silver and other currency; to control the sending of communications to enemy subjects or the allies of the enemy, and to license enemy insurance companies to do business in the United States. A Censorship Board, consisting of representatives of the Secretaries of War and of the Navy, the Postmaster General, the War Trade Board and the Chairman of the Committee on Public Information, is established for the censorship of mail, telegrams, cablegrams and wireless messages passing between the United States and any foreign country. The Federal Trade Commission is authorized to make use of patents held by enemy subjects for the needs of the war, under certain safeguards of the property rights of the enemy subjects holding the patents. The administration of enemy alien property rights, in so far as these are suspended or interfered with by the existence of a state of war, will be taken care of by an alien property custodian who is yet to be appointed. The provisions of the law requiring the translation of items of war information or comment in publications printed in foreign language will be administered by the Postmaster General. The Secretary of State has power to license or forbid individuals of enemy countries or their allies to leave the United States.

Troubles of Old King Coal Fuel Administrator Garfield, in charge of the negotiations between operators and miners on the question of increased wage schedules, has given emphatic warning to all concerned that "under no circumstances should the production of coal in the United States be allowed to diminish," and that he would "use whatever powers are necessary to compel the production of coal to meet the country's needs." While blaming the strikers for endangering the prosecution of the war, Mr. Garfield declared that the industry as a whole had shown much patriotic zeal and that "if all the people will show the same patriotism in the use of coal which the miners and mine operators are showing in its production, there will be enough coal this year for all war purposes and still leave all that is necessary for domestic industries and for keeping the people warm." He estimated this year's bituminous coal production as about 50,000,000 tons in excess of the production in 1916, and said that anthracite coal production showed an even greater proportionate increase. Most of the difficulty in obtaining sufficient coal is due, he said, to car shortage.

Most of the striking miners in Illinois, Indiana and Ohio, where strikes have been most frequent, have returned to work. John P. White, president of the United Mine Workers, and Frank Farrington, president of the Illinois Federation of Miners, urged the unions to be patient and refrain from taking part in any strikes until the Fuel Administration had opportunity to decide upon the question of increasing prices sufficiently to permit another increase of wages. But the disturbed condition of the industry has threatened some parts of the country with a fuel famine.

Dixie's Bit The conferences of the Southern Commercial Congress in New York have brought out many interesting facts about the way in which the war has affected the South and the ways in which the South is taking its part in the war. "In North Carolina," said President Pack, of the National Emergency Food Gardens Commission, "there has been an increase in home canning production from 350,000 jars and cans last year to nearly 4,000,000 this year. In Virginia the 115 branches of the Woman's Suffrage Association asked for our daily garden planting lessons and made it their business to see that the material got to the local newspapers. Af-

ter the planting season the commission took up the canning and drying campaign all over the country, and our estimates show that 460,000,000 cans of food are being placed on the pantry shelves this fall." Several speakers declared that the Federal Farm Loan Act had already greatly bettered agricultural conditions in the South and enabled farmers greatly to increase their crop production.

Dr. Thornton, of the University of Virginia, discussed another phase of preparedness. "New courses," he said, "are offered in the political geography of all the great European states, in meteorology, in physical geography, and in international law and diplomacy. From the school of engineering have been taken over courses in plane surveying, topographical surveying, map drawing, navigation, field astronomy, automobile construction and care, and the characteristics and use of timber. Other courses are those in telegraphy, telephony, wireless, signaling and photography." The Southern Commercial Congress discust also war finance, the improvement of highways and waterways and publicity work in the interest of Southern development. A resolution was adopted for the safeguarding of peace after the war by a "league of honor among democratic nations."

Transportation and the War

It now appears that the Federal Government will not stop with taking over the ocean-going shipping of American registry but will reach out its hand to grasp the railroad systems of the country. The Conference Committee on National Preparedness has made public the following significant statement:

> Not only is ship tonnage inadequate to the war's demand, but the whole transportation system is bending, and may break, under the strain of our first year at war. With crops not yet moving freely, with only a fraction of our new army sent from home, with our whole national war effort yet unplanned and unmeasured, war production is already hampered by shortage of cars and locomotives, lack of ample terminal, storage and other facilities; newspapers almost daily report mills closed or running part time, mines restricting needed output, shipbuilding delayed. . . .
>
> The exigencies of war may force Government ownership in the surprizingly near future. Perhaps the only step that the railroad people could take to postpone this for any length of time would be a very broad-minded and general attitude on their part in contributing their facilities to the community service.

The report praised the railroad chiefs who have coöperated with the Government in handling war freight and effecting economies in transportation. But it was pointed out that in some instances railroads have endeavored to retain the most profitable shipments on their own lines instead of making cheap and speedy transportation the sole consideration. This is inevitable under private ownership, for, as the report said, "interests of different railroads must sometimes conflict and their chiefs must still consider themselves trustees of stockholders' interests."

Rumors of a strike for increased wages on the part of the railroad trainmen in the northeastern states may also have had a part in stirring up sentiment for the nationalization of the railroads. The public is in no humor to tolerate interference with the speedy transportation of munitions of war by labor men or by capitalists. It is not believed, however, that any of the railroad brotherhoods will ask for an upward revision of wage schedules before next spring. The Shipping Board has intervened to avert a threatened strike of the harbor boatmen, marine engineers and longshoremen in the port of New York. Representatives of the unions concerned consented to submit their claims to arbitration.

Course of the Stock Market

The opening of the New York Stock Exchange on Monday, the 15th, followed an interval of three days which had been preceded by a sharp decline of prices. On the 10th, when more than a million shares were sold, all the industrial stocks had shown weakness, which was ascribed mainly to a suspension of dividends by the People's Gas Company of Chicago, owing to the high cost of material and labor and the need of capital for addition to plant. The price of the company's stock has fallen to 42½ from 106 in January last. For Steel Corporation shares, 320,000 of which were sold, there was a net loss of 2¼. The market was also affected by fear as to the effect of new taxes. On Thursday, the 11th, there had been recovery for industrials, with gains ranging from ½ to 2½, but railroad stocks were weak, on reports of new demands for higher wages. Prices of these stocks rose from the lowest level before the close, but there were losses for nearly all of them, while industrial gains were sufficient to make an average advance for the whole list.

This may have foreshadowed the downward movement three days later, on Monday, when prices were depressed by a report that the Exchange was to be closed. While there was evidence of liquidation designed to provide money for investment in the new Liberty bonds, and the new taxes on corporations' profits were borne in mind, this report had much weight. There was no warrant for it. The president of the Exchange said the rumor was a ridiculous one, and that closing had not even been discussed by the officers. Conditions are not like those which led to closing in the early days of the war, when values were menaced by heavy sales from abroad in the only remaining free market. Steel shares (312,000 out of a total of 953,700) sold below par, at 99⅛, with a net loss of 2⅞. Everything went down. Sugar and tobacco stocks were exceptionally weak, with losses ranging from 3 to 8 points. This was the day when the Government assumed control of American ships, and on this account there was a considerable reduction for Mercantile Marine shares.

But the price movement was reversed on Tuesday. At first the decline continued. In a short time it was checked by many purchases, which caused a steady advance, and the best prices, as a rule, were seen at the end of the day. No further attention was paid to the report that the Exchange might be closed. Steel shares were sold again below par, but the final figures were 103¼, showing a net gain of 3¼. All the active railroad stocks were higher, with additions of 2 points for St. Paul, and 3⅛ for Union Pacific. On Wednesday, however, prices fell again, but there was firmness at the close. Encouragement was found in the Illinois Central's declaration of a small extra dividend, and in the Atchison's annual report, which showed that with an increase of $22,000,000 in gross revenue there had been a net earnings gain of $6,629,000. Sugar and tobacco stocks moved downward, railroad share losses were only fractional, as a rule, and the price of Steel was reduced by one point, or a little more than the average for the whole list.

A general recovery was seen on Thursday, when the advance for industrials was indicated by Steel's gain of 2⅝. A new order for 300 locomotives gave the same addition to the Baldwin stock, and Bethlehem Steel took 6⅞ on a report that the company had undertaken to build $225,000,000 worth of torpedo boats. Railroad additions were fractional for a majority, but the prices of St. Paul and Reading were increased by 2¼. The recent decline of bond prices is commonly ascribed to the desire of holders to shift investment to the new Liberty bonds. The Controller of the Currency suggests that depression of the security market by such sales should be avoided by procuring loans on the bonds from banks.

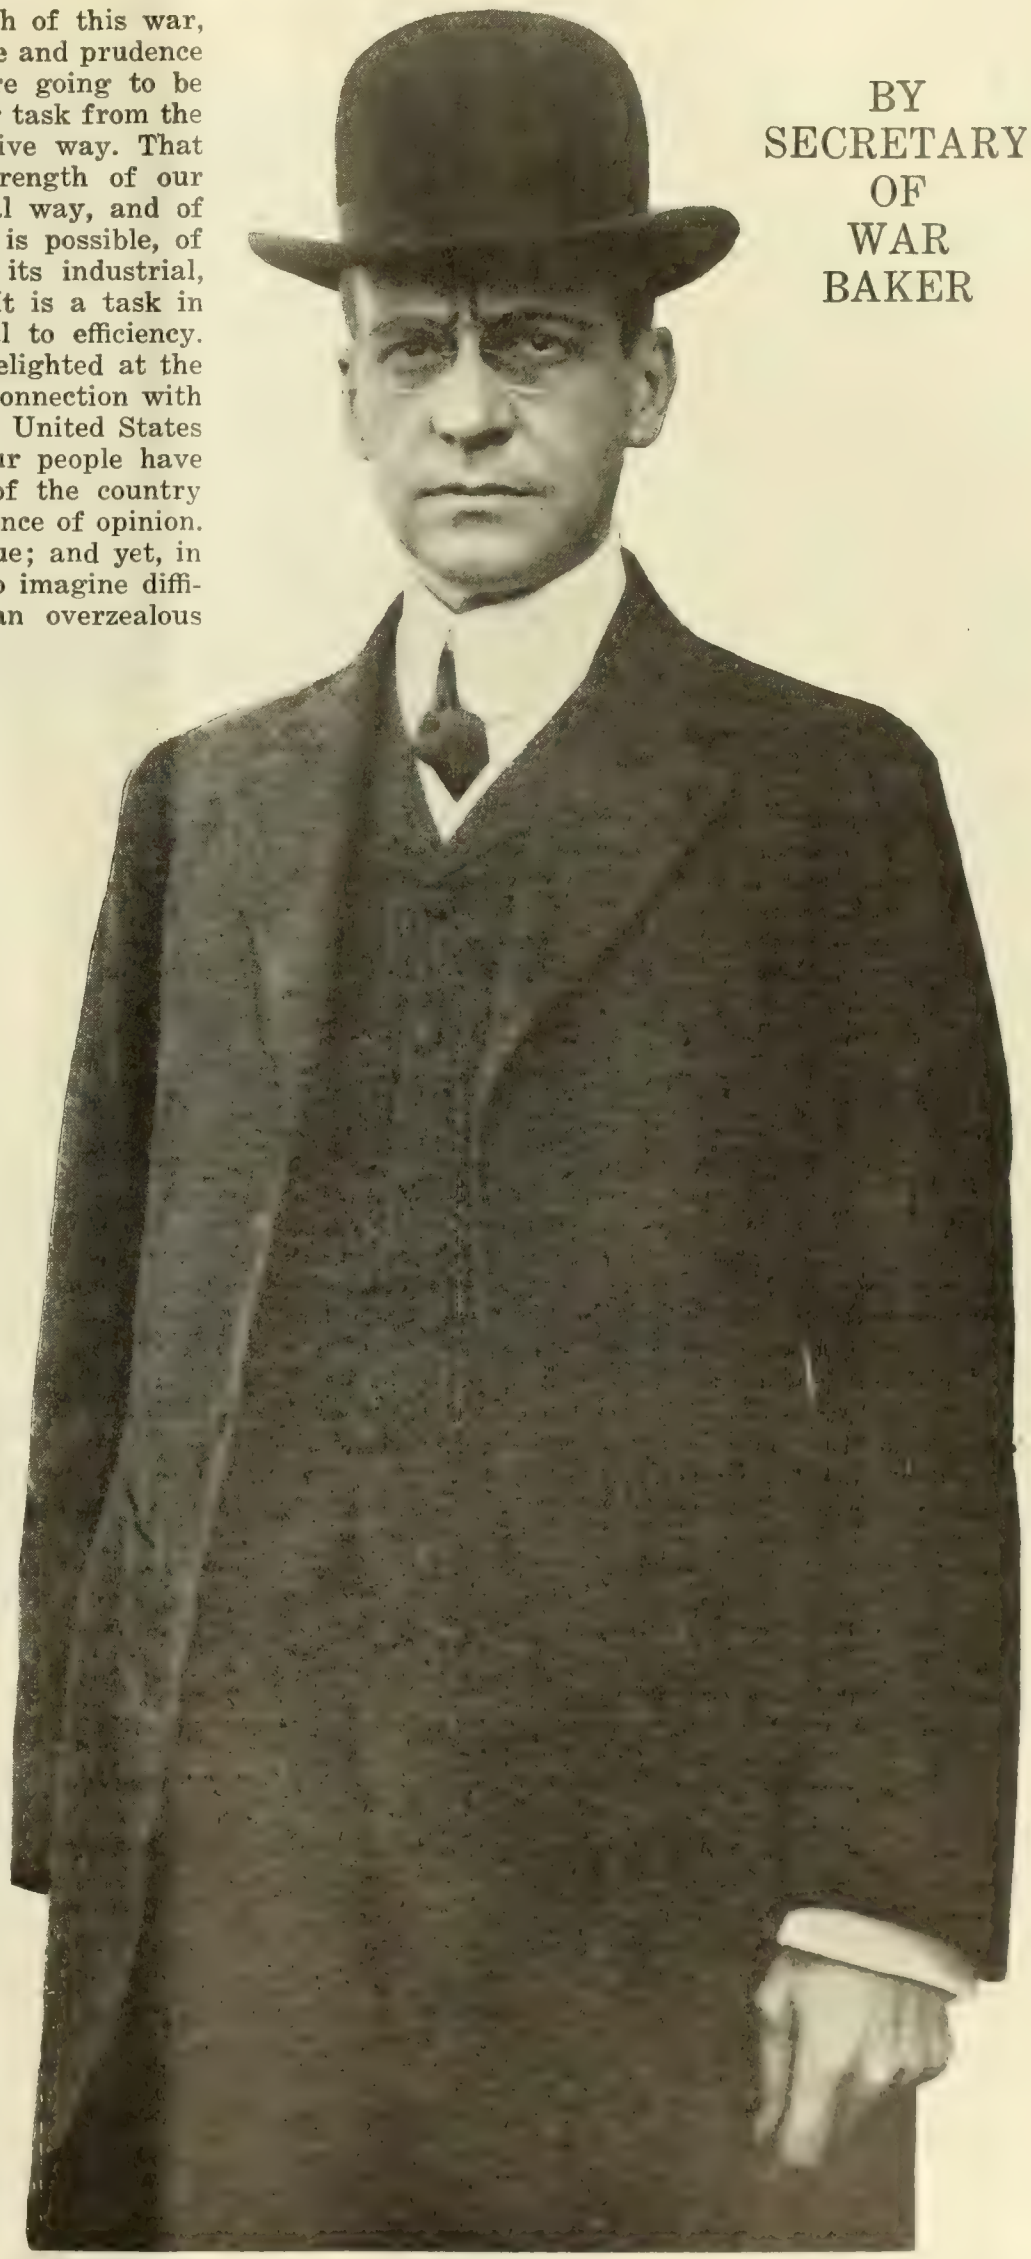
VICTORY AND THE ROAD TO PEACE

A Message to the American People

BY SECRETARY OF WAR BAKER

WE can make no forecast of the length of this war, but every consideration of intelligence and prudence directs us to enter it as tho it were going to be long, and to equip ourselves to do our task from the very beginning in the largest, the most effective way. That means the mobilization of the energy and strength of our country in a military way and in an industrial way, and of course it means the preservation, as far as it is possible, of the country from unnecessary dislocations of its industrial, commercial, agricultural and community life. It is a task in which the maximum of coöperation is essential to efficiency.

I think everybody in this country has been delighted at the freedom of our people from flashy impulses in connection with this great undertaking. I think everybody in the United States has been pleased at the good feeling which our people have maintained toward one another, the freedom of the country from internal disturbance and embittered difference of opinion. I hope that will continue; I think it will continue; and yet, in a country made up as ours is, it is very easy to imagine difficulty arising from an indiscretion or from an overzealous state of mind.



We are at the beginning of the war. We are going to have losses on the sea; we are going to have losses in battle; our communities are going to be subjected to the rigid discipline of multiplied personal griefs scattered all thru the nation, and we are going to search the cause of those back to their foundation, and our feelings are going to be torn and our nerves made raw. That is a place for physicians of public opinion to exercize a curative impulse; and it is the duty of those individuals who make up a very large part of the direction of public opinion by means of their written or spoken utterances, to exemplify the fact that it is not necessary for a nation like the United States—which is fighting for the vindication of a great ideal—to discolor its purpose by hatreds or by the entertainment of an unworthy emotion. Every conflict we have among ourselves, every dissent which we allow to be prest beyond the point of expression of opinion, which is necessary to secure wisdom, every division which we allow among ourselves, delays the achievement of the great object of this war.

We have mobilized our financial power, we have mobilized our man power, we have mobilized our industrial power. Our financial power is exprest in billions of dollars; our man power in millions of individuals, and our industrial power in the inexhaustible resources of our country.

Now, in this mobilization of the people of the United States, we are going to jar their habits. Business houses are not going to be able to do as they used to do, in many ways; workers in industrial establishments, farmers who are tilling their fields, everybody, has been asked to give up, or at least to permit the temporary obstruction of some of their deeply imbedded, habitual modes of action and thought. As a consequence we are all going to be in a more or less disturbed state of mind; things are not going to be as they usually are, and so our minds are going to be filled with questions as to whether the things which are in an unusual state are in a right or a profitable state.

More than a million men were under arms in the army and navy on September first, all of whom are volunteers, because prior to that time there was not a drafted soldier in a single training camp.

The construction of sixteen national army cantonments, repre- [*Continued on page 199*

"I BELIEVE IN PEACE AND IN THE PROPER ENFORCEMENT OF THE LAWS OF PEACE —BY FORCE IF NECESSARY."—NEWTON D. BAKER

GOVERNMENT BY MURDER

BY WILLIAM A. McGARRY

PHILADELPHIA CORRESPONDENT OF THE NEW YORK EVENING POST

PHILADELPHIA, the birthplace of national independence, is about to test the political freedom of its citizens in an election to fill four county offices, most of the seats in councils, and several minor positions. The issue, which is clear cut, is murder—the result of a political conspiracy proved in a court of record by overwhelming evidence—yet the answer is in doubt. With the Mayor, Thomas B. Smith, and seventeen other defendants bound over for the grand jury under heavy bail or locked up, with the knowledge that the killing was only an incident in the worst political reign of terror the city has ever known, the citizens of Philadelphia have not made it clear that they intend to throw off the yoke of contractor-bossism with its vicious, systematic abuse of public office and police power.

At this writing the outstanding fact in an unparalleled exposure of political rottenness is that there should be doubt of the outcome. But doubt there is, altho a few weeks ago thirty thousand citizens gathered in and around the Academy of Music to protest against "government by murder," launching, overnight, a reform movement that promised a clean sweep of the Republican Organization and the first move toward honest government. As usual in such cases, the type sometimes called "professional reformers" will be responsible if the new party is wrecked. They have laid it open to attack by compromise with a faction as guilty as the one now on trial in all save murder.

THE killing occurred on primary election day, September 19. For weeks prior to that date the Fifth Ward, in which Independence Hall is located, had been terrorized by police and civilian strong arm men seeking to force the election as Republican ward leader of Isaac Deutsch, a follower of the faction headed by State Senator Edwin H. Vare and Congressman William S. Vare, his brother. The Vares had little use for the ward. It was hardly worth the effort for the few additional jobs it would place at their disposal. But James A. Carey, who ruled as Republican leader for the weaker faction, headed by United States Senator Boies Penrose and State Senator James P. McNichol, was singled out as a target by the Mayor because of the part played by a Carey follower in the last session of the legislature in killing a measure in which the Mayor was interested.

For wanton greed and personal spite, the Vares and the Mayor ordered that Carey be overthrown. Thirty policemen who refused to do political

Mayor Smith, who brought a political reign of terror in the City of Brotherly Love

work were transferred to other districts, and notorious strong arm men were brought in from river wards to take their places. The Fifth Ward had been "swung" before by just such tactics. But a week before the primary election it became evident that Carey, once a leading exemplar of election thuggery, had really gained a strong personal following and stood to win against the worst efforts of the police. Then a private detective agency was commissioned to import eighteen gunmen to put the finishing touches on the intimidation of citizens.

The night before the primary election this gang, aided by police in uniform and in plain clothing, raided the Carey political club, blackjacked two score men and a crippled boy, and walked away unharmed. On election day members of the same gang attacked Carey and John H. Maurer, Assistant District Attorney, with blackjacks. George A. Eppley, a vice squad detective uninfluenced by the quarrels of political leaders, reached Sixth and Delancey streets just as the attack was started, ran in to save Carey, and was shot twice thru the back, and killed, by one of the gunmen. The man who did the shooting and one of his companions were caught, and four other members of the gang were arrested by the New York police.

BUT after Philadelphia police, witnesses of the crime, had arrested the two men at the scene, it became evident that the department had rested its case. The Mayor was arrested by private prosecution, with Deutsch and Police Lieutenant David Bennett, who is in charge in the ward. Later the District Attorney, Samuel P. Rotan, caused the arrest of William E. Finley, executive director of the Republican City Committee, two operatives for the detective agency that imported the gunmen, and five members of Bennett's force. He also produced as "star witness" Samuel G. Maloney, local manager for the detective agency, who testified that he was hired by Deutsch and paid $1000 by Finley to bring in the gunmen.

The evidence so far produced represents only the prosecution. It was presented at a preliminary hearing that continued for eight days before President Judge Charles L. Brown of the Municipal Court. Ordinarily such cases are brought first before a magistrate's court, which is not a court of record. Altho the testimony, as has been said, gave seemingly indisputable proof that there was a conspiracy to "get" Carey, the handling of the whole proceeding gave rise to a vague distrust on the part of citizens allied with no political faction; something more than a suspicion that the case was being "staged." Naturally the Vares have been quick to seize upon this.

But granting that no opportunity to make political capital out of the hearing was lost by either side, the singular feature of the case as it stands now is the announced intention of the Vares to attempt to prove a "frame-up." After five attempts thru the police department to arrest Maloney, despite the fact that he was held in $10,000 bail as a material witness for the District Attorney by a Common Pleas Judge, they succeeded in having him heard by a magistrate for a further hearing, at which they promise countersensations. In so far as they have gone in their announcements, the net result will only be to drag the Penrose-McNichol faction into the mire. Merely to prove that McNichol men plotted to have Maloney go to Vare men with a suggestion that he bring in gunmen will be of little apparent [*Continued on page 190*

FLEUR-DE-LIS

By Harold Lowther Alcock

"My soul to God—My body to the Earth—
My Heart of Hearts I give for France"—
A soldier wrote before the call "Advance!"
O! Soul so pure what nobleness of birth,
These are the words of love of highest worth.
But, wrote against the trench with slender lance,
Restore them France—and in the marble pour
From changing sands that sacred love he bore.

O Glorious France! how softly rests their clay,
Who saved thee from the dark unwelcome day,
Who gave their lives the first sweet flowers of peace,
Who braved a surging hell for thy release,
Who raised the lily ere it trampled lay,
Let nothing now that was of them decay.

OUT FROM THE FIRST-LINE TRENCHES

BY DAVID L. KEITH

A week or so ago we asked Independent readers to share with us the letters home from the boys in training camps or on the firing line—"the sidelights on the soldier's life, the human touches that never get into the cable dispatches, but do get into correspondence." This letter from Captain Keith to his family is a particularly fine example of such first-hand description of what fighting really means. It was written in front of Lens, where Captain Keith has been since he went thru the Somme offensive of last year. He went overseas in October, 1915, has been in five engagements, was twice wounded and recently received the Military Cross.—THE EDITOR.

THIS morning, I wonder if you would know me. They all say I am the toughest looking specimen in the army—that is going some, too. This morning I had my first hand wash for six days. Old Batman (whom I left out of the show) appeared on the scene first thing. Got an old steel helmet, produced his own towel and soap, then I had a glorious wash.

I am *tired*—five nights and four days under tense excitement with very little to eat, to drink and much less time to sleep. My company had the most responsibility—we went 700 yards further than any of the other three and held the new front line for four days. During that time we were threatened with four counter attacks and actually ourselves repelled a very strong one. The work done by the company was simply glorious. My best little officer, A. A. Becket of Brantford, was killed in the assault. The company's loss was a great one.

On the night of the 14th we started out to get into position, taking nine hours to do so. On the way we were soaked by rain, the enemy also made us go thru a heavy cloud of gas. However, after a very strenuous time we got into position. I was in the rear of my company and by unfortunate circumstances was cut off from them a few minutes before the starting off time. But as I had been over the ground before I had some idea where to go, so I took out my map and compass, righted myself, jumped out of the trench and went over land to our new position—arrived there just at the right time. You have no idea what those moments of uncertainty meant. *Never experienced anything like it in my life.*

Just as I was arriving at the spot (I had outrun my headquarters staff—they could not stand the pace that the old man put up), I met Lieutenant Richardson, our scout officer, and we went on together behind the barrage. We started out in the dark and ended up in bright sunlight. The amount of destruction was simply beyond words, and the noise—well, just awful.

Lieutenant Richardson and I had not gone far when he was hit in the right arm near the shoulder. The bones were broken and he was suffering considerable pain when I bound up his arm with my shell dressing. He started back for our old line and I on for our objective. Afterward I heard that Lieutenant Richardson fainted, fell in a shell hole and remained there till 10 p. m.—eighteen hours. Then he came to, and found our R. A. P., where he was drest and sent on to Blighty.

My company reached its objective and was well at work consolidating one hour and thirty-five minutes after starting. The Hun put up very little resistance. Our company captured fifteen prisoners (one being an officer) and ten machine guns. One of these guns we at once set in position and used with good effect on a great many targets, as the Huns were running away over the back country for hours. Our objective was absolutely torn beyond recognition as a trench by our artillery, so our men immediately set to work to redig it. This job seemed beyond us altogether, but the result before next morning was marvelous. This hard work had a great deal to do with the keeping down of our casualty list.

The first day in the new trench was made tremendously interesting by seeing the enemy form up for counter attacks, and then seeing our wonderful artillery break them up and send them flying all over the country. My only method of communication was by runner. I lost three of these, one being killed and two wounded.

One morning the enemy came over and entered my line. My men counter attacked in a most brilliant manner and before one could say Jack Robinson had the attack well in hand. When it comes to hand to hand fighting one Canadian seems to be as good as three or four Huns. Our counter attack was the means of killing about fifteen of the enemy and taking several wounded prisoners.

The novelty of an assault has worn off as far as I am concerned, but I must confess that the excitement was intense. As one officer put it, "I wouldn't have missed it for $100,000, and I would not go thru it again for $1,000,000."

Last night was one of the most uncomfortable I ever put in. Only a rubber sheet on the ground at the bottom of a forty foot dugout.

I think it will take a few days to get rested up. I only hope we will get the chance before they rush on to something else. The Huns seem to be able to take a lot of beating before they even begin to think things are against them. I have been in five shows where we fairly walloped them and I was figuring out that I have been in advances that total up seven miles. Just about have had enough of it, but then I have been very fortunate, and in the face of that grumbling seems to be so out of place.

I have been sitting on the side of an old chalk trench all day long. Shells have been dropping near enough for some of the pieces to come as far as us. One of my officers has been holding up his leg and playing at looking for a Blighty. But that does not appeal to me, so I am going to make for my dugout.

Got an old steel-helmet, towel and soap, and had my first wash for six days

What the Old Leaf Said

By John Crowe

YOU are sharp, my wind, you are sharp to-day!
Sharp have you sharpened your little spears,
A thousand of them at my ears
And sticking in my side, I know.
"Go down," the shrill spears say, "Go down,"
The time is come and you must go
And you must lie upon the ground.
Enough of shuddering now, away!
One dizzy moment on the air
And then, my shuddering leaf, you're there."
My wind, you need not bluster so;
I have been ready for this day,
This dawn I felt the spears and knew,
And told my heart what it should do,
Obey as now it shall obey.

Now I have loved to wave in the sun
And have a little place my own
Where I the king might wave alone.
I would not care to wave too long.
You've heard perhaps the poet's song
About some aged yellow leaf
Who begged the winds to let him stay
And was so sick with fear and grief
When they were taking him away,
But when was ever such a one?
And why insult the yellow leaves
Who want no pity nor reprieves?
For none would willingly outstay
Companions that have dropt away,
And no proud leaf has ever been—
No, not a leaf was ever green—
But after months of merry use
The blight came down on all green stuff,
And green was green for long enough;
And dry is that leaf's goodly juice,
Cold unto death is his old heart,
Weary the leaf of a leaf's proud part
As he waits for the winds to set him loose.

Now it was good at growing-time.
(Pardon an old leaf's memories
Reviewing the life that is led on trees.)
For there are smells on a good spring day,
They made a wonder of our air,
And there are games and games to play,
Before we knew it night was there.
One tingles at the rain in spring,
(Swishy, swishy, foolish drops,
You'll never stick on our tree-tops),
One jumps to hear it thundering.

And then came full-grown knowing-time
What is a leaf? He has his prime,
And it is to perch so strong and high
And laugh at rough winds sailing by
And say no wind shall put him down.
Never a face of prying moon
But I outstared it, sneaking round.
Never a withering sun of June
But tried me all the blazing day,
Thinking to wither me so soon,
And then went red with rage away;
For I would fold, for prudence' sake,
And sit and study half-awake;
I could have folded more and slept,
But for the big black man below
Who came from a garden that he kept
And flung himself down by his hoe
And lay in the shadow pleased with me.
But I was better pleased than he
At answering a black man's prayer.
I brooded over lovers too
For many a languid evening thru,
I blest the dalliers unawares
Who thought of only love's affairs.
I thought it good to sit so high
Between the creatures and the sky,
Practising love and wisdom there.

Two thrushes used to come and swing,
A blackbird too, the blackest thing,
A while each day to stay and sing
At many a serenade for me.
And they were serenaders three!
They do not serenade me now,
They do not like my yellow face,
They do not stop on a barren bough,
They are off to another and greener place.
The old leaves rattle on the stem
And birds have no more tunes for them.
So this is the end of a leaf at last.
Now why are you chanting words of cheer,
Why do you whisper words of hope,
When time for hope and cheer is past?
Bright are the heavens you bring so near
To leaves that agonize and grope;
Pleasant your easy theories,
Comfort the finest that there is!
I thank each friendly comforter,
Let him not trouble much, I ask,
We are less frightened than we were,
And more indifferent to his task.
The old leaves hardly care at all
What happens next—they only fall.

IF you would really know the end,
Why, thus I think it happens, friend:
The dizzy passage soon is done
And you may say the old leaf's gone.
But consolation even then,
Behold! I shall not go alone.
Whoever lives upon the tree
Shall know the same mortality
And bear me thoro company.
A million leaves shall go with me!
Attended thus, it matters less
That I am plucked from happiness;
Befriended thus, it matters not
That I address myself to rot.
Is such an unconcern amiss?
Then hear me make one pious prayer,
There is a heaven for which I'd care.
Will the black gardener grant me this:
Let him come with a shining rake,
Swing and swing till his black sides ache,
Roll us over, pile us deep
Into a single mangled heap,
Haul us to his garden spot,
Dump us on that ground to rot.
Down where the roots of life are spread
Let be the burial of the dead.
But when it smells of spring again
The garden will know its good black stain,
And blest shall that garden grow,
Greener every vine shall blow,
We rotted that it might be so.

Blow sharp, O wind, blow sharper still!
The old leaf offers up his will,
Then blow and blow, my wind, until—

HOW CAMOUFLAGE BEGAN

These tents in Macedonia, covered with branches to keep off the heat, suggested the original camouflage—according to one of the numerous stories of its discovery. There's interesting similarity, at any rate, between them and the American tent opposite. The marine gun below looks like nothing at all at a distance. The camoufleurs have worked out an exact science of these miscellaneous painted blotches

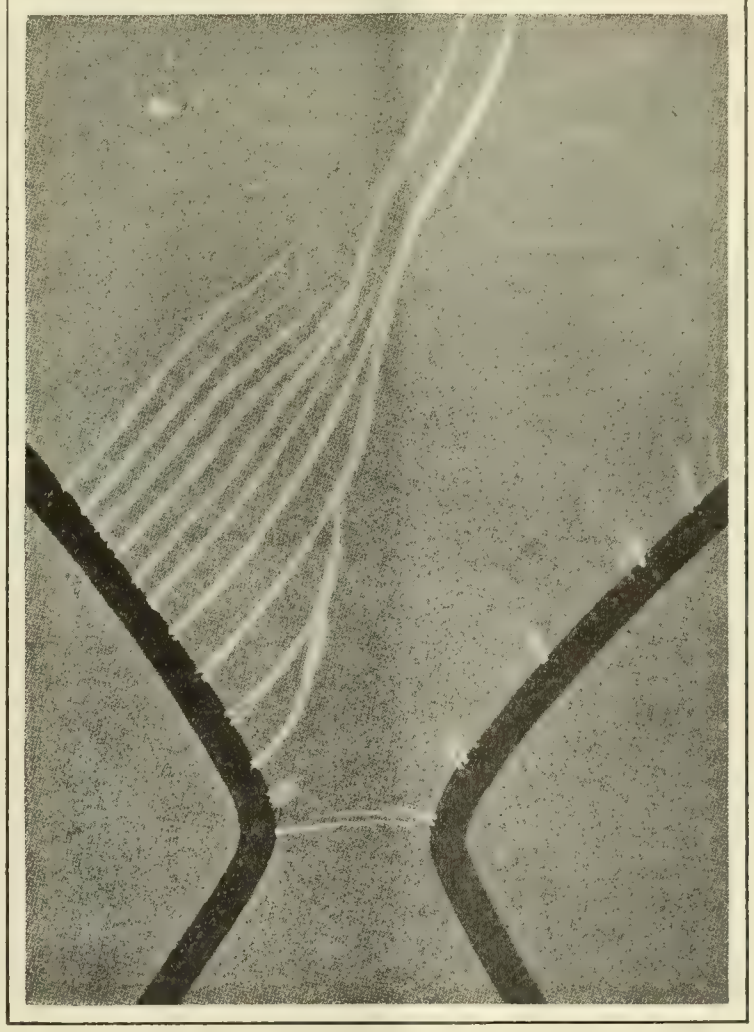
CREATIVE CHEMISTRY

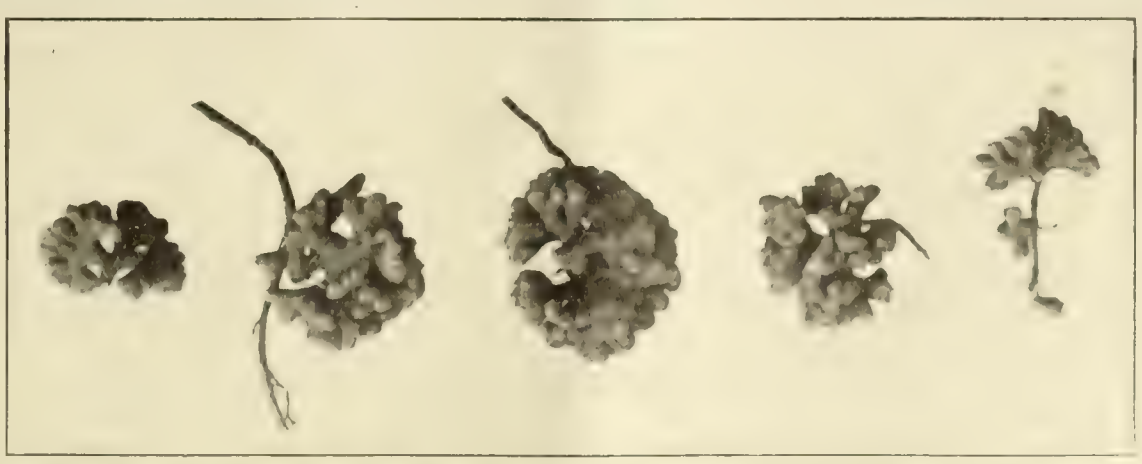


A Popular Explanation of Recent Progress in Chemical Industries

BY EDWIN E. SLOSSON

KEEPING THE SOIL WELL FED

THE Great War is not only starving people: it is starving the land. Enough nitrogen is thrown away in some indecisive battle on the Aisne to save India from a famine. The population of Europe as a whole has not been lessened by the war, but the soil is being robbed of its power to support the population. A plant requires certain chemical elements for its growth and all of these must be within reach of its rootlets, for it will accept no substitutes. A wheat stalk in France before the war had placed at its feet nitrates from Chile, phosphates from Florida and potash from Germany. Now all these are shut off by the firing line and the shortage of shipping. Out of the eighty elements only thirteen are necessary for crops. Four of these are gases: hydrogen, oxygen, nitrogen and chlorine. Five are metals: potassium, magnesium, calcium, iron and sodium. Four are non-metallic solids: carbon, sulfur, phosphorus and silicon.

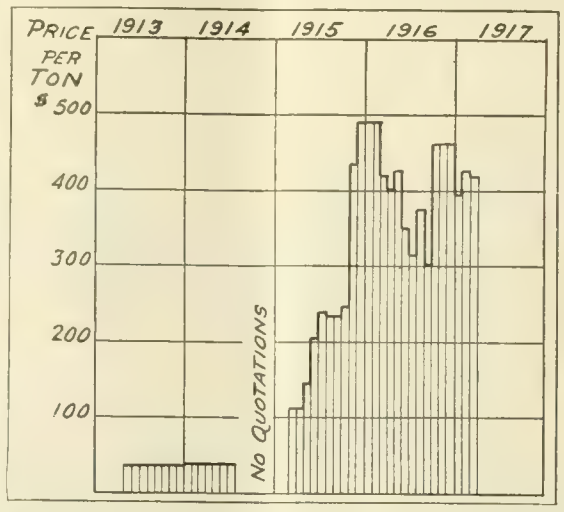


Three of these, hydrogen, oxygen and carbon, making up the bulk of the plant, are obtainable *ad libitum* from the air and water. The other ten in the form of salts are dissolved in the water that is sucked up from the soil. The quantity needed by the plant is so small and the quantity contained in the soil is so great that ordinarily we need not bother about the supply except in case of three of them. They are nitrogen, potassium and phosphorus. These would be useless or fatal to plant life in the elemental form, but fixt in neutral salt they are essential plant foods. A ton of wheat takes away from the soil about 47 pounds of nitrogen, 18 pounds of phosphoric acid and 12 pounds of potash. If then the farmer does not restore this much to his field every year he is drawing upon his capital and this must lead to bankruptcy in the long run.

Man's violent method of the fixation of nitrogen. The Pauling furnace in which air is blown past two hollow iron electrodes between which a powerful alternating current is crossing. The electric arc forms where the two horn-like electrodes come closest and sweeps upward and outward forming a flame that is about a yard long. The oxygen and nitrogen of the air coming in contact with this flame are converted into oxides of nitrogen

So much is easy to see, but actually the question is extremely complicated. When the German chemist, Justus von Liebig, pointed out in 1840 the possibility of maintaining soil fertility by the application of chemicals it seemed at first as tho the question were practically solved. Chemists assumed that all they had to do was to analyze the soil and analyze the crop and from this figure out, as easily as balancing a bank book, just how much of each ingredient would have to be restored to the soil every year. But somehow it did not work out that way and the practical agriculturist, finding that the formulas did not fit his farm, sneered at the professors and whenever they cited Liebig to him he irreverently transposed the syllables of the name. The chemist when he went deeper into the subject saw that he had to deal with the colloids, damp, unpleasant, gummy bodies that he had hitherto fought shy of because they would not crystallize or filter. So the chemist called to his aid the physicist on the one hand and the biologist on the other and then they both had their hands full. The physicist found that he had to deal with a polyvariant system of solids, liquids and gases mutually miscible in phases too numerous to be handled by Gibbs's Rule. The biologist found that he had to deal with the invisible flora and fauna of a new world.

Plants obey the injunction of Longfellow and rise on the stepping stones of their dead selves to higher things. Each successive generation lives on what is left of the last in the soil plus what it adds from the air and sunshine. As soon as a leaf or tree trunk falls to the ground it is taken in charge by a wrecking crew composed of a myriad of microscopic organisms who proceed to break it up into its component parts so these can be used for building a new edifice. The process is called "rotting" and the product, the black, gummy stuff of a fertile soil, is called "humus." The plants, that is, the higher plants, are not able to live on their own proteids as the animals are. But there are lower plants, certain



Nature's silent method of nitrogen fixation. The nodules on the vetch roots contain colonies of bacteria which have the power of taking the free nitrogen out of the air and putting it in compounds which are thoroly suitable for plant food

kinds of bacteria, that can break up the big complicated proteid molecules into their component parts and reduce the nitrogen in them to ammonia or ammonia-like compounds. Having done this they stop and turn over the job to another set of bacteria to be carried thru the next step. For you must know that soil society is as complex and specialized as that above ground and the tiniest bacterium would die rather than violate the union rules. The second set of bacteria change the ammonia over to nitrites and then a third set, the Amalgamated Union of Nitrate Workers, steps in and completes the process of oxidation with an efficiency that Ostwald might envy, for ninety-six per cent of the ammonia of the soil is converted into nitrates. But if the conditions are not just right, if the food is insufficient or unwholesome or if the air that circulates thru the soil is contaminated with poison gases, the bacteria go on a strike. The farmer, not seeing the thing from the standpoint of the bacteria, says the soil is "sick" and he proceeds to doctor it according to his own notion of what ails it. First perhaps he tries running in strike breakers. He goes to one of the firms that makes a business of supplying nitrogen-fixing bacteria from the scabs or nodules of the clover roots and scatters these colonies over the field. But if the living conditions remain bad the newcomers will soon quit work too and the farmer loses his money. But if he is wise he will remedy the conditions, putting a better ventilation system in his soil perhaps or neutralizing the sourness by means of lime or killing off the ameboid banditti that prey upon the peaceful bacteria engaged in the nitrogen industry. It is not an easy job that the farmer has in keeping billions of billions of subterranean servants contented and working together, but if he does not succeed at this he wastes his seed and labor.

THE layman regards the soil as a platform or anchoring place on which to set plants. He measures its value by its superficial area without considering its contents, which is as absurd as to estimate a man's wealth by the size of his safe. The difference in point of view is well illustrated by the old story of the city chap who was showing his farmer uncle the sights of New York. When he took him to Central Park he tried to astonish him by saying "This land is worth $500,000 an acre." The old farmer dug his toe into the ground, kicked out a clod, broke it open, looked at it, spit on it and squeezed it in his hand and then said, "Don't you believe it; 'tain't worth ten dollars an acre. Mighty poor soil I call it." Both were right.

The modern agriculturist realizes that the soil is a laboratory for the production of plant food and he ordinarily takes more pains to provide a balanced ration for it than he does for his family. Of course the necessity of feeding the soil has been known ever since man began to settle down and the ancient methods of maintaining its fertility, tho

What happened to potash when the war broke out. The diagram from the "Journal of Industrial and Engineering Chemistry" of July, 1917, shows how the supply of potassium muriate from Germany was shut off in 1914 and how its price has risen since

discovered accidentally and followed blindly, were sound and efficacious. Virgil, who like Liberty Hyde Bailey was fond of publishing agricultural bulletins in poetry, wrote two thousand years ago:

But sweet vicissitudes of rest and toil
Make easy labor and renew the soil
Yet sprinkle sordid ashes all around
And load with fatt'ning dung thy fallow soil.

The ashes supplied the potash and the dung the nitrate and phosphate. Long before the discovery of the nitrogen-fixing bacteria, the custom prevailed of sowing pea-like plants every third year and then plowing them under to enrich the soil. But such local supplies were always inadequate and as soon as deposits of fertilizers were discovered anywhere in the world they were drawn upon. The richest of these was the Chincha Islands off the coast of Peru, where millions of penguins and pelicans had lived in a most untidy manner for untold centuries. The guano composed of the excrement of the birds mixt with the remains of dead birds and the fishes they fed upon was piled up to a depth of 120 feet. From this Isle of Penguins—which is not that described by Anatole France—a billion dollars' worth of guano was taken and the deposit was soon exhausted.

Then the attention of the world was directed to the mainland of Peru and Chile, where similar guano deposits had been accumulated and, not being washed away on account of the lack of rain, had been deposited as sodium nitrate, or "saltpeter." These beds were discovered by a German, Taddeo Haenke, in 1809, but it was not until the last quarter of the century that the nitrates came into common use as a fertilizer. Since then more than 53,000,000 tons have been taken out of these beds and the exportation has risen to a rate of 2,500,000 to 3,000,000 tons a year. How much longer they will last is a matter of opinion and opinion is largely influenced by whether you have your money invested in Chilean nitrate stock or in one of the new synthetic processes for making nitrates. The United States Department of Agriculture says the nitrate beds will be exhausted in a few years. On the other hand the Chilean Inspector General of Nitrate Deposits in his latest official report says that they will last for two hundred years at the present rate and that then there are incalculable areas of low grade deposits, containing less than eleven per cent, to be drawn upon.

Anyhow, the South American beds cannot long supply the world's need of nitrates and we shall some time be starving unless creative chemistry comes to the rescue. In 1898 Sir William Crookes—the discoverer of the "Crookes tubes," the radiometer and radiant matter—startled the British Association for the Advancement of Science by declaring that the world was nearing the limit of wheat production and that by 1931 the bread-eaters, the Caucasians, would have to turn to other grains or restrict their population while the rice and millet eaters of Asia would continue to increase. Sir William was laughed at then as a sensationalist. He is, but his sensations are apt to prove true and it is already evident that he was too near right for comfort. We are only half way to the date he set and already we have one wheatless day a week and are likely to have another soon unless we stop shooting nitrates into the air. The area producing wheat was by decades:*

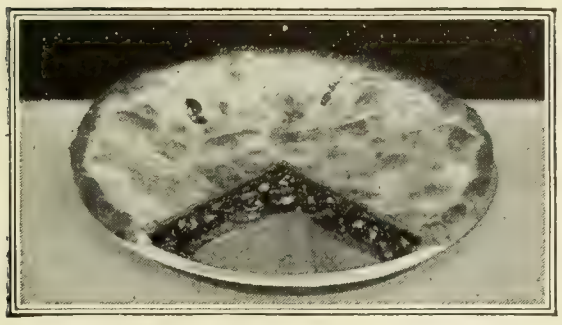
THE WHEAT FIELDS OF THE WORLD

	Acres
1881-90	192,000,000
1890-1900	211,000,000
1900-10	242,000,000
Probable limit	300,000,000

If 300,000,000 acres can be brought under cultivation for wheat and the average yield raised to twenty bushels to the acre, that will give enough to feed a billion people if they eat six bushels a year as do the English. Whether this maximum is correct or not there is evidently some limit to the area which has suitable soil and climate for growing wheat, so we are ultimately thrown back upon Crookes's solution of the problem that is, we must increase the yield per acre and this can only be done by the use of fertilizers and especially by the fixation of atmospheric nitrogen. Crookes estimated the average yield of wheat at 12.7 bushels to the acre, which is more than it is in the new lands of the United States. Australia and Russia, but less than in Europe, where the soil is well fed. What can be done to increase the yield may be seen from these figures:

GAIN IN THE YIELD OF WHEAT IN BUSHELS PER ACRE

	1889-90	1913
Germany	19	35
Belgium	30	35
France	17	20
United Kingdom	28	32
United States	12	15



The greatest gain was made in Germany and we see a reason for it in the fact that the German importation of Chilean saltpeter was 55,000 tons in 1880 and 747,000 tons in 1913. In potatoes, too, Germany gets twice as big a crop from the same ground as we do, 223 bushels [*Continued on page 194*

*I am quoting mostly Unstead's figures from the *Geographical Journal* of 1913. See also Dickson's "The Distribution of Mankind," in Smithsonian Report, 1913.

Bake and fry deliciously!

It is delightful to roll out such a fine, smooth dough

Pie with crust like this will make your reputation as a cook!

When the lard is piping hot, put them in. Watch the delicate brown crust form at once

Such dainty, tempting croquettes! Such a crisp, brown crust! Your family will love them

DO you make tender, flaky pie-crust? Do you fry croquettes and potatoes that are brown-crusted, yet soft and flavory inside?

To bake and fry most deliciously, you must select your lard with utmost care. It should be of just the right consistency, neither too soft nor too stiff. It was with this essential principle in mind that Swift's "Silverleaf" Brand Pure Lard was prepared.

Makes delicious pie-crust!

Swift's "Silverleaf" is exactly right for shortening. It works into the flour with wonderful smoothness. It makes a dough which is easy to handle with the light touch that insures a tender pie-crust. When you use this lard, you will be surprised at the new delicacy, the light, crisp flakiness your pie-crusts will have.

Why it is ideal for frying, too!

You can fry deliciously with this lard because you can heat it to an extremely high degree without its scorching or discoloring. See what a delicate brown crust immediately forms on your croquettes or potatoes, and keeps in all the fragrant, steaming aroma, all the delicious flavor.

Your food never gets grease-soaked. It cooks quickly, yet is well done all through. When your family tastes the croquettes you fry with this lard, they will think you have discovered some piquant new way to season them.

Get some of Swift's "Silverleaf" Brand Pure Lard today. Give your family delicious croquettes, pie-crusts that melt in their mouths. Hear them say that the things you cook are the best they ever ate.

Swift's "Silverleaf" Brand Pure Lard

Swift & Company, U. S. A.

One Thing Money Cannot Buy

By ROY WILSON BEAL

SOME folks imagine that the greatest thing in the world is a fat bank account and plenty of leisure time in which to spend the money. The blind man thinks the greatest thing in the world is to be able to see. The cripple thinks the greatest thing in the world is to possess a body free from deformities, aches and pains. The hungry man thinks the greatest thing in the world is to sit down to a table loaded with all kinds of good things to eat. The lover thinks the greatest thing in the world is love. In fact everyone thinks the greatest thing in the world is that which each most desires and is least able to obtain.

The greatest thing in the world is not money or power, automobiles or mansions; it is something money cannot buy. You may ask, "Is there anything money cannot buy?" Yes there is. The most important, the most vital and the most necessary thing in life to have in order to be satisfied, contented and happy and able to enjoy life is to possess that "one thing money cannot buy."

What is that thing which money cannot buy? It is HEALTH. Precious, vital, priceless health. Necessary alike for rich and poor. Attainable equally for young and old. The rich cannot be happy without it; the poor cannot be comfortable without it; the sick cannot be well without it. You cannot purchase it in a drug store for it does not come put up in bottles ready to "take according to directions." Nor can you obtain it from the grocer for it does not exist either in bulk or in packages. Those who have it rarely appreciate to its fullest extent its priceless value. Those who have lost it would give all they had in the world sometimes to get it back. A few are privileged to enjoy it without exerting apparently any effort on their part to keep it but the majority of us are obliged to work for it; first to acquire it and then to keep it.

Now the question naturally arises, "If *I* do not possess this greatest of all human blessings, where and how can I get it?" By simply devoting a few minutes a day occasionally indulging in "an internal bath" administered with the aid of a "J. B. L. Cascade." What is a "Cascade"? It is an appliance used for the administration of an internal bath and was invented by Dr. Chas. A. Tyrrell, who not only saved but prolonged his own life more than fifteen years beyond the time set by his own physicians to live and is alive and hearty today. Internal bathing is a short cut from illness to health. There is nothing laborious or objectionable about it. It is a simple, efficacious and quick method of ridding the body of those poisons which are known to multiply enormously in the colon or large intestine and directly or indirectly the underlying cause of most of our physical and mental ills.

The thousands and tens of thousands of testimonials on file in Dr. Tyrrell's office attest to the almost miraculous results obtained through the use of the Cascade. If you will write to Chas. A. Tyrrell, M.D., 134 West 65th Street, New York City, mentioning The Independent, there will be mailed to you a booklet entitled "The What, the Why, the Way of Internal Bathing," which describes in detail this appliance and how it has benefited thousands of sufferers from a variety of ills.

As a prophylactic means of avoiding serious or prolonged illness and as an aid in assisting nature to restore the health of those who are ill, it has almost no equal in the realm of science. There is almost no condition of ill health that does not derive some benefit from its use.—*Adv.*

Remarkable Remarks

UNCLE SAM—Buy a Liberty Bond.

FIELD MARSHAL JOFFRE—Victory surely will be ours.

ED HOWE—A good many have intimated that I lack sense.

WOODROW WILSON—No man can win honor who thinks of himself.

GENERAL PERSHING—It is women who suffer and lend courage to us.

A. F. CURRIER, M. D.—I prefer castor oil in the great majority of cases.

JOHN D. ROCKEFELLER—The bonds of the U. S. Government are the safest investment.

LISSIE C. FARMER—Old wool blankets can often be used in making petticoats or braided rugs.

PROF. ALBERT BUSHNELL HART—How did Eve spend her time while Adam was hunting dragons?

CARRIE CHAPMAN CATT—The most vigorous opponent of woman suffrage in the world is the Kaiser.

MARQUIS OKUMA—I doubt whether the European civilization has not already today approached its last stage.

J. P. MORGAN—I understand that there is, in some quarters, a feeling of pessimism caused by declining securities.

MRS. PERCY PENNYBACKER—In these days of distress every woman should pass her soul in review before herself.

BILLY SUNDAY—If one of these old Romans should come to New York, he would think the whole town was bughouse.

PROF. KELLY MILLER—The American nation can rely unlimitedly on the negro to follow the flag wherever it may lead.

MISSIONARY W. G. FAIRFIELD—There are only eight doctors to twelve million people in the Province of Shansi, China.

GENERAL VON HINDENBURG—May Mr. Wilson continue in the future to be a part of the force which ever intends evil and does good.

LESLIE M. SHAW—I would prefer to have lost the great War of Independence and remained an English dependency like Canada than to be a German vassal for all time.

MACHINE GUNNER EMPEY—If a Frenchman kisses an American soldier, the American mustn't poke him in the chin; he must kiss him back.

DR. DUDLEY A. SARGENT—Nine times out of ten woman, from the standpoint of physical endurance, should make as good a soldier as man.

DR. C. H. PARKHURST—I would rather see my country under the domination of the Koran and its prophets than subject to the cultivated barbarism of Berlin.

LADY DUFF GORDON—It was a comparatively short while ago that no nation save the French ever attempted the union of green and blue, of mauve and yellow, of pink and red.

HERBERT C. HOOVER—Unless we can secure an immediate reduction of the sugar consumption in candy, ice cream and sweet drinks, it will be necessary next year to curtail the supplies to these industries.

PRESIDENT ARTHUR T. HADLEY—The man who has the facts at his command, knows their relative values and understands the art of stating them in proper order is a guide whom the people crave.

PROF. ERNST HAECKEL—One single, highly cultured German warrior represents a higher intellectual and moral life-value than hundreds of the raw children of nature whom England and France, Russia and Italy uphold today.

CHIEF BURGOMASTER OF POTSDAM TOWN—The crafty hypocrite Wilson, who, with the simple impudence of an uneducated parvenu, has the insolence to interfere in our domestic affairs, may be assured that none but fools will believe that our pitiless enemies are giving us good advice when they try to embitter our domestic unity.

Have You Left School?

with a diploma, or without it? In either case, you of course do not wish to leave off being educated. When education ends, life ends.

Take a Reading Course

Everybody reads, but too many read without any plan, and to no purpose. The college graduate is like other people in the need of system, but a little more likely to realize his need. The Chautauqua Reading Course is useful alike to the person of limited training, who labors many nights over each book, and the critic or vigorous man of affairs who can sweep thru them all in a few hours. For either, a group of related, intelligible, and competent studies leads to a well rounded result.

Don't Read at Random

For many years, the very mention of a reading course has meant without further explanation the Chautauqua reading course. It was the first and is still the best and it alone has a world-wide fame. The Independent is used as the current events element. The cost is trifling, $6 for a year; $3.50 if you already take The Independent. Are you tired wasting your odd minutes? Write for Chautauqua-Independent Outline.

GOVERNMENT BY MURDER

(*Continued from page 178*)

value in lessening the guilt of the present defendants.

In the meantime Thomas B. Smith is still Mayor of Philadelphia, Finley is still a select councilman, a mercantile appraiser and head of the Republican City Committee, Bennett is still a police lieutenant on active duty in the Fifth Ward, and the five defendant policemen are still on duty. It has been shown that attempts were made to intimidate witnesses against the perpetrators of the reign of terror. The District Attorney has demanded the removal, or at least the transfer, of Bennett. Not only the Mayor, but also his Director of Public Safety, and his Captain of Detectives, are accused of knowledge that gunmen were operating in the Fifth Ward, and of doing nothing to halt their activities.

Philadelphia paved the way for these examples of bad government when she restored the Republican organization to power in 1915, but the fight of which the Fifth Ward murder was part and parcel had its start in 1911. Graft in public contracts was so open, the use of the police in politics was so bold under Mayor John E. Reyburn, whose term ended in that year, that a fusion reform movement was inevitable. Even this would have met defeat, however, if it had not been for the split in the ranks of the "gang." The Vares demanded the Republican nomination for Mayor for William S. Vare. Penrose and McNichol saw a menace to their leadership in this, and denied it. When they learned the Vares intended to fight, they brought in a legislative committee to investigate. It exposed the failure of the Vares to live up to specifications in several contracts, but when its attention was forced to irregularities by the Penrose-McNichol faction, the committee suddenly adjourned, disappearing overnight and never making a report.

Vare lost the nomination to George S. Earle, who in turn lost the election to Rudolph Blankenburg, the fusion candidate, by 5000 votes. Blankenburg's victory was made possible only by the fact that the Vares ordered their followers to knife the Republican ticket, just to show their strength.

This widened the breach, and in spite of many "agreements," developments have forced the two factions more and more apart. Each side has been working night and day for more power. The Vares gained control of the Governor, Dr. Martin G. Brumbaugh, elected in 1914 as an Independent Republican, by helping him to pass certain social legislation in his first year in office. With patronage as their weapon they extended the fight against Penrose and McNichol thruout the state.

In 1915 Vare was expected to run again. But at the last moment he withdrew in favor of Smith. Nothing quite as bad as the Smith deal had been tried by the organization up to that time. On the surface, it meant peace between the factions. As developments proved, each side was trying to outwit the other, and the Vares won. Smith, a former postmaster, had been in private life for a decade. The voters had forgotten him. It was arranged to give him a "certificate of character" thru an appointment from the Governor to the State Public Service Commission. Altho the plot was exposed, it was carried out brazenly. Smith served only a month on the commission, resigning to become the Republi-

can candidate for the mayoralty. Patronage is the mainspring of the political machine. When Smith started to give most of what he had to dispense to Vare followers, the McNichol ward and division leaders dropt away.

Going into the primary on September 19, the Vares controlled the Republican City Committee, the election machinery in 39 out of 48 wards; they made and "broke" police and detectives. There had not been a whisper of a reform movement, altho Smith, the Vare Mayor, outdid the gang in its palmiest days by virtually making public a list of ward leaders who would be "recognized" at City Hall. McNichol was a political leader, apparently, by sufferance of the Vares. A "harmony conference" was called to agree upon candidates for the four county offices—District Attorney, Receiver of Taxes, Register of Wills, and City Treasurer. Under the law the incumbent of the latter office cannot succeed himself. An erstwhile reformer was named in his place, and holders of the other offices were agreed upon for renomination.

Locally, the product of this conference was known as the "Fifty-fifty slate." Penrose and McNichol were supposed to control District Attorney Rotan and Register of Wills James B. Sheehan. W. Freeland Kendrick, the Receiver of Taxes, and Frederick J. Shoyer, candidate for City Treasurer, were known as Vare men. For a time only the politically wise knew that Sheehan had "'gone over" to the Vares. He is demonstrating it to all now by making stump speeches for the whole ticket. Rotan has shown unusual activity in prosecuting the Vare followers mixt up in the Fifth Ward scandal, but he has refused to accept the nomination of the reform movement for reëlection, on the ground that he is pledged to the other members of the "Fifty-fifty ticket" not to accept any other nomination.

From the viewpoint of the boss, the most important of these offices is that of Receiver of Taxes. The incumbent appoints about one thousand clerks, and these jobs are peddled out to Organization workers. If the drive of the reformers is successful, they will have it in their power to break the Organization by 1919, when the mayoralty campaign will be on. The unfortunate phase of the whole affair is that the independents had little time to work. They must nominate their candidates by petition. Whether it was because they thought it unavoidable or for a more sinister reason, they accepted a Penrose-McNichol organization, hastily brought together, of five preëmptors for the party name—the Town Meeting Party—in each ward.

It is generally conceded that Penrose-McNichol support is essential to victory. A few weeks ago all the indications were that this backing would be given so that the Vares might be crushed in the city. But now the politicians of the older Republican faction are scurrying about with the report that the exposure of gang tactics here has hurt the party in the state, and the fear of a Democratic Governor next year has arisen to torment Penrose and McNichol.

The outsider may ask: "but what of the independent vote?" The answer is that approximately 110,000 Philadelphians failed to register, and so denied themselves the right to vote in the coming election. They may be heard from in the gubernatorial fight next year, or they may say again, as they have said in the past, "what's the use?" Perhaps in the last analysis these citizens are responsible for Philadelphia's government.

Philadelphia

Which Road Is Yours?

An Earth Road which requires at least a 218-pound pull to each ton

A Concrete Road which requires an average pull of only 27.6 pounds to each ton

IT takes a pull of 218 pounds to get a 1-ton load over the road on the left, when you can get over it at all. In wet weather you can't get over it at all; even in dry weather it is rough and dusty. On the right, where the road has been paved with concrete, it takes a pull of only 27.6 pounds. It never takes more than that in the worst kind of weather—winter or summer—because it is hard and clean.

Which Road Do You Want?

Everybody knows that it is easier to haul on a concrete road than on any less rigid surface. But few realize how great is the difference. This has been recently determined by tests made with a dynamometer by Prof. J. B. Davidson, Agricultural Engineer, University of California, made for the Good Roads Bureau of the California State Automobile Association.

A 3-ton load was hauled over various types of roads in the same locality on the same day, the same horses and drivers being used. The dynamometer recorded tractive pull in pounds per ton of load as follows:

	Pounds
Over a level, unsurfaced concrete road	27.6
Concrete base, 3/8-inch skin top asphaltic oil and screenings	49.2
Waterbound macadam, level, good condition	64.3
Concrete base, 1½-inch Topeka top, level, good condition	68.5
Gravel road, good condition, level	78.2
Earth road, fine dust, level	92
Earth road, stiff mud on top, firm underneath, level	218
Loose gravel, not packed down, new road, level	263

Remarkable showing for concrete—less than half the tractive force required over a good stretch of waterbound macadam, less than one-third that required on dirt or packed gravel, about one-tenth the pull required on loose gravel.

You pull ON a concrete road, where you pull AGAINST an unimproved, rough or boggy surface. Where one wastes power, the other saves. Power costs money, whether you feed a team or buy gasoline. Your saving in power will pay your share of the cost of a concrete road.

There are 30,000,000 horse-drawn vehicles in this country, most of them on farms, and 3,500,000 motor cars and trucks. The waste of horse power, of time, and motor fuel involved, not in poor roads, but in all roads less desirable for traction than concrete, is enormous. Besides this waste, the United States Office of Public Roads estimates that $200,000,000 per year is paid out indirectly for bad roads in extra cost of food. What is paid out for maintenance of roads that won't stay built is incalculable. It runs into hundreds of millions more. The excess consumption of gasoline is another huge item which motor car owners have to pay.

Concrete Roads
Their Advantages:
No Mud—No Dust
No Ruts—No Holes
No Slipping
No Skidding
Easy Hauling
Smooth Riding
Long Life—Safety
Always Ready for Use
Low Maintenance
Moderate Cost

Can any community afford to neglect its highways in view of these facts, or to build them of any material less enduring or less desirable for traction than CONCRETE? Its construction cost is lowest in the end and its upkeep cost is lowest from the start.

Be sure you know what a concrete road is. Concrete is made of portland cement, sand and pebbles or crushed stone, and water. It is hard and durable. Concrete is the material used in dams, factories, bridges, and big engineering works like the Panama Canal, requiring great solidity and strength.

Let us give you some interesting figures. Write for free copies of Bulletins Nos. 107 and 136.

CONCRETE FOR PERMANENCE

This New Range Is A Wonder For Cooking

Although it is less than four feet long it can do every kind of cooking for any ordinary family by gas in warm weather, or by coal or wood when the kitchen needs heating.

There is absolutely no danger in this combination, as the gas section is as entirely separate from the coal section as if placed in another part of the kitchen.

Note the two gas ovens above—one for baking, glass paneled and one for broiling, with white enamel door.

Gold Medal
Glenwood

The large oven below has the Indicator and is heated by coal or wood.

See the cooking surface when you want to rush things—five burners for gas and four covers for coal.

When in a hurry both coal and gas ovens can be operated at the same time, using one for meats and the other for pastry—It

THE NEW BOOKS

Adventures in the Uncanny

THE SUPERNATURAL IN MODERN ENGLISH FICTION, by Dr. Dorothy Scarborough, is one of the few monographs in the field of literature which must have been a pleasure to write. It is a survey of the treatment of supernatural themes in English and American literature from the "Gothic romance" of the end of the eighteenth century, down thru Poe and Wilkie Collins to writers of our own day, such as Algernon Blackwood and Arthur Machen. Altho the study is not and could not be exhaustive, considering the thousands of good ghost stories which the nineteenth century added to the world's fiction, there are over three hundred pages of rapid summary of the most famous ghosts, devils, werewolves, dream specters, dual personalities, magic machines, ultramundane forces and animated corpses which have sent the shivers up and down the spines of the last four generations. The work is beautifully indexed, so that the reader can turn in an instant to his favorite horror. Arthur Machen, author of *The Bowman* (popularly called "the angels of Mons"), has published a new story combining a narrative of the war with the element of the supernatural, *The Terror*, a tale of the revolt of all the animal world against mankind, a theme suggesting the view of Maeterlinck that the brute creation is secretly hostile to humanity. *The Indian Drum*, by William MacHarg and Edwin Balmer, makes effective use of the legend that a mighty Indian drum booms out over the Great Lakes whenever there is an accident, one beat for each man drowned.

The Supernatural in Modern English Fiction, by Dorothy Scarborough. G. P. Putnam. $2. *The Terror*, by Arthur Machen. New York: McBride. $1.25. *The Indian Drum*, by W. MacHarg and Edwin Balmer. Little, Brown & Co. $1.40.

Our Virgin Islands

THE Danes held possessions in the West Indies for two hundred and fifty years and never found time to write a good history of them. We have had them less than a year and here is a first class history of them. And, curious to note, it is by a Dane, Prof. Waldemar Westergaard, of Pomona College, California. Being the son of a Danish family which immigrated to North Dakota, and having been trained by Prof. H. Morse Stephens in the University of California, he is peculiarly fitted for research in this virgin field (pun accidental). He began his work on some letters found in the Bancroft collection of the University of California and then went to Denmark and dug up the original records of the Danish West India and Guinea Company, which no previous historian had touched. This gave him the material for his history of the Danish West Indies while it was under the rule of the Company from 1671-1754, and he proposes to follow this volume with two others bringing the history down to date. In the meantime he has sketched out this later history in a supplementary chapter. We hope that he will also give us sometime a briefer résume of the whole for this fine piece of original investigation is too solidly packed with facts and figures to attract the general reader.

But the volume is full of interesting and novel information. For instance we all know of the efforts that Germany has been making in recent years to secure control of the Danish Islands, efforts that have finally been frustrated by our annexation of them. But who of us knew that this was an old Prussian ambition, that in 1685 Frederick William of Hohenzollern, the Great Elector of Brandenburg and Duke of Prussia, gained a foothold on St. Thomas to carry on the slave trade in connection with the Danes? But ten years later a French privateer swooped upon the Brandenburg buildings, looted the treasury and robbed the employees, from the director-general to the humblest, of everything except the shirts to their backs. It was such incidents as these that taught the Hohenzollerns that they could never do anything with colonies until they became a sea-power and this led them to embark upon the naval policy that precipitated the Great War.

The Danish West Indies, by Waldemar Westergaard. Macmillan Company. $2.50.

Test Books

IN each generation a few books are published that test the acumen of the reader, separating "highbrows" from low as an ethical test might separate sheep from goats. Samuel Butler wrote two books of this sort, *Erewhon*, originally published in 1872, revised and reprinted in 1901, and now offered to us again, and *The Way of All Flesh*, written, for the most part, in the years that preceded the publication of *Erewhon*, but published posthumously in 1902 and now reprinted for the delectation of the discerning.

Erewhon, the admirable satire of the hypocrisies and fads of the English-speaking world, appealed to a wide circle, truly, for the first edition sold out in three weeks. The humor and whimsy, the strange narrative of unusual adventures recommend it to all readers of real books. But the fine ramifications of thought, the subtle ironies that lead home to life as we know it, the delicate descriptions of intellectual problems that are our own stated in novel ways —the old equation in new terms—these things mean most to the few who enjoy thinking for its own sake. We have too much sentimental thinking and too many intellectual feelings. We mix things. Samuel Butler's chapter on "The Rights of Vegetables" should bring us back to the common sense of thinking with our minds and feeling with our emotional natures.

The Way of All Flesh is a strong, leisurely novel of English family life permeated with a rich philosophy that shows how ridiculous were many of the hackneyed conceptions of duty, especially filial duty, and many of the dogmas and disciplines in accordance with which the people of Butler's day built up their lives. In one respect Butler's genius foreshadowed that of Bernard Shaw, his great admirer—he delighted in revealing the absurdity of customs and cults by exhibiting them humorously, by pursuing the ordinary thought of the ordinary person farther than the ordinary person would or could pursue it, and by making into stories the commonplace behavior that was the result of such thought, and letting such stories seem to be the conclusion of the whole matter. Butler's humor was far more serious than

Shaw's, and, perhaps because he was not a dramatist, his philosophy is less elusive and can be separated from the philosophy of his characters with less difficulty. As compared with Shaw's method, Butler's method may be said to have bulk and weight. To break the fallow earth of stale customs Samuel Butler used a spade. Shaw does his digging with a dagger.

Erewhon, by Samuel Butler. E. P. Dutton & Co. $1.50. *The Way of All Flesh*, by Samuel Butler. Boni & Liveright, Inc. 60 cents.

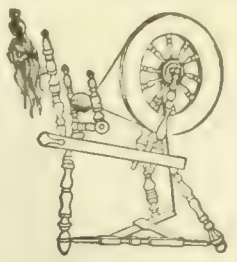
Jobs and Wages

Out of a pamphlet published in 1913 has now grown an excellent handbook on the *Minimum Wage*, giving all the latest data and discussion. (H. W. Wilson Company, White Plains, New York, $1.25.)

How to Choose the Right Vocation is a curious, entertaining and doubtless useful compilation by H. W. Merton, a vocational advisor. It enumerates the special qualities essential to some 1400 occupations, and by series of questions enables the introspective to discover their abilities—and disabilities. (Funk & Wagnalls Company, $1.50.)

Combined in one volume are two studies on the effect of war industry in disorganizing the lives and working conditions of the laboring classes, sometimes for the better but often with disastrous results to the homes the parents of which were swept into the vortex of production for the battleline. *Women as Munition Makers*, by Amy Hewes, takes up the manufacturing town of Bridgeport, Connecticut; and *Munition Workers in England and France* is a summary of the reports issued by the British Ministry of Munitions. (Russell Sage Foundation, New York, 75 cents.)

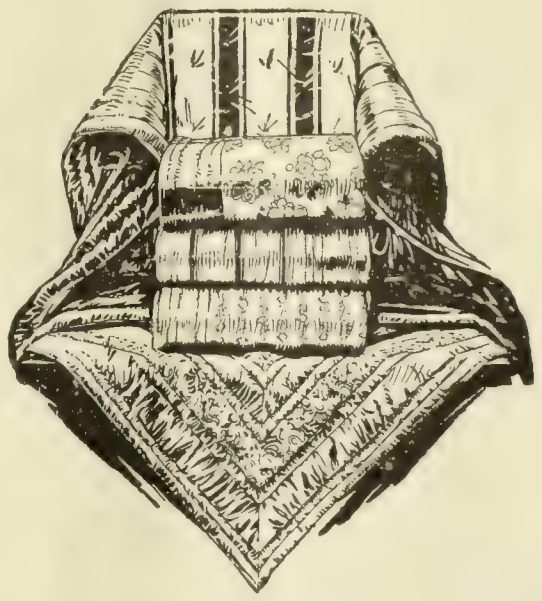
In These United States



The first volume of *A Social History of the American Family*, by Dr. Arthur W. Calhoun, devotes a chapter to sexual codes and customs in the European countries which furnished colonists to the New World and then traces their modification and development in the thirteen English colonies down to revolutionary times. The volume shows evidence of great research and contains a full bibliography. (Arthur H. Clark Company, Cleveland.

American Ideals, by Professors Norman Foerster and W. W. Pierson of the University of North Carolina, is a compendium of brief quotations from the orators, poets, statesmen and scholars who have attempted to define the ideals and purposes of the United States. The selections are judiciously made and we believe that the book should prove useful in the inculcation of a thoughtful and intelligent patriotism among the rising generation. (Houghton, Mifflin. $1.25.)

American Presidents, by Prof. Thomas F. Moran, of Purdue University, is a readable string of brief sketches of the personality and historical importance of each of the American Presidents. These sketches show well-balanced judgment, but they might with advantage have been somewhat more extended. It is impossible adequately to portray the character of a great political leader and discuss his relation to his age in a paragraph or two of comment. (Thomas Crowell Company, New York, 75 cents.)



The revised second edition of *The History of Tammany Hall*, by Gustavus Myers, appears at a most appropriate moment in the midst of a municipal election in New York City. The story is brought down to the opening of the 1917 campaign. Mr. Myers does not write as a partizan; he simply gives the ascertained historical facts and his book should be as useful to the college student of political science as to the voter who wishes definite information about the organization which for a century had been the dominant fact in the political life of the Empire City of America. (New York: Boni and Liveright. $2.50.)

Blankets *and* Bed Coverings *at* McCutcheon's

Reg. Trade Mark

A very remarkable collection of Cotton-, Wool- and Down-filled Comfortables in all the leading colors in Stripes, Plaids and Floral effects are now on display.

There are in addition the usual plain colors in a wide range, in Silk and Satin. Prices range from $4.50 to $60.00 each.

Blankets, in all sizes from the small-crib to the extra-large size for four-post beds, in all the medium and better grades, at prices very much below the present-day values.

Good medium-grade Blankets, $5.00, 6.00, 7.00 8.00, 10.50 up per pair.

Bed Spreads. Included in our stock are the light-weight Night Spreads. Dimity, Patent Satin, Sheer Mull, plain and embroidered, also Linen embroidered. Our line of fine Filet Bed Spreads was never more complete and consists of Cluny and Filet on Scrim, Filet and Italian cut-work on heavy Linen. $32.50 up to $300 each.

What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 24th year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. A dollar bill mailed at our risk will bring you the Pathfinder for a full year, or simply send **15c** to show that you might like such a paper, and we will send the Pathfinder on probation **13** weeks. The 15c does not repay us, but we are glad to invest in new friends. **Pathfinder, Box 39, Washington, D. C.**

CREATIVE CHEMISTRY

(*Continued from page 186*)

per acre instead of our 113 bushels. But the United States uses on the average only 28 pounds of fertilizer per acre, while Europe uses 200.

It is clear that we cannot rely upon Chile, but make nitrates for ourselves as Germany does. In the first article of this series we considered the new methods of fixing the free nitrogen from the air. But the fixation of nitrogen is a new business in this country and our chief reliance so far has been the coke ovens. When coal is heated in retorts or ovens for making coke or gas a lot of ammonia comes off with the other products of decomposition and is caught in the sulfuric acid used to wash the gas as ammonium sulfate. Our American coke-makers have been in the habit of letting this escape into the air and consequently we have been losing some 700,000 tons of ammonium salts every year, enough to keep our land rich and give us all the explosives we should need. But now they are reforming and putting in ovens that save the by-products such as ammonia and coal tar, so in 1916 we got from this source 325,000 tons a year and it is expected that this will soon be raised to 400,000 tons.

Germany has a natural monopoly of potash as Chile has a natural monopoly of nitrates. The agriculture of Europe and America has been virtually dependent upon these two sources of plant foods. Now when the world was cleft in twain by the shock of August, 1914, the Allied Powers had the nitrates and the Central Powers had the potash. If Germany had not had up her sleeve a new process for making nitrates she could not long have carried on a war and doubtless would not have ventured upon it. But the outside world had no such substitute for the German potash salts and has not yet discovered one. Consequently the price of potash in the United States jumped from $40 to $400 and the cost of food has gone up with it. There is a standing reward open—say a million or a hundred million dollars, the world will not haggle over the price—to anybody who will discover a bed of potash salts equal to that of Stassfurt or a process that will match it. Even under the stimulus of prices ten times the normal and with chemists searching furnace crannies and bad lands the United States was able to scrape up less than 10,000 tons of potash in 1916, and this is barely enough to satisfy our needs for two weeks!

Yet potash compounds are as cheap as dirt. Pick up a handful of gravel and you will be apt to find much of it feldspar or other mineral containing some ten per cent of potash which—when extracted—would be worth $500 a ton. Unfortunately it is in combination with silica, which is harder to break up than a trust. But "constant washing wears away stones" and the potash that the metallurgist finds too hard to extract in his hottest furnace is washed out in the course of time thru the dropping of the gentle rain from heaven. "All rivers run to the sea" and so the sea gets salt, all sorts of salts, principally sodium chloride (our table salt) and next magnesium, calcium and potassium chlorides or sulfates in this order of abundance. But if we evaporate sea-water down to dryness all these are left in a mix together and it is hard to sort them out. Only patient Nature has time for it and she only did in one place, that is at Stassfurt, Germany. It seems that in the days when northwestern Prussia was undetermined whether it should be sea or land it was flooded annually by sea-water. As this slowly evaporated the dissolved salts crystallized out at the critical points, leaving beds of various combinations. Each year there would be deposited three to five inches of salts with a thin layer of calcium sulfate or gypsum on top. Counting these annual layers, like the rings on a stump, we find that the Stassfurt beds were ten thousand years in the making. They were first worked for their salt, common salt, alone, but in 1837 the Prussian Government began prospecting for new and deeper deposits and found, not the clean rock salt that they wanted, but bittern, largely magnesium sulfate or Epsom salt, which is not at all nice for table use. This stuff was first thrown away until it was realized that it was much more valuable for the potash it contains than was the rock salt they were after. Then the Germans began to purify the Stassfurt salts and market them thruout the world. They contain from fifteen to twenty-five per cent of magnesium chloride mixt with magnesium chloride in "carnallite," with magnesium sulfate in "kainite" and sodium chloride in "sylvinite." More than thirty thousand miners and workmen are employed in the Stassfurt works. There are some seventy distinct establishments engaged in the business, but they are in combination. In fact they are compelled to be, for the German Government is as anxious to promote trusts as the American Government is to prevent them. Once the Stassfurt firms had a falling out and began a cutthroat competition. But the German Government objects to its people cutting each other's throats. American dealers were getting unheard of bargains when the German Government stepped in and compelled the competing corporations to recombine under threat of putting on an export duty that would eat up their profits.

The advantages of such business cooperation are specially shown in opening up a new market for an unknown product as in the case of the introduction of the Stassfurt salts into American agriculture. The farmer in any country is apt to be set in his ways and when it comes to inducing him to spend his hard earned money for chemicals that he never heard of and could not pronounce he—quite rightly—has to be shown. Well, he was shown. It was, if I remember right, early in the nineties that the German Kali Syndikat began operations in America and the United States Government became its chief advertising agent. In every state there was an agricultural experiment station and these were provided liberally with illustrated literature on Stassfurt salts with colored wall charts and sets of samples and free sacks of salts for field experiments. The station men, finding that they could rely upon the scientific accuracy of the information supplied by Kali and that the experiments worked out well, became enthusiastic advocates of potash fertilizers. The station bulletins—which Uncle Sam was kind enough to carry free to all the farmers of the state—sometimes were worded so like the Kali Company advertising that the company might have raised a complaint of plagiarizing, but they never did. The Chilean nitrates, which are under British control, were later introduced by similar methods thru the agency of the state agricultural experiment stations.

As a result of all this missionary work, which cost the Kali Company $50,000 a year, the attention of a large proportion of American farmers was turned toward intensive farming and they began to realize the necessity of feeding the soil that was feeding them. They grew dependent upon these two foreign and widely separated

sources of supply. In the year before the war the United States imported 250,000 tons of Stassfurt salts, for which the farmers paid more than $20,000,000. Then a declaration of American independence—the German embargo of 1915—cut us off from Stassfurt and for the last three years we have had to rely upon our own resources. We have seen how Germany—shut off from Chile—solved the nitrogen problem for her fields and munition plants. It remains to be seen whether we—shut off from Germany—can solve the potash problem as well. It does not seem so easy.

There is no more lack of potash in the rocks than there is of nitrogen in the air, but the nitrogen is free and has only to be caught and combined, while the potash is shut up in a granite prison from which it is hard to get it free. It is not the percentage in the soil but the percentage in the soil water that counts. A farmer with his potash locked up in silicates is like the merchant who has left the key of his safe at home in his other trousers. He may be solvent, but he cannot meet a sight draft. It is only solvent potash that passes current.

In the days of our grandfathers we had not only national independence but household independence. Every homestead had its own potash plant and soap factory. The frugal housewife dumped the maple wood ashes of the fireplace into a hollow log set up on end in the backyard. Water poured over the ashes leached out the lye, which drained into a bucket beneath. This gave her a solution of pearl ash or potassium carbonate whose concentration she tested with an egg as a hydrometer. In the meantime she had been saving up all the waste grease from the frying pan and pork rinds from the plate and by trying out these she got her soap fat. Then on a day set apart for this disagreeable process in chemical technology she boiled the fat and the lye together and got "soft soap," or as the chemist would call it, potassium stearate. If she wanted hard soap she "salted it out" with brine. The sodium stearate being less soluble was precipitated to the top and cooled into a solid cake that could be cut into bars by pack thread. But the frugal housewife threw away in the waste water what we now consider the most valuable ingredients, the potash and the glycerine.

But the old lye-leach is only to be found in ruins on an abandoned farm and we no longer burn wood at the rate of a log a night. Last year even under the stimulus of tenfold prices the amount of potash produced as pearl ash was only 220 tons—and we need at least 300,000 tons in some form. It would, of course, be very desirable as a conservation measure if all the sawdust and waste wood were utilized by charring it in retorts. The gas makes a handy fuel. The tar washed from the gas contains a lot of valuable products. And potash can be leached out of the charcoal or from its ashes whenever it is burned. But this at best would not go far toward solving the problem of our national supply.

There are other potash-bearing wastes that might be utilized. The cement mills which use feldspar in combination with limestone give off a potash dust, very much to the annoyance of their neighbors. This can be collected by running the furnace clouds into large settling chambers or long flues, where the dust may be caught in bags, or washed out by water sprays or thrown down by electricity. The blast furnaces for iron also throw off potash-bearing fumes.

Our six million ton crop of sugar beets last year contained some 12,000 tons of nitrogen, 4000 tons of phosphoric acid and

Why England Uses Sanatogen so Extensively

LADY Mackworth quotes a former cabinet minister as remarking that Sanatogen is "a national necessity to preserve good nerves." For eighteen years previous to the war Sanatogen had been building up its remarkable prestige among the English people. Sir Gilbert Parker, Arnold Bennett, Hall Caine—many indeed are the leaders of British thought who have long been publicly endorsing it.

Today, therefore, when national good health has become a necessity, when the sick list must be kept low and the convalescent made well in the least possible time, England knows she can place utmost reliance upon its wonderful tonic and upbuilding qualities in any emergency.

This is why such vast quantities of Sanatogen are used by the British in the convalescent hospitals at home, in the base hospitals, in the trenches—in fact, wherever the burdens and horrors of war make it necessary to preserve and restore steady nerves and build up weakened bodies.

Sanatogen Long Made in America

In this country, too, Sanatogen has the highest standing. It is endorsed not only by many prominent men—such as Colonel Henry Watterson and John Burroughs—but by thousands of physicians. The Sanatogen sold here is made in an American factory by an American Company.

Civilian and soldier alike find benefit in Sanatogen. It strengthens and sustains, it promotes fitness and recuperates after fatigue. The delicate child, the anæmic young girl, the nursing mother, the run-down business man—*all* find help in Sanatogen.

A trial will convince you—do you not owe it to your health to give Sanatogen this trial today?

* * *

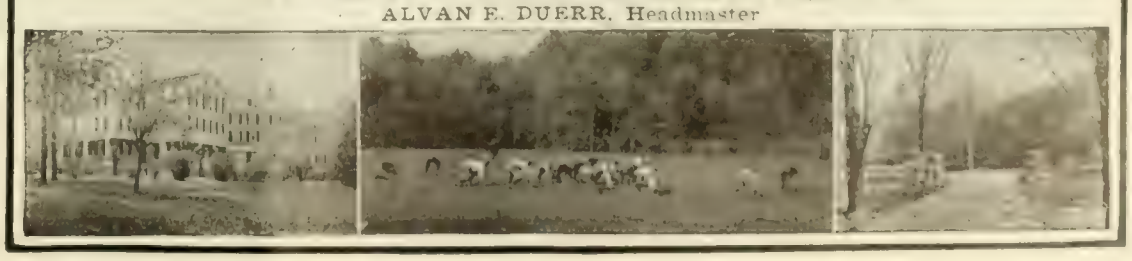
"The Art of Living," a charming booklet by Richard LeGallienne, touching on Sanatogen's kindly help and giving other aids in the quest of contentment and better health, sent free on request. Address The Bauer Chemical Co., Inc., 26 R, Irving Place, New York City.

Good druggists everywhere sell Sanatogen—no increase in prices—in 3 sizes, $1, $1.90, and $3.60

THE STONE SCHOOL

Cornwall-on-Hudson, Box 5, New York
FIFTY-FIRST YEAR

A School in the Heart of the Open Country. For Boys from 9 to 19.



LOCATION: 50 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, unusually adapted to a sane and simple out-of-door life.

WORK: Preparation for College or Business Life; recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase individual efficiency. Small classes: A teacher for every six boys.

ATHLETICS: Two fields with excellent facilities for all sports, under supervision; hiking, woods life, swimming pool.

You are invited to come and see for yourself. Catalog sent on application.

ALVAN E. DUERR, Headmaster

Faces Made Young

I will tell the secret of a youthful face to any woman whose appearance shows that time or illness or any other cause is stealing from her the charm of girlhood beauty. I will show how without cosmetics, creams, massage, masks, plasters, straps, vibrators, "beauty" treatments or other artificial means, she can take the look of age from her countenance. I want every woman, young or middle aged, who has a single facial defect to know about my

Beauty Exercises

which remove lines and "crow's feet" and wrinkles; fill up ugly hollows; give roundness to scrawny necks; lift up sagging corners of the mouth; and clear up muddy or sallow skins. I will explain all this to any woman who will write to me. I will show how five minutes daily with my simple facial exercises will work wonders. This information is free to all who ask for it.

Results Guaranteed

I absolutely guarantee results. No woman need be disappointed. I offer the exercises at my risk. Let me tell you about them. Write for my Free Book (sent in plain sealed envelope). It will tell you just what to do to bring back firmness to the facial muscles and tissues and smoothness and beauty to the skin. Write today.

18,000 tons of potash, all of which was lost except where the waste liquors from the sugar factory were used in irrigating the beet land. The beet molasses, after extracting all the sugar possible by means of lime, leaves a waste liquor from which the potash can be recovered by evaporation and charring and leaching the residue. The Germans get 5000 tons of potassium cyanide and as much ammonium sulfate annually from the waste liquor of their beet sugar factories and if it pays them to save this it ought to pay us where potash is dearer. Various other industries can put in a bit when Uncle Sam passes around the contribution basket marked "Potash for the Poor." Wool wastes and fish refuse make valuable fertilizers, altho they will not go far toward solving the problem. If we saved all our potash by-products they would not supply more than fifteen per cent of our needs.

Tho no potash beds comparable to those of Stassfurt have yet been discovered in the United States, yet in Nebraska, Utah, California and other western states there are a number of alkali lakes, wet or dry, containing a considerable amount of potash mixt with soda salts. The plants at Searles Lake, California, expect to be able to put out 1000 tons a month now that Congress has granted permission to work the deposits which are on Government reserves. Altogether we got from these western salts and brines 3994 tons of potash last year.

Another mineral source of potash is alunite, which is a sort of natural alum, or double sulfate of potassium and aluminum, with about ten per cent of potash. It contains a lot of extra alumina, but after roasting in a kiln the potassium sulfate can be leached out. The alunite beds near Marysville, Utah, are now being worked for all they are worth, but the process does not give potash cheap enough for our needs in ordinary times.

The tourist going thru Wyoming on the Union Pacific will have to the north of him what is marked on the map as the "Leucite Hills." If he looks up the word in the Unabridged that he carries in his satchel he will find that leucite is a kind of lava and that it contains potash. But as he will also observe that the potash is combined with alumina and silica, which are hard to get out and useless when you get them out. One of the lavas of the Leucite Hills, that named from its native state "Wyomingite," gives fifty-seven per cent of its potash in a soluble form on roasting with alunite—but this costs too much. The same may be said of all the potash feldspars and mica. They are abundant enough, but until we find a way of utilizing the by-products, say the silica in cement and the aluminum as a metal, they cannot solve our problem.

Since it is so hard to get potash from the land it has been suggested that we harvest the sea. The experts of the United States Department of Agriculture have placed high hopes in the kelp or giant seaweed which floats in great masses in the Pacific Ocean not far off from the California coast. This can be hauled into barges and brought to shore, where it may be dried and used locally as a fertilizer or burned and the potassium chloride leached out of the charcoal ashes. But it is hard to handle the bulky, slimy sea-weed, cheaply enough to get out of it the small amount of potash it contains. Last year the four large plants engaged in the kelp business contributed only about a thousand tons of potash.

This completes our survey of the visible sources of potash and it cannot be said that the prospect is promising. Last year we could only produce about 10,000 tons of potash. In 1917 we hope by energetic

exertion to raise it to 20,000 or 25,000 tons. But we need 300,000 tons and we could use twice that to advantage if we had it. Professor Ostwald, the great chemist of Leipzig, says:

America went into the war like a man with a rope around his neck which is in his enemy's hands and is pretty tightly drawn. With its tremendous deposits Germany has a world monopoly in potash, a point of immense value which cannot be reckoned too highly when once this war is going to be settled. It is in Germany's power to dictate which of the nations shall have plenty of food and which shall starve.

If, then, some mineralogist or metallurgist will cut that rope by showing us a supply of cheap potash we will erect him a monument as big as Washington's. But Ostwald is wrong in supposing that America is as dependent as Germany upon potash. The bulk of our food crops are at present raised without the use of any fertilizers whatever.

When we turn to the consideration of the third plant food we feel better. While the United States has no such monopoly of phosphates as Germany has of potash and Chile has of nitrates we have an abundance and to spare. Whereas we formerly *imported* about $17,000,000 worth of potash from Germany and $20,000,000 worth of nitrates from Chile a year we *exported* $7,000,000 worth of phosphates.

Whoever it was who first noticed that the grass grew thicker around a buried bone he lived so long ago that we cannot do honor to his powers of observation, but ever since then—whenever it was—old bones have been used as a fertilizer. But we long ago used up all the buffalo bones we could find on the prairies and our packing houses could not give us enough bonemeal to go around, so we have had to draw upon the old bone-yards of prehistoric animals. Deposits of lime phosphate of such origin were found in South Carolina in 1870 and in Florida in 1888. Since then the industry has developed with amazing rapidity until in 1913 the United States produced over three million tons of phosphates, nearly half of which was sent abroad. The chief source at present is the Florida pebbles, which are dredged up from the bottoms of lakes and rivers or washed out from the banks of streams by a hydraulic jet. The gravel is washed free from the sand and clay, screened and dried, and then is ready for shipment. The rock deposits of Florida and South Carolina are more limited than the pebble beds and may be exhausted in twenty-five or thirty years, but Tennessee and Kentucky have a lot in reserve and behind them are Idaho, Wyoming and other western states with millions of acres of phosphate land, so in this respect we are independent.

But ever here the war has hit us hard. For the calcium phosphate as it comes from the ground is not altogether available because it is not very soluble and the plants can only use what they can get in the water that they suck up from the soil. But if the phosphate is treated with sulfuric acid it becomes more soluble and this product is sold as "superphosphate." The sulfuric acid is made mostly from iron pyrite and this we have been content to import, over 800,000 tons of it a year, largely from Spain, altho we have an abundance at home. Now that the shortage of shipping has shut off the foreign supply we are using more of our own pyrite and also our deposits of native sulfur along the Gulf coast. But as a consequence of this sulfuric acid has gone up from $5 to $25 a ton and acidulated phosphates have gone up correspondingly.

Germany is short on natural phosphates as she is long on natural potash. But she has made up for it by utilizing a by-product of her steelworks. When phosphorus occurs in iron ore, even in minute amounts,

Does Red Meat Cause Rheumatism?

R. L. ALSAKER, M. D.

By R. L. Alsaker, M. D.

Author of "Maintaining Health"

DEAR DOCTOR ALSAKER: I am 43 years old. Have hardly had a sick day in my life, except the usual diseases of childhood and an occasional cold in the fall or spring, when most people seem to catch cold. For the past three years I have had occasional pains in the shoulder, the knee joints, and in the little finger of the left hand.

My doctor tells me that I have rheumatism and that I must stop eating meat—especially red meat—beef, lamb, etc. I eat very little meat. My breakfast consists of bacon and eggs or one mutton chop, rolls and occasionally wheat cakes (never more than three), or toast and a cup of coffee. And I eat a little fruit and oatmeal with cream and sugar. For lunch a couple of soft boiled eggs and a piece of pie or cake and a glass of milk. Sometimes I take Boston baked beans instead of eggs and tea instead of milk. For dinner we have soup, a roast of some kind, or broiled or baked fish, with potatoes and other vegetables, and occasionally a salad, but I don't care much for raw food, and always a dessert—ice cream, stewed fruit, pie or cake—and after dinner coffee.

If red meat causes rheumatism, why should I have it and the other members of the family, who eat meat as frequently as I do, be free?

W. J. L.

THIS gentleman seems to think that he has been quite well, though he and real health have not been on speaking terms for some years. Those who are well do not have colds. Colds are a warning, a danger signal, showing that the body is full of impurities and waste.

Pains that travel from joint to joint, usually called rheumatic pains, are another sign that the blood is charged with impurities.

This gentleman seems to think that he has been prudent about his eating, when in fact he has been careless. At 43 everybody owes it to himself and family to know how to eat so as to have health. Eggs, meat, fish and milk are proteids (albuminous foods). The body needs a limited amount of these foods, but if they are taken in excess, as they are when eaten at every meal, they build rheumatism, catarrh, bronchitis, asthma, colds, Bright's disease and other ills.

Why does not every member in this family have rheumatism? Because individuals differ, and what will express itself as rheumatism in one may take the form of a different disease in another individual. Each and every one who lives in this manner must from time to time have some kind of physical trouble.

Red meat does not in itself cause rheumatism, though overeating of meat often helps to build the trouble. I have to fall back on experience and say that I have had numerous cases of rheumatism of all kinds—gout, lumbago, muscular rheumatism, rheumatism of the joints, chronic and acute—and every case, without exception, has recovered, when they followed directions. Many of these patients had had rheumatism from ten to thirty years, during which time they had consumed vast quantities of drugs and had gone to springs and had been boiled out, without special benefit.

These sufferers recovered through proper living, especially through correct eating. If this gentleman will eat and drink as he should, he will recover, as all the rest did. There are no *ifs* and *buts* about it—he will get well and stay well. What is more, right eating will make his whole family well. And they won't need any drugs or operations. It is natural to be well, and those who follow Nature's laws will always have health. Proper eating is the most important, in fact the dominating, health factor. Everyone who has rheumatism can eat his way out of it and into health. No one need be sick.

Rheumatism is a luxury, not a necessity. Those who get it, can keep it indefinitely. They can also get rid of it and stay rid of it. Those who have rheumatism should not complain about it, for they have the knowledge at hand that will show them how to get out of the aches and pains of rheumatism and back to health.

Realizing the universal need of clearly defined instruction on the cause and cure of this annoying disease I have outlined in a small volume a plan of living that has proved successful in getting rid of all kinds of acute and chronic rheumatism. My instructions are easy to understand and pleasant to follow.

The plan shows how to live so as to have health. It tells you in plain English the true cause of rheumatism, and it gives you the true cure—a cure that works. There is nothing mysterious about it. It is simple, good, workable common sense that you can apply *right in your home.* You need not go to health resorts or so-called healing springs. You need not take drugs, or waters bearing fancy or unpronounceable names. You know as well as I do that *drugs do not cure* rheumatism—or anything else. Don't fool with them, but learn how to live so that your system will be so sweet and clean that you can have no aches and pains. A cure consists in living according to the natural demands of your body, in giving the body the proper care, and *especially in eating correctly.* This book of health plans will teach you how to get well and stay well, if you are a careful, observant reader. The title of this new book is, "GETTING RID OF RHEUMATISM." Its price is one dollar, with ten cents additional to cover packing and postage. Its cost is considerably less than your doctor would charge for prescribing a treatment—less than your druggist would charge you for a patent "cure-all" *that doesn't cure*—less than it would cost you to lose a day's pay on account of sickness—less than the cost of an evening at the theatre. In fact this book is an investment that will pay dividends in health and happiness till the end of your days.

Send to my publisher, Frank E. Morrison, New York, and get your copy. Follow my plan of treatment for one month; then if you are not entirely satisfied with the improvement in your health, return the book and your money will be refunded to you.

Remember this: If you want health you can have it. You have your choice of living right or living wrong. This book teaches you the truth and nothing but the truth. Do you want it?

PUBLISHER'S ANNOUNCEMENT: R. L. Alsaker, M.D., is an eminent authority on the subject discussed in the above article. His patients come from all corners of the globe and they learn from him how to get well and stay well. He has put the net result of his many years of professional experience with sick people into his writings and it is a real pleasure for me to recommend them, because I know from personal experience and observation that good results *always* follow an observance of his simple instructions. Don't risk another day's sickness; send $1.10 at once for "GETTING RID OF RHEUMATISM" and learn quickly how to prevent further sickness and get back to health and happiness. Money returned if you follow instructions for one month and are not entirely satisfied with your improvement in health. Frank E. Morrison, Publisher, Dept. 74, 1133 Broadway, New York.

Luigi Criscuolo, Director

The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds. We cannot, of course, decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

it makes the steel brittle. Much of the iron ores of Alsace-Lorraine were formerly considered unworkable because of this impurity, but shortly after Germany took these provinces from France in 1871 a method was discovered by two British metallurgists, Thomas and Gilchrist, by which the phosphorus is removed from the iron in the process of converting it into steel. This consists in lining the crucible or converter with lime and magnesia, which takes up the phosphorus from the melted iron. This slag lining, now rich in phosphates, can be taken out and ground up for fertilizer. So the phosphorus which used to be a detriment is now an additional source of profit and this British invention has enabled Germany to make use of the territory she stole from France to outstrip England in the steel business. In 1910 Germany produced 2,000,000 tons of Thomas slag while only 160,000 tons were produced in the United Kingdom. The open hearth process now chiefly used in the United States gives an acid instead of a basic phosphate slag, not suitable as a fertilizer. The iron ore of America, with the exception of some of the southern ores, carries so small a percentage of phosphorus as to make a basic process inadvisable.

Recently the Germans have been experimenting with a combined fertilizer, Schröder's potassium phosphate, which is said to be as good as Thomas slag for phosphates and as good as Stassfurt salts for potash. The American Cyanamid Company is just putting out a similar product, "Ammo-Phos," in which the ammonia can be varied from thirteen to twenty per cent and the phosphoric acid from twenty to forty-seven per cent so as to give the proportions desired for any crop. We have then the possibility of getting the three essential plant foods altogether in one compound with the elimination of most of the extraneous elements such as lime and magnesia, chlorides and sulfates.

For the last three hundred years the American people have been living on the unearned increment of the unoccupied land. But now that all our land has been staked out in homesteads and we cannot turn to new soil when we have used up the old, we must learn, as the older races have learned, how to keep up the supply of plant food. Only in this way can our population increase and prosper. As we have seen, the phosphate question need not bother us and we can see our way clear toward solving the nitrate question. We have given the Government $20,000,000 to experiment on the production of nitrates from the air and the results will serve for fields as well as firearms. But the question of an independent supply of cheap potash is still unsolved.

WHAT TO READ ON "FEEDING THE SOIL"

The Department of Agriculture or your congressman will send you literature on the production and use of fertilizers. From your state agricultural experiment station you can procure information as to local needs and products. Consult the articles on potash salts and phosphate rock in the latest volume of "Mineral Resources of the United States," Part II Non-Metals (published free by the U. S. Geological Survey). Also consult the latest Yearbook of the Department of Agriculture. The *Journal of Industrial and Engineering Chemistry* for July, 1917, publishes an article by W. C. Ebaugh on "Potash and a World Emergency."

QUESTIONS FOR STUDENTS

If 25 pounds of sodium nitrate (Chile saltpeter) will add a bushel per acre to the wheat crop, how much would it increase the American wheat supply if we had used as much nitrate as Germany? (You can find crop statistics in the Yearbook of the Department of Agriculture.)

Can you make soap from wood ashes and fat?

What are the "pea-like plants" that have the power of fixing nitrogen from air? Are any such used in your locality for enriching the soil? What fertilizer do the farmers buy or use?

What are potash or potassium salts and phosphates or phosphorus used for besides agriculture?

STATEMENT OF THE OWNERSHIP, MANAGEMENT, etc., required by the Act of Congress of August 24, 1912, of The Independent, published weekly at New York, N. Y., for October 1, 1917:

State of New York, } ss.
County of New York, }

Before me, a notary public in and for the State and county aforesaid, personally appeared Karl V. S. Howland, who having been duly sworn according to law, deposes and says that he is the President of Independent Corporation, owner of The Independent, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business manager are: Publisher, Independent Corporation; Editor, Hamilton Holt; Associate Editor, Harold J. Howland; Managing Editor, none; Business Manager, none, all of 119 West Fortieth street, New York, N. Y.

2. That the owner is Independent Corporation, 119 West Fortieth street, New York, N. Y. Names and addresses of stockholders holding 1 per cent. or more of total amount of stock: Charles B. Alexander, 165 Broadway, New York, N. Y.; James Douglas, 99 John street, New York, N. Y.; Hamilton Holt, 119 West Fortieth street, New York, N. Y.; Estate of William B. Howland, 119 West Fortieth street, New York, N. Y.; Harold J. Howland, 119 West Fortieth street, New York, N. Y.; Karl V. S. Howland, 119 West Fortieth street, New York, N. Y.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent. or more of total amount of bonds, mortgages, or other securities are: none.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

INDEPENDENT CORPORATION,
KARL V. S. HOWLAND, President.

Sworn to and subscribed before me this 10th day of October, 1917.

WESLEY W. FERRIN,

Notary Public, N. Y. County No. 183. New York County Register's No. 9145.
(My commission expires March 30, 1919.)

For 36 years we have been paying our customers the highest returns consistent with conservative methods. First mortgage loans of $200 and up which we can recommend after the most thorough personal investigation. Please ask for Loan List No. 710
$25 Certificates of Deposit also for saving investors.
PERKINS & CO. Lawrence, Kans

THE LIVERPOOL AND LONDON AND GLOBE
INSURANCE COMPANY, Limited
NEW YORK OFFICE, No. 80 WILLIAM STREET.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

VICTORY AND THE ROAD TO PEACE

(*Continued from page 177*)

senting the building of sixteen cities, each to be occupied by 40,000 soldiers, justifies the announcement that all will be ready for occupancy as fast as the troops are called to the training camps. Within three months from the beginning of construction the Government will have expended approximately $150,000,000 on this work alone. The largest amount appropriated before the present year was for the construction of the Panama Canal—$46,000,000. Within three months these new cities have been provided with sewerage, lighting and power systems. Each cantonment contains about a thousand separate buildings. It has been appreciated that the cantonments are the dwelling places for men not accustomed to military life but to all the conveniences of the average American home. Both from the viewpoint of hygiene, comfort and attractiveness, the War Department has endeavored to make each cantonment a model city where the environment will be conducive to military efficiency and contentment. The entire construction has been brought about by cooperation between the Quartermaster General's department and the Council of National Defense and its committees.

The task of equipping an army of nearly 2,000,000 men is progressing as rapidly as the peace-time industries of the country can be extended to meet war conditions. Minor inconveniences and shortages, which develop as the cantonments are opened, will be temporary. The response of American industry to extraordinary demands has been remarkable.

The task of equipping the army began from the ground up. More than $3,000,000,000 must be expended by the Quartermaster Department for the first year of the war. The difficulties and shortages have been and are gradually overcome. The food situation at each cantonment and abroad is reported as gratifying.

Everything, therefore, is making for efficiency in carrying on the war. The United States will never turn back until it has given the world peace—not merely a cessation of conflict. We are in this war as the evangels of peace.

Nobody knows what the world is going to be like when this war is over. No imagination is able to picture the sort of civilization the world will have after this conflict. But we do know that when this war is over the rehabilitation of a stricken if not paralyzed civilization is going to be a long-drawn-out and uphill task, and there will be need on every hand for trained minds, for trained and schooled men.

When the reconstruction of the world takes place; when a finer and better civilization has been worked out; when the human race puts its shoulders to the wheels of industry and begins to spread abroad the impalpably valuable discoveries of science, I can imagine that a new history of the world will be written. And it will date, I think, from this great war, when men realized perhaps for the first time in a fundamental way that the waste in conflict was an unrecoverable waste; that the upkeep of enormous armies was too great a burden to bear; and that the real happiness of mankind is based upon the peaceful pursuits which aim to make available the great resources of the world.

When peace comes America will have a special opportunity for a great service!

Washington

Greater Strength and Increased Service

THE Guaranty Trust Company of New York has joined the Federal Reserve System. Through this membership, the character of the Company is unchanged but its strength is increased and its opportunities for service are broadened.

With only a few minor exceptions, the Guaranty Trust Company retains all of its charter rights, and will continue its activities as a trust company under the New York State Banking Law. The personnel of its Board of Directors is not in any way affected by its new status.

The advantages resulting from membership will directly benefit the Company's commercial customers, and through them the entire business community.

As a member of the Federal Reserve Bank of New York, the Guaranty Trust Company can enlarge the scope of its acceptance and discount business, securing for its customers the most favorable terms.

As a member bank, this Company has behind it the entire strength and facilities of the Federal Reserve System.

MONTPELIER VERMONT

A NUMBER OF THINGS

AN OCCASIONAL PAGE BY EDWIN E. SLOSSON

BEFORE I got my phonograph I suspected that the advertisements might be exaggerated. But I found that they had not even mentioned its most interesting features. They tell how you can play on it but not a word about how you can play *with* it. They do not hint that by moving the speed regulator back and forth you can make a monolog into a dialog and a solo into a duet between an upper-attic alto and a sub-basement bass. They do not tell you how you can quite transform a record with little drops of water and little grains of sand and little spots of candle grease scattered over it. They mention various needles, steel, fiber, tungsten and jewels, but not a word about how you can cut up your old combs, be they rubber, celluloid, ivory or tortoise shell, to make needles. A hard wood toothpick, suitably sharpened, will turn a ten cent record into a seventy-five cent one. A friend from Utah tells me that the progressive people of the West have discarded the boughten needles and are using cactus thorns, with the end rubbed off on sand paper. I wish I could try it, but cactuses don't grow in New York City except in the Botanical Garden and there is a policeman on guard there.

BUT the needle is really unnecessary. So is the sounding box. So is the arm and resonance chamber. All you need is a photo film negative. Stick one corner into the groove and there you have it. If you bend the celluloid like a sail in a breeze you will get a fine tone. I believe the manufacturers are making a mistake in using flat diaphragms. A bulging one ought to sound louder and less harsh. If you haven't a negative handy use a visiting card, a postal card, anything. Use your fingernail. This makes the music far and faint but that is an advantage with most records. A mandarin could get along without any diaphragm at all—I mean in his phonograph.

Three or four films or cards can be held between the fingers or fixt on a stick so as to run in different grooves. This multiplies the volume of sound and makes a medley of it. If you want to play the phonograph appropriately buy a set of the postcard portraits of distinguished musicians and let each play his own compositions. It is a pretty sight to see Wagner quivering with emotion as the "Valkyrie" races under him.

Of course you will cut out from the catalog the portrait of your favorite singers and paste them on the middle of the record. On a gift record you can paint a picture or a decorated motto or your autograph on this center space, covering up the advertisement but leaving the title. It beats the old-fashioned plaque or frying pan as a basis for the fine arts. A young lady who had studied Futuristic painting at the Y. W. C. A. art school sent me a record with the loveliest centerpiece of ultra-modern *appliqué*, containing all the colors of the rainbow and some unknown to nature and found only in the aniline dyes. And it plays Futuristic music, too. You see she has covered over the hole in the center and cut another half an inch away. This produces eccentric music, like the Hawaiian, only more so.

The chief defect of the phonograph in its present stage is the scratching. There ought to be some way of getting rid of that, say by damping the scratch vibrations, for these must be quite different from the music vibrations. I find that the scratching comes largely from the rubbing of the needle on the bottom of the groove and that it can be reduced somewhat by relieving the arm of some of its weight. In a transverse vibration machine the needle does not need actually to touch the bottom. What I am trying to rig up now is an extra arm extending above the arm carrying the music box and connected with it by a thin rubber band. By tightening this band by wrapping it around a screw the music box can be lightened until it does not drag on the bottom. Or, perhaps it would be better to have a backward extension of the arm with a weight running out as in scales. I haven't got the scheme worked out well enough to patent yet but while tinkering with it I ran on to something else. The greatest discoveries, you know, are often made by accidents like that, as by-products of research, so to speak. If you attach a long thin rubber cord, a broken band, to the arm just back of the music box and wrap the other end around your finger held high above, you have a device for retarding, graduating and repeating that beats anything advertised—which is saying a good deal. One of my first purchases was a record of "Nellie Gray" because that was the popular song when I was a boy, by which you can tell just how old I am. But I was disappointed in it altho it was one of Woolworth's most expensive records. It did not thrill me as it used to when I heard it sung in —— in those days. The professional twang and the mechanical reproduction failed to give expression to the theme. But by the simple device I have described I can get all the pathos that used to go to my heart when, sitting on a log by a Kansas campfire, I heard it sung by—whoever happened to be sitting on the other end of the log. Now it goes like this: "Oh my, Oh my, Oh my, p-p-poor Nellie G-G-Gray, they have t-t-taken you away and I'll never, never, never see my d-d-darling any mo-o-o-o-ore." This is the true vox humana, the voice broken by sobs, wailings and stuttering. Everybody hearing it shakes with uncontrollable emotion.

IT is curious that the phonograph should succeed so well on some things and fail so utterly on others. Simple and pure tones of high pitch come off the best. A tinkling bell is almost perfectly reproduced, so is a xylophone, piccolo, a high key on a cornet, some notes of the violin and some tones of the feminine voice. But a piano sounds like a spinet, a bass drum is ludicrous and a pipe organ impossible. Good quartets are rare and when more voices are added the phonograph gets palpitation of the diaphragm. It is too much to expect that a single needle and disk should transmit all sounds. Obviously the only way to increase the volume and variety is to multiply the number of reproducers. The diaphragm vibrates in sectors like a Chladin plate.

However it may be clamped, it is bound to stop some sets of vibrations and so spoil certain tones. I suppose the manufacturers have compromised on the form and mode of attachment that gives the best average results. But they might give us half a dozen different kinds of reproducers for different sorts of music, one for soprano and another for bass voices, one for strings and another for the brass band. But for the full orchestra or chorus I do not see any other way than to have four records fastened on a single shaft, one above another with space enough between for a tone arm. In recording and reproducing each would have a diaphragm of different elasticity, thickness, size and mode of clamping and a special needle to correspond. One would be adapted to strings, one to the wood wind, one to the brasses, and one to the human voice. In recording each they would take up the sound of the instruments for which it was designed together with such stray overtones from the other instruments as fell within its scope. Being especially adapted to a single type of sound waves it would be practically deaf to any other and so would not spoil the tone by recording it falsely. For some instruments the transverse zigzag records give the best results while the hill-and-dale machines do better on others. In my quadruple record machine both types could be used on the same piece. Since the four records would be fastened together they would necessarily synchronize. (N. B. Patent will be applied for when I get time.)

THE NEUTRAL IN ALL AGES

490 B. C. While of course we cannot approve of Persian imperialism, yet we must remember that Athens is far from perfect and therefore we should at once shut off the export of bronze sword blades to the capitalistic republic on the Ægean.

1307 A. D. We deplore the expressions of partizan sympathy for Wilhelm Tell which have found their way into a portion of the press (bribed doubtless with Swiss gold). We hold no brief for Gessler, but Swiss militarism is just as bad as Austrian.

1570 A. D. The massacres by the Duke of Alva have awakened in us at times emotions almost akin to distaste, but since an early peace is the important thing we are indignant at the suggestion of any dismemberment of the Empire of Philip II. It should be enough to make the Dutch Netherlands an autonomous principality under Spanish rule.

1776 A. D. We cannot endorse every act of George III's administration, but this by no means commits us to any approval of the harebrained fanaticism of such extremists as Washington and Jefferson.

1860 A. D. We fear that these attempts at the national unification of Italy will cause some bloodshed. Would it not be better if Victor Emmanuel would agree to "no annexations" and quiet the just apprehensions of Austria and the King of the Two Sicilies?

1917 A. D. (See pacifist press.)

My Home is Gone!

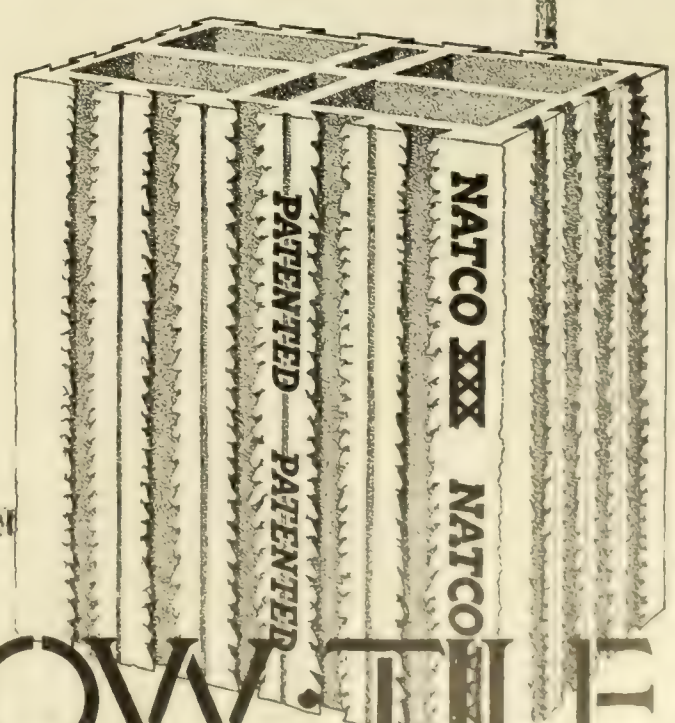
WILL you ever have to say that? Will you ever have to look back on the home it took you so long to create—swept away in an hour by the fire peril that comes when you expect it least? And what about the children? *Did they get out in time?*

Face that grim question now—before it is too late. On just such simple decisions rest a lifetime's happiness. Do those whom you have brought into the world mean so little to you that you can afford to leave them in danger?

Build throughout of NATCO HOLLOW TILE.

While it costs more than criminally dangerous wood construction, with Natco you buy safety—everlasting safety for a sum so low that in a few years you get it back in lower coal bills and lower maintenance cost.

Natco is the modern building material that made the skyscraper possible. Do your children deserve less safety than you get in your own office? Natco means lower coal bills—warmer in winter—cooler in summer, thanks to the blankets of dead air contained in the tile. Natco is damp proof; vermin proof; trouble proof—permanent, and everlastingly safe.



When you buy, ask "Is it Natco"? When you build say "I must have Natco." Be safe. Fire comes when you expect it least.

Send today for the interesting free 32-page book "Fireproof Houses." It contains photographs and descriptions of beautiful Natco residences designed by leading architects. And remember—it may save your life and the lives of those you love.

NATCO·HOLLOW·TILE

The Brunswick
ALL PHONOGRAPHS IN ONE

This All-Record Brunswick Is The Final-Type Phonograph

The Brunswick is equipped to play *all* records as if on their own machines. Any needle may be used, including the Jewel Point, the Sapphire Ball, Steel, etc.

Heretofore, the phonograph owner has been compelled to play a single kind of record for each instrument. There are master records of many makes. Each concern controls artists whom you wish to hear.

Now you may buy any favorite record—whatever make—and play it on your Brunswick. You will hear it at its best.

Incomparable Tone

The Brunswick combines all the finer phonographs in one. This readjustment had to come, sooner or later. People demanded it.

Frankly, The Brunswick is a composite phonograph. In designing it, our experts made a scientific study of all the foremost phonographs of Europe and America, appraising all current improvements.

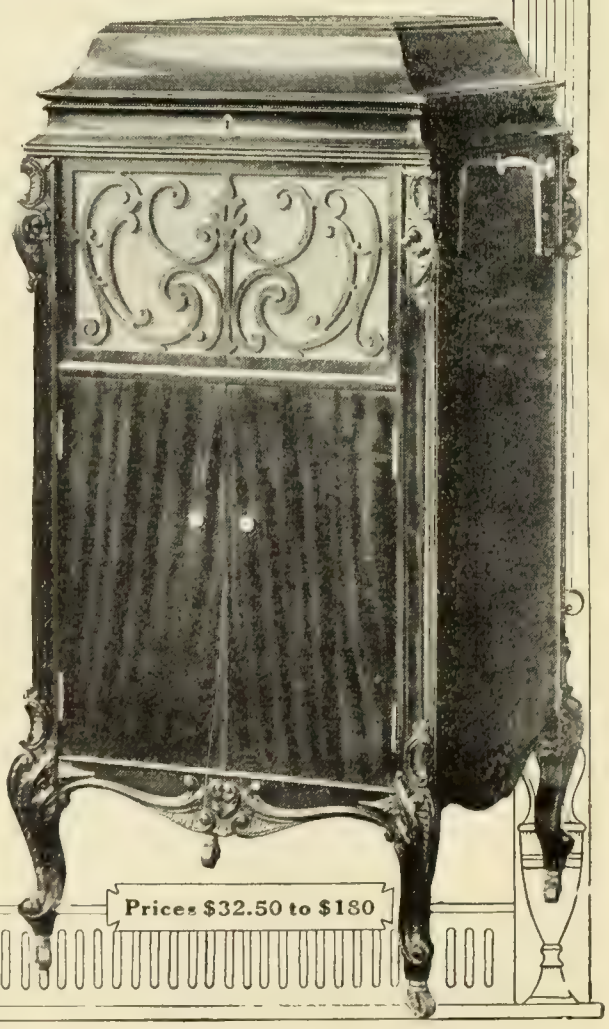
Then they took the best features of the many and by a process of elimination developed The Brunswick and combined in it all the wanted perfections.

The Brunswick sound-chamber was designed by experts in acoustics. They decreed that it should be made like a Stradivarius violin, of choicest, most resonant woods. They forbade the use of metal in its construction.

Brings New Delights

Among the other makes, The Brunswick plays Pathe Discs.

Heretofore the Pathe collection—the largest in the world—has been barred from many homes. Yet some of the foremost singers and musicians perform exclusively for Pathe.



People who hear Pathe Discs on the Brunswick are quick to assert that this is the ideal combination, the greatest achievement in the phonographic art.

Go to any Brunswick dealer and ask him to play your favorite records—whatever make. Then hear them elsewhere.

Note the difference. It does not take a trained ear. Whenever such comparisons as these are made, The Brunswick always wins.

Then appraise all the other advantages. Last of all, ask about the price and you will be surprised to find that The Brunswick costs somewhat less.

Before going to hear The Brunswick, you may want to know more about it. If so, write for an illustrated catalog, which will be sent gladly. But, really you should hear it. That is the real test.

Prices $32.50 to $180

HOW TO STUDY THIS NUMBER

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. COMPOSITION.

The Story of the Week.

1. Imagine that you are present at a meeting of your neighborhood association. Give an oral explanation of the new draft system, showing how it will affect your community.
2. Imagine that you are secretary of the commission charged with stopping strikes in the West. In proper form write a report of the work of the commission.
3. Give an oral summary of the reasons that have led President Wilson to support Woman Suffrage.
4. Read "Can You Live on Onions?" Using the statistics in that article as a starting point, tell what any family can do to save food, and thus aid in preventing further increase in the cost of food products.
5. Give a clear oral explanation of the New York Mayoralty campaign, and show how it is related to matters of national interest.
6. Write a circular letter, such as a grocer might send to his customers, concerning the sugar shortage.
7. Read "Plight of the Northern Neutrals." Write an answer to the President of the Netherlands Overseas Trust Company.
8. You have been asked to address a meeting of Americans of Scandinavian birth. Prepare a suitable talk concerning the relations that you think should exist between Scandinavia and Germany.
9. Present, and explain, the peace program drawn up by the Russian Council of Workmen's and Soldiers' Delegates. Show why these terms would be fatal to the best interests of Russia and of the world.

Special Articles.

1. Point out evidences of sincerity, originality, and literary merit in "My First Six Weeks with the Colors." Write a similar article on "My First Term in School."
2. Write a very short summary of the principal points presented in "Is England Going to Starve?"
3. Write a short exposition on the method of systematic giving mentioned in "Boosting the Old Town."
4. Imagine that you are a guest at "Rockledge." Write an enthusiastic letter in which you describe the house, and tell something about your experiences there.
5. Show in what ways "The Paint Box House" gives admirable examples of the following: introduction, exposition, description, presentation of feeling, choice of words, conclusion.

SECTION II. LITERATURE.

Phantasms of War. By Amy Lowell.

1. How closely are Miss Lowell's poems on the war related to fact? What is the purpose of the poems?
2. Give a clear explanation of "The Facts in the Case." What emotions do the facts rouse in you?
3. Explain the following words that occur in "The Cornucopia of Red and Green Comfits": cornucopia, comfits, linden-tassel, lustred, louis d'or, dockets, lading, amber, glades, gnomes, Lorelei, "Unter den Linden," misshapen Kaiser, Heilige Nacht, marzipan, castanets, Potsdam.
4. Divide the poem into several stanzas, and write an appropriate title for every stanza.
5. What is the effect of naming three children, "Jeanne," "Gaston" and "Marie"? Why should the mother tell them of fairies in Germany?
6. How is part of the poem related to "Macbeth?" What is the effect of the lines that tell how "Germany splits its sides with laughing?"
7. What were the fairies the French children saw at Christmas time? What is the effect of mentioning Christmas in this poem? How is the nature of the Christmas candy made emphatic?
8. In what ways does the poem have literary value? In what ways is it likely to affect conduct?

SECTION III. WORD STUDY.

1. Give the meaning and the derivation of every one of the following words prominent in the news of the week: neutralization, renunciation, plebiscite, autonomy, indemnities, premature, provisional, propagandists, instigate, subsidy.

SECTION IV. GRAMMAR.

1. Give the syntax of all the infinitives in the leading editorial article.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Italy in the War—"An Alpine Avalanche," "The Italian Collapse," "Italian Cabinet resigns."

1. Sum up Italy's aims in entering the war. Which of them is she most anxious to achieve? Why?
2. What is the Italian people's chief motive in fighting to regain the Trentino territory?
3. Review the former struggles between Italy and Austria. Mention the important points in the Napoleonic campaigns.
4. Outline in brief the steps that led to the establishment of the Venetian republic.
5. How was Italian unity achieved? What bearing has its accomplishment on Italy's attitude in the present war?
6. "In a single blow the armies of the Central Powers undid all the achievements of Italy during the successful summer campaign and even threatened to sweep the Italians back beyond the frontier." What were the achievements of the summer campaign? Name the successive goals of Italy's advance.
7. Reread the article "Avanti Savoia!" published in The Independent of September 15, 1917. Trace the Italian victories and defeats on the accompanying map.
8. Explain the political situation in Italy now. What will be the probable effect of the change in ministry? Recall the influence of ex-Premier Giolotti against Italy's entrance into the war and his connection with the German agent, Prince von Bülow. "It is said that a representative of the Giolotti party is likely to be included in the new cabinet." What dangers do you see in this possibility?

II. Social and Political Conditions in Turkey—"The War as I Saw It in Turkey."

1. What special problems of government are present in Turkey that are not present in the government of European countries?
2. From a study of this article and any other available sources what conclusion do you draw about the racial problems of Turkey?
3. During the first years of the war what special problems did the American Ambassador to Turkey have to solve?

III. Terms of Peace—"Russian Peace Rumors."

1. Tabulate the indicated peace proposals under the following heads: (a) Europe, (b) the colonies, (c) international economic relations?
2. How do you account for the favorable terms which Russia is willing to offer Germany? In how far would these terms suit Germany? the European Allies? the United States?

IV. Irish Affairs—"Another Sinn Fein Plot."

1. Look up in The Independent for May 8, 1916, the story of the Irish revolt of 1916. Is there any probability of another uprising similar to that of April, 1916?
2. What is the present status of the Home Rule agitation? Why has the process of establishing Home Rule for Ireland been so long delayed?

V. Food Supply—"Is England Going to Starve?" "The Empty Sugar Bowl," "Can You Live on Onions?" "An Uncompleted Prophecy."

1. Make an outline of Mrs. Whitney's article. Wherein are Mr. Hoover's problems the same as those of Lord Rhondda? Wherein are they different?
2. What arguments can now be presented in favor of Prohibition which could not have been presented in times of peace?
3. With the aid of your mother, draw up a table indicating the approximate prices of ten articles of food in November, 1913, 1914, 1915, 1916, 1917. Explain the conditions which this table shows.

VI. Stocks and Bonds as Investments—"Now is the Time to Buy."

1. ". . . The Government bond at four per cent is far more attractive than the corporation security at six per cent." Why?
2. According to the author what are the causes for the present low prices of stocks?
3. "High prices and high interest rates are apt to have the same result in the United States as in Europe," etc. Explain how this result comes about.
4. "I have known no better time for the purchase of *standard* securities than right now." What facts justify this statement?

The Benefits and Enjoyments of Silverware

ARISTOTLE said "that whenever you buy something it is because the benefit promises to be greater than the sacrifice"—and certainly that is true of silverware, which passes from one generation to another till the benefits of its use and enjoyment are out of all proportion to its original cost.

Gorham Sterling Silverware is sold by leading jewelers everywhere, and bears this trade-mark

The Independent

WITH WHICH IS INCORPORATED

HARPER'S WEEKLY

We ask the indulgence of our readers for the delay in the delivery of this issue of The Independent. It was caused by a strike which affected all the printing houses in New York City, including of course the press at which The Independent is printed

AN ALPINE AVALANCHE

ON Tuesday, October 23, Washington gave out to the American press "a semi-official despatch" stating "that General Cadorna is making preparations on an extensive scale for an important military movement." There was no disclosure, for military reasons, of the objective, extent or character of the movement or when the Italian offensive will be resumed. The despatch credited the war correspondent of the Roman *Tribuna* with the statement "that gossip of an Austrian offensive has proved to be unfounded."

In this unpretentious and somewhat ambiguous fashion the news was broken to the American people of the Austrian offensive which had begun on the preceding Sunday. As we now know, the "important military movement" which General Cadorna was then beginning was a retirement on "an extensive scale" involving nothing less than the evacuation of Gorizia and the relinquishment of most if not all of the gains made by Italian arms in thirty months of fighting. An Austro-German army of half a million men broke thru the Italian lines and poured down the western slope of the Julian Alps into the valley of Cividale. This brings them upon the left flank and in the rear of the Italian forces that penetrated eastward into the Bainsizza and Carso plateaus last August. These forces, caught between the devils and the deep sea, are being withdrawn as rapidly as possible, but it appears that over 100,000 have been captured. The enemy also claims the capture of seven hundred cannon, very likely in large part the British artillery that was sent this summer to brace up the Italian offensive.

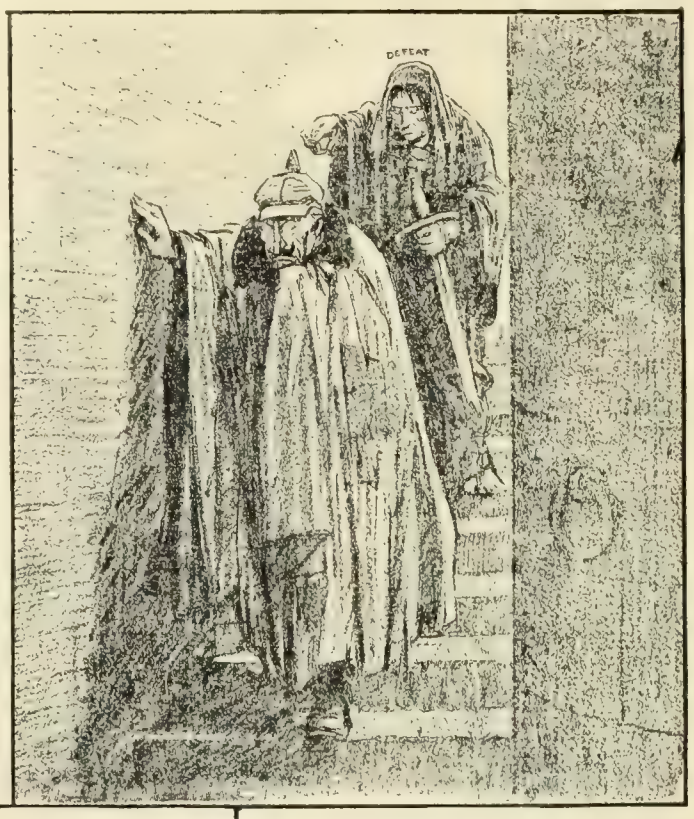
We can now see the meaning of some of the mysterious maneuvers of the past few weeks. The German naval demonstration in the Gulf of Finland, which sent the inhabitants of Reval, Helsingfors and Petrograd scuttling to the country, was a feint to cover the retirement of the German troops beyond Riga. The German fleet will doubtless do what it can in the Baltic, but it cannot have the support of any very extensive land forces, for 130,000 German troops are said to have been sent to aid the Austrians in their Italian offensive, and the Germans need all the men they can get to withstand the continued assaults of the British and French—and now Americans—on their lines in France and Belgium.

When the Austrians invaded Italy from the Trentino in 1916 they met with little opposition, and it was feared that they might sweep across the country to Venice, but the Russians came to the rescue and the Austrian troops had to be withdrawn for service in Galicia. This time the Russians cannot be depended upon even to hold their own, so it devolves upon the Allies in France. Accordingly, General Pétain delivered an attack upon the German lines about Laon at the same time as the Austrian attack on Italy. It remains to be seen whether this will serve as a diversion or not. The Germans would probably be willing to give up some ground, perhaps even surrender Laon, rather than relinquish their new offensive.

The importance attached to this new movement is shown by the fact that it is led in person by the young Austrian ruler, Kaiser Karl. The imperial prestige would not be risked on a venture likely to turn out to be a feint or a failure. The German Government has not only sent troops but its best generals, Mackensen and Ludendorf, who planned and carried out the most remarkable campaigns of the war, the expulsion of the Russians from Galicia and the conquest of Rumania. They are now trying the same smashing tactics on Italy. But the Italians outnumber the invaders by more than five to one, and are supported by the money, men and munitions of the other Allies. It was impossible to aid the Russians or the Rumanians with reinforcements or supplies, but Italy is not inaccessible to outside aid, tho with the shortage of shipping it is not easy to reach.

The American Government, in response to Italy's pressing appeal, has just turned over twenty-five ships to the Italian service. There is a serious shortage of both food and fuel. Coal costs $60 a ton when it can be bought at all, and, as every tourist knows, Italy is never too warm in winter. In spite of the censorship, rumors of widespread disaffection, even of impending revolution, have leaked thru to this country. In the recent riots at Turin the Government forces carried the barricades by the aid of aircraft, a new feature of street warfare not anticipated in Herr Most's manual of revolutionary tactics.

The overthrow of the Boselli ministry by a vote of three to one is natural enough, for the Government seems to have been caught napping by the Austrian invasion. The only alarming feature about it is the increasing influence, if not the return to power, of the Giolitti or pro-German faction. It will be remembered that ex-Premier Giolitti, the most popular politician in Italy, led the opposition against the entrance of Italy into the war. He was swept aside by the rising tide of the war spirit, and his friend and backer, Prince von Bülow, the German agent in Italy, had to flee the country. Now a former follower of Giolitti heads the new Italian cabinet. Among the socialists and republicans there has been considerable peace propaganda of late. That the enemy is counting upon some such support is indicated by the report that the



CARTOON COMMENT

STRAWS

DOWN, DOWN, DOWN

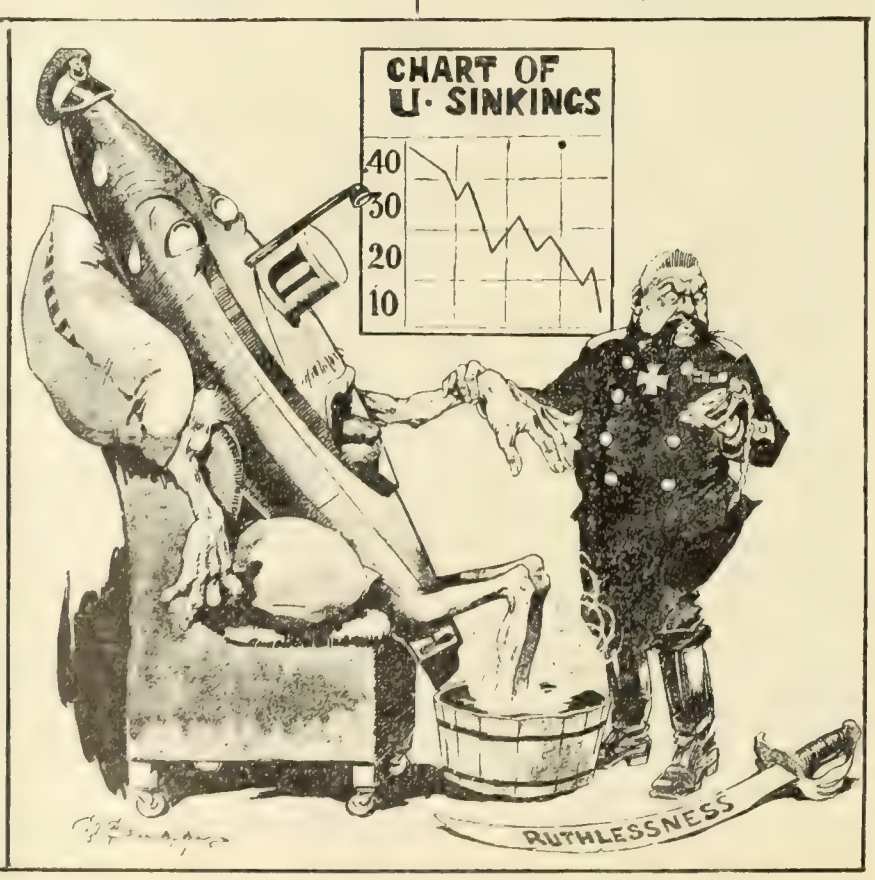
The inexorable command of Defeat, forcing the Kaiser to relinquish his ambitions of world victory and descend into dark despair is graphically presented (on the right) by Kirby of the New York "World." The other cartoons on this page are from two representative London papers; they are at the same time grim and humorous illustrations of the growing popular impression that Germany's military resources cannot possibly last much longer and that the German people are at last becoming aroused against their present rule

THE UNINVITED GUEST

"I have come to stay with you, dear Wilhelm, to the very end," says Famine to the shrinking Kaiser in the cartoon above. It was drawn by Owen Aves for the London "Passing Show"

GERMANY'S MAN SHORTAGE

The report that boys from thirteen to sixteen years old are coming in among the German prisoners is the basis for this cartoon of G. E. Studdy's, published in the London "Passing Show." "Himmel," says the Prussian official, "How is it you have not been called up before?"



A WATCHED POT THAT SEEMS TO BE BOILING

Popular disturbance is increasing in the German melting pot as the fire of internal troubles grows hotter, and the world looks on with increasing approval as the people prove that they have a will of their own. Cartoon by Paul Benly in "London Opinion"

GETTING WEAKER

It is a rather optimistic forecast, this cartoon by G. E. Studdy, of Germany's U-boat campaign failing fast. Hindenburg has dropt the sword of Ruthlessness to give his attention to his pet patient, but U-boat seems nearly done for

banners of the invaders are inscribed with the word "Peace." The wholesale surrenders of the Italians show that the scheme worked. It is evident that the new offensive has a political as well as a military purpose and is intended to throw Italy into chaos like Russia. But a dispatch from Rome assures us that the invasion has had the opposite effect and all parties are now united in defense of the kingdom.

Such are some of the forces involved in the situation, but he would be a rash man who would attempt to draw a definite conclusion. It is like a problem in algebra. We know the factors involved, the x, y and z, we know whether they are plus or minus quantities, but since we do not know the value of any one of them we cannot get the answer.

FOR WHAT?

THE second Liberty Loan is gloriously subscribed. Our soldiers have gone into action in the trenches of France. The casualty lists of "ours" are just beyond the turning. We are beginning to feel—perhaps more than a little—the pinch that comes when food and fuel grow scarce.

It is a good time to stop and consider afresh what we are fighting for. David Lloyd-George, England's dynamic and magnetic Prime Minister, has just put it into words with his accustomed skill:

> It is not a question of territorial readjustment or indemnities, but preëminently a question of the destruction of a false ideal which has intimidated and enslaved Europe, or would have done so had it been triumphant. It is an ideal, where force and brutality reign supreme, as against the ideal of the world peopled by free democracies and united in an honorable league of peace. That is the ideal enshrined at Potsdam, where they have been plotting and scheming how to enslave their neighbors. That has been their dream and our nightmare. There will be no peace, no liberty, until that shrine is shattered and its priesthood dispersed and discredited forever.

It is to that end we go to fight alongside our gallant allies who have borne the burden and heat of the day. We cannot be reminded—remind ourselves—too often that we are mustering our vast resources and ourselves, not against a people, not even against a Kaiser, but against a false and idolatrous ideal. The world must destroy it or it will destroy the world.

GOD AND MR. WELLS

WHETHER God made H. G. Wells or H. G. Wells has recently made God and pronounced Him good, we shall not attempt to say. If any sensitive reader hesitates to hold God responsible for Wells, he may think one way. If any reader equally but differently sensitive shrinks from owing to Mr. Wells his vision of God, he may think the other way. Speaking only for ourselves, we confess conservatism in these matters, and, in spite of occasional doubts, probably shall go on believing that God made Wells.

For the purpose of what we are coming to it may not much matter. What we object to is the portrayal of God as a king, visible or invisible. We are done with kings; the kings must go. In the days of old when kings were useful, indispensable, and the highest ideal of government conceived by man, it was proper to think of God in monarchical terms. But the word "king" has ceased to be an honorific appellation and is rapidly becaming a by-word and an hissing.

Since the Scriptures warn us that we cannot find out God by searching, or by any means know the Almighty to perfection, it is permissible, we suppose, to think about Him in any decent way that seems to us more true and decent than another. So to start with (by way of clearing the ground) we rule out the blaspheming Kaiser's way, the preposterous Hegelian way and the H. G. Wells way.

Of ways that remain there are two or three rather nice pagan ones that appeal to us as at least partly true, and then, best of all (so we think), the Christian way.

The earliest, and most simple-minded way apprehended God as a mysterious, impersonal and magical "It." You could catch "It" or "It" could catch you. "It" could hurt you in dreadful and unimaginable ways, or "It" could heal you and fill you with strength and gladness. "It" was in the grass and in the trees; in the wind and in the water. The child playing tag ("tree tag" above all) thinks in the naïve heathen fashion until his elders in their inscrutable wisdom shatter his illusions and blast his happiness. Yet the elders themselves can't get away from that beautiful oldest religion, however much they may try. They remember May Day and Hallowe'en, and light up the Christmas tree; and they talk about "vim" and "vigor," "vitality," "virility" and "virtue," every one of which, in the original meaning of these words, was "It."

Strong and beautiful men, wise and courageous men were so, to the mind of primitive man, because they were full of "It." They were magicians and heroes, they were "daimones" and titans, they were divinities.

Side by side with ideas of "It" grew up ideas of ghosts. Herbert Spencer's account of the process, in the first volume of his "Principles of Sociology," is one of the best chapters that he ever wrote, and Jane Ellen Harrison's "Themis" is the best account of "It" that you can anywhere find. The ghost of the hero and the ghost of the chieftain of course were full of "It" and of course they became deities.

Out of such theological elements emerged the gods of Olympus; superhuman, immortal, mighty with "It," workers of wonders; yet human, and sharing the passions of men, caring for men, sharing their joys, and their sorrows, fighting their battles with them, and meddling in their love affairs.

Against this background appears, at length, the Christian faith. God again dwells in man as the wonder worker, doing miracles, immortal and rising from the grave; but he is no longer the hero of battles or the slayer of dragons. "It" has become a divine understanding, an infinite love, giving all of life's short day to work for men and sacrificing self in the end, that men might live.

We have confest that we like this notion of God better than any other, and in particular better than the Wells notion of the King-God. We think that it probably is truer than any other; and the best part of it, as we look at it, is, the suggestion it offers to everybody to look for a spark or a thrill of godliness within himself and give it a chance to do thru him something on the whole worth while.

WHICH IS YOUR LINCOLN?

MOST of our readers were born too late to vote for Lincoln, but we are going to give them all a chance to cast their ballots for him—not this time to occupy for four years the White House at Washington, but to stand perpetually in front of the Houses of Parliament in London. A Lincoln in bronze is to represent the American people near the court of St. James's, and surely they ought to be consulted as to which of the Lincoln effigies they regard as the best representative of the man and the nation.

When doctors disagree the public is the referee, and in this case there is undeniably a disagreement. What was intended as a peace offering turns out to be an apple of discord. The International Committee that was formed to celebrate in 1914 the Hundred Years' Peace between Great Britain and the United States, wishing to place in London a permanent memorial of the amity of the two nations, proffered a statue of Lincoln to the British Government. The offer was accepted and a fine site was assigned for it near Westminster Abbey on Parliament Square. It was at first intended to send a replica of the St. Gaudens statue in Lincoln Park, Chicago, but last year George Grey Barnard completed a statue of Lincoln for Cincinnati that aroused widespread interest and hot controversy. Our readers will remember that we used it as a cover design for The Independent of February 26, 1917. Among the ad-

mirers of the Barnard statue was ex-President Taft, and when his brother, Charles Phelps Taft, offered to pay for a replica it was gratefully accepted by the American and British committees.

Then the storm broke. Those who disliked the work did not care about its being set up in Cincinnati, but they objected to its going to London. The fight against it is led by F. Wellington Ruckstuhl, editor of the *Art World*, who calls it a "woful, wallowing Willie, mourning for mother and complaining of a colic"; and again as "a stoop-shouldered, consumptive-chested, chimpanzee-handed, lumpy-footed, giraffe-necked, grimy-fingered clodhopper, wearing his clothes in a way to disgust a ragman." This is as strong language as used to be used south of Mason and Dixon's line about the real Lincoln. The *Art World* goes on to prove that Lincoln was not ugly and awkward but fine-looking and dignified; that he was not slouchy, but on the contrary "drest in the hight of fashion of his time. . . . We have many photographs to show that Lincoln always drest in the best clothes his money could buy, whenever he could do so. . . . Lincoln was fully aware of the importance of elegant social forms—if the nation is to realize its highest destiny." The old photographs of Lincoln have been brought out to prove that his hands were not unduly large and that his feet were really small, considering his hight.

In opposition to this we have such artists as John Sargent, Charles Dana Gibson and Frederick MacMonnies. Mr. MacMonnies, who first attracted the attention of the American public thru his fountain at the Chicago Fair, says:

> What we want in Barnard's statue is that sculptor's vision of Lincoln's soul—and we have it. In addition to this it is good sculpture and composition and excellent design. . . . He has helped to let the public into the secret of Lincoln's greatness.

On the other hand, Representative Rogers, of Massachusetts, who has introduced a resolution into Congress calling upon the President to prevent the statue from being sent to London, calls it "more simian than human, with misshapen, ugly, comic, cartoonist feet exhibiting plenty of sole but no soul." The late Rufus Choate, in a letter of protest written shortly before his death, said it is "a horrible thing and a gross libel upon President Lincoln."

But Mr. Roosevelt for once agrees with Mr. Taft and says:

> At last we have the Lincoln of the Lincoln-Douglas debates . . . the living Lincoln, the great democrat. The statue is unique. I know of no other so full of life. The greatest sculptor of our age. The one is worthy of the other. I congratulate Barnard with all my heart. He has given us Lincoln, the Lincoln we know and love.

But it is not the Lincoln that his son knew and loved. Robert Lincoln writes: "The result is a monstrous figure which is grotesque as a likeness of President Lincoln and defamatory as an effigy." On the other hand, Miss Ida Tarbell says: "Barnard's Lincoln is to me the profoundest thing yet done on the man by any one in any medium"—which implicitly includes her own admirable biography.

To these criticisms may be added that overheard from one of the crowd which flocked to see the statue when it was first exhibited in the court of Union Theological Seminary, New York: "Lincoln wa'nt no hookworm poor white trash." As the uncinaria had not then been discovered history does not enlighten us on that point, but it cannot be denied that Lincoln rose from the class referred to. That is why Barnard chose for the figure model a man who, like his father and grandfather before him, was born on a farm only fifteen miles from where Lincoln was born. He was about Lincoln's hight and build. The face Barnard took from the Lincoln life-mask, which he studied for three months. As is well known, Lincoln's face was asymmetrical, and artists have often tried to trace a connection between his physiognomy and his composite character. According to Barnard, the left side of his face is the mother side, revealing his tenderness, sensitiveness and sense of humor, while the right, the man's side, is stern, determined and stoical. In our illustration on another page we give views of the Barnard statue from both sides, so our readers can judge if he has succeeded in carrying out this idea.

On the same page we give the other statues that have been suggested as substitutes. The one in the upper left corner is the statue by Augustus St. Gaudens, showing Lincoln just risen from a curule chair, as tho to make a speech. This is Lincoln the mature statesman, not what Barnard intended to represent, Lincoln between 1857 and 1860.

Another conception of Lincoln much loved by many, as may be seen from our photograph of it, is the work of Gutzon Borglum and is placed in Newark, New Jersey. Mr. Borglum, like Lincoln, is a product of the prairies, and he won his fame by his modeling of horses and cowboys. We also present for your consideration Edinburgh Memorial, by J. Patrick, and the statue in Boston by an older sculptor, Thomas Ball. The latter represents Lincoln the Emancipator, as is indicated by the unshackled slave-boy kneeling at his feet, but the effectiveness of the group has been somewhat impaired to those who are so unfortunate as to have heard the remark of the irreverent humorist that it should be called "Shine, Sir?"

Latest of the Lincoln statues is that which has just been completed by Daniel Chester French for the national Lincoln memorial building at Washington. We show a photograph of the original model taken in the studio.

Here there are six different statues of Lincoln. Which do you like best? Which do you like least? And how do the others range in between? Send in your ballots to us promptly and if we get enough to be significant we will publish the results. Families, schools and clubs may vote collectively. Put down all six of the sculptors' names, Ball, Barnard, Borglum, French, Patrick and St. Gaudens, and arrange or number them in the order of your preference. The question is yet undecided and the public voice may have an influence. In England as well as in this country the question is now being discussed in lively language. The London *Times* is positive as usual: "There can be no question, of course, that the outspoken condemnation of the great President's son and the protests of men like the late Mr. Choate will settle the matter so far as this country is concerned. It is inconceivable now that this particular statue should ever reach our shores." The Thunderer indignantly goes on to say that the London public has "a right to know by whose authority so grave a blunder was committed in their name." But Barnard has warm defenders in England, where his earlier work is well known, especially the group first exhibited in the Paris Salon and now in the Metropolitan Museum, designed to express in marble Hugo's phrase, "I feel two natures struggling within me." The First Commissioner of Works, who has the placing of the statue, refuses to take sides in the controversy and states that the British Government is content to leave the selection to the United States. It is proposed to send the same statue to Petrograd and Paris as to London, so the people of all three nations will form their idea of the martyred President from this effigy, whichever it is.

AN UNCOMPLETED PROPHECY

THE president of a wholesale liquor dealers' association in New York predicts that the result of the war prohibition legislation already passed by Congress will be:

"First, a sharp decrease in the amount of consumption;

"Second, a big decrease in the number of saloons and retail liquor dealers and the practical elimination of the irresponsible and disreputable type of saloon."

This is admirable frankness. If he had been only a little franker, he would have added:

"Third, a marked decrease in vice, disease and crime;

"Fourth, a clear gain in efficiency, individual and community."

But perhaps that was too much to expect.

THE STORY OF THE WEEK

Old Glory in the Trenches For the first time in the course of the Great War American soldiers have entered the trenches under the American flag. There have, of course, been thousands of American volunteers serving with the French Foreign Legion or other military organizations of the Entente Allies, and American doctors, nurses, ambulance men and engineers have braved the fire of the enemy on many occasions. But an official statement issued to the public on October 27 brought the first news of American participation in land warfare as a belligerent nation. It announced:

> In continuation of their training as a nucleus for instruction later, a contingent of some battalions of our first contingents, in association with veteran French battalions, is in the first line trenches of a quiet sector on the French front. They are supported by some batteries of our artillery, in association with veteran French batteries.
>
> The sector remains normal. Our men have adapted themselves to actual trench conditions in the most satisfactory manner.

The official communication of October 27 mentioned neither the exact day when the American soldiers occupied the trenches nor the location of the "quiet sector on the French front" where they were stationed. The Americans took their posts under cover of night and at six o'clock in the morning made their presence felt by the enemy by beginning an artillery action. When the Germans discover what troops are facing them it is improbable that the "sector on the French front" will long remain "quiet," as it has always been the German custom to make an early attack on trenches held by new recruits not yet used to the technic of trench warfare. Major General Scott, former Chief of Staff, has arrived in France and gone to the front.

Getting in All Over Few persons realize to what an extent the United States has already contributed to the conduct of the Great War. It is now announced that more than 100,000 American officers and soldiers have been transported to France under the protection of our naval vessels, and until the sinking of the "Antilles" on October 17 every transport passed in safety. But in spite of this fact, many German papers are still discussing whether it will be possible to send "an American army" to Europe. The War Department is already considering the calling of a second detachment of drafted men to the training camps this winter. Secretary of War Baker authorizes the statement that work has been begun on more than 20,000 airplanes, America's first contribution to the war in the air. Twenty-four aviation schools have been provided in this country, and many Americans are also learning to fly in European aviation camps.

THE GREAT WAR

October 22—British army makes drive east of Ypres. Twenty-five British ships sunk during previous week. Germans land on Esthonian coast.

October 23—French capture 8000 Germans in Aisne valley attack. Barthou replaces Ribot as French Minister of Foreign Affairs.

October 24—Austrians attack Italian positions on Isonzo front. Germans abandon advanced posts near the Gulf of Riga.

October 25—French again attack northeast of Soissons. Italians begin retreat on Bainsizza Plateau.

October 26—Italian ministry forced out of office. Brazil makes formal declaration of war on Germany.

October 27—American soldiers reported in trenches for the first time. Second Liberty Loan oversubscribed.

October 28—Austro-German forces take Gorizia and Cividale. Belgians make progress near Dixmude.

Even more significant is the report that the United States will be represented at the next war conference of the Entente Allies. This will be the first general war conference in which the United States has taken direct part, and our participation means that we will make our influence felt in the field of diplomacy as well as on the field of battle.

Second Liberty Loan Oversubscribed When the period of subscription for the second Liberty Loan was over at midnight on October 27, the bankers, overwhelmed with last minute applications, were able to make only the most general estimates of the sum loaned to the Government. The news that American soldiers were actually in the front trenches came only a few hours before the closing of subscriptions, but it is said to have swelled the total by many millions. Official estimates place the amount of subscription at more than $5,000,000,000; the maximum offered to buyers. No section of the country was a "slacker." Each of the twelve reserve districts reported more than its minimum quota, and the majority of districts seem to have reached or exceeded their maximum. The total number of persons subscribing is estimated at from eight to ten millions. Within the New York district alone about 2,500,000 persons invested in bonds. Enlisted men in the army took about $82,000,000 of the Liberty Loan, and the navy subscribed to the extent of $6,000,000. Even General Pershing's army on active service in France sent back heavy subscriptions. As was the case with the first Liberty Loan the early days of the publicity campaign yielded disappointing results and only within the last week did it become evident that the minimum of $3,000,000,000 would surely be surpassed.

(c) Underwood & Underwood

A PARADE WITH A DIFFERENCE

The British tank and Italy's Caproni biplane "marched" in New York's big Liberty Loan parade on October 25 along with 20,000 bondholders

The Day of France October 23, 1917, will be remembered hereafter as one of the most glorious days in French annals. Early in the morning, under cover of an artillery barrage and a heavy mist, the French attacked six German infantry divisions with strong artillery support assembled in the trenches lying across the road from Soissons to Laon. The French attack at one point penetrated the German positions to the depth of more than two miles and swept past Fort de Malmaison and several fortified villages. More than 8000 prisoners were taken in this single day's action. Two days later the French attacked again, extending their trenches as far as the Oise-Aisne Canal. During the course of the week the French took altogether more than 12,000 prisoners and 150 large cannon, not including machine guns and mine throwers.

The French drive was hardly a surprize, for it was a matter of course that the French and British would try to aid their Italian allies by starting such a vigorous offensive that the German military authorities would be compelled to withdraw some of their divisions from the Isonzo front to France or Belgium. The battleground selected by the French for their offensive is the Chemin des Dames, the highroad on the ridge of high ground north of the Aisne which General Nivelle captured in the French offensive of the spring and which the Germans vainly endeavored to retake during the summer. General Nivelle's conquest of the Chemin des Dames position was achieved at so excessive a cost that he was retired from chief command in favor of General Pé-

tain, who has now resumed the advance on Laon begun by his predecessor, but in a more cautious manner, by means of local attacks instead of a general offensive on a wide front. Owing to its strictly limited scope and to extremely thoro artillery preparation, the French advance reached all its objectives with the loss of comparatively few men.

The fighting on the Aisne front somewhat eclipsed in interest the progress of the Allies in Flanders. The British and French pushed ahead northeast of Ypres, consolidated captured positions and repelled German counter-attacks, but the continuance of bad weather prevented any general offensive. The slackened pace of the Flanders campaign is indicated in the British casualty lists, which show a marked decrease for the month of October as compared with September.

On the Russian Front The concentration of German troops on the Italian front seems to have given Russia a momentary relief. The Germans have completed their occupation of the Baltic islands off the Esthonian coast and even landed a small force on the Verder peninsula east of Moon Sound, but, on the other hand, they have drawn in their lines east of Riga and abandoned a large area beyond the Dvina. Strangely enough, the German reports admitted a retreat "on a wide front" before the Russian reports mentioned the fact.

The Russian navy made a name for itself in the recent battle of Moon Sound. The battleship "Slava" withstood the attack of a large German fleet and when the ship was about to sink some of the crew were rescued by Russian destroyers. Volunteers from the "Slava" went ashore on Oesel Island and held back the Germans with machine guns until the positions were abandoned by the demoralized Russian infantry. Petrograd reports claim that the Germans lost a large number of torpedo boats in the naval engagement in Moon Sound and that two battleships and a number of other enemy vessels were put out of action. By the conquest of the Baltic islands the Germans won over a hundred cannon and a large quantity of military supplies, besides taking over 20,000 prisoners.

The Italian Collapse The most terrible disaster which has befallen the Entente Allies since the Russian retreat from Galicia took place on October 24 when the Austrians and their German allies launched their great drive against Italy in the region of the Julian Alps north of Gorizia. In a single blow the armies of the Central Powers undid all the achievements of Italy during the successful summer campaign and even threatened to sweep the Italians back beyond the frontier.

The armies of the Central Powers attacked the Italians along the Isonzo river near Flitsch (Plezzo) and Tolmino. They succeeded in occupying Monte Matajur and other fortified hights west of the Isonzo. In order to save their army along the lower Isonzo from being cut off the Italians were forced first to withdraw from the Bainsizza Plateau and later to evacuate Gorizia, Cividale and the positions on Monte Santo. The problem of General Cadorna was no longer how to press an offensive against Austria or even how to withstand the counter-attack, but how to save anything from the general disaster. Within the course of a few days the Germans and Austrians had taken more than 100,000 prisoners and 700 cannon. Such a loss is more than a sign of weakness; it is a serious injury to the future military effectiveness of the Italian army.

Italian Cabinet Resigns The ministry of Premier Boselli resigned office on October 26 because a resolution of confidence in the Government was voted down in the Chamber of Deputies by a majority of 314 to 96. The Boselli cabinet came into office in June, 1916, because the ministry of Premier Salandra was blamed for permitting the Austrian drive of last year by way of the Trentino, and the chief reason for the fall of the Boselli ministry seems to have been the Austro-German successes on the Isonzo front. There is a pacifist group in the Italian Parliament, but it does not seem that the refusal of a vote of confidence to the Government was an indication of resentment against its war policy. On the contrary the speech of Baron Sonnino, Minister for Foreign Affairs, was well received by most of the men who combined to force the ministry out of office. Baron Sonnino's speech was mainly devoted to a discussion of the Pope's peace proposal. He declared that all the Allies favored the principle of disarmament and international arbitration but that the difficulty was to obtain guarantees of security against a faith-breaking nation such as Germany. He insisted that Italy would not make peace apart from her allies or without the realization of her national unity.

There is, unquestionably, a very great amount of discontent in Italy, but its basis is chiefly economic. The supply of wheat and sugar is insufficient for the needs of the people and there have been serious bread riots in Turin. The shortage of coal is even more important, as the existence of the munitions industry is dependent upon a plentiful supply of fuel. Italy does not have such extensive coal deposits as Great Britain, Germany or the United States, and the shipping shortage has made importation difficult. As a result, the Italian people are face to face with the prospect of a fuelless winter. In order to keep the factories supplied, private individuals will have to leave their houses unheated thruout the cold weather.

ON GUARD IN ITALY

A lonely look-out standing watch on the battle front in the Alps. The Italian army has been driven back by the recent German drive from all the territory taken during its summer campaign

Brazil Does It President Braz of Brazil formally proclaimed a state of war with Germany on October 26. The Chamber of Deputies approved the declaration of war by a vote of 149 to 1, and the Senate by a unanimous vote. The action of the Brazilian Government caused no surprize as Brazil had severed diplomatic relations with Germany, revoked her declaration of neutrality and undertaken the policing of South Atlantic waters early in the summer. The impelling reason for the formal declaration of war was the recent sinking of the merchant steamer "Macau" in the Bay of Biscay by a German submarine, followed by the arrest of the captain of the steamer.

ITALY'S BATTLEGROUND

This picture illustrates the character of the country north of Gorizia where the Italians have made their greatest gains and where the Austrians, with their German allies, are now reconquering all that they have lost

Russian Peace Rumors

The peace program drawn up by the Council of Workmen's and Soldiers' Delegates is amazingly moderate; indeed, it may almost be styled a German peace, since it contains little that would not now be approved by the majority of Germans and Austrians. All German conquests in Europe are, it is true, to be abandoned. But, on the other hand, Germany regains her colonies and the Central Powers retain intact their present possessions. Austria must grant "autonomy" to her Italian provinces and to Bosnia-Herzegovina, and Turkey to Armenia; but Russia must also concede home rule to Poland, Lithuania and the Baltic provinces, and Rumania to the Dobrudja. The fate of Alsace-Lorraine is to be settled by a popular plebiscite, and the boundaries of the Balkan nations rearranged according to the popular will. The territorial terms proposed are not unlike those suggested by the Pope and by the organizing committee of the Stockholm Socialist Conference. A proposal that will not be welcomed by Russia's allies is the demand for the neutralization of the Panama and the Suez Canals. No indemnities are to be paid by any belligerent; except that fines levied on occupied districts and the money spent on maintaining prisoners may be returned after the war and the devastated districts of Belgium and Serbia are to be restored "from an international fund." Other points touched upon are the freedom of the seas in war time, the renunciation of an economic "war after the war," general disarmament, and the choice of delegates to the peace congress by popular vote. All secret treaties are declared void.

There is, however, an increasingly wide gap between the Russian Government and the Workmen's and Soldiers' Council; and Premier Kerensky is wholly opposed to the idea of a separate or premature peace.

It seems at first sight strange that any Russian party should propose terms of peace that are more favorable to Germany and her allies than to their own country. But there are many points to be taken into consideration; that Russia has suffered greater losses in battle than any other belligerent, that Germany seems able to inflict defeat upon the Russian armies almost at will, that the radicals fear that a continuation of the war may endanger the fruits of their revolution, and that German propagandists have industriously circulated the report that the western Allies were seeking a peace in which the interests of Russia and Rumania would be sacrificed. To put a stop to this rumor, Lord Robert Cecil formally announced in the British House of Commons that "the Government is determined to abide by our Russian ally and assist her in consolidating her new found liberty. The Government also realizes the great debt owing the Rumanian Government and army, and the Rumanian people can rest assured that this country will not desert them in the present crisis."

Plight of the Northern Neutrals

The embargo on shipments of contraband to the neutral nations adjoining Germany continues to create a counter-current of ill feeling against the Entente Allies which partly offsets the effect of Germany's incessant raids on neutral shipping. The president of the Netherlands Overseas Trust Company has written a very angry letter to President Wilson, presenting the grievances of his fellow countrymen:

> Lately America has been trying to handle us not by arguments or by persuasion, but by cutting off our supplies. She puts our ships under arrest by refusing bunker coal, which she could quite well afford to deliver. You prevent us from keeping in touch with our colonies that form one of the principal assets of our national life. . . . It is a ridiculous supposition that we should be feeding Germany. If we wanted to do so we could not. Our whole exports would not cover the wants of Germany for more than a few days. The simple fact is that Holland has been and is an importing country for the sake of its very existence. Nearly all of our first necessities are obliged to come from without. It would mean the absolute collapse of our national supplies to have to do without them. Do you suppose we could keep an indispensable part of these imports going unless we returned a certain amount of exports, insignificantly small, as compared with the wants of a large population, but for a country like ours a most important means of exchange? We keep endeavoring to make this exchange with both sides.

Of course, the United States and the Entente Allies have a strong case, more than once presented in The Independent, in the fact that the Dutch have entered into various agreements with Germany and Austria-Hungary relative to exports, shipping and credits which place the natural resources of the Netherlands very much at the disposal of our foes and which make our exports to the Netherlands, replacing the commodities exported to the Central Powers, an indirect aid to Germany. But the very fact of these agreements makes the position of the Dutch a pitiable one, for they dare not defy their powerful neighbor to the east by shutting down on German trade and yet they cannot do without imports from Germany's enemies. It is to be feared that the Dutch and the Scandinavians will suffer as much from privation this winter as if they were belligerents instead of neutrals.

Sweden has still to solve the question of a ministry which can command the support of a parliamentary majority. As the Liberals and the Socialists have triumphed over the pro-German Conservatives, it is probable that the incoming ministry will be pledged to a policy of peace and neutrality. The existing government is regarded as over-friendly to the Central Powers, and Secretary Lansing's proof of the favoritism shown to Germany by the Swedish legations in Mexico and Argentina strained relations not a little between Sweden and the Entente nations.

Scandinavian Sailors Massacred

On October 17 two German raiders attacked a number of neutral merchant ships traversing the North Sea under the protection of British war vessels. Two British destroyers, the "Mary Rose" and the "Strongbow," were sunk with their crews and nine merchant ships were destroyed by gunfire. Three of the merchant vessels attacked escaped and a number of the sailors from the other ships were later picked up by British

© *International Film*

AMERICANS WHO HAVE SEEN REAL FIGHTING

This snapshot of two Boston boys with the Foreign Legion illustrates several points of interest in the day's work on the western front. The soldiers, wearing gas masks and steel helmets, are getting ready to place a dummy figure where it will draw the enemy's fire

patrol vessels. All of the ships destroyed, including five of Norwegian registry, three of Swedish and one of Danish, were unarmed and unwarned. The German raiders not only refused to give the sailors a chance for their lives but even fired on the lifeboats after they had been launched. It is estimated that one hundred and fifty men were killed in the attack or left to drown, not including the crews of the two British destroyers.

It was certainly unfortunate for the Germans that in a single action they had contrived to kill sailors and sink ships of all three of the Scandinavian countries. These nations have recently become somewhat estranged from the cause of the Entente Allies because of our rigid embargo on exports to neutrals trading with Germany. But, for the moment at least, their grievance over trade restrictions has been eclipsed by the massacre of the North Sea. Especially is this true in Norway, where a large portion of the press is ardently pro-Ally. Captain Roald Amundsen, the distinguished Norwegian explorer, has returned to the German legation all the decorations of honor conferred upon him by German authorities, as an act of protest against the killing of the Norse sailors. The merchant marine of no nation has suffered heavier relative losses than that of neutral Norway. From the beginning of the war to the middle of September Norway lost 479 steamers of 777,000 tons; 160 sailing ships of 155,000 tons, and 698 sailors and passengers.

During the week ending October 21 the submarine activity of the Germans showed some increase. Seventeen large British vessels and eight of less than 1600 tons were sunk by mine or torpedo. This is not above the average loss for the entire period of unrestricted U-boat warfare, but it is a worse record than any of recent weeks. The British cruiser "Orama," a ship of 12,927 tons, has also been reported as sunk by a German submarine but without loss of life.

The recent disaster to the American transport "Antilles," which was manned by civilians, has decided the Government to supply all transports with regular navy men hereafter. The crews now manning the transports will be transferred to cargo ships operated by the Shipping Board, and Congress will be asked to authorize an increase in the personnel of the navy, amounting to perhaps 80,000 men, to supply naval crews for transport vessels.

Back to Denmark? It is reported in the Danish papers that Germany is seeking to strike a bargain with her little neighbor on the north by which a narrow strip of northern Schleswig, including that part of the "lost provinces" of Schleswig-Holstein which is most purely Danish in population, will be sold back to Denmark. The war of 1864, provoked by the intrigues of Bismarck, resulted in the severance from Denmark of the duchies of Schleswig and Holstein and eventually in their incorporation into the Kingdom of Prussia. The population of Schleswig-Holstein was then and is today a mixture of Germans and Danes, tho only in northern Schleswig are the Danes in the majority, and Denmark has never ceased to desire that her southern frontier be made to correspond with the natural boundary between the Danish and the German speaking peoples. The German Government has exerted every effort to stamp out of existence the Danish language in Schleswig, just as she had persecuted French in Alsace-Lorraine and Polish in the eastern parts of Prussia, but the Danish element still persists as a disturbing factor in the Empire. By the sale, Germany would solve one of her national problems, gain a large sum of ready money to uphold her falling credit and win the friendship of a neighboring country, weak in military strength but commercially important. The sum of money stipulated is said to be the same $25,000,000 which we paid to Denmark for the Virgin Islands. Even if it be true that Germany has made the reported offer to Denmark, it is probable that the Danes will not venture to buy until the end of the Great War lest the transaction appear to the Entente Allies as a subsidy extended to an enemy by a neutral.

Another Sinn Fein Plot In a discussion in the British House of Commons Premier Lloyd George announced that Germany had planned to instigate a new rebellion in Ireland similar to the Sinn Fein insurrection which was crushed in Dublin in 1916. The new insurrection was to be on the second anniversary of the first; that is Easter, 1918. Lloyd George declared that Professor De Valera, the newly elected member of Parliament from East Clare, and other agitators had been openly preaching sedition, that young Irishmen who would have been drafted into the army had they been Englishmen were arming and drilling in preparation for rebellion, and that, in view of the terrible events of eighteen months ago, no such disloyal propaganda would be tolerated. He made two highly important statements of the Irish policy of the present coalition Government. When Mr. Dillon requested assurances that the constitutional plan of the present Irish Convention would be enacted into law without delay as soon as the convention reached an agremeent Lloyd George declared that the Government would "press the House to put into legislative form the conclusions reached by the convention." This means practically that the Irish people will write their own Home Rule bill and that the Government will see that it is agreed to by Parliament or resign office. On the other hand, Lloyd George scouted the possibility of an absolutely independent Ireland, saying that "under no conditions will Great Britain permit anything of that kind."

The statement on the Irish question by Premier Lloyd George was called out by a resolution offered by John Redmond, leader of the Irish Nationalists, condemning the "policy which has been pursued by the Irish Executive Government and the Irish railway authorities at a time when the highest interests of Ireland and the Empire demand the creation of an atmosphere favorable to a successful result of the deliberations of the Irish Convention." He ascribed the growing strength of the Sinn Fein or independence faction to the unnecessary precautions taken by the Government, the arrest of men suspected of disloyalty and the proclamations issued against drilling. After a debate in which Premier Lloyd George and Chief

Secretary of Ireland Henry Duke defended the acts of the Irish administration Redmond's resolution was defeated by a majority of 211 to 78.

Evidence obtained in the United States tends to confirm the truth of Lloyd George's account of an intended Irish plot. The Department of Justice has caused the arrest of "General" Liam Mellowes and Baron von Recklinghausen, suspected of taking part in anti-British conspiracies. General Mellowes won his unofficial title by commanding a force of rebel volunteers in the Dublin insurrection. The Canadian authorities have arrested a number of Irish and Turkish conspirators at Halifax, including Dr. Patrick McCarton, called by his Sinn Fein associates the "first Ambassador of the Irish Republic to the United States."

Stopping the Strikes

The commission of investigation headed by Secretary of Labor Wilson has already achieved some success in settling labor difficulties in the West. The chief victory thus far won by the commission was the adjustment of the strikes in the Globe-Miami copper district of Arizona. Some five thousand miners have been on strike since early in July and it is estimated that about 60,000,000 tons of copper have been withheld from the market during the period of labor shortage. The plan proposed and accepted by both sides included the establishment of a workers' committee for each mine, the employment of all the men now on strike except those who refuse to abide by agreed contracts or who had been guilty of preaching sedition against the United States, and the appointment of an arbitrator by the Government.

The steel construction yards of Seattle have also reopened. The boilermakers, last to abandon the strike, voted by a small majority to return to work and thus made possible the resumption of shipbuilding. The 12,000 shipyard workers who participated in the strike have agreed to await the settlement of their demands by Federal agencies. In Portland, Oregon the unions took similar action.

The labor troubles of greatest immediate import are in the coal mining industry. Owing to the coal shortage, caused in part by strikes and in part by difficulties of transportation, Fuel Administrator Garfield has announced that it may be necessary to commandeer in the public interest ten per cent of the nation's output, both anthracite and bituminous. This requisition will be in addition to and apart from the possible seizure of the supplies of coal hoarders who are withholding fuel from the industries which require it.

The Empty Sugar Bowl

The American housewife who has devoted her ingenuity to devising attractive menus for wheatless and meatless days is confronted with a new problem. The heavy exportation of sugar to France has caused a serious shortage in the United States and something of a food panic in some of the larger cities. Food Administrator Hoover at once took action to check the rise in retail prices by issuing instructions for the distribution of the nation's stock of sugar. The refiners were called upon to diminish their sales to manufacturers of luxuries such as candy and syrups. Manufacturers of food products were given preference, especially the condensed milk companies. The ordinary consumption of table sugar was reduced by voluntary agreements among wholesalers, retailers, restaurant keepers and consumers, and local price agreements were made to prevent extortion. Dealers and consumers were cautioned against hoarding or buying in large quantities. Wholesalers and retailers were warned that an attempt at overcharge might result in the holding up of their own supply. By such measures the Food Administration has undertaken to cope with the sugar shortage, but their effectiveness depends wholly upon the economy of the individual consumer. Fortunately, the crisis will be of but a few weeks' duration, as beet sugar from the West is being hurried to eastern markets and the Cuban sugar cane crop will begin to be available in December. By the end of the year the sugar situation should be practically normal.

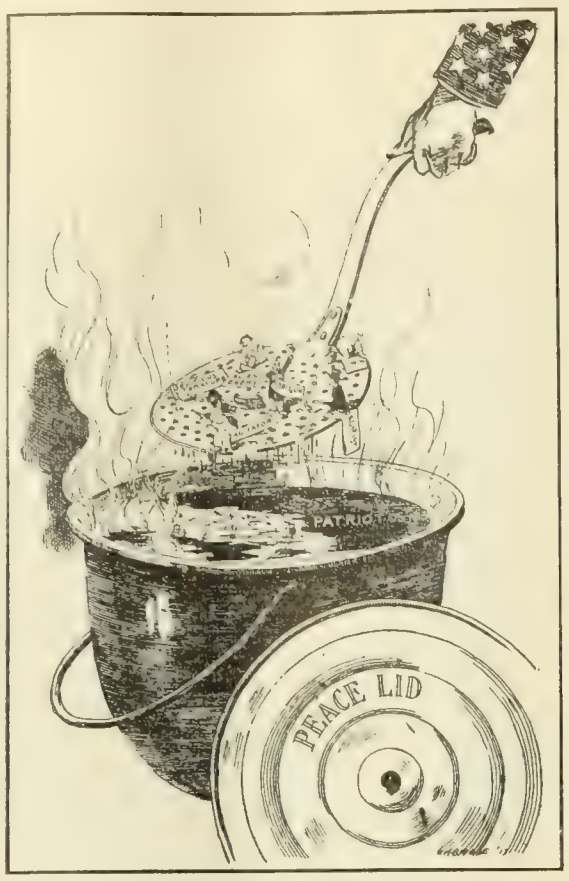
Can You Live on Onions?

A compilation of price variations undertaken by the Federal Bureau of Labor Statistics shows that food prices as a whole have advanced by 47 per cent from August, 1913, to August, 1917. From 1913 to 1914 they advanced on the average only 6 per cent, and the outbreak of war in Europe had comparatively little immediate effect upon prices in this country. In 1915 prices descended practically to their level of two years before. In 1916, with crop shortages and heavy exports, prices rose again by 14 per cent, and our entrance into the war has brought with it an even more rapid increase.

A LONDONER'S IDEA OF US

These cartoons from the London *Sunday Pictorial* are entitled "How America Will Influence Our Lives" "The participation of the United States in the war," says the cartoonist, "can hardly fail to have a great influence upon our civilization," and he humorously suggests a few of the changes that may be brought about as the result of our close co-operation."

Flour prices this August were two and one-quarter times what they had been four years before. Cornmeal showed an advance almost as great. Potatoes went up by 87 per cent; sugar, by 77 per cent; lard, 72 per cent. Considering last year only, cornmeal doubled in price; flour advanced 70 per cent; beans, 59 per cent, and other articles increased in cost to a lesser degree. Onions were the only important foodstuff to decrease in price during the year.



Wilson Opens Suffrage Drive

In the midst of the New York State campaign for woman suffrage, President Wilson has thrown the full weight of his personal influence to the suffragists. During the last two or three years the President has on several occasions exprest his belief that the time was ripe to extend the franchise to women; but it was not believed that with the burden of conducting the Great War resting so heavily upon his shoulders, and especially in view of the misconduct of the pickets in Washington, he would take an active part in the suffrage campaign this fall. In order to ascertain the President's position the leaders of the New York Woman Suffrage Party appealed to him in person to make a public statement. This he consented to do. In the course of a brief address the President said:

> As one of the spokesmen of a great party, I would be doing nothing less than obeying the mandates of that party if I gave my hearty support to the question of woman suffrage which you represent, but I do not want to speak merely as one of the spokesmen of a party. I want to speak for myself, and say that it seems to me that this is the time for the states of this Union to take this action. I perhaps may be touched a little too much by the traditions of our politics, traditions which lay such questions almost entirely upon the States, but I want to see communities declare themselves quickened at this time and show the consequence of the quickening. . . .
>
> It is almost absurd to say that the country depends upon the women for a large part of the inspiration of its life. That is too obvious to say; but it is now depending upon the women also for suggestions of service, which have been rendered in abundance and with the distinction of originality. I, therefore, am very glad to add my voice to those which are urging the people of the great State of New York to set a great example by voting for woman suffrage. It would be a pleasure if I might utter that advice in their presence. Inasmuch as I am bound too close to my duties here to make that possible, I am glad to have the privilege to ask you to convey that message to them.

The New York Mayoralty Campaign

This being an "off year" in politics, with neither Presidential nor Congressional contest, and with domestic problems overshadowed by the tremendous issues of the war, there are only a few elections this November which are of more than local interest. One of these is certainly the municipal election in New York City. The "regular," or Tammany Democrats, are supporting Judge John F. Hylan. Mayor Mitchel is making a campaign for reëlection as the "Fusion" candidate, but without the endorsement of any regular party. He entered the Republican primaries,

Ambrose in Rochester (N. Y.) Post-Express

THE DROSS

Seditious literature, alien enemies, agitators, traitors, pacifist propaganda must all be skimmed from the Melting Pot of Patriotism now that the Peace Lid's removal shows them up

but was defeated by William M. Bennett, who is therefore the regular Republican candidate. Mayor Mitchel is actively supported, however, by many of the national Republican leaders, including ex-President Roosevelt, ex-President Taft, Governor Whitman, ex-Justice Hughes, Senator Calder and ex-Senator Root. The local party organizers are also favorable to his candidacy, and not a few refused to support Mr. Bennett even after his victory in the primary. Most of the newspapers of the city, with the notable exception of those owned by Mr. Hearst, are working enthusiastically for Mayor Mitchel's reëlection.

The feature of the election which has made it of national interest was the introduction into it of the war issue. Mayor Mitchel has frequently declared that the election would be a test of New York's Americanism, and he summed up the forces opposed to him in the alliterative phrase, "Hearst, Hylan and the Hohenzollerns." Morris Hillquit, the Socialist candidate for mayor, has openly taken issue with the war policy of the Wilson administration and has devoted his speeches almost wholly to propaganda for an immediate peace. The vote cast for Mr. Hillquit will be a very close measure of the strength of pacifist sentiment in New York, for a number of prominent Socialists, including John Spargo and Charles Edward Russell, are supporting Mayor Mitchel, and, on the other hand, thousands of persons who have never before voted the Socialist ticket are supporting Mr. Hillquit as the peace candidate. Mr. Hylan and Mr. Bennett are opposed to the introduction of national issues into the municipal campaign. Mr. Hylan is basing his campaign upon the alleged extravagance of the Fusion administration and its undue favoritism to certain private individuals and corporations. He also attacked the reforms recently introduced into the New York public schools (known as the "Gary system" because some of the changes introduced were first tried out in the public schools of Gary, Indiana).

The voters of the whole State of New York must decide the question of woman suffrage. Equal suffrage was placed before the voters on popular referendum two years ago, but it was defeated by an adverse majority of nearly 200,000. After being twice approved by the State Legislature, the suffrage amendment has again been submitted on referendum.

New Draft System Announced

Provost Marshal General Crowder has made public the method by which the order of summoning men for military service will hereafter be determined. The new system has no application to the 687,000 men already drafted, but it will affect all other registered men. "On a day to be fixed" a questionnaire will be sent to the men on the registration list and within a week thereafter every man will be required to return the correct answers to the questions asked of him to the authorities in charge of the draft. On the basis of this information the men will be divided into five classes. Each class will be called up for physical examination before any member of the next class is summoned, but within each class the order of liability will apparently be based on the order in which the registration numbers were drawn in the summer draft of this year. The first class includes bachelors or married men who have no one dependent on them for support and who are not skilled in any essential war industry. In most registration districts the whole of the next contingent of drafted men will be drawn from this class. The second class includes married men whose families would be able to support themselves and also skilled farm laborers or men "engaged in necessary industrial enterprise." The third class includes men with parents, brothers, sisters or foster children wholly dependent on them for support; county and municipal officers, firemen and policemen, necessary employees in the national service (including "necessary" mail carriers and custom house clerks); industrial, agricultural or technical experts, and workmen in arsenals, armories and navy yards. The fourth class includes married men with wife or children absolutely dependent upon them for support, and also the chiefs of necessary industrial or commercial enterprizes. The fifth class, supposed to be wholly exempt from the draft, includes officials of the states and the nation, ministers and divinity students, alien enemies, other aliens (this may be modified by subsequent legislation), criminals, persons permanently incapacitated mentally or physically, licensed pilots, and persons already enlisted in the army or navy.

IS ENGLAND GOING TO STARVE?

BY JANET PAYNE WHITNEY

THE English have always been celebrated for roast beef. You can still get it there. The story runs that a waiter in one of the big restaurants recently said to an habitué of the place, in discreet English-waiter style (friendly but condescending): "'Ow did you find the beef today, sir?" "Oh," replied the diner, brightly, "quite easily, thank you! I moved my potato and there it was!"

That was when the English were economizing in meat, in loyal obedience to the Food Controller. A casual observer might have gathered, during the period of that demigod's new and uncomfortable existence, that the Food Controller was intensely embarrassed at the patriotic loyalty of the average citizen. They took him so seriously! When he said "Eat less meat!" down went the meat-bills of the country, a "meatless day" was instituted in many households and some restaurants, and up went bread and vegetables. This was disturbing and unexpected. The potato supply, reduced to home-grown vegetables, was running out. The Food Controller hastened to amend the situation. "Never mind the meat!" he shouted to the country, "eat less potatoes!"

The country was puzzled but willing to oblige. Nevertheless meat and vegetables were now at alarmingly high prices. Even the patriotic citizen must eat something. This fact became apparent to the Food Controller as wheat began to run out faster than it could be grown in a country depleted of men, and a desperate appeal to "Eat Less Bread" appeared on all the hoardings.

It is a tribute to the strength of John Barleycorn in England that I did not see one poster with the request to "Drink Less Beer," altho grain and sugar, the two essentials of life of which the shortage was most acute up to the date of my leaving, a few weeks ago, were both being used in large quantities in the manufacture of alcoholic drink. To put it in the homely terms in which the people themselves would speak of it, Father could get his beer and what-not, right along, but Mother could get little bread or flour, and sometimes *no* sugar for the children's food. Strange that even in a time of national and international crisis, the poor man's luxury drink should rank as a necessity before his children's body-building food. And the result of this discrimination? I have known the members of a contingent ordered to the front to spend the last night of their sojourn in their native land, in memory-and-sense-drowning carousal, and thereafter the less tipsy to wheel the helplessly drunk in wheelbarrows to the train.

I knew of a colonel who to prevent this kept those of his command who were about to go to the front, locked up in a large room for several hours before their departure. To such humiliating shifts did the brewing vested interest bring those Englishmen who wished to protect their weaker brethren from, in their own persons, publicly degrading the nation. The private degradation, more serious by far, pursued its way unchecked, save by tinkering methods.

Mrs. Whitney is an Englishwoman who has been until recently one of the managers of a London bureau for women's war service, where she has had wide opportunities to study England's economic problems. — THE EDITOR.

THE worst of the Food Controller's tiresome and exasperating situation was that he could not control! He could only, it appeared, make piteous appeals and counter-appeals to the British public. He could not stop corn and sugar being used wastefully in the production of drink and cause them to be carefully conserved and fairly apportioned for the production of food. He could ask that no more icing should be used on cakes, that fancy confections of all kinds should be very sparingly made, that every housekeeper should limit herself to half a pound of sugar per head per week for her household, inclusive of pies, puddings, cakes and other things made: and appear distractingly like a man feverishly trying to calk every little leak in a boat except the biggest.

His efforts, at any rate, were warmly backed up by at least the English middle class. Cakes of any kind have become a rarity at their tea-tables, and those that appear are probably sweetened by dates instead of sugar, and have vinegar in the place of eggs. The voluntary bread-and-flour ration, which the middle and upper classes were entreated to adopt so as to leave more bread and flour for the very poor, who made it their staple food, was strictly adhered to; and it *was* a ration and left one wanting more! If any one wasted a crust, its family and friends would turn upon it with horror, crying with united voice, "Eat it up, wicked! What would Lord Devonport (or later, Lord Rhondda) say?" And the Food Controller's inoffensive name became a household bogy, to flourish before innocent babes who did not want to finish their bread-and-milk.

The passion for "war economy" sometimes went to extreme lengths. There was a case in the papers of a lady who was prosecuted for throwing crusts to the birds—or rather ordering her maid to do so. Her defense, by the way, is worth mentioning as equaling, in its naïve and rather scornful candor, the curious state of mind of the prosecution. She said she had not ordered that the crumbs should be thrown to the birds, but that they should be burnt!

If I recollect rightly, she was fined £5 and tremendously reprimanded. It was necessary that an "example" should be made of these careless housewives!

International Film

Lord Rhondda, England's Food Controller

FOR the other side of the picture! The troops in a certain town in the north of England were regularly supplied by the Headquarters Commissariat with the usual liberal army rations of meat, bread and vegetables, mainly conveyed from outside, as the large number of soldiers was too much for the town's resources. Frequently many hundreds of these troops were absent for several days at a time on route-marches and maneuvers. Information of the numbers to be absent and the extent of time of absence could and would have been readily supplied to the Commissariat. But there are not wanting indications that the regular military mind partakes of the nature of machinery, and can be wound up to perform effectually and punctually a certain job, but cannot acquire the plasticity and intelligence to deal with variations in that job. The Commissariat, in fine, declined to vary the regular ration, route-marches or none, as it "would cause confusion at headquarters." It is illegal in England either to give away or to sell superfluous army rations. This is to safeguard against corruption. Consequently, in the aforesaid town, and in many others, tons of superfluous goods were either buried or burned.

Waste in the army is notorious in other ways than this. A story is told of soldiers who wanted to make a bright bonfire before their departure to the front, and [*Continued on page 217*

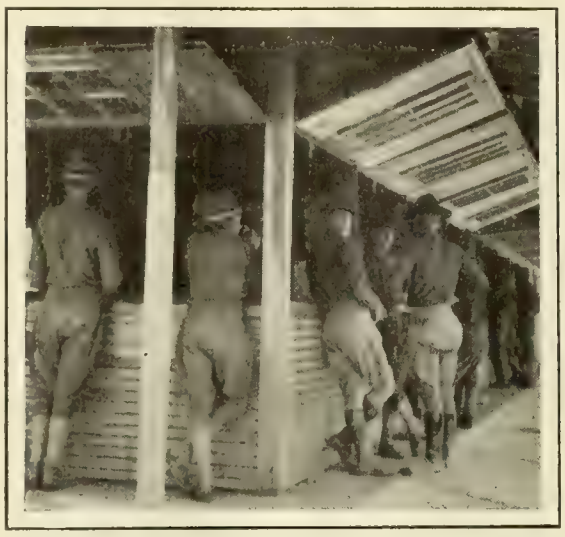
The men of the National Army when they first reached camp

WHEN the list of the men drafted first for the new National Army was published last July, a host of my friends telephoned or called to give sympathy and advice. Their ideas of military life were far from encouraging. They declared frankly that my constitution could not bear the strain of the work, which would be terrific. And there was my wife. By all means, urged several, I should urge exemption for her sake.

The prospect was not bright. For ten years I had been the traveling representative of an old and wealthy bond firm. I stopped always at the best hotels in the larger cities. Usually I would rise shortly after nine o'clock, call leisurely at several dignified offices, and the day's work was over. I never stinted myself on clothing and food, for my salary was not niggardly. Except for an occasional game of golf, I took no physical exercize, and I had grown fleshy and rather pale.

However, a few weeks later I left for the training camp. I accompanied recruits from every walk of life, mechanics, farmers, lawyers, business men, clerks, miners, doctors; but the greater number were young farmers.



At the railroad depot we were met by a detachment of officers and privates, who lined us up with military promptness and marched us to the receiving station. Within an hour the final physical examination was completed. We were conducted to the camp quartermaster warehouses to receive our clothing and bedding allowances. Each man was given two pairs of breeches, two olive drab flannel shirts, one blouse, one hat, two pairs of shoes, one pair of leggins, three pairs of underclothes and four pairs of socks; for his bunk, each received two olive drab blankets and a canvas bed-sack, to be filled with hay. We were told that overcoats would be issued later.

That same day military life began in earnest. At the barracks (a substantial two-storied pine building, large enough to quarter two hundred and fifty men) our serious, athletic young captain informed us:

"A recruit kit, consisting of two face towels, soap, a hair brush, a tooth brush and a comb, will be issued to every man this afternoon. Your civilian equipment, clothing and unnecessary toilet articles must be returned to your homes at once. You will wear the regulation clothing—no leather leggins or fancy hats. The Government wants each man to be outfitted alike."

I felt a pang of disappointment. I had provided myself with a tailor-made uniform, athletic shoes, leather leggins and an expensive military hat. My wife had given me twelve hand-embroidered towels and two pairs of linen sheets of the finest quality. And my suit-cases contained numerous, toilet articles, soaps, oils and much else.

The captain taught us how to make up our bunks. The two blankets were doubled, folded three times and placed at the head of the small iron bed, the folded edges to the left. Shoes were put under the edge of the bed below the blankets, the toes pointing evenly outward. There was a particular spot for the smallest article. And the bunks must be kept in this order except between taps and reveille and during the hour for sweeping and scrubbing in the morning.

The canteen is one of the few camp "frills"; the men buy candy, tobacco and magazines

The occupant of the bunk next to mine was a man named Hicks, who, tho intelligent looking, wore a sullen, sour expression, which I instantly disliked. My bunk-mate on the other side was an overgrown, awkward farmer youth with powerful, grimy hands, brown teeth and dirty ears. His name was Blevins. His filthiness disgusted me.

Before noon a mess kit, containing a meat can, a knife, fork and spoon, a condiment can and a pan, was given to every man in the barracks. A few moments later the first sergeant yelled, "come and get it!" and we hurried down into the big mess hall for dinner. Out of tall, shining cans the cooks ladled boiled cabbage, roast beef, macaroni and cheese, boiled potatoes, stewed peaches and lemonade, filling each pan and cup as we filed past. This fare was a sample of the meals served to us during the next two weeks.

That afternoon we began work on the rudiments of drill. The hand salute, which, if given accurately is no simple performance, was carefully explained and practised for an hour. Next we were divided into squads of eight men to learn to keep step properly. And neither is this an easy task for a raw recruit.

Back and forth, back and forth, we marched on the black strip of drill ground between the barracks. I had never walked so much in my life, and sweat rolled from every pore. My back ached dully; my feet burned. But the second lieutenant (a youth with a pale, thin fringe above his lip) continued commanding sharply, "one, two, three, four, one, two, three, four."

Suddenly he wheeled about and came up to me briskly.

"Get in step," he shouted, glaring at me. "You're not dead yet."

The muscles of my jaws twitched, and I breathed an oath of vengeance. But I fell in step and I kept up with the count.

I began to feel ashamed of my weariness. About me men were striving with the enthusiasm and determination of candidates for a college football eleven. Deeply in earnest, they apparently enjoyed every moment. And they were learning remarkably fast—the officers frankly told us so. Before we fell out that afternoon, the captain said:

"We'll learn a song now, men. It's quite simple. Here it goes:

The company barracks at inspection time, kits laid out on the bunks and bedding just so

WITH THE COLORS

Drafted Men

A detachment of infantry recruits after a few weeks' training

"We'll hang Kaiser William to a sour apple tree,
We'll hang Kaiser William to a sour apple tree,
We'll hang Kaiser William to a sour apple tree,
As we go marching onward."

And as they sang, the whole meaning of our part in the war, the fine ideals and possessions we were to fight for, came to me with an overwhelming rush. I felt the keen thrill that I had known twelve years before on the sidelines of a close varsity football match. I sang, too, more loudly and more wholeheartedly than any one near me. From that moment on I was an American soldier.

The next day the regular schedule of training went into effect. From 5:40 a. m. until noon we stood inspection of quarters and worked at calisthenics, dismounted artillery drill, guard duty, physical drill, semaphore signaling and artillery nomenclature. From 1:30 p. m. to 4:30 p. m. we studied camp sanitation, care of health, first-aid treatment, care of equipment and clothing, courtesies and customs of the military service, rules of war, rights of prisoners of war and Articles of War. Between 4:30 p. m. and supper at 6 p. m. we polished our shoes, bathed and shaved. The regulations permitted men to wear mustaches and beards, but they must be kept neatly trimmed. We were required to bathe twice a week and to wash our hands before each meal. Our underclothing was critically inspected at least twice each month.

Hicks, Blevins and I had nothing to do with one another. Hicks continued sullen and Blevins remained dirty until noon of the third day, when both strangely disappeared.

After passing the final physical examination, each of us had been vaccinated against small-pox and inoculated to prevent typhoid and paratyphoid. There were three inoculations, the last two following intervals of ten days. These precautions were to make us immune from the diseases for three years.

The physical standard of the recruits had proven excellent. Only two per cent of the arrivals had been rejected, and at the fifty infirmaries in the camp, very few men were reporting daily, altho the authorities insisted that the slightest ailments or injuries be treated by experts.

The work steadily grew harder. For hour after hour we drilled at to the right flank, to the left flank, to the rear, squads right and squads left. We became sore and stiff, but there was no let-up. Apparently I could never learn to hold a pivot, and I made an awkward mess of changing step. The comments of the young lieutenant with the fringe of mustache became sarcastic.

I had never seen a better behaved lot of men. Saloons and cafés were strictly forbidden to sell us liquor, and the regulations dealt severely with soldiers who gambled. At first I missed my occasional cocktail, but after a week I found I could live quite easily without it.

The hand salute isn't as simple as it looks; new recruits need a good hour's practise

A remarkable change came over Hicks and Blevins. Because he had hesitated to obey an order, Hicks had been assigned to three days at kitchen police, which meant toiling over hot ranges and scouring huge pots. When he returned to regular work, he was no longer sullen, and he has never hesitated to carry out another order. A sergeant had taken Blevins in hand and bathed and shaved him until he was a new man. He had done extra duty, too. Now he needs no urging to keep himself clean.

Every evening after supper I walked over to one of the nine attractive Y. M. C. A. buildings to write to my wife. But we received no letters, for the camp mail service was not yet working. During the brief rest periods, Hicks, Blevins and I lay on our bunks, reading or trying to sleep and growing more lonesome as time passed. Then one day the letters came, and we received several apiece. Overjoyed, I forgot myself and repeated to Hicks something my wife had written; a moment later Blevins was excitedly asking us to read a long letter from his sweetheart. Instantly the three of us became friends, and we have remained friends ever since.

After this incident our evenings were no longer lonesome. We formed a habit of attending the nightly concerts and performances given by experts at the big Y. M. C. A. auditorium, under the auspices of that generous organization. We are planning to enroll soon in one of the French classes which will be held in the Y. M. C. A. recreation halls. One Y. M. C. A. director has arranged an athletic program, during which amateur pugilists will box. Hicks and I are matched for five rounds.

The Government is doing all it can to provide well for us. Our quarters are better than those used by the Regular Army or the National Guard. The bath houses are furnished with equipment equal to that found in the best gymnasiums in the country. The utmost care is taken in the preparation of the food, for mess inspectors, trained specialists, pass thru the kitchens daily, keenly alert for filth or improper cooking methods. Our mess sergeant is adding savings from his rations allowance, and soon we shall be eating delicacies, purchased from civilian merchants.

The harder I worked the more mistakes I seemed to make. But I was determined to succeed. One day my wife wrote that she was coming to the training camp for a day's visit. Much as I longed to see her, this news troubled me, for I pictured my dismay when the young lieutenant would criticize my awkwardness in her presence.

Our course (Continued on page 11)

"Back and forth, back and forth, on the black strip of drill ground between the barracks"

BOOSTING THE OLD TOWN

BY CHARLES MOREAU HARGER

EX-PRESIDENT OF THE NATIONAL CITIZENS' LEAGUE FOR KANSAS

THE president of the Ourtown Commercial Club called a special meeting urging "every-business man" to be present. From long experience all knew what to expect—some money was needed for some cause. Only a bare quorum attended—mostly those who had been seen personally by the president.

"We are asked," said he, when he had called the meeting to order, "to raise five hundred dollars for the entertainment of the convention of the Ancient Order of Trustful Knights next month."

"What's the money for?" asked a dentist. "The meeting won't do me any good."

"Well it will help the town—advertise us all over the state and the delegates will spend money here."

"Thought they were to be entertained free," interrupted a hardware dealer. "I can't see where it will help my business."

"That is so, but we must decorate the town, hire the band and make a good showing."

In the end committees were appointed to pass a subscription paper among the business houses and raise five hundred dollars. The committees went in blocks of three. They entered each store, told the proprietor how much he was expected to give and presented a paper for his signature.

If he objected, the argument was, "See what your competitor gave." That brought him. The assessments were high enough to allow for 30 per cent of refusals and in the end they secured the money.

HALF of those who contributed could by no possibility reap any benefit, unless advertising the town indirectly helped them. The restaurants, drug stores and soft drink parlors profited —but how could implement dealers, hardware men, professional men and banks gain? They did not and they knew it—but their town pride cost them in the end from $10 to $25 each.

The business man of the small town is taxed beyond all reason by the subscription paper. In quick succession the committees make their rounds—county fair, Fourth of July celebration, support of the band, fair ground and city park improvement, good roads (even the farmers come in with subscription papers asking aid because a good road will "help the town"), sidewalk to the cemetery, conventions, committee expenses to secure more conventions—until many men absolutely refuse to serve on any such soliciting body. The total contributed by a business house that wants to do the right thing runs into hundreds of dollars annually.

In addition are endless numbers of beggars, funds for specific charities, subscriptions to build new churches anywhere within ten miles, solicitors for orphans' homes in adjoining states, and the legitimate dues for maintaining the commercial and other organizations of the city.

Now comes the war. Ourtown, with a population of 4500, gave $10,600 to the Red Cross, $2400 to the mess fund of the local National Guard Company, $250 to the war Y. M. C. A., and has a budget of $500 for training camp activities and $250 for soldiers' libraries. All these are worthy and the funds were given freely—but the great part came from the business men who have all the other burdens of giving heaped upon them.

There should be a way to limit the subscription paper fever that afflicts every community from the smallest town to the largest city. Is there a way to eliminate the unnecessary funds and to distribute the burden evenly over the people?

ONE western town has succeeded in remedying part of the evil. Practically all the business firms formed an association in which each agreed to stand an assessment based on their capital. Part of it was drawn and placed in the bank. Then a secret committee was appointed by the president, even the members not knowing the men who constituted it. When the solicitor for a church fund, a road fund, a fair fund or any other fund, tried to raise money he was referred to the secretary who took the request to the secret committee which decided its worthiness and appropriated from the cash on hand what seemed just as the town's share. Firms that had been giving $50 to $100 a year found their expense of this kind cut down to $25. There was no argument that "you must give as much as your competitor." The fake advertiser soliciting for a hotel register or for a livery stable clock to be surrounded by advertisements was out of a job. Hundreds of worthless advertising schemes were wiped out in the course of the year. Legitimate newspaper advertising increased. The town was better for it.

Such an organization, if it included every firm and every professional man, would save a community thousands of dollars annually. No business man objects to just contributions for worthy causes. He is willing to meet every fair demand, but every dollar that is paid out for needless purposes is a tax on his thrift and lessens his ability to build up his own community.

THESE are times when the average man must "give until it hurts." We have only begun to give for the war and wasting our energies by frittering away the hard earned surplus in a steady stream of subscription papers, without any consideration of their relative importance is poor economy. Giving may be systematized but the cold truth is that this disposition of his income is less sanely handled than any other item of the business man's expense.

In the end it is the "good fellow" who gives the larger portion. His hand goes into his pocket, his name on a check, without urging. He does not consider whether or not the object is entirely necessary. Two young women last summer collected $15 to $20 a day each for a mythical "old ladies' home," traveling for weeks thru the small towns and obtaining a dollar from each business house. They were good looking and smiling—the men fell for it. They confided that not once in a hundred times did any one ask to see their credentials—which were forged anyhow.

Hundreds of solicitors make good salaries collecting for alleged charities. Some states have compelled solicitors to take out licenses, but still they go on, gathering in the dollars because there is no system in giving.

It is not blessed to give unwisely and true conservation dictates that there should be some everyday common sense in the demands made on the business man of today. If he is to be able to meet the needs of the country in its great call for financial assistance he must make some adjustment of the disposal of such funds as he can spare. It is unfair to drain his purse for things that are of small moment. He can secure efficiency in giving if he will unite with his fellow sufferers and put into the operation sane and business-like methods.

SAMMY IN THE TRENCHES

The American army in France—and it is more of an army than most of us over here realize—has had its first chance at actual fighting; "a contingent of some battalions of our first contingents," reads the official report, "in association with veteran French battalions, is in the first line trenches of a quiet sector on the French front. Our men have adapted themselves to actual trench conditions in the most satisfactory manner"

GET YOUR GAS MASKS ON!

Seconds are precious when the warning gong is sounded for a gas attack, and drills to develop speed in adjusting the gas masks are one important phase of Sammy's training for the trenches. This photograph and the one above come from one of the training camps in France, where American soldiers are being given a short period of intensive training before they are sent forward to the first line trenches

AMERICAN TROOPS GO OVER THE TOP

Coincident with the news of our soldiers' first fighting comes this photograph of a recent practise charge under the same conditions

PHANTASMS OF WAR

BY AMY LOWELL

The Independent takes pleasure in announcing that it will print from time a time a series of poems on the present great crisis by Amy Lowell, the author of "Sword Blades and Poppy Seed," "A Dome of Many-Coloured Glass" and "Tendencies in Modern American Poetry." This series, "Phantasms of War," is remarkable as showing America's reaction to the horror of events, to the hideous fantasticality which this war has let loose and which we are just beginning to comprehend fully in this country. As the Dutch artist, Raemaekers, sketched this same "dance of death" for his countrymen, so does the American poet show it for us. And these poems are no mere essays of imagination. Terrible as they are, each is strictly based upon facts. Did America need arousing to the war, these poems would act as a trumpet-call.—THE EDITOR.

The Cornucopia of Red and Green Comfits

"In the town of Bar-le-Duc in the Province of the Meuse in France the Prefect has issued instructions to the Mayor, the schoolmasters and the schoolmistresses to prevent the children under their care from eating candies which may be dropped from German aeroplanes, as candies which were similarly scattered in other parts of the war zone have been found to contain poison and disease germs."—Daily News Report.

Currants and Honey!
Currants and Honey!
Bar-le-Duc in times of peace.
Linden-tassel honey,
Cherry-blossom, poppy-sweet honey,
And round red currants like grape clusters,
Red and yellow globes, lustred like stretched umbrella silk,
Money chinking in town pockets,
Louis d'or in exchange for dockets of lading:
So many jars,
So many bushes shorn of their stars,
So many honey-combs lifted from the hive-bars.
Straw-pale honey and amber berries,
Red-stained honey and currant cherries.
Sweetness flowing out of Bar-le-Duc by every train,
It rains prosperity in Bar-le-Duc in times of peace.
Holy Jesus! when will there be mercy, when a ceasing
Of War!
The currant bushes are lopped and burned,
The bees have flown and never returned,
The children of Bar-le-Duc eat no more honey,
And all the money in the town will not buy
Enough lumps of sugar for a family.
Father has two between sun and sun,
So has mother, and little Jeanne, one,
But Gaston and Marie—they have none.
Two little children kneeling between the grape-vines,
Praying to the starry virgin,
They have seen her in church, shining out of a high window
In a currant-red gown and a crown as smooth as honey.
They clasp their hands and pray,
And the sun shines brightly on them thru the stripped Autumn vines.

Days and days pass slowly by,
Still they measure sugar in the grocery,
Lump and lump, and always none
For Gaston and Marie,
And for little Jeanne, one.
But listen, Children. Over there,
In blue, peaked Germany, the fairies are.
Witches who live in pine-tree glades,
Gnomes deep in mines, with pickaxes and spades,
Fairies who dance upon round grass rings,
And a Rhine-river where a *Lorelei* sings.
The kind German fairies know of your prayer,
They caught it as it went thru the air.
Hush, Children! Christmas is coming.
Christmas, and fairies, and cornucopias of sugar-plums!

Hollow thunder over the Hartz mountains.
Hollow thunder over the Black Forest.
Hollow thunder over the Rhine.
Hollow thunder over "Unter den Linden."
Thunder kettles,
Swung above green lightning fires,
Forked and spired lightning
Cooking candy.
Bubble, froth, stew!
Stir, old women;
Stir, Generals and spur-heeled young officers;
Stir, misshapen Kaiser,
And shake the steam from your up-turned moustachios.
Streaked and polished candy you make here,
With hot sugar and—other things;
Strange powders and liquids
Dropped out of little flasks,
Drop—
Drop—
Into the bubbling sugar,
And all Germany laughs.
For years the people have eaten the currants and honey of Bar-le-Duc,
Now they will give back sweetness for sweetness.
Ha! Ha! Ha! from Posen to Munich.
Ha! Ha! Ha! in Schleswig-Holstein.
Ha! Ha! Ha! flowing along with the Rhine waves.
Ha! Ha! Ha! echoing round the caves of Rügen.
Germany splits its sides with laughing,
And sets out its candles for the coming of the Christ-child.

"Heilige Nacht!" and great white birds flying over Germany.
Are the storks returning in mid-Winter?
"Heilige Nacht!" the tree is lit and the gifts are ready.
Steady, great birds, you have flown past Germany,
And are hanging over Bar-le-Duc, in France.
The moon is bright,
The moon is clear,
Come, little Children, the fairies are here.
The good German fairies who heard your prayer,
See them floating in the star-pricked air.
The cornucopias shake on the tree,
And the star-lamps glitter brilliantly.
A shower of comfits, a shower of balls,
Peppermint, chocolate, *marzipan* falls.
Red and white spirals glint in the moon.
Soon the fairies answered you—
Soon!
Soon!

Bright are the red and white streaked candies in the moonlight:
White corpse fingers pointing to the sky,
Round blood-drops glistening like rubies.
Fairyland come true:
Just pick and pick and suck, and chew.
Sugar and sweetness at last,
Shiny stuff of joy to be had for the gathering.
The blood-drops melt on the tongue,
The corpse fingers splinter and crumble.
Weep white tears, Moon.
Soon! So soon!

Something rattles behind a hedge,
Rattles—rattles.
An old skeleton is sitting on its thighbones
And holding its giggling sides.
Ha! Ha! Ha!
Bar-le-Duc had currants red,
Now she has instead her dead.
Little children, sweet as honey,
Bright as currants,
Like berries snapped off and packed in coffins.
The skeleton dances,
Dances in the moonlight,
And his fingers crack like castanets.

In blue, peaked Germany
The cooks wear iron crosses,
And the scullery maids trip to church
In new ribbons sent from Potsdam.

THE WAR AS I SAW IT IN TURKEY

BY AMBASSADOR ABRAM D. ELKUS

TURKEY, even in times of peace, presents a most complex problem. Government is no simple task because of the intricacy of the elements composing the population. Unlike most other countries, there are peoples within the nation who will preserve a separate identity, and this individuality is to some extent officially recognized by the Government.

Tho the land owners and the office holders are chiefly drawn from the Mohammedan Turks, the great bulk of Mohammedan Turks, together with the Arabs and Syrians, are peasants and farmers. In between these two social grades comes the middle class—the mechanics, tradesmen, bankers, shopkeepers and business men. They are, on the one hand, Armenians, Syrians and Greeks, who are for the most part Christians, and on the other hand, are Jews. Each of these sects and races has its separate official leader, who is both a political and religious head. The Roman Catholic Armenians, the Protestant Armenians, and the Greeks, have each their Patriarch, while the Jews have their Grand Rabbi. In addition to their usual ecclesiastical authority, all of these dignitaries possess some degree of temporal power, which is either granted or recognized by the Government.

These problems already in existence were further greatly complicated upon the outbreak of hostilities. For many years prior to the war most of the nations of the world, the United States included, possest certain rights granted to them by treaties with Turkey. Consular Courts were provided for which had jurisdiction over disputes between Turks and foreign citizens; further, the various diplomatic representatives were given authority over their own countrymen.

When Turkey went into the war she attempted to terminate these treaties, or capitulations as they were popularly termed. To this attempt the United States did not assent, claiming that the treaties were not one-sided and could be dissolved only by mutual consent. This, of course, rendered the situation more difficult of solution by diplomatic officers.

The American Embassy, besides having the protection of American interests, had intrusted to its care the interests of Great Britain, France, Russia, Italy, Belgium, Serbia, Montenegro, San Marino, and Switzerland, the last being the only neutral. The peo-

ples of these countries all looked to the American officials for protection. Besides the foreigners, the Armenian and Syrian Christians and the Jews, not only in Palestine but thruout Turkey, looked to America for food and for money. They besought of American representatives such protection of life and liberty and such assistance as could be rendered.

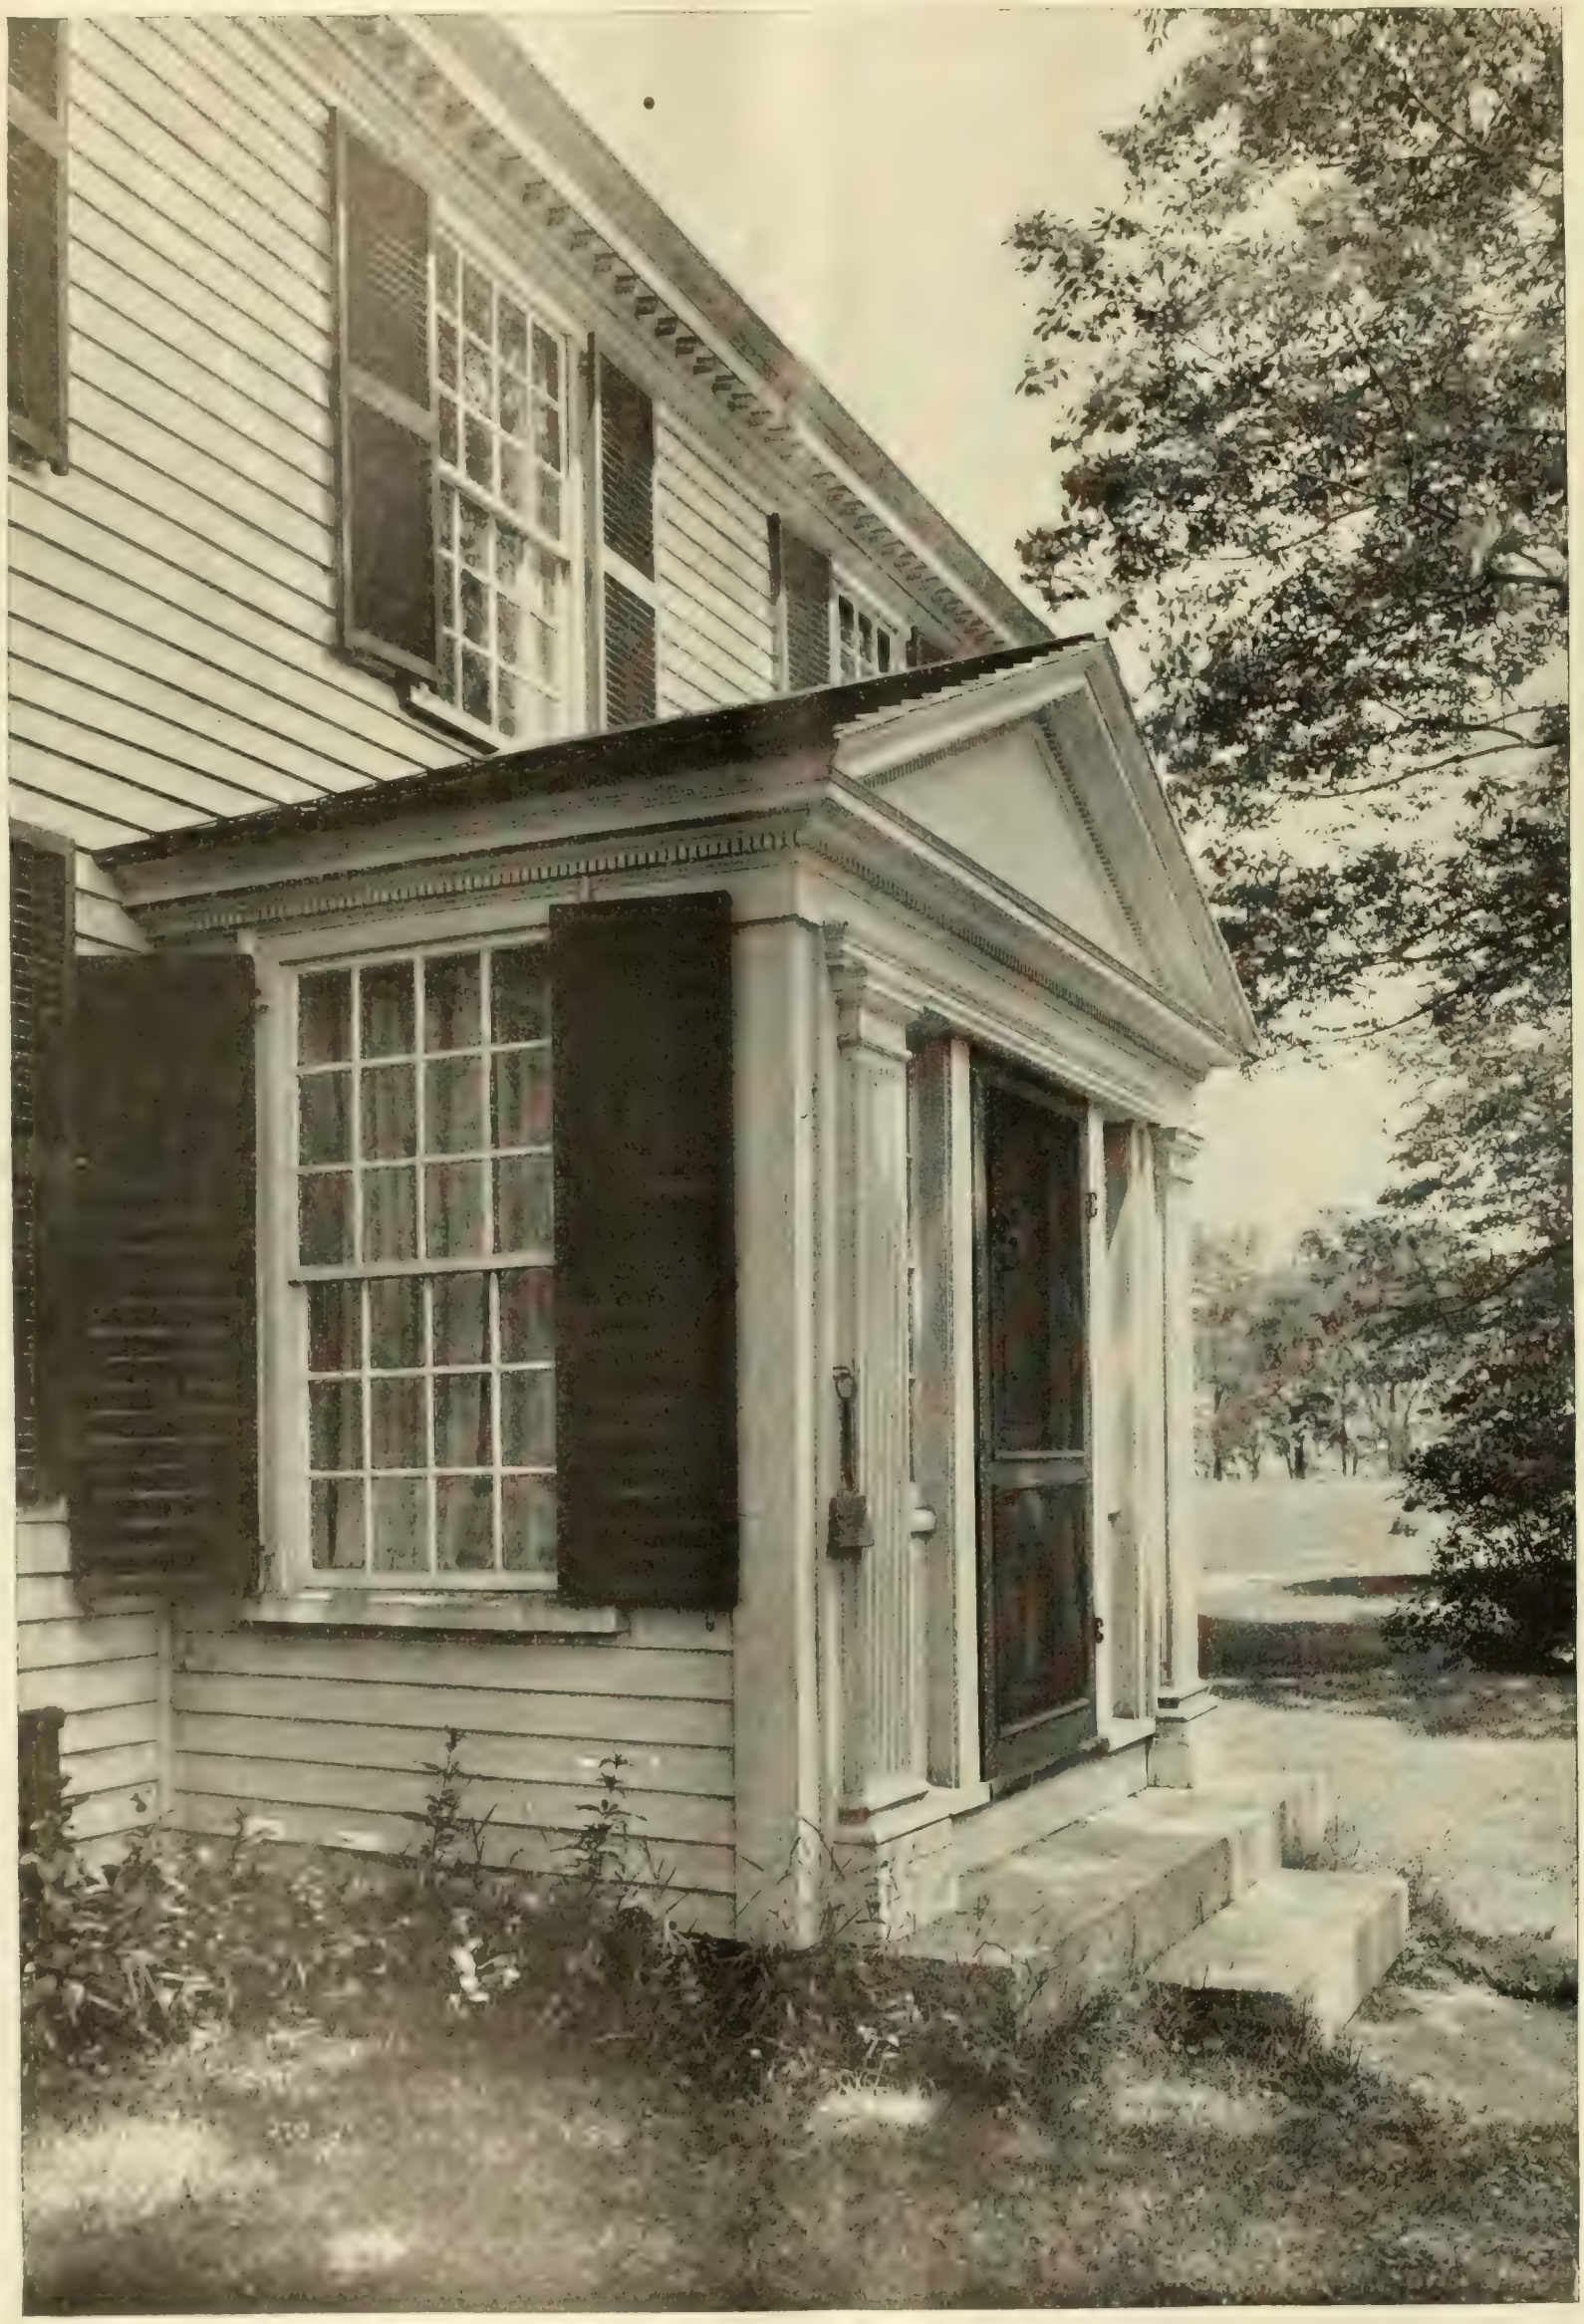
In addition to this, there were in Turkey thousands of British prisoners captured at the Dardanelles and in the Kut-el Amara campaign, and many thousands of Russian and other prisoners of war, to be cared for. There were also many Americans in Turkey engaged in missionary, educational and charitable work. All of these, together with other foreign subjects who were living and doing business in Turkey, were in continual need of help and protection. So the day's work began early and never ended; the week's work was seven days long and there were no holidays.

OUTSIDE of the purely diplomatic work there was the good work of helping the poor, the oppress and the starving of all faiths and nationalities. In this the American Embassy gladly took a leading part. Food and clothing were purchased and soup kitchens, at which thousands were fed daily, were established. The oppress were relieved when possible and the sick were treated, but it all required constant effort and daily work and organization.

To clothe and feed the prisoners it was necessary to establish a purchasing and manufacturing bureau. Cloth was ordered made and then was sent to be manufactured into garments. Raw leather was purchased and shoes ordered long in advance, for it was impossible to buy anything ready made. Food in quantities had to be bought greatly ahead of time. All the funds for this relief came thru the American Embassy and it was no simple task to obtain the best returns for the money expended.

As the war progressed poverty and hunger increased day by day. The city streets were crowded with beggars, many of them children. Sickness, including the dreaded typhus, became more and more prevalent.

Occasionally, strange sights which shocked Western sensibilities were to be seen in the streets. One day we awoke to find the bodies of ten men hanging in the public square of Constantinople. Rumor was rife among the awed and curious crowd of onlookers. Some said the men had been deserters, others said they were spies. No one knew positively what they were, but by all they were regarded as an example of warning.



WHEN diplomatic relations with the United States were broken by Turkey, all Americans were advised to leave. Many did so, but many of the missionaries, the workers in the American schools and colleges and the physicians and nurses, both men and women, in the American hospitals decided to remain faithful to the call of duty, irrespective of hardship and danger and disease. They are there now, permitted to carry on their fine work, deserving of the admiration and gratitude of their countrymen.

On our journey from Turkey to Switzerland every courtesy was shown us. To travel, as we did, thru Turkey, Bulgaria, Serbia, Austria, Switzerland, France and England in ten days is an exceptional feat in these times.

The fields of Bulgaria, Serbia and Austria seemed to us as we passed to be well tilled and cared for. Food scarcity was everywhere encountered until we reached Switzerland, where butter, eggs and meat were to be had in plenty.

We visited the western front, where the great guns never seem to stop their fearful thunder; and then across the smooth seas, in a ship, darkened each night, fearful of the dreaded submarine; and so home, to see the Stars and Stripes floating everywhere, to the land of plenty and sunshine, only touched by the knowledge of war and as yet without its sorrows.

MAKING THE HOUSE LIVABLE

BY AYMAR EMBURY II

Slate is the right roof for this Detroit residence. Joy Wheeler Dow, Architect

WHETHER you build your house of stone or stucco, brick or wood, there are certain matters more prosaic and less fascinating than the designing of plans and the choice of the principal materials, but which must be properly understood if the house is to be built with intelligent economy and to be, after it is built, truly livable.

I do not believe there is any branch of building construction which is so little understood technically as the question of paint. The manufacturers furnish reports of tests so at variance that it is almost impossible to arrive at any just conclusion on the subject. It is perhaps fair to say that any of the high-class and reputable firms who make ready-mixt paints produce at least one grade which, regardless of the constituents of which it is composed, is durable, will hold its color and will not peel or blister, if properly applied. On the other hand, the common custom is to mix the paints at the job, and I cannot advise too great care in overseeing this part of the work to make sure that constituents of good quality are used.

Paint is composed of two separate elements, one the medium, the other the pigment, and the materials most commonly employed for these two purposes are raw linseed oil and white lead. If the linseed oil is of good quality, the white lead thoroly divided and well mixt into it, and if the job can dry without being covered with dust and dirt, a fairly durable coating will result.

But as one can never depend upon the weather, it is usually necessary to add some volatile oil, such as turpentine, to make the paint dry more quickly and this tends inevitably to lower the quality of the work, especially if too much is used. Many good painters recommend the use of a little ground white zinc with the white lead, and zinc will probably make the paint hold its color somewhat better since white lead and oil used alone have a tendency to turn yellow. White lead and zinc together, mixt in oil and turpentine, are probably the best things to use for interior work. Most colored paints are made by mixing ground colors with the white lead and white zinc. There are very few, if any, which will not fade, so in determining the colors to be used one must allow for a certain amount of fading.

Our Colonial ancestors had only a few colors, all of which had metal bases: white lead (carbonate of lead) and white zinc (zinc oxide) for white; lead oxide for red, the old red barn; and copper and arsenic oxides for green, this latter being the well-known "Paris" green. The beautiful green blinds which we see on the old farmhouses were painted with this Paris green, which when it is first applied is the rawest, greenest green imaginable, but fades into quiet, lovely tones. As the process takes time, we now mix our paint at the beginning to match the colors to which the old work has faded and, if the right colors are not used, we find after a few years, perhaps after a few months, that the effect has been lost and that we must repaint. Most good painters, however, have a fair knowledge of what is going to happen to paints altho they may have no idea of the chemical processes which take place. I would advise, therefore, that the painter be given samples of the colors which it is desired to obtain and be permitted to use his discretion in mixing the paint, so that after the preliminary fading process has taken place these will be the colors of the house thru a long period. One thing should be remembered in this respect: samples are very deceptive. It is best to see a house which has the proper colors and then make the samples at that house, when it will be found that small samples do not apparently resemble the large surfaces which they actually match. [Continued on page 250]

Paint is important! The white clapboards and green shutters of the Loring house at Old Roxbury, Massachusetts, built in 1757, set modern architects a good example

PLANTS THAT LIVE IN GLASS HOUSES

BY WILLIAM C. McCOLLOM

ONCE in a while I find a person who fancies that greenhouses are about as democratic as Russia under the regime of Mr. Nicholas Romanoff—that they belong exclusively to the idle rich who, like that gentleman, are "fond of flowers." But, as a matter of fact, to have and enjoy a greenhouse you needn't be rich and you mustn't be idle.

Greenhouses can be purchased to suit a purse of almost any size; they vary in dimensions and material to such an extent that they may cost a few hundred dollars or many thousands. If one does his own work, a greenhouse is possible on an income considerably below what used to be the tax-exemption limit. It's much the same as with the automobile; you can get a lot of fun from either a limousine or a flivver. With the small greenhouse, one must be prepared to do the gardening, but that is the joy of it. I know several women who own small greenhouses and do all their own work, and they not only do it well but enjoy every minute.

Have you ever stopped to consider the full value of a greenhouse, or have you just thought of it as a place where a few flower aristocrats are comfortably coddled? Consider for a moment what a small greenhouse means to the garden—vegetable or flower seedlings of all kinds started in February or March instead of outside in April or May, hundreds of strong young plants all ready to set out just as soon as the weather adjusts itself, bedding plants in quantities raised from cuttings of stock plants, propagation by cuttings or seeds, numerous plants for the perennial border. It has no end of possibilities in the hands of a skilful operator.

The greenhouse is an all-year proposition and not just a winter sunshine shop. There is no season of the year when there are not a hundred and one different uses for the greenhouse—flowers for cutting, pot plants for decorative work, vegetables for the table, fruits of various kinds, besides many little things that a garden-lover delights in that are not procurable elsewhere.

Forcing bulbs of various types is one of the most interesting things you can do in the greenhouse. They are easily grown, and they occupy little bench-space. When the bulbs are first brought in to force, they are kept under the benches until they have practically completed their growth and need be brought up to the light only for a few days to finish them. The bulbs are inexpensive, the flowers last a long time when cut, and they are not at all fastidious in their cultural requirements—in short, they are ideal flowers for the amateur.

All types of the tulip can be forced, and the narcissi are good forcers, from the small Pheasant's Eye type to the large Trumpet. The sweet-scented hyacinths are also very popular, with their fine range of colors, especially the blue types, and both the Dutch and Roman type force well. Other good forcing bulbs are the allium, Spanish iris, ornithogalum, etc.

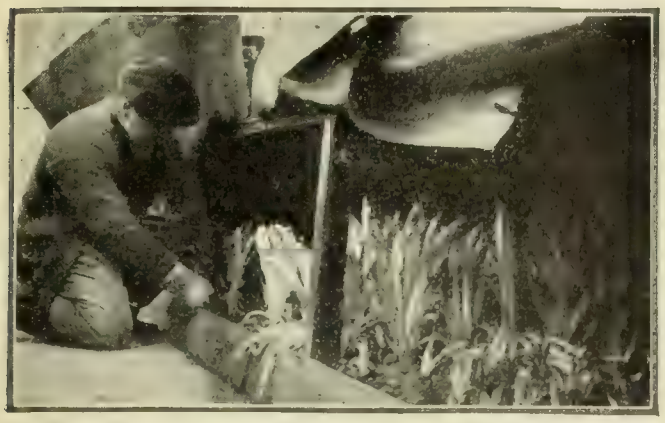
SUPPOSE the outside benches of your greenhouse are planted with carnations, which will do very well with a night temperature ranging from 50 to 55 degrees. For an 18 by 25 foot house we should get about 200 plants in the outside benches, which are three feet wide and approximately fifty running feet (planting the carnations about one foot apart and four plants across the bench). Under good cultivation the plants should average sixteen flowers each for the season, from October to May inclusive, and on this basis we find the house should produce about 3200 flowers, or 400 per month during the flowering season, besides leaving us the center bed for other uses! Carnations are usually propagated from cuttings which are stuck in sand during December and January. The young plants are potted up when rooted and carried along in pots until the latter part of May, when they may be planted in the field or benched. Field planting is preferred as it releases the greenhouse during summer for other purposes. In late August or early September the plants are lifted from the field and benched and are then grown continuously until they are discarded the following summer.

Snapdragons are a good companion crop for the center bench. They have a very good range of colors, and the flowers keep well when cut. The sweet pea, too, does very well on the center bench under the growing conditions of the carnation. The plants are usually started from seed during August and will begin flowering in December and continue until very warm weather. They can be grown in large pots or the seed can be sown directly in the benches.

There are still other flowering plants for the carnation house—stocks, mignonette, primula and numerous annuals such as arctotis, calendula, salpiglossis, etc. Or you may prefer some of the hard-wooded forcing plants; lilac, wisteria, deutzia, cytisus and rhododendrons are all dependable, but of course it is understood that the other crops mentioned must be reduced somewhat in order to make room.

The space under the benches of the greenhouse is very valuable and should not be wasted. Mushrooms can be raised by using a drop curtain or other device to exclude the light. All crops grown under the benches, indeed, do better if a curtain of some kind is fastened to the side of the bench to keep out the light. In this manner are grown asparagus, sea kale, chicory and rhubarb. These crops, with the exception of the mushroom, force from roots, and are therefore not only easy to grow but quick to yield results. The roots are planted under the benches in prepared beds and, if they have been properly matured and ripened, will start active growth in a few days.

It is in spring that one fully appreciates greenhouse possibilities. Bedding plants are given an early start, and fine pot-grown plants of one's own raising are available at the proper time to set out. Cannas, heliotrope, alternanthera, lantanas, coleus, geraniums, ricinus, dusty miller and ornamental grasses can all be prepared this way for bedding.



Just think of the high standard of your vegetable garden with your own little greenhouse reinforcing the garden patch outside. Artichoke, cabbage, cauliflower, celery, eggplant, lettuce, peppers and tomatoes should be started during February or March to give the best results. In fact, there are few vegetables that are not improved in quality and hastened to maturity by an early start

The lean-to is an economical type of greenhouse

This is how a lean-to looks inside—plenty of space

With a drop curtain to keep out light you can grow mushrooms or asparagus under the benches

in the greenhouse. If you have the space, sow beets, carrots, leeks, onions, parsley, herbs and even corn in pots.

Then the flower garden will be deeply in debt to the greenhouse, with its multitude of varieties, some of which are made possible only by the early start. All of the house-sown plants are in flower weeks before any plant seeded outdoors could possibly bloom; asters, salvia, petunias, dahlias from seed and lobelias are only a few of the many cut-flowers that are handled in this manner.

During summer the greenhouse can be used for a number of purposes. Summer-flowering bulbous plants such as achimenes, yellow calla, tuberous begonia, gloxinia, or the beautiful leaved caladium can be grown, or a crop of high quality melons can be easily raised and will surpass any outdoor-grown product. Potted fruit is another possibility, if one prefers something to eat instead of something pleasing to the eye.

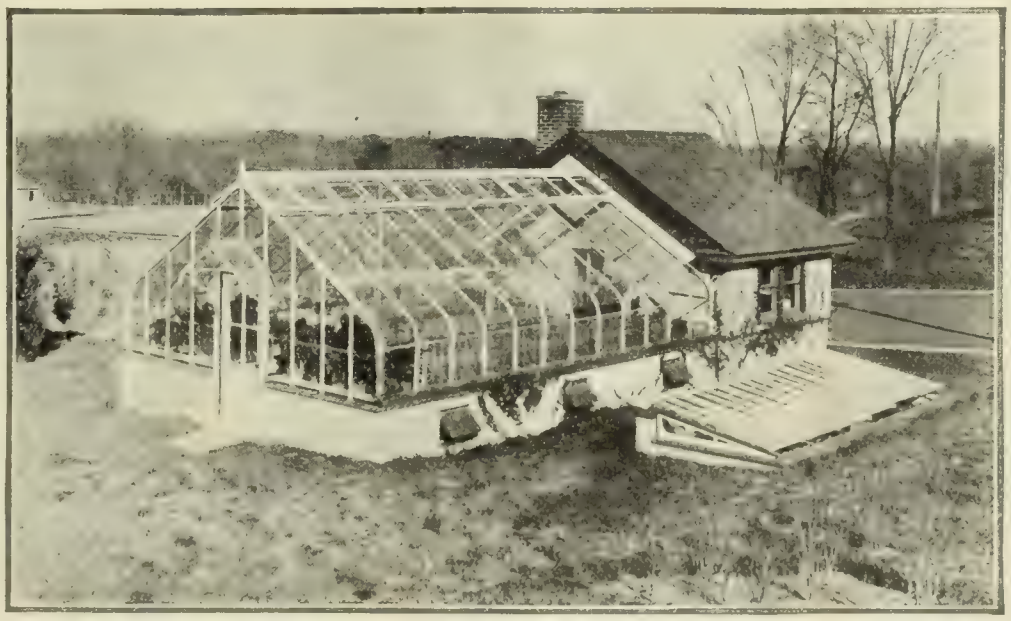
The standard summer use for the small greenhouse is for the chrysanthemum. One does not get summer flowers, but one does get a crop of flowers in the fall when they are at a premium and fully appreciated. It will facilitate matters in a small greenhouse to grow them in pots, as they can be moved about easily to make room for other crops.

If the greenhouse be devoted to roses and the crops that can be grown with the roses, the variety is reduced to some extent, but there is still a wide field to select from. If tea roses are planted they will do well in the side benches, but American Beauties must have the center bench. I would not advise any one to attempt Beauties in a small greenhouse, for they are shy bloomers. The roses are usually planted in the bench during May and June, which, of course, eliminates some of the summer possibilities of the greenhouse, since somewhat special growing conditions must be maintained in order to have healthy plants that will stand the strain of winter forcing. There are, however, a few plants such as the poinsettia, begonia, eucharis, calla lily, gardenia and others that can be grown with the rose satisfactorily.

Fruit-growing is a fascinating possibility of the greenhouse—it furnishes food and is picturesque, too

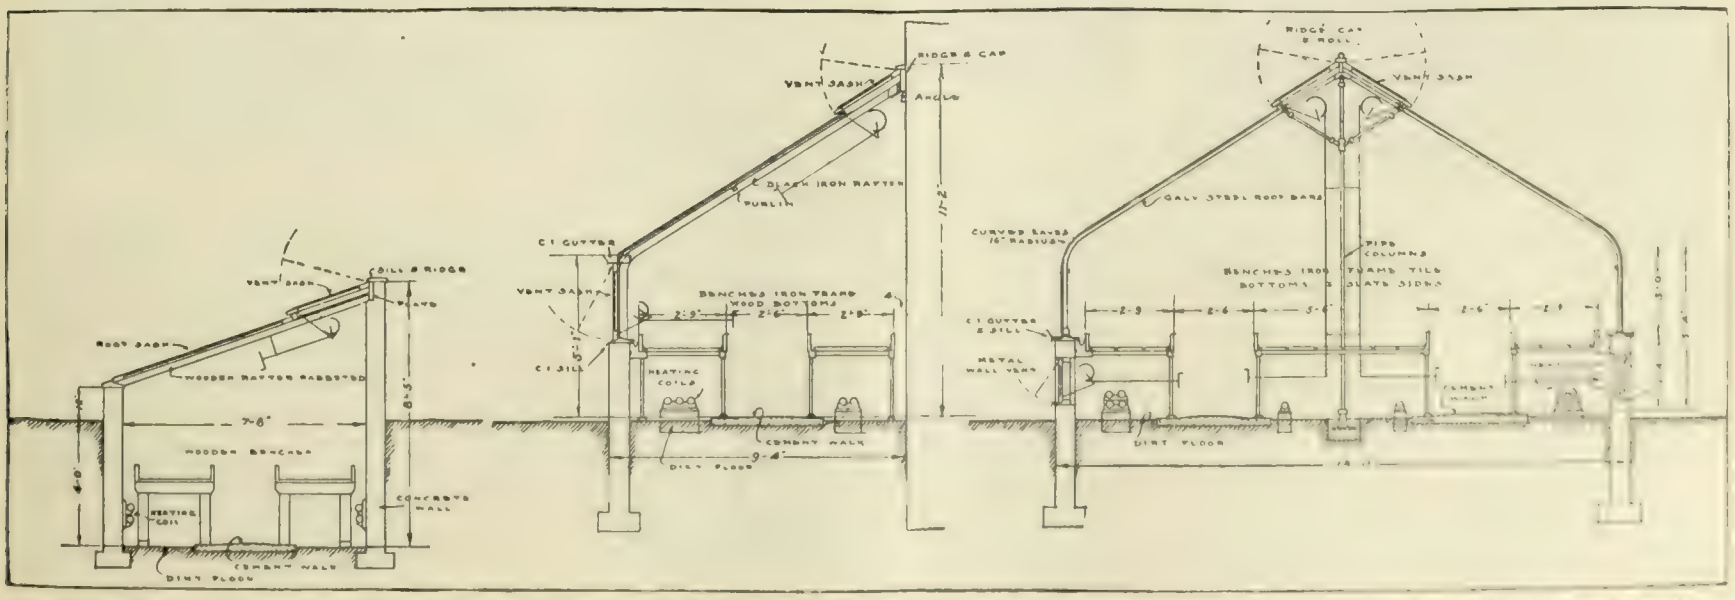
THE space under the benches could then be used for forcing lily-of-the-valley, or one can have "dark" crops such as chicory, asparagus, mushrooms, sea kale and rhubarb. These do better, however, at a little lower temperature; the rose-house should be kept at 60 degrees.

Of course, the ideal layout is the two-compartment house where two distinct and different growing conditions are maintained. This also gives us better quality in the case of many flowers that may be started in the lower temperature and finished in the warmer compartment, such as the azalea, forcing lilies and climbing roses in tubs. Vegetables may also be grown to special advantage in this sort of house; in the coolhouse, radishes, beets, carrots, cauliflower, lettuce, spinach (both the broad-leaved and New Zealand type) and parsley; in the warmhouse, beans, cucumbers, tomatoes and even peppers and eggplant, tho the last two are hardly profitable.



Every greenhouse, no matter what size, should have a little section of frames close by. In the spring they are used to "harden off" the various young plants before setting out; in summer they can be used for the growing of exacting crops of various kinds, or they may be used for the carrying over of numerous pot plants for winter forcing in the greenhouse, such as primula, cyclamen, etc. In the fall they become a sort of storage-pit for many of the forcing plants prior to bringing them into the greenhouse, or crops of various kinds can be grown in the frame during fall and winter—lettuce, cauliflower, chervil, watercress, etc., or pansies, forget-me-not and English daisy.

Now what does all this cost, and how can these hundred and one uses of the greenhouse be best provided for?



The cheapest type of greenhouse is the pit, which might be termed a glorified cold-frame. The most serious objection to it is the lack of ventilation. To offset this, however, this type of construction requires less ventilation because of the small proportion of exposed surface. The steps necessary to get in and out of the greenhouse are not the most convenient thing, but this is not at all serious. For service the pit is dependable; it is in appearance that it suffers by comparison with the house.

The pit is usually of home construction. The excavation is made to the required depth (about four feet is the average): concrete or other neces-

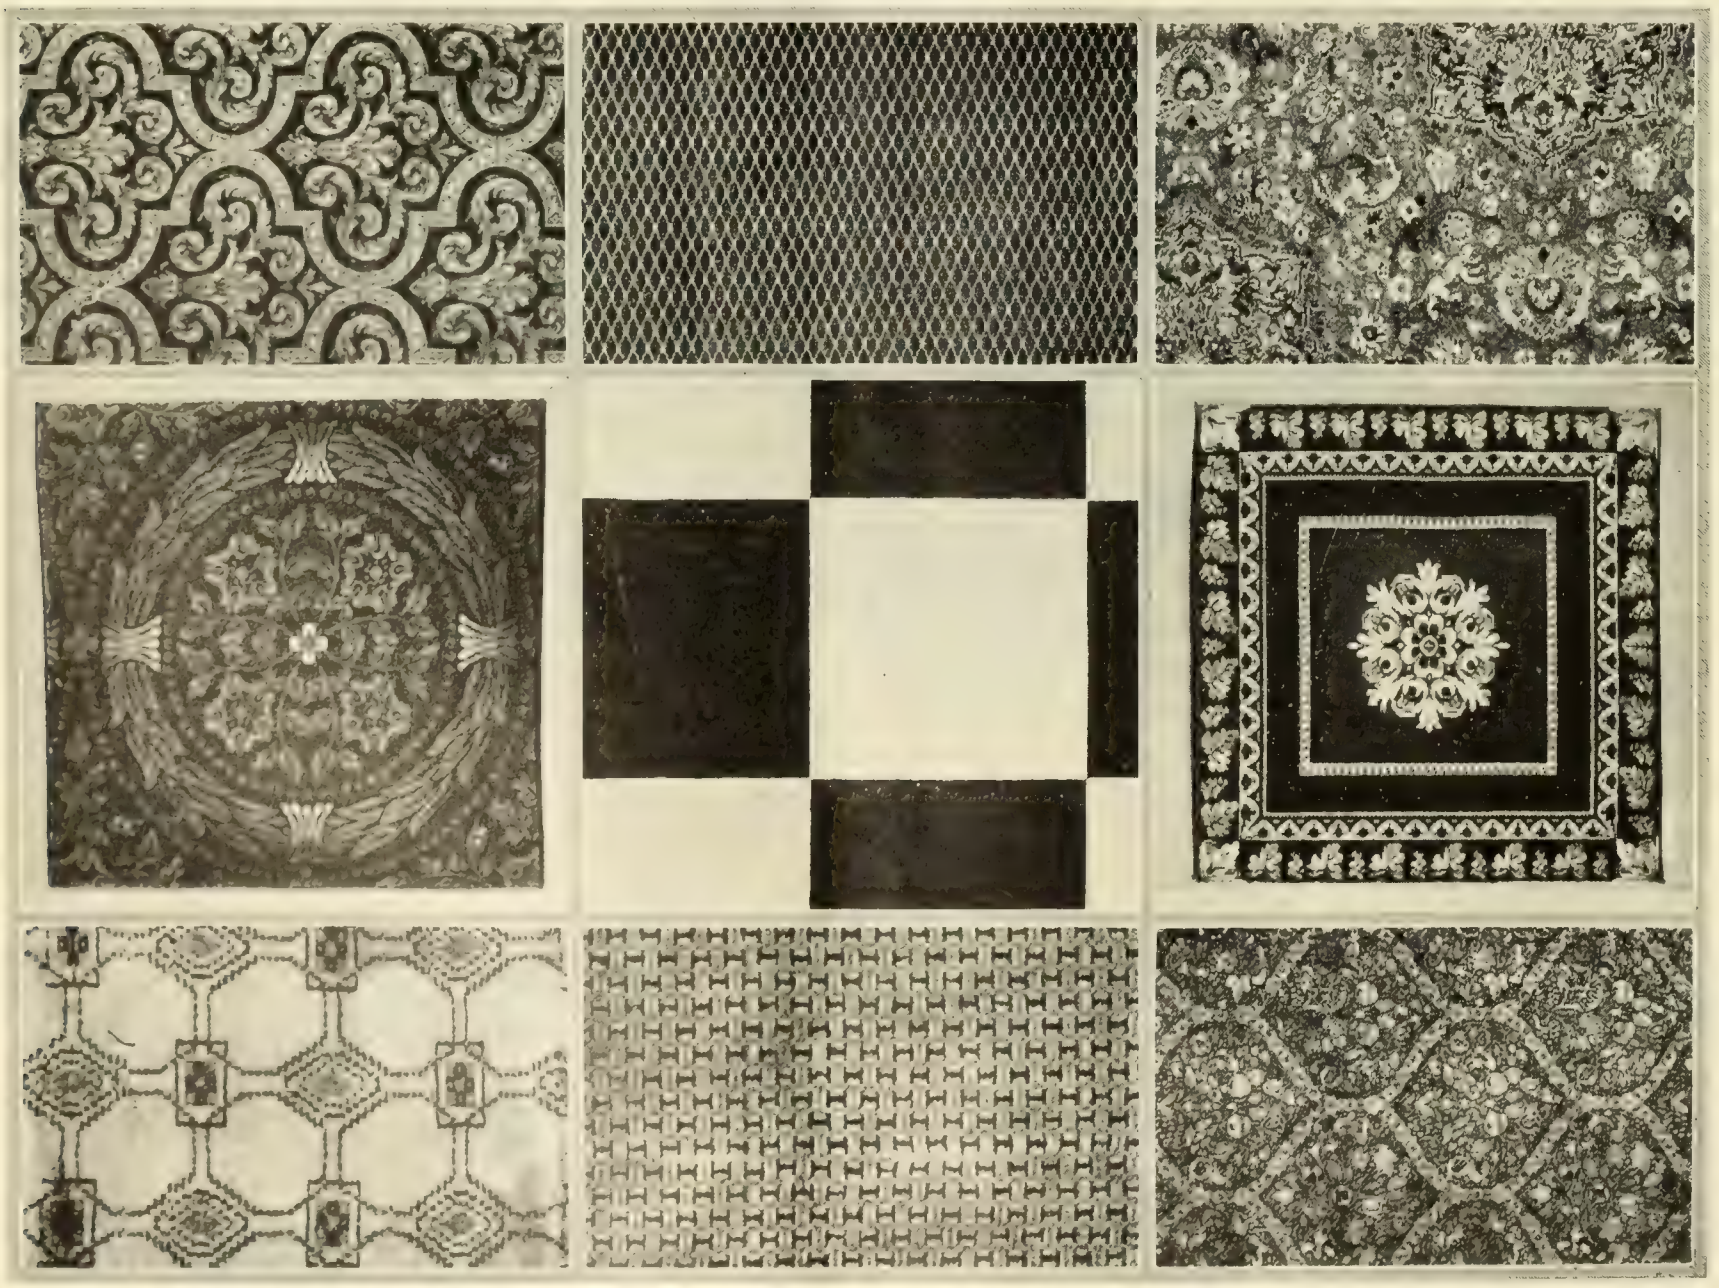
A typical Chinese border the design is a familiar one and the colors are a soft red and Chinese green and a dark blue

THE RETURN OF CARPETING

BY GEORGE LELAND HUNTER

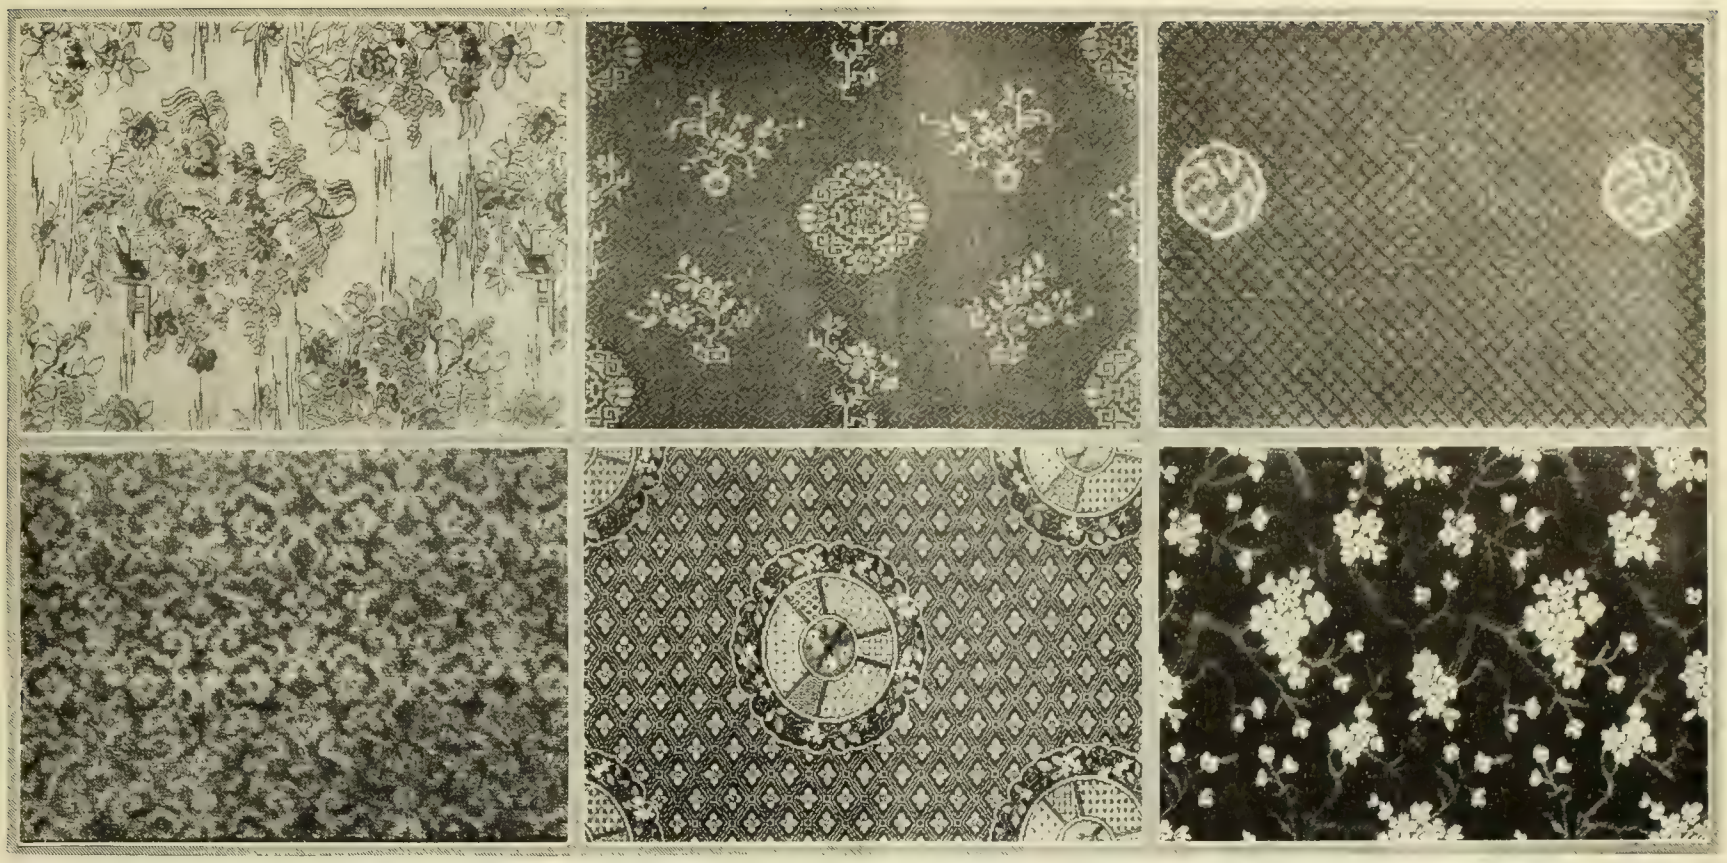
FORTY years ago all-over carpeting was a measure of the prosperity of American families. Those who could afford it had their homes "carpeted from kitchen to attic." Bare floors were the sign of poverty or parsimony, and made the badly heated or unheated rooms look even less comfortable than they were.

When Oriental rugs came in, carpeting went out. At first small Daghestans and Shirvans and Ghiordes and Kulahs were superposed on the carpeting, usually to the decorative disadvantage of both. Later parquet and other hardwood flooring made it possible to eliminate the domestic weave.



Soon it became the fashion to decry carpeting as unsanitary. Oriental rugs were commended as not only more beautiful and more durable, but also as easier to keep clean. The two-faced smyrnas and other domestic rugs, even those made by sewing together strips of carpeting, shone with reflected glory.

Before long large Oriental rugs covering all of the floor, except a narrow space around the outside, were so much in demand that special shapes and sizes were developed in the Orient for the American market. Gorevans and Tabrizes and Mahals and Muskhabads inherited the vogue that had been created by rugs free from Occidental influence.



Simultaneously American manufacturers began to copy Oriental rug patterns, but of necessity modified them greatly in the machine direction. At first the borders were sewed on, but later seamless tapestries and velvets and chenille axminsters, and finally even seamless wiltons, were produced completely bordered in the Oriental manner.

Thus the knell of carpeting would seem to have been sounded. But just in the nick of time the vacuum cleaner appeared to remove from all-over carpets the stigma of "unsanitary." Now, it is quite as easy to extricate the dust from them as from rugs, and we are once again free to consider them from the points of view of comfort and of decorative fitness.

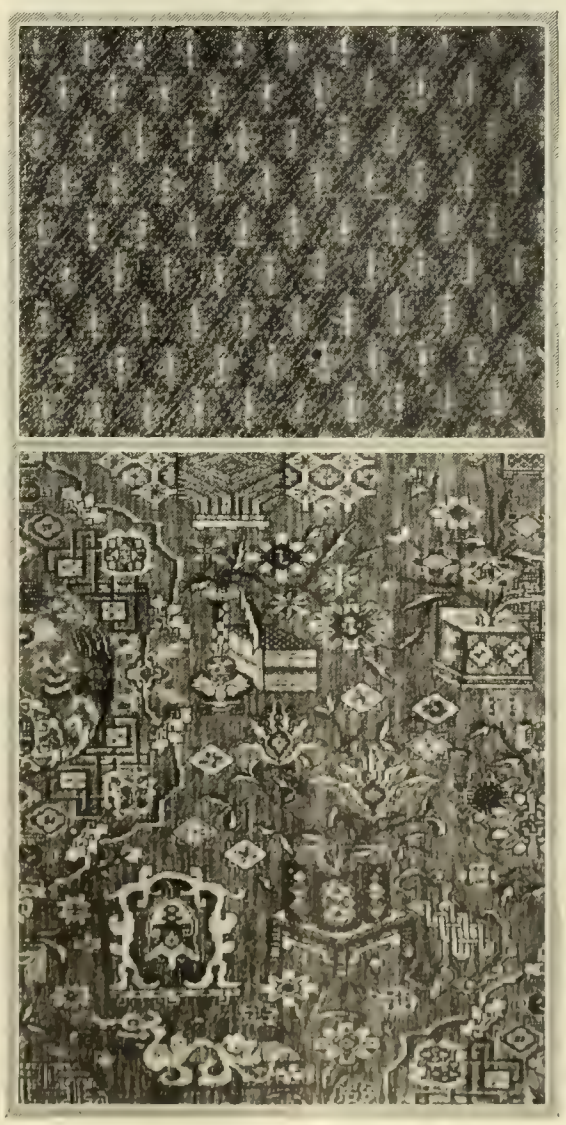
THE reason why pile carpets and rugs are the fundamental floor covering is because they swallow up so much of the light. Polished wooden floors, like ice, are

These nine carpets are of European pattern; numbers 1, 2, 3, 4, 5, 6, 7, 8, 9 beginning at the upper left corner

Half a dozen Chinese patterns; numbers 10, 11, 12, 13, 14, 15, beginning at the upper left corner

insecure footing not only because they actually are slippery but also because they seem to recede from the foot. All surfaces that reflect much light look farther away than surfaces that reflect little light.

Particularly in houses with connecting small rooms should strong contrasts of rugs with rugs, and of rugs with flooring be avoided. In other words, particularly in such houses should carpeting be used to bring the rooms together.



Take, for example, a living room and a dining room, opening into each other and both opening into the hall. Nothing will give the effect of space, and prevent them from fighting with one another like the same carpeting over the floor of all. If, in addition, the wall paper and woodwork of all three interiors are kept the same, there is opportunity for considerable variety in the furniture, without decorative confusion.

TWENTY years ago a large proportion of American carpet patterns were unskilful rehashes of French patterns, with contrasts hightened to please the cruder American taste. Popular also were huge roses and other flowers heavily shadowed into bold relief, so that one involuntarily lifted the foot to step over them. Now we have abjured these extravagancies, and prefer such excellent representations of Louis XIV as No. 7, or of Louis XVI as No. 8, or tiny repeats many of which inherit almost as much from the sixteenth century as from the Louis XVI and Empire (No. 9 and No. 16).

Especially popular today are Chinese patterns, some adapted direct from Chinese rugs and some from English and French eighteenth century versions of Chinese. While many of these had their origin in the Louis XV and Georgian Rococo periods, others have the calm repose of Louis XVI, or the placid sturdiness of Early Victorian and the French Restoration. In other words, these American carpetings with Chinese motifs differentiate into several types, one most suitable for use with Chippendale, another with Adam, and still another with Phyfe furniture.

Colors that Chinese patterns bring prominently forward are black and gold, and blue and yellow.

Note No. 12 with yellow motifs on a blue ground that is lined and striped in black; or No. 11 with yellow motifs on blue ground diapered with "cloud bands." No. 14 shows typically Chinese medallions; No. 10, Chinese landscape verdures on tan strié ground. No. 17, the border of which is illustrated at the top of the opposite page, is one of those designs found so often in the field of Chinese rugs, "household implements" consisting principally of the decorative and useful bric-a-brac that is found on the library tables of the Chinese "literati" (professors). The coloration is charming, soft red and Chinese green and a dark blue on strié blue ground.

An Empire pattern (above) and a colorful Chinese carpet; numbers 16 and 17

No. 15 is a typical Japanese verdure pattern and illustrates clearly the naturalistic feeling that distinguishes most things Japanese from the more skilfully conventionalized Chinese.

One of the patterns on the lower half of the opposite page (No. 2) is of Persian origin and splendidly handled, tho complicated by the introduction of dog and goat as well as Shah Abbas floral. Another pattern (No. 1) had its earliest inspiration in the huge Gothic pomegranates of the fifteenth century, tho here reshaped and with colors reblended to show the classic influence of the Renaissance. No. 6 is the wreath pattern used at the Shoreham Hotel in Washington, D. C., an inlaid-marble large tile effect of the ancient Roman type, resembling the once famous Eagle Head dear to our grandfathers in ingrain carpeting. No. 4, tho a Roman ceiling pattern and shadowed, is one of the most satisfactory small tile effects I have ever seen.

No. 5 consists of 12 inch plain tiles in alternating black and white. It is one of the most effective patterns ever created, especially for large halls and spacious salons. In simplicity it vies with the Caen stone paper so often used on walls by those of classic taste, and because of its texture suggests the floor just as definitely as do the carpetings in parquet patterns.

MORE obvious but not more important than the decorative are the comfort advantages of all-over carpets. If the flooring is defective, they hide it and keep out drafts. If it is cement or tiles or stone they warm it and soften it.

Significant for the health is the fact that the carpets catch and hold dust until it can be removed with the vacuum cleaner, instead of leaving it free to float in the air where lungs must continually breathe it.

Interesting to note in closing is the fact that spool axminster carpeting is gaining in popularity at the expense of wilton carpeting, which has long been regarded as the standard. Personally I prefer and professionally I recommend the looser weave, lower price, higher pile, more varied colors and softer line effects of spool axminsters, and a majority of the patterns shown in connection with this article are in that texture.

PLENTY OF CLOSET ROOM

BY MARY HARROD NORTHEND

"PLENTY of closet room!" is the cry of the practical housewife. No matter how many she has, she is sure she needs more. In Colonial times, our granddames' closets were a luxury; today, they have become a necessity. They must meet two tests of efficiency: first, they must be practical for storage purposes, and, second, they must further, not mar, the decorative plan of the interior. They range all the way from the little box-shaped space under the stairs for the holding of overshoes, to what is almost a room in itself partitioned off in the dressing room. Here they are deep and wide enough to lay a ball room dress out on each shelf. No one can afford to go without adequate closets on account of cost. You can adapt your closet to your purse as easily as to your party coat. There are on the market today woods of every price, decorative glass and wall boards, each practical in closet making.

You can break the corners of your dining room and gain valuable space by built-in china closets with leaded glass doors—but be sure they balance

TAKE the attic, for instance. It calls to mind a dusty, cobwebby spot, the delight of all children, especially on rainy days when they are allowed to pull over the trumpery to their heart's content. The old-fashioned attic was a storage place for odds and ends that might come into use some day. Piled high under the eaves were old trunks and chests filled with family belongings, packed away for sentiment's sake; cast off furniture, outgrown playthings, everything, in fact, around which memories lingered. The modern attic is cleared; the relics of olden days are packed away in moth and mouse proof closets, rendered air-tight thru the use of boards or wall boards plastered on the inside, to meet the floor. Not a crack is left, even those in the floor have been filled. Inside the door is a printed inventory showing where everything belongs. The walls are of a light color, easily washed. If clean and uninfected garments are shut up in these dust proof rooms they will be practically safe. Every housekeeper who has tried both ways comes back to the moth-proof closet for safety. While hooks in cleats on the wall hold the dresses, the further end is partitioned off into innumerable drawers, in which are deposited the household goods that formerly lay strewn on the floor of the attic.

Bedrooms often have insufficient closet space. This can be overcome by a little forethought mixt with a grain of common sense. Sometimes it is done by a large dressing room in which one of the walls is used for closet purposes. Across one side are poles for the hanging of suits or dresses, on the other, tiers of drawers deep and shallow and variously partitioned, surmounted with a row of hat cupboards, a separate cupboard for each hat. If the rest of the room is paneled in white, the same idea may be carried out here, and the rows of drawers with glass knobs will be exceedingly attractive. If there are several women in the family, two occupying a room, divide the closet into squares, by wooden partitions, thus eliminating family friction and making a convenient place for hats. Cretonne covered stands give the closet an air and save the bother of keeping hat boxes on the shelves. For the shoes, have drawers divided into sections, or a pole run across the lower part to hold the shoes on slipper trees out of the dust.

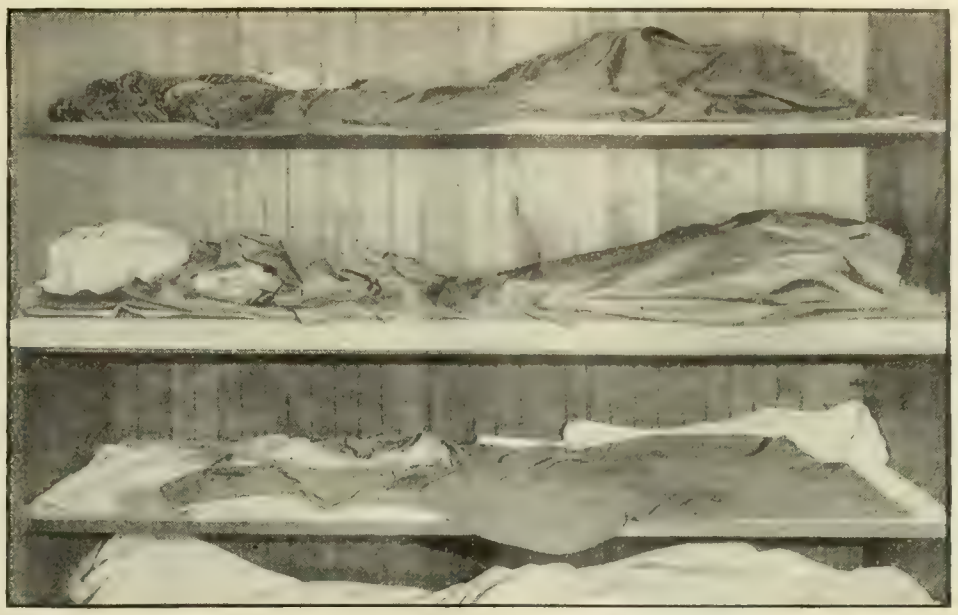
The size and shape of the closet determines its fitting. Long shallow compartments should have a double door so that one can find what is wanted without poking about and disarranging everything else. Sometimes closets are hardly larger than the depth of the hanger. Here, short poles should be introduced, running perpendicularly to the door, allowing it to open and shut without mussing the gowns. Where the ceiling is high there are many possible schemes, such as a long pole that runs about six inches below the ceiling, on which the hangers are placed. A pulley attached to the ceiling and a strong wire hoop at the end of the rope will support several hangers, each one holding heavy cloaks or seldom used dresses. A tier of shelves can be used if one has a light small step ladder at hand, preferably a ladder made to order on lines harmonious with the other furnishings and stained or enameled to match.

AN ideal dress closet sometimes not often—exists. In order to have it perfect let it be six feet wide and ten deep with two poles set in the woodwork perpendicular to the door, hat cupboards over either pole, a light in the center and a window at the end. Under the window have a home-made shoe cupboard. It should reach to the sill and be large enough for a generous depth of shoe lengths. It should be finished with two doors. Inside have two rows of open pigeon holes for ordinary shoes and below these two rows of drawers with tiny glass knobs and nickel label slots. These are for the best shoes, pale colored slippers, etc. There is just room for one pair to stand side by side in each space. In the front corners of the closet screw metal loops near the floor and higher up. These are to hold umbrellas and parasols, to prevent their falling down whenever a garment is brushed against them.

Where there is plenty of space in the house the good housewife puts aside a small room-like closet for her linen. Sometimes, however, she is forced to use a compartment between two rooms or a let-in space in the wall. The shelves should always be broad so that the sheets and counterpanes need not be folded small, and they should be comparatively close together to avoid much piling. Deep drawers can be designed to hold the pillowcases and towels or perhaps sectional pigeonholes with doors hinged at the bottom and closed with spring latches.

You need not confine your closets exclusively to the upper floors. On either side of the fireplace in the living room closets can be arranged, one to hold a woodbox with shelves above for kindling while the other conceals the victrola if it does not suit the type of furnishing in the room. Recessed cabinets with glass doors are an excellent addition to a room, as are recessed book shelves. The latter you can make yourself, using pine and painting them to match the trim of the room.

You must have a closet or corner cupboard in your dining room for decoration even if you don't need it for china. In even the smallest room a triangular cupboard can be inserted without using up any extra space. There are so many different variations of this theme that one can always work out an original design. The china cupboard or buffet was the one closet of prominence in Colonial days. Like those used today, it showed rare old china, but unlike those of today it was seldom if ever glassed in. One can buy detachable triangular cupboards that fit into the corner of the wall or can be screwed up above the tea wagon in the corner.



SECRET closets are a delight to every housewife. They are very simple to design and can be introduced behind the paneling in dining room, or between the studs in the wall. They can be opened by hidden hinges or fitted up with decorative hardware, and are used for preserves and syrups, to save hasty excursions to the jam closet in the cellar.

Many pantry closets have shelves placed so far apart that a great deal of space is wasted. It is better to hold to eight inches, for even if one cannot keep whole sets of plates properly piled together there is less space lost in the end. The clatter of dishes sometimes penetrates the living room and the noise can be lessened thru the use of asbestos or rubber. Old fashioned hinged doors are often used but they swing awkwardly out into the limited space of the pantry. It is much more sensible to use sliding glass doors. The cupboard nearest the pantry sink should be the one for the glass because it stands less chance of being broken.

Kitchen closets have become so much a matter of scientific patented appliances that one has comparatively little to say about them. There must be one exception and that is, the pan closets, which should be quite shallow. Cup hooks can be made use of in both this closet and the china cupboard, for the jostling of tin ware in a drawer is hard on egg beaters and other delicate utensils. Be sure to put plenty of labels on drawer cupboards and shelves.

Every house has nooks and crannies which can be converted into closet room. There is ample space in the walls between beams; tall narrow recesses can be worked out on either side of the fireplace while corners may be utilized for the placing of books. Each one of these offers to the ingenious housekeeper an opportunity to store away the more unsightly of her lares and penates.

Taking care of the family's clothes is by no means an easy job. How to keep party dresses properly is always a problem. An excellent arrangement is the one on the right, a dressing room closet with what are known as "ball dress shelves." Big, shallow drawers like those below are a very good closet supplement. If each feminine member of the family has her own drawer or her own shelf life is vastly simplified. Altho it has nothing to do with party dresses the medicine closet above the drawers is a good idea

Utilize your odd corners. All sorts of convenient shallow closets can be built into the waste spaces of an upstairs hall. Below is a tier of English sliding trays and that invaluable thing, a broom closet. In the center is a dress closet of proper hight; the gowns can hang full length on hooks and there is still room for shoes underneath. The drawer holds hats or shirt waists. If this were an ideal dress closet it would have a window. Photographs, with one exception, are by Mary Harrod Northend

A linen closet that is all it should be, broad shelves, close together to avoid folding and piling, and deep drawers

The acme of masculine luxury, hooks at the right hight shelves, sliding doors and plenty of room for

"Rockledge" a House that Fits the View

With a hillside for its dooryard and nearly the whole state of Colorado in view from the veranda, "Rockledge" possest more than the usual advantages to start with. The house and grounds have been adapted almost perfectly to their setting. A winding driveway climbs to the house near the crest in graceful curves with sloping lawns and massed shrubbery set between. The native cedars and pinions have been left as they were found except where absolutely necessary to remove them

The house itself is of the native sandstone with stucco of the same tone and so blends with its surroundings. It is impossible to label the residence as to particular style or architectural period. It is frankly an American product whose designers found their inspiration in the main in the English country home and Spanish sources. Careful study of mass, line and color as related to the site of the house are perhaps the chief elements of the success that it has attained

The inviting and home-like atmosphere of the exterior is duplicated within. The great chimney of sandstone with its hood of copper trimmed with wrought iron which extends thru two stories gives the keynote of hospitality as one enters. The entrance hall is open to the roof, with a second story gallery

A feeling of informality is given by the arrangement of the residence in three wings, two containing the master's quarters and the other the servants'. The handling of the garage so as to connect it with the main structure is worth particular notice. Unusual convenience of arrangement thruout the whole house has been achieved

The feature of the owner's apartments is the individual sleeping porches and dressing rooms, which are a part of each bedroom suite. The living room and hall are paneled with dull finished Oregon fir. "Rockledge" is the residence of Edwin H. Heath. William W. Stickney, architect

THE PAINT BOX HOUSE

BY HARRIET S. GILLESPIE

BESIDE the Boston Post Road, in the village of Rye, stands a Colonial cottage, so encompassed about by tall trees and hedgerows and box-bordered flower beds that few are aware of its presence. But around its cedar shingles much romance and history is written, and about its weathered head cluster memories of Washington, Lafayette, Rochambeau and other picturesque personages of the Revolution.

The farm on which the cottage stands was the gift of Simeon Ford to his son Ellsworth on the occasion of his marriage a twelvemonth past. The house was in a sad state of demoralization when young Mrs. Ford, with a hobby for collecting and a genius for color, set about its restoration. She and her husband agreed at the start that none of the primitive beauty of the house should be destroyed, so only the necessary structural changes were made, such as the extension and enlargement of the kitchen and the introduction of modern plumbing.

Mrs. Ford's feeling for color amounts to genius, and her decorative schemes are as daring and original as they are charming. The first evidence of her skill is seen on entering the quaint Dutch door of the house, drest with a ponderous knocker of pre-Revolutionary make. A scarlet hand-rail on the diminutive white staircase strikes the first note of colors which the festive mass of wild asters in a cream porcelain jug on the gate-legged table seems to accentuate. A single rush-bottomed chair in the foreground, with a goldframed Colonial mirror hanging against the black-and-white "calico" wallpaper, completes a composition that sets at once the decorative key of the house.

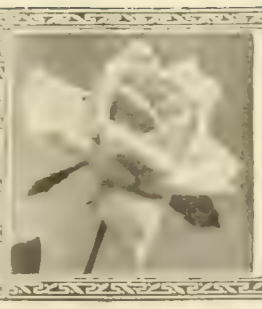
It seems eminently fitting that in the living-room the long wall-spaces, broken by the small-paned windows, should be covered with Japanese grass cloth in creamy gray, and that the ceiling and woodwork should be done in Colonial white. Neither is there any seeming inconsistency in the window-length curtains of hand-dyed peacock-green that lend a contrasting note to the room, nor in the deeper-toned velvet filling covering the floor, for they provide a sympathetic setting for the furnishings.

In the dining-room Mrs. Ford has introduced her color sparingly but effectively, not so as to startle the eye but rather to accentuate the beauty of the composition. Not far from the flame-colored chest is the finely designed corner cupboard in which the glass is divided by hand-wrought molding. Splendidly illustrative of the wealth of material in reach of the early settlers is the floor with its twelve-inch boards, now painted a rich oaken brown. No one but Mrs. Ford would have discovered the quaint wallpaper in ivory and blue with its curious design, which at a distance resolves itself into a smoky blue, but at near view becomes a veritable Alice in Wonderland collection of queer folk and odd beasts. With it the Alice blue hand-dipped curtains combine charmingly. Between tall brass candlesticks a Japanned tea-tray, decorated in burnished gold rests atop the linen chest.

It looks like an ordinary Colonial staircase here—but the hand-rail is really scarlet

One of the most delightful of the Ford relics is the old English dresser that stands beside the chimney-piece. On its oaken shelves are ranged the pewter in shining rows which catch and hold the faint reflection of the pink luster tea-set in the china cupboard opposite. Beside it is a rush-bottomed, slat-back chair which is dyed a deep flame-color; near by an ancient brass-bound trunk brilliantly illuminated in Scandinavian design. Old-fashioned, oval, braided rugs in gay tones lie on the floor. Bits of polished brass and the effulgent sheen of a copper preserving kettle, now doing duty as a wood-box, reënforce the decorative values of the larger pieces.

Often the design of such refugeed furniture is fine, while the wood is poor, and so one can forgive the liberties Mrs. Ford takes with her Colonial relics. And when another treasure in the shape of a Gothic bed was unearthed, all worm-eaten and time-worn, her decision was to highten its medieval beauty by a garb of Colonial yellow. With it quaint hook-rugs in which blue, old-rose and pale yellow predominated, with a touch of black, are used on the floor.



The old-time atmosphere clings to the place, and one never for a moment forgets its ancient origin, despite the fact that on all the furnishings there rests the unmistakable touch of modern art, all of which is a distinct triumph for Mrs. Ford and her love of brave color.

In the grape arbor, in season, the dessert hangs overhead

What to Do in November

A GARDEN GUIDE BY HUGH FINDLEY

PROFESSOR OF HORTICULTURE IN SYRACUSE UNIVERSITY COLLEGE OF AGRICULTURE

THE GREENHOUSE

Seed Sow the seed of primrose, foxglove, asters, phlox, etc., and keep the seedlings growing in order to have early bloom.

Bulbs From the middle to the last of this month bring a few of the bulbs which you had planted the latter part of September to the light. Keep them in a low temperature. The soil should be kept moist but never wet. As the foliage shows signs of growth, increase the temperature, light and moisture.

Bulbs, daffodils, etc., started in fiber, should be planted in bowls. Care should be exercized not to break the roots or bruise the leaves which should be two to three inches in length. Artistic designs may be arranged. If the plants are kept growing rapidly they will bloom for Christmas.

Freesias and tuberous root begonias if started now will bloom in February and March. These bulbs do not need to be stored in order to develop a strong root system. The tops and roots grow equally fast in the light.

Stock Plants Keep the stock plants stored under the greenhouse benches free from insects by scattering tobacco stems over them. Never let the soil dry out. Keep it moist, not wet. Stock plants to be kept strong and healthy should not wholly be shut off from light.

Tree Fuchsia If the fuchsia was started in the spring by allowing only one stem to grow until it reached a hight of three feet, and the tip was pinched back and side buds allowed to grow to develop a large head, it should have developed a large tree shaped plant by November. Stop picking off the leaf or flower buds. Feed the plant a little liquid manure. It should be in full bloom by Christmas. A tree fuchsia started in November will bloom in March.

THE VEGETABLES

Seeds and Seedlings Sow the seed of New Zealand spinach in furrows 12-15 inches apart and one inch in depth. Protect the seed by covering it with some form of litter. Remove this in early spring and the seedlings will appear above the ground before the soil is ready to work for other crops.

Risk a sowing of wrinkled peas (Sutton's Excelsior or Thos. Laxton). Have the soil rich and mellow. Sow the seed three inches in depth.

It is not too late to set out multiplier onions. They will make an early start in the spring and follow the sets planted in September.

Plants for Next Spring Cauliflower and cabbage plants should be put in the cold frame or hotbed, protected from the frost, kept alive but not growing. Keep the temperature low, the air pure and the soil moist. Plants held over in this way will reach maturity very early in the spring if set out in a rich, warm garden loam.

Storage Celery may be lifted and stored the last of this month. It may be packed in boxes, providing holes have been made about two inches from the bottom and all around the box in order to admit air. It may also be stored in a cool cellar on the floor.

Cabbage should be pitted out of doors before the hard frosts set in.

Tie the leaves of the cauliflower together near the top, lift the plant root and all and stand them, root down, in a little soil in the root cellar.

Asparagus and Rhubarb This is the month to set out new beds of these perennials. They are both gross feeders. The soil should be made rich. The asparagus should be set in rows three feet apart and the roots planted twelve inches apart in the row. The crown should be five to six inches below the surface. The crown of the rhubarb should be about four inches deep and the plants set three feet apart. Cover these plants with a mulch of manure.

Pests If you plan to start a garden on land that is now in sod, plow it this month so as to destroy the cutworm.

Fall plowing or spading, providing it is from six to eight inches in depth, will destroy the squash-nine borer. The soil should be left in the rough so that the frosts may break up the clods and destroy insect pests that hibernate below the frost line.

Clean Up This is the month to clean out the weeds before the seed drops. Pile these partly dried weeds in your garden and burn them. Do as much cleaning this fall as possible. The spring work will demand your attention and time. Be sure that the tools are clean. Rub a little linseed oil over the metal parts to prevent rust.

Lime Apply a little lime to the soil especially if it is a clay type. Fall spading or plowing is highly recommended.

THE FLOWER GARDEN

Sweet Peas Dig into the soil 1 to 2 inches of well decayed manure. After making a trench 4 to 5 inches in depth sow the seed rather thickly and cover it with garden loam. After the frost has come to stay apply 2 to 4 inches of manure or straw over the rows in order to keep the seed below the frost line. Remove the manure or covering very early in the spring.

Hard Wooded Plants Such plants as lilac, roses, Deutzia, etc., may be lifted and potted in rich soil. The soil should be packed firmly about the roots. Do not apply water after potting. Store in a cool, dark place, under cover to protect the plants from snow and rain. They may be brought under glass later to be forced.

Tender Bulbs Store all tender bulbs such as cannas, gladioli and dahlias in sand. Place the box or barrel in a cool cellar.

Cineraria Repot early in November and keep the plants growing vigorously in order to have Christmas bloom.

Winter Protection Such plants as the Oleander and American Aloe (Century Plant) may be stored in a dry, cool cellar over winter. It should be free from gas and the temperature should always be above freezing.

Protect rhododendrons by placing hemlock or pine boughs around them. Boards may be used providing small air spaces are left.

Compost Don't burn the leaves. Mulch your wild garden with them to a depth of twelve inches. If you have some left, pile them up, throw on a few branches to keep them from scattering and allow them to decay. Leaves left for two or three years and mixt with a little garden loam make a fine compost for potted ferns.

It is late but not too late to start a soil and manure compost heap. Place one foot of soil and sod, six inches of manure, and again one foot of soil and sod. Mix into the soil a little bone meal. After the heap reaches a hight of four feet cover it with inverted sod. Early in the spring turn it over and chop up the sod. The soil, manure and decayed sod should be well mixt before using. This soil will be in fine condition for potting early tomatoes, etc.

Flower Beds Apply a heavy coating of decayed horse or cow manure to the flower beds to be used next spring. After digging in the manure leave the soil in the rough and scatter over it a liberal amount of lime. Soil treated in this way will be sweet, loose and fertile for next spring's planting.

Indoor Gardening Keep a close watch for mealy bugs on coleus. Wash them off by the use of whale oil soap and a small paint brush, also the green aphides. Dust the plants with tobacco dust, allow it to remain on the plant over night. Wash it off with clear but not cold water. Stir the surface soil of your potted plants. On bright days ventilate the room freely but never allow plants to stand in a draft.

FRUITS AND BERRIES

Timely Warnings If the limbs of your low-headed apple trees are heavy and in a possible line of snow drifts, nail two five foot to ten foot strips of wood with a single large spike two feet from the top. Open these strips scissor fashion and brace up these limbs. Guard against the splitting of bad crotches in the same way.

Tent Caterpillars Look especially on the young branches of your three to five year old trees for clusters of tent caterpillar eggs. Pick them off and burn them.

Spring Planting This is the month to dig the holes for next spring's planting of apple trees. Place the sod in one pile, the fine top loam in another, and the subsoil in the third. Fill the hole with manure and allow it to remain over winter. In the spring lift out the manure and place it in a fourth pile, loosen up the soil in the hole, place a little of the fine soil in the bottom and set the tree. The fine soil is then fitted about the roots followed by the partly decayed sod, then the bottom soil, and finally what remains of the manure is scattered on the surface of the soil around the tree.

Cane Fruits Mulch all cane fruits. They have a shallow root system and need winter protection.

Stored Fruit Pick over the fall varieties of apples the last of the month and remove all specked fruit. The late varieties need not be handled until January.

WAR GARDEN BUREAU

The Independent-Countryside War Garden Bureau, 119 West Fortieth Street, New York, will answer your garden questions freely and promptly and will give you expert advice about any of your garden problems. The dates given on this page are for the latitude of New York City. For every hundred miles north or south subtract or add from five to eight days.

THE WAR GARDEN CONTEST

LIKE a Liberty Bond a War Garden is at one and the same time a gift to the country and a personal investment, and like a Liberty Bond it is one of those things that everybody ought to have. That was the reason for the institution of The Countryside War Garden Contest. Three prizes of one hundred, fifty, and twenty-five dollars, respectively, were offered for "the best articles recording the writers' actual experiences with home vegetable gardens this year." Efficient use of available land as indicated by judicious planning and effective results were the terms on which the decision was made. Lack of space prevents us from publishing the winning articles in full but the tabular records which each contestant kept tell the story. You will find that they well repay careful study, and the owners of the many, many excellent gardens which were not quite fortunate enough to win prizes or honorable mention do not need to be told that a War Garden is a prize in itself.

The first prize of one hundred dollars was awarded to Mr. Hamilton M. Laing, of Portland, Oregon. From eight hundred and sixty-six square feet, with the weather, soil and enemies to work against, this amateur cleared thirty-one dollars and eighty-eight cents. Here is his story:

THERE were a few things working for and a considerable number of things working against the success of this agricultural essay. To begin with, the spring was cold, wet and backward, one of the worst in years, every Oregon old-timer said; for weeks during April and May rain fell daily and the weather was extremely cold. To offset this condition the soil offered nothing for it was mainly subsoil that had come from the basement at building time. It was heavy, inclining to dry after rains into brick-like hardness; the lot was on the northerly slope of the hill where the earth was predisposed to green mold and coldness, and tho it had been enriched by fertilizer from the hen-house, this had tended to make it sticky and clammy with inclination to mold, rather than mellow and airy and warm. Also neighboring cats insisted on digging up seed and seedlings; the firs on adjoining vacant lots threw a dense shade during part of the day; moles came into the beds and did their worst, and lastly the slugs, abominable wretches! assembled in gormandizing legions seeking to devour. To all which there must be added a most colossal ignorance on the part of the gardener. Against this there was a scanty credit account consisting for the most part of unbounded enthusiasm—backed, of course, by the H. C. L. My garden, in fact, was to be an experiment, a first one. It was to be a war measure; only the staples, the necessaries, were to be grown in it.

The mole might be useful on the West Front, but not in the garden. In an hour this wretch had tunneled forty-six feet thru a bed of carrots

The slugs even climbed the chrysanthemums and gowned the leaves. The day's first and last duty was a slug hunt with the lime can

An hour's work by a lusty mole—forty-six feet. His tunnels were sprinkled with lime in order to show more clearly here

About April 23 I dug the first ground and threw it into beds with liberal ditches between and sowed it in spinach, onions, onion sets and lettuce.

The garden plot was dug by hand, spaded deeply, broken and then torn down and fined with the rake. Some hollows due to the settling of the subsoil were filled in with top soil. There were several weather interruptions during planting time; progress was slow for this soil had to be allowed to dry well. If worked while moist, it dried in hard granules and lumps.

With the first green rows of sprouting things along came the slugs. Green things disappeared before them; their appetites were tremendous. The weather was wet, so lime and slug killer lost their potency almost at once. It was a case for intensive methods and a fight to the finish.

The peas, both dwarf and telephone, were planted in two divisions about ten days apart; the earlier plants were the stronger and bore more heavily. The lazy wife beans, however, all but failed on first trial and so were planted a second time. The third planting of these beans that were placed in a row—the others were placed in thirty-inch circles—reversed the order of things and grew heavier vines and bore more prolifically.

Cultivation of the plots went forward during spare time and with no particular system. Such soil demanded much stirring. Most plots were decidedly under cultivated and some even were neglected. Thru the long season of drought it was found that the best condition of this soil was produced by soaking thoroly with the sprayer.

RECORD OF THE WAR GARDEN THAT WON FIRST PRIZE

and not cultivating until it became rather dry again. When scuffled or hoed too early (moist) it invariably turned hard and lumpy.

It was toward the end of June that the sprouting beds took on the appearance of a real garden; during the last two weeks of this month, growth was tremendous. On June 15 the onions received first thinning, and carrots and beets followed shortly. On June 28 the blossoming tomatoes were pruned and tended according to instructions; the lazy wife beans, twenty inches high and growing two inches a day, were poled. By July 1 the telephone peas were higher than the five-foot fence and eventually they called for an additional support and reached the hight of over seven feet. Second crop spinach at this date was an inch high.

Lettuce was the first usable product; spinach followed shortly and then came green onions (sets) and soon the green seed onions followed. The hens enjoyed the first onion thinnings, the second came to the table. Then followed the carrot thinnings and green peas (Duke's Delight). None of the carrots were wasted. Even the small ones, when cooked in combination with green peas and served with cream sauce, made a garden seem the most desirable thing in the world. Beet thinnings now provided spinach of an unbeatable order and toward mid-July the roots were large enough to be usable. Every dinner now received contributions from one or other of the plots.

The excessively hot weather of late June and early July hurried the peas and early bean crop and several pounds of these were dried and canned and put away for future reference. So went the summer. By the first rain in September (the 6th) parsnip tops on the strongest plants were two and three feet in length; some of the winter carrots weighed eleven ounces and the early, thirteen; the lazy wife beans of late planting were eleven feet high, still growing and apparently bent on making the eaves of the house while they matured a bountiful crop of big green pods. The onions, rather a sad crop, were small, the largest measuring only two inches in diameter; and the tomatoes at this date were showing more tendency to blight than ripen.

But Oregon has a long, if not rapid growing season. Parsnips remain in the ground all winter and grow until November frosts begin to pinch; carrots usually do the same. The weight of the yield of parsnips and carrots and beets was estimated by digging one row, weighing, and multiplying by the number of rows. The onions were harvested September 23. In estimating the value a medium price in all cases was taken and this based on current market prices.

Net profits $31.88 said the record on September 25, and yet still far from complete. There were beans yet to pull, potatoes to dig, a winter's supply of carrots, parsnips and beets still in the ground, canned beans and peas and tomatoes in the basement, over a hundred tomatoes still on the vines and now ripening without blight—the fruits of a war garden now were rather tangible.

But a garden cannot be measured in poundage and dollars and cents; its benefits cannot be summed up in a table any more than a lovely sunset or a lovely view from the window can be so exprest. I had regarded such after-hours occupation as fit only for an old man, and bless you for whole weeks I found it the chief interest of the day. Beyond the mere gastronomical pleasure of contemplating nearly a half-ton of eatables that cost little was that other and higher pleasure of doing. The struggles of germination and growth; Nature's inexorable ways and laws—indeed the whole story of creation was in every ten by five plot. From the slug war and mole hunt, which were sport of a sort and crusade all in one, to the problem of ripening the last of the tomatoes indoors it was all an interesting, profitable, happy experience. Next to a good wife the best thing in the world is a good garden.

The second prize of fifty dollars was given Miss M. L. Anderson, of Laramie, Wyoming, to whom "gardening has always been an instinct, a recreation, an adventure." The practical side of Miss Anderson's work is covered in her tabulated report and these excerpts from her article show its pleasanter phases.

FOLLOWING the instinct of Norse gardeners, we have always hedged our vegetable beds by rows of flaming flowers. This year there were few flowers, for my garden knew that this war was not to be won by sweet-peas and ink-black pansies. So in half of our dear pansy bed this year carrots grew; along the sweet-pea fence climbed corn; our new last season's grassy lawn, that stretched out from the wild currant bushes, was this year upturned for cabbages and cauliflowers. But we have not missed all the beauty of our summer yard. For the carrots waved in the wind like cosmos; the beets were red as foliage plants; the beans bore a dainty purple flower, and the cabbages seemed akin to roses.

But gardening here in our mountains means hard work. It means, four mornings a week, rising to begin irrigation at five o'clock; for the irrigating hours are regulated by law and are short—only from five to eight four mornings a week. Not a moment of that precious time must be lost. Gardening means, too, a ceaseless, weary fight with cut worms. Nothing but eternal vigilance could this year have saved the garden. The chill of spring lasted long into the summer; the old lawn bed where we planted cabbages and cauliflower, was not upturned in the fall, because we did not know of war gardens then, and the cut worms had housed themselves in the turf. Just when the fight against the invading worms was most critical, illness and professional duties made two of us inactive gardeners for six weeks. So from the forty-eight cauliflowers that we set out, only six withstood the worms and the inattention. But these six were fine heads; one weighed eight pounds. The cabbages were more sturdy. From forty-eight, thirty-one developed into perfect heads. The largest weighed twelve pounds.

And we turn to the jars of canned vegetables and we pat them lovingly; we planted and hoed and weeded them. We saved their lives by our two-tined folk. We picked and cleaned and canned them. And in return they gave us health and outdoor sport, adventure and companionship. And greatest of all they gave us the joy of serving our country by work in this mountain garden, 7000 feet above the sea.

The third prize was earned by a seventeen year old boy. Mr. Thomas Murry, of Wellsville, Utah, cleared one hundred and thirty-four dollars and seventy-five cents from his plot of ground one hundred by sixty feet and put into a small paper so much intelligent gardening and real advice that he easily ranked third.

I obtained my seed from a grocery store but before planting them I made germination tests; finding the seed very satisfactory I planted them at the proper depths and received good results.

I applied about two acre inches of water to crops; this water I measured by means of a "weir," as I wished to determine the amount of water used thruout the season.

To combat the aphids on the cauliflower and cabbage I mixt one pound of arsenic with one pound of flour and placed this in a small cheesecloth sack and dusted upon the plants. I repeated this operation ten days after the first application. In almost every case it was a perfect success and saved my plants from total destruction.

A small black "fly" appeared on my tomato and potato plants about July 15. I mixt two pounds of Paris green with three pounds of flour and dusted this over the plants as with cabbage and cauliflower. This checked the insect's ravages and the plants began to thrive and grow as they should under normal conditions. Other than this I was not troubled with insect pests to any noticeable extent.

I irrigated my entire plot the second time on July 2, as the drouth was doing some injury. I applied three acre inches of water to my plot and followed this by

another thoro yet shallow cultivation so as not to injure the shallow root systems of any of my plants. Due to the drouth and unfavorable weather conditions some of my plants, such as corn and beans, did not grow very fast.

HONORABLE MENTION

Mrs. Margaret D. Starrett, Chicago; Miss Sara V. Prueser, Defiance, Ohio; Mrs. Irene M. Gould, Crichton, Alabama; H. W. Darr, Minneapolis; Bessie Hixson, Hixson, Tennessee; Charles Houghton, Fayetteville, New York.

The article of Mrs. Margaret D. Starrett is so fresh and contains so many original ideas that we have given part of it.

ALL thru the winter I absorbed the contents of agricultural magazines and drew sketches of a prospective garden. I had a plot of ground about 30 by 50 feet, and I was aching to put into practise all I had read about gardening. I thought that I could at least earn my taxes off my backyard. When war was declared and we women were expected to be the conservators of the food supplies, I determined to do "an extra bit." I had read of humus and fertilizers, and realized that my plot needed both badly. I bought two loads of horse manure and spaded it in. I used twenty pounds of sheep manure in the furrows, mixing it well with the soil; then set my plants, sowed my seed and waited for results, and while waiting put my wits to work. Believe me, that garden needed to be mixt with brains. I conned over in my mind the constituent elements of fertilizers to see if by any possibility I had any lying around loose. "Potash," says I, "now let me see—potash—hardwood ashes—lye—soap." What's the matter with using a tablespoonful of lye in the scrubwater? "The suds will be fine to throw around the roots of my cabbage plants." Done! Every week my prospective "kraut" received its feed of elegant "potashy" suds.

The books told of the value of Canada hardwood ashes, and Scotch coal soot. Why Canada and why Scotch? Does "distance lend enchantment" even to the gardeners? Well. "Absence may make the heart grow fonder" with some folks but not with me. I just took my own good American hardwood ashes, and after cleaning out the chimney flue, dumped my good American soot and ashes on that garden.

As much as was possible to publish of Mr. H. W. Darr's article is found below. It will prove of value to one planning another year's garden.

AN acre in garden will produce enough vegetables to provide more than twenty families with a daily supply of green groceries during the summer, and besides literally make the gardener's cellar bulge with the store of potatoes, onions, squash and canned vegetables he puts away for the long winter. Instead of hinting about what *may* be accomplished, however, let me tell you what I actually did with my garden of a trifle over an acre of ground.

Adjoining our own property are four vacant lots, 80 by 150 feet, that I was fortunate enough to secure the use of for a small outlay of money. Beside these four lots we used our own two, 60 by 150 ones, making about an acre and a half altogether. With eight weeks of summer school during the forenoons, even an acre and a half of garden furnished plenty of entertainment during the rest of the day.

Last year we had a very successful garden, the sales from it amounting to nearly $275. Besides we had our living out of it for a family of seven. So with our previous experience and the standard already attained, combined with the stimulus from all sides to have a war garden, we increased the size of our garden somewhat over last year and went into it full of enthusiasm and hope for at least as good a one as we had in 1916. Our hopes neared a climax yesterday when we started to gather in our squash, which had been planted on May 29 in the potato patch just after the potatoes began to appear above ground. Something in the crisp air and comfortable feeling of plenty compelled the whole family to come out and help bring in the multicolored harvest. When they were all collected we had over a wagon-load—over 200 squash.

The whole garden was planned and cultivated with the idea of making it attractive in the extreme, besides being productive and economical in the handling. During the winter months I made a careful study of my soil, principally as to location and slope. After I had decided on what should be planted and after the lots had been exactly measured a very definite map or planting plan was drawn. Every row was shown and marked to indicate what vegetable was to be planted in it, and the variety and quantity. With this plan worked out it was possible to purchase seeds in just the proper amount and all at once thus securing better prices.

I carried this diagram right out into the garden at planting time and it was a great help at that busy season. With my map before me I lost no time in planning and laying out the ground when I should be planting. I just worked my plan. When each kind of seed was planted there remained only to mark on the chart the date of planting and my record was complete until harvest time. You can imagine how useful it was thru the summer after the plants were growing, and I had forgotten, in many cases, what particular variety of a certain vegetable this row contained, to refer to my map and tell my friends as we walked thru the garden just what we were looking at. Then again, at harvest time, it was a simple matter to indicate on the diagram what varieties are most profitable and to be retained next year if we are to have a garden.

We had a hotbed and raised all our own tomato, cabbage, eggplant, pepper and flower plants. It was not planted until April, and the word hotbed is a misnomer in that case. The manure was poor and never got hot, but the plants grew apace. On the same day our garden was plowed. The first outdoor planting was potatoes, on April 21. By the end of May our tomato and eggplant and peppers were just right to set out.

With the exception of selecting the seeds, plowing is the most important job in my garden. No one but an experienced workman is entrusted with that work, if I can get such a one. In a city a good plowman is hard to find. I selected my seeds early and they were on hand before seeding time. Any good seed-house will furnish reliable seed, but you can get a better selection of varieties, and perhaps save some money, if you do not confine your order to one house. I ordered from eight different houses this year but I think I made a mistake to divide my order among so many. Seeds of supposedly same variety varied greatly and some proved disappointing. The experience, however, enabled me to find out where I can get the purest and best seeds another year.

Your Window Shades—

YOUR window shades have to work hard. Think of the endless strain that is put on your window shades. Think of the dozens of times every day that they are raised and lowered. Think what it means to you in actual money saved to find a shade cloth that resists wear—that rolls evenly and smoothly—that is fadeproof—and that does not crack, tear or ravel. That is what you get when you ask your dealer for Oswego or Chouaguen (Shoo-A-Gen) Shade Cloth.

Oswego or Chouaguen Shade Cloth

Either of these shade cloths will give you wonderful service. They are both made under exclusive process by the Oswego Shade Cloth Company. Ask your dealer to mount these shade cloths on Hartshorn Rollers. Only the finest fabrics—firm-bodied, pliable and long-wearing—are used in making these shades. They are exquisitely tinted in a wide variety of mellow colorings.

You Need This Book

Send today for "Shade Craft and Harmonious Decoration," our FREE book which tells how to drape your windows—how to plan your color schemes—how to group your furniture. Practically everything that you want to know about home decoration you will find in this beautifully illustrated book. Address "Dept. A."

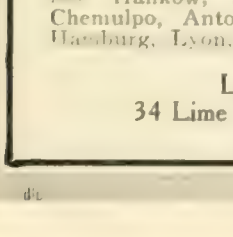
TRADE MARK

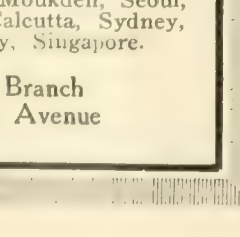


"You Were Fortunate to Secure a Place Blessed with Trees and Shrubs"

"But I didn't," my friend said. "My good fortune lay in knowing where to go for them. All those trees and shrubs, which add inestimable beauty and value to my estate, came from Hicks Nurseries and were planted only *last year*.

"I saw their advertisement in The Independent and wrote for a catalog. The catalog convinced me that it was practical to transplant big trees, so I placed my order in the fall just about this time. Hicks Nurseries selected the shrubs and big trees from their large stock, dug and delivered them here on their own motor trucks, making a haul of 100 miles.

"Yes, every shrub and tree lived and has grown satisfactorily, just as they *guaranteed*.



"They also ship by express and freight up to 1000 miles, and guarantee satisfactory growth."

A large ball of earth is left around the roots, then canvas wrapped and roped to a wood platform for shipment.

Order Living Christmas Trees Now

We ship them by express, roots and dirt carefully packed in a wooden box. Decorate it as a Christmas Tree and after Christmas plant it on your lawn for perpetual beauty. 5 ft. Douglas Spruce, $4; 5 ft. Japanese Fir, $8; 6 ft., $15; 8 to 10 ft., $20. We *guarantee* them to grow.

Possibly this will be the baby's first Christmas tree and the planting of it will become an historical event.

COLLEGE AS USUAL

American Pluck in Constantinople

BY EVELINE A. THOMSON

IN a remote corner of Europe, so far away that some of us have almost forgotten its importance, is an American college for women, lying where the continents meet in the great city of Constantinople. This college has been there for years, bringing America into close touch with the people of a little known land; but its greatest pride is that during three years of war, of difficulties and hardships and of threatened disbanding, it has stood for American ideals on the Bosphorus and has continued to do its patient, careful educating while all around the nations have been flying at each others' throats.

The college opened as usual on September 18 of this year. The announcement is full of significance. Notwithstanding the enormously high cost of living, notwithstanding the fact that the American Ambassador has returned from Turkey to this country, notwithstanding a diminished faculty and a hard year ahead, Constantinople College opens its doors *as usual*.

During the last few months the burden has fallen most heavily on Dr. Louise B. Wallace, dean of Constantinople College and acting-president since the return to this country of Dr. Mary Mills Patrick in October, 1916. It has been Dean Wallace's task to maintain an optimistic outlook, even after the diplomatic break between Turkey and the United States. She has had to negotiate with officials and keep in touch with the policies of the country. She has had to concentrate on efficiency and a high standard of scholarship and at the same time watch carefully to cultivate relations of understanding and sympathy with those in authority. She has succeeded admirably. The Turkish officials have been most courteous and have shown their friendliness in unmistakable ways. With the departure of Ambassador Elkus, American affairs were taken over by the Swedish Legation at the head of which is M. d'Anckersvaerd, a personal friend of Constantinople College. Dean Wallace reports that the college interests have been well looked after and that the Turkish Government has assured her of their approval.

It is difficult to give an adequate picture of conditions in Constantinople. The interior of Asia Minor is in a restless and chaotic state and many of the American missions have had to be abandoned for the time. The principal American colleges, however, at Smyrna, Beirut and Constantinople have been allowed to continue their good work. It is only thru official channels and by way of a neutral country that the meager news of events can get thru. The life of the city has changed considerably in the last three years; the foreign colonies have almost disappeared and the actual cost of living has increased many times over. There is much poverty and suffering among the great mass of the people and the college has been turned at times into a local relief station for the poor of the neighborhood. A strict censorship hedges both strangers and natives around with a wall of silence and communication with friends and relations afar has had to be given up altogether. Life in Constantinople today has few attractions and yet these splendid American women under Dean Wallace have stuck to their post undismayed, and in the coming college year are prepared to give of their best to the young women who clamor for learning.

New York City

Have You Left School?

with a diploma, or without it? In either case, you of course do not wish to leave off being educated. When education ends, life ends.

Take a Reading Course

Everybody reads, but too many read without any plan, and to no purpose. The college graduate is like other people, in the need of system, but a little more likely to realize his need. The Chautauqua Reading Course is useful alike to the person of limited training, who labors many nights over each book, and the critic or vigorous man of affairs who can sweep thru them all in a few hours. For either, a group of related, intelligible and competent studies leads to a well rounded result.

Don't Read at Random

For many years the very mention of a reading course has meant without further explanation the Chautauqua reading course. It was the first and is still the best, and it alone has a world-wide fame. The Independent is used as the current events element. The cost is trifling, $6 for a year; $3.50 if you already take The Independent. Are you tired wasting your odd minutes? Write for Chautauqua-Independent Outline.

FOURTEEN SUPERFINE HARDY PHLOX

Most of them are recent introductions of famous European growers. A wonderful advance in color and size over the old varieties; many of the shades being entirely new in Phlox. May be planted as long as the ground is not actually frozen.

Astrild Bright cochineal-carmine.
B. Comte—Brilliant rich French purple.
Europa—White with decided crimson-carmine eye.
Elizabeth Campbell—Bright salmon-pink, with dark crimson eye.
Gefion—Tender peachblossom pink, with bright rose eye.
Grideur—Soft mauve-rose, suffused and overlaid with a lively deep shade of cerise.
Minerva—Luminous violet-rose, with white center and a bright carmine eye.
Mrs. Jenkins—The best all round pure white.
Riverton Jewel—Lovely shade of mauve-rose, illuminated by a brilliant carmine-red eye.
Rheinlander—A most beautiful salmon-pink.
Rynstrom—Same carmine rose color as the Paul Nevron.
Thor—Beautiful salmon-pink, overlaid with a deep scarlet gloss, large white halo and amber red eye.
Viking—One of the latest to flower, of a pleasing soft salmon-rose.
W. C. Egan—One of the largest flowered varieties; a pleasing shade of soft pink.

Price—Any of the above Superfine Hardy Phlox: 25c each; $2.00 per doz.; $3.50 per 100; set of 24 varieties, $5.00.

Our Fall Catalogue also gives a complete list of seasonable seeds, plants and bulbs for outdoors, window garden and conservatory.

A copy mailed free to anyone, mentioning this magazine.

THE POULTRY YARD IN NOVEMBER

BY E. I. FARRINGTON

SOME people seem to think that a hen can be neglected during the molting period, as she is not laying any eggs. This may be true to a certain extent of hens which molt early, for it is good policy to eat them or sell them at once. Early molting hens are not usually good layers. The hens which are molting now, tho, should make the best of winter and spring egg producers, and for that reason should receive particularly good care. Different plans for hastening the molting, one of them being to starve the birds for a short time and then to feed them heavily, are advocated, but they are not to be recommended.

The ordinary ration can be given, but it will be advantageous to add a small amount of oil meal to the mash, or sunflower seeds to the scratch ration. They will help the hen in shedding its feathers and getting a new coat. The important thing is that the hens have dry, comfortable quarters, and that they be fed liberally. The mistake of killing off the late molters should be avoided. If any hens are to be carried over the second year, it should be those which are slow to shed their feathers.

THE feed problem has not yet been solved, for corn continues to be high, as the new crop has not yet been generally distributed. It is probable that the price will drop within a few months. It is not wise, tho, to feed new corn freely until the hens get accustomed to it, and probably the best plan for the average amateur to follow is to continue giving the birds a moist mash in the morning, with a mixt ration feed at night, combining oats, barley, cracked corn, sunflower seeds, Kaffir corn and a little wheat, or such of these grains as may be available. In sections where there are plenty of oats, oats should be used. If barley is grown locally to a large extent, barley should be fed by the poultry keeper.

It is not true that any one kind of grain is necessary. As a matter of fact, it has been found in England, under the stress of war time conditions, that hens can be made to lay well when they receive almost no grain. Over there all sorts of waste vegetables and by-products of different kinds, even to cooked banana skins, are being fed.

It is not very probable that extremes like this will be reached in this country, but much can be done to cut down the feed bill by making liberal use of vegetables during the winter months.

In many sections it is possible to buy mangels, beets, cabbages and other vegetables which are not good enough to market, the price being low. These vegetables can be stored and fed as needed during the winter. The best way to feed mangels raw is to split them and drive a spike thru them into a board, the cut side being out. Cabbages can be hung by a string just within reach of the fowl. Mangels, beets and other root crops can be stored in boxes of sand in the cellar, but the cellar is not a good place for cabbages. The best way to keep them is to bury them in an outside trench.

Probably the most economical way to feed all the vegetables except cabbages is to cook them, for then there is less waste. Poultry keepers who have gardens are likely to find themselves with a stock of very small potatoes at this season. These potatoes are excellent for the chickens, but must invariably be boiled, as they contain too much starch to be fed raw. Vegetable cutters are not expensive, and shred the vegetables in long, worm-like pieces, which seem to have an especial attraction for the hens. There is little waste when the vegetables are used in this way.

In lieu of vegetables, or to supplement them, a green ration of some kind may be fed during the winter months. It will help to keep the hens in condition, besides acting as an appetizer. Most poultrymen seem to agree that the best kind of green food is produced by sprouting oats. This is easily done by soaking the oats over night in warm water and then spreading them about an inch deep in a shallow tray, the tray being kept in a warm room or cellar, and moistened daily. In a short time the oats will throw up fresh green sprouts, of which the hens are very fond. After the sprouts are allowed to grow several inches, they will make considerable green food, but will have taken practically all the sustenance from the oat itself. If the sprouts, tho, are fed when only an inch long, they will supply green food and considerable nourishment will be derived from the grain as well.

It is important to remember that western oats are very likely to have been sulfured to keep out worms. Oats that have been treated in this way will not sprout. It is best to buy oats grown locally when possible for sprouting.

In some sections the grain dealers carry beet pulp, a by-product of the beet sugar factories. This pulp makes a very good green ration when soaked out in hot water. If the hens do not eat it readily at first a little bran may be mixt with it to tempt them.

BACKWARD pullets may often be induced to lay by feeding a wet mash for a few weeks, at least ten per cent of the best beef scraps being included. The same ingredients as those commonly fed in a dry mash may be used, and the mash should be just moist enough so that it will crumble in the hands when it is squeezed. This is assuming that the pullets have been raised on a grain ration, supplemented with a dry mash. If they are accustomed to a moist mash, and still are delayed in laying, it may be well to feed a little ground bone, which is an excellent stimulant. The bone must be fresh, tho, and fed with care. An ounce to a bird three times a week will be sufficient.

It is not advisable as a rule to keep the old hens and pullets in the same pen, as they require somewhat different handling. Old hens are likely to get fat on a ration which will keep pullets in good laying condition.

Old hens that are being kept over are likely to be found with scaly legs. The best treatment for this is to dip the legs into a pan of liquid made by pouring hot water on tobacco leaves of a cheap grade, and allowing it to cool. Two or three treatments may be given if necessary, and the legs afterward rubbed with vaseline.

The more progressive poultrymen are learning the value of fresh air in their poultry houses, and do not close the windows or curtains except in very severe weather. Recent experiments have shown that if the window openings are covered with wire of a close mesh such as is often used on the cellar windows of houses, it will keep out both rain and snow to a very large extent, thus making the closing of the windows unnecessary during rain or snow storms.

Pebbles

"Any truth in the report that Mrs. Gump eloped with a boarder?"

"No, it was only a roomer."—*Postscript.*

Waiter—What will you have, sir?

Diner—Oh, bring me an assortment of proteins, fats and carbohydrates—I leave it to you, Henry—say about eight hundred calories.—*Boston Transcript.*

"An' so you're goin' to teach French at the school, Mr. Canewell?" said the grocer's wife. "Well, it's as well that some folk can teach people, for I often think it must be shockin' difficult for furriners who come here. For instance, take the word 'air' for example. There's the 'air on our 'eads, the hair of the hatmosphere, the 'are they 'unts, and air you quite well? Yes, it must be awful confusin'."—*Exchange.*

Aunt Elvira rushed into the house, hysterical.

"I've lost my hearing!" she shouted.

"You have?" her frightened sister shouted back. "How do you know?"

"See that man out there playing that hand organ? Well, I can't hear a single note!" and Aunt Elvira wept afresh.

"That's a moving picture photographer at work!" snapped her sister.—*Daily Press.*

She was pretty and he was handsome and they were very devoted to each other as they sat and held hands and watched the Reds play at the Cincinnati ball park.

"There's Hal Chase on first," observed the youth. "He's a bird. And there's Toney, the pitcher. He'll be our best man before long—"

The sweet young thing gasped. "We-ell, I guess he'll be all right—but, Arthur, this is so sudden!"—*Everybody's.*

A hungry traveler put his head out of a car-window as his train pulled up at a small station, and said to a boy:

"Here, boy, take this dime and get me a sandwich, will you? And, by the way, here's another dime. Get a sandwich for yourself, too."

The boy darted away and returned, munching a sandwich, just as the train was starting off. He ran to the traveler, handed him a dime, and said:

"Here's yer dime back, boss. They only had one sandwich left."—*Washington Star.*

"Ah," sighed the convalescent soldier at a base hospital, "what wouldn't I give for one breath of my native air!"

"Where d' you come from?" asked an ambulance driver.

"Frae Aberdeen."

"Aberdeen, eh? I came down from there before crossing. Wait half a jiff, and I'll see what I can do for you."

A little later there was a noise of throbbing engines, and a powerful motor car drew up before the veranda where the soldiers were sitting.

"Now, then," said the obliging driver, "bend down to this wheel, while I unscrew the valve of this back tire. I pumped it up in Aberdeen before I left. Put your mouth right over it and take a good sup when I let her go."—*New York Globe.*

The story of the rival boot-makers, which appeared recently, is matched by a correspondent of an English paper with another story, equally old but equally worth repeating. It concerns two rival sausage-makers. Again, they lived on opposite sides of a certain street, and, one day, one of them placed over his shop the legend:

"We sell sausages to the gentry and nobility of the county."

The next day, over the way, appeared the sign:

"We sell sausages to the gentry and nobility of the whole country."

Not to be outdone, the rival put up what he evidently regarded as a final statement, namely:

"We sell sausages to the King."

Next day there appeared over the door of the first sausage-maker the simple expression of loyalty:

"God save the King."—*Christian Science Monitor.*

Salt Mackerel

Direct from the Fishing Boats to You

Old Gloucester

Your pail is ready—fat, meaty, juicy mackerel —send no money—try the fish first.

Frank E. Davis PRESIDENT

It's thirty-three years, come next September, since I began supplying the choicest of Gloucester's famous mackerel direct to the homes of families throughout the country.

Our Own Home Kind

People here in Gloucester, the leading fish port of America, laughed at me when I began to sell mackerel by mail. They didn't realize how hard it is for other people to get good fish. But I did. So I decided to make it easy for everybody, everywhere, to have full-flavored, wholesome fish, the kind we pick for our own eating here at Gloucester. 65,000 families are buying from us today.

Fishmen for Generations

You see, I *know* fish. My folks, 'way back, have always been fishmen. They helped found Gloucester in 1623. My boyhood days were spent aboard fishing boats. Catching fish, knowing the choicest and picking 'em out, cleaning and curing them the *right* way, has been my life's job.

Such a *Good* Breakfast!

A fat, tender, juicy Davis' Mackerel broiled to a sizzling brown; some butter, a sprinkling of pepper, a touch of lemon, if you wish—how good it smells, how tempting it looks, how it tickles the palate, and, oh, how it satisfies!—the favorite breakfast dish of thousands.

Thirty Years' Development

Today our business is housed in a modern, four-story, concrete building, with 20,000 square feet of floor space; fitted with the most improved and sanitary equipment for cleaning and packing fish. Standing at the water's edge, the fishermen's catches are brought right into the building. They go to your table with "the tang of the sea" in them.

Fall Mackerel, Fat and Tender

Most of the fish your dealer can buy are Spring fish, thin, dry, and tasteless. What I've selected for you are Fall fish, juicy and fat with the true salty-sea mackerel flavor. We clean and wash them before weighing. You pay *only* for *net* weight. *No heads and no tails.* Just the white, thick, meaty portions—the parts that make the most delicious meal imaginable. You probably have never tasted salt mackerel as good as mine.

Send No Cash— Try the Mackerel First

I want you to know before you pay that my fish will please you. If there is any possibility of a risk, I want it to be at my expense. Just mail the coupon today, and I'll ship at once a pail of my mackerel containing fish, each fish sufficient for 3 or 4 people, *all charges prepaid,* so that your family can have a real Gloucester treat Sunday morning.

Then—if my mackerel are not better than any you have ever tasted, send back the rest at my expense.

If you *are* pleased with them—and I'm sure you will be—send me $3.90, and at the same time ask for "Descriptive List of Davis' Fish," sold only direct, never to dealers.

Remember: Meat, flour, potatoes, *everything* has gone 'way up in price. In comparison, Davis' mackerel is low. An economical food—so good to eat, so nutritious! The "Sea Food Cook Book" that goes with the fish will tell you just how to prepare them.

Mail the coupon now with your business card, letter-head or reference.

PLANTS THAT LIVE IN GLASS HOUSES

(*Continued from page 227*)

sary walls are built to a hight of about twelve feet above grade in front and about four feet in back; wooden sills are bolted or anchored to the foundation; then the rafters are cut and nailed in place; then the crosspieces are fitted, such as the ridge to which the vent-sash is attached and the vent-purlin which holds the upper side of the sash-bars in place and supports them; then the sash-bar can be placed and the pit is ready for glazing. Inside there are usually two side benches and a center walk. The details depend of course upon the width of the house, but a good layout is to make the inside measurement seven feet, eight inches, with two three-feet benches and a two-foot center walk. A pit can be built for about $1 per square foot, figuring the cost of the materials only. If labor is added to this, the cost would probably come to about $1.50 per square foot; on this basis a house forty feet by ten feet would cost about $600.

The lean-to greenhouse is next in order. When one has a building or garden wall which can be utilized as the rear wall, the lean-to will be found both economical to build and satisfactory to operate. It is practically an even-span greenhouse cut in two, lengthwise, and of course it needs a southern exposure. I would not advise any one to build a wall especially to accommodate a greenhouse of this type; it is only to be recommended for attaching to walls, stables, garages, etc., already in place. In fact the placing of small lean-to houses against the garage, using the same heating unit for both, is a common practise.

When building a lean-to make it as wide as possible, remembering, however, that the width is governed by the hight of the eave on the building to which it is to be attached, for in order to assure a good tight roof on the greenhouse it should have a pitch of at least six and one-half inches to the foot—seven and one-half inches is better still. The advantage of the wide house is that a small narrow lean-to has such a great proportion of its surface exposed to outside conditions that it is considerably influenced by sunshine or extreme cold, and it is difficult to maintain a steady temperature, while the wider house, having a much larger volume of air inside, is not so quickly affected and the temperature is therefore not so likely to fluctuate.

The lean-to is, naturally, less expensive than the even-span house, but in figuring the cost of greenhouses there is not so much difference in the types as there is in the materials used. Usually the pit is constructed entirely of wood, which keeps the cost down. An all-wood frame house is the cheapest type of construction; then come the various types of iron supported houses, from the pipe frame to the modern rafter type; and an all-steel house is the most expensive. In every case you get value; the question is merely how much one wishes to spend. The lean-to can be constructed from $2 to $5 per square foot of area covered, according to the materials selected.

The even-span greenhouse is the accepted type today. In very exceptional cases, such as on sharp southerly slopes, a three-quarter-span house might be used to advantage, but generally speaking the even-span house excels. It can be given any exposure—a distinctive advantage in the laying out of grounds and in the placing of a greenhouse on grounds already developed.

The curved-eave type seems to be the last word in construction. It has many advantages over the angle-eave type; it does

away with numerous shading members, and thus secures the full benefit of the sun's rays; and it gives a clear roof surface with no obstruction at the eave-line, which prevents the snow from piling up on the roof and causing shade and glass breakage; but above all the curved-eave house is much better in appearance. It makes the greenhouse an appropriate feature of the beautiful place. Expert mechanics are needed to erect the curved-eave, even-span house. It cannot be built properly by the layman. This type of house usually has an equipment that corresponds with the construction, such as galvanized iron bench supports with tile bottoms and slate sides, three and one-half inch heating pipes, "A" quality glass, etc. It can be constructed for from $5 to $7 per square foot of area covered.

To assure wholesome growing conditions in the greenhouse, little or big, avoid low, poorly drained locations, and keep it a proper distance from buildings, trees (particularly evergreens) or other obstructions to the south. The sun being at an angle of 22 degrees at noon on the shortest day of the year, it is easy to determine the distance from the obstruction where the house must be put to avoid shade.

The greenhouse which one expects to operate for himself should be near the house; in fact it may well be attached to the house and heated from the same furnace that heats the dwelling.

The heating of the greenhouse is the most vital part of the entire plant. One may have a greenhouse poorly constructed in other ways and get results, but a faulty heating system means failure. There are three distinct types of pipe used in greenhouse heating—steel, wrought iron and cast iron. Steel pipe comes in various sizes but the one most commonly found in greenhouse heating is two feet. This is a threaded pipe with couplings and is easily installed, but the constant expansion and contraction, the effect of certain waters, and the abnormal conditions in the greenhouse soon cause corrosion and the pipe is short-lived—from six to eight years. The wrought-iron pipe also comes in threaded lengths and will be found much more satisfactory than the steel pipe. Of course it is a little more expensive. Cast-iron pipe is undoubtedly the best; it will last a lifetime, it is not affected by unusual conditions, and as it is nearly always made in large sizes (about three and one-half inches in diameter for greenhouse heating) it is advisable because the large volume of water it carries is not influenced by outside conditions. This pipe does not come threaded; it has hubs and needs a competent heating-man to make up the joints. It is the most expensive heating system to instal, but is the cheapest in the long run. And, by the way, never paint the pipes whatever the material, as the tidy-souled amateur likes to do.

For small greenhouses, hot water is the best heating medium. Steam is possible only where a large range of greenhouses is contemplated and a night fireman is employed. It fluctuates considerably and, being quick in generation, is, of course, quick in cooling, so that it requires constant attention.

The water can be heated by various means. The best outfit is a boiler equipt to burn anthracite coal. Cheaper grades of coal should be used only where the greenhouse can be visited during the night, for they require closer boiler attention. In natural-gas districts, boilers equipt to burn gas are more commonly used. Gas is a very good heating medium where it can be had at reasonable rates, but it has

King GREENHOUSES

Help You Help Mr. Hoover

These beautiful houses will supply your table with an abundant supply of fresh vegetables and fruits all winter long.

Into every King Greenhouse goes the experience gained in building hundreds of houses for big professional growers. Every practical feature is worked out to the last detail, and in addition a special type of construction is used which permits of rare grace and beauty of design.

Write for our descriptive literature. Tell us the kind of surroundings with which you want your greenhouse to harmonize. Submit your ideas, then our experts will furnish plans and estimates for approval. No obligations on your part of course.

to show you his Seth Thomas Clocks. He will gladly procure for you, through our new illustrated catalog, these or others of our mahogany clocks ranging in price from $10 to $75.

HENLEY

Dull finish mahogany case. The works are the same as in the "Dundee" clock, 8-day movement, strikes hour and half hour on Cathedral bell. The dial is 5 in. convex white porcelain, and has heavy brass sash and convex beveled glass. Height, 10 in., width, 9½ in.

SETH THOMAS CLOCK COMPANY, NEW YORK

KELSEY HEALTH HEAT

IT is not a boiler heat. It is not a furnace heat. It is a health heat, produced by the Kelsey Warm Air Generator. A heat that is full of tonic oxygen, and mixed with just the right amount of moisture.

Because of the full abundance of both heat and fresh air that it gives, it is the *one ideal heat* for the older folks who so vitally need both.

Aside from its genuine comfort, it saves coal. In fact we go so far as to claim that it delivers more heat from less coal than other heats. Then we proceed to prove it.

Want the proofs? Send for booklet.

LATE FALL PLANTING

May be done in the North if the plants are rightly cared for. This refers to hardy perennials and bulbs. Deciduous shrubs and trees, if backed, may be planted until winter. When perennials are set late they should be in well-drained soil and protected the first winter. Tulips, narcissus, crocuses, when set late in the North should be covered enough to keep them from frost the first third of the winter, so that the new roots may form. This covering should be removed early in spring.

Ask for Horsford's spring and autumn lists.

one drawback. Usually the gas is left regulated for the night, but about the time that offices and factories close, the gas-pressure is considerably increased and often a rise in the temperature results. A thermostatic heat-regulator relieves this trouble. Oil-burners are being perfected and no doubt will be more common in the near future. At the present time the large oil-heaters are very good but the smaller type, such as might be used in a small greenhouse, is not very satisfactory. The boiler, no matter what fuel used, should be of ample size to insure easy control. The boiler-cellar should be of such depth that it is possible to keep all mains below the floor-level of the greenhouse.

It is a hard matter to give any idea of the operating cost of a greenhouse. It depends largely on the degree of perfection one desires. For instance, one of the large chrysanthemum plants shown at an exhibition costs many hundreds of dollars to grow, but a small one for the house might cost only a few cents. Disregarding the two extremes, and assuming that the crops grown are of an ordinary nature, a greenhouse eighteen by twenty-five feet should not require more than three hours' work per day. On that basis one man should take care of three houses of this size. I know a number of gardeners who are producing excellent results and have more glass than this to care for, but it is worth considering that work in the greenhouse is of an exacting nature; it cannot be put off until a more convenient time. You cannot do a week's work in one day; you must do a little every day. The work in the greenhouse also varies according to the season of the year. Spring is the busy time and close application is necessary then. During midsummer and winter the work is comparatively easy; in fall a considerable amount of attention is again required getting ready for the winter.

If your greenhouses are tight and properly constructed they do not consume nearly as much coal as some people imagine. I know one case where a gardener operates a greenhouse eighteen by thirty-three feet on six tons of coal for the season, but as every one knows, the quantity of coal consumed depends upon the skill of the one who tends the furnace. A great deal of good heat is ofttimes wasted by needless firing. The best system for operating the boiler is to start the fire in the afternoon about three or four o'clock (according to the season of the year) and get the return pipe warm before sundown; if this is done it is an easy matter to retain the heat thru the night. In the morning the fire is shut off, usually banked with ashes, so that the sun is used to manufacture heat during the day. No coal should ever be used on bright days. Sun heat is better for the plants than artificial heat, not to mention the saving of coal.

So much for the structural requirements. But doesn't just the thought of the greenhouse "sunshine shop," with its moist, warm fragrance and its riot of green and color the year round fascinate that corner of your imagination that belongs to the garden?

"Here, boy, take these flowers to Miss Fannie Honeysome, room 8."

"My, sir, you're the fifth gentleman wot's sent her flowers today."

"What's that, you grinning dub? What's that you say? W-who sent the others?"

"Oh, they didn't send any names. They all said: 'She'll know where they came from.'"

"Well, here, take my card and tell her these are from the same one who sent the other four boxes."—*Press.*

MY FIRST SIX WEEKS WITH THE COLORS

(*Continued from page 217*)

had scarcely begun. We were to study first the artillery drill regulations of the United States Army; then we were to take up the European fighting methods practised today. Before the training period has ended, the infantry will have had experience in bomb-throwing, bomb-firing, bayonet fencing and trench charging. Trenches are being constructed on the wide target ranges. When we arrive in France, we shall require only a brief course of intensive special training before we are ready for the front.

The strict discipline has brought many excellent results. Men who knew little or nothing about sanitation, have learned to guard their health properly. Lazy men have acquired the habit of working ambitiously with regained self-respect. Drinking men have ceased to drink. There are very few who are not striving with body and soul to perfect a powerful military machine that will crush the menace of Germany for all time.

We have not learned when our training in the United States will end. Even the officers do not know this.

As the day for my wife to arrive drew near, I became almost sick. I dreaded being humiliated before her, for my letters frankly described me as a most promising soldier.

A few moments before the train came in, the lieutenant with the small mustache sent for me. In the orderly room he eyed me sternly.

"I've been watching you for some time," he began bluntly. "You have interested me, I confess. You certainly have worked hard enough, and there is no doubt of your good intentions.

"But you have made many mistakes—a great many, in fact, haven't you?"

I nodded, my mouth dry. Some new blunder, I guessed. I resolved again to get even when the war ended.

"I have had you promoted to be a corporal. The Army likes men with your ambition and energy; the Army also believes in a square deal. There may be a sergeant's place open soon. I advise you to keep working hard."

I must have almost fainted. Instead I ran with a bounding heart to the train to meet my wife. I was a corporal! And before long I might be a sergeant!

I shall never forget my wife's surprize when she saw me.

"Fred," she cried, after I had kissed her. "You look magnificent! All your fleshiness is gone. You're so tall and straight and brown. Your eyes are so clear and bright. Your arm is as hard as steel. You *are* a soldier, aren't you?"

"I am a corporal," I replied.

A bellhop passed thru the hall of the St. Francis Hotel, whistling loudly.

"Young man," said Manager Woods, sternly, "you should know that it is against the rules of this hotel for an employee to whistle while on duty."

"I am not whistling, sir," replied the boy. "I'm paging Mrs. Jones's Dog."—*Argonaut.*

The new waiter (strictly unfit) was being installed into the mysteries of his calling by the buxom and businesslike manageress.

"Now, suppose a lady came into the restaurant an' ordered peaches, what would you give her?"

"A finger bowl," said the waiter.

"That's right. An' suppose she ordered watermelon?"

"A bath tub."—*Exchange.*

BRITTON PUBLISHING COMPANY, N.Y.

WHAT AMERICAN GIRLS ARE DOING IN FRANCE

These incidents of what American relief work is accomplishing in France are quoted from the monthly report of the American Fund for French Wounded.—THE EDITOR.

"EASE it a little, now, up-p!"

A fifty-pound crate slid easily into a Ford truck, and two girls, flushed with exertion, took a little breathing spell before proceeding to hoist the next case. The scene was a famous Paris open-air theater, the auditorium of which was filled to overflowing with packing-cases containing luxuries and necessaries—mostly necessaries—for the wounded French *poilus*.

The toilers were two neatly uniformed, well-bred looking girls and they were engaged in adding their quota to that incalculable mass of voluntary effort whereby America is showing its sympathy with the Allied cause.

One by one they trundled the crates and cases on a baggage truck to their automobiles, up-ended them, and with vigorous ease lifted them into the car until the limit of its carrying capacity was reached.

All this constituted wholehearted, cheerful work little looked for from the hands of American girls whose physical effort in the normal course of things is generally limited to the wielding of tennis rackets and golf clubs. It meant grease-stained hands, chipped and battered fingers, sometimes protected by grimy rag bandages; it also meant an amount of physical stress and strain which none but the most robust and healthy girls could dare to undertake. Yet it was no more than a tithe of the manual labor which these two girls, and many others like them, are undertaking for the sons of the land of Lafayette and Rochambeau.

Had I arrived half an hour earlier I should have seen a bevy of girls attired in long blue overalls, overhauling their cars, and removing from the chassis the accumulation of mud picked up in the previous day's drive of a hundred miles.

The loading terminated, a businesslike girl appeared on the scene bearing a sheaf of papers, one of which she handed to the chauffeuse.

"All right; to Auxiliary Hospital No. 999 at Fontainebleau."

And briskly cranking up whilst her companion took her place, the driver sped off swiftly down the Champs-Elysées on a hundred-mile errand of mercy on behalf of France's stricken braves.

The theater was the Alcazar d'Eté. In peace time, with its fashionable restaurant, it is a gathering-place for gaiety and pleasure; now, whilst the guns are thundering ceaselessly not 80 miles away and an unending stream of wounded flows to the rear. it is a center of beneficent war work, where American women are striving night and day to alleviate the sufferings and supply the most pressing needs of the French *blesses*.

TRANSPORT SERVICE

To be more explicit, the theater is the headquarters of the American Fund for French Wounded, which has been instrumental in improving the lot of tens of thousands of stricken men. The phase of its activities which I was privileged to witness was the transport service, handled from beginning to end by girl volunteers. The transport staff of the A. F. F. W. have daily to overcome seemingly insurmountable difficulties and solve the most elusive problems.

Merely as preliminaries to the work which they are carrying out, they have to

attend to the maintenance, upkeep and cleaning of their cars; repairs, the supply of spare parts, garaging, insurance, etc. Many of these multifarious duties are attended to before breakfast, and then the chauffeuse has to pack and load her own car with special articles for which a pressing need had been declared at some hospital in Paris or within a fifty-mile radius of the capital. Next comes the long journey in all winds and weathers, then the unloading at the hospital, which again is often, owing to the lack of other labor, performed by the girls themselves. The crates, cases and bales contain bandages, clothing of all descriptions, medical appliances and an indescribable variety of supplies sent from sympathetic America.

Distributing centers are established in various parts of France, notably at Nice, Pau, Chambéry and in Brittany, so that the far remote departments are covered as well as the Paris district.

The girls who have sole charge of the motor service come from all parts of the United States. Very fascinating they look in their dark blue uniforms, consisting of short skirt and military jacket, fastened with Red Cross buttons. Round the waist is worn a black leather belt, and an additional military touch is imparted by blue cloth epaulets bearing the letters A. F. F. W.

OUR FLAG AT THE FRONT

He came into the Paris depot of the American Fund for French Wounded to see his *marraine*. She had adopted him when she heard that he was from the devastated district and that his eighteen-year-old daughter had been taken away by the Germans. He didn't know where his family was.

All thru the winter his *marraine* had sent him cigarets, sweaters, socks, whatever he needed. And now he was on "permission" and had come to thank her.

"And now, what can I give you?" she asked at the end of their talk.

"Nothing, thank you, except," he hesitated, "except, if you can, an American flag."

"But what do you want of an American flag?"

"Well, you see," he explained, "I am in charge of a searchlight car. And those Boches don't know that America is in the war with us."

"But it isn't possible!"

"Quite true, madame. We know from our prisoners. So I want an American flag to put in front of my light. Then I'll call to them 'Mit uns! Mit uns!'"

The American flag is now at the front.

THE REASON

It was in Noyon—the town of sadness. We went into a little place on the corner, that at one time had been a café, in search of a woman who could cook for the three members of the A. F. F. W. who had come there to establish a depot.

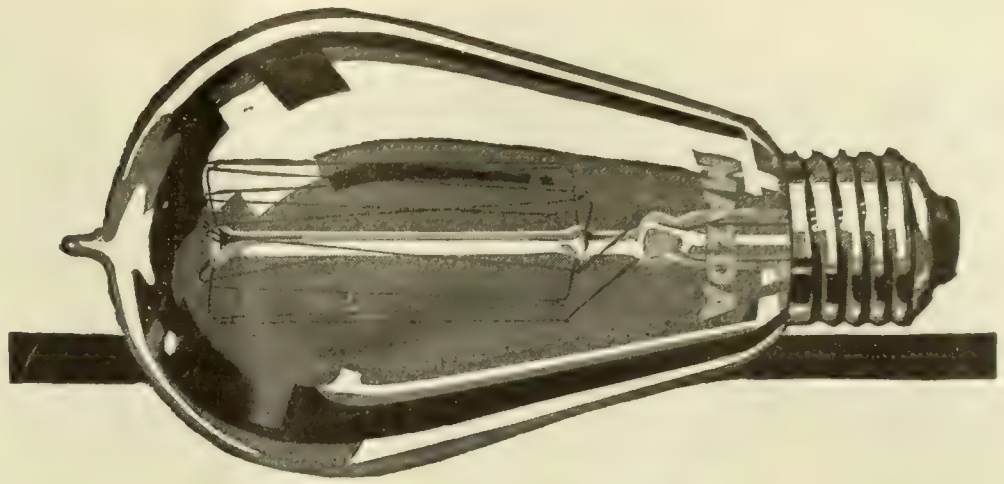
We asked a bright-eyed French woman if she had a stove.

"No," she answered.

"If we bring you one you can cook, can't you?"

Not at all in a discouraged manner but with a great curiosity she asked:

"What is there to cook?"



We were very prompt with the answer.

"Vegetables."

"But there aren't any," and she pointed out to the gardens that the Germans had trampled before leaving.

"Eggs, then."

She smiled at our stupidity. In a matter-of-fact tone she said: "There aren't any hens."

MAZDA

"Not the name of a thing, but the mark of a service"

MAZDA Service—a systematic research for making good lamps better.

The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

THE HOUSE LIVABLE

(*Continued from page 225.*)

There is probably no one point about the house, unless it be the painting, which gives more trouble than the plaster. One is forever having plaster crack, sometimes it falls off, and one invariably hears after such an occurrence that the plastering work was poor. This is not by any means invariably the cause. Cracks in plaster arise more commonly from the shrinkage or swelling of the material to which it is applied than from defects in the plaster work itself, and where plaster falls off it is usually because the lath has been spaced either too close or too far apart, altho sometimes a poor grade of plaster may be the cause. It is probably better to use metal lath for plastering than wood lath, altho the metal transmits sound and heat more freely than the wood, and this same point, the tendency of transmission of sound and heat, is perhaps the most important in considering what type of plaster to specify.

Old-fashioned plaster is made of lime, sand and hair. If the lime be properly slaked and of good quality, an excellent result can be obtained, but since the lime is frequently insufficiently slaked and continues to slake after it is put in the walls, causing cracks or pits in the plaster surface and burning out the hair, the patent plasters are the safest.

Patent plasters are of two kinds: the hard plasters and the pulp plasters. The hard plasters are in some ways the most satisfactory, because the plaster work can be executed more quickly, straighter and perhaps with fewer chances for mistakes in workmanship than with the pulp plaster. On the other hand, hard plaster is a wonderful sound distributor and is so brittle that if a nail is driven into it the surrounding wall is broken. Pulp plaster is not quite as good a sound conductor as hard plaster, which means that the house is quieter. Tho harder to work, good mechanics can produce smooth and even walls and ceilings with it, and, after it is finished, one can drive nails into it anywhere without breaking it.

I do not venture to recommend any one of these three types. Tho I commonly use the pulp plaster in my own practise, I go back to the old-fashioned kind if I discover that my clients are nervous about noise, or I use the hard plaster if the pulp plaster cannot readily be obtained or if I am doubtful about the quality of the mechanics who are to apply it.

The materials for roofs remain about what they always have been: shingles, slate and tile, altho with the past few years prest asbestos shingles have been made, of agreeable color and apparently durable. The only fault to be found with the asbestos shingles is its thinness, which tends to give a completed roof the appearance of a sheet of paper upon which lines have been ruled. Shingles, of course, come in a variety of sizes and can be laid in a variety of ways and colored to suit one's wishes. A shingle roof is water-tight, at least for the first ten or fifteen years of its life, but it is not permanent. The old hand-rived white pine shingles were about as durable as slate or tile, but the modern sawn red or white cedar shingles are, after all, more or less temporary, and any one putting on a shingle roof must expect to replace it after fifteen or eighteen years. A shingle roof also is liable to become ignited from a chimney fire or from brands which find lodgment upon it. On the whole, where price will permit, it is probably better to use a slate or a tile roof.

Tiles have been somewhat done to death and, to the writer at least, many of the

forms of the so-called Spanish or Italian tile seem unsuited to American conditions. The shingle tile, so called because its shape is approximately that of a shingle, is much better suited to our American construction and is the shape of tile most commonly used in France and England in old work. Tile comes in a variety of colors, most of which are obtained by applying glazes to the clay. While some of these glazes are durable, others form a very thin shell of hard material over the tile underbody, and if the glaze is chipped or broken the tile goes to pieces, leaving a leaky roof which is hard to repair.

Slate is in many ways the most attractive of all roofing materials, and is no more expensive than cheap tile. It is not used as commonly as shingles or tile, probably because most people when they think of slate roofs have in mind the thin fragile black slate which was so common around 1850 and which, because of its poor quality and because it was too thin, was constantly breaking and blowing off the roof and causing leaks. Its color, too, while perhaps suited to certain color schemes, was by no means the most pleasant for country-house work in general. Now slate can be obtained in a variety of very beautiful shades, and by mixing these shades almost any color of roof is possible. Perhaps the shades most used at present are the so-called sea-green and variegated green and purple. The sea-green is a dull gray-green, and the purple something between terra-cotta-red and purple. Red slate can also be obtained, as well as black, yellowish and blue, and as the colors of slate are of Nature's own devising, they are usually quiet and harmonious, of very different type from the hard, uncompromising reds and greens of new tile.

One question which often comes up in connection with the material of the roof is the material for the gutters, leaders, flashings, etc., for most people will want copper and can afford tin only. Now, as a matter of fact a good tin gutter is about as permanent as copper tho it does require some care. Moreover, where the metal is so fixed that it cannot expand or contract, tin is probably a better material than copper, since it is less liable to split. The great trouble with tin is that, like many other materials, it is made in all grades, from stuff that is not worth the proverbial powder to a really high-grade material. Tin for roofing is not solid tin; it is a plating of tin on a thin charcoal iron or mild steel base plate. There is no doubt but that the charcoal iron base is the better if it can be obtained. Most of the tins readily available, however, are plated on mild steel, but if the steel is soft enough so that it does not split when it is bent and the plating is heavy, the material is perfectly satisfactory. I would recommend that no tin plate with less than thirty-five pound coating per box be used, and I also recommend a very light-weight plate, the trade name of which is I C. It is probably more permanent than the heavier plate, known as I X, because it is less liable to be broken when it is bent to form seams. Galvanized iron is frequently used for gutters and leaders because it is more rigid and substantial, but it has not the permanence of good tin and too much must not be expected from it.

Even the strictest economy in the use of lumber will not make a very tremendous saving in the cost of a house since there are very many parts of the building where no such saving in lumber can be made, but the careful owner and the careful architect can save perhaps five per cent of the total cost by thoughtfulness in these items.

Lumber comes sawn in even lengths of feet. Twelve, fourteen, sixteen and eighteen

are the usual lengths which are carried everywhere in stock, and as one has to allow about six inches on each end of the floor-beam to support it on the work below, if one desires to economize in a very sensible way, the stock sizes of beams will naturally be selected. Now these stock sizes were originally determined by what widths could properly be spanned by beams of certain sizes, and it has been found by experiment that beams two inches in width and eight inches deep can be used over a span of thirteen feet, and beams two inches wide by twelve inches deep over a span of seventeen feet, without the floors sagging or feeling shaky. When one lays out rooms which have to be spanned by heavier beams than these the price instantly mounts, and where economy is to be considered, as is almost invariably the case, the careful architect and house builder will begin at this point, since there is not much difference between the comfort of rooms thirteen and fourteen feet in width, and there is a considerable difference in the cost of the framing timber.

Of all the heating systems, hot air is probably the best, altho on this point I do not agree with most of my colleagues. It is perfectly true that hot air will not heat a house of great size properly, nor will it heat a house of any size where extreme temperatures, running from ten to twenty below zero, are to be expected, but the many failures of hot-air furnaces which have prejudiced the building public against them have been due to poorly designed furnaces and poor installation rather than to a basic bad principle. Of late the manufacturers of some of the furnaces have improved their design so that hot air is the most economical and the most efficient system in operation, and the easiest and cheapest to install.

Steam has the great advantage that a house of any size can be heated from a central plant, but it lacks flexibility, and steam-heated rooms are apt to be too hot or too cold, according to whether the apparatus is working well or not.

Hot water is economical to operate and gives a pleasantly tempered heat. Tho its first cost is considerable, it is simple to run and generally desirable.

The vapor system is excellent, comparable only with hot water for its heating qualities and of about the same expense, both to install and operate. It has these advantage over hot water; in case the fire goes out the system is not filled with water which is liable to freeze and burst the piping, and in extreme cold weather the apparatus can be run as a regular steam system.

The reasons for my preference for hot air over steam, vapor or hot water are that, when hot air is used there is a constant renewal of fresh air in the house, and that the unsightly radiators are done away with.

A hot-air installation is a much more delicate operation than either the installation of a steam or hot-water plant, and the principles upon which it runs are less commonly understood by heating contractors, so that it is not uncommon to find good furnaces giving bad results, because of incorrect placing of registers or because of sharp bends in the pipes around which the hot air will not pass. Consequently, one of the other systems is unquestionably the safest to employ, especially where it is desirable to keep a house uniformly heated.

And, finally, I cannot repeat too strongly that no house, of whatever material it be made, should be built without an architect, and that the choice of an architect should be made with the utmost care and discrimination.

INSURANCE

Service of The Independent

A constantly increasing number of readers are securing valuable information through the Insurance Service Department conducted by W. E. Underwood, Director.

IS ENGLAND GOING TO STARVE?

(*Continued from page 215*)

poured sugar onto it to make the blaze flare riotously: and there are many other stories of a like nature. But who can blame them if their attitude frankly is—"Let us eat, drink and be merry, for tomorrow ——?"

It is only the organized waste that fills the heart of the Food Controller and his loyal civilian nation with exasperated despair! The "organized" waste, and that dread creation of a dark period, the Food Profiteer.

Go into any poor district of any of the larger English cities and see the poor women, pale and dreary, standing in long queues outside the grocer's shops, waiting their turn to buy sugar. A policeman keeps them in line. They fight eagerly for their turn. After four hours or more of waiting and standing, in any weather, the tail end of the queue may have to turn away disappointed. "Sold out!" While those who hurry off, rewarded for an incredibly early start, clasping their precious little packets, have paid from 25 to 50 per cent higher for their little scrap of sugar than their richer sisters, because of buying it by the ounce instead of by the pound, and even at that have probably been given underweight. So much for the small profiteer, who wrings his gains by farthings out of the lives of the poor.

And for the large. It was matter of public scandal that the price of meat, which is plentiful, was artificially forced up to its current rate; and that thousands of tons of bacon were allowed to stand idle in the docks in the hot weather, till the fat oozed out thru the casks, waiting, while the poor went hungry, until the market price was sufficiently high to induce the sale of it.

These men, mostly safely over military age, who are making fortunes out of the world's anguish, are a sorry collection. While mothers and wives, at the heart-contracting news of war, were steeling themselves for the great sacrifice; while young men were throwing their all with zest—pleasure, career, life—at the feet of their country; while the nation's leaders were calling the people to a great self-dedication to the vindication—thru tears, thru blood, thru the slavery of the military system—of freedom; even then was the war-profiteer saying in his heart, "I will pull down my barns and build greater!"

Their reward is with them.

Yet if one walks thru the West End of London—in the daytime!—it is hard to believe in the war; unless an air-raid happens to be in progress. The shops are gay as usual with dainty silks and laces, furs and jewelry. Just as many strange new fashions, just as many evening gowns and little odds and ends of accessories to women's clothing—filmy scarfs, embroidered collars, fine lawn handkerchiefs, fantastic little bows and flowers—as appeared there in that dimly remote, almost-forgotten period "before the war"! Prices are higher, but the laws of demand and supply seem to be making "business as usual."

Only here and there the grim specter looms back into view among the crowd; here over the shoulder of a bonny girl-commissionaire at the doorway of a big store; there behind the bright blue or pale-gray flannel uniform which proclaims "wounded" afar. Here in the crippled, blinded form of a man "invalided out," decrepit, prematurely aged, yet somehow bearing unmistakably the stamp of youth. These last are sights to make the heart sob while the eyes are dry, things to dream of

Hardy Perennials

Natives of California

ONE OF THE GREATEST charms of English Gardens is hardy perennials. My collection at The Terraces is probably the finest in America, including the lovely natives of the Coast.

November is one of the best planting months in the South and far West, but I can ship all winter. Remember that I pay carriage charges in the United States.

Catalogue E brings to the flower lover of the South and West a wealth of lovely things—Phlox in rich shades; German Iris in wonderful variety; Delphiniums; Hollyhocks in rare colors; superior plants of Sweet Williams, Campanulas, and a host of other rare flowers.

Catalogue A presents a large collection of California native bulbs, plants and shrubs. All of my catalogues will be sent free (on application) to readers of The Independent. Write today.

in heaven itself with passionate pity and pain.

Yet, despite the temptations of the shops, "war economy" is fashionable. People are trying to trim their hats, make their own clothes, dig their own gardens and reduce their domestic staff. Servants, indeed, are at a premium. Munition making or bus conducting or ticket collecting or farming, are all so much more exciting, and freer, and generally better paid. The papers are full of skits and cartoons on maids selecting mistresses at the labor exchanges, asking them for references from their previous maids and making minute enquiries as to their personal character! Household labor is beginning to be elevated in England to much the same honorable level it appears to hold in the United States.

Lecturers on household economy are going up and down the country, giving free, or nominally feed, lectures to all and sundry on the conservation of vegetable peelings, the use of flour substitutes—maize and the like—the making of jam with dates instead of sugar, and many other useful and useless hints ingeniously mingled. Also expert and pseudo-expert articles on new or forgotten forms of cheap food have poured into the papers, and been loyally experimented with by a trustful public. One of these recommended young nettles as a substitute for spinach, which I daresay is all right: another praised common goose-grass, which would seem to boil up into a tender and succulent vegetable: and one, the most dangerous, urged people to try young rhubarb leaves, boiled, instead of cabbage. Of this experiment a number of people nearly died!

At one time there was a great outcry among the virtuous majority upon the non-virtuous minority, who were supposed to be storing food. "Food hoarder" became a term of execration, and each man looked upon his neighbor with suspicion. One old maiden lady was reported by my acquaintances next door to her to have got forty tins of golden syrup concealed in her house. Now what could an aged lady want with golden syrup? And when it came to eighty pounds of it, at least—!? So gossip buzzed busily, and police inspection of houses for hidden food was threatened. Many people, in great fear, hastily turned stealthily saved little "hoards" of sugar into jam. But somebody remembered in time that an Englishman's house is his castle, and the situation was saved. Besides, the police had enough to do, what with the registration of aliens and all, and a depleted force!

The very poor, I have said already, suffer, and suffer bitterly, as they always must, feeling as they do every pinch that comes in the national life, first, and last, and longest. Yet there is arising a kind of fourth class, a kind of "wealthy" poor, who are making big money at munition work, or who are supplementing their separation allowance by some form of newly opened remunerative work. These mainly have no sense of thrift. They do not generally save their money, they spend most of it. They work long hours, and when they are "off" they like to "have their fling." They will buy melons and grapes and pine-apples—expensive things in England; they will buy expensive and fashionable clothes. Margarine has taken the place of butter on most middle class tables in England; but these "wealthy poor" will have none of it. They will have the best butter and use it lavishly. And to them the Food Controller and the economy lecturer may indeed appeal in vain. They turn a deaf ear. Money has come to them in unexpected quantities before their sense of responsibility has been developed. Their education and resources are limited. They do not

know what to spend money on, save food and dress and picture palaces. These last, indeed, in every town, and almost in every village, are doing a roaring trade, what with the munition workers and the drifting population of ennuied Tommies in training. Some distraction, some relaxation they all must have. This is the easy way.

And with it all, drink, waste, profiteering, submarines and lack of organization, is England going to starve? Not while she keeps her soul alive! May England never be a highly organized country if it means the loss of that vitality of spirit which emerges from every failure with the impulse to try again, and with the originality to find a fresh way of trying. She will "muddle thru"—can any one do more?—as one who

"Never turned his back, but marched breast forward—
Never doubted clouds would break!
Never feared, tho right were worsted wrong would triumph.
Held we fall to rise, are baffled to fight better—sleep to wake!"

But England will not only in days to come feel the cruel grip of hunger, but will be herself a barrier to the freedom of the nations for which she is fighting, if the Imperialist party is allowed to blind and coerce the democracy, as there is every danger of their doing. British democracy is sound at heart, but it is easy to distract its attention from the aims of the war to questions of food and home conduct—so interesting and so immediate. It is America's great mission, under her great leader, to link together the democracies of the world in a great struggle for a clear and human issue, out of which will grow that solid League of Nations, with a permanent, democratically elected, International Parliament, which seems to me the best, if not the only hope, of a just and lasting peace.

Bull—How many cigs d'ye smoke a day?
Durham—Any given number.—*Columbia Jester.*

He—Are you fond of indoor sports?
She—Yes, if they know when to go home.—*Princeton Tiger.*

Recruit (nervously)—Shall I mark time with my feet, sir?
Lieutenant (sarcastically)—My dear fellow, did you ever hear of marking time with the hands?
Recruit—Yes, sir; clocks do it. *Puck.*

"'Please call my husband to -,' she began, but she was interrupted.
"'Your husband ain't here, ma'am,' said the attendant, blandly.
"'My goodness gracious me!' the lady exclaimed. 'You're mighty sure about it, aren't you? And I haven't told you my name yet, either. Look here, mister, how do you know my husband isn't at the club when I haven't told you my name?'
"The attendant answered more blandly than ever:
"'Nobody's husband ain't never at the club, ma'am.'"—*Washington Star.*

The artist was painting—sunset, red, with blue streaks and green dots.
The old rustic, at a respectful distance, was watching.
"Ah," said the artist, looking up suddenly, "perhaps to you, too, nature has opened her sky pictures page by page? Have you seen the lambent flame of dawn leaping across the livid east; the red stained sulfurous islets floating in the lake of fire in the west; the ragged clouds at midnight, black as raven's wing, blotting out the shuddering moon?"
"No," replied the rustic shortly; "not since I signed the pledge."—*New York Globe.*

TRADE YALE MARK

See the trade-mark "Yale"—it is a definite guarantee

Think of every *quality* you want in a padlock, or night latch, or door closer, or builders' hardware, or chain blocks: Security, protection, decoration, capacity for long, exacting service, mechanical soundness, material excellence and skilled artisanship.

Those are the qualities guaranteed by the trade-mark "Yale"—the trade-mark put on every Yale product as visible evidence that the article bearing it represents the best that organization, most approved methods and manufacturing practice can produce.

"Yale"—a trade-mark that is a guarantee. *See* it on the product you buy—or you won't get "Yale."

THE NEW BOOKS

Pan-Americanism

INTER - AMERICAN ACQUAINTANCES, by Charles L. Chandler, of Harvard University, is a very interesting and valuable study of the intimate relations existing between the United States and the countries of Latin America at the time the latter were struggling for their independence. The author, who has studied in South American universities and is thoroly familiar with his material, is able to illustrate his narrative with many quotations from the revolutionary leaders of the South American republics showing how great was their admiration for the founders of the United States and how influential was the example of the successful revolution of the English colonies in arousing the colonies of Spain to a similar struggle for independence.

The North American Idea, by James A. MacDonald, editor of the *Toronto Globe*, is a Canadian message to the United States, urging a permanent policy of alliance and friendship between the English speaking peoples of this continent. He believes that it is the historic mission of Canada to unite the sympathies and purposes of the British Empire and the United States, since Canada is a member of the former political unit and the immediate neighbor of the latter. The volume is based on the author's lectures on the Cole foundation at Vanderbilt University.

Inter-American Acquaintances, by Charles Lyon Chandler. Sewanee, Tennessee, University Press. $1.25. *The North American Idea*, by James A. MacDonald. New York: F. H. Revell. $1.25.

Friendly Latin America

LATIN AMERICA AND THE UNITED STATES, a volume containing the addresses of Elihu Root when in 1906 he made his great tour of the Latin republics of the New World, will be invaluable to the future historian who seeks to trace the origins of that fraternal spirit which has brought to our side in the war with Germany the great majority of our southern neighbors. Elihu Root was the ideal man for a mission of courtesy and conciliation, as, indeed, he has once more proved in his recent visit to Russia. Always he knew the right thing to say and the right place to say it. No less dignified, sincere and appropriate are the speeches of welcome of the statesmen and diplomats who offered to Mr. Root the hospitality of their respective countries, but eloquence and courtesy are the birthright of Spanish blood and it is something to find an American who can hold his own in a bout of mutual compliments. Time has shown that Mr. Root's tributes to the friendliness, greatness and idealism of the nations which welcomed him were not formal diplomatic commonplaces but the exact truth. On one occasion, however, Mr. Root overstepped the limits of discretion. Could he have revised his speeches after the Mexican resolution he might have omitted his remark: "It has seemed to me that of all the men now living, Porfirio Diaz, of Mexico, is best worth seeing. . . . If I were a Mexican, I should feel that the steadfast loyalty of a lifetime could not be too much in return for the blessings that he had brought to my country." It is, however, unjust to single out this one unsafe remark from so much that has been verified by the future.

Latin America and the United States, by the Hon. Elihu Root. Collected by Robert Bacon and James Brown Scott. Cambridge: Harvard University Press. $2.50.

Our Lady of the Snows

THE NEW ERA IN CANADA, a volume of essays by fifteen prominent Canadian writers, is a contribution of permanent value to the political literature of the great Dominion. Among the subjects treated are conservation of natural resources, woman suffrage, the immigration problem, the conflict of the French and English languages, the question of a closer federation with Great Britain, party government and reconstruction after the war. These essays are of great interest to readers in the United States, for the Dominion is more closely allied by trade and similarity of environment to the United States than it is allied politically to the rest of the British Empire. Some of the contributors to the book are also old friends to readers in this country. Prof. Stephen Leacock's two essays on "Democracy" and "National Organization for the War," will be read for the sake of the writer and also because these problems are as much ours as Canada's.

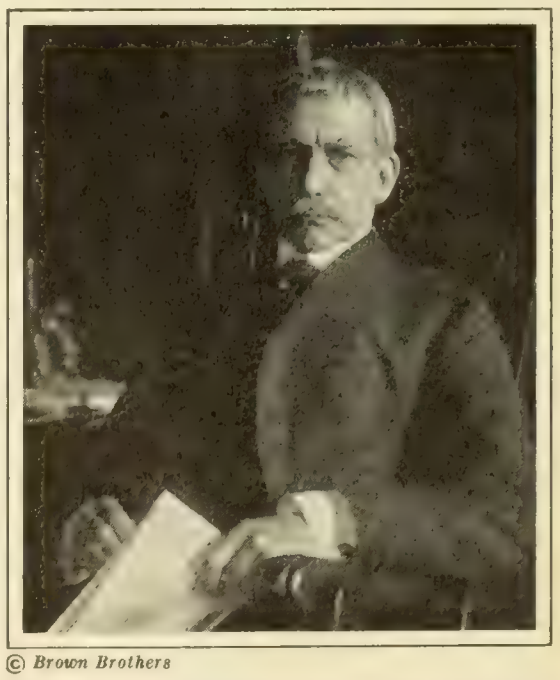
Canadian Confederation and Its Leaders, by M. O. Hammond, is a volume of biographical sketches of the men whose labors brought about the confederation of the Dominion. The men and the issues discussed are for the most part those of a vanished generation.

The New Era in Canada. Edited by J. O. Miller. E. P. Dutton & Co. $1.75. *Canadian Confederation and Its Leaders*, by M. O. Hammond. Geo. H. Doran Company. $2.50.

Chesterton as Rebel

GILBERT K. CHESTERTON'S *Utopia of Usurers* will puzzle the average literary critic. He always says that Chesterton is an amusing, entertaining, attractive concocter of paradoxes but that he is not sincere and must not be taken seriously. Chesterton's latest volume is neither amusing nor attractive, it is certainly the least enjoyable book which he has ever written, but it has a savage earnestness that puts the charge of insincerity out of court completely. The average literary critic also insists that Chesterton is a conservative and an upholder of the established order and the ruling classes. But the *Utopia of Usurers* is an attack, an almost frantic attack, upon the rich, written with a brutal directness unmatched since the days of Cobbett. It is about as subtle and paradoxical as a blow on the head from a heavy wooden club. In his own words, Chesterton's thesis is "that men in England are ruled, at this minute by the clock, by brutes who refuse them bread, by liars who refuse them news and by fools who cannot govern, and therefore wish to enslave."

The theory that Chesterton is a conservative seems to be based on the facts that he calls himself a Catholic and that he is opposed to Socialism. But he claims that the Catholic Church is the poor man's champion and that modern State Socialism is only a cloak for "the servile state" in which the capitalists can use the police power to compel working men to labor. This condition of affairs already exists, he declares, in Germany, where Krupp and Kaiser are in a common partnership to make economic and political despotism eternal, while gilding the workers' chains a little with "social legislation." But for the most part Chesterton confines his attention to denouncing conditions in England; he dismisses the case of Germany briefly and, even while condemning the Prussian military-economic machine, finds time to condemn also "the silly boycott of Germans in England, extending even to German music."



Utopia of Usurers, by G. K. Chesterton. New York: Boni and Liveright. $1.25.

The End of the Trail

THE history of the Middle West has few chapters more important and interesting than the trek of the pioneers just prior to the Civil War. Hamlin Garland in his autobiography, *A Son of the Middle Border*, has rendered a real service to American history, which can only vitalize its statistics of the settlement of the Mississippi Valley and the plains beyond by the memories of those who experienced the adventure. Mr. Garland's father, whom he

calls "The Soldier," was a born pioneer with the restless urge which seeks for new horizons; his wife and children shared his wanderings but not his enthusiasm, and the book takes on a dramatic quality from the struggle between the spirit of the father eager for new lands and the homeloving instincts of the son and mother longing to go back to the settled ways. Hamlin Garland was born in Wisconsin:

> I count myself fortunate in the fact that my boyhood was spent in the midst of a charming landscape and during a certain heroic era of western settlement. The men and women of that far time loom large in my thinking, for they possest not only the spirit of adventurers but the courage of warriors. Aside from the natural distortion of a boy's imagination I am quite sure that the pioneers of 1860 still retained something broad and fine in their action, something a boy might honorably imitate.
>
> It all lies in the unchanging realm of the past—this land of my childhood. Its charm, its strange dominion cannot return save in the poet's reminiscent dream. No money, no railroad train can take us back to it. . . . It was a magical world, born of the vibrant union of youth and firelight, of music and the voice of moaning winds—a union which can never come again to you or me, father, uncle, brother, till the coulee meadows bloom again unscarred of spade or plow.

The author shows an abiding love for his state, to which he brought back his pioneer parents after their long struggle on Iowa and Dakota farms, of which the son does not spare us one sordid detail. Indeed he seems to us to exaggerate the bareness and ugliness of a wild prairie claim being subdued into a "broken" farm. The titanic side of the conflict with nature does not escape the man who wrestled with the prairie as a boy, but his heart was never in the adventure as was that of the "Soldier" father and he felt his return to New England as an escape and a deliverance.

> For seventy days I walked behind the plow on the new farm. It was lonely work for a boy of eleven. I disliked cross-cutting for the reason that the unrotted sods would often pile up in front of the coulter and make me a great deal of trouble. There is a certain pathos in the sight of that small boy tugging and kicking at the stubborn turf in the effort to free his plow. . . . It was always hard to go back to the farm after one of these days of leisure—back to greasy overalls and milk-bespattered boots, back to the society of fly-bedevilled cows and steaming, sweaty horses, back to the curry comb and swill bucket. Most authors in writing of "the merry, merry farmer" leave out experiences like these—they omit the dust and the grime, they forget the army worm, the flies, the heat, as well as the smells and drudgery of the barns. Milking is a tedious job. We all hated it. . . . My eyes saw nothing but the loneliness and the lack of beauty in the landscape. . . .
>
> I clearly perceived that our Song of Emigration had been, in effect, the hymn of fugitives. . . . I perceived little that was poetic, little that was idyllic, and nothing that was humorous in the man who with hands like claws was scratching a scanty living from the soil of a rented farm while his wife walked her ceaseless round from tub to churn and from churn to tub. On the contrary, the life of such a family appealed to me as an almost unrelievedly tragic futility. . . . For me the grime and the mud and the sweat and the dust exist. They still form a large part of the life on the farm, and I intend that they shall go into my stories in their proper proportion.

A biography must necessarily be a life seen thru a temperament and experiences that would have been a matter of course or even interesting to a "born farmer," or a biologist revolted the bookish lad whose tastes were cultural and never agricultural. And the man with a real love for the farm does not write books about it.

With this reservation *A Son of the Middle Border* seems to us a great and a true book; a contribution to our annals of the settlement of our country; as well as a story of unusual interest and even fascination. We who make history so fast, need to have these pictures of pioneer life fixt before they fade from the memories of sons of the "Middle Border." America is at the end of the trail that led to unexplored lands and untried adventures—let her pause to look back over the way she has come.

Pioneer days will not return, but she has use for all the courage and endurance that they engendered.

A Son of the Middle Border, by Hamlin Garland. Macmillan. $1.60.

The Second Advent

THE COMING, by J. C. Snaith, author of "The Sailor" and several other successful adventures in fiction, is an ambitious attempt to bring the personality of Jesus into a modern setting. The scene is rural England during the course of the present war. The vicar of Penfold-with-Churley preaches the second coming of Christ in the formal, decorous manner suited to an old and established church. He is much troubled by a young carpenter in the village, frail in body and eccentric in speech and manners, whose apparent indifference to the fortunes of the war affronts his patriotism, whose familiar speech of heavenly things seems to him blasphemy, and whose visions of the supernatural rouses in his mind the suspicion of insanity. So the vicar bestirs himself to get the young man incarcerated in an asylum in spite of the reluctance of some of his friends, who are much imprest by the sweet spirit of the carpenter, to let him act in the case. Even in the insane asylum John Smith, who is poet as well as carpenter, manages to deliver his message to the world, and the vicar discovers at last that he has failed to recognize the Messiah whose advent he had so long awaited.

Mr. Snaith handles his theme delicately, poetically, with a fine and sensitive reverence. One feels, however, that John Smith was rather too weak and sentimental a figure to be a true avatar of the great central character of the New Testament. A number of writers within recent years have undertaken the inspiring, tho difficult, task of rewriting the life of Christ in the terms of our own generation, but practically all of them have failed in the same way. They have omitted the strong and manly qualities so fundamental in the historical Jesus and left only a gentle dreamer, an impractical St. Francis. Mr. Snaith's sincere and interesting novel is somewhat weakened by this serious misconception of the personality of the Messiah.

The Coming, by J. C. Snaith. D. Appleton Company. $1.50.

The Realm of Babel

THERE has been no lack of careful, scholarly studies of the unique political, social and racial problems of the Habsburg Empire and no lack of war propaganda books written to prove that this unwieldy political structure must be kept together or must be taken apart. *Austria-Hungary*, by Wolf von Schierbrand, is a happy mean between the scholarly survey and the journalistic war book. It discusses the problems of the country with unusual completeness of scope and moderation of tone, but there is an attempt to interpret the soul as well as the body, to give the meaning of facts as well as the facts themselves. The author tells us, for example, that underneath the many antagonisms of the polyglot empire, "a certain easy good-nature, a certain leisureliness, a certain trend to hospitality, a certain flabby softness and lack of rugged energy, an unpretentious kindness, a certain freshness of spirit and naïveness appear to mark them all, no matter what their race or creed." This is a fact, but you will not find it in Baedeker or the Britannica.

The author had the advantages of knowledge and sympathy. He traveled in various parts of the Habsburg realm from 1912 to 1916 and his descriptions of the people in

Dominie Dean

"The Little Minister" of the Mississippi

By Ellis Parker Butler

Author of "Pigs is Pigs"

"Mr. Butler has told his tale well. If it could be circulated in the thousands of communities of the kind in which David Dean lived, it would pay for its writing many times over. It is in Mr. Butler's best vein, and is enjoyable throughout."
—*N. Y. Evening Post.* *Illustrated. Net $1.35.*

An American Girl in Syria

Who Follows in their Train?

By Mary Caroline Holmes

The charmingly written account of an American girl's adventures in the land of Syria. Those who read and succumbed to the fascination of "The Lady of the Decoration" may anticipate a similar pleasure from this delightful volume.

Net $1.25.

A Tale of the Conquest of Canaan

When the Sun Stood Still

By Cyrus Townsend Brady

"Cyrus Townsend Brady has written another historical novel, a tribute to the Jewish people, showing them in the days when they were valiant fighters on the battlefield. It is a gripping story, which will prove entertaining to those who like historical novels."—*Post-Dispatch.* *Net $1.35.*

A Boy's Book of Magic

The Magic of Science

By A. Frederick Collins

A boy's book of rare delight. It opens up a practically unending vista of entertainment, which is as much valuable knowledge as it is diversion and amusement. Nearly one hundred and fifty sketches illustrate the text.

Profusely illustrated. Net $1.25.

A Girl's Fairy Book

Through the Rainbow

By Florence Peltier

A Fairy Story. With illustrations by Clara P. Wilson and Jewel L. Morrison. In some respects the reader is reminded of "Alice in Wonderland"; in others, met only by new, original fancies. A book of sheer, unalloyed delight.

Small quarto, cloth. Net $1.00.

30 Years with the Mexicans

In Peace and Revolution

By Alden Case Buell

"The other side" of the Mexican character as seen by a missionary—an old resident of Mexico. A deeply interesting book which reveals the land and the people as they really are.

Illustrated. Net $1.50.

The North American Idea

By James A. MacDonald, LL.D.

The famous Canadian editor discusses the growth and development of that spirit of liberty, just government and freedom of individual action in the light of its relation to the Great World War. *Cloth. Net $1.25.*

Russia in Transformation

By Arthur J. Brown, D.D.

A book of timely interest, showing the conditions leading up to the Revolution and fundamental characteristics which will undoubtedly affect New Russia. *Net $1.00.*

war time, tho too infrequent, are of great interest. Particularly vivid is his picture of the first days of the Great War:

When the night finally came, the night of July 24th, and the wire flashed the news from Belgrade that Serbia had rejected the Austro-Hungarian ultimatum, the whole town, the whole two millions of Vienna, were strung up for war. The whole town was frantic with joy. Total strangers embraced each other. They wept for joy. The nightmare of humiliation, of disdain gulped down like a nauseous drug for ages, was off their breasts. They felt like freemen, like heroes fit for battle. It was the same in Budapest; it was similar in the provincial capitals. If ever a nation went into war as to a feast, as to a cleansing, strengthening bath, Austria-Hungary surely did on that sultry, nerve-racking night of July 24th, 1914.

The greatest weakness of the Habsburg Empire is its economic backwardness and to this, in the author's opinion, is due its dependence on Germany. Hungary, for instance, with perhaps the best agricultural land in all Europe, produces only 52 per cent as much per acre of cultivated soil as Germany. The nobles hold much of the land in great estates in nearly every part of the Empire and their lands are the least productive; partly because of the space given over to hunting grounds and pleasure parks and partly because of the degraded position of the tenant farmer and agricultural laborer. The author assures us that "the Austrian people, in their vast majority, are now subsisting on about half the amount of food they habitually consumed before the war"; a natural consequence of the neglect of scientific agriculture during the years of peace. In industrial development, most of the Austro-Hungarian nationalities are generations behind the age. The author makes an exception of the Czechs of Bohemia, whom he praises as the most energetic, practical, thrifty and well educated of all the Slavic peoples, and, indeed, the equals of their German neighbors in these respects.

And here is a sketch of the gallant, reckless Magyars of Hungary:

In the course of the war I paid several short visits to Budapest. It was an entirely different atmosphere into which one plunged. Not only because there was neither lack of reliable news from every source nor of palatable meals, but also for the reason that the Hungarians at no time during the fearful struggle . . . lost courage and self-confidence. A more striking contrast those days it was hard to conceive than the timid and nervous people of Vienna and the dare-devil Magyars of Budapest. In the elegant Andrassy street of that gay capital, a sort of Fifth Avenue, plus the buoyant, open-air life of the cafés with their gipsy bands forever tuning up the nerves, no stranger would have for a moment supposed he was in a city but a short distance from where a life-and-death struggle was going on—in those Carpathian passes where hecatombs of war's victims lie still bleaching in the sun. All the reckless life of a pleasure-loving city was rushing on thru it all. There was as much gambling and as much music and as much love-making as ever—at least to all appearances.

Austria-Hungary, the Polyglot Empire, by Wolf von Schierbrand. New York: Frederick A. Stokes Company. $3.

For Ireland

A courageous, romantic, naïve story is that of Margaret Skinnider's part in the Dublin rising. The book is not Irish in phrase, witness its very British title, *Doing My Bit for Ireland,* but it is thoroly Irish in spirit. Youth, devotion, enthusiasm, disappointment, tragedy, these are the notes struck. The touch of comedy is all unconscious as in the explanation of the failure to meet the good ship "Aud" with its load of arms. (The Century Company, $1.)

Those who wish to understand the views of the Irish Nationalists who are supporting *The Irish Home-Rule Convention* should certainly read the little book recently published under this title which contains essays by George Russell (A. E.) and John Quinn as well as an address by Sir Horace Plunkett, who has presided over the sessions of the convention. Every lover of Ireland (and what American is not?) will rejoice that brains so keen and spirits so well disposed and conciliatory are at work on the most difficult problem of the future constitution of the Irish nation. (Macmillan, 50 cents.)

Of course *The Soul of Ulster* is no more dispassionate than any Sinn Feiner argument. But it is well for us interested onlookers to see the other side of the perennial Irish question. Ernest W. Hamilton sets forth with vividness matters seldom stated and makes comprehensible the undying bitterness between north and south Ireland. (E. P. Dutton & Co., $1.25.)

Half a Dozen Stories

A Maid of Old Manhattan, by Emilie Benson Knipe and Alden Arthur Knipe, is a romantic tale of Indians and Dutch colonists in the days of old New Amsterdam. (Macmillan, $1.25.)

The Village Shield, by Ruth Gaines and Georgia Willis Read, is a story of love and war in Mexico. It is rich in local color and rather too rich in Spanish phrases inserted to enhance that color. (E. P. Dutton, $1.50.)

The Joyful Years, by F. T. Wawn, is the story of Cynthia and Peter who belong to the best English society and must needs love and wed under great difficulties. Then Peter goes to war. Incidentally the book is a mental revel in feminine pulchritude. (E. P. Dutton & Co. $1.50.)

Marie Grubbe, by J. P. Jacobsen, is an historical novel of the wars between Denmark and Sweden in the seventeenth century. The translation from the Danish was made by Hanna Astrup Larsen. The tale is a gloomy one, and the manner of treatment harshly realistic. (American-Scandinavian Foundation, New York.)

A work of fine scholarship is the edition of Lily's *Anatomy of Wit and Euphues, His England,* by M. W. Croll and Henry Clemons. The essay introducing this forerunner of the popular novel discusses the times, the author and the much disputed origin of the literary form known as Euphueism. (E. P. Dutton & Co., $2.25.)

A Young Lion of Flanders, by Jo Van Ammers Kueller, translated by C. Thieme, is a story of the German occupation of Belgium and of the suffering of one Belgian family, and of the heroism of one boy, a young despatch rider who lived to serve his country. The story, the author tells us, was written that her own children might learn thru reading it the horror and futility of war. It seems more probable that the prowess of the boy Leon, and his thrilling adventures would appeal to the heart of youth as glorious. (Frederick A. Stokes Company, $1.50.)

Scientific Theories and Facts

An excellent restatement of the evidence for *The Theory of Evolution* is presented in six lectures by Prof. William B. Scott. The book makes an excellent bridge between the Darwinism which is synonymous with evolution for so many of the older readers, and the newer theories growing out of recent experiment and observation. (The Macmillan Company, $1.)

The World's Minerals, by Leonard J. Spencer, is an excellent popular introduction to the subject. It contains descriptions of 116 species of the more common simple minerals, the classification of which is strictly chemical. There are forty colored plates, also an appendix on rare minerals and ores of economic importance. In view of the dearth of good elementary books on this subject, this volume is especially welcome. (F. A. Stokes Company, $2.75.)

Chemical Discovery and Invention in the Twentieth Century, by Sir William Tilden, is a bulky volume giving an account of the momentous conquests of matter by human knowledge in the past quarter of a century. It contains descriptions of laboratory equipment and special apparatus of recent invention, a discussion of modern chemical theories and discoveries, an account of modern applications of chemistry, such as the

processes for obtaining oxygen and nitrogen from the air, and a survey of the progress in organic chemistry, it forms a most valuable summing up of recent progress. (E. P. Dutton & Co., $3.50.)

An example of the way the world is converted from the error of its ways of thinking is given in Dr. Dorothy Stimson's monographs on *The Gradual Acceptance of the Copernican Theory of the Universe.* It contains, among other curious documents, a translation of an argument dated 1619 from that stronghold of conservatism, the University of Louvain, to prove that "the sun do move." (Baker & Taylor Company, $1.25.)

A fourth edition within ten years indicates the character of the late Dr. E. H. Lock's *Recent Progress in the Study of Variation, Heredity and Evolution* which has been revised and brought up to date by Professor Doncaster. The chief additions relate to very recent work on sex determination and on so-called "linkages" or coupling of characters—principally the work of American investigators. (E. P. Dutton & Co., $2.)

Dr. B. L. Stevenson's *Socio-Anthropometry* is a study of the physical traits of the three chief racial types in Europe and the attempts that have been made to trace their influence on history. The author's conclusion is that: "Changes in anthropologic type are so long delayed and so extended in space that under no consideration can they be made use of to support explanations for the occurrence of political or economic events." (R. G. Badger, Boston, $1.)

Evan McLennan is the author of *Cosmical Evolution*, an attempt to criticize destructively the accepted theories of astronomical and physical science and to replace them with a constructive theory all his own. His criticisms are very ingenious and his work is highly suggestive and worthy of thoughtful consideration despite the fact that scientists do not find his theories acceptable. There is much in the book which the lay reader would find interesting. (Privately printed, Corvallis, Washington.)

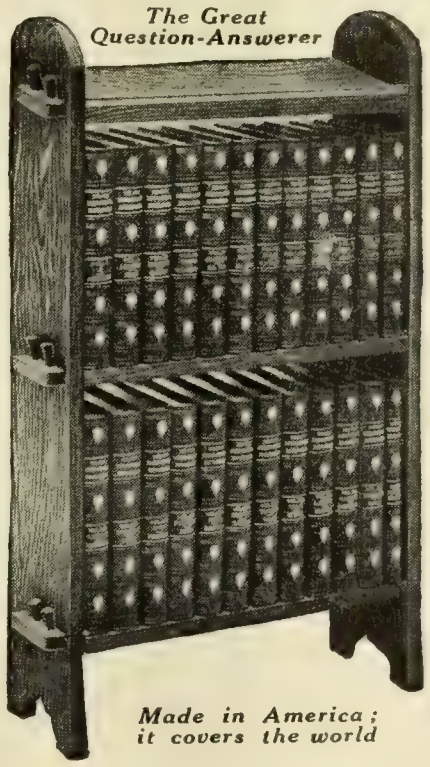
History of Several Sorts

The fourth of the nine volumes of *Dio's Roman History*, translated by Earnest Cary; *Galen*, translated by A. J. Brock, and the fourth of the ten volumes of *Plutarch*, translated by Bernadotte Perrin, are late issues of the Loeb Classics. (G. P. Putnam's Sons, $1.50 each.)

Anne of Britanny, by Helen J. Sanborn, is a romantic slice of medieval French history and a sympathetic biography of a woman who was twice queen of France. Many illuminating glimpses of the age and the country are given in the course of the narrative. (Lothrop, Lee & Shepard, Boston, $2.)

The History of Medieval Europe, by Prof. Lynn Thorndike, of Western Reserve University, is a good text for the backbone of any high school, normal school or college course of medieval history. In the course of 640 pages of reading matter the story of Europe from the fall of Rome to the rise of national monarchies in the sixteenth century is related with exceptional adequacy. (Houghton Mifflin Co., Boston, $2.75.)

For years resident in South America, and now one of the staff of the *Pan-American Magazine*, L. E. Elliott has made a very full study of *Brazil Today and Tomorrow*. Chapters on the history and social life fill a third of the book. The rest is devoted to business interests and conditions. The Brazilian point of view is given by much reference to native papers. Maps and excellent illustrations complete a valuable book. (The Macmillan Company, $2.25.)



Historic Silver of the Colonies and Its Makers, by Francis Hill Bigelow, is an elaborate survey of the treasures of silverware existing in America from the early settlements of Puritan and Cavalier to the time of the Revolution. The 325 illustrations of pieces of Colonial plate which the

Finance Exchange Speculation Economics Credits Discount Securities Loans Coupons Currency Reserves Clearing House Money Trusts Trade Railways Tariff Traffic Rural Credits Immigration Transportation Taxation Ships Telegraph Income Insurance Codes Auditing Cables Shorthand Income Tax Bimetallism Business Law Statistics Corporations Manufacturing Efficiency Wealth Shipping Bookkeeping Mathematics Grammar Handwriting Geography Language Loans Coöperation Commercial Paper Law

WHY BIG BANKS BUY THIS WORK

THE NATIONAL CITY BANK OF NEW YORK, one of the leading financial institutions of the world, has a well organized Educational Department for its employees and some of the topics taught and discussed appear above.

The Department includes a carefully selected library containing at least *one* general reference work that treats every one of these topics and thousands of others. That work is

Made in America; it covers the world

THE NEW INTERNATIONAL ENCYCLOPÆDIA

Second Edition; Just Completed

Revised, Rewritten and Reset from A to Z.
Printed Throughout from New Plates.
Number of Volumes Increased.
Size of Page Enlarged.

24 VOLUMES; 80,000 ARTICLES

Editors:
FRANK MOORE COLBY, A.M.
TALCOTT WILLIAMS, LL.D., L.H.D., Litt.D.
More than 500 Contributors and Office-Editors

THE NEW INTERNATIONAL is not only available for the education and business use of the bank's employees, but the President of the Institution has himself purchased three sets for home- and office-use.

Hundreds of other banks and bankers have bought and use THE NEW INTERNATIONAL. Officials and employees alike find it

The Best General Help to Business Efficiency

STRONG POINTS

1. Accuracy: all important articles *written by specialists.*
2. Authority: can be quoted *on any subject* without fear of successful contradiction.
3. Comprehensiveness: covers a wider field than any other general reference work. It contains 80,000 articles—30,000 *more than any other encyclopaedia.*
4. Lucidity: written in language so plain that *even the young folks can understand.*
5. Illustrations and Maps: carefully prepared to *illuminate* and *explain* the text.
6. Convenience: printed on thin paper—not *too* thin but easy to *handle* and to *leaf.*
7. Arrangement: all subjects alphabetically arranged and *easy to find.*
8. Pronunciation: all except the most common words made clear by *a simple phonetic system.* Derivations also indicated.
9. Bibliography: every important subject supplemented by a *full list of books* that may be consulted.
10. Courses of Reading and Study: afford specialized help toward *self-instruction* in leading branches of knowledge.
11. Research Bureau Service: provides subscribers the *free privilege* of information from our Editors on *any encyclopaedic subject.*
12. Attractiveness: *Monthly prizes* stimulate use of volumes, thus *increasing their interest and value.*

As THE NEW INTERNATIONAL serves banks and bankers, so it serves those in other lines and is thus the favorite reference work for men and women in every profession, occupation and employment.

And it will serve *you,* as you will quickly see if you will let us send you our 80-page Illustrated Book of *Specimen Pages, Engravings, Plates in Color, Maps,* etc., with partial lists of subjects treated and a description of our *Courses of Reading and Study* designed not only for advanced students but to *help the young folks in their school-work.*

BOOKS FOR PROGRESSIVES IN RELIGION

THE THIRD AND FOURTH GENERATION

OR

OUR KNOWLEDGE REGARDING HEREDITY

By Elliot R. Downing

Ready Soon

Of interest to the general reader and suitable as a textbook for classes of young people in Sunday school, high school, and college.

The Millennial Hope

By Shirley J. Case. For early publication.

This book will deal with the subject of the millennium from a modern point of view.

Other books by the same author:

The Evolution of Early Christianity

$1.50, postage extra.

Beginnings of the Christian movement are studied in the light of the actual religious situation of the first century.

The Historicity of Jesus

$1.50, postage extra.

A criticism of the contention that Jesus never lived, a statement of the evidence for his existence, and an estimate of his relation to Christianity.

A Guide to the Study of the Christian Religion

Edited by Gerald B. Smith. *$3.00, postage extra.*

A comprehensive survey by 12 well-known scholars. Every minister should have a copy.

The Psychology of Religion

By George A. Coe. *$1.50, postage extra.*

A book for the student and general reader. "I consider it the best single volume on the subject in English. For that matter I know of none so good in French or German."—*J. A. Leighton, Ohio State University.*

Story of the New Testament

By E. J. Goodspeed. *$1.00, postage extra.*

This book is designed to present vividly and unconventionally the situations which called forth the several books or letters, and the way each sought to meet the special situation to which it was addressed.

THE UNIVERSITY OF CHICAGO PRESS 5851 Ellis Ave., Chicago, Illinois

Buy Nationally Advertised Goods

Mr. Purinton, Director of The Independent Efficiency Service, says:

"Remember that a nameless product is generally a worthless product. Buy goods that are nationally known, perpetually advertised. Their quality is higher, their cost lower."

Your great and sure protection in buying goods is to buy trade-marked goods. If foods, drinks, medicines, drugs, household supplies or toilet preparations, you may be sure of a scientific guarantee of their worth, if they are nationally advertised—not one month, or one year, but year after year.

You may well look with suspicion on any merchandise that cannot—and therefore does not—stand this test.

The dealer who offers you something "just as good" is not your friend.

The dealer who says he does not carry "this" or "that" but promises to get it for you is your friend.

If you see it advertised in The Independent it is "standard" and you can buy it with a free mind.

Watch The Independent's advertising columns—and you may feel secure in your purchasing.

Consult, if you please, The Independent's Plan and Purchase Department, which will gladly tell you, without charge, what to buy and where and why.

THE INDEPENDENT

119 WEST FORTIETH STREET NEW YORK CITY

author has selected as typical or as particularly beautiful will arouse the wondering admiration of those who think of our forefathers only as simple and rather inartistic frontiersmen. It is certain that no multimillionaire of today could boast of owning finer examples of the silversmith's art. (Macmillan, $6.)

The Story of Princeton, by Edwin M. Norris, is the latest of a series of popular histories of leading American colleges and universities. Every reader will read with particular interest and no little amazement the chapters which tell of the turbulent days a hundred years ago when riot and rebellion of the students were common events. (Little, Brown & Co., $2.)

The Single Tax Year Book, edited by Joseph Dana Miller, is an encyclopedia for the propagandist. To it have contributed many of the leading advocates of the theories of Henry George in the United States and foreign countries, and there is also a full account of recent progress toward the single tax in the various states and in the nations to which the doctrine has spread. (Single Tax Review Company, New York, $2.50.)

Out of Their Mouths is a collection of quotations from German statesmen and writers admirably adapted to its purpose of stirring up the war spirit by showing the abhorrent aspect of Prussian imperialism. Such a volume is also a great convenience when one wants to refer to some significant utterance. But we hope no German will take the hint and compile a volume of what our Fourth of July speechers and newspapers have said of America's superiority and manifest destiny. (Appleton, $1.)

Poems of War and Peace

Björnstjerne Björnson's *Arnljot Gelline*, translated from the Norwegian by William Morton Payne, is an epic of the ancient Northland in the days when King Olaf imposed Christianity on his reluctant subjects by force of arms. Even in translation something of Björnson's romantic spirit and high enthusiasm is preserved. (American-Scandinavian Foundation, New York.)

Professor Burton holds his old course thru his latest volume, *Poems of Earth's Meaning*. He is untouched by recent fantasies of verse form, neither is there here any poem born of the war. Sincere work there is with no straining for emotional or linguistic effect. "Here Lies Pierrot" and "Don Quixote" are two lyrics that appeal to the imagination. (Houghton, Mifflin Company, $1.25.)

A Treasury of War Poetry, edited by Prof. George Herbert Clarke, of the University of Tennessee, is a collection of the more notable British and American war verses written during the past three years. A large number of poets are represented, but each is given only a little space. On the whole Professor Clarke has been remarkably successful in sifting the grain from the chaff and not permitting the two stacks to get mixt afterwards! (Houghton, Mifflin, $1.25.)

For Philosophers

The Essentials of Philosophy, by R. W. Sellars, of the University of Michigan, is a study of such metaphysical problems as the nature of knowledge, the nature of space and time, and the relation of mind to brain. The book is in a form suitable for classroom use. (Macmillan, $1.60.)

Philosophy and the Social Problem, by Dr. Will Durant, of Columbia University, is a plea for the philosopher-king of Plato's vision, for the domination of all life by intelligence. The author accepts Socrates' identification of intelligence with morality and traces the development of the idea thru later philosophies, dismissing with some impatience those which are exclusively concerned with the abstractions of metaphysics. Dr. Durant has an earnestness of manner, a flowing vigor of expression and a skill in summary which makes his book readable even for the man who has never turned his attention to problems of philosophy. (Macmillan, $1.50.)

REMARKABLE REMARKS

HAMLIN GARLAND—Don't can—dry.

ED HOWE—I need watching; so do you.

IRVIN S. COBB—Let us pray for depraved Chicago.

MRS. W. J. BRYAN—Men are poor judges of women.

EMPEROR WILLIAM—On then upon the enemy with joyful heart.

EZRA POUND—Sir A. Conan Doyle has never stooped to literature.

ADMIRAL VON TIRPITZ—We are now at the fateful hour of our existence.

PASTOR W. LEHMANN—Germany is the center of God's plan for the world.

CHAMP CLARK—The senseless and malicious abuse of Congress should cease.

HENRY MORGENTHAU—President Wilson is the greatest Socialist in the world.

AUSTRIAN FOREIGN MINISTER CZERNIN—Complete disarmament is the only issue.

S. VERDAD—The only alternative to a democratic Germany is a European inferno.

W. J. BRYAN—No matter how much and how often we are taxed, it is not for us to complain.

H. L. BRAILSFORD—A question of honor may be defined as one which men will not solve by reason.

EX-AMBASSADOR GERARD—All the German newspapers are subject to control as in no other country.

ARNOLD BENNETT—On the subject of women's fashions, the men still talk a vast amount of nonsense.

BANK PRESIDENT B. F. HARRIS—God pity and forgive the man who forgets the place where he was born.

DR. ROBERT M. MCELROY—Your boy in college is not taught the vital things of the day, as, for instance, graft.

MARIAN HARLAND—Nothing more delicious in the form of pickles ever visits our table than peach mangoes.

A. LAWRENCE LOWELL.—I am not sorry, but proud that forty per cent of Harvard University has gone into the war.

"MA" SUNDAY—The average man would rather look at a pretty face than at a tempting platter of ham and eggs.

JOE M. CHAPPLE—Thirty-two out of thirty-four great inventions of the last twenty years are American inventions.

ELIHU ROOT—There are some newspapers printed in New York, the editors of which deserve conviction and execution for treason.

CONGRESSMAN HEFLIN—I could name thirteen or fourteen members of the House who have acted in a very suspicious fashion.

GENERAL VON CLAUSECWITZ—Whoever uses force without any consideration or without sparing blood, must sooner or later vanquish.

WILLIAM H. NICHOLS—I regret to say, politics continues to be spelled with a capital P while patriotism is too frequently spelled without it.

FRANK A. VANDERLIP—The sooner the public gets over the idea that we can have "business as usual" during the Great War, the better for all.

MARSHAL VON HINDENBURG—President Wilson's note was not only an insult to the German people, but was also an insult to the Pope's good-will.

WILLIAM H. TAFT—William McKinley was the man who saw most clearly, when others were blind to it, the real position of the United States in the world.

DR. FRIDTJOF NANSEN—I do not think it would be of the slightest advantage to the Allies to lead or compel any of the Scandinavian countries to go into the war.

PROF. J. MCKEEN CATTELL—It seems at times as tho the whole organization at the university is better suited to the courtier, the adventurer or the mediocrity than to the man of genius or of fine temperament.

For Americans in Arms and Arming

"Over There" it is Life or Death for Body and Soul. Americans will therefore appreciate this frank and truthful presentation of facts from an English Comrade in Arms who has seen three active years of fighting.

Every One Should Read It

HOW TO LIVE AT THE FRONT

By HECTOR MacQUARRIE—A. B. CANTAB, Second Lieut., Royal Field Artillery. 12 photographic illustrations. $1.25 net.

Gives an intimate, informative and stirring account of Battle, Fear, Courage, Disease, Wise Precautions, the Tommy, the Poilu, etc. Straight tips are these by one who has known the irksomeness of the Training Camp, the difficulty of fitting into the marching, the Hell of battle, the spirit of the Tommy and Poilu, and the danger, worse than that of bullet, shrapnel and gas that lies in wait for the soldier behind the lines, or on leave. The author handles matters frankly and helpfully. He shows how upon the Battle Field a man's character can be made or destroyed. Learn the truth. There has been too much false romancing in books and articles about the Great War. Lieutenant MacQuarrie's book should be placed in hands of your son, brother or friend in the ranks. It will inspire and help him.

THE SOLDIERS' ENGLISH AND FRENCH CONVERSATION BOOK

By WALTER M. GALLICHAN.

Cloth, 30 cents net. Limp leather, 75 cents net. Contains hundreds of useful sentences and words enabling the soldier to converse with the French and Belgian allies, wth correct pronunciation of each word.

IF I WERE TWENTY-ONE

By WILLIAM MAXWELL.

Tips from a Business Veteran. 8 illustrations. $1.25 net.

This is a snappy book with a punch, by a man with wit, experience and enthusiasm who expresses his belief in the ability of a young man to attain success. In every chapter, in every line, there is sharp aim at the truth which inspires and instructs the reader.

THE BATTLE WITH TUBERCULOSIS AND HOW TO WIN IT

By D. MacDOUGALL KING, M.B.

6 illustrations. $1.50 net.

A great number of deaths occur, not because the disease is terribly virulent, but because patients do not understand the reasons underlying the only treatment that will bring success. This book sets forth in a simple, interesting and convincing manner the fundamental facts which help to answer the patient's constant "Why must I do this?"

THE RACCOON LAKE MYSTERY

By NEVIL MONROE HOPKINS, Ph.D.

4 illustrations in color by Gayle Hoskins. $1.35 net. A new "Mason Brant" Detective Story.

A thrilling and humorous detective story in which the hero, a lionized novelist and college professor whose life has been particularly easy, writes of his adventures when suddenly dropped into the difficulties resulting from a particularly mysterious murder mystery at a wilderness camp. This is a book with real character.

By PAUL L. ANDERSON, E.E., Lecturer The Clarence H. White School of Photography. 21 half-tones. 38 line cuts. Octavo. $2.50 net.

The one best book upon photography. Indispensable to the ambitious amateur, and of great value to the professional. It is an authoritative book and discusses every point concerning which you desire information.

SUCCESSFUL CANNING AND PRESERVING

By OLA POWELL, U. S. Department Agriculture. 163 illustrations. 12mo. $2.00 net.

This addition to Lippincott's Home Manual Series is a practical yet scientific working handbook for the individual woman and for clubs upon all steps in the successful canning and preserving of fruits, vegetables and meats. It is a book the American woman needs.

THE TWICE AMERICAN

By ELEANOR M. INGRAM.

3 illustrations in color by Edmund Frederick. $1.35 net.

A sparkling romance of how Noel, a poor man, goes to South America, carrying with him little but the remembrance of the girl he left behind, of very different social and financial position. South America makes good use of him in running her railroads and mines and finally in commanding her conquering armies. Rich and famous, he returns to New York—the results are amusing.

"Really Tighter Than Other Windows

in Winter"—writes Mr. Wm. Galloway (Waterloo, Iowa) of Whitney Windows. "The ease with which they are opened and closed does not seem to be affected in the least during damp weather," writes Mr. R. A. Ainsa, El Paso, Texas. "One of the advantages is the absence of rattling during wind storms. Furthermore, they have a pleasing appearance from the outside."

We have letters like these from all over the country—expressing enthusiastic satisfaction with casement windows installed with

WHITNEY CASEMENT WINDOW HARDWARE

Why not write us *now* and find out more about this entirely *new type*, out-folding, sliding casement window?

We manufacture only the patented Whitney Casement Window Hardware in three grades to fit all requirements—use any style sash you wish. (By using double-glazed sash you can do away with storm windows.) If you cannot get the sash locally, we will quote you on your requirements complete.

Our service department will help you, without charge, to adapt Whitney Windows to any unusual requirements, furnishing you with drawings and specifications that will enable your contractor or carpenter to make successful installation.

FREE—Write for interesting portfolio of artistic and practical casement window designs for different types of homes.

321 Rash Building, Salina, Kans.

Mr. Purinton's War Service Question Box

A Reader from Illinois. "Certain questions are being discussed here, and we want your answers. (a) Can the boys who are drafted choose their branch of the service, according to fitness or preference? (b) There is a settlement in our county of good people religiously opposed to war, some would rather die than volunteer to kill others; will the draft compel these men to violate their conscience by taking up arms? (c) What would be the penalty if they refused? They are splendid American citizens."

(a) Confer with chairman of your local registration board, on all matters pertaining to draft.

(b) These "conscientious objectors" may be exempt if, on being drafted now or later, they apply to local exemption boards for release, and on condition that they were members of a religious sect prior to May 19, 1917, whose creed or principles, announced before that date, required members to abstain from participation in war. But we would urge those friends to follow the example of the Quakers, also against war, who voluntarily came to Government officials and asked to be placed in war duties free of the actual taking of life—such as relief work, farm labor, civilian mobilization of all kinds. You can be a non-slayer without being a slacker.

(c) Probably fine, or imprisonment, or both, to any who refused if exemption claim were not granted. But we think demonstration of honest religious scruples will guarantee release.

Mrs. H. C. P., Maine. "As a firm believer in health foods, I lately combined with several other housewives in sending a large order to a food company advertised extensively. But we found, when we served these hygienic dishes, that the men of our families did not care for them at all, preferring unwholesome beefsteak and fried potatoes. Do you know why men's tastes are so unreasonable, and how they can be changed?"

The average man, mournful to remark, is a dietetic outlaw. He rebels at everything he ought to eat—fresh fruits, vegetables and salads, whole wheat bread, meat substitutes, digestible desserts. The only way to get him to eat health foods is to conceal the horrible fact that they *are* health foods. The majority of men still have the unruly stomachs of boys, they have never learned to apply the laws of intelligence to their gastric department. Your experience is like that of thousands of our modern housewives; we would suggest your problem as a vital theme for discussion at women's clubs and household science meetings.

But remember that so-called "health foods" are *not* health foods unless they *taste* right. The palate must be considered. A man served with chips for food may properly have a chip on his shoulder. Be sanitary, but be sane first. Eat foods—not fads.

Miss B. B., Utah. "Am a school teacher, have excellent health; want to be a nurse but should prefer entering a hospital and training there instead of joining local Red Cross chapter. Are there any hospitals in the Middle West from which I should stand a fair chance of being sent into active service?"

The American Institute of Homeopathy has recently taken part in organizing the first woman's medical base hospital unit for action in France. Apply to any local homeopathic physician for details; or write Dr. Cornelia C. Brent, dean of New York Medical College and Hospital for Women, 19 West 101st street, New York. This college would give you splendid training if you can afford to be in New York. If not, ask Editor *Trained Nurse and Hospital Review*, 38 West 32d street, New York, for names of approved hospitals near you.

Miss F. E. N., Pennsylvania. "I have a studio in which I do all manner of decorative art work—now a luxury in these times of economy. How can I turn this accomplishment into something of value to my country, and still use it as a means to provide necessities for my mother and myself? Posters, pen-and-ink drawings, the writing and illustrating of jingles, are some features of my work."

Prepare a four-page leaflet, describing all your service in brief, with samples of best work reproduced, and names of prominent people as patrons or references. If possible, engage an advertising expert on this leaflet.

Find local headquarters of all patriotic societies from your city classified business directory, or society blue book. Write each secretary a one-page letter, typed on your letter-head, offering to donate a good percentage (twenty to thirty) of your fees from the members of that society, to the society, during the war, as a means of doing your bit; and asking that your offer be made known to all members of the society. Enclose leaflet, and state that others may be had for distribution.

Make your letter a winner by studying first a book such as "Letters That Make Good" (price $5 with examination privilege) from American Business Book Company, Causeway street, Boston.

Mr. W. S. M., California. "Is there any branch of your society in California? If so I would like to join it and help to extend your war efficiency work."

The National Institute of Efficiency has headquarters in the Union Trust Building, Washington, D. C. Apply there for membership, and nominate your friends. While the Institute, being a national organization, has not specialized in local branches, you could easily form a group of members among your neighbors, and meet regularly to discuss war efficiency problems and take up war efficiency measures. You form the group, and we will suggest ways to make your meetings interesting and profitable.

A suggestion meanwhile. You could order a few extra copies of The Independent, for the next six months, either in your own name for personal distribution to selected friends, or by mail direct from the publishers to the neighbors you want to rouse to coöperation. Many ideas will be given for patriotic endeavors; if you can impress on your acquaintances the importance of keeping up with the War Service Question Box, you will be doing a fine thing for your community and your country.

Prof. S. R. H., South Dakota. "Have been teacher of manual training, specialty woodwork. Should like to find employment so as to aid the Government. Could do carpenter work, and build residences here, but do not feel that would be helping the nation particularly. Have written Department of Labor at Washington, but as yet have no answer. Where could I apply for work?"

Do not expect early answer from any U. S. department on war questions. Departments are overwhelmed with correspondence, and will probably have to send belated reply in a "form" letter that may not fill your personal need. Apply to the special board, committee or association that would handle your problem or service.

Chairman Hurley of General Shipping Bureau Board, Washington, D. C., could tell you where to seek employment in building the new fleet of wooden ships. President Samuel Gompers, American Federation of Labor, Washington, D. C., is helping to mobilize the workers of the nation—write him for instructions. Also request advice of Frank Duffy, United Brotherhood of Carpenters and Joiners of America, Carpenters' Building, Indianapolis, Indiana.

Miss E. C., Tennessee. "Kindly tell me if there is need for a woman photographer in the service of the United States, and if so in what department. How can photography be used in the war? I am doing high class portraiture, and want to turn my professional experience to account."

Every branch of defense or relief work would be made more fruitful by means of photography. When people have before them the actual reproduction of war needs, opportunities and activities, the impulse to coöperate is wonderfully strengthened. Offer to become staff photographer to several patriotic organizations in your city, and confer as to best ways of utilizing war pictures. Also write Editor *Photographic Journal of America*, 122 East 25th street, New York; Editor *Photographic News*, 42 East 23d street, New York; Louis A. Schwarz, Photo Engravers'

Union of North America, 5609 Germantown avenue, Philadelphia, and George Creel, Chairman Bureau of Censorship, Washington, D. C.

A Teacher from New Hampshire. "I am barred from military service by curvature of the spine. Have specialized in chemistry, organic and inorganic. Am now principal of our village school. Would be willing to do anything, if I knew exactly what."

Study up on the chemistry, purity, digestibility of the foods eaten by the families of your village; then teach all your boys and girls how to eat for economy and efficiency. The Hoover propaganda to save meat and wheat for the Allies should start the whole nation on a campaign for efficiency food reform. It isn't enough merely to prevent the billion-dollar annual food waste; we must help all America to learn how to eat for health, productivity, longevity, mentality, morality.

Read modern food books. Write for literature describing work of Prof. L. B. Allyn, Westfield, Massachusetts; of Dr. Harvey W. Wiley, care *Good Housekeeping*, 119 West 40th street, New York; of Alfred W. McCann, care *New York Globe*, New York; of Farmers' Bulletins, U. S. Department of Agriculture, Washington; of Domestic Science Department, your state university.

Mrs. H. S., Michigan. "I am planning this year to can vegetables, soups, fruit, etc., for sale, as a wartime industry. I have for years canned for home use, so it is not new work, but I do not know where or how to market my goods. Please inform me."

Consult the grocer you patronize. If your goods are first-class in all respects, he should be glad to put them in stock. Prepare advertising circular, telling your aim to increase food supply as a means of doing your bit, and offering to devote a small percentage of receipts to defense or relief work. Emphasize purity, quality, cleanness, wholesomeness, toothsomeness, economy, nutrition, of your products (when these facts are open to proof). Leave circulars on grocery counter, mail them to housewives, hand them for personal distribution to officials of women's clubs, domestic science organizations, and patriotic movements. Plan a free demonstration in grocer's window to start campaign; advertise the fact in local papers for several days before. Mark every container with attractive, distinctive label; and guarantee satisfaction or return of price.

Mr. J. C., California. "I have been referred to your Efficiency Service, and should like, if possible, to know the best follow-up sales system suitable for a land subdivision."

Put your question to editors of business journals, such as *Advertising and Selling*, 95 Madison Avenue, New York; *Salesmanship*, Kresge Building, Detroit; *System*, Wabash Avenue and Madison, Chicago; *Business Philosopher*, Area, Illinois. Look in advertising pages of these magazines for advertisements of sales letter writers and publicity experts; negotiate with a few of the best. Write Plan and Purchase Department, Independent, 119 West 40th Street, for list of recent books on salesmanship; buy several and study for solution of your problem. Train yourself, or one of your employees, in the whole science of modern selling by enrolment in a good mail course.

Rev. W. J. P., Minnesota. "Having lost my hearing, I can no longer minister as a pastor, and must seek a new field of work. For years I have contributed to local papers, but without any pay. Could not a newspaper syndicate use my short articles, or put me on book reviews? How can I market my literary product?"

Ask the editors of the local papers you have served without pay to give you addresses of national newspaper syndicates, and also letters of introduction to the respective presidents. Order from a national news company (The American or the Union has a dealer in almost every large town) a complete set of daily papers for a month from big cities like Chicago, Pittsburgh, St. Louis, San Francisco; find in the papers any articles you think you could equal, write the syndicates controlling the articles, in care of the newspaper.

Obtain recent numbers of *The Writer*, containing directory of American periodicals and what they want from contributors (address The Writer Publishing Company, Box 1905, Boston).

In extending to the Southern Pacific Company, under the terms of the Panama Canal Act, the privilege of retaining the ownership and operation of the Morgan Line,

The
Interstate Commerce Commission
said:

"The regularity of the sailings, the frequency of the service, the expedition with which through shipments are handled, and the promptness in adjusting claims for damage and overcharge were testified to by numerous shippers."

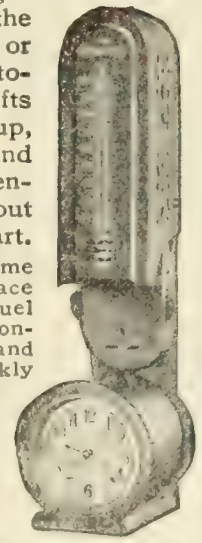
What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that appeals to the whole world and tells the truth and only the truth as it sees it. The Pathfinder fills the bill without emptying the pocketbook. If you want to keep posted on what is going on in the world, and do not have much time or money, this is your meat. If you want a paper which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which gives the news clearly, fairly, briefly—here it is. A dollar bill mailed at our risk will bring you the Pathfinder a full year, or any part of it for 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new friends. **Pathfinder, Box 39. Washington, D. C.**

Save Coal by Heat Control



Saving coal this winter means more than helping your bank account! It helps your country!

You will save coal this winter if you don't burn more than you actually need to keep your home comfortable.

The "MINNEAPOLIS" HEAT REGULATOR

helps to keep you warm and save your coal supply. It is an automatic device that takes over the working of the drafts and dampers of any style heating plant. It keeps the home at an even temperature all the time. As soon as the temperature falls below the comfort mark, the Regulator opens up the drafts. When it is again warm enough, the drafts are closed, the fire kept down. Thus no more coal is burned than is actually needed.

The "Minneapolis" maintains both day and night temperatures. It heats the house just enough at night to make heating in the morning easy. An hour or two before arising it automatically opens the drafts and when the family get up, the rooms are warm and comfortable, and stay evenly heated all day without any attention on your part.

Takes over all the bothersome work of managing the furnace and soon pays for itself in fuel saved. Sold by heating contractors, hardware dealers and plumbers. Easily and quickly installed in any home and guaranteed satisfactory.

Write us for booklet.

MINNEAPOLIS HEAT REGULATOR CO.
2775 Fourth Av. So., Minneapolis, Minn.

Splendid Christmas Gifts

Pair Genuine Mahogany Sticks, 4½ in. high, pair Genuine Bayberry Candles and hand-colored Greeting Card with charming sentiment, $1.00. Money back if you want it. A refined, tasteful gift.

No. 14225. Artistic 9½ in. Bowl, Flower Holder, 3 White Narcissus Bulbs, Bird Ornament, and Hand Colored Gift Card, $1.00. A charming gift for anybody who loves flowers. Two months' growth, then the beautiful, fragrant flowers. Pin a dollar bill to this ad and send to The Holmes Co. Money back if you want it.

Our Big Gift Book pictures thousands of splendid gifts, something to please everybody and at right prices. Your list of names and our Big Gift Book is all you need. Send for the book Today—NOW. It's Free, and it's a great big help.

THE HOLMES CO., 325 Elmwood, Providence, R. I.

Market Place Talks

BY LUIGI CRISCUOLO

NOW IS THE TIME TO BUY

AT this writing the successful outcome of the Liberty Loan campaign is an assured fact, with a probability of a very generous oversubscription of the minimum. The success of the loan is attained, fortunately, without the aid of an artificially rising stock market which the general public had been led to believe would be so necessary to the successful flotation of the bonds. Bull markets may be an effective aid with respect to the placing of large amounts of corporation securities, but the present case was one where patriotism played an important part along with other considerations.

Government finance is sure to have the attention of the country—business, finance and industry—for the period of the war. That much is certain. With the Government continuing to compete with private corporations for capital, there should be no doubt in the minds of the people as to which competitor will win out. For the man who has never invested, the Government bond at 4 per cent is far more attractive than the corporation security at 6 per cent. As such people have been in the majority, the Government has the advantage of a vast amount of latent capital, heretofore unavailable for corporate financing except thru the savings bank. However, as the savings bank is essentially a purchaser of seasoned securities, its deposits contribute little to new enterprises, and to the general prosperity only in a roundabout way.

Under the present form of government bond flotation in a month's time, there is a period of tensity in the financial markets, which puts a most effective damper on security prices but encourages liquidation which is not checked by buying orders. Hence the trend of the security markets has been downward, in spite of the tendency toward inflation into which we have been drifting. If some method were inaugurated whereby there would be a continuous sale of Government bonds or war savings certificates, the trend of security prices would be given no artificial check which has been so disconcerting and unprofitable to many investors.

Taxation and the uncertainties in connection therewith are the dominant factors still, because of the fact that while the tax laws have gone into effect, their official interpretation will be a thing of the future. And this interpretation may be just as disappointing to corporations as were the varied interpretations of the original income tax law of 1913. Corporation officials have been busily engaged in computing the effect of the new laws upon their earnings and the effect they will have upon their future dividend policy, but the solution is still a matter to be decided sometime in the future.

Until some of the large speculators have definitely discovered the effect of taxation upon corporations, the market should continue to be purely a professional, see-saw affair. When the speculators decide that this or that stock is cheap and begin a buying movement, the attention of the small buyer will be focussed by the press, as usual, upon the merits of industrials which appear to be purchases. In order to encourage a large buying movement, easy money rates should be in order.

Now all of this seems to be very simple, and it is likely that a bull market could be artificially created on this basis. But, again, let us not forget that we have the omnipresent Government demands to contend with. Wars bring about high prices for commodities, wages and money. With the Administration absolutely committed against excessive speculation in foodstuffs and necessities, it is not at all improbable that it will also become committed against excessive speculation in stocks, and marginal trading, for valid reasons. A wild and booming securities market would result in demand for money in large amounts. Thus the stock speculators would come into competition at once with the Government for capital.

Were there no necessity for further loans, it might be the psychological moment for the beginning of a real upward trend. But it appears that just as soon as fundamental conditions are rosiest, along comes another Government demand for five billions in bonds and two billions in taxes to defray expenses of the war. The war will continue for some time yet; tho it would be foolish to hazard a guess as to the end, certainly the end is not in sight.

The duration of the war will be a governing factor with respect to interest rates. Easy money will not necessarily appear with peace negotiations in sight because the end of the war would not lessen the demand for capital. Billions will be required to rehabilitate the devastated territories, for rebuilding old railroads, constructing new ones, remodeling cities, etc.

High prices and high interest rates are apt to have the same result in the United States as in Europe—inflation and over extension of credit. Issuance of Federal Reserve Notes to an overwhelmingly large degree may also be in evidence. Gold is being gathered into the vaults of the Federal Reserve Banks in vast amounts and the purchasing power of the dollar keeps on decreasing. Trust companies are getting in under cover, under the protecting wing of the Federal Reserve System. There is only a step to the issuance of fiat money, tho some writers are inclined to believe that we are reaching that state faster than is good for our financial health.

Aside from all of these considerations, the man with money to invest should not allow it to lie in a bank drawing 4 per cent interest, or less. It is far better for it to be employed in United States Government bonds at 4 per cent or standard corporation securities at a return of from 5 to 7 per cent. The matter of uncertainty with respect to private investment lies entirely in the point of view from which the question is approached. If the buyer is in the market for a quick turn, let him beware, for the turn may be sharp and either up—or down. If he buys for an income with a possible enchancement over a period of years. I have known of no better time for the purchase of *standard* securities than right now.

THE FOOD FIGHT

Under this head, every week, The Independent will print some vital part of the information which is being circulated by the Food Administration and the Department of Agriculture to aid American housekeepers in their patriotic and intensely necessary work of conserving food.

FEWER fats! That is one of the Food Administration's most urgent pleas. Reduce the use of fats and limit butter to the table; don't cook with it. How can it be done? There are any number of ways.

In breads fats may be omitted entirely. Use clarified pork or beef fat, oleomargarine, hardened vegetable fats or fat compounds.

For hot breads, such as biscuits, muffins or pancakes, use clarified pork, or beef fat, oleomargarine, hardened vegetable fats, fat compounds or sour cream.

In making cup cake, chocolate cake, spice cake, ginger cake or cookies use clarified fat, chicken fat, pork fat, hardened vegetable fats, oleomargarine, fat compounds, sour cream or grated chocolate.

Clarified beef fat, chicken fat, oleomargarine, sour cream or chopped suet may be used for puddings.

If you must have pastry, let it be plain, not rich, and use hardened vegetable fats, oleomargarine or fat compounds.

For sautéing use vegetable oils, clarified beef fat, pork fat, especially bacon fat, chicken fat or savory fats. For deep frying, oils, fat compounds, clarified beef fat, pork fat or mutton fat combined with other fats; but save fats by doing as little frying as possible.

To clarify fats heat any sweet drippings from beef, pork or mutton with boiling water, stirring constantly. When the fat and water has boiled freely, set the dish aside to cool. Remove the cold fat and heat it again to drive out all the water. Keep it in a crock.

Any fat warmed with a leaf of summer savory and a clove of garlic may be used in sautéing potatoes, hominy and rice.

Fats which can no longer be used for deep frying and left-over fats which are not quite sweet, may be put in a crock to save for fall soap-making for home cleaning. Dissolve one can of lye in one quart of cool water. Stir until it is white. Add six pounds of fat, melted but not hot. Pour it into a pan and cut it into squares as it hardens. Let it dry thoroly before using it. If the soap is to be white the fat must be clarified

---

Mother—Joan, dear, have you been doing anything to this ink?

Joan—Yes, Mummy, I put some water in it to make it write weak. I've been writing a letter to Daddy—and I wanted to whisper something to him!—*Passing Show.*

"What are oxen?" asked the teacher.

The little foreigner looked blank.

"Does any one know what a cow is?" she asked hopefully. A dingy hand waved wildly at the back of the room.

"I know, I know, teacher. A cow, she lays milk!"—*Public Ledger.*

The fussy old gentleman asked the chance traveling companion: "Have you any children, sir?"

"Yes, sir; a son."

"Does he smoke?"

"Ah, sir, he never so much as touched a cigaret."

"So much the better, sir; the use of tobacco is a poisonous habit. Does he frequent clubs?"

"He has never put his foot in one."

"Allow me to congratulate you. Does he ever come home late?"

"Never. He goes to bed directly after dinner."

"A model young man, sir; a model young man. How old is he?"

"Just six months."—*Philadelphia Record.*

Bonds That Are Always Worth 100 Cents on the Dollar

THE war is now in its fourth year. The United States has been involved in the great conflict for more than six months. Practically all standard securities listed in the Stock Exchange have suffered losses in value, many of them heavy. Tens of thousands of investors have seen their holdings shrink in value.

As a result, the American people are turning in great numbers to those securities that do not depreciate in value in times like this—such as first mortgage serial bonds, safeguarded under the *Straus Plan*.

THESE bonds, by their very nature, are non-fluctuating investments. They are always worth par and accrued interest, 100 cents on the dollar, in any and all conditions. They are safe, they yield 6%, and they are issued in $100 and $500 amounts. They are the logical investment today.

Write today for valuable literature describing these thoroughly safeguarded bonds.

KEEPING CARBURETORS THRIFTY

BY CLARKSON LLOYD

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

ADJUSTING a carburetor for high speed running, or making the high speed adjustment, as it is called, is rather more difficult than making the low speed adjustment.

Not all carburetors have a high speed adjustment. A common example of this kind is the instrument used on the Ford car, which has a dash attachment by means of which you can regulate the gasoline needle valve opening, but which has only one air inlet.

In a previous article (see The Independent for September 1, 1917) I described briefly the operation and function of the auxiliary air inlet valve, as follows:

"Another early discovery was that a fixt air opening, while satisfactory at slow speeds or with stationary engines working at constant speeds, was unsatisfactory when used with a variable speed machine. This is because an engine running fast needs less gasoline and more air than when running slowly. The difficulty was overcome by setting in the side of the mixing tube a spring valve. The increased suction of the cylinders as the engine was speeded up opened this valve automatically and admitted more air. As the speed decreased the suction also decreased and the valve, operated by its spring, gradually admitted less air, until, at a certain point, it admitted none at all.

"In this we have what is today known as the auxiliary air valve. And today it is still further improved by a screw which controls the tension of the spring."

Now the purpose of this series is to tell you how to use the least possible amount of fuel in the operation of your car. And the auxiliary air adjustment plays its part in this wise:

At low speeds the fuel mixture should be richer than at high. At low speeds the cooling areas rob the cylinders of more heat, compression is more apt to be lost, thru leakage, and combustion should be slower in order to sustain the pressure. But at high speeds compression is considerably higher, because there is less leakage and less loss of heat. A lean mixture burns faster and gives a higher pressure and therefore makes for greater economy than a rich mixture.

To quote one well known authority on the subject: "The quantity of mixture an engine will take varies greatly with the speed. At slow speeds the volume of carburetor pressure is equal to the cubic content of the cylinders multiplied by the number of power strokes. At high speeds of one thousand revolutions or over the quantity may drop to less than one-half the amount, depending on the design of the valves, inlet piping and passages. This reacts on the compression and hence on the mixture desired for best results.

"The design of the engine has a bearing on the carburetor design which explains the well known, but seemingly mysterious, fact that a carburetor giving good results on one engine sometimes fails to maintain its reputation when applied to one of different design. The system of ignition used has also a marked influence on the proper working of an engine."

The auxiliary air valve, opening wider and admitting more air as the engine speed is increased, promotes perfect combustion. And, as I have said before, perfect combustion alone gives economy of operation. It is essential, therefore, that this valve be so adjusted that it opens just enough to admit the required extra air ration at the right speeds.

Whether it does this or not depends on two things, first, the strength of the spring and second, the compression of the spring by the adjusting nut or screw. The spring should be of such length and of such gage (thickness of wire) diameter and number of convolutions as to provide the requisite progressively increasing resistance to opening. At the same time it must exert little or no pressure upon the valve when it is against its seat.

When your carburetor has been adjusted for slow speed running and you have set the needle valve in a position which supplies the least fuel capable of running smoothly turn your attention from the needle valve adjustment to the auxiliary air valve. With the engine running at a good speed slowly cover the air inlet with your hand in order to prevent any air being drawn into it. If the engine slows down when you do this, the spring should be weakened, or the tension lessened, since not enough air is getting to the mixing tube. Next try opening the air valve slowly by pushing it off its seat with your finger or with a pencil. If the engine speeds up it is another clear indication that the spring should be weakened. But if it slows down then you may know that the spring tension is correct and that the mixture is just right. Of course, an overlean mixture will slow an engine down, and if when you open the air inlet the engine slows down even tho the throttle is set for a fair speed you should tighten the spring adjustment, thus admitting less air.

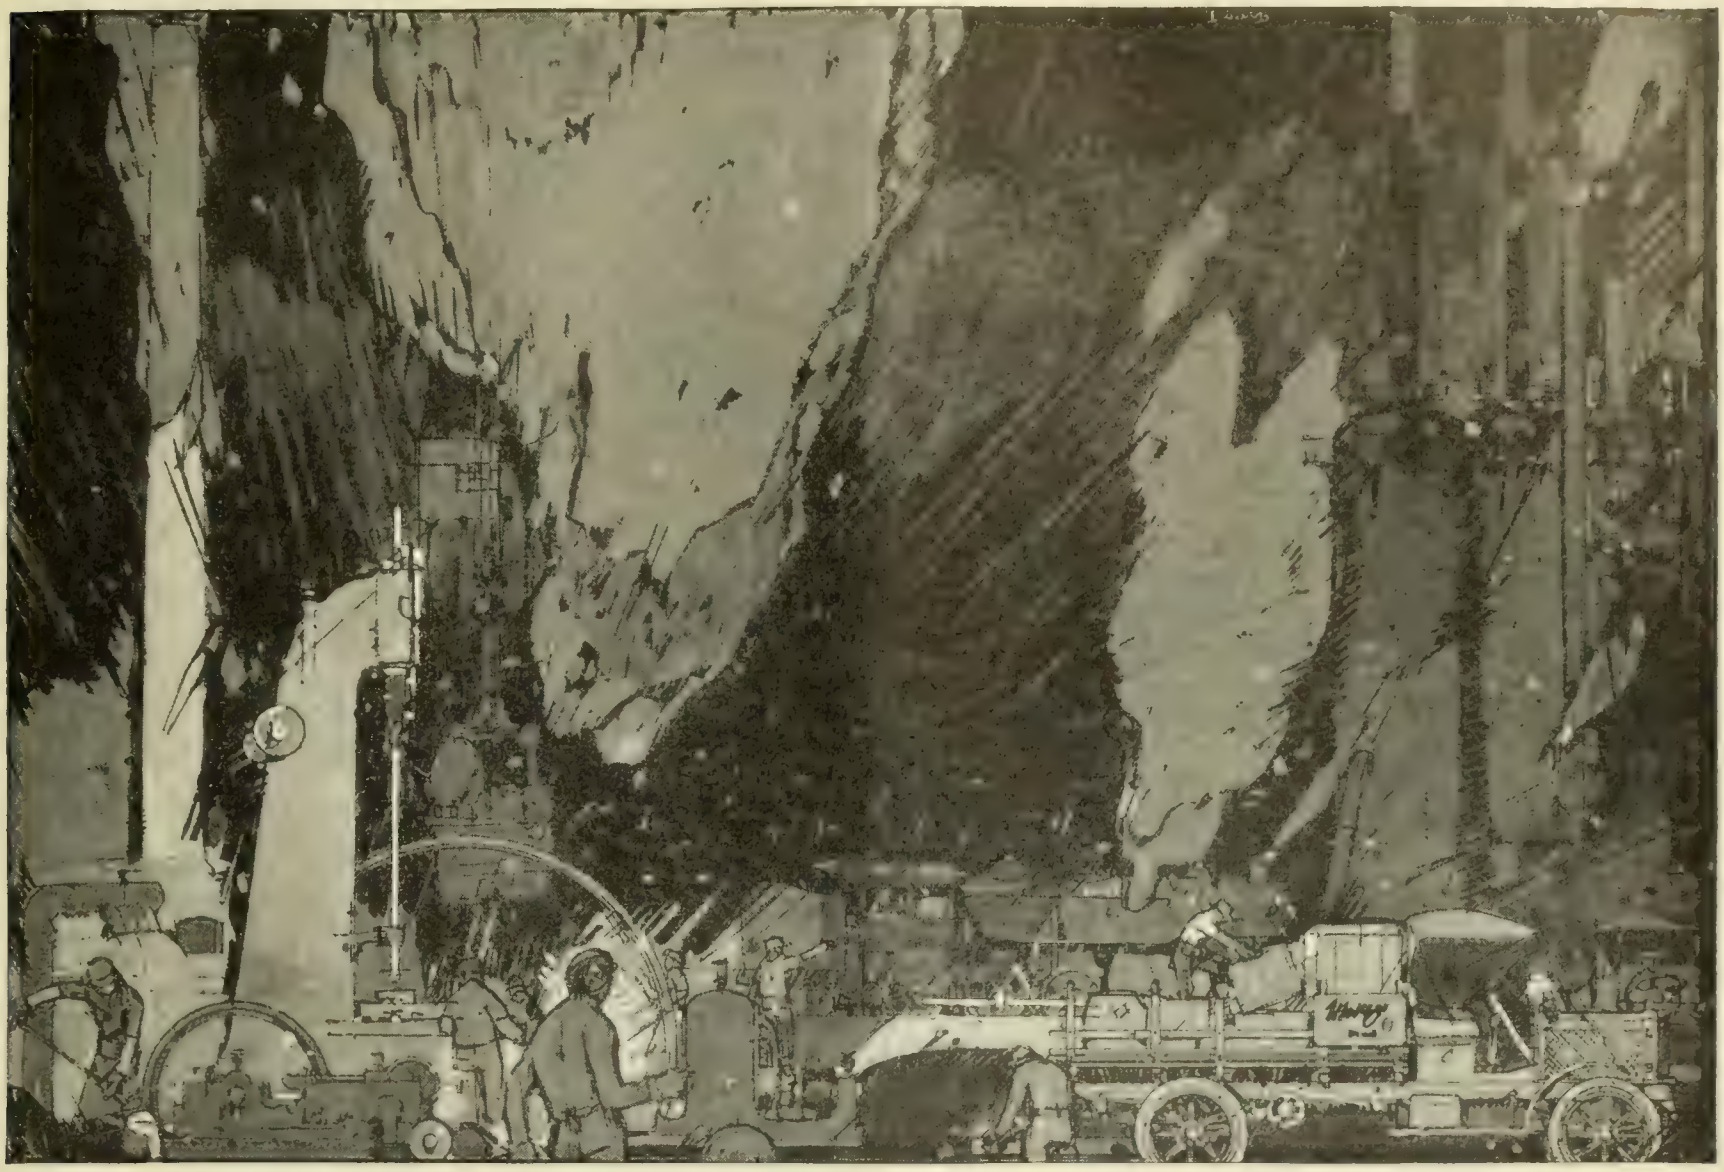
THESE adjustments should first be made with the engine running at about the rate which would produce a car speed of twenty miles an hour on high gear. After you have made them at this engine speed, make the tests given above with the throttle open twice as wide. All adjusting, let me repeat, is more satisfactory if it be done while the car itself is in motion.

This can be done if all the carburetor requires is the turning of the auxiliary air valve spring-tension nut. It is quite possible, however that you find the spring valve too weak or too strong in spite of all your efforts with the adjusting nut. In this case it will be necessary for you to remove the spring and either substitute a new one or alter the one you have.

Ask the Director anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give in this department an opinion as to the relative merits of various makes of cars or accessories, it is always ready to give full and impartial information about any individual product.

With the engine running slowly so that the air valve is held firmly against its seat, back off the spring adjusting nut until the slightest further increase in throttle opening causes the valve to leave its seat. From this point on the only proper adjustment for the air valve becomes a series of tests for spring strength without alteration of its normal length. That is, with the adjustment backed off to the extent described above, if the spring tension with increased throttle openings is too light, parts of or whole convolutions of it should be cut off and spring stretched to the right length to hold the valve upon the seat until the correct spring (not spring tension) is obtained.

If the spring you have seems too strong even after this has been done, you can unwind it slightly, to increase its diameter, which will also weaken it.



If the spring has too strong a tension it will not allow its valve to open sufficiently to admit enough air and the mixture will be needlessly rich—and wasteful—for high speed running. If the spring tension is too weak, it will let the valve admit air at low speeds, when it is not needed.

I would suggest that if you find it necessary to make alterations in the strength of the spring itself, you turn the job over to an expert carburetor man, or drive to the nearest service station maintained by the manufacturer of your carburetor.

WITH the appearance of cold weather you have probably found that the engine which has served you satisfactorily all summer is beginning to get balky. It is likely, in fact, almost certain, that you are beginning to have unusual difficulty in starting early in the morning, or even during the daytime, after your car has been standing for an hour or so. Cold weather makes starting difficult because overnight the engine gets so cold that the gasoline does not readily vaporize until the carburetor and the intake manifold are warmed up.

Many motorists, ignoring the fact that when the engine is cold it must be fed a very rich mixture—even raw gasoline at times—in order to make it start, make the costly mistake of keeping their feet on the starting button for minutes at a time. This lengthy spinning does no good. On the contrary, it does considerable harm. It brings a severe drain on the storage battery. And storage batteries, in cold weather, are strangely enough, less able to withstand such drains than they are in summer. Instead of spinning the engine in the hope that something will happen, it is far better to assume that it will not start and right at the outset to apply first aid measures.

In cold weather first step on the starter once, to turn the engine over and break the engine loose. The oil in the cylinders may have congealed and glued the pistons to the cylinder walls during the night. Then pour raw gasoline thru the pet cocks. And cut off the carburetor main air supply. When you have done this the engine will probably start readily. Once it is started gradually increase the air supply until the carburetor is getting the normal amount. But give the engine plenty of time to get warm. Five or ten minutes is frequently necessary.

HAVING THE STAMINA FOR WAR

AMERICAN machinery, American railroads, American trucks will be put to as drastic a test as the man power of the nation. Their ability to accomplish and to endure will be a factor in winning the war. Production will rise to unheard-of levels—and men will be scarce. The war will absorb them. If more work is to be done, with fewer hands, *machinery will have to do it.*

In transportation, motor trucks will displace horse draft, to save drivers. For the same reason, larger, better, more efficient trucks will take the place of lighter and cheaper ones. Heavier loads, faster time, uninterrupted service will demand it.

Every operation must be adjusted to save men. They will be scarce and expensive. The truck which can do the most work and keep at it the longest is the best investment. The essential thing is performance—doing the work—handling the volume—at low cost.

Every experienced truck user knows what a mechanical strain truck service imposes under ordinary conditions. Rough going, heavy loading, overspeeding, careless driving—all have their effect. Only the best mechanism survives.

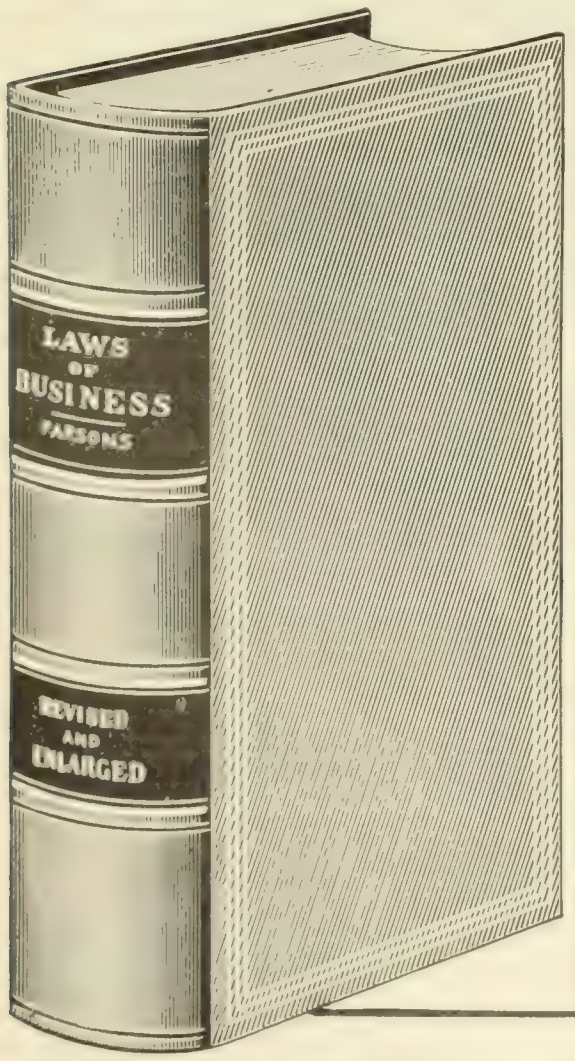
Under war conditions high pressure work will intensify the strain. Only the highest grade trucks will be able to work uninterruptedly.

Never before have the manufacturing standards always so rigidly maintained in building White Trucks appeared so vital. In normal service it takes time to demonstrate the low operating cost and high performance of a White Truck. Under the stress of wartime traffic they show up quickly. It takes White stamina to perform and endure.

THE WHITE COMPANY, *Cleveland*

The Importance of having the Law on *YOUR* side

The most wonderful thing about **law** is the **protection** it gives to the man who is **right** and who **knows** he is right. The man who **understands** the first principles of **Business Law** may be **prudent** in ordinary business transactions, but the man who has **Parsons' Laws of Business** at his elbow never **guesses.** He **knows!** He **knows** that he **knows! And he has the Law on his side.** The man who depends only on the law of common sense is sure to find out that:



Many a will is contested and upset
Many a deed or lease contains a clause that he doesn't KNOW about
Many a note proves worthless
Many a contract contains a qualifying or nullifying provision
Many a man suffers financial loss or has the expense of a lawsuit, because he did not KNOW, or provide against the invasion of, his RIGHTS

Parsons' Laws of Business (*1917 Edition*)

is the one great, standard text and reference book on **Business Law,** the book that saves endless lawyers' consultations and fees; **the book that keeps you out of legal entanglements;** the book that insures you against legal mistakes; the book that sharpens your intellect and fires the ambition of young men in business or just entering business; the book that hundreds of business and professional men recommend and thousands use; the book that should be in the home or on the desk of every man or woman who owns property; who is in business; who does business and who has ambition to succeed.

Is Your Will Contest-Proof?

Consult Theophilus Parsons, formerly Professor of Law in Harvard University, in his remarkable book **Parsons' Laws of Business.** In this work he gives the world a wonderful exposition of the laws of inheritance; explains the peculiar provisions required in wills and so clarifies the principles of inheritance law that when you have finished this chapter you can, aided and guided by the contest proof forms given in **Parsons' Laws of Business,** yourself be an authority on the drawing up of so important a document.

Do you make Contracts?
Are you an Investor?
Are you a Banker?
Is your life Insured?
Are you a Partner?
Are you an Employer?
Are you an Agent?
Do you hold a Note?
Have you given a Note?
Is your house or other property Insured?
Are you an Author?
Are you a Manufacturer?
Do you run or own a Car?
Are you a Farmer?

On these subjects and on all other conceivable vital business matters there are chapters in **Parsons' Laws of Business** written by that great constitutional lawyer, Prof. Theophilus Parsons, in untechnical, understandable business English. Each chapter is a clear, forceful, authoritative exposition of its subject, and you need this book because you need to know that you are right.

This is the great book of 946 pages of Business Law of which over 300,000 copies have been sold; the book that contains revised and authoritative legal FORMS of all kinds.

Are You an Executor? Guardian?

Do you know the duties, the powers, the rights of beneficiaries, and that executors are entitled to compensation in the administration of their sacred trust? Prof. Parsons has written two wonderful chapters on these all-important subjects in his **Laws of Business**—chapters that for real information value to the layman are probably unequaled in legal literature.

Do You Know the Peculiar Kinks in the Laws Relating to Married Women?

Do you know the property rights of husband, wife, children; or other heirs, of blood relations; how they vary in different States? In clear, untechnical, understandable terms Prof. Parsons points out the pitfalls awaiting those who are careless of dower rights. **Parsons' Laws of Business** in these wonderful chapters show how indispensable this book is to women as guide and counsellor.

Are You an Inventor?

Do you know that not one inventor in a hundred ever enjoys the financial reward of his discoveries, simply because he was ignorant of his rights under the patent laws? Forget, if you please, that **Parsons' Laws of Business** contains about 900 other pages and consider only Prof. Parsons' masterful exposition of patent laws, on how to proceed on Application Forms, on Caveats, on Assignments and Grants; on Appeals; on Interferences; on License; on Foreign Patents; on Trade-marks, etc., and you would have a book worth many times its remarkably low price.

Do You Own Property? Expect To?

Nothing more fires the ambition of the men or women than the expectation of owning a home or making a real-estate investment. How important to know that your contracts, deeds, and other documents are correctly drawn, so that you may be sure of a clear title! Prof. Parsons' chapters in his **Laws of Business** are absolutely authoritative on ownership, lease and title, as well as on the rights of tenants, on trespass, rental, etc., etc. Every property-owner, every prospective property-owner, needs this wonderful book. It contains every standard form of Deed, Mortgage, Release, Lien, Lease, drawn up by a master mind.

If you're a law abiding citizen you need this book

THE NEW PLAYS

The Rescuing Angel, by Clare Kummer, affords slight opportunity for Billy Burke to do more than show off her type of prettiness. Thin comedy unredeemed. (Hudson Theater.)

Eve's Daughter, by Alicia Ramsey, is the season's first offering of Grace George and her highly competent "Playhouse Company." Exaggerated character delineation in spots, but a very strong and worth while play for adults. (The Playhouse.)

HOW TO STUDY THIS NUMBER

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. COMPOSITION.

The Story of the Week.

1. The class will select four students to speak respectively on the four topics that follow. When all the explanations have been presented the class will decide which student has won the honors of the day. (a) A clear explanation of the five recommendations for price control. (b) The control of the bituminous coal industry. (c) How the new war taxes will affect the individual. (d) Reasons for granting or refusing the demands of the Switchmen's Union.
2. The teacher will appoint four students to answer, in turn, all questions that the class may ask on the following topics. The two who show the best information, and who use the best English, will be declared victors. (a) What the British navy has accomplished in the war. (b) The political crisis in Germany. (c) Internal affairs in Italy. (d) The present condition of Russia. (e) Recent fighting in Flanders.
3. Write a sincere expression of your opinion on every one of the following topics: (a) The Norwegian protest. (b) The Luxburg revelations. (c) The Sinn Fein conference.
4. Write short newspaper items on the following topics: (a) What the war is costing Great Britain. (b) How the copper strike was settled. (c) The League of Small and Subject Nationalities.
5. Write a short composition in which you show what an ordinary person can do to help conserve the nation's food supply.
6. Show, with the aid of a map, how the present war is related to the events of Bible times.

Editorial Articles.

1. Write a short summary of "The Shifting War Map."
2. Prepare a speech in which you ask for money to aid the army work of the Young Men's Christian Association.
3. You hear a friend speak in an angry way concerning "Free Speech." Explain to him exactly what is meant, and what is not meant, by the term.
4. You hear a friend laugh at a farmer. Show him exactly what the work of the farmer means to the nation.

Creative Chemistry. By Edwin E. Slosson.

1. Point out examples of the following: point of contact; use of the familiar; humor; climax; allusion; metaphor; use of detail; personification; epigram; emphasis.
2. Write a brief of the entire article.
3. By what means has Dr. Slosson gained clearness?
4. Write a somewhat similar article concerning some subject with which you are familiar, but which most people know little about.

Making Sailors without Ships. By Willard Connely.

1. Imagine you are in training at the Dunwoody Industrial Institute. Write a letter about your life there.

Socialists: the Kaiser-Party. By William English Walling.

1. Summarize the indictments that the writer, who is an advocate of Socialism, makes against the present Socialist party. How does he support his contentions?

The Cinderella of the Arts. By Mary Perry King.

1. In a single paragraph explain the type of dancing in which the writer expresses the greatest interest.

SECTION II. LITERATURE.

The Red Flower. By Henry Van Dyke.

1. Explain the following words: Pentecost, angler, hodden, devil's paint brush, field-gray.
2. Explain the meaning and the effect of the following expressions: "With bullet heads"; "Their iron way"; "The devil's hour"; "Crimson mud"; "The will to power."
3. What was the occasion of the poem? What contrast does it suggest? What emotion does it present? How does it affect the reader?
4. Tell something concerning the literary work of Henry Van Dyke. What great international services has he rendered? Why do we regard his poem with especial interest?

SECTION III. WORD STUDY.

1. Give the meaning and the derivation of every one of the following words prominent in the news of the week: referendum, commodities, bituminous, casualty, chancellor, conservative, Reichstag, compromise, morale, Bolsheviki, comprehensive, exchequer, Flanders.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Financing the War—"Here Come the Taxes!" "Britain's Big Bill."

1. Keep a record during the next few weeks of the evidences which you see of the "host of war revenue taxes, designed to bring home to the people the urgency of the national crisis."
2. "Greatest popular interest attaches to the new postal rates." What are these rates? Why are people so much interested in them?
3. Compile, as far as you can, the statistics of expenditures for war made by the various European nations during the past three years. Why is the United States at the present moment spending so much more than any other country?
4. Can you explain the last sentence in the New Item, "Britain's Big Bill"?

II. Progress of the War—"The Shifting War Map," "Italy frim Within," "Kerensky Speaks His Mind," "The Flanders Push."

1. ". . . the Austro-German invasion of Italy is a peace drive," etc. Explain the invasion upon this assumption.
2. "Her [Austria's] territorial ambitions . . . point toward the Balkan rather than the Italian peninsula." When and why did Austria change her point of view in this matter?
3. Why are the Allies determined to win the war on the western front while the Germans "prefer to knock out their weakest enemies"?
4. Prove to yourself by means of a map that the conquest of Poland, Rumania and Venetia shortens the German line.
5. Germany seems to have abandoned her Russian campaign for the present. Why?
6. Why are the operations in Flanders referred to as a "push" rather than as a "drive"?

III. The Gateway to Asia—"In the Path of the Crusaders."

1. Why, in all ages, have most of the great struggles between Europeans and Asiatics been fought in Syria and Asia Minor? Illustrate your answer by reference to one or more of the struggles in antiquity or in modern times.
2. At the present time there is active rivalry for the control of western Asia between Russia, Great Britain and Germany. What purpose had each of the three in mind? What has each done in the last generation to gain this control?

IV. The German Government and the War—"Germany Drops the Pilot."

1. What relation does the Imperial Chancellor bear to (a) the Emperor, (b) the Bundesrath and the Reichstag, (c) the Prussian Diet, (d) the rulers of the federated states of the empire?
2. What is the attitude of von Hertling toward the war? How is he regarded by each of the parties in Germany?

V. Modern Industrial Problems—"What Comes from Coal Tar."

1. The dyestuff industry is an example of the development of an industry based upon the utilization of by-products. Sketch briefly how this development has taken place.
2. Contrast the attitude of the English and American governments and manufacturers toward the dyestuff industry with that of the German Government and the German manufacturers.
3. "The manufacture of dyes is not a big business, but it is a strategic business." Upon what facts is this statement based?

VI. Socialism and the War—"Socialists: The Kaiser-Party."

1. From an examination of the stated principles of socialism in your text book make a brief summary of the ideals of the party previous to the outbreak of the war.
2. In view of Mr. Walling's past sympathies, how do you account for his present attitude?
3. According to Mr. Walling, what are the factors which are contributing toward the growth of so-called Socialist sentiment in the United States? Are these factors permanent forces or forces which will be at work only "as long as the war endures"?
4. "Probably a majority of the urban masses still believe that this is a capitalists' war.' How do you account for this belief?
5. "It [the Socialist organization] is now not only un-American but it is anti-American." Do you agree with this?

VII. The Laboring Man and the War—"Will the Switchmen Strike?" "Copper Strike Settled," "Soft Coal Prices Raised."

1. In normal times, what are the chief influences which regulate the relations between capital and labor? How have these been modified by the war?

HARPER'S WEEKLY

MORALE AND MORALITY

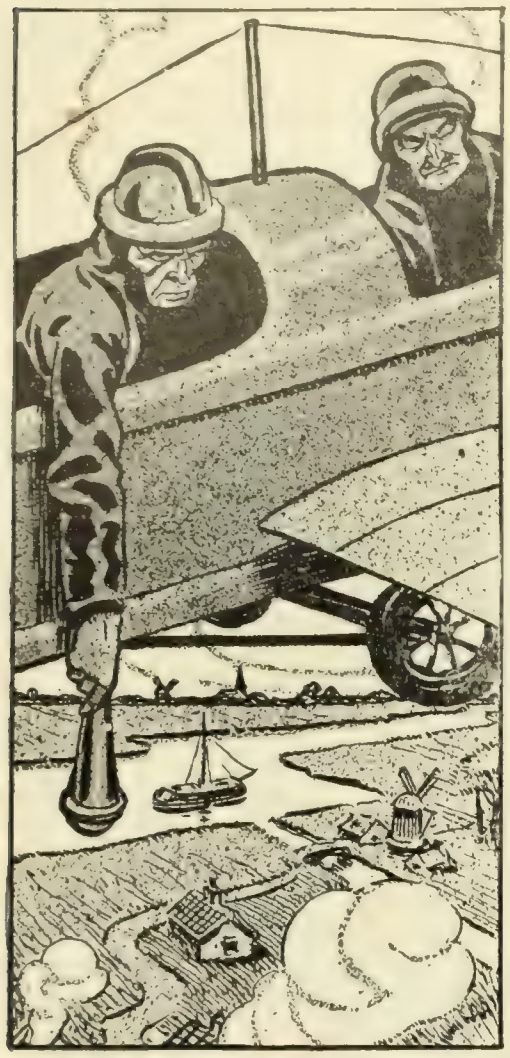
THERE is a dazzling superman sort of assurance in the calm way in which the Young Men's Christian Association assumes that if a thing is worth doing, the money will of course be furnished for it by those who have seen Association programs meet and fill opportunities heretofore. American business men obviously like that kind of bold philanthropic engineering—calculating the need irrespective of the charges and then going smartly about the matter of meeting the need without even stopping to ask whether the thing is possible.

The need, opportunity and duty which compel the Association's military effort nobody doubts who has made even a half hour's exploration of the case. Army officers, who know most about the soldier's efficiency conditions, are most emphatic in insisting on something requisite which must be added beyond complete equipment and perfect drill to keep a fighting man keyed up to modern battle strain—*morale*, military parlance names it. That signifies something stout enough to offset homesickness, potent enough to dissipate cowardice, idealistic enough to electrify patriotism, conscience-stirring enough to nullify temptation, thrilling enough to evoke high purpose, manly honor and gallant conduct. And leaders, military and civilian, who see life steadily and whole, know that this kind of thing is not accomplished in men except by forging character in the heat of some kind of religious conviction.

That makes a gnarled problem for twentieth century governments, timid as they all are about getting involved (during war time at all events) in the animosities born of sectarian jealousy. And it is certainly a godsend to them all that the Young Men's Christian Association has reached a stage of development in which it is able, as a score of practical illustrations prove, to project among men of many classes and all sorts of names a religious stimulus that has power and reality in it and yet does not set fire to any theological or ecclesiastical controversies. That is just the thing that nations require more than anything else to give to their armies substance that will stand wear. All civilization is stronger for the demonstration that there can be put to use in such times of stress as the present a really nonsectarian religion which lacks neither spinal stiffness nor heart-beating vitality. Precisely this is what the North American Young Men's Christian Association has ready in supply for the soldiery of the United States and the soldiery of its allies—an experienced religion consisting of shoulder-to-shoulder brotherhood among conscientious comrades in arms and an ever-present conviction that God made men to be righteous and will hold them to account if they neglect his purpose. Also it includes a strenuous faith that "God is able to make a man stand" if the man really wants to stand, and that when a man stands by God, God is bound to stand by him—in life and in death—and after that in life again.

Commending that kind of faith in the name of Jesus Christ as greatest of all who have dwelt by the side of the road and been friends to man, cannot possibly do offense to bishop or presbyter, pastor or priest, pope or patriarch. It is no wonder then that in the army camps priests celebrate mass and ministers preach sermons in the same Y. M. C. A. huts.

No wonder either—tho at the first hearing of it, it seems a present-day miracle—that orthodox Russia and papal Italy and also France (not yet certain of just what its religion is) want this very same thing in their armies just as much as the United States wants it. And when one hears thus how much the Young Men's Christian Association service is appreciated and how widely, marvel ceases that in order to answer all demands $35,000,000 should be called for by General Secretary John R. Mott and his associates in the National War Work Council. An Association building for each five thousand men in every American camp, at home and overseas alike, with five hearty, friendly, helpful men attached to each building—that with all the incidentals will cost something like $25,000,000 till the middle of next year. And after spending that much on our own men, $10,000,000 more for missionary extension of the same thing to our allies is not to be begrudged. Still less is there reason to begrudge the modicum of the fund that will go to comfort men in prison camps on both sides of the fighting line. In an hour when Americans are fully set on paying the whole price of quick victory, they will assuredly not refuse or scale down this investment in morale—and morality.



FREE SPEECH

THE right of free speech is a much mishandled conception. It implies the right of the individual to speak his mind without interference, *unless* his mind contains what is indecent or seditious or treasonable or libelous. He may speak freely, but he may not lie to the detriment of his neighbor, or debauch the morals of the community, or incite to rebellion against the state, or give aid or comfort to the nation's enemies. He may not use tongue or pen to the detriment of the public safety.

This is in time of peace. In time of war the restrictions, in the very nature of the case, become more rigorous, tho the underlying principle of the preservation of the public safety remains the same. But the safety of the state becomes the supreme consideration. Then the would-be critic of the acts of the majority must be held to a higher, a more rigid responsibility. Then the boundary line between treason and loyalty, with its perplexing twilight zone, shifts bodily. Then simple disloyalty may become as dangerous as sedition,

CARTOON COMMENT

AIR RAIDS AND REPRISALS

A NEUTRAL'S RIGHTS

"De Notenkraker," Amsterdam, presents this cartoon of a somewhat ignored point of view on air raids. "Drop them here," say the aviators, "these are only the neutrals"

THE BOOMERANG

Germany's increasingly successful Zeppelin attacks on London have roused the British people to a vigorous demand for reprisals. General Smuts, South African statesman and member of the British War Cabinet, struck the note of popular feeling in a recent speech: "We are dealing with an enemy whose culture has not carried him beyond the rudiments of the Mosaic law, to whom you can only apply the maxim of 'an eye for an eye and a tooth for a tooth.'" Roy, of the London "Evening News," has sketched below his interpretation of Germany's reactions

IMMUNE?

"Well, it's been a wonderful protection —so far!" comments the foxy Kaiser under the umbrella of "British Forbearance" in this cartoon by Williams, published in "London Opinion"

JOHN BULL: "AFTER 'EM! THEY'VE ASKED FOR IT, AND WHAT THEY GET THEY'LL WELL DESERVE"

sedition may shade over into treason. Then the people, whose agent the government is, have the right to demand, with an insistence that in time of peace would be oppressive, of the individual who would oppose the people's decision, that he guard his tongue and curb his pen.

This is not a denial of free speech; it is a modification of it to fit abnormal conditions. It is no more tyranny for the Federal Government, in time of war, to repress with a firm hand the utterances of dangerous men than it is for the policeman in time of peace to prevent a careless or recalcitrant citizen from maintaining a nuisance in his backyard or driving recklessly in the street or telling lies about his neighbor.

It is all a matter of degree. The Government must enforce what is for the good of all. What is best for all in time of peace may be far from that in time of war. The obligation to decide rests upon the Government, subject to the fundamental responsibility to public opinion and the popular will.

Which brings us to the real touchstone of the whole matter. Our judgment of the right and wrong of any particular case of repression of speech must depend on our judgment of the speech itself. And yet the question is not whether the speech is sound or unsound. The abridgment of the freedom of speech should only arise when the speech is inimical to the public safety. When we have answered to our own satisfaction this question we are ready to make our decision on the question between the repressor and the repressed.

It is the function and the duty of a government in time of war to restrain any acts or utterances which will militate against the success of the nation in its prosecution of the war. It is the function and the duty of the people to decide whether any such act of restraint is necessary and reasonable. If the decision is in the negative, the verdict should be not that the government has no right to restrain speech, but that it has erred in exercizing that right.

Free speech is a precious possession. Any abridgment of it for whatever purpose must be entered upon with reluctance and regret. But when the purpose is the preservation of our liberties, our sovereign rights or the welfare of humanity, there can be but one choice. The safety of the people is the supreme law.

LOGIC

THE United States Government is taking elaborate and wise precautions to keep the soldiers it is making away from drink. It knows that drink does nothing but harm to a soldier.

If a soldier, why not a munition maker? Or any other kind of a worker? Or anybody?

FARM PURCHASING POWER

THERE is something almost beyond belief in the colossal totals of crop values in this season's results of farming. It would seem that, after twenty years' rise of purchasing power on the part of the farmer, the tendency had at least reached a climax. Some preliminary estimates place the aggregate worth of crops and animal products at the unprecedented sum of $18,000,000,000 as the American farmers' addition to the national wealth at current prices for the year 1917. Last year it was placed at between thirteen and fourteen billion dollars. But both prices and yields have, as a rule, vastly increased for the current year. At the October 1 price wheat had a record value of $1,324,000,000, or $452,000,000 more than the crop of 1916. Oats were worth $427,000,000 more than that of a year ago. And corn at $1.75 a bushel, had a farm value of $5,620,000,000, or the snug little sum of three billion, four hundred and ninety-one million dollars more than the crop of 1916. This year's yield of 3,211,000,000 bushels of corn is worth almost as much as the three crops of corn for the years of 1914, 1915 and 1916 combined (December 1 prices).

These three cereals, the mainstay of cereal foods for man and the domestic animals, total 5,450,000,000 bushels and their farm value amounts to $7,925,000,000 in round numbers. If the farmer sells only half of this he will pour a leaven of $3,963,000,000 into the commercial lump and set millions of men at work in factory and workshop.

How this vast purchasing power will react on the life and labors of the farming world itself remains to be seen. If much of it goes into unproductive expenditure, it may do more harm than good. If it helps to wean away the youth from the farm, by the glitter of overmuch fondness for the city and less love for the free citizenry of the land, it must be a curse. But if it goes for enriching the spiritual life of the farm family and community, if it is used to relieve rural womanhood of the drudgery and strain that sends too many to the insane asylum, if it is employed in improving the farmer's mastery over the real factors of his calling, then the prosperity of big crops and adequate prices must bring, thru the farms of the country, an unmixt blessing to the entire nation.

THREE OF A KIND

The soldier who refuses to fight.
The rich man who refuses to buy bonds.
The citizen who refuses to vote.

THE MOB

THE dastardly act of a band of masked men who kidnapped the Rev. Herbert S. Bigelow, pastor of the People's Church of Cincinnati, a week ago Sunday night, took him to a lonely spot in the Kentucky woods and horsewhipt him, is more than a national humiliation. Do these self-styled loyalists and patriots realize that they have done a thousandfold more harm to the American cause than any utterances of a pacifist preacher could possibly do?

When the mob at Memphis the other day burned a negro at the stake and cut off his head for a Roman holiday, the gruesome details were immediately published thruout Germany as a typical example of the civilization they could expect to have imposed upon them if America won the war.

In times like these, we cannot expect entirely to avoid outbursts of mob madness, but the American people must sternly repress and punish them whenever they arise; for those who tolerate the mob shall perish by the mob.

THE SHIFTING WAR MAP

ACCORDING to the German Socialist daily, *Vorwärts*, the Austro-German invasion of Italy is a peace drive; its object is not to win more territory, but to win more favorable peace terms. *Vorwärts* cannot be called a Government organ, but in this case we may well accept this view of the motive of the new movement. Austria felt badly in 1866 when, under pressure of the iron heel of Prussia, she was forced to cede Venetia to the Italians, but it is hardly probable that she hopes to regain the province or even to hold that part of it she has now taken. Her territorial ambitions, if she still retains any, doubtless point toward the Balkan rather than the Italian peninsula.

Nor is it likely that Mackensen imagines that he can sweep clear across Italy and attack France in the rear. The attack from the east across the Isonzo River has been supplemented by an attack from the north across the Carnic Alps, and, if this is followed by an attack from the Trentino on the west, the Venetian province may possibly be lost, but any further advance could undoubtedly be checked by running in troops from France. This would of course mean that for the winter at least the pressure upon the German lines in France and Belgium would be relaxed

and that the Germans had again succeeded, by means of an offensive, in shifting the battle from a field chosen by their enemies to one preferred by themselves.

It is a commonplace of strategical science that the belligerent which enjoys the advantage of superior numbers and position can choose the time and place for attack, so it is curious to see that in the present war the Allies, altho they vastly outnumber the Central Powers and surround them on every side, have left it largely to the latter to take the initiative. On sea and on land and in the air Germany has repeatedly assumed the offensive and kept the Allies on the jump to meet her new weapons and new points of attack. The only European campaigns initiated by the Allies were the attack on Gallipoli by the British and the invasion of Transylvania by the Rumanians, and both of these were disastrous failures.

It has been the fundamental principle of the Allied strategy that the war must be won on the western front and that it did not matter much what happened elsewhere. The Allied press has always argued that, since Germany is the strongest of our foes and the France section is the strongest of the German lines, a knock-out blow delivered here would bring victory at once. Quite true, but the French and British have been pounding away on this line for three years and the knock-out blow has not yet been delivered. It may come at any time—Germany, for all we know, or don't know, may be on the verge of internal collapse—but we may be sure that so long as the Germans have men enough they will hold the western front. And so long as they have men enough to fill the trenches and ammunition enough to keep their guns going they may continue to hold this front indefinitely, with such slight setbacks as they have already suffered. It is like Horatius at the bridge:

> In yon strait path a thousand
> May well be stopped by three.
> Now who will stand on either hand
> And keep the bridge with me?

The line between Switzerland and the sea is no "strait path," but in trench warfare numbers do not count beyond the necessary minimum to man the front and provide for reserves. The British despatches speak much of the declining *morale* of the German troops. The prisoners taken are mostly old men and boys, ill trained, incompetent and dispirited. That we have heard the same sort of reports from this same source for the last two years should not make us incredulous now. The man power of the German empire is of course greatly weakened. Herr Ledebour, speaking recently in the Reichstag, said that the German losses amounted to six million, of whom 1,500,000 were dead, 500,000 crippled for life, 2,000,000 permanently invalided and 2,000,000 wounded. Part of the wounded will return to the ranks, but there are some 700,000 Germans held prisoners by the Allies. Ledebour, as a Socialist trying to stop the war, would not minimize the losses, but he would hardly have dared to exaggerate them in a Reichstag speech. So we must assume that Germany has lost about half of her able-bodied men.

But the poor quality of the soldiers recently captured in France and Belgium need not mean a serious weakening on that front. In view of the new movement it may be susceptible of a different interpretation, for as we now know one or two hundred thousand of the best German troops were sent to aid the Austrians in their invasion of Italy. It is no compliment to Haig and Pétain that the enemy should have entrusted the line in front of them to "old men and boys" while the best troops are despatched to start a fresh offensive in another quarter. If many of the Allied troops have to be sent to Italy the odds against the Germans in France and Belgium will be correspondingly reduced. But the change of venue effected by Germany's new maneuver may turn out to the advantage of the Allies if they shake off their fixed idea that a decision can only be reached on the western front.

The policy of the Germans has been the opposite of that of the Allies. Instead of trying to deliver a knock-out blow to their strongest enemy they have preferred to knock out their weakest enemy. Belgium, Serbia, Montenegro, Albania, Rumania, Russia; these have been attacked and defeated, and now the Teutonic arms are turned toward the next weakest enemy. Siam and Portugal being out of reach, Italy is the victim.

At the time each of these advances was undertaken those who write on military strategy without looking at a map exprest great solicitude lest the Germans should weaken her front by lengthening her lines. But those who could afford a ten cent map and knew enough to lay a string on it knew better. The conquest of Poland shortened the line. The conquest of Rumania shortened the line. The conquest of Venetia would shorten the line. The original Italian-Austrian frontier was about 250 miles long. If the Austrians could establish a new front between Venice and Lago di Garda it would be only sixty miles long. They would no longer have the advantage of the mountain wall, but entrenchments on the open plain may stand as long as any. Neither the Germans nor the British have been able to break thru those on the flats of Flanders in three years of incessant fighting. What is worse, the Teutonic line on the eastern side may be regarded as virtually shortened by a thousand miles so long as Russia remains incapacitated by nervous prostration. The Austrians are said to have transferred forty divisions from the Russian front to the Italian.

Cadorna's first despatch from the front ascribed the wholesale surrenders on the Isonzo to the "cowardice" of the Italian troops. This phrase excited such indignation among the Socialists that it was withdrawn. But we hope it was true. For cowardice can be cured, but if the weakness manifested in this section means disaffection on the part of the Italian people it may not be so easily checked. The Austrians gave way ignominiously before the Serbs, Rumanians and Russians, but when they were stiffened up by a few German officers and troops they entered upon a campaign of conquest. The Allies have been much disappointed in Italy. They have supplied her with money and munitions, with coal and food, but her three million soldiers have penetrated but a few miles into the enemy's territory and have not been able to hold their own whenever the enemy assumed the offensive. But individually the Italians are brave fighters. We have seen them in the movies climbing mountain peaks and scaling precipices. Under new management and with stiff reinforcements of British, French and Americans the Italian army may turn tables upon the invaders and on this historic Venetian field another of the world's decisive battles may be fought.

VOICED VERSE

IS poetry a vocal or a visual art? Is it typography or elocution that gives it expression? Did poetry decline in popularity because the custom of reading aloud went out of fashion? And will the poet regain his prestige when the people relearn the art of listening? These questions seem likely soon to be answered, for there are various movements in vogue for a revival of the practise of reading verse aloud. Poetry societies are now thriving in many of our cities. Some of our poets are beginning to read their own works in public and with a little more practise they may read them well. And lastly, a Poetry Theater League has been formed in New York City "to present poets whom publishers are too timid to introduce" and to help along "the American Poetic Renaissance." The prospectus of the League asks "How many of us realize that more true poetry has been written within the last decade than in any other period of American literature?" We cannot answer this because the figures do not seem to be in the *World Almanac*, but we believe the League is right in trying to switch poetry from the page-eye route to the lip-ear route.

THE STORY OF THE WEEK

THE GREAT WAR

October 29—Eighteen British ships sunk during previous week. Italians retreat to Udine. Germans abandon Verder Peninsula.

October 30—Hertling succeeds Michaelis as German Chancellor. Germans take Udine. British advance to Passchendaele.

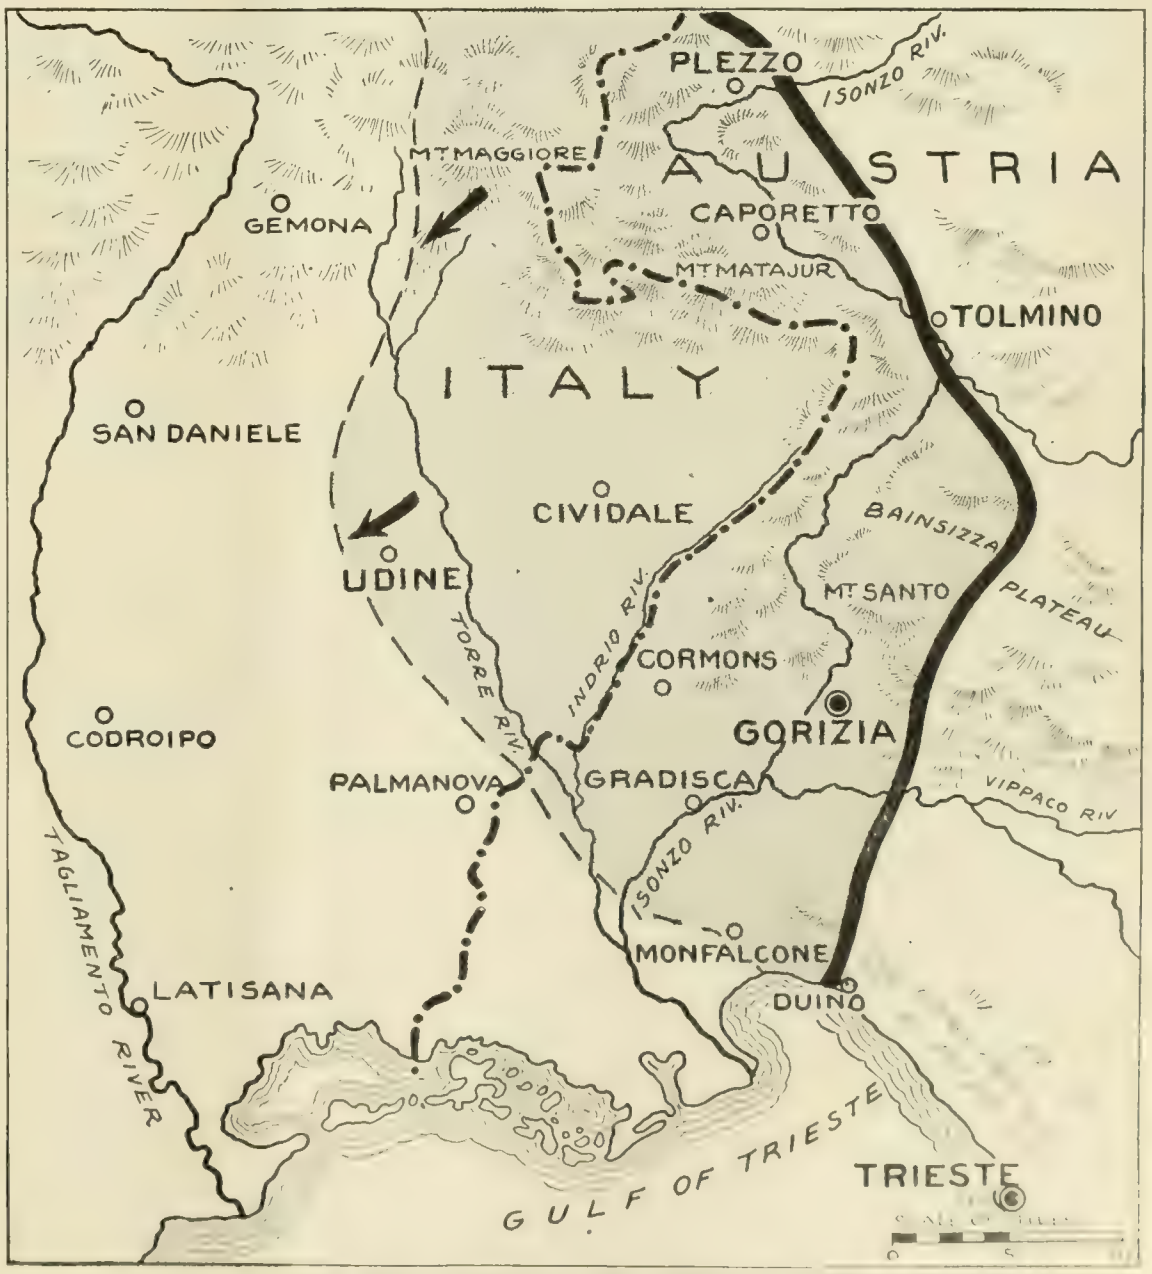
October 31—German invasion approaches the Tagliamento River. United States diverts coal and shipping tonnage to Italy.

November 1—Italians retreat across the Tagliamento. British occupy Beersheba in Palestine.

November 2—Germans retreat north of the Aisne. Pro-German riots in Southern Brazil.

Mackensen Crushes Cadorna's Army

The best that can be said for the Italian campaign is that General Cadorna withdrew his army in time to save it from being cut in two and annihilated in detail. The Italian retreat was ably managed, but it was so rapid that by the time the Italians had fallen back to the Tagliamento Valley they had permitted the enemy to take 180,000 prisoners and 1500 cannon. The large cannon loaned to Italy by England, however, are said to have been withdrawn in security. More than a thousand square miles of territory were covered by the great Italian retreat.



While the Italian army as a whole is probably very much larger than the Austro-German forces on the Italian front, the Germans under Field Marshal von Mackensen secured a great local superiority in men, artillery and munitions along the Isonzo between Plezzo and Tolmino, which completely demoralized that portion of the Italian line. In a retreat that was almost a rout the Italians abandoned their hold on the Julian Alps and retreated southwest to the lowlands around the towns of Udine and Cividale. This bent back the Italian line at such a dangerous angle that any attempt to hold Gorizia and the lower Isonzo Valley might well have resulted in the piercing of the Italian defense and the consequent isolation and capture of that part of the army which remained on Austrian soil. The retreat in the north was, therefore, swiftly followed by a more orderly retreat in the south, and Gorizia was abandoned. The troops on the Carso resisted every Austrian assault until the order for a general retirement left to the Austrians the positions which they had failed to capture.

The Italians made no serious attempt to hold Udine or Cividale, but continued their retreat to the line of the Tagliamento River. Here they turned on their pursuers for the first time and endeavored to withstand any further advance. A new Austrian army then advanced south from the Carnic Alps, which adjoin the Julian Alps but lie farther to the west, and struck at the extreme left of the retreating Italian army. This combined blow from the front and on the left flank forced General Cadorna to withdraw still more of his army beyond the Tagliamento. If the Italians cannot hold the Tagliamento line they may be forced to abandon even Venice and go into winter quarters south of the Adige or the Po.

Italy from Within

The German military authorities did not aim their crushing blow at Italy without reason or simply because Austria was in dire need of help. They knew that Italy was insufficiently provided with food, coal and munitions of war; that for weeks the Italian Government had been frantically begging Great Britain, France and the United States for the war supplies which would make possible a renewal of General Cadorna's brilliant summer offensive; that the bread shortage in the city of Turin had led to bloody riots which were comparable to the New York draft riots during our Civil War and were almost as destructive as the Sinn Fein outbreak in Dublin, and that pacifist propaganda (of which Germany was not ignorant nor yet innocent) had greatly affected the morale of the army. The German Socialists announced that the invasion of Italy was no war of conquest, but a "peace drive" to bring the war to a speedy end. The Pope's peace appeal had also, no doubt, its influence on the more devout Italians.

It would be a great error to say that the majority of Italians are weary of the war and willing to conclude an immediate peace without victory. A proof of this is the constitution of the new cabinet, chosen to office after the beginning of the Italian retreat. Vittorio Orlando, who was Minister of the Interior in the previous cabinet, is now Premier, and Baron Sonnino retains

THE FIRST WEEK OF THE GERMAN DRIVE

The heavy black line indicates the Italian position before General von Mackensen brought the German army to the aid of the hard prest Austrians. The shaded area shows the territory abandoned by the Italians to the enemy. The main attack came between Plezzo and Tolmino and passed thru Cividale and Udine, but the Germans also assaulted the Italians from the northeast in an attempt to turn the left flank of their army. The two arrows indicate the general direction of these movements. The bulk of Cadorna's army has been forced to retire behind the Tagliamento River

Pictorial Press

BRAZIL LOSES NO TIME

The declaration of war with Germany by the Government of Brazil finds a commission from her army already in France on a tour of inspection behind the western front

his post as Minister of Foreign Affairs. Both men are ardent supporters of the war and so are most of their colleagues in the new ministry. There is, however, a pacifist group which has its influence in Italian politics; or, rather, there are two groups, the extreme Socialists, who oppose all war, and the followers of ex-Premier Giolitti, who are more or less friendly to Germany. Open pacifist propaganda has been sternly suppressed by the Italian Government since the nation entered the war, but a good deal has gone on under cover until the whole country was awakened to the danger by observing the readiness of some regiments to retreat or surrender while their comrades attempted to stand firm.

The United States came to the rescue of Italy at once. Of course, it was impossible to send an army in time to give effective aid to the hard-pressed soldiers of Cadorna, but Italy is in far greater need of supplies than of men. The American Government extended to Italy the generous sum of $230,000,000 war credit to facilitate the purchase of needed commodities; transferred to Italian use 100,000 tons of shipping; granted an order for 2,000,000 tons of coal, and suspended all export restrictions which impeded the immediate shipment of goods to Italy. France and Great Britain arranged to send to Italy a large supply of munitions and also a small contingent of men, less to swell the numbers of the Italians than to give them encouragement and visible assurance that Italy's interests would not be sacrificed for the sake of victories on other battle fronts.

In the Path of the Crusaders The British campaign in Asiatic Turkey is progressing in a very favorable manner. On the last day of October a British army under General Allenby attacked the city of Beersheba and occupied it during the following night. As Beersheba is in southern Palestine, the British are now emulating the achievement of the children of Israel, who entered the Holy Land from Egypt and conquered it from the Canaanites. Substituting "Turks" for "Canaanites" the Old Testament is a very good guide to the strategy of the present British campaign, as the British also marched thru the desert from Egypt to the southern boundary of Palestine. Palestine is also historic ground in later wars, for King Richard of the Lion's Heart attempted in vain the conquest which his fellow-Englishmen of the present century have undertaken. The capture of Beersheba had, however, more than a sentimental importance. The Turks were compelled not only to abandon the city but also to surrender 1800 soldiers and nine cannon. In Mesopotamia the British have made progress, compelling the Turks to abandon some of their positions between Bagdad and the Persian frontier.

The Flanders Push The Franco-Belgian-British line continues to creep forward slowly across the shell-torn swamp north and northeast of Ypres. On October 27 the French advanced on a two and a half mile front directly north of Ypres and west of the Houthulst forest, occupying several fortified villages and farms. The Belgians took part in the advance, and, literally, swam to victory. The new line faces to the north a flooded region along the Yser Canal. The British entered the suburbs of Passchendaele on October 30, stopping just short of the town limits and occupying many spurs and ridges of high ground in the vicinity. The German report says that the British actually entered Passchendaele and were driven out again, but there is no mention of this in the British account. Practically the entire strip of high ground east of Ypres is now in the hands of the Allies.

The French have consolidated and extended their recent gains north of the Aisne. This sudden, dramatic blow is more striking, if not more important, than the slow and steady gains on the Flanders front. By a single stroke France regained no less than twenty-five square miles of her soil, which is said to be a record for trench warfare. Of course, Germany has made much greater gains in attacks against Russia, Serbia and Italy, but never across closely locked entrenchments. Another such blow on the same part of the western front would drive the Germans back to Laon and perhaps even compel a general retreat to a line of defense close to the French frontier.

Kerensky Speaks His Mind Premier Kerensky has appealed to the allies of Russia to bring speedy aid to the troubled republic. He declared that Russia had been carrying the burden of the war from the beginning and was now so worn by the strain that others must bear a larger share hereafter. "Russia," he said, "began the war for the Allies. While she was already fighting England was only preparing and America was only observing." He scouted the idea that Russia had any intention of concluding a separate peace and denied that the present anarchical conditions proved that the revolution had been a failure. "The Russian revolution," he pointed out, "is only seven months old. No one has the right to feel disillusioned about it. It will take years to develop. In France, which is only as large as three Russian departments, it took five years for their revolution to develop fully." Kerensky was asked if an American army would be of use on the eastern front. He replied that the difficulties of transportation put that out of the question, but that very important aid could be extended by shipping supplies to Russia and by granting loans to her. He said that the Russian people were dissatisfied because Great Britain, with the largest navy in the world, had done nothing to help Russia in the Baltic.

In the debates of the provisional Parliament the line has become more and more sharply drawn between the pacifist Bolsheviki and the rest of the delegates. Some of the Bolsheviki are threatening civil war to depose Kerensky and conclude an immediate peace. On the other hand, Professor Milukoff, leader of the Constitutional Democrats, declared that the peace program put forth by the Workmen's and Soldiers' Council was dictated in the interest of Germany. Premier Kerensky is using his best endeavors to reawaken a spirit of patriotism among the people and especially in the army and navy, and he appears to be hopeful that when the Constituent Assembly is chosen it will give the republic a measure of stability lacking at the present time when authority is more or less divided between the provisional Parliament, the ministry, and the Workmen's and Soldiers' Council.

Germany seems to have abandoned her Russian campaign for the present in order to concentrate her forces on the crushing of Italy. The army in northern Russia has been withdrawn

almost to Riga and the Germans have made no attempt to follow up the capture of the Baltic Islands by any sustained invasion of the mainland. It is, perhaps, already too late in the year to undertake a march on Petrograd. The temporary relief granted to Russia by the approaching winter and the urgent necessity for transferring troops to the Italian front comes at an opportune moment, for mutinies continue to occur in the army and navy and Finland is on the verge of open rebellion. It is possible, indeed, that a German army landing in Finland would find there as many friends as foes, for to political discontent has been added a serious food shortage which threatens Finland with a hungry winter.

The Vikings Condemn The Pirates

The recent destruction of Scandinavian merchant ships by German cruisers in the North Sea has called forth a note of protest from the Norwegian Government. After reciting the facts of the massacre of October 17, the note declared:

> The Norwegian Government bears in mind that in the memorandum addrest to the German Government on October 20, 1916, occasioned by the sinking of Norwegian ships in the ice-cold sea by German submarines, it called attention to the fact that the Norwegian nation considered in the light of a violation of the laws of humanity the last fresh case in which the death of Norwegian sailors was caused. . . .
>
> It has made a profound impression on the Norwegian people that not only have German submarines continued to sink peaceful neutral merchant ships, paying no attention to the fate of their crews, but that even German warships adopted the same tactics. The Norwegian Government decided to send this note in order to bring to the attention of the German Government the impression these acts have made upon the Norwegian people.

The newspapers in Norway express indignation at the reports of contemplated exports of nickel to Germany. They point out that this metal is used in the manufacture of torpedo tubes and that the Government, by permitting the sale, is giving the Germans the means for renewed murders of Norwegian seamen.

The Little Folk Speak Up

An interesting conference of the League of Small and Subject Nationalities was held in New York recently. Spokesmen for more than a score of the nations whose political independence is either not now recognized or is threatened by the predominant power of mightier neighbors presented the claims and hopes of their respective peoples, and there were also addresses on the general question of the principle of nationality by American speakers of note. Among the many nationalities represented were Denmark, Belgium, Ireland, Finland, Assyria, Korea, India, Lithuania, Scotland, Albania and the "Zionist" Jews. Dr. Frederick C. Howe, Commissioner of Immigration at the port of New York, acted as president of the conference. The object of the League of Small and Subject Nationalities is to secure the backing of American public sentiment for the consideration of their national interests at the coming peace congress which will end the Great War. Senator La Fontaine, of Belgium, presented resolutions of appreciation for President Wilson's championship of the cause of the small nations.

A number of persons announced to speak before the conference refused to appear on the ground that the League was pro-German in tendency. This idea seems to have been based partly on a printer's error which made it appear that one of the Alsace-Lorraine representatives was to speak on the "independence" of Alsace-Lorraine instead of the reunion of the lost provinces with France, and partly upon the fact that the representatives of India, Korea, Finland and Ireland presented claims for complete national independence which the Entente Allies are by no means disposed to grant. The Alsace-Lorraine delegation withdrew from the conference, and so did representatives of Bohemia, Greece, Armenia and some other nations. The organizers of the League deny any sympathy whatever with the cause of the Central Powers, and, indeed, the presence of spokesmen for Belgium, Slesvig and other countries opprest by Germany, Austria and Turkey should have dissipated any idea that the conference was held in the interest of Germany.

Sinn Fein Again

The Sinn Fein conference opened its sessions in Dublin on October 25, intending, apparently, to rival the Irish constitutional conference which is also in session. The latter organization is official, with the backing of the British Government and the Irish Nationalist Party, and its conclusions will in all probability form the basis for a Home Rule bill which will be the future constitution of Ireland. The Sinn Fein conference, on the other hand, is a rebel organization with no other authority than the military power of its backers can give it. Professor De Valera was chosen president of the organization, which claims the support of 250,000 organized Irishmen.

The constitution of the Sinn Fein, as submitted to the approval of the conference, provides that:

> Sinn Fein aims at securing international recognition of Ireland as an independent Irish Republic. Having achieved that status, the Irish people may by referendum freely choose their own form of government.
>
> This object shall be attained thru the Sinn Fein organization which shall in the name of the sovereign Irish people (a) deny the right and oppose the will of the British Parliament and the British Crown or any other foreign government to legislate for Ireland, (b) make use of any and every means available to render impotent the power of England to hold Ireland in subjection by military force or otherwise.

A constituent assembly of the Irish people was recommended to consider a comprehensive system of national reconstruction. This program included: the establishment of councils and local administrative bodies; the creation of an Irish consular service; the "re-establishment of an Irish merchant marine"; a survey of the natural resources of the country; the organization of a national civil service system; the establishment of a national stock exchange and of courts of arbitration for the adjustment of labor disputes; "the reform of education to render its basis national and industrial by the compulsory teaching of Irish language, Irish history and Irish agriculture and manufacturing potentialities in a primary system"; the substitution of outdoor relief and government employment for the present poor law system; the assurance of a living wage to workers, and the equality of men and women.

The Bulldogs of the Sea

Premier Lloyd George in a recent address to Parliament recited the achievements of the British navy in furthering the work of the war. He declared that 13,000,000 men, 2,000,000

A NEW GERMAN SPHINX

The resignation of the stop-gap Chancellor Michaelis leaves that important office open for a statesman of greater force and ability. Count Georg von Hertling, who has been asked to take it, is Prime Minister of Bavaria

horses, 25,000,000 tons of war munitions and 51,000,000 tons of coal and oil have been transported from port to port in safety since the opening of the Great War and that only 3500 British soldiers had lost their lives while on transports. The British expeditionary force, he said, now consisted of more than 3,000,000 men. Seventy-five per cent of this mighty army came from England. The British self-governing Dominions, including Canada, Australia, New Zealand, South Africa and Newfoundland, had contributed voluntarily nearly 800,000 soldiers. Scotland, Ireland and Wales had sent large contingents also, but the Premier made no definite statement of the number.

For the week ending October 28, the British lost fourteen merchant ships of more than 1600 tons each and four of smaller tonnage. This was a decided improvement over the record for the previous week, when twenty-five vessels were sunk by the enemy.

Sir Eric Geddes, First Lord of the Admiralty, told the House of Commons of the progress of the war against the U-boat. He asserted that from forty to fifty per cent of the German submarines have been sunk, and that more were destroyed in the last three months than during the whole of 1916. He announced that the total net reduction in British tonnage since the beginning of the Great War was less than 2,500,000 tons, or about fourteen per cent of the merchant marine of the empire. During the period of the war the navy had increased its tonnage by seventy-one per cent. He paid a tribute to the American destroyers for the good work which they had done. He regretted that, owing to the extensive mine fields at the entrance to the Baltic it had been impossible to extend aid there to Russia.

Germany Drops the Pilot

Chancellor Michaelis, the successor of von Bethmann-Hollweg as head of the German Imperial Ministry, has placed his resignation in the hands of his royal master and Count Georg von Hertling, Prime Minister of Bavaria, has been asked to take office as his successor. The resignation of Michaelis was generally expected and was, indeed, demanded by nearly every party and faction in the Reichstag. Michaelis was a colorless Prussian official who was put into the Chancellorship to tide Germany over the political crisis of the summer and give the Kaiser and his circle of advisers time to select a suitable man for the post.

The conservative parties of the empire clamored for the appointment of Prince von Bülow, who had been Chancellor before von Bethmann-Hollweg. Prince von Bülow is a pronounced reactionary on nearly all questions of foreign and domestic politics, but he is also one of the ablest men in German political life and no Chancellor since Bismarck has come so near to being a real power on his own account aside from his authority as agent of the Kaiser's will. The open opposition of the Socialists, however, made the appointment out of the question. Several other prominent men were proposed for the Chancellorship, but the Reichstag refrained from insisting upon any particular individual. Germany is as far today as in any previous hour of her national history from enjoying "parliamentary" government; as the selection of the Imperial Ministry is in fact as well as in name the exclusive prerogative of the Kaiser.

Count Georg von Hertling is a popular statesman of exceptional ability. Unlike Michaelis, he has been active in party politics and parliamentary life. In some degree, he represents "the scholar in politics," for at one time he was a professor of philosophy at Bonn University and he is the author of several books on philosophy and theology. He has served in the Reichstag, altho in recent years he has been active rather in Bavarian than in national politics. Since 1912 he has been Bavarian Premier. Count von Hertling is associated with the Catholic "Center" Party, which usually takes an intermediate stand between the reactionary Conservatives and National Liberals of Prussia and the radicalism of the Social Democrats. It is not known what attitude he will take toward the foreign and domestic problems which confront the German nation. He has voiced the general sentiment of Bavaria for an early peace on a basis of compromise; but, on the other hand, he has hitherto opposed every attempt to democratize Germany and he is said to have advocated the reactionary policy of dividing Alsace-Lorraine between Prussia and Bavaria instead of erecting it into a self-governing state of the empire.

Fresh Luxburg Revelations

Secretary of State Lansing has disclosed some more of the cablegrams which passed from the German legation in Argentina to Berlin by way of the Swedish legation. On July 7, 1917, Count Luxburg advised his Government to adopt a policy of frightfulness toward Brazil. His cablegram was worded as follows:

> Our attitude toward Brazil has created the impression here that our easygoing good nature can be counted on. This is dangerous in South America, where the people under thin veneer are Indians. A submarine squadron with full powers to me might possibly still save the situation. I request instructions as to whether after a rupture of relations legation is to start for home or to remove to Paraguay or possibly Chile. The naval attaché will doubtless go to Santiago de Chile.

Count Luxburg, the very undiplomatic diplomat who spoke of the South American people as Indians "under thin veneer," is the same man who called the Argentine Minister of Foreign Affairs "a notorious ass" and urged that Argentine merchant vessels should be "sunk without a trace."

International Film

SCHOOL CHILDREN IN LONDON

Zeppelin drill is a daily exercize in the East End public schools, and the children are taught in case of an air raid to lie flat on the floor

Another cablegram, dated August 4, 1917, has possibly even greater interest, since it refers to German ambitions in Brazil:

I am convinced that we shall be able to carry thru our principal political aims in South America, the maintenance of open market in Argentina and the reorganization of south Brazil equally well whether with or against Argentina. Please cultivate friendship with Chile. The announcement of a visit of a submarine squadron to salute the President would even now exercize decisive influence on the situation in South America. Prospect excellent for wheat harvest in December.

What Count Luxburg meant by the "reorganization of south Brazil" is not made clear, but it is at least interesting to Brazilians that for the first time an official representative of the German Government has admitted that Germany desired to interfere with the political status of the southern provinces of the republic where German settlers are fairly numerous. Chile will also, no doubt, be interested in the projected "visit of a submarine squadron" to cultivate "friendship" with a race of "Indians under thin veneer."

MOVING BOATS BY HALVES

Some of the boats from the Lakes, sent east to supplement our coast shipping, were too big to go thru the canals. So they were cut in two, made water-tight, and sent along, a half at a time

Britain's Big Bill Chancellor of the Exchequer Andrew Bonar Law, in an address delivered on October 30 to the House of Commons, recounted the financial cost to Great Britain of carrying on the Great War. The average daily expenditure from July 22 to September 22 of this year was £6,414,000, or about $32,000,000. For continuing the war to the end of the present year he asked Parliament to vote a credit of £400,000,000 ($2,000,000,000). The total loans since the beginning of the Great War amount to £5,692,000,000 ($28,460,000,000). The British national debt now stands at more than $25,000,000,000; but a large part of this is covered by loans to the allies of Great Britain or to the dominions of the Empire, which will in all probability be repaid. Chancellor Bonar Law explained that the increasing daily cost of carrying on the war was due in part to an increase in the army maintained in France, in part to the increased pay of the soldiers and sailors, in part to the rise in the price of bread and other commodities, and in part to the more open character of the fighting, which has necessitated expenditure for bridges, motor transport and temporary railways in Flanders. He asserted that Germany was spending more in the war than Great Britain and from a smaller reserve of financial resources.

He paid a tribute to the generosity of the United States. "It is an open secret," he said, "that until America came into the war the method of financing our purchases there and the question of exchange were not only serious problems, but, in my opinion, insoluble problems."

Wilson Tells Us to Save Food On "War Sunday," October 28, President Wilson appealed to the American people to conserve the food supply of the nation for the benefit of the army and navy, for the sake of the Allied nations not so blest as we with agricultural resources and for the common cause which brought us into the Great War. He promised that:

If our people will economize in their use of food, providently confining themselves to the quantities required for the maintenance of health and strength; if they will eliminate waste; and if they will make use of those commodities of which we have a surplus, and thus free for export a larger proportion of those required by the world now dependent upon us, we shall not only be able to accomplish our obligations to them, but we shall obtain and establish reasonable prices at home.

The Food Administration is now working out a system of indirect retail price control. One of the methods which will be employed is the limitation to a fixed number of days of the time permitted for storing food. Licensed warehousemen and storage concerns will, subject to certain exceptions, be forbidden to keep on hand any quantity of food in excess of "reasonable requirements" for a sixty day period and will be forbidden also to sell to any person a supply "in excess of his reasonable requirements for use or sale by him during the period of sixty days next succeeding such sale or delivery." Cold storage goods will not be allowed to sell as "fresh" and the date of their consignment to storage must be recorded. All warehouses must file rate schedules with the Food Administration.

SCHOOL CHILDREN IN NEW YORK

These lusty young ones decided to imitate their elders recently and went on strike from school work. The police had to break up their street meeting riots

Here Come the Taxes! On November first a host of war revenue taxes, designed to bring home to the people the urgency of the national crisis, became effective. Beginning with midnight, October 31, there came into operation the ten per cent levy on amusement admissions, the three per cent tax on freight transportation, the eight per cent addition on passenger fares, the ten per cent tax on Pullman accommodations, the five per cent tax on oil pipe line transportation, the five per cent tax on express packages, the five cents due on telegraph and telephone messages costing fifteen cents or more, the extra ten per cent on club dues, the eight cents levy on each $100 of new life insurance and the penny a

dollar due on fire, marine and casualty insurance premiums. On the following Friday several new and increased taxes on tobacco and its products, enacted during the recent session of Congress, were automatically imposed.

Greatest popular interest attaches to the new postal rates. Postcards are, from November 2, carried for two cents instead of one; letters to places in the United States, Canada, Cuba, Mexico, Panama, Great Britain, and various parts of the West Indies will require fifty per cent more postage than hitherto, beginning with a minimum of three cents; "drop" letters will require two cents instead of one. Other stamp taxes, including those on parcel post packages, will not go into effect until the first of December, however, and the increased mail rates on periodicals not until next July. The report of the Post Office Department, showing a surplus for the year of $9,000,000, may cause Congress to modify some of the new postal rates during its winter session. Only on twelve previous occasions in the history of the country has the Post Office Department turned any surplus into the Treasury, and never before so large a one. Usually, the postal services of the nation have been run at a marked financial loss, and this fact has been the basis of an agitation for increased rates.

Business Men for Price Control The Chamber of Commerce of the United States has ratified, thru the medium of a referendum of the business organizations which are affiliated with it, the declaration at the war conference recently held at Atlantic City, approving Federal regulation of prices during the war. The recommendations approved by referendum favor: additional legislation increasing the power of the national Government to fix prices; the extension of price regulation to all articles having importance in basic industries as well as those directly utilized in carrying on the war; the fixing of prices to the general public as well as to the Government; the administration of price control by a small executive board selected by the President; distribution of essential commodities, with preference "to those purchasers whose needs are most directly related to the public welfare," by a Federal agency, and the establishment of committees for each leading industry and trade to represent it in conferences and to tender advice to Federal agencies that control prices and distribution. These resolutions were all approved by heavy majorities, varying from six and a half to one to more than ten to one.

Soft Coal Price Raised In order to permit an increase in wages to the miners and to prevent any renewal of strikes in the bituminous coal mines, President Wilson has authorized an increase in price of forty-five cents a ton. This increase applies to the price at the mine and only indirectly affects retail costs. On the average, the price of coal to the wholesaler is increased by the new order from $2.75 to $3.20. The wages agreement already reached by conference between the operators and the miners of the Central Field allows an advance of ten cents a ton to miners, advances ranging from seventy-five cents to $1.40 a day to laborers and an advance of fifteen per cent for yardage and dead work. The mine operators complained that it was impossible to meet the new wages schedules unless they were permitted to increase prices, and the Fuel Administration granted their request upon investigation. The new rates went into effect on October 29. As a means for the conservation of the nation's fuel supply, which is at present less than adequate, the Fuel Administration is

Cesare in New York Evening Post

SAVE HIM FOR ME!

Whichever way he looks Mr. Everyman sees trouble: the keen thrust of winter's hardships on the one hand and the crushing blow of war taxes on the other

considering a plan for "rationing" industries not engaged in essentially useful work. It is proposed, for example, to reduce the amount of coal used in maintaining electrical advertisements and display signs in the large cities. It is estimated that in the course of a year no less than 8,000,000 tons of coal are consumed in the generation of electricity for this purpose.

Copper Strike Settled The mines of the Arizona, Detroit and Shannon copper companies, all of them located in Arizona, have resumed work. Since July the six thousand workmen employed in this copper mining district have been out on strike, and the mines were kept idle until the President's Labor Commission intervened and proposed an agreement which was accepted by both sides. It was determined that in any case of dispute hereafter the decision should rest with an impartial Federal administrator, unless the matter could be settled by mutual agreement. The commission refused to consider the question of revising the wage schedules on the ground that it would require a long investigation to determine the merits of the case, but proposed that the whole matter be left to the Federal administrator with the promise that the new wage scale shall count from the first day that the miners returned to work. Should it be discovered that the copper companies could not afford to pay the wages established by the administrator, the commission would take the responsibility of recommending to the President an increased selling price which would yield a fair profit to the operators. The resumption of work in these mines increases the copper output of the nation by about 10,000,000 pounds a month.

Will the Switchmen Strike? The Switchmen's Union of North America has demanded a fifty per cent increase in wages to meet the general increase in prices which has taken place during the last few months. The special committee which formulated this demand at a Chicago conference included representatives from nearly every railroad system on which the switchmen are members of the union. The union demands not only a fifty per cent increase in the wages of switchmen, switch tenders and carmen but the payment of "time and a half" for labor exacted in excess of eight hours in any twenty-four. If the proposals of the union are rejected by the railroads, or not conceded within the next thirty days, the union will put the question of calling a strike up to its members for a referendum vote. The membership of the union is approximately 20,000.

The railway conductors and trainmen are considering concerted action with the switchmen. The eight-hour law enacted by Congress last year amounted in fact to an increase of wages, since the same rate of pay was given under the new schedule for eight hours' work as had previously been granted for ten, but there is much truth in the contention of the unions that prices have risen more rapidly than wages and that the men are relatively in a worse position today than they were before the passing of the Adamson law.

If wages are again increased, it is probable that freight rates will have to be raised also. The railroads of the eastern states have petitioned the Interstate Commerce Commission for opportunity to present their claims for rate increases and the commission has authorized the railroad operators to present their case in a series of hearings beginning November 5. The high cost of railway fuel, as well as the possibility of wage increases to switchmen and other employees, is an argument for the requested increase.

Statistics prepared by President Warfield of the National Association of Owners of Railroad Securities show a net income loss of $37,000,000 as compared with the revenues of American railroads in 1916. The amount spent in maintenance, apart from the increased cost of labor and materials, was less than during the year before; showing that railroad properties could not be kept in good condition. Nineteen railroad companies lost $1,000,000 in stock values during the year and bonds had greatly depreciated.

MAKING SAILORS WITHOUT SHIPS

BY WILLARD CONNELY

CHIEF YEOMAN, U. S. N. R. F.

OUT Minneapolis way they are making sailors without ships. A vocational school is turning out by the hundreds craftsmen-bluejackets who win their ratings before ever they see a ship. Precedent, not reason, makes this seem odd. Twentieth century sailors need no ocean until they sail.

Dunwoody Industrial Institute in Minneapolis is not too far west to have intimate relations with the squadrons of the United States Navy now operating somewhere off the Atlantic seaboard. Since its designation in the summer as a naval training school Dunwoody has already sent several companies of skilled men to the fleets, men who had partly served their apprenticeship before arrival in Minneapolis. In December, the first general exodus will be under way, nearly seven hundred expert artizans off to the receiving ships, and their places filling daily with untutored recruits enrolled from all quarters of the land.

No metamorphosis in the regimen of Dunwoody was demanded when the sailors came. The school authorities had begun, months previously, pointing their students and alumni for the army, so military discipline and order were fairly well established in the Institute. There was no limitation to combat, for the multiform departments at Dunwoody—the day classes, evening classes and extension courses—presented an elastic reach, quickly adjustable to a sudden increment.

The principal need was to supplement the civilian schedule with prescribed naval distinctiveness. To the machinist's mates' school and gas engine laboratories at Charleston Navy Yard was sent a chief instructor in those branches at Dunwoody, while his colleague went to the electrical school at New York Navy Yard. The commissary school at San Francisco furnished specifications for the training of ship's cooks, bakers and commissary stewards. The course in blacksmithing, new at Dunwoody with the advent of the bluejackets, was worked out on lines suggested by assistant instructors, seasoned ironmongers formerly with the navy or on merchant ships. Sheet-metal methods and carpentry called for small variation.

The steady success of this remote naval detachment, under the command of Ensign Colby Dodge, led the Bureau of Navigation to favor two extra branches of activity in Minneapolis. A navy aviation unit has been organized, groundwork has begun, and flying with seaplanes and torpedoplanes starts in the spring over Lake Minnetonka. The course of study parallels that given at the navy aviation school in Pensacola. A hospital corps of one hundred men has commenced training, too, with work in pharmacy, first aid, nursing, minor surgery, along the lines practised at the naval hospital training school at Newport.

Carpenters and shipwrights who couldn't plane a plank four months ago are building motor boats now. The radio operators and electricians on the right are studying related work in electricity, with storage batteries, dynamometers and power circuits

apprentices in carpentry could scarcely plane a plank smooth. Today they are building motorboats. To the radio students the sound of the letters in the international code was no more intelligible than the tapping of a woodpecker. In a month they sent or received ten to fifteen words a minute. Coppersmiths who could barely distinguish tin from galvanized iron at present make stovepipe, ventilators, lockers in series, bunker lamps. Gas engineers could run an auto truck, some of them, but they paled at the thought of repairing one. Now they can take down, adjust and reassemble a machine "without having any pieces left over." The acquaintance of blacksmiths with a forge had stopt in watching horses shod. These men now weld with the oxy-acetylene flame, they make shop tools, chains, andirons, oarlocks. Likewise the electricians have learned marine signaling, circuits, dynamos, the machinists to make parts, the cooks and bakers to make food as well as to eat it.

On the eve of the withdrawal of the first battalion for active sea duty, the first quota of men who came to Dunwoody as raw novices, it is possible to obtain some perspective on the means of handling the new winter detachment, both as to its training and as to its relations with the great body of Middle West civilians, so avid for the society, the novelty, of such extremely dry-land bluejackets.

Commanding Officer Dodge has determined that the melting-pot principle need not apply in war time to Dunwoody naval apprentices. To continue the metaphor, if certain jackies arrive for training already halfway "melted" into their trade by virtue of previous experience, the word from Washington to hasten makes advisable the despatch of these men to sea long before their mates who are beginners. A trade in the navy is not so variant from its standards in civil routine as to warrant teaching a semi-practised hand all over again from the start.

At the outset the general period for training in all classes was set at four months. But it was not foreseen how many of the jackies knew their trades before enlisting, how many needed only a few weeks' drill in naval tactics to give them a first-class rating, how many had joined the navy largely for the chance to continue their craft. Nor was it calculated at first that good machinists' mates who in times of peace are trained for sixteen months, could be turned out even under compress instruction in no less than half that time. Again, not a few apprentices are unfit, in any class, to pass an examination for their rating after four months' study. So under the sliding scale now adopted at Dunwoody a squad or a company of men can go to sea, rated, only so soon as they qualify. This competitive basis Ensign Dodge and Assistant Director Kavel of the Institute believe to be stimulating, wholesome, inspiriting to the men.

It has developed that for the best interests of naval discipline, always harder to instil ashore than at sea, the bluejackets be given no liberty, except the traditional Saturday afternoon and Sunday. After the evening mess they report to the chief petty officer in charge at their hotel lodgings, and remain on the hotel premises. Taps sounds at ten p. m. [*Continued on page 299*

THE RED FLOWER

JUNE, 1914

BY HENRY VAN DYKE

In the pleasant time of Pentecost,
By the little river Kyll,
I followed the angler's winding path
Or waded the stream at will,
And the friendly fertile German land
Lay round me green and still.

But all day long on the eastern bank
Of the river cool and clear,
Where the curving track of the double rails
Was hardly seen tho near,
The endless trains of German troops
Went rolling down to Trier.

They packed the windows with bullet heads
And caps of hodden gray;
They laughed and sang and shouted loud
When the train was brought to a stay;
They waved their hands and sang again
As they went on their iron way.

No shadow fell on the smiling land,
No cloud arose in the sky;
I could hear the river's quiet tune
When the train had rattled by;
But my heart sank low with a heavy sense
Of trouble—I knew not why.

Then came I into a certain field
Where the devil's paint-brush spread
'Mid the gray and green of the rolling hills
A flaring splotch of red—
An evil omen, a bloody sign,
And a mark of many dead.

I saw in a vision the field-gray horde
Break forth at the devil's hour,
And trample the earth into crimson mud
In the rage of the Will to Power—
All this I dreamed in the valley of Kyll,
At the sign of the blood-red flower.

THE CINDERELLA OF THE ARTS

BY MARY PERRY KING

FOUNDER OF THE SCHOOL OF PERSONAL HARMONIZING, INTERPRETATIVE MOTION AND SPEECH

THE history of modern dancing within our own time is not only the record of the growth and development of a craft; it is the history of the reformation and restoration in public esteem of an art that was deteriorating. From being a discredited and all but useless pseudo-art, modern dancing has become at its best a humanizing and cultural fine art, and taken its rightful place again in our education and social life. The Cinderella of the arts has been restored to her birth-right with her rhythmic sisters, Music and Poetry.

Twenty years ago, dancing, as an art, was at its lowest ebb. Social dancing was stereotyped and conventional, with little of the dignity of the old and formal courtly dances, and with none of the grace and freedom which belong by right to every really living form of human expression. Its spirit and naturalness and spontaneous joy had been lost in artificiality. Ballet dancing, almost the only kind of artistic dancing then in vogue, was in no better case—given over to meaningless intricacies of foot-technique and either vapid or vulgar display.

Since that time, dancing has undergone great changes and made great advances. It has become now an interesting and delightful art, like music or literature or painting, serving our social needs with ecstasy and charm and satisfying amusement, and giving another vent for the human spirit, which is always seeking avenues of expression

© Johnston-Hewitt Studio

A dance of the Sun and Wind

for itself in forms of beauty. With this new lead and trend, the career of modern dancing seems boundless.

The first great revolt of over-represt nature, from the dreary and stiff monotony of old-fashioned ballroom dancing to the turkey-trot and Maxixe and Apache imitations, was nothing short of a riotous explosion. After one or two seasons this first rebellion subsided into a seething tumult of tangoes and fox-trots, frenzied with the novelty of its own freedom and sensational innovations. This very natural riot of the art in its new found liberty gradually wore out its excitement; and its devotees began to long for real interest, meaning, significance, to restore relish to their pursuit.

Parallel with this spontaneous upheaval in social dancing, "natural dancing" began to be heard of. People who loved great music, and whose activity longed to respond to it as they felt it, found gratifying leadership in Miss Duncan's splendid vindication of natural tendency and the beauty of natural freedom.

In the wake of her initiative came many followers. Miss St. Denis produced some famous pictorial dances, Oriental in subject and setting; and the distinguished Russian Ballet departed from traditional ballet work, to add classic and story dancing to their repertoire, with a considerable amount of folk dancing.

Of all the dancers of this generation there has been none to compare in charm and range of skill with Anna Pavlowa. She and her first partner, Mordkin, did the most effective duet work that has been seen in this country.

From the heralding of the celebrated Diaghileff Ballet, with its great artists and its fabulous settings, we eagerly expected it to fulfil our fondest dreams of poesie thru dance. And when it came, without its great artists, but with

Photograph by Wescott

These girls go camping in the Rocky Mountains to dance with all outdoors for a setting

settings as fabulous as promised, and with performances as busy and startling as could be asked, we were disappointed. It was surprizing, it was wonderful, but it was not wholly delightful. So unlovely were its subjects, that the more forcefully they were presented, the less chance was left for enchantment. I have seen American amateurs with no helpful settings produce infinitely more ecstasy.

The "natural dance" movement as distinguished from the old artificial forms opened the door in this country for another riot of over-represt and untrained natural impulse, and led to ridiculous extremes of mere personal exhibition. Misguided young women, without even the rudiments of an education in the exacting art, and without the least aptitude for it, imagined themselves fitted to be dancers. One manageress went so far as to engage a large company of well-looking, well-bred European girls, assuring them that they need know nothing of dancing, and that if they only appeared upon a stage with the least possible costume and with their hair effectively worn, and just "let go' in whatever free, unconstrained movement they might choose, any audience would be enthralled by the beauty of the performance. Of course, results were dire, and left an aftermath of weak, tho more or less pleasing, nothings and anythings that were offered to the public to musical accompaniment. At last these dancers, too, began to feel the staleness of dissipation in their work and to crave sound interest again.

At this wholesome stage of development of the art, there comes to ballroom dancing the demand for better music, for a variety of easy, unexacting rhythmical dances, suited to good music and to ballroom dress and conditions; and a demand for "style" of performance which exacts decorous formal positions and subtle grace of bearing from head to foot. Now this is social art—a basis for pleasurable, profitable ballroom dancing. There still remain to be "created" some interesting figure and group dances, for groups large and small, for social use—dances of more free and modern interest and procedure than the old minuet, less bourgeois than lancers and quadrilles, and more distinguished than folk dances.

To "natural dancers," already sick of the name, and having long wearied of "classic" dancing and "esthetic" dancing, came brief trials of "dramatic" dancing, "oriental" dancing, and "improvisations"; and now comes "interpretative" dancing—a name *made* to fit, and to cover a multitude of efforts, in the interpretation of everything from Beethoven to a bumble-bee.

Very recently the terms "poem dance" and "rhythmic pantomine" have been widely borrowed from my use of them in connection with my work in "Personal Harmonizing," and have proved so "taking" as to have become the popular "last word" in dance parlance.

When Mr. Winthrop Ames brought Rheinhardt's "Sumurun" to America, it was far too big and too new to us generally to be at once fully appreciated. It was manna in the wilderness, none the less, to those who wanted it and needed it—who had learned to know the subtle elemental significance of human motion, and to realize the comparatively unworked field of its great power, and the desirability of educating it.

"You have caught the turn of the melody clear, And you give it again"

THE Orientals in their ancient wisdom have far outrun us in their knowledge and consideration of human motion. They realize that in our habits of motion lie the closest, truest revelations of what we really are—not what we wish to seem, but just, willy-nilly, what we are. It is by this indisputable betrayal of the inner self that Orientals read humanity. Words are but weapons, veils, or torches to be used as one will, to further what seemings one may choose. Habits of motion and gesture are unconscious and eloquent revelations of the real personality, telling the truth in spite of ourselves. Orientals never even listen to words that are at variance with a person's unconscious habitual motion. They read the mute involuntary expression of what that person actually is, or is thinking and feeling, regardless of the impression he may be trying to convey thru speech.

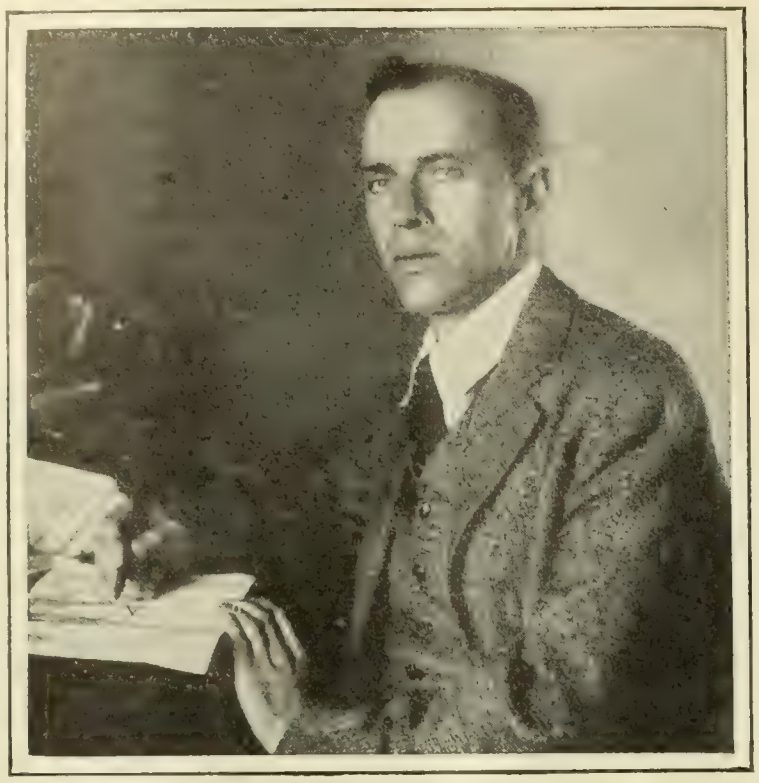
It is this fact that makes human motion a field to be cultivated; that we may reap the good that is in it, and that we may eliminate the ills that lie in wait there, to over-run and trip us.

That the leaders in these keenest and most comprehensive of arts should be foreigners is only because foreigners know the value of time and industry, and the full importance of all the factors that are needed for proficiency. For this reason a foreign artist who wishes to present a poem dance or a rimic pantomime, before daring even to mention such a wish, has spent literally years in studying poetry's significances, rhythms and accents; in studying music's significances, rhythms and accents; besides devoting much time thru those years to technical study for the mechanical frecing of the body, in order to make it ready to respond to the thought and feeling of a subject.

When a dancer undertakes to interpret great music, it is not enough for her to express simply the physical emotion with which she responds to its sensuous appeal. There is thought and spirit, poesie and drama, in fine music, and any interpretation that fails to express these finest and strongest elements, is entirely inadequate and unsatisfying. The best preparation for a dancer for the appreciation and interpretation of music, with all its poesie, lies thru practise in expressing the poesie that is more definitely given us in the form of poetry. For such practise I have long found poem dances and rhythmic pantomime to be the most beguiling and successful mediums. Training of this kind, in expressing the best thought and feeling of humanity (which is to be found in the best poetry), develops in the student a true appreciation of these things and a plastic facility for expressing them, not only in art but in every-day life. Thru such cultural service, dancing and pantomime attain their legitimate dignity.

New Canaan, Connecticut

SOCIALISTS: THE KAISER-PARTY



BY WILLIAM ENGLISH WALLING

WHEN a political party becomes a vote-getting machine its future is hard to predict. It will follow the passions and prejudices as well as the momentary interests of the masses of the localities where it happens to be strong. The so-called American Socialist Party is growing by leaps and bounds in all the foreign colonies of our cities where it has hitherto developed. But it is growing exclusively because of momentary interests and racial passions due to the war. It has fallen heir to the fruits of the vast underground German propaganda conducted for nearly three years without let or hindrance by Bernstorff and the other agents of the Kaiser.

It is safe to say that seventy-five per cent of the dispatches and editorials reaching the masses of our cities and industrial centers before America's entrance into the war were either wholly or largely pro-German. Moreover, they had the advantage of being inspired from a common center. A lie repeated a thousand times or more, from sources apparently widely separated, a lie taking many forms but always without any obvious contradictions, ends by becoming a self-evident truth in the minds of most newspaper readers. It becomes a fact that "everybody knows."

The opponents of Kaiserism have been most ineffectual in combating this propaganda—for the reason that public opinion in a democracy cannot be mobilized. We oppose Kaiserism from many angles, and there is no unity in our attack. Now that we are in the war pro-German dispatches and editorials are gradually becoming less frequent. But the Bernstorff propaganda had continued so long and has become so deeply rooted and so solid among certain elements of foreign descent and affiliations which compose the majority of our urban population that a very little additional material is now sufficient to keep it alive and this little is supplied every day, either from the Vatican, from Russia, from Germany, from "neutral" countries or from some local election or labor trouble in the United States.

If the genuine Americans and internationalists in this country could wage a campaign comparable in magnitude and efficiency to that waged by Bernstorff, the German propaganda might be counteracted. But this would require (1) that the campaign should be unified as to all the main questions of the war, and (2) that it should have the support of the overwhelming majority of the newspapers reaching our urban masses. If the campaign should not gain the adhesion of existing foreign-language and popular newspapers (such as the Hearst organs) other similar papers would have to take their place. And, finally, a considerable period of time would be required, as Bernstorff had a free hand for almost three years. Moreover, the German "facts" and logic reached the working class public first. And it is infinitely harder to dislodge prejudices of long standing than it is to reach a public while it is still unprejudiced.

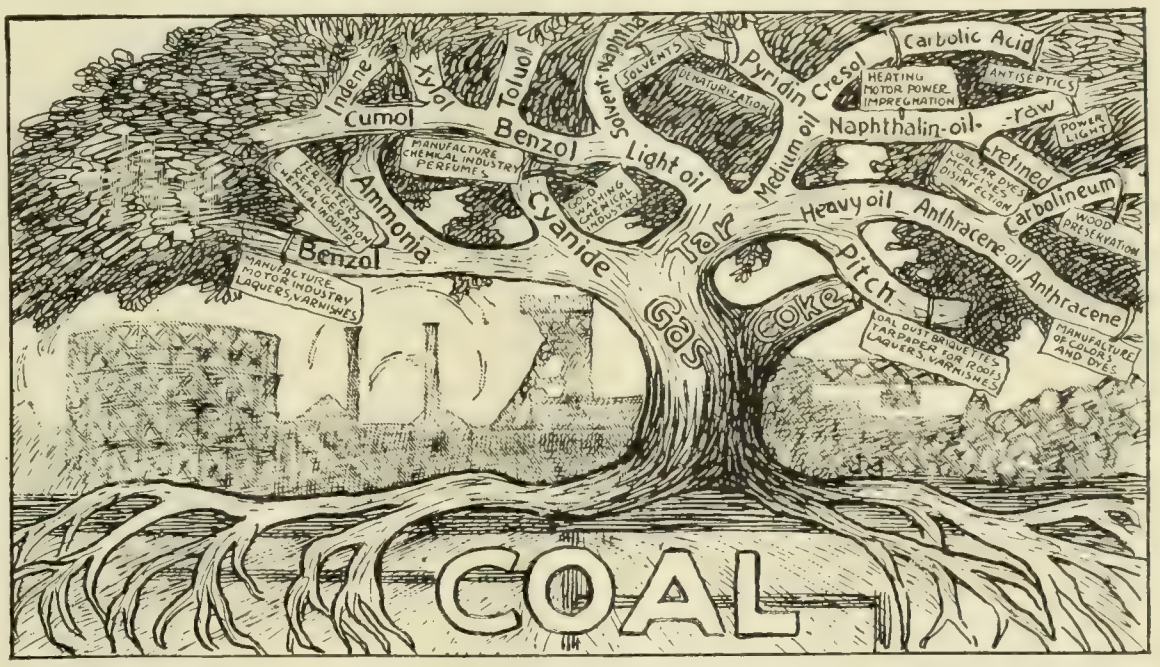
Press Illustrating

His own prominence as an advocate of Socialism gives particular emphasis to Mr. Walling's indictment here of the present Socialist party. He is thoroly conversant with the international aspects of socialism and has written several books on the subject; such as "Russia's Message," "Socialism as It Is," "The Larger Aspects of Socialism"

NO doubt an expenditure of one one-hundredth of one per cent of our daily war cost would cure our urban "proletariat" within a few months of the frightful mental disease with which the Kaiser has inoculated it. This would be a trifling cost at which to secure the actively loyal support of our cities for the war.

But there is no reason to suppose that any such campaign will be organized. A year and a half ago I called the attention of a number of influential persons to the fact that the Kaiser was everywhere capturing the masses of our cities by underground methods. It was known that certain sections of the West were pro-German, but this was due to the actual presence of Germans and not to the far more dangerous fact of a successful foreign propaganda in nearly every important city and industrial center in the country. I showed that the streets, public places and saloons showed an overwhelmingly pro-German drift. For example, it is only recently that the sign "No War Talk" has appeared in the saloons. The saloons are now "neutral." Before our entrance into the war they were not even that. There was no danger in war talk then. It was almost all one way—anti-British and pro-German. Now we all know the power of the saloon in politics. My assertions as to facts were not denied, and have since been proved correct by events. But as always in our individualistic *laissez-faire* democracies all the advantage of organization, of intelligent foresight, of the intellectual offensive were left to the Germans. Nothing was done and now it may be too late.

Thus at the present moment the Socialist Party has several million German-drilled voters to draw upon—except in such localities as Chicago and New York, where both Democratic and Republican machines are competing with it for these votes. But it has also made preparations to harvest votes from all the individual sufferings, the political complications and economic troubles that result from the war. Here its method is simple. It predicts every imaginable evil. The mere fact that ninety per cent of its predictions prove untrue and expose it as a false leader causes no serious difficulty. The party has no responsibility; its false predictions are forgotten, while it keeps before us those of its forebodings that have come true. Now economic troubles affecting the masses are certain to result, in spite of all efforts to avoid them. Thus the Socialist Party will represent the immediate interests of its constituents, on the supposition that the conquest of half the earth by Kaiserism is no concern of theirs—and certainly not worth any considerable sacrifice. Indeed, there are plausible grounds for alleging that the capitalists and other social classes should pay all the cost of the war. Probably a majority of the urban masses still believe that this is a capitalists' war.



BUT even if it is not, the legitimate argument that those better able to pay should stand the larger part of the war cost is easily stretched to the impractical proposition that they should pay it all—and that the masses should pay nothing. Of course it is true that the submerged tenth is physically unable to pay anything—also that another two-tenths, perhaps, just above this level, should be protected from any economic loss. Moreover, the rising cost of living must be held within bounds for the masses generally. But it is physically impossible in war time completely to control all prices or to keep wages advancing altogether as fast as the cost of living for all employments. And in this way certain sections of the workingmen will be obliged from time to time to bear part of the economic burden of the war and will be- [*Continued on page 302*

CREATIVE CHEMISTRY

A Popular Explanation of Recent Progress in Chemical Industries

BY EDWIN E. SLOSSON

WHAT COMES FROM COAL TAR

The geneological tree of coal tar products. This sketch from the "Literary Digest" shows how the crude material obtained from the destructive distillation of coal may be developed into manifold derivatives such as dyes, perfumes and medicines

IF you put a bit of soft coal into a test tube (or, if you haven't a test tube, into a clay tobacco pipe and lute it over with clay) and heat it you will find a gas coming out of the end of the tube that will burn with a yellow smoky flame. After all the gas comes off you will find in the bottom of the test tube a chunk of dry, porous coke. These, then, are the two main products of the destructive distillation of coal. But if you are an unusually observant person, that is, if you are a born chemist with an eye to by-products, you will notice along in the middle of the tube where it is neither too hot nor too cold some dirty drops of water and some black sticky stuff. If you are just an ordinary person, you won't pay any attention to this because there is only a little of it and because what you are after is the coke and gas. You regard the nasty, smelly mess that comes in between as merely a nuisance because it clogs up and spoils your nice, clean tube.

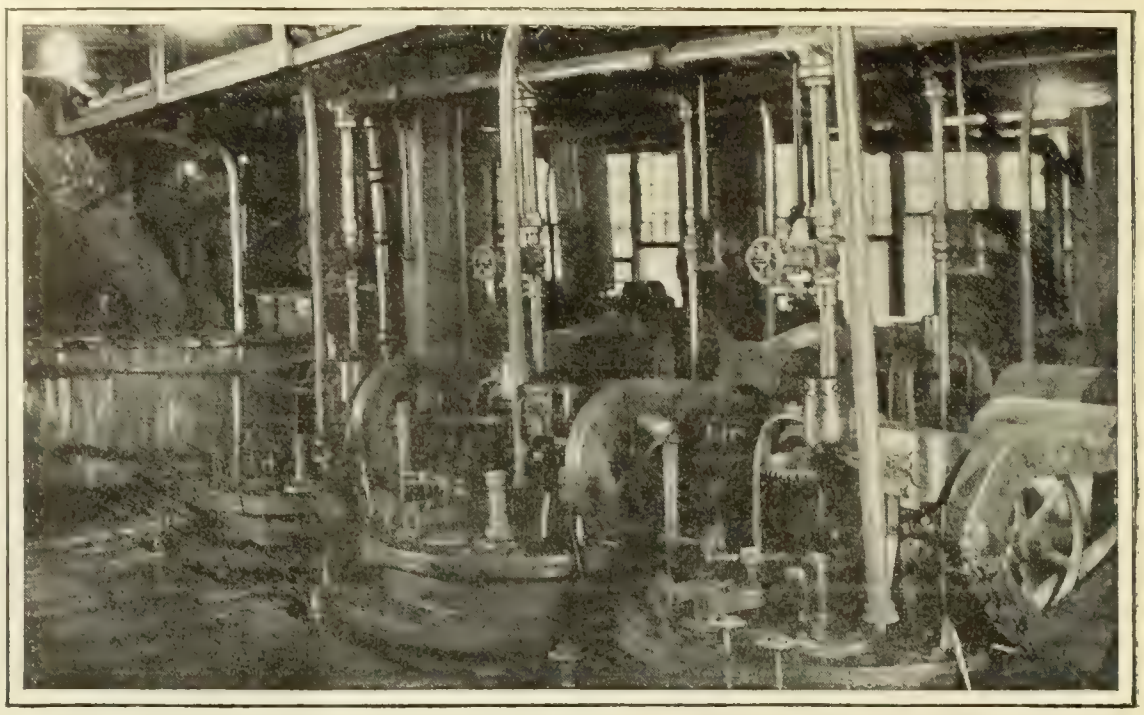
Now that is the way the gas-makers and coke-makers—being for the most part ordinary persons and not born chemists—used to regard the water and tar that got into their pipes. They washed it out so as to have the gas clean and then ran it into the creek. But the neighbors—especially those who fished in the stream below the gas-works—made a fuss about spoiling the water, so the gas-men gave away the tar to the boys for use in celebrating the Fourth of July and election night or sold it for roofing.

But this same tar, which for a hundred years was thrown away and nearly half of which is thrown away yet in the United States, turns out to be one of the most useful things in the world. It is one of the strategic points in war and commerce. It wounds and heals. It supplies munitions and medicines. It is like the magic purse of Fortunatus from which anything wished for could be drawn. The chemist puts his hand into the black mass and draws out all the colors of the rainbow. This evil-smelling substance beats the rose in the production of perfume and surpasses the honey-comb in sweetness.

Bishop Berkeley, after having proved that all matter was in your mind, wrote a book to prove that wood tar would cure all diseases. Nobody reads it now. The name is enough to frighten them off: "Siris: A Chain of Philosophical Reflections and Inquiries Concerning the Virtues of Tar Water." He had a sort of mystical idea that tar contained the quintessence of the forest, the purified spirit of the trees, which could somehow revive the spirit of man. People said he was crazy on the subject, and doubtless he was, but the interesting thing about it is that not even his active and ingenious imagination could begin to suggest all of the strange things that can be got out of tar, whether wood or coal.

THE reason why tar supplies all sorts of useful material is because it is indeed the quintessense of the forest, of the forests of untold millenniums, if it is coal tar. If you are acquainted with a village tinker, one of those all-round mechanics who still survive in this age of specialization and can mend anything from a baby-carriage to an automobile, you will know that he has on the floor of his back shop a heap of broken machinery from which he can get almost anything he wants, a copper wire, a zinc plate, a brass screw or a steel rod. Now coal tar is the scrap-heap of the vegetable kingdom. It contains a little of almost everything that makes up trees. But you must not imagine that all that comes out of coal tar is contained in it. There are only about a dozen primary products extracted from coal tar, but from these the chemist is able to build up hundreds of thousands of new substances. This is true creative chemistry, for most of these compounds are not to be found in plants and never existed before they were made in the laboratory. It used to be thought that organic compounds, the products of vegetable and animal life, could only be produced by organized beings, that they were created out of inorganic matter by the magic touch of some "vital principle." But since the chemist has learned how, he finds it easier to make organic than inorganic substances and he is confident that he can reproduce any compound that he can analyze. He can not only imitate the manufacturing processes of the plants and animals, but he can often beat them at their own game.

When coal is heated in the open air it is burned up and nothing but the ashes is left. But heat the coal in an enclosed vessel, say a big fireclay retort, and it cannot burn up because the oxygen of the air cannot get to it. So it breaks up. All parts of it that can be volatilized at a high heat pass off thru the outlet pipe and nothing is left in the retort but coke, that is carbon with the ash it contains. When the escaping vapors reach a cool part of the outlet pipe the oily and tarry matter condenses out. Then the gas is passed up thru a tower down which water spray is falling and thus is washed free from ammonia and everything else that is soluble in water.

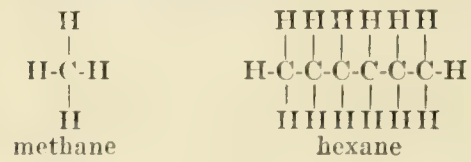


This process is called "destructive distillation." What products come off depends not only upon the composition of the particular variety of coal used, but upon the heat, pressure and rapidity of distillation. The way you run it depends upon what you are most anxious to have. If you want illuminating gas you will leave in it the benzene. If you are after the greatest

yield of tar products, you impoverish the gas by taking out the benzene and get a blue instead of a bright yellow flame. If all you are after is cheap coke, you do not bother about the by-products, but let them escape and burn as they please. The tourist passing across the coal region at night could see thru his car window the flames of hundreds of old-fashioned bee-hive coke-ovens and if he were of economical mind he might reflect that this display of fireworks was costing the country $75,000,000 a year besides consuming the irreplaceable fuel supply of the future. But since the gas was not needed outside of the cities and since the coal tar, if it could be sold at all, brought only a cent or two a gallon how could the coke-makers be expected to throw out their old bee-hive ovens and put in the expensive retorts and towers necessary to the recovery of the by-products? But within the last ten years the by-product ovens have come into use and now nearly half our coke is made in them.

Altho the products of destructive distillation vary within wide limits, yet the following table may serve to give an approximate idea of what may be got from a ton of soft coal:

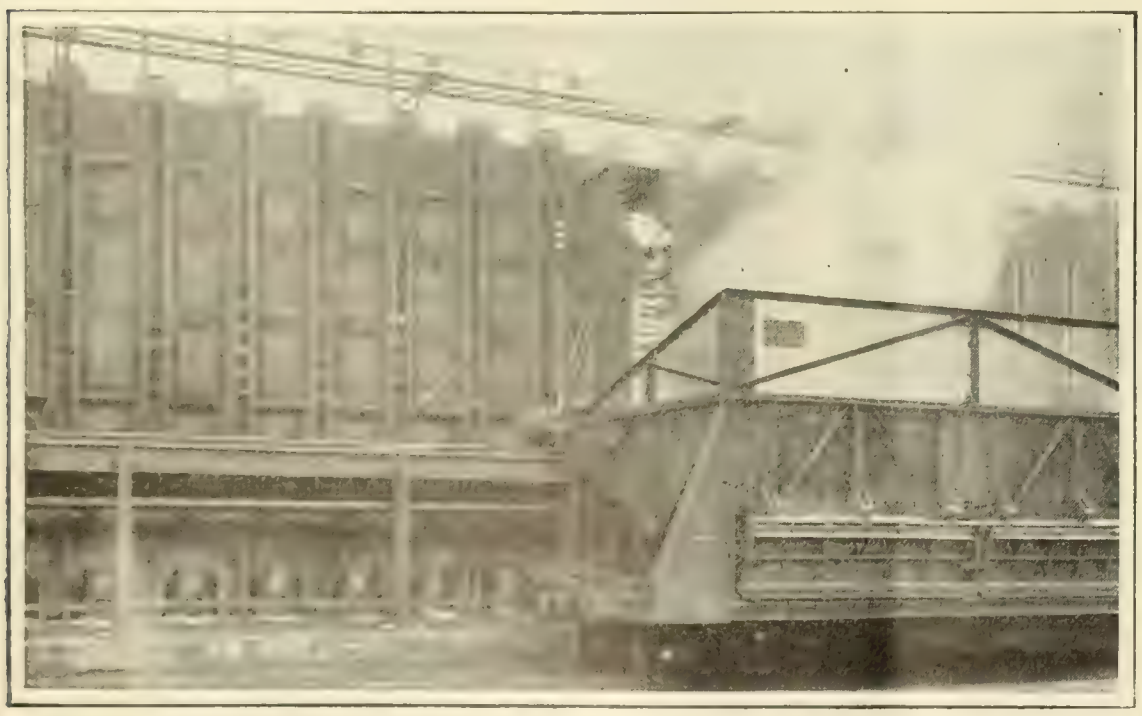
1 ton of coal may give:
- Gas, 12,000 cubic feet
- Liquor (Washings): ammonium sulfate (7-25 pounds)
- Tar (120 pounds): benzene (10-20 pounds); toluene (3 pounds); xylene (1½ pounds); phenol (½ pound); naphthalene (3-8 pound); anthracene (¼ pound); pitch (80 pounds)
- Coke (1200-1500 pounds)



When the tar is redistilled we get, among other things, the ten "crudes" which are fundamental material for making dyes. Their names are: benzene, toluene, xylene, phenol, cresol, naphthalene, anthracene, methyl anthracene, phenanthrene and carbazol.

Vats for the manufacture of aniline dyes at the Schoelkopf Company's Works, Buffalo

There! I had to introduce you to the whole receiving line, but now that that ceremony is over we are at liberty to do as we do at a reception, meet our old friends, get acquainted with one or two more and turn our backs on the rest. Two of them, I am sure, you've met before, phenol, which is common carbolic acid, and naphthalene, which we use for mothballs. But notice one thing in passing, that not one of them is a dye. They are all colorless liquids or white solids. Also they all have an indescribable odor—all odors that you don't know are indescribable—which gives them and their progeny, even when odorless, the name of "aromatic compounds."



The most important of the ten because he is the father of the family is benzene, otherwise called benzol, but must not be confused with "benzine" spelled with an *i* which we used to burn and clean our clothes with. "Benzine" is a kind of gasoline, but benzene *alias* benzol has quite another constitution, altho it looks and burns the same. Now the search for the constitution of benzene is one of the most exciting chapters in chemistry; also one of the most intricate chapters, but, in spite of that, I believe I can make the main point of it clear even to those who have never studied chemistry—provided they retain their childish liking for puzzles. It is really much like putting together the old six-block Chinese puzzle. The chemist can work better if he has a picture of what he is working with. Now his unit is the molecule, which is too small even to analyze with the microscope no matter how high powered. So he makes up a sort of diagram of the molecule, and since he knows the number of atoms and that they are somehow attached to one another, he represents each atom by the first letter of its name and the points of attachment or bonds by straight lines connecting the atoms of the different elements. Now it is one of the rules of the game that all the bonds must be connected or hooked up with atoms at both ends, that there shall be no free hands reaching out into empty space. Carbon, for instance, has four bonds and hydrogen only one. They unite, therefore, in the proportion of one atom of carbon to four of hydrogen, or CH_4, which is methane or marsh gas and obviously the simplest of the hydrocarbons. But we can have more complex hydrocarbons such as C_6H_{14}, known as hexane. Now if you try to draw the diagrams or structural formulas of these two compounds you will easily get

methane hexane

Each carbon atom, you see, has its four hands outstretched and duly grasped by one-handed hydrogen atoms or by neighboring carbon atoms in the chain. We can have such chains as long as you please, thirty or more in a chain; they are all contained in kerosene and paraffin.

So far the chemist found it easy to construct diagrams that would satisfy his sense of the fitness of things, but when he found that benzene had the composition C_6H_6 he was puzzled. If

***The production of coal tar.** A battery of Koppers by-product coke-opens at the plant of the Bethlehem Steel Company, Sparrows Point, Maryland. The coke is being pushed out of one of the ovens into the waiting car. The vapors given off from the coal contain ammonia and the benzene compounds used to make dyes and explosives*

1917 ATLAS With New War Maps Given FREE

To the readers of *The Independent* who *take advantage of this offer* now made in connection with

Webster's New International

The Only Grand Prize (Highest Award) given to **dictionaries** at the **Panama Pacific International Exposition** was granted to **Webster's New International** and the **Merriam Series** for **superiority** of **educational merit.**

This New Creation
The *Merriam* Webster–

A Complete Reference Library in Dictionary Form—with nearly 3,000 pages, and type matter equivalent to a **15-Volume Encyclopedia** all in **a single volume,** in Rich, Full Red Leather Binding, can now be secured by readers of *The Independent* on the following remarkably easy terms:

The entire work in full leather (with 1917 Atlas)

DELIVERED for $1.00

and easy payments thereafter of only a few cents a week
(In United States and Canada)

on SUPERIOR INDIA PAPER

REDUCED ONE HALF

In Thickness and Weight

India-Paper Edition

Printed on ***thin, opaque, strong,*** superior India Paper. It has an excellent printing surface, resulting in remarkably clear impressions of type and illustrations. What a satisfaction to own the ***new Merriam Webster*** in a form so light and so convenient to use! This edition is ***one half*** the thickness and less than one half the weight of the regular edition. Size 12⅜ in. x 9¾ in. x 2¾ in. ***Weight*** 7½ lbs.

Regular-Paper Edition

Printed on strong book paper of the highest quality. Size 12⅜ in. x 9¾ in. x 5½ in. Weight 16 lbs.

Both Editions are printed from the same plates and indexed.

Over 400,000 Vocabulary Terms, and, in addition, ***12,000 Biographical Names,*** and ***30,000 Geographical Subjects,*** besides thousands of other References. Nearly ***3,000 Pages. Over 6,000 Illustrations.***

"To have this work in the home is like sending the whole family to college."

The only dictionary with the New Divided Page, characterized as "A Stroke of Genius"

THE ATLAS

Is the **1917** "New Reference Atlas of the World," containing nearly **200** pages, with **128** pages of maps, beautifully printed in colors, with marginal reference indexes, late Census Figures, Parcel-Post Guide, New War Maps, etc., all handsomely bound in red cloth, size **10¼** x **13⅝**.

To those who respond at once we will send

a copy of "Dictionary Wrinkles," containing an amusing "Test in Pronunciation" (with key) entitled "The Americanization of Carver," and also a "Red Facsimile Booklet" of interesting questions with references to their answers.

Mail this coupon at once to

G. & C. MERRIAM CO.

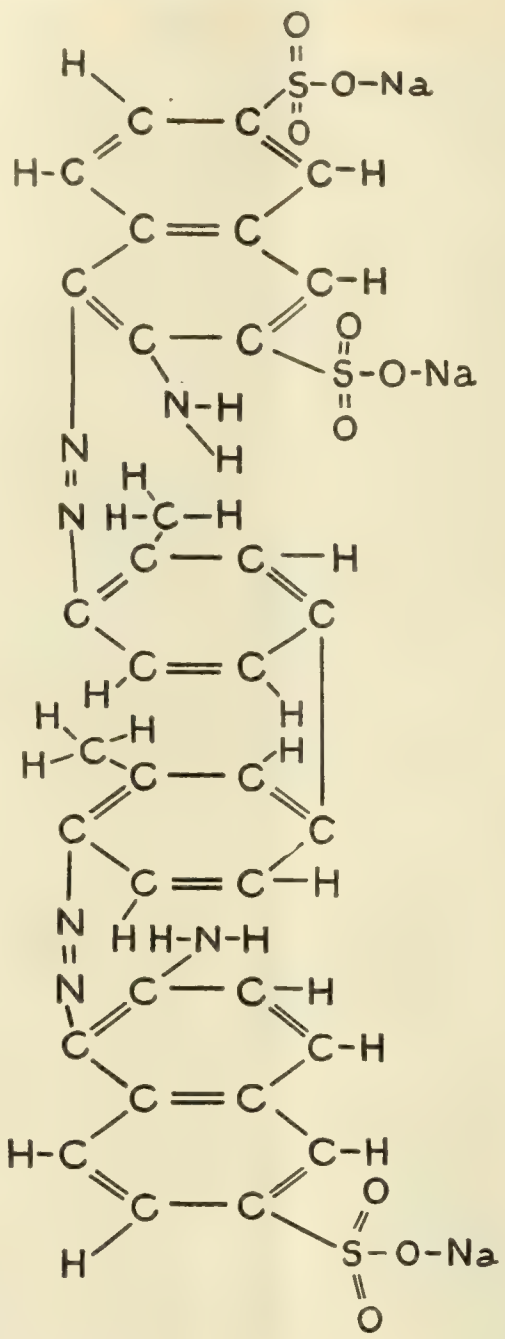
you try to draw the picture of C_6H_6 you will get something like this:



which is an absurdity because more than half of the carbon hands are waving wildly around asking to be held by something. Benzene, C_6H_6, evidently is like hexane, C_6H_{14}, in having a chain of six carbon atoms, but it has dropt its H's like an Englishman. Eight of the H's are missing.

Now one of the men who was worried over this benzene puzzle was the German chemist, Kekulé. One evening after working over the problem all day he was sitting by the fire trying to rest, but he could not throw it off his mind. The carbon and the hydrogen atoms danced like imps on the carpet and as he watched them thru his half closed eyes he suddenly saw that the chain of six carbon atoms had joined at the ends and formed a ring while the six hydrogen atoms were holding on to the outside hands, in this fashion:

Professor Kekulé saw at once that the demons of his subconscious self had furnished him with a clue to the labyrinth and so it proved. We need not suppose that the benzene molecule if we could see it would look anything like this diagram of it, but the theory works and that is all the scientist asks of any theory. By its use thousands of new compounds have been constructed which have proved of inestimable value to man. The modern chemist is not a discoverer, he is an inventor. He sits down at his desk and draws a "Kekulé ring" or rather hexagon. Then he rubs out an H and hooks a nitro group (NO_2) on to the carbon in place of it; next he rubs out the O_2 of the nitro group and puts in H_2; then he hitches on such other elements, or carbon chains and rings as he likes. He works like an architect designing a house and when he gets a picture of the proposed compounds to suit him he goes into the laboratory to make it. First he takes down the bottle of benzene and boils up some of this with nitric acid and sulfuric acid. This puts in the nitro group and makes nitro-benzene, $C_6H_5NO_2$. He treats this with hydrogen, which displaces the oxygen and gives $C_6H_5NO_2$ or aniline, which is the basis of so many of these compounds that they are all commonly called "the aniline dyes." But aniline itself is not a dye. It is a colorless or brownish oil.

It is not necessary to follow our chemist any farther now that we have seen how he works, but before we pass on we will just look at one of his products, not one of the most complicated but still complicated enough.

The name of this is sodium ditolyl-disazo-beta-naphthylamine-6-sulfonic-beta-naphthylamine-3.6-disulfonate.

These chemical names of organic compounds are discouraging to the beginner and amusing to the layman, but that is because neither of them realizes that they are not really words but formulas. They are hyphenated because they come from Germany. The name given above is no more of a mouthful than "a-square-plus-two-a-b-plus-b-square" or "Third Assistant Secretary of War to the President of the United States of America." The trade name of this dye is Brilliant Congo, but while that is handier to say it does not mean anything. Nobody but an expert in dyes would know what it was, while from the formula name any chemist familiar with such compounds could draw its picture, tell how it would behave and what it was made from, or even make it. The old alchemist was a secretive and pretentious person and used to invent queer names for the purpose of mystifying and awing the ignorant. But the chemist in dropping the al- has dropt the idea of secrecy and his names, tho equally appalling to the layman, are designed to reveal and not to conceal.

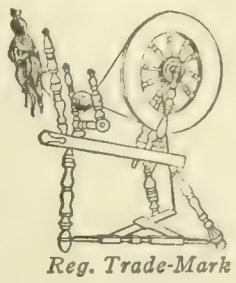
Even from this brief explanation the reader who has not studied will, I think, be able to get some idea of how these very intricate compounds are built up step by step. A completed house is hard to understand, but when we see the mason laying one brick on top of another it does not seem so difficult, altho if we tried to do it we should not find it so easy as we think. Anyhow, let me give you a hint. If you want to make a good impression on a chemist don't tell him that he seems to you a sort of magician, master of a black art, and all that nonsense. The chemist has been trying for three hundred years to live down the reputation of being inspired of the devil and it makes him mad to have his past thrown up at him in this fashion. If his tactless admirers would stop saying "it is all a mystery and a miracle to me, and I cannot understand it" and pay attention to what he is telling them they would understand it and would find that it is no more of a mystery or a miracle than anything else. You can make an electrician mad in the same way by interrupting his explanation of a dynamo by asking: "But you cannot tell me what electricity really is." The electrician does not care a rap what electricity "really is" if there really is any meaning to that phrase. All he wants to know is what he can do with it.

THE tar obtained from the gas plant or the coke plant has now to be redistilled, giving off the ten "crudes" already mentioned and leaving in the still sixty-five per cent of pitch, which may be used for roofing, paving and the like. The ten primary products or crudes are then converted into secondary products or "intermediates" by processes like that for the conversion of benzene into aniline. There are some three hundred of these intermediates in use and from them are built up more than three times as many dyes. The year before the war the American custom house listed 5674 distinct brands of synthetic dyes imported, chiefly from Germany, but some of these were trade names for the same product made by different firms or represented by different degrees of purity or form of preparation. Altho the number of possible products is unlimited and over five thousand dyes are known, yet only about nine hundred are in use. We can summarize the situation so:

Coal-tar→10 crudes→300 intermediates→900 dyes→5000 brands.

Or, to borrow the neat simile used by Dr. Bernard C. Hesse, it is like cloth-making where "ten fibers make 300 yarns which are woven into 900 patterns."

The advantage of the artificial dyestuffs over those found in nature lies in their variety and adaptability. Practically any desired tint or shade can be made for any particular fabric. If my lady wants a new kind of green for her stockings or her hair she can have it. Candies and jellies and drinks can be made more attractive and therefore more appetizing by varied colors. Easter eggs and Easter bonnets take on new and brighter hues.



More and more the chemist is becoming the architect of his own fortunes. He does not make discoveries by picking up a beaker and pouring into it a

little from each bottle on the shelf to see what happens. He generally knows what he is after, and he generally gets it, altho he is still often baffled and occasionally happens on something quite unexpected and perhaps more valuable than what he was looking for. Columbus was looking for India when he ran into an obstacle that proved to be America. William Henry Perkin was looking for quinine when he blundered into that rich and undiscovered country, the aniline dyes. William Henry was a queer boy. He had rather listen to a chemistry lecture than eat. When he was attending the City of London School at the age of thirteen there was an extra course of lectures on chemistry given at the noon recess, so he skipped his lunch to take them in. Hearing that a German chemist named Hofmann had opened a laboratory in the Royal College of London he headed for that. Hofmann obviously had no fear of forcing the young intellect prematurely. He perhaps had never heard that "the tender petals of the adolescent mind must be allowed to open slowly." He admitted young Perkin at the age of fifteen and started him on research at the end of his second year. An American student nowadays thinks he is lucky if he gets started on his research five years older than Perkin. Now if Hofmann had studied pedagogical psychology he would have been informed that nothing chills the ardor of the adolescent mind like being set at tasks too great for its powers. If he had heard this and believed it, he would not have allowed Perkin to spend two years in fruitless endeavors to isolate phenanthrene from coal tar and to prepare artificial quinine—and in that case Perkin would never have discovered the aniline dyes. But Perkins, so far from being discouraged, set up a private laboratory so he could work over-time. While working here during the Easter vacation of 1856—the date is as well worth remembering as 1066—he was oxidizing some aniline oil when he got what chemists most detest, a black, tarry mass instead of nice, clean crystals. When he went to wash this out with alcohol he was surprized to find that it gave a beautiful purple solution. This was "mauve," the first of the aniline dyes.

The funny thing about it was that when Perkin tried to repeat the experiment with purer aniline he could not get his color. It was because he was working with impure chemicals, with aniline containing a little toluidine, that he discovered mauve. It was, as I have said, a lucky accident. But it was not accidental that the accident happened to the young fellow who spent his noonings and vacations at the study of chemistry. A man may not find what he is looking for, but he never finds anything unless he is looking for something.

Mauve was a product of creative chemistry, for it was a substance that had never existed before. Perkin's next great triumph, ten years later, was in rivaling Nature in the manufacture of one of her own choice products. This is alizarin, the coloring matter contained in the madder root. It was an ancient and oriental dyestuff, known as "Turkey red" or by its Arabic name of "alizari." When madder was introduced into France it became a profitable crop and at one time half a million tons a year were raised. A couple of French chemists, Robiquet and Colin, extracted from madder its active principle, alizarin, in 1828, but it was not until forty years later that it was discovered that alizarin had for its base one of the coal-tar products, anthracene. Then came a neck-and-neck race between Perkin and his German rivals to see which could discover a process for making alizarin from anthra-

Christmas Handkerchiefs *at* McCutcheon's

Reg. Trade-Mark

IT is none too early to be thinking about Holiday Handkerchiefs, and especially if you wish embroidering done.

All pure Linen, of course. We have stuck to that principle for sixty-five years and we stick to it still. There is no cotton in the whole stock: that's an important thing in these days when ascending costs tempt manufacturers and dealers to cut quality.

For a Man: Splendid, luxurious Linen Handkerchiefs of full size, 25c, 35c, 40c, 50c to $6.00 each. Initialed at 25c, 35c, 50c, 75c and $1.00 each. Smaller sizes 50c and up, with or without initial.

For a Child: Pretty little embroidered and print designs in color as well as all White, 15c each and up.

For a Woman: Everything from simple, plain hemstitched ones at 15c up to elaborate affairs of Duchesse Lace or Embroidery at $50.

We have the usual large collections of White Embroidered goods from Ireland, Switzerland, Spain, Madeira, etc., at the popular prices, 25c, 50c, 75c and $1.00.

All the way through, the collection is just as wide and interesting as it ever was.

Handkerchief purchases are delivered in dainty White boxes suitable for presentation as Christmas gifts.

The Lazy Muscles That Cause Constipation

By R. H. SINCLAIR

It is now agreed by all of the great authorities that constipation is not a disorder of the stomach or even of the small intestine, but of the large intestine or colon.

Under normal conditions, this large colon, which is about five feet long and shaped like a horse-shoe, extracts the liquids from the waste matter entrusted to its care and promptly passes the residue on.

But unfortunately, due to our sedentary lives, the colon has gradually become so lazy from lack of exercise that it is unable to perform its functions.

If we were able to live outdoors and to exercise vigorously every day, our colons would handle their work properly; for exercise is the greatest and most satisfactory colon stimulant known.

To most of us, sufficient daily exercise, however, is not possible. We have neither the time nor the inclination. Instead, we dose ourselves with laxative drugs, mineral waters, and other nostrums, with the result that, while we get temporary relief, we not only aggravate the condition, but find that repetitions of the same dose later fail to produce results.

But relief, even when obtained, is not sufficient. To maintain health and efficiency, it is absolutely of paramount importance to create and maintain, day in and day out, freedom from intestinal poisons; and this is impossible with laxatives.

There is a new way, however, to keep the colon sweet and clean—a way which has the same effect as vigorous exercise, yet without the inconvenience or time-consuming features of exercise. And the results are even better because the treatment is localized.

The principle upon which this new method is founded is the same as that used in massage. We all know that massage has the same effect as exercise—it stimulates the nerves and strengthens the muscles. Colon massage as practiced by osteopaths has proved wonderfully effective.

This new method of massaging the colon involves the use of a device called the Kolon Motor—a mechanical masseur, the face of which is shaped to fit over the colon when placed against the abdomen. You merely put the Kolon Motor on a door or wall, lean up against it, and turn the handle for a few moments. The face rotates with a scientific waving motion which immediately stimulates the colon and causes proper functioning. A couple of minutes in the morning each day is all that is required, and unless your experience is different from the hundreds of other users you will feel like a new person after the very first application.

Before the Kolon Motor was offered to the public a number of well-known physicians were acquainted with its merits and used it in their practice. Without exception the results were most gratifying—in fact, every physician who has tested the Kolon Motor endorses it most highly.

Martin's Method, Incorporated, Dept. 511, 105 East 30th Street, New York, has prepared a booklet called Colon Cleanliness, which they will be pleased to send gratis to all readers of this magazine. In this booklet the Kolon Motor is clearly illustrated and its application shown. It also contains a scientific discussion of auto-intoxication, and explains why and how the Kolon Motor produces such assured results. Letters from well-known physicians relating their experience with the Kolon Motor also form a part of the book.

There may be some who scoff at the idea of colon hygiene and its direct relation to health and efficiency, but the wiser ones will write for this free book and learn what this wonderful device is accomplishing for so many others.—*Adv.*

The Independent Investor's Service

Luigi Criscuolo, Director

The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds. We cannot, of course, decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

cene. The German chemists, Graebe and Liebermann, beat him to the patent office by one day! Perkin was the first to put synthetic alizarin on the market, but later the Germans captured the business. The madder fields of France were put to other uses and even the French soldiers were dependent on made-in-Germany dyes for their red trousers.

Any kind of dye found in nature can be made in the laboratory whenever its composition is understood and usually it can be made cheaper and purer than it can be extracted from the plant. But to work out a profitable process for making it synthetically is sometimes a task requiring high skill, persistent labor and heavy expenditure. One of the latest and most striking of these achievements of synthetic chemistry is the manufacture of indigo.

Indigo is one of the oldest and fastest of the dyestuffs. To see that it is both ancient and lasting look at the unfaded blue cloths that enwrap an Egyptian mummy. When Cæsar conquered our British ancestors he found them tattooed with woad, the native indigo. But the chief source of indigo was, as its name implies, India. In 1897 nearly a million acres in India were growing the indigo plant and the annual value of the crop was $20,000,000. Then the fall began and by 1914 India was producing only $300,000 worth! What had happened to destroy this profitable industry? Some blight or insect? No, it was simply that the Badische Anilin-und-Soda Fabrik had worked out a practical process for making artificial indigo.

That indigo on breaking up gave off aniline was discovered as early as 1840. In fact that was how aniline got its name, for when Fritzsche distilled indigo with caustic soda he called the colorless distillate "aniline," from the Arabic name for indigo, "anil" or "al-nil," that is, "the blue-stuff." But how to reverse the process and get indigo from aniline puzzled chemists for more than forty years until finally it was solved by Adolf von Baeyer of Munich, who died last August at the age of eighty-four. He worked on the problem of the constitution of indigo for fifteen years and discovered several ways of making it. It is possible to start from benzene, toluene or naphthalene. The first process was the easiest, but if you will refer to the products of the distillation of tar you will find that the amount of toluene produced is less than the naphthalene, which is hard to dispose of. That is, if a dye factory had worked out a process for making indigo from toluene it would not be practicable because there was not enough toluene produced to supply the demand for indigo. So the more complicated naphthalene process was chosen in preference to the others in order to utilize this by-product.

The Badische Anilin-und-Soda Fabrik spent $5,000,000 and seventeen years in chemical research before they could make indigo, but they gained a monopoly (or, to be exact, ninety-six per cent) of the world's production. A hundreds years ago indigo cost as much as $4 a pound. In 1914 we were paying fifteen cents a pound for it. Even the pauper labor of India could not compete with the German chemists at that price. At the beginning of the present century Germany was paying more than $3,000,000 a year for indigo. Fourteen years later Germany was *selling* indigo to about the same amount. Besides its cheapness, artificial indigo is preferable because it is of uniform quality and greater purity. Natural indigo contains from forty to eighty per cent of impurities, among them various other tinctorial substances. Artificial indigo is made pure and of any

desired strength, so the dyers can depend on it.

Art can go ahead of nature in the dyestuff business. Before man found that he could make all the dyes he wanted from the tar he had been burning up at home he searched the wide world over to find colors by which he could make himself—or his wife—garments as beautiful as those that arrayed the flower, the bird and the butterfly. He sent divers down into the Mediterranean to rob the murex of his purple and so rare it was that only kings could wear it. He sent ships to the new world to get Brazil wood and to the oldest world for indigo. He robbed the lady cochineal of her scarlet coat. Why these peculiar substances were formed only by these particular plants, mussels and insects it is hard to understand. I don't know that Mrs. Cacti Coccus derived any benefit from her scarlet uniform when khaki would be safer, and I can't imagine that to a shellfish down in the sea it was of advantage to have a red lining to its shell or to an indigo plant that its leaves in decomposing should turn blue. But anyhow, it was man that took advantage of them until he learned how to make his own dyestuffs.

Our independent ancestors got along so far as possible with what grew in the neighborhood. Sweetapple bark gave a fine saffron yellow. Ribbons were given the hue of the rose by poke berry juice. The Confederates in their butternut-colored uniforms were almost as invisible as if in khaki or *feldgrau*. Madder was cultivated in the kitchen garden. Only logwood from Jamaica and indigo from India had to be imported. That we are not so independent today is our own fault, for we waste enough coal tar to supply ourselves and other countries with all the new dyes needed. It is essentially a question of economy and organization. We have forgotten how to economize, but we have learned how to organize.

The British Government gave the discoverer of mauve a title, but it did not give him any support in his endeavors to develop the industry, altho England led the world in textiles and needed more dyes than any other country. So in 1874 Sir William Perkin relinquished the attempt to manufacture the dyes he had discovered because, as he said, Oxford and Cambridge refused to educate chemists or to carry on research. Their students, trained in the classics for the profession of being a gentleman, showed a decided repugnance to the laboratory on account of its bad smells. So when Hofmann went home he virtually took the infant industry along with him to Germany, where Ph.D.'s were cheap and plentiful and not afraid of bad smells. There the business throve amazingly, and by 1914 the Germans were manufacturing more than three-fourths of all the coal tar products of the world and supplying material for most of the rest. No wonder the British are now cursing the universities for thus imperiling the nation thru their narrowness and neglect; but this accusation, tho natural, was not altogether fair, for at least half the blame should go to the British dyer, who did not care where his colors came from, so long as they were cheap. When finally the universities did turn over a new leaf and began to educate chemists, the manufacturers would not employ them. Before the war six English factories producing dyestuffs employed only 35 chemists altogether, while one German color works, the Höchster Farbwerke, employed 307 expert chemists and 74 technologists.

This firm united with the six other leading dye companies of Germany on January 1, 1916, to form a trust to last for fifty years. During this time they will maintain

The Fate of the Unprepared

Among the remarkable events of this war no fact stands out more startlingly than the tragic sacrifice of Russia's unequipped soldiers.

The army has been victimized by intrigue and treachery. Guns were sent to the front without ammunition and ammunition without guns. Supplies were provided that when unpacked proved to be rubbish. Left stranded by communications that broke down under slight pressure the brave Russian troops hurled themselves again and again against foes perfectly prepared.

From the very verge of victory they doggedly fell back fighting with stones and clubs and iron bars, resisting heroically but ineffectively.

No thought can be more abhorrent to Americans than that of our boys ruthlessly slaughtered because of lack of equipment or support which it is the first business of us at home to supply.

Our Government, never before so powerful, is working prodigiously in the preparation of armies and means of warfare. Throughout the nation there is a unity of purpose that is piling on the altar of liberty every personal ambition and corporate gain.

Mines, factories, farms, shipyards, the counting houses and shops of every industry are laboring day and night to supply the sinews of war.

The Bell System is co-operating to mobilize production, transportation and communication, and is using its every energy to speed up American defense.

THE STONE SCHOOL

Cornwall-on-Hudson, Box 5, New York
FIFTY-FIRST YEAR

A School in the Heart of the Open Country. For Boys from 9 to 19.

LOCATION: 50 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating, unusually adapted to a sane and simple out-of-door life.

WORK: Preparation for College or Business Life; recent graduates in 12 leading colleges. Each boy studied physically and mentally to increase individual efficiency. Small classes: A teacher for every six boys.

ATHLETICS: Two fields with excellent facilities for all sports, under supervision; hiking, woods life, swimming pool.

You are invited to come and see for yourself. Catalog sent on application.

ALVAN E. DUERR Headmaster

An International Daily Newspaper

"It would be a fine thing if this excellent daily newspaper could go into every home in the country, for it is not only a daily newspaper but in fact a daily magazine of tremendous value. The most striking feature of the Monitor at this time is its wonderful foreign news, giving exclusive information and articles in regard to the situation in Europe."

(*The Dayton, Ohio, Journal*)

Published daily in Boston, U.S.A., The Christian Science Monitor circulates the world over.

The Monitor conducts its own news gathering bureaus in all parts of the world, and because its news of the world war and of all great diplomatic affairs of the nations is said by other newspapers to be the most complete in the world, its news is "news" whenever received by the subscriber.

It omits entirely from its columns the sensationalism which makes up so large a part of the news of the day usually seen by the public.

Advertising columns are also completely censored.

A single article is devoted each day to a discussion of Christian Science for those who are interested.

The paper is in reality *"An International Daily Newspaper"*—the first one ever published.

The Christian Science Monitor is on general sale throughout the world at news stands, hotels and Christian Science reading-rooms at 3c a copy. A monthly trial subscription by mail anywhere in the world for 75c, a sample copy on request.

THE CHRISTIAN SCIENCE PUBLISHING SOCIETY

This gives you a list of interesting items to look over with opportunity of stating your problem and requirements. We are always ready to reply to the questions of those needing assistance.

119 W. 40th Street, New York City

uniform prices and uniform wage scales and hours of labor, and exchange patents and secrets. They will divide the foreign business *pro rata* and share the profits. The German chemical works have been making big profits during the war, mostly from munitions and medicines, and will, after it, be, thru this new combination, in a stronger position than ever to push the export trade.

As a consequence of letting the dye business get away from her, England found herself in a fix when war broke out. She did not have dyes for her uniforms and flags, and she did not have drugs for her wounded. She could not take advantage of the blockade to capture the German trade in Asia and South America, because she could not color her textiles. A blue cotton dyestuff that sold before the war at sixty cents a pound, brought $34 a pound. A bright pink rhodamine formerly quoted at a dollar a pound jumped to $48. When one keg of dye ordinarily worth $15 was put up at forced auction sale in 1915 it was knocked down at $1500. The Highlanders could not get the colors for their kilts until some German dyes were smuggled into England. The textile industries of Great Britain, that brought in a billion dollars a year and employed one and a half million workers, were crippled for lack of dyes. The demand for high explosives from the front could not be met because these also are largely coal-tar products. Picric acid is both a dye and an explosive. It is made from carbolic acid and the famous tri-nitrotoluene is made from toluene, both of which you will find in the list of the ten fundamental "crudes."

Both Great Britain and the United States realize the danger of allowing Germany to recover her former monopoly and both have shown a readiness to cast overboard their traditional policies to meet this emergency. The British Government has discovered that a country without a tariff is a land without walls. The American Government has discovered that an industry is not benefited by being cut up into small pieces. Both governments are now doing all they can to build up big concerns and to provide them with protection. The British Government has assisted in the formation of a national company for the manufacture of synthetic dyes by taking one-sixth of the stock and providing $500,000 for a research laboratory. But this effort is now reported to be "a great failure" because the Government put it in charge of the politicians instead of the chemists.

The United States, like England, had become dependent upon Germany for its dyestuffs. We imported nine-tenths of what we used and most of those that were produced here were made from imported intermediates. When the war broke out there were only seven firms and 528 persons employed in the manufacture of dyes in the United States. One of these, the Schoelkopf Aniline and Chemical Works, of Buffalo, deserves mention, for it had stuck it out ever since 1879, and in 1914 was making 106 dyes. In June, 1917, this firm, with the encouragement of the Government Bureau of Foreign and Domestic Commerce, joined with some of the other American producers to form a trade combination, the National Aniline and Chemical Company. The Du Pont Company has also entered the field on an extensive scale and there are many minor concerns engaging in it. With these powerful forces rallied in defense of national industry it is expected we will be able to compete with the German combination in peace time as well as war time. To protect this industry Congress has put on a specific duty of five cents a pound and an ad valorem duty of 30 per cent on imported dyestuffs; but if, after five years, American manufacturers are not producing 60 per cent in value of the domestic consumption, the protection is to be removed. For some reason, not clearly understood and therefore hotly discussed, Congress at the last moment struck off the specific duty from two of the most important of the dyestuffs, indigo and alizarin, as well as from all medicinals and flavors.

The manufacture of dyes is not a big business, but it is a strategic business. Heligoland is not a big island, but England would be glad to buy it back just now at a high price per square yard. American industries employing over two million men and women and producing over three billion dollars' worth of products a year are dependent upon it. Chief of these is of course textiles, using more than half the dyes; next come leather, paper, paint and ink. We have been importing more than $12,000,000 worth of coal-tar products a year, but the cottonseed oil we exported in 1912 would alone suffice to pay that bill twice over. But altho the manufacture of dyes cannot be called a big business, in comparison with some others, it is a paying business when well managed. The German concerns pay on an average 22 per cent dividends on their capital and sometimes as high as 50 per cent. Most of the standard dyes have been so long in use that the patents are off and the processes are well enough known. We have the coal tar and we have the chemists, so there seems no good reason why we should not make our own dyes, at least enough of them so we will not be caught napping as we were in 1914. It was decidedly humiliating for our Government to have to beg Germany to sell us enough colors to print our stamps and greenbacks and then have to beg Great Britain for permission to bring them over by Dutch ships. By next year we may hope to be independent.

WHAT TO READ ON COAL TAR DERIVATIVES.

Send ten cents to the Department of Commerce, Washington, for "Dyestuffs for American Textile and Other Industries," by Thomas H. Norton, Special Agents' Series, No. 96. A more technical bulletin by the same author is "Artificial Dyestuffs Used in the United States," Special Agents' Series, No. 121, thirty cents. Other useful publications are: "Dyestuff Situation in U. S.", Special Agents' Series, No. 111, five cents; "Coal-Tar Products," by H. G. Porter, Technical Paper 89, Bureau of Mines, Department of the Interior, five cents; "Wealth in Waste," by Waldemar Kaempfert, *McClure's*, April, 1917; "The Evolution of Artificial Dyestuffs," by Thomas H. Norton, *Scientific American*, July 21, 1917; "Germany's Commercial Preparedness for Peace," by James Armstrong, *Scientific American*, January 29, 1916; "The Conquest of Commerce" and "American Made," by Edwin E. Slosson in The Independent of September 6 and October 11, 1915. The H. Koppers Company, Pittsburgh, give out an illustrated pamphlet on their "By-Product Coke and Gas Ovens."

EXERCIZES FOR CHEMISTRY STUDENTS

Read up the process of coke-making and gas-making in any large chemistry or in an encyclopedia.

Draw the structural formulas for CH_4, C_6H_6, C_7H_8, C_4H_{10}, C_7H_{12}, C_6H_{14}, C_6H_6, C_6H_5OH, $C_6H_5NO_2$, $C_6H_4(NO_2)_2$, $C_6H_5NH_2$, and then look them up in some book on organic chemistry. Compare the structure of benzene with naphthalene and anthracene. Look for the single benzene rings and the double naphthalene rings in the formula of Brilliant Congo.

How do you account for the fact that anilin and alizarin have Arabic names? Look up the derivation of alchemy, algebra, alembic and alcohol in the dictionary.

What is meant by a "synthetic" product? What substances can you mention that are made both naturally and synthetically?

What is meant by saying that "a person of royal descent is "born to the purple"?

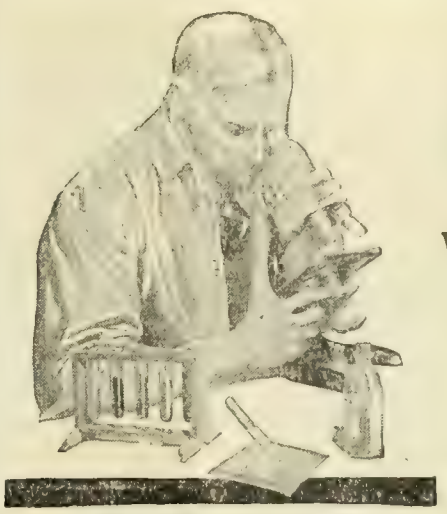
Buy some small packages of aniline dyes and try coloring cotton, wool, and silk cloth.

Question for debate: Resolved that the United States should maintain duties on dyes which are imported.

MAKING SAILORS WITHOUT SHIPS

(*Continued from page 284*)

A result of this stringency has borne fruit in study. When there is no permissible diversion, study itself becomes a diversion. Tho there are some college men and more who have attended high school, the average naval recruit has not had an overdose of education. To him study is more new than obnoxious, notwithstanding his probable early aversion to it.



The single alternative to returning to barracks after supper is to remain at the Institute, where thru the evening there is perhaps even more incentive to application. The Dunwoody night school for civilians, in session until 9 p. m., prolongs the scheme of the day's work, with instructors present to help. For bluejackets, however, classroom and workshop at night seem to shake off their disciplinary tone, and to offer prospects more sociable.

As at all naval schools, the Dunwoody instructors drummed into the sailors with almost terrifying emphasis the importance of writing every day in their log-books an accurate record of their work, with drawings of machines or materials used. Anxiety to keep these log-books up to the mark accounts for much of the consistent night effort.

At some recent seaplane maneuvers on a nearby lake, incident to the organization of the Dunwoody Unit of the National Aerial Coast Patrol, one of the blacksmith apprentices was detailed, with several mates, to stand guard a whole day over the plane. Religiously he made a careful drawing of the seaplane in his log-book, with an account of his experiences on watch. Other men, having been told that a log-book was a sort of diary, took to recounting their impressions of the city instead of their exercizes at class. For the incoming detachment the log-book requirements will be announced in a more precise form.

Four to six men in each class have been found so adept at their trade as to make it desirable to hold them indefinitely at Dunwoody as assistant instructors. Before enrolling in the navy these particular bluejackets served ten years or more in their vocation, rambling about the country and in foreign lands, too, sometimes at sea, absorbing the sundry ways of handling problems the craft presents. They can teach. They can show how tools should be made and used. They have exchanged observations and the apprentice jackies have profited immensely thereby. By splitting up the classes into sections with one of these assistants at the head of each, the chief instructors have been able to intensify the training by direct heed to individuals. But this excellent system has taken months to develop. Without question the new men coming to Dunwoody will advance more rapidly than their predecessors. Furthermore, much naval equipment not obtainable at the start because of accumulated war orders at the great engineering and electrical factories, is now installed, so that instruction can go forward with nothing lacking.

Seven hundred bluejackets abruptly popping into the streets of a harbor town would call forth no unusual comment from the inhabitants, would mean merely another warship or two come to anchor. But let this many sailors invade a city in the interior, a region which never before knew but two or three jackies at a time, quietly home on leave at that, and there is bound to be little less than circus excitement. This pro-war impression on the populace the Navy Department sagely foresaw when it

This Man's Methods

The Time Has Come to Deal With Corns in a Scientific Way

Not This Man's

Let An Expert Deal With Corns

Ask who makes it before you use a method for ending corns.

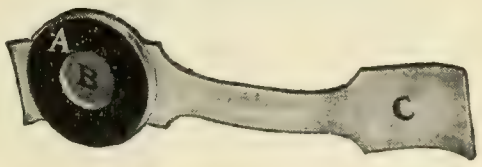
Harsh methods are not sanctioned now. Mussy methods are unnecessary. Soreness never need occur.

Blue-jay was invented by a chemist of high repute. It is made by a concern of world-wide fame as a maker of surgical dressings.

Its action is gentle and results are sure. It acts on the corn alone, not on the healthy tissue.

Apply it as you wrap a cut finger. That ends all pain, all discomfort. In two days the corn disappears. Sometimes an old, tough corn needs a second application. But no corn can resist this method. It is sure to go.

Millions of people know this. At the first sign of a corn they apply a Blue-jay. Corn pains never bother them.



You will always do likewise when you see the results. One trial will convince you. It means so much, and costs so little, that we urge you to make it now.

Deal with one corn tonight.

B&B Blue-jay Corn Plasters
Stop Pain Instantly
End Corns Completely
25c Packages at Druggists

BAUER & BLACK *Makers of Surgical Dressings, Etc.* Chicago and New York

How Blue-jay Acts

A is a thin, soft pad which stops the pain by relieving the pressure.

B is the B&B wax, which gently undermines the corn. Usually it takes only 48 hours to end the corn completely.

C is rubber adhesive which sticks without wetting. It wraps around the toe and makes the plaster snug and comfortable.

Blue-jay is applied in a jiffy. After that, one doesn't feel the corn. The action is gentle, and applied to the corn alone. So the corn disappears without soreness.

Over There

Herman Whitaker Has Gone to France for The Independent

KNOWING his work you know what is in store for you. Whitaker has been through the mill. He writes out of a full experience with pen dipped in his own life's struggle. That is why he ranks with California's other two young literary giants, Jack London and Frank Norris. Witness: A "holy terror" as a youngster—so said his stepfather, the Scotch naval surgeon, and his uncle, Sidney Grunby, the playwright. Ran away to get experience, and got it. Served in the British Army for three years. Became fencing master for his regiment. Became a lumber jack in Ontario. Busted bronchos on the Manitoba frontier. Married. Pioneered in the Hudson Bay country. Went broke farming up north of Winnipeg. Fled from the Cree Indians, to California. Settled there with his family. Worked twelve hours a day and read five hours every night—from Kant, Hegel, Darwin, Spencer and the like. Cut his niche in American literature. Went 500 miles south of Mexico City and stumbled on "one of the worst slave systems in the world." Put the story in his famous book "The Planter" and later in his magazine series "Barbarous Mexico." Whitaker never settles down. Went to El Paso with General Pershing. Joined Villa as war correspondent of The Independent. Went on his Saltillo Campaign against Huerta.

You know Whitaker's other works—"The Settler," "Over the Border," and scores of short stories of vivid character-drawing and intense description.

Do you remember this bit from "The Probationer"? It shows how Whitaker sketches things he has seen:

> "A twenty-mile wind plus sixty degrees of frost is not productive of warmth, and the bitter prospect added a chill to their rigors. All about them clumps of ragged poplar blotched the whiteness. Far off a range of hills thrust scrub-crowned peaks against a livid sky; the snowy wastes were hideless. In the east a sad spruce forest blackly loomed. Over all brooded the silence. The vastness of it all, the solitude, the blanched, far-reaching desolation, awed and oppressed the young man. It was so different from the smug, roadruled eastern townships. Hard, cruel, brutal, its utter savagery repelled the eye and sickened the soul."

Our correspondent says he is going to send us some good live stuff from the battlefront and we believe him. Don't you?

The Independent

sent its men deep into the unbriny Northwest.

Imagine families by the score at, say Portsmouth, New Hampshire, inviting two or three sailors to each home for Sunday dinner! Yet this occurs regularly in Minneapolis and St. Paul, cities to which the Dunwoody bluejackets, nearly all from distant homes in the south, east or Pacific states, are utter strangers. Indeed I imply no lack of war ardor in coastal residents. To them, naturally, sailors have never been a curiosity, either in time of peace or war. National spirit feeds on various emotions, and one of them, as directed toward the Dunwoody naval detachment, is benign inquisitiveness.

Several of the men fell mildly ill, and were obliged to remain in their bunks. The naval surgeon in charge believed a separate house for a sick bay and dispensary was essential. An interested family donated its old residence. Then a women's organization gave a big musicale, and the money received went into furnishing and renovations, jam shelves were replenished, linen closets filled. A cosy clubroom, a sun-porch, were evolved for convalescents. The Dunwoody Naval Hospital almost shouts the blessings of infirmity.

Something in hundreds of navy blue uniforms makes landlocked civilian minds picture a dreadnaught in all its formidability, in all its protective might. Practically without exception no Dunwoody bluejacket has ever trod the deck of a man-of-war, but it is sufficient to the people that this adventure is imminently in store for him. In this thought curiosity gives way to genuine admiration plus envy.

Since it is established that the novelty of sailors in the community is by no means a transient force, that the eagerness of the civilians to "do something" for the men remains undiminished, Commandant Dodge has decided not to be averse to occasional entertainments arranged for his battalion, recreations such as dances, suppers, theatricals. Tho healthful, the northwest winter is long and hard, with stretches of monotony. The Dunwoody Naval Band, which plays daily at the noon mess, will relieve the tedium of indoor evenings. Frequent drilling in the hall with navy rifles will inspire martial tone.

It might be concluded that the bluejackets will be loath to leave the scene of their inland triumphs, where they have formed unexpectedly so many lasting friendships. But a man, a boy, enlists in the navy primarily because he yearns to go to sea. Fond good-bys there will be, of course, but not one Dunwoody jacky who is not counting the days until he goes aboard ship.

Minneapolis

Remarkable Remarks

ARNOLD BENNETT—Life is marvelous.

LORD NORTHCLIFFE—Why shouldn't war nurses smoke?

GENERAL PERSHING—This war is being fought by women.

SECRETARY LANE—The man who is a thorobred wins out.

DR. PARKHURST—The only thing that justifies effort is result.

W. L. BROWNELL—The man who thinks he can, is right about it.

RABBI STEPHEN S. WISE—I have never feared to be in a minority.

ADMIRAL TOGO—Tighten the strings of your helmet after a victory.

MR. J. D. BERESFORD—A hen is only an egg's way of making another egg.

MAX BEWER—To look upon the Kaiser is like looking upon a wonderful autumn day.

The New Books

A Democratic Deity

IN a footnote in his recent book, "God, the Invisible King," Mr. H. G. Wells remarks that the some influences making for new religious ideals may be seen inside as well as outside the church. The truth of his observation is strikingly shown in a new volume by Edmund H. Reeman, and parallels many of the leading notions of God advanced by Mr. Wells, who is eager to have it known that he repudiates Christianity and the Christian conception of God. Mr. Reeman asks with deep earnestness the question, *Do We Need a New Idea of God?* and answers in the affirmative with enthusiasm and conviction. He finds it an easy task to show that the prevailing notions of God as Creator and Providence are inadequate to the present world needs, in part at least because they are not able to take into account the new reaches of knowledge attained by man in the last few decades.

The chapters on "God and Democracy," "The Nature of the Life-Force," and "The God of the Struggle," indicate the trend of Mr. Reeman's contribution to the new idea of God toward which he believes the world is moving. Many of these pages are so like Mr. Wells's that one might conclude the American author was writing under the influence of the Englishman's last book, were it not for the fact that Mr. Reeman's volume was in press before Mr. Wells's theological pronouncement was published. There is no doubt that the similar contentions of both authors are but symptomatic of a general movement in the religious world toward a larger recognition of certain elements in the divine ideal that have been more or less overlooked in the past.

It will bring new forces of appeal to the larger gospel of the Kingdom as Jesus proclaimed it, if the phraseology of democracy can be made to replace the monarchical thought-forms in which our conceptions of God were born, and if greater emphasis can be placed upon the essential coöperation of man and God for the consummation of the divine purpose in the universe, which both are still engaged in building.

Like many other dissatisfied souls, the author finds it much more easy to point out the inadequacy of the old than to lead into positive notions of the new, but his attempt is a worthy one.

Do We Need a New Idea of God? by Edmund H. Reeman. Philadelphia: Geo. W. Jacobs & Co. $1.

Strong War Fiction

The British Navy at War, by W. MacNeile Dixon, tells in handy form of the daring exploits of British fleets and single ship actions since the commencement of hostilities. The author's method is more a simple statement of known facts than entering into the professional controversies which have risen. But apart from the major engagements, of which we have all read, the author discloses strange incidents of modern sea warfare.

The British Navy at War, by W. MacNeile Dixon. Houghton, Mifflin Company. 75 cents.

LOOK ON THE TOP WAD FOR "INFALLIBLE" OR "E.C."

HERCULES
Smokeless Shotgun
POWDERS

When you buy loaded shotgun shells you buy by name. You ask for your favorite make and see to it that you get it.

But if this is all you do you omit an important detail. You overlook the matter of powder.

It is just as easy to obtain a powder with which you are familiar, a powder in which you have full confidence, as it is to obtain your favorite make of shell. You ask for the powder by name just as you ask for the shell.

Hercules Smokeless Shotgun Powders, Infallible and "E.C.", may be obtained in the standard makes of shells given at the left. The shell you shoot is among them. You can obtain a Hercules powder in that shell by asking for it when you buy.

On the top wad of every shell, and on the side of the box in which the shells are sold, is printed the name of the powder with which the shell is loaded. Look for the name when buying. See that it is either Infallible or "E.C.".

These powders are of high quality and uniform quality. They give light recoil, even patterns, and high velocity. Write for a free booklet which describes them fully.

SOCIALISTS: THE KAISER-PARTY

(*Continued from page 290*)

come a fruitful soil for the "Socialist" German peace propaganda.

The election in Dayton indicates considerable successes in the immediate future for this "Socialist" organization, and these successes may continue as long as the war endures. But the party has become exclusively an anti-war party, and its new supporters have been gained exclusively on the anti-war issue. Moreover, the organization has once more become wholly foreign as it was twenty years ago. It is now not only un-American, but anti-American. It rejects absolutely not only those incipient elements of internationalism always present in America's domestic and foreign policy, but also the new internationalism so rapidly and consistently developing in the state papers of President Wilson. It rejects as worthless the two centuries of development of democracy in America, in France, in England and in the British colonies. It rejects all socialism not demonstrably and exclusively of German origin and having the approval of the present intellectual leaders among the German Socialists, that is, Kautsky, Bernstein, Ledebour, Haase, et al. It leaves these men, themselves the helpless hostages of the Kaiser, as the dictators of the world-policy of the so-called international socialism.

After the war is over the future of an organization wholly devoted to ending the war by means of a German peace is difficult to foresee. If the war leads to unexpected difficulties, and these are prolonged even after it is over, the organization may continue to grow. If popular discontent takes a new direction, no matter what that direction may be, it is certain that the managers of the machine will take advantage of it.

But it has permanently lost the support of all those who believe that America stands for something important, something worth fighting for, in the development of international democracy.

After the war the present "Socialist" party will lose the support of the "bourgeois" pro-Germans and pacifists now aiding it and will have to rely exclusively upon the un-Americanized masses. This will make it utterly impossible that it should gain control in the near future of a single state in the union, and highly improbable that it can get control of more than a very few cities. Its prospects, then, after a war that might have increased tenfold the following of a genuinely international, and a genuinely democratic socialism will be distinctly inferior to its prospects before the war.

Moreover the party's chief success in 1912 increased as one traveled West. They were smallest in New York, where the immigrants often make their first stay and are least Americanized, and largest in Butte, Berkeley and the thoroly American far West. Now the situation is reversed. The largest "Socialist" gains are in New York. It is a direct and impudent movement of foreigners imbued with German nationalism (German Socialist brand) against international and democratic America.

The attack is succeeding in a certain measure today and may continue to succeed for several years longer. But already it is beginning to create a bitter reaction and I am one of those who hope and believe that within a few years—even in our foreign colonies—this reaction will sweep this organization of traitors to internationalism and democracy out of ex-

DOES YOUR STOMACH BALK?

ARE you afraid of it? Is it a mystery? What do you know about it? What service is it giving? You are no stronger than your stomach! Your capacity for work, endurance, mental keenness, depend upon whether your stomach functions soundly and does its share in producing pure blood for the heart to send to all parts of the body, putting "Pep" into every thought and action.

DOES YOUR HEART MURMUR, SKIP AND FLUTTER?

Do you know that your heart is also menaced by a deranged stomach? If your food is allowed to sour and ferment, the gases thus generated will swell your abdominal region unnaturally, bringing the pressure thus caused principally against the heart. This condition is responsible for many of the fatal, so-called cases of Heart Failure.

YOU CAN'T CORRECT THIS WITH DRUGS AND PILL PIFFLE

The Stomach is a muscular organ and its perfect functioning depends upon maintaining a normal muscular activity. This is where

YOU NEED MY HELP!

I have devised methods which bring about an internal muscular development so that the functioning can be controlled.

It is not what you eat, but what you are able to digest that gives you the vitality to do things. Stop pampering your stomach. It is STRONGFORT METHODS you need, based on the true principles of Nature's laws of health and body building.

I AM A BUILDER OF MEN!

YOUR whole body can be rebuilt. I will show you how to help Nature and replace the old worn, decaying cell life and rebuild it with new vital tissue. No matter what your weakness, whether it has been brought on by *indigestion, gassy stomach, nervousness*, or by *youthful indiscretions*, my natural methods will correct it. If you are SKINNY, run down, bilious, always tired, have headaches, rupture, no "Pep," you need STRONGFORTISM. Every bodily ill gives way to the gentle, healing and building influences of my System.

It will cost you nothing to consult me—it may save your life. Send TODAY for my book, **"Intelligence in Physical and Health Culture."** It is a liberal education on the subject and will show you the way to perfect Health, Long Life, Success and Happiness. It is FREE. Send 6c. in stamps to cover mailing expenses. Write NOW.

M., October 31, 1917.

A. F. HOCKENBEAMER,
Vice-President and Treasurer.

San Francisco, Cal., October 31, 1917.

LIGGETT & MYERS TOBACCO COMPANY.
St. Louis, Mo., October 23, 1917.

A quarterly dividend of three per cent (3%) was this day declared upon the Common Stock of LIGGETT & MYERS TOBACCO COMPANY, payable on December 1, 1917, to Common Stockholders of record at the close of business on November 15, 1917. Checks will be mailed.

T. T. ANDERSON, Treasurer.

Journalism As An Aid To History Teaching

By EDWIN E. SLOSSON, Ph.D.

Literary Editor of The Independent

Associate in the School of Journalism, Columbia University

This address, which was given before the History Section of the New York State Teachers' Association at Rochester, November 23, 1915, has been published in pamphlet form and will be furnished free to teachers.—Write to The Independent, 119 West 40th St., New York.

istence. For the result of the war and America's peace terms will finally demonstrate—even to the satisfaction of the foreign colonies—that we are fighting for democracy and internationalism.

There is little to fear from the pro-German Socialists after the war. But there is much to fear now. Every electoral success they gain, exaggerated a hundredfold in the telling, will help to keep Russia from rendering what limited assistance she still can render the Allied cause and will aid to keep the remaining neutrals under German control.

Hence the enormous importance attributed by the German Chancellor, Michaelis, to the supposed "unpopularity" of the war in America.

The time to act against these traitors to democracy and internationalism is now—especially in view of economic troubles which are certain to appear shortly, in spite of all the efforts of the Administration. The American labor movement can and will voice all legitimate grievances. But we must not allow the just demands of American labor to be used to fasten the yoke of Kaiserism upon the people of Europe.

It may already be too late to counteract the stupendous work of the German propaganda. It is not too late to prevent its spread. Our first task must be to prevent the further extension of this mental and moral slavery. We must isolate it, brand it and set the rest of the nation against it. We may then be certain, to use Lincoln's phrase as to chattel slavery, that it is "on the road to ultimate extinction." But we can be certain of nothing unless we take the offensive against these Allies of the Kaiser—and take it NOW.

Greenwich, Connecticut

Peat Moss for Red Cross

AMONG the many substitutes which the present war has brought into the service of man, particularly among the Germans, the use of sphagnum, or peat moss, as a surgical dressing is remarkable.

This moss placed on fresh wounds will absorb seven to ten times its own weight in liquid; cotton, only about six times. Cotton dries slowly; moss, with comparative rapidity. This quality is of particular value in the care of profusely bleeding wounds on long trips from battlefield to hospital.

Sphagnum has springy qualities that make it less disagreeable to the touch of the wounded region. When cotton comes in contact with a sensitive surface, it feels as if a hard substance were being forced down upon tender nerves. The contact of sphagnum is scarcely noticeable.

The cotton fibers frequently adhere when the compresses are changed, and their removal is always painful. Sphagnum pads are renewed almost without the patient's knowing.

The elasticity of the moss prevents compression of the dressing, which would exclude the air and interfere with the circulation necessary to proper antisepsis.

To prepare for surgical use it is first picked, partially dried upon netting or tables that allow free circulation of the air, and next sorted by hand to remove foreign substances, as twigs, leaves and bark. Along with this goes the grading, the fresh, green moss being of better quality than the faded or slightly brown plants. Following this it is sterilized, dried a second time, and finally packed in bags of convenient size for shipment.

Take the Cure this Winter at

Virginia Hot Springs

The only place in America where it can be taken just as comfortably as in the Spring or Fall

Many who, in former years have regularly visited Harrogate, Aix-les-Bains, Carlsbad, Vichy and other European Resorts (at present inaccessible on account of the war) are *now* taking the cure at *Hot Springs* and find it just as beneficial, and the climate and surroundings much superior.

The curative value of the waters (celebrated since 1735) is vouched for by eminent physicians from all parts of the world and by sufferers who have experienced their wonderful effects.

THE BATH HOUSE is modern, complete and comfortable, and is connected with the Hotel by a sunlighted viaduct, so that the bather may go to and from his room without outside exposure.

It would be difficult to imagine a more delightful spot. The *Homestead standard* of service maintained throughout the year. If you would learn more of this truly *ideal winter resort*, write for

Renewed Health—Rest—Recreation

Glorious wooded mountain scenery, Riding and Driving over interesting mountain roads and trails—Golf, Tennis, and a variety of other sports give an added zest to outdoor recreation.

The Homestead Book

graphically describing and illustrating, in colors, the many charms of the Homestead and its surroundings and dilating fully upon the *therapeutic values of the famous waters*. Copies upon request.

What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 24th year. The paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. A dollar bill mailed at our risk will bring you the Pathfinder for a full year, or simply send **15c** to show that you might like such a paper, and we will send the Pathfinder on probation **13** weeks. The 15c does not repay us, but we are glad to invest in new friends. **Pathfinder, Box 39. Washington, D. C.**

IN THE INSURANCE WORLD

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

IT is an accepted axiom that the commerce of a nation follows its flag. Arthur Richmond Marsh, editor of *The Economic World*, is of the opinion that being an indispensable part of commerce, banking and fire insurance should invariably accompany it wherever it goes. But this they do not do, in the case of American commerce, as he pointed out in a recent address before the members of the Insurance Society of New York. Mr. Marsh advocates the extension of American fire insurance thruout the world in emulation of the British example. He cited the importation last year by us of some billions in raw materials and observed that it was safe to say that not ten cents' worth of American insurance protection came with them. He then drew attention to the British system in contrast, and we are to conclude that he regards the universality of British insurance as an important contributory factor to the power exercized by that nation in world commerce.

The conditions pictured are true in each case, and they are not inexplicable in either. The territorial limitations of the British Isles, cut off from the world by water, made her a maritime nation; compulsorily, a race of splendid adventurers, who probably carry in their blood a strain which, tho it may not thirst for conquest, seeks, and for ages has sought, to extend its influence. Britain's natural theater being too narrow for her activities, she has been driven abroad for elbow room, and she has carried her customs and institutions with her in the belief that they were essential to her enterprizes.

And so it comes about that we find Great Britain's commerce covering the world, supported everywhere by her banks and insurance companies. It is worthy of our attention here to note one great difference between a great British insurance company and its American prototype: there is no form of coverage, fire, life, casualty and the numerous others practised, which the English or Scotch company may not, does not, furnish; the American company is hamstrung in this matter—"cribbed, cabined and confined" by the differing restrictive laws of forty-eight states.

In the United States the Liverpool and London and Globe Insurance Company, to illustrate a general fact, signifies fire insurance only; in the remainder of the earth it is known as a corporation from which any form of legitimate insurance may be obtained. Getting back to the main thread of our theme, Britain was forced by her isolation and comparative territorial insignificance to range the world, and she has done it.

An altogether different task fell to our lot. A sparse population was confronted by an unsubdued wilderness occupying upward of three millions of square miles. Our forefathers settled themselves to the work of subduing and rendering it habitable. After nearly three hundred years we find that the conquest is but complete. The processes of development continue. We have grown into thinking in terms of a continent. We have not been crowded for room. Compared with Britain, our fire insurance institution is young. The vast majority of all the companies organized here have perished in the flames of our tremendous fire waste. Very few of the many organized within the past fifty years survive.

While the British companies have been free under the general laws of that empire to develop themselves in their own way, the American companies have been hampered in nearly every state by special laws, some of them so drastic as seriously to impair the directorial powers of those who conduct them.

There are, it is true, in spite of the difficulties, a number of companies properly equipt financially and managerially to transact a world business. Perhaps they should, perhaps they will do so. But I do not expect them to do it soon.

* * *

THAT portion of the American press which is devoted strictly to the insurance business is divided over the question of permitting enemy companies to continue transacting business here during the war period.

The contingent arguing in favor of the German companies—which do not exceed half a dozen, including one casualty and one life reinsurance company—is small. The American Defense Society has just sent out a circular letter appealing to the people to communicate with the Secretary of the Treasury, requesting that he refuse a license to those companies.

I agree with the principles enunciated by the society. It is urged by the advocates of non-interference that the funds of the American branches of the companies are strictly held here; that no portion of them may be withdrawn for remittance to the enemy; and that we need the insurance facilities they furnish. The latter is of such negligible value it need not be considered.

As to the retention of funds within the country under rigorous supervision by state authorities, there are two answers: If Germany is beaten, as we hope and intend she shall be, she is bankrupt and any inordinate loss suffered by her companies here—an unfortunate conflagration occurring before peace is declared—renders aid to the American funds from German head offices a very doubtful quantity; again, unless the American funds are actually impounded by the Government, what assurance have we that they may not be used by the adherents of Germany in this country in furtherance of her secret designs against us? We have abundant evidence to the fact that Germany holds to the doctrine that all she does in war is right. Over and beyond this, I see no good reason why, if in defense of our own position, we are ready to kill her soldiers and sailors and utterly destroy all that represents her power, we should not nullify all the sources of that power, however small, in this country. It is clean warfare, proper and legitimate; and it is our duty to play for all it is worth even the deuce of trumps.

* * *

ONE can easily understand why a militant advocate of fraternal life insurance on the assessment plan becomes irritated over any criticism leveled at that system. That system is on the defensive. Why? Because of the many and grievous errors it has committed, errors persisted in long after they were made plain, culminating in great injury which of course is inflicted on the members who lived and grew old—too old to carry the burdens imposed by the errors.

Let it be understood that such criticisms as are indulged in are not aimed at the lodge plan, nor the form in which the affairs of the system are administered, nor the manner in which the contributions to the funds are made by members. The objections are solely against the unscientific way in which the rates are made and the funds distributed. If each member's rate is adequate to the risk incurred in granting him membership, it makes no difference whether he pays once, twice, four times or twelve times a year, proper interest charges being made for postponed payments.

Personally I like the lodge system. I recognize its value. It appeals to the social instinct in man. It brings men closer together, and in this instance unites them in one of the most noble of causes—the preservation of the home.

As a matter of fact, to this amalgamation is due almost wholly the continuance of the orders. Under no other conditions which I can imagine would an institution devoted to the insurance of lives have survived the gross errors so long committed by the managers of this class of insurance.

The mistakes are being corrected, but in many cases they cannot be retrieved. Hundreds of thousands of old members are hopelessly lost.

A journalistic advocate of the orders calls this "slinging actuarial mud," and then admits that the "fraternal system is handicapped by the adjustment of rates that followed the inadequate premium collections of its early days." That is the point, and what does it mean? It means that the difficulties encountered in adjusting rates, the "handicap," arises out of the financial inability of the young man "of its early days," now an old man, to pay the heavy assessments which are levied against him.

It is neither help nor consolation to that man to be told that the mathematics of the scheme have been reformed, and the new members are paying adequate rates. He is warranted in wondering why in "the early days" they told him, as they did, that his rate was adequate. They insisted then that it was. They pretended to know. The agents of old line companies who held otherwise were denounced as the representatives of rich and expensive corporations, working for nothing but their pockets. They were "slinging actuarial mud."

However, it was not mud; it was light; but the heathen in their blindness continued to bow down before the shrines of their impenetrable ignorance. Were they honest in all this? I try to believe so, but it is difficult.

Fraternalism as applied to life insurance will not perish. It should not. It will regenerate itself.

But the process will require an enormous sacrifice by those in its fold least able to make it—the men and women of middle age and beyond.

The Insurance Department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. Address all communications on insurance subjects to the director of The Independent Insurance Service

WAS $100

The Oliver Typewriter

NOW $49

A $2,000,000 GUARANTEE

That This $49 Typewriter Was $100

The Sales Policy Alone Is Changed, *Not* the Machine

The Oliver Nine—the latest and best model—will be sent direct from the factory to you upon approval. Five days free trial. No money down. No salesmen to influence you. Be your own salesman and save $51. Over a year to pay. Mail the coupon now.

This is the time when patriotic American industries must encourage *intelligent* economy by eliminating waste. New economic adjustments are inevitable.

So March 1st we announced the Oliver Typewriter Company's revolutionary plans. On that date we discontinued an expensive sales force of 15,000 salesmen and agents. We gave up costly offices in 50 cities.

Price Cut In Two

By eliminating these terrific and mounting expenses, we reduced the price of the Oliver Nine from the standard level of $100 to $49. This means that you save $51 per machine. This is not philanthropy on our part. While our plan saves *you* much, it also saves for *us*.

There was nothing more wasteful in the whole realm of business than our old ways of selling typewriters. Who wants to continue them? Wouldn't you rather pocket 50 per cent. for yourself?

The Identical Model

The Oliver Typewriter Company gives this guarantee: The Oliver Nine we now sell direct is the exact machine—our latest and best model—which until March 1st was $100.

This announcement deals only with a change in sales policy.

The Oliver Typewriter Company is at the height of its success. With its huge financial resources it determined to place the typewriter industry on a different basis. This, you admit, is in harmony with the economic trend.

A World Favorite

This Oliver Nine is a twenty-year development. It is the finest, the costliest, the most successful model that we have ever built.

More than that, it is the best typewriter, in fifty ways, that anybody ever turned out. If any typewriter in the world is worth $100, it is this Oliver Nine.

It is the same commercial machine purchased by the United States Steel Corporation, the National City Bank of New York, Montgomery Ward & Co., the National Biscuit Company, the Pennsylvania Railroad and other leading businesses. Over 600,000 have been sold.

Simplified Selling

Our new plan is extremely simple. It makes it possible for the consumer to deal direct with the producer.

You may order from this advertisement by using the coupon below. We don't ask a penny down on deposit.

When the typewriter arrives, put it to every test—use it as you would your own. If you decide to keep it, you have more than a year to pay for it. Our terms are $3.00 per month. You are under no obligation to keep it. We will even refund transportation charges if you return it.

Or if you wish additional information, mail coupon for our proposition in detail. We immediately send you our de luxe catalog and all information which you would formerly obtain from a typewriter salesman.

10 Cents a Day

In making our terms of $3.00 a month—the equivalent of 10 cents a day—it is now possible for everyone to own a typewriter. To own it for 50 per cent less than any other standard machine.

Regardless of price, do not spend one cent upon any typewriter—whether new, second hand or rebuilt—do not even rent a machine until you have investigated thoroughly our proposition.

Remember, we offer here one of the most durable, one of the greatest, one of the most successful typewriters ever built. If anyone ever builds a better, it will be Oliver.

Don't Pay $100

Why now pay the extra tax of $51 when you may obtain a brand new Oliver Nine—a world favorite—for $49? Cut out the wasteful methods and order direct from this advertisement.

Or send for our remarkable book entitled, "The High Cost of Typewriters—The Reason and the Remedy." You will not be placed under the slightest obligation.

THE OLIVER TYPEWRITER COMPANY
1568 Oliver Typewriter Bldg., CHICAGO, ILL.

NOTE CAREFULLY—This coupon will bring you either the Oliver Nine for free trial or further information. Check carefully which you wish.

Mail Today

THE OLIVER TYPEWRITER CO.
1568 Oliver Typewriter Bldg., Chicago, Ill.

☐ Ship me a new Oliver Nine for five days free inspection. If I keep it, I will pay $49 at the rate of $3 per month. The title to remain in you until fully paid for.

My shipping point is _____

This does not place me under any obligation to buy. If I choose to return the Oliver, I will ship it back at your expense at the end of five days.

☐ Do not send a machine until I order it. Mail me your book "The High Cost of Typewriters—The Reason and the Remedy"—your de luxe catalogs and further information.

Your Problem is Solved

Because The Brunswick Plays ALL Records

WITH each Brunswick come two reproducers. These are instantly interchangeable. So for every type record you may use the proper needle: Steel, sapphire ball, jewel, etc. This great achievement, with others equally advanced, makes The Brunswick the final type phonograph—all instruments in one.

All records are at your command, all artists, bands, orchestras, ALL MUSIC. The Brunswick alone—of the finer phonographs—offers this unrestricted selection. This includes the wonderful Pathe Discs. Heretofore few were permitted to enjoy the famous Pathe star—Muratore—and other Pathe artists.

Brunswick tone is unmatchable because of the all-wood sound chamber, built like a violin.

Who, now, is content with a *one*-record phonograph, or with lesser attractions?

Hear The Brunswick first—then compare. Note all its advanced and exclusive features.

You'll say, too, that it is the one phonograph you've always wanted.

THE NEW PLAYS

Hamilton. George Arliss is the star of this interesting attempt to bring to life again the personality of Alexander Hamilton and the times in which he lived. Hamilton's opponents, Jefferson and Monroe, are shown in rather a sorry light by the text of the play, but their parts are excellently taken. (Knickerbocker Theater.)

HOW TO STUDY THIS NUMBER

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. COMPOSITION.

The Story of the Week.

1. You are editor of a paper read principally by women. Write an editorial article commenting on the recent votes for equal suffrage. Pay particular attention to the responsibilities equal suffrage will bring, and the results it may accomplish.
2. Write for your school paper a short item concerning the New York City elections.
3. Tell something concerning the history of Poland. Then explain the present plans for Poland.
4. With the aid of a map show how the war is related to places made famous by the Bible.
5. Give a clear oral explanation of what is meant by "Dying Nations." Add original comments on the subject.
6. Give an oral summary of the most important war news of the week.
7. Write an explanation of the present situation in Russia. Add your own comments concerning the future of Russia.
8. Imagine that you have a relative in Australia. Write a letter in which you tell of the most important events that have recently occurred in the United States.
9. Write a vivid description of any picture illustrating the news of the week.

Editorial Articles.

1. Write, as if for a novel, a character sketch of a man who has the opposition habit. Write a character sketch of a man who has the constructive habit. Make use of these sketches in an original story for your school paper.
2. Prepare for your school assembly an oration in which you not only tell what President Wilson has said concerning the present German Government, but also show in what ways the German people are admirably adapted for democratic government. Consult the article "Democracy in Germany," by Kuno Francke.
3. Show in what ways "Mobilizing the Borgias" is an effective and appropriate title. Give directions for writing titles. Write two or three good titles for school compositions.
4. Write, in a single paragraph, an explanation of the importance of the Monroe and Ishii doctrine.

The Great Adventure.

1. Tell which letters please you most. Give reasons for your preference. How can you make a letter interesting?
2. Write a letter that would interest an American soldier in active service, writing preferably to some soldier whom you know. If your teacher says the letter is really interesting, send it to the soldier to whom you wrote it.

Uncle Sam's War-Made Industries. By Donald Wilhelm.

1. Write a list of the principal topics considered in the article. Tell how the author has maintained unity. Point out the expressions by which he has gained coherence. Point out expressions by which he has gained variety and interest.

Handling Men. By G. S. Radford.

1. In a single paragraph write a précis, or summary, of the entire article.

Are You Working Too Hard? By F. B. and L. M. Gilbreth.

1. Read the article. Then write a similar article entitled "Are You Studying Too Hard?"

SECTION II. LITERATURE.

The New Books.

1. Explain the following expressions: "An artist of power in light and shade," "Symbolical significance," "A comprehensive and illuminating review," "The lay reader," "Well tabulated instruction," "A helpful manual," "An accepted authority," "A fairly well-beaten reading path," "A lexographical product."

SECTION III. WORD STUDY.

Give the meaning and the derivation of every one of the following words prominent in the news of the week: coalition, premier, franchise, autonomous, deportation, Tammany, borough, factor, budget, municipal, endorsement, coup d'etat, republican, conspiracy.

SECTION IV. GRAMMAR.

The teacher will ask every member of the class to select from The Independent five examples of words whose syntax seems difficult to explain. The lists will be exchanged and the work prepared for class recitation.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. The Government of New York City—"New York Goes Back to the Husks," "The Tiger Triumphs."

1. Answer the question asked in the second paragraph of the editorial.
2. On the basis of the first paragraph of the news item, make a study of the city's form of government. In what respect is it like the government of your own community?

II. Women's Suffrage—"As New York Goes," "New York Trusts the Women."

1. Review the history of the struggle for women's suffrage in the United States during the past year. What progress has the movement made? What set-backs has it had?
2. According to the editorial, what are the next steps in bringing the movement to national success?
3. What are the causes which "brought about a change of heart" in New York?
4. What is meant by the "Presidential suffrage"? Why was this granted to women when the state suffrage was denied?

III. The Revolutionary Spirit and the War—"Anarchy Reigns in Russia," "Election Day Results."

1. What are the causes which led to the downfall of the Kerensky government in Russia? What in your judgment is the next step?
2. What evidences of the revolutionary spirit do you find in the election returns in the United States? Is this revolutionary opposition justified in any way?

IV. The Political Future of Germany—"German King Worship," "Democracy in Germany."

1. "After carefully reading his article we are unable to resist the conclusion that the Germans . . . cling to this conviction as king worshipers," etc. Do you arrive at the same conclusion?
2. What, according to Professor Francke, are the democratic influences at work in Germany?
3. Investigate one or more of the institutions described by Professor Francke? Does your investigation justify his conclusions?
4. How does Professor Francke justify the paradox that "the monarchy has been intertwined with all or nearly all the republican tendencies"?

V. The United States and Japan—"The Monroe and Ishii Doctrine," "Hands Across the Pacific."

1. Under what circumstances did the United States and Japan first enter into friendly relations? How long did these friendly relations continue? What were the causes which threatened to disrupt this friendship?
2. Justify, if you can, the first sentence in the editorial?
3. Why is the present agreement between the United States and Japan compared to the Monroe Doctrine?
4. "By the agreement . . . each of the three nations concerned gains something." State these gains.

VI. Industrial Efficiency—"Handling Men," "Are You Working Too Hard?"

1. Review the material furnished for the discussion of this topic in The Independent for September 15 and October 20.
2. Do you agree that wages are the most important factor in the "reduction in labor turn-over"?
3. Prove that "it is only good business sense for the management to provide a clean and comfortable place to work."
4. Which of the seven causes for unnecessary fatigue are under the control of the management? Which under the control of the worker?

VII. American Industries and the War—"Uncle Sam's War-Made Industries," "The Manufacturer's Problem."

1. Is it true that national efficiency depends upon the development of home industries in peace times as well as during war?
2. Make a list of the chemical products now being manufactured in the United States which were formerly imported from Germany.
3. What are the terms of our "Declaration of Industrial Independence"?
4. "In one word, America already has avenged the 'Lusitania.'" What is your understanding of this?
5. Summarize Mr. Purinton's article with the following sentence as a text: "The whole situation is up to the *American manufacturer.*"

Her bit! With a typewriter and a mimeograph she multiplies her power to do—a thousand fold. With this simple equipment she reduces printing costs down to a minimum—does in one hour what other methods take many hours or days to do—produces a finished product that is a joy to look at—and liberates other workers for other duties. Lower cost—quicker results—better work—and much labor saved! For the duplicating of letters, office and factory forms, bulletins, etc., you need the mimeograph now as never before. Let us show how simply it will reproduce drawings, charts, designs, etc. And how it will help materially to reduce your printing bills. You don't know the mimeograph unless you know the new mimeograph. Get information from your local dealer or interesting booklet "E" from A. B. Dick Company, Chicago—and New York.

EDISON-DICK MIMEOGRAPH

The Independent

WITH WHICH IS INCORPORATED

HARPER'S WEEKLY

THE MONROE AND ISHII DOCTRINE

THE notes, recently exchanged by Viscount Ishii and Secretary Lansing and published last week, probably mean more to the future peace of the world than any diplomatic step that has been taken since the Great War began. This is the beginning of the culmination of a policy stedfastly advocated by The Independent thruout the past decade.

In 1907, when relations between Japan and the United States were becoming strained, The Independent was one of the first to urge a constructive program for maintaining unimpaired the historic friendship between the two great Pacific Powers. In an editorial published January 2, 1908, we said:

> Suppose the United States and Japan should sign a treaty in which each agrees to respect the territorial integrity of the other. This would mean that the question of the ownership or control of each other's territory is not a fit question for difference and arbitration. Then let the proposed treaty declare that all other questions of dispute that might arise be referred to arbitration. Thus the "vital interests" of territorial integrity would be the subject neither of arbitration nor war, and all other subjects (which would manifestly not be worth going to war about) would be settled by arbitration.

Four months later, there was signed in Washington by Secretary Root and Baron Takahira a treaty providing that all disputes of a legal nature or in regard to the interpretation of treaties shall be settled by arbitration, but questions of honor and vital interests are reserved for the arbitrament of war. This treaty followed closely those being negotiated by our Government with several other nations and was as far as the United States was prepared to go at the time. In our issue of May 14, 1908, after congratulating both governments on the negotiation of this treaty we said:

> We would not, however, overstate the importance of this treaty with Japan. As long as "honor" and "vital interests" are excepted from arbitration it will always be easy to find a pretext for going to war, for honor and vital interest cover as great a multitude of sins as of virtues. The time, we fear, has not yet come when it will be safe to refer all disputes to arbitration, for a nation might lay claim to another's territory or independence, and this no spirited people would or should submit to the arbitrament of an outsider.

This was evidently sound statesmanship, for on November 30 of the same year notes were exchanged between Japan and the United States in which the following epochal declarations were made:

> 1. It is the wish of the two governments to encourage the free and peaceful development of their commerce on the Pacific Ocean.
> 2. The policy of both governments, uninfluenced by any aggressive tendencies, is directed to the maintenance of the existing status quo in the region above mentioned and to the defense of the principle of equal opportunity for commerce and industry in China.
> 3. They are accordingly firmly resolved reciprocally to respect the territorial possessions belonging to each other in said region.
> 4. They are also determined to preserve the common interest of all powers in China by supporting by all pacific means at their disposal the independence and integrity of China and the principle of equal opportunity for commerce and industry of all nations in that Empire.
> 5. Should any event occur threatening the status quo as above described or the principle of equal opportunity as above defined, it remains for the two governments to communicate with each other in order to arrive at an understanding as to what measures they may consider it useful to take.

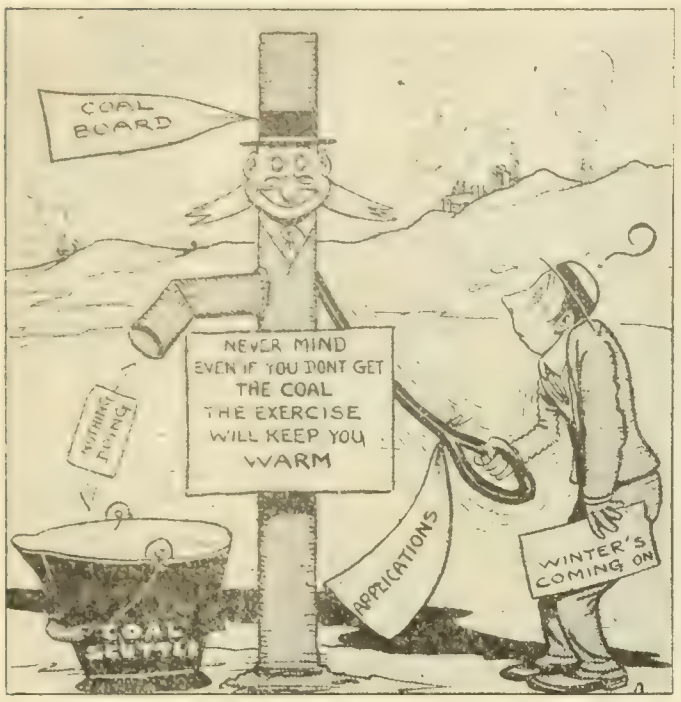
It will be seen that the treaty and declaration taken together practically fulfilled the requirements of our editorial several months before, for the declaration guarantees that the "vital interests" of territories be respected and the treaty provided that all other things be arbitrated.

The promulgation of this treaty and declaration, however, did not settle the issues between Japan and America. Despite the attempts of conciliation on the part of statesmen and men of good will in both countries, the jingo element in Japan and America—instigated we now know largely by German intrigue—kept the issue smoldering.

Finally, on our entrance into the war, Japan felt the time was opportune for the final settlement of all misunderstandings and accordingly dispatched the Ishii mission to our shores. We have already recorded in our issue of October 13 our belief that "the result of this mission will be to restore the historic relations of amity between the two nations that continued unbroken from the days of Commodore Perry's treaty down to the end of the Russo-Japanese war." We are now confirmed in this belief by the exchange of notes between Secretary Lansing and Viscount Ishii—the first fruits published of the recent negotiations.

We print elsewhere the text of this momentous document by which the United States reaffirms and recognizes Japan's paramountcy in Asia; Japan promises not to violate the integrity of China and both powers agree not to permit any third power to dominate China.

Thus the greatest issue between Japan and America is disposed of, for it has long been evident that Japan regarded the Chinese question as far more vital to her than our treatment of Japanese subjects in the United States.



We rejoice, therefore, that five weeks ago we urged the administration to recognize Japan's Monroe Doctrine. For the Ishii doctrine for Asia and the Monroe Doctrine for America, are after all nothing but the prototypes of what the whole world must adopt after the war is won if the security and the integrity of every nation is to be guaranteed, each by all and all by each.

Viscount Ishii and Secretary Lansing deserve the thanks of two great nations and the world for their triumph of statesmanship.

Now let the United States send a return mission to Japan to settle all the remaining issues, such as immigration and naturalization. Why not?

CARTOON COMMENT

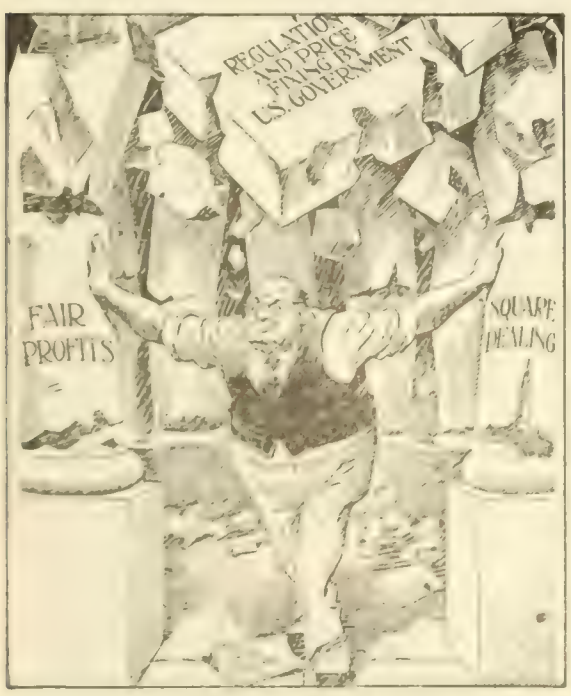
HINTS TO HOUSEHOLDERS

PUZZLE PICTURE: FIND THE COAL

"Never mind even if you don't get the coal; the exercize will keep you warm," is the comforting placard of the government's coal board in England. But it doesn't seem to satisfy the householder. "Oh, What a Happy Land Is England!" is Roy's caption for it, published in the London "Evening News"

RHONDDA'S RE-PRICE-ALL

"The People," London, is responsible for the pun which titles the cartoon at the right. The Food Controller's offensive begins—butcher and baker succumb at the first shot



THE SQUEALERS

This cartoon from the Cleveland "Plain Dealer" urges Uncle Sam to use food control against greed, extravagance and waste

NEW TOOLS FOR THE BAKER

An Italian comment on food regulations requiring an exact size and weight for loaves of bread. Drawn by Grog for "Il 420"

ANOTHER SAMSON

The profiteer brings down upon himself his own destruction. Drawn by Stinson in the Dayton (Ohio) "Daily News"

I'VE MET YOU BEFORE!

Cesare in the New York "Evening Post" represents Food Commissioner Hoover standing firm against exorbitant war pleas

WHIP BEHIND, MISTER

What chance has the poor consumer with profiteers, hoarders and speculators dragging him back? Ding in New York Tribune

MOBILIZING THE BORGIAS

ONE interesting feature of Germany's military policy is the partiality which has been shown for one particular weapon: poison. The first instance of this was the introduction of chlorine and other murderous gases on the western front in 1915. The second was the proved and in part admitted poisoning of wells in Africa; a crime afterward repeated in the evacuated districts of northern France. Both the Italians and the French have complained of the scattering of poisoned candies by German airmen. In Rumania, according to documents found among the papers of the German embassy, cattle and horses were deliberately inoculated with the germs of disease. We say nothing of recent instances of poison plots in the United States because these are still under investigation. Since German militarism in the past has usually been of an open, frank and bluntly brutal type, it is strange that the authors of frightfulness during the present war should prefer a weapon which civilization has banned not because it is more cruel than others but because it is more perfidious. We cannot imagine a bluff old robber baron of the Rhine or an aggressive statesman of the Bismarck type going about with an inoculating needle or putting sheep dip in drinking water. We do not like the Hohenzollern tradition of conquest and cruelty, but we hate to see added to it the Borgia tradition of treachery and cunning.

GERMAN KING WORSHIP

IF a majority of the Kaiser's subjects believe, as Professor Kuno Francke does, that Germany needs a king, Americans are interested to know why they so believe. Have they arrived at an intellectual judgment after an examination of evidence, or do they believe after the manner of religious faith, and as king worshipers? Professor Francke is presumably as well qualified to answer the question as anybody in America. After carefully reading his article we are unable to resist the conclusion that the Germans, including Professor Francke, who still believe that Germany needs her Kaiser and perhaps will one day need her Crown Prince, cling to this conviction as king worshipers, rather than as statesmen.

Professor Francke devotes almost three-fourths of his article to a contention that, for a number of reasons, the republican experiment would seem to have a bright prospect of success in Germany. The German school system, he tells us, is essentially democratic, and has fitted the masses for both intellectual activity and practical tasks. The German military system, he says, has imbued the whole German people with a sense of public responsibility and of the duty to place service to the community above private interests. German parliamentary life, he urges, is exceptionally free from the evils of class monopoly and private graft; German civil administration is even now, to a great extent, based upon essentially republican institutions; and in her industrial life Germany has a remarkably large number of voluntary associations of a coöperative character, including the Socialist trade unions.

To the rationalistic intellect these would seem to be excellent reasons for thinking that Germany could get on without a king very well, but in four short concluding paragraphs Professor Francke warns us that no such conclusion can safely be drawn from them, and the reason for this unfortunate fact, it appears, is that "the monarchy has been intertwined with all or nearly all the republican tendencies." It is the monarchy, and in particular the Prussian monarchy, that has made education popular. It is the monarchy that has given to Germany her national army. It is the monarchy that has consistently held the balance in parliamentary conflicts. It is the monarchy that has kept expert functionaries busy in the paternal German Government and in German city administration. And it is the monarchy, more than any other power in German public life, that has assuaged the evils of industrial competition.

In other words, according to Professor Francke, the German subject looks like a grown up human being capable of self-government, but in fact, he isn't. One monarch or another, and in particular the Prussian monarch, has tutored and drilled and drest him up to look like a free man, but has taken good care not to let him become one. Therefore, he needs a king!

Well, that depends. If it is for his interest and for the interest of mankind that he should still be held in tutelage indefinitely, or if he is congenitally incapable of initiative and self-government, he probably should keep his kings and his Kaiser. If he is not so incompetent, and if he could learn how to handle his own political affairs if he had to, the sooner he scraps his precious Hohenzollern family and gets into the trial and error game of creating a working republic, the better off he will be.

This is not what Professor Francke started out to prove, but it is what his article does prove in fact.

AS NEW YORK GOES—

THE victory for woman suffrage in New York State is the biggest thing that has happened to the suffrage cause in this country. It comes precious near to being decisive. It is the knock-out blow for the "antis."

New York is not a western state, in location, habit of mind, or general characteristics. It is far from being radical; it is confirmedly safe, sane and satisfied. Its approval of woman suffrage removes at a stroke from that reform the contemptuous label of "western radicalism"; it gives the cause a kind of certificate of political respectability. When New York has approved, what member of the "best circles" of political conservatism anywhere will dare to oppose? The New York *cachet* makes the thing *de rigueur;* it must make the thing fashionable.

New York is a big state, the biggest in population, in wealth, in power, in prestige. To carry this stronghold by assault is like capturing the enemy's capital. The moral value of the achievement far outweighs the practical utility.

With the winning of this battle, the outcome is secure. It only remains to consolidate the ground. The state citadels of the enemy will fall one by one—unless unconditional surrender by the Federal Amendment comes first.

New York has settled the matter. "On to Washington" is the next cry—but sans pickets, sans violence, sans *sabotage*, sans everything but persuasion and moral force.

NEW YORK GOES BACK TO THE HUSKS

THE people of New York City have handed their city back to Tammany Hall. They have said at the ballot box that they do not want for the next four years good government, clean government, intelligent government, honest government. For the Mitchel administration has given them that kind of government in remarkable degree —and Tammany has never given them that kind of government and never will.

Why do they do it? Why can Tammany win a victory like this four years after a smashing victory on the other side?

The answer is simple, tho at each election it is complicated by various collateral conditions, which, however, do not alter the fundamental fact.

Tammany is united, cohesive, stable. The Tammany vote is a constant quantity: 228,000 in 1905, 250,000 in 1909, 230,000 in 1913, 297,000 in 1917. Tammany can deliver these votes year in and year out with certainty and precision. The outcome of any election depends not on what Tammany does, but on what the other people do.

Whenever the opposition to Tammany is united and aroused, Tammany cannot win. The figures prove it, the election results confirm it year after year.

Four years ago the Fusion candidate for Mayor received 358,000 votes and Tammany was obliterated. This year Tammany got only 60,000 more votes than in 1913, and emerged triumphant. It emerged because the opposition was divided. There were three opponents of the Tammany candidate for Mayor, Republican, Socialist and Fusion. Taken together their votes were more than Tammany's. Taken separately they made a pitiful showing. The Fusion vote dropt in four years from 350,000 to 150,000. The Socialist vote jumped in four years from 32,000 to 142,000.

Taken by and large the inferences to be drawn from the return of Tammany to power in this year of grace are these:

Tammany can deliver the goods it has with certainty.

Only a united opposition can defeat Tammany.

New York does not like "high brow" government, or "silk stocking" government, no matter how efficient or honest or enlightened it may be.

War stimulates the Socialist vote by attracting to the Socialist banner those who do not believe in war, those who do not want war, those who suffer from war, those who sympathize with the enemy.

"The children of this world are in their generation wiser than the children of light."

THE OPPOSITION HABIT

MANY a warrior has conquered a kingdom and found that he could not rule it because he had never learned how to govern but only how to fight. Many a captain of industry has toiled to accumulate a fortune only to discover that he did not know what to do with his millions when he had them. There is a certain type of radical that is in the same sorry plight. He devotes his life to the winning of reforms and the breaking down of abuses, but when the reforms are won and the abuses abolished his usefulness is ended. Unfortunately his activity does not end. Satan finds some mischief still for his idle hands to do.

In Russia all intelligent and public spirited men have for generations given their best energy to a single task, the removal of a huge obstruction that made all national progress and development impossible. It was useless to give time and thought to constructive tasks, such as improving the schools, introducing scientific methods into municipal administration and developing the natural resources of the country, so long as an oppressive and dishonest caste of officials was actively hostile to education and saw in administration and productive industry only so many opportunities for graft. By a mighty effort the rulers of Russia and all their privileges were swept aside and the Russian people stood erect, unshackled, free to govern themselves. But many revolutionists had been so long in opposition that they could not realize the actual possession of power. To them the art of government consisted in revolt, and they went around looking for some substitute for Tsardom against which they could continue to revolt. Their duty was to take hold of Russia and rule it. Instead they accepted the easier and more congenial task of wrecking ministries, instigating strikes and denouncing their brother reformers.

Russian freedom is a matter of months; we can excuse the Russian people for being unable at first to believe their own good fortune. A man who suddenly wakes from a terrible nightmare may be pardoned for thinking, while he is yet rubbing the sleep from his eyes, that he is still in a dream. But the United States has been a self-governing commonwealth for generations. Every reform that the people might wish has been within their grasp; they had but to reach forth and take it. Yet for decade after decade radicals have been saying: "There would be no graft, no poverty, no high cost of living, no inefficient administration if the people ruled. But the people do not rule. Wall Street, the party machine, the subsidized press, capitalism or something else is in the way. Let us remove it." Some pointed to imperfections in the machinery of government as the explanation for the failure of our democracy to bring forth its promised fruits. Equal suffrage, direct primaries, the initiative and referendum, direct election of senators, commission government, federal regulation of railroads, ballot reform and municipal ownership were in turn suggested and widely adopted as the necessary measures to "restore the government to the people." The results of these reforms were usually excellent. But when they had been achieved, some of the men who had worked hardest to accomplish them declared that they were frauds and that "the bosses" and "the trusts" still governed. We believe that if a complete system of communism were adopted, if all incomes were made exactly equal by law and all public officials chosen by lot or by the most carefully adjusted and safeguarded system of voting, there would still be those who would inveigh against "the ruling classes."

It is a glorious thing to cut down forests and blast out the stumps to make good agricultural land on which a race may live and prosper. But the time comes when all the chopping and blasting has been done and the need of the hour is for planting and building. It is a splendid act to "turn the rascals out," whether they be German nobles or Tammany spoilsmen. But civic duty is nine parts wise administration to one of reformation. The franchise and the direct primary are important gains for democracy. But of what avail are they if the citizens neglect to register and vote? Smash the capitalists if you like, friend Socialist. But please realize that when you have done so you will be just at the beginning of your real task, the democratic organization of industry. What the world needs is the radical who can wield the scepter of power as well as grasp it; the reformer who is not afraid of responsibility.

THE EDUCATION OF THE AMERICAN PEOPLE

A democracy is run differently from an autocracy. It has more heads—which is a good thing when they once can be got to looking in the right direction. In Germany when the food commissioner went to the national cupboard and found it bare of certain articles of diet all he had to do was to convince the Kaiser, the Chancellor and a few generals of the fact, and forthwith the entire population was put upon a strict diet by means of bread cards, potato cards, fat cards, milk cards, etc. But in America a government has to convince rather than command. It is not the police but the press and the platform that must bring them into the unity of opinion necessary for combined effort.

The American people have to be educated in two branches which they have as a whole neglected hitherto, national economy and international relations. They must learn how to save for the benefit—not of themselves—but of the world. They must learn how to think—not of themselves—but of the world. They must be taught—not merely nationalism—but super-nationalism. In this the Food Administration, the Council of National Defense, the Committee on Public Information and various other agencies, official and unofficial, are engaged. The information they gather and give out reaches the public thru our unrivaled system of papers and periodicals. To manage the speaking side of this continental campaign the Government has been placed under the direction of Arthur E. Bestor, who is the head of the largest system of platform education to be found in the world, the Chautauqua Institution. President Wilson in writing to Mr. Creel of the Committee on Public Information says:

> Your suggestion of Mr. Arthur E. Bestor, president of Chautauqua Institution, to direct this work is excellent. You were fortunate to be able to enlist one who has been so intimately connected with a great American educational institution devoted to popular instruction without prejudice or partizanship.

The Independent as the official organ of the Chautauqua Institution rejoices that Chautauqua has been found worthy to serve the nation in this crisis of its history.

THE STORY OF THE WEEK

The First American Battle

Soon after a small detachment of American troops were placed in the trenches on "a quiet sector of the French front" they were tested in a battle. The Americans annoyed the opposite trenches by bombardments and by patrol actions at night until the Germans determined to wipe out the menace confronting them. On November 3 the German War Office made the simple announcement:

> At the Rhine-Marne Canal, as a result of a reconnoitering thrust, North American soldiers were brought in as prisoners.

The mention of the Rhine-Marne Canal enables us to locate the whereabouts of the American detachment which was first in the trenches. The canal crosses the French entrenchment line in northeastern France, not far from the German border; a part of the front where there has been little fighting and no important gain or loss of territory by either side since the early days of the Great War.

The American account of the fight gives more detail. A German raiding party advanced against an isolated angle of the front trench where American troops were held for instruction. This detachment was cut off by barrage fire from all help by their comrades. A force of Germans, estimated at more than 200, entered the trench in the wake of their artillery fire and engaged in a fierce hand to hand conflict with the Americans. As a result of the fight three Americans were killed and five wounded. A sergeant, a corporal and ten privates were taken captive. Two Frenchmen in the trench were also killed. One wounded German was taken prisoner, but the total losses of the enemy are not known since the raiders took back their dead and wounded to their own trenches. By the standards of modern warfare, the raid was on too small a scale to be mentioned in the daily reports of the belligerent armies, but since it was the first armed conflict between American soldiers and the enemy it has such historic significance as belongs to "the shot heard round the world" at Lexington, and may well be dignified by the name of "the Battle of the Rhine-Marne Canal."

Passchendaele at Last

On November 6, Canadian infantry entered the town of Passchendaele after the way had been cleared by a heavy bombardment. With the occupation of this town the British armies have completed their long campaign which has had for its object the capture of the ridge of high ground east of Ypres. From the end of July up to the present time the British have concentrated their energies on this one task, advancing with such deliberation that the progressive stages of their advance could only be shown on a very large scale map. By a lavish expenditure of shells, and by carefully following the rule of never permitting infantry to advance beyond the protective cover of artillery fire, the British have progrest without a single setback, gaining fresh ground at every attack. It is probable that the German casualties on the Ypres front have been as heavy as the British, in spite of the fact that the risks involved in taking the offensive rested on the latter, and thousands of Germans have gone from the trenches to the prison camps in the rear of the British lines.

From Passchendaele the plain of Flanders stretches before the British like a carpet. Within range of the British guns is the city of Roulers and the road and railroad which run south from Roulers to Menin. If the British are able to drive their great wedge as far east as this line of communication they will make it difficult for Germany to hold on to the Flemish coast line which is now the chief base of their submarine operations. But the prevailing anarchy in Russia and the reverses suffered by Italy may set free enough German troops to hold up the further advance of the Allies on the western front until the spring drive of 1918.

On the French front the Germans have abandoned altogether the high ground of the Chemin des Dames and retired to new positions along the Ailette River. The retreat was so skilfully managed that the first news of it came to the public from the German official statement. The Germans boasted that they withdrew their troops "unnoticed and undisturbed." The retirement was to the depth of about a mile on a front of more than thirteen miles.

Anarchy Reigns in Russia

The Russian revolution has entered a new and menacing phase. Petrograd is in the hands of the Bolsheviki faction of the Petrograd Council of Soldiers' and Workmen's Delegates; the provisional Parliament has gone the way of the old conservative Duma; Premier Kerensky and the republican government are exiled from the national capital; the whole country is plunged into civil war, and the party which is momentarily dominant has declared for immediate peace and the confiscation of private property. It will be strange indeed if the Germans do not find good fishing in such troubled waters. In all probability German intrigue was a large factor in promoting the pacifist coup d'état which has thrown Russia into confusion.

The signs of an impending crisis in Russian affairs were many, tho few foreign observers realized how imminent was the peril of open civil war. Kerensky's frank statement of the difficulties confronting the Russian Government and the necessity that the western Allies should for the immediate future shoulder the greater part of the burden of carrying on the war showed that he at least fully appreci-

THE MODERN WAY OF MARCHING

Sending troops to the front is managed now without wearing out the men by tedious marches. Here's how the British do it on the western front

WOMAN SUFFRAGE IN NORTH AMERICA

In the American states and Canadian provinces which are uncolored white women have equal franchise with men at all elections. In North Dakota, Nebraska, Illinois, Michigan and Rhode Island women can vote for President; and in Arkansas at primary elections. The legislatures of Indiana and Ohio conferred the Presidential suffrage on women, but the Supreme Court of Indiana and the voters of Ohio have reversed the action of the legislators. The area colored black confines the franchise to men

ated the gravity of the situation. The Government prohibited armed demonstrations in the capital, but Leon Trotzky, leader of the Petrograd Council of Soldiers' and Workmen's Delegates, defied the mandate of Premier Kerensky and sent orders to the Petrograd garrison not to obey any military orders except those approved by the military committee of the Soldiers' and Workmen's Delegates. While conditions were thus critical the Government found it necessary to replace General Verkhovsky, Minister of War, by General Manikovsky.

But all the precautions taken by the Government did not suffice to prevent a Bolsheviki insurrection on November 7. An attempt on the part of Premier Kerensky to arrest conspirators who had distributed arms and ammunition to Petrograd workmen precipitated the outbreak. Trotzky's followers seized the important public buildings in Petrograd and with the aid of the city garrison and the mob arrested some members of the Government and compelled others to seek safety in flight.

The victory of the Bolsheviki was announced to all Russia by proclamation, issued in the name of the military committee of the Central Council of Soldiers' and Workmen's Delegates. This proclamation declared that "We have deposed the Government of Kerensky, which rose against the revolution and the people. The change which resulted in the deposition of the provisional Government was accomplished without bloodshed." It instructed the army at the front to join the movement and threatened the arrest and punishment of any officers who failed to support "the accomplished revolution." The announced program of the revolutionists includes: immediate peace; the partition of large landed estates among the peasants; the transmission of all authority to the Council of Soldiers' and Workmen's Delegates until it is possible to elect a constitutional assembly.

The Dying Nations Thirty-nine months of war have not exhausted any of the larger belligerent powers, but the incessant struggle has practically drained the resources of those small nations whose territory has been in large part occupied by the enemy. It is estimated that the population of Serbia has decreased during the Great War from 3,170,000 to 2,218,000. The male population has been reduced by about thirty-eight per cent; so that, at present, there are about half as many again of the female sex as of the male. The birth rate in Serbia is high, and should have kept the population from showing any absolute decrease during any normal war; but the privations endured by the soldiers, the prisoners, the deported refugees and the starving civilians in the occupied districts are annihilating the whole Serb race. The Serbians are very angry over the policy of deportation pursued by the Central Powers and especially at the internment of some of the deported men, women and children in Asiatic Turkey.

Rumania has suffered less than Serbia because her territories have been occupied only in part and her people have endured the horrors of war for a shorter period. Yet the news comes from the temporary capital at Jassy that new wearing apparel is not to be had at any price whatever, that meat is no longer within the means of the civilian population, that a scanty supply of cornmeal is the sole subsistence of the peasantry, that the horses and cattle are dying for want of fodder, and that the death rate from disease has greatly increased. Both Serbia and Rumania are looking to America for aid.

Charity can save the destitute Serbs and Rumanians in liberated territory, but only military victory or a speedy cessation of the war can bring rescue to those districts occupied by the enemy. Germany and Austria-Hungary have hardly any surplus of food above their own necessities with which to succor the peoples whom they have subjugated. Unfortunately, military rescue appears distant. The combined army of French, British, Serbians, Greeks, Russians, Italians and Albanians on the Balkan front has confined its activities for the past few months to local advances and small skirmishes and the date of the often predicted "Balkan drive" is still unknown. The one crumb of consolation for the Allied cause in the Balkan situation is that Bulgaria is growing increasingly uneasy and discontented. In the Bulgarian Parliament the Premier was charged with sacrificing the national interests to those of Germany and Austria, and a resolution expressing want of confidence in the ministry failed by the narrow margin of nine votes.

Italy in Retreat. General Cadorna has abandoned the line of the Tagliamento River, where his forces made their first stand after abandoning the Isonzo front. Little disappointment was felt by the Allies, because the Tagliamento is only the first of a series of "moat rivers" which traverse the plains of northern Italy, and just at what point the Italian military authorities have determined to make a final

THE GREAT WAR

November 3—French advance to the Ailette River. American soldiers captured in Lorraine. British sink German cruiser in the Cattegat.

November 4—British advance in Tigris valley. Temporary Polish Cabinet takes office.

November 5—Twelve British ships sunk during previous week. American patrol boat "Alcedo" torpedoed. Germans cross the Tagliamento River.

November 6—Italians retreat from the Tagliamento line. Canadian soldiers enter Passchendaele.

November 7—United States war mission arrives in England. Bolsheviki riots in Petrograd.

November 8—Kerensky flees from Petrograd. Austro-German army strikes Italian line at the Livenza River.

OUR FIRST LADY POSTMAN

Mrs. Permelia Campbell leads the way in a new profession for women in America. England and France have had women mail carriers since the beginning of the war

resistance is not known. The reason for continuing the retreat is less to find a naturally defensible front than to give the necessary few days' breathing space for the reorganization of the shattered army. Fortunately, the reports from Italy all indicate that the army has wholly recovered its discipline, and the retreat no longer resembles a rout. At some places the Italians have even been able to undertake counterattacks with the purpose of checking the advance of the enemy.

The invading Austro-German army forced the Tagliamento River at Pinzano, a town some forty miles north of the Adriatic coast, taking 6000 prisoners during the engagement. The Italians at once withdrew their army to save it from being pierced by the enemy and began a retreat in the direction of the Livenza River. Beyond the Livenza is the Piave River, the last natural line of defense before Venice. Whether it will be possible to save Venice, or whether it will be necessary to sacrifice Venice to save Italy, is known only to the Italian military authorities; if to them. French troops and British munitions are already being rushed to the Italian front and the United States has increased the shipping tonnage for Italian use.

Premier Lloyd George of Great Brittain, Premier Painlevé of France, and Premier Venizelos of Greece are all in Rome to reassure the Italian Government and people and to reach an agreement on military policy. Since the German invasion we have heard nothing more of the internal dissensions of the Italian civilians. In Turin, where a short while before there had been bloody bread riots fomented by anti-war agitators, there was a great patriotic demonstration, and a similar demonstration, in which 300,000 people took a solemn oath to continue the war until the invader was expelled from Italy, was celebrated in Rome.

The Palestine Campaign The British have followed their success at Beersheba by an attack on Gaza, the place once famed for Samson's exploit in carrying off the city gates. To batter down the modern defenses no Samson was available, so the British introduced a modern substitute, the "tank" or armored automobile mounted on caterpillar tractors. These great machines crushed the Turkish entrenchments and plowed a path thru the desert sand to reach the enemy. A British correspondent pays a tribute to the courage of the Turks, who stuck to their machine guns in spite of the fire to which they were subjected and the terrible engines brought for their destruction. Some Italians took part in the fight side by side with the British. At Beersheba, Gaza and other battle grounds of southern Palestine the British have taken prisoner nearly 2500 Turks.

In Mesopotamia the British have continued their northward progress along the Tigris River as far north as Dur, a town twenty miles beyond Samara. The Turks have vainly attempted to impede the British advance, which threatens the city of Mosul, the strategic center of eastern Turkey. It is probable that only the failure of the Russians to drive southward simultaneously with the approach of General Maude's troops up the Tigris Valley has thus far saved the Turks from being driven far west of the Persian frontier.

Remaking Poland The Central Powers are now busily at work remaking the Polish constitution according to their wish. The report that Austrian and Russian Poland were to be united into an autonomous kingdom under Emperor Karl of Austria-Hungary is now denied. On the contrary, it is asserted "on high authority" that the newly restored Kingdom of Poland will be a wholy independent nation whose ruler will be forbidden to reside abroad or even to marry without the consent of Parliament. According to the new constitution, Poland will be a Roman Catholic monarchy, hereditary in the male line, with a partly popular Parliament. The lower House of Parliament will be elected on the basis of a general, secret direct ballot for one deputy to every 60,000 inhabitants. Half of the Senate will be elected, the rest to be appointed by the King. Deputies will serve five years and senators ten. The first King, it is stated, will be elected by the first Parliament, but presumably a man will be chosen who is acceptable to the governments of the Central Powers. A new Polish cabinet has been selected; but the chosen Premier, Count Tarnowski of Tarnow, will not take office if the report from Warsaw may be believed that the German authorities have vetoed his nomination. It is evident that, under any nominal constitution whatever, Germany and Austria-Hungary intend to remain the real rulers even in that part of Poland to which they promise independence.

The Battle of the Cattegat While the British have failed to send any relief to the hard prest Russian navy in the Baltic, they have extended their patrol of the North Sea as far east as the Cattegat, the strait separating Denmark from Sweden and uniting the North Sea with the Baltic. In one recent engagement the British succeeded in sinking the "Marie," an auxiliary cruiser of 3000 tons. Most of her crew were killed during the fight and the rest were picked up and taken capitive by the British. Ten armed German patrol vessels were also destroyed, including the "Crocodile" of 1000 tons. A Danish steamship assisted in rescuing the German survivors of the battle. None of the British destroyers

THE DASHING CAVALRY IN ACTION

Some of the raw recruits get their first army lessons in riding on a merry-go-round. It does look silly, but there's a lot to be learned in mounting and dismounting while even wooden horses gallop up and down

which took part in the action have been reported lost.

The United States has begun to suffer some naval losses. Following the sinking of the homeward bound transport "Antilles" on October 17, came the news on November 1 that the transport "Finland" had been torpedoed on its return trip. The "Finland" did not sink, but it reached port in a damaged condition and had to be held for repairs. Three naval gunners, two enlisted men of the army and four civilian members of the crew are reported killed or missing.

On November 5 the American patrol boat "Alcedo," a converted yacht, was sunk by a German submarine while passing thru the naval war zone. A lieutenant and twenty enlisted men are reported missing out of a ship's crew of seven officers and eighty-five men. The "Alcedo" is the first war vessel of the American navy which has been sunk by the Germans, altho not the first to be attacked. Hitherto only freighters and transports have fallen victim to the enemy torpedo.

During the week ending November 4 the British lost eight vessels of more than 1600 tons each and four smaller vessels. This is the absolute minimum of losses for any week since the Germans began their campaign of unrestricted U-boat warfare, and equal to one-half of the average weekly loss for the whole period. During the same week the French lost one large vessel and one of less than 1600 tons, and the Italians two steamers of small tonnage and three sailing ships.

THESE SIGNS COST COAL

The bright lights of Broadway use fuel enough each night to keep a great many people warm all winter

Brazil in Trouble

As soon as Brazil announced her formal participation in the Great War, the German population in the southern states of the republic began to make trouble for the Government. A German uprising during the first week of November paralyzed traffic on all the southern railroads and made it difficult for the Brazilian authorities to move troops. As a consequence of this disloyalty the Government determined to punish the enemy alien population. President Braz recommended to Congress a legislative program providing for the annulment of contracts for public works entered into with Germans, the prohibition of new land concessions to German subjects, the extension of Government supervision over German banks and commercial firms, the prohibition of the transfer of ownership of German properties and the internment of enemy suspects. The Chamber of Deputies promptly adopted all of these recommendations.

Popular indignation in Brazil is at fever heat, and the authorities are having difficulty in saving German business houses from destruction by mobs. Even apart from the German outbreak, there would be cause enough for anger in the news that two more Brazilian steamers, the "Acary" and the "Guarahy," have been torpedoed in European waters, and in the recent publication of Count Luxburg's notorious dispatch to his home Government declaring that Germany's "principal political aims in South America" included "the reorganization of south Brazil." Whatever this may have meant, it is interpreted by the Brazilians as a plot against their national independence.

Hands Across the Pacific

The United States and Japan have concluded a diplomatic agreement designed to remove every cause of controversy between the two nations in regard to their interests in China; to reassure those who have feared that Japan intended to annex Chinese territory or, at any rate, to close the "open door" of the Orient against our trade, and to put a stop to German intrigues designed to create hostility between China and Japan or between Japan and the United States. A citation from the text of Secretary of State Lansing's proposals to Viscount Ishii, chief of the Japanese War Mission to this country, will serve to indicate the nature of the agremeent:

> The governments of the United States and Japan recognize that territorial propinquity creates special relations between countries and consequently the Government of the United States recognizes that Japan has special interests in China, particularly in the part to which her possessions are contiguous.
>
> The territorial sovereignty of China nevertheless remains unimpaired and the Government of the United States has every confidence in the repeated assurances of the Imperial Japanese Government that while geographical position gives Japan such special interests they have no desire to discriminate against the trade of other nations or to disregard the commercial rights heretofore granted by China in treaties with other powers.
>
> The governments of the United States and Japan deny that they have any purpose to infringe in any way the independence or territorial integrity of China and they declare furthermore that they always will adhere to the principle of the so-called "open door," or equal opportunity for commerce and industry in China.
>
> Moreover, they mutually declare that they are opposed to the acquisition by any government of any special rights or privileges that would affect the independence or territorial integrity of China or that would deny to the subjects or citizens of any country the full enjoyment of equal opportunity in the commerce and industry of China.

With the conclusion of this agreement, the Japanese special mission achieved its aim and Viscount Ishii left Washington with words of appreciation for his friendly hosts. Secretary Lansing declared that by the agreement and by the explanations of Japanese policy frankly given to the American people by the Japanese commissioners "in a few days the propaganda of years has been undone, and both nations are now able to see how near they came to being led into the trap which had been skilfully set for them." He added that "complete and satisfactory understandings upon the matter of naval coöperation in the Pacific for the purpose of attaining the common object against Germany and her allies have been reached between the representative of the Japanese navy who is attached to the special mission of Japan and the representative of the United States navy."

By the agreement concluded at Washington on November 2 each of the three nations concerned gains something. China now has the formal, explicit assurance of Japan that there will be no further invasions of her national sovereignty; and this pledge is backed by the guarantee of the United States. The United States gains assurance that henceforth American trade and industry will be free to assume their share in the development of the natural resources of the Chinese republic. Japan gains the much coveted recognition of the United States that "Japan has special interests in China, particularly in the part to which her possessions are contiguous." The relation of Japan to China becomes much like our own to the nearer republics of Latin America, that of "next friend" and protector, with the difference that Japan is pledged not

to annex the territory within her sphere of special interest while the United States is under no such explicit pledge to any nation.

American War Mission Sent

Secretary of State Lansing announces the safe arrival "at a British port" of the American representatives at the Allied War Conference which will be held in Paris on November 15. At the same time he made public the personnel of the commission, which is headed by Edward M. House, President Wilson's friend and adviser. The other members of the war mission of the United States are: W. S. Benson, Chief of Naval Operations; General Bliss, Chief of Staff; Oscar T. Crosby, Assistant Secretary of the Treasury; Vance McCormick, Chairman of the War Trade Board; Bainbridge Colby, of the Shipping Board; Dr. Alonzo Taylor, representing the Food Administration; Thomas N. Perkins, representing the Priority Board, and Gordon Auchincloss, secretary of the commission.

The war conference of the Entente Allies is not an assemblage of diplomats to determine terms of peace or other general questions of policy. Its purpose, as exprest by Secretary Lansing, is "perfecting a more complete coordination of the activities of the various nations engaged in the conflict and a more comprehensive understanding of their respective needs, in order that the joint efforts of the co-belligerents may attain the highest war efficiency." He explained that the various governments fighting Germany had asked the United States to extend to them financial and commercial aid and that it had become necessary to take action to reconcile their varied and often conflicting needs. Since the belligerents of Europe are largely dependent upon American shipping, coal, wheat, machinery, ammunition and money, it became imperative that the United States be directly consulted as to their most advantageous distribution in the common cause. The desire of the conference is that the many nations at war with Germany should act as a single nation and that all the widely scattered war zones should be considered as parts of a single front.

Distributing the Liberty Loan

Secretary of the Treasury McAdoo announces that the total subscription to the second Liberty Loan amounted to $4,617,532,300. Since this was in excess of the required minimum of $3,000,000,000, only 50 per cent of the oversubscription will be accepted. All subscriptions for sums varying from $50 to $50,000 will be accepted in full. Those who applied for bonds in excess of the latter sum will have to be content with the acceptance of a percentage of their subscription above that figure, varying from 90 per cent for applications amounting to less than $100,000 to a little more than 40 per cent for sums exceeding $50,000,000. This system of allotment is designed to favor the small subscriber and prevent undue concentration of bond holdings. The first Liberty Loan was distributed in a similar way, with the difference that only the required minimum of $2,000,000,000 was accepted and the entire amount of oversubscription, instead of half of it, was distributed among the subscribers.

The second Liberty Loan was taken by 9,400,000 men and women; a democratic distribution unparalleled in the history of American finance. By the two loans thus far issued to finance the war, we have become for the first time a nation of bondholders. Every one of the twelve Federal Reserve districts into which the country is divided exceeded its minimum allotment. New York did best, with an oversubscription of 72 per cent, but Richmond was a good second. These two districts were the only ones to exceed their assigned maximum. Dallas, with the lowest subscription of any of the districts, exceeded its minimum by the safe margin of 4 per cent. It is evident that no section of the United States has the slightest hesitation in giving financial support to the Government and the war.

Government Tithes the Coal

Fuel Administrator Garfield has announced his decision to commandeer in the public interest ten per cent of the total coal output of the country. The power to take such action is conferred upon the Federal Government by the food control law. The amount of coal affected by this order is placed at about 60,000,000 tons, including both anthracite and bituminous. From this big Federal "coal pile" will be supplied the emergency needs of the nation, especially in respect to sustaining the essential war industries. In addition to tithing the mine output the Government will increase the available supply by seizing stocks held by hoarders who are keeping coal from the market with the object of forcing up prices.

The Fuel Administration has authorized jobbers and wholesalers who had made early contracts to sell at a margin of fifteen per cent above the contract cost. Under previous regulations they were permitted to sell only at a fixed margin above the mine price fixed by the Government, which would in many cases have meant a loss where high prices at the mine had existed prior to the intervention of the Government. State food administrators are authorized to fix local price rates for retail coal dealers, subject to the overruling authority of the Federal Fuel Administration. The advice is given to assign the profit allowed to the retailer on a flat value basis rather than a percentage basis, as the latter method would give the less efficient dealer with higher costs a larger actual profit than other dealers.

Election Day Results

No general trend of opinion can be discovered from the results of the elections held in different parts of the United States on November 6. While New York City went overwhelmingly Democratic, the state Assembly remained Republican and the Republicans won many elections in the upstate cities besides electing their candidate for the Attorney Generalship, the only important state office which was filled this year by the voters of New York. In Massachusetts, Governor McCall and his associates on the state ticket were returned by a large majority. Elections in New Jersey resulted in a Republican Senate and Assembly. Manchester, New Hampshire, chose a Democratic city administration for the first time in over forty years; and the Republicans elected the Mayor of Louisville, Kentucky, which has been Democratic for ten years. In Connecticut, Massachusetts and Pennsylvania Republicans were sent to Congress. In Philadelphia the

Republican machine won by a narrow margin over the ticket of the "Town Meeting" party, in spite of the fact that accusations of conspiracy to murder rested on the bosses of the Republican machine and that many regular Republicans, including Senator Penrose, gave their support to the reformers. In a number of Pennsylvania cities mayors were elected on non-partizan tickets; among them Archibald Johnston, vice-president of the Bethlehem Steel Company and now first Mayor of the consolidated city of Bethlehem.

If it is hard to discover from the scattered returns any general gain or loss for the Republican and Democratic parties, it is equally hard to estimate aright the strength of socialism. As an offset to their gains in New York City, the Socialists met crushing defeat in Chicago, where a Fusion judicial ticket was chosen by a heavy majority over the Socialist candidates. In Dayton, Ohio, Fusion candidates captured the city commission in spite of the great local strength of the Socialists. In every contest the Socialists made their fight on the issue of immediate peace, attracting to their number many pacifists and pro-Germans who had never before been associated with the party and who had no belief in the principles of socialism. This fact made the Socialist vote an excellent barometer of the anti-war sentiment of the nation.

Prohibition was an issue in many cities and in the states of Ohio and New Mexico. In both states the "drys" seem to be successful, tho in Ohio the contest was extremely close.

The Tiger Triumphs The Mayor of New York City for the next four years will be John F. Hylan, the Democratic nominee. Judge Hylan not only succeeded in obtaining the office for which he was candidate, but he carried with him to victory the entire city ticket. The Democrats of New York have elected their candidates for Mayor, Controller, President of the Board of Aldermen, the Borough Presidents of Manhattan, Bronx, Brooklyn, Queens and Richmond, and most of the minor offices in each of the boroughs. Tammany has captured every vote on the Board of Estimate, which is responsible for the municipal budget, and has secured a safe majority of the Board of Aldermen.

One of the most interesting features of the municipal campaign was the strong showing made by Morris Hillquit, the Socialist nominee. Judge Hylan obtained nearly 300,000 votes; almost twice the number obtained by Mayor Mitchel, his nearest rival. Mr. Hillquit was a good third with over 140,000. In none of the boroughs did the Socialist candidate fail to give Mayor Mitchel a close race for second place, and in The Bronx he gained a distinct lead over his Fusion rival. The other candidates on the Socialist ticket polled a strong vote, tho none did so well as Mr. Hillquit, and several of the party were elected to the Assembly and to the city Board of Aldermen. Mr. Bennett, the regular Republican candidate, was an exceedingly poor fourth, with little more than one-third as many votes as were obtained by Mayor Mitchel. Outside the borough of Brooklyn, where his local popularity helped him to make a fair showing, Mr. Bennett was not a factor at all; and if his entire vote had been added to that of Mayor Mitchel the Democratic candidate would still have been victorious.

New York Trusts the Women The success of the woman suffrage amendment to the New York constitution attracted as widespread attention in the rest of the country as the result of the municipal election in New York City. In 1915 equal suffrage was defeated on referendum in the city and "up state" as well. This year nearly every part of the state went for suffrage by comfortable margins. Greater New York favored the equal franchise by a majority of more than 92,000; a majority to which every borough contributed.

The joy of woman suffragists over the victory in New York was modified by defeats in Indiana and Ohio. In Ohio the partial or "Presidential" suffrage which had been granted by the state legislature was lost when submitted to referendum. A few days before election the Supreme Court of Indiana declared the statute permitting women to vote for Presidential electors contrary to the state constitution, on the ground that by constitutional definition voters were "male citizens." The precedent of Indiana may cause litigation to test the laws of other "Presidential suffrage" states, such as Illinois, North Dakota, Nebraska, Michigan, Rhode Island and (as regards primary elections) Arkansas. Complete equal suffrage now exists in Wyoming, Colorado, Idaho, Utah, Washington, California, Oregon, Nevada, Arizona, Montana, Kansas, New York and Alaska.

Segregation Held Illegal Louisville, Kentucky, enacted in 1914 a race segregation ordinance forbidding persons of either the white or the black race from moving into residence blocks in which a majority of the inhabitants were of the opposite color. This ordinance was tested in the state courts, but was not finally decided until the Supreme Court, in a unanimous opinion handed down on November 5, declared it contrary to the Constitution of the United States and so invalid. The argument had been advanced that race segregation would prevent rioting. "Desirable as this is and important as is the preservation of the public peace," so ran the opinion, "this aim cannot be accomplished by laws or ordinances which deny rights created or protected by the Federal Constitution." The court admitted that laws providing for race segregation in public conveyances and in public schools had been upheld, provided that equal facilities were given to both races, but denied that the case in question was a parallel one and hence justified by these precedents. The decision in the case of the Louisville ordinance will probably nullify similar ordinances now in force in many southern cities.

DEMOCRACY IN GERMANY

BY KUNO FRANCKE

CURATOR OF THE GERMANIC MUSEUM AT HARVARD UNIVERSITY

The American people, together with every other free people of their Allies, are profoundly interested in the question whether the German people will emerge from the Great War still blind worshipers of autocracy or awakened believers in democracy. Will Germany become a Republic? What will be the fate of the Hohenzollern? Who can say? In the following article Professor Kuno Francke sets forth the reasons for his somewhat paradoxical hope that the war will make of Germany a "republic not in name but in fact." We comment editorially on this hope on another page.—THE EDITOR.

IN this discussion of the possibility of a republic in Germany, I shall purposely avoid the issues involved in the world war and confine myself to questions of inner German politics.

In the abstract, there seem to be no reasons why a German republic should not be eminently successful. Indeed there are a number of reasons why the republican experiment would seem to have a particularly bright prospect of success in Germany.

The German school system has brought about an exceptionally high state of education among all classes and has to an exceptional degree fitted the masses for intellectual activity and for practical tasks of many kinds. The German school system is essentially democratic, that is, it opens up the avenues of intellectual training to every talent from whatever rank of society, and it brings together in the *Gymnasia* and *Realschulen* the son of the butcher and the son of the nobleman not only as fellow pupils, but as comrades in sport also. While in a conspicuous manner cultivating intellectual aristocracy, it does not cultivate social exclusiveness. There are indeed no schools in Germany which, like Eton or Rugby and our own fashionable private schools, aim chiefly at educating gentlemen. Even the schools most closely adhering to the traditional classical curriculum aim above all to train effective members of the professions needed in public life and effective servants of the state.

THE German military system has imbued the whole German people beyond most other peoples with a sense of public responsibility and the duty of each and all to place service to the community above private interests. The discipline of the German army, inexorable as it is, is not a deadening brute force, but on the contrary an agency for self-exertion and common emulation in developing individual capacity. It has made the average German quick, alert, daring as well as circumspect and painstaking; it has hightened the sense of individual dignity of the common man; it has increased and strengthened the national characteristic of soberness, economy, and thrift. And the whole army organization, with its single-minded attention to public needs, has found many counterparts in other spheres of public life.

German parliamentary life has been exceptionally free from the evils of class monopoly or private graft. Even where, as in Prussia and Saxony, the suffrage for the state legislatures is based on class distinctions and property qualifications, the practical work of these state legislatures has on the whole been for the common good and for widely spread popular prosperity. The Prussian progressive income tax, for instance, preceded the establishment of an income tax in Massachusetts by more than a decade. And it should not be forgotten—as it often is—that the parliamentary system of the German Empire makes a parliament elected on the basis of universal manhood suffrage a necessary factor in all federal legislation and in all appropriation of money for federal purposes. Besides, a considerable number of state legislatures, including those of Bavaria and Alsace-Lorraine, are based, like the German Parliament, upon the principle of universal manhood suffrage; and in the near future this will undoubtedly be the case in all German states. The constantly increasing influence of the Socialist party in all these parliamentary bodies is a guarantee that the weight of parliamentary opinion in Germany will be increasingly on the popular side. Here, then, is another foundation wall, and a very solid one, for the structure of a possible German republic.

Moreover, German civil administration is to a very large extent even now based upon essentially republican principles. It would indeed be hard to find better examples of genuine republicanism than in the governmental record of the German cities. I am not thinking so much of Hamburg, Bremen, and Lübeck, the old Hanseatic towns, which are republics even in name, as of the vast number of cities, great and small, all over Germany which, altho integral parts of monarchical states have a community life so independent and self-governing that they may indeed be called model schools for good and effective citizenship. One could not well conceive of a more solid type or a safer practical exponent of republicanism than the average householder in these cities. He sees before his eyes the striking results of a city administration by experts, enlightened, progressive, actuated not by party motives but by objective consideration of the city's needs. He feels proud of communal achievements, the absence of slums, the general cleanliness of the streets even in the poorest districts, the effectiveness of intelligent building regulations, the thoroness of city hygiene, the care bestowed upon respectable and instructive amusements for all classes, and many other such evidences of good government. And he is not inclined to think lightly of the capable bureaucracy which is managing the city's affairs. At the same time, he knows full well that this bureaucracy has been elected by him; that he exercizes thru the common council an effective supervision over it; that, in other words, he is part of the sovereign people which has relegated large powers of long duration to its functionaries only because they can serve the people best by assuming large responsibilities. In all this it is easy to see conditions and states of mind which are extremely favorable to the growth of durable republican institutions.

Finally, industrial life has led in Germany to a remarkably large number of voluntary associations of a coöperative character which again offer unusual opportunities for training the people in public organization and public service. I refer in particular to the Socialist trade unions and coöperative societies and to the farmers' productive associations, the activities of all of which have indeed made the community spirit one of the dominant factors in the daily life of the German masses and have nearly eliminated the detached efforts of isolated individuals from the struggle for existence.

All these phenomena seem to point to a republic as the ultimate form of German national life. If I nevertheless do not believe in the likelihood or the desirability of a radical upheaval in the political constitution of Germany, it is for the reason that the monarchy has been intertwined with all or nearly all the republican tendencies of which I have spoken.

WHAT has made Germany great during the last generations is this very intertwining of monarchical leadership and socialized popular activity. It is the monarchy, in particular the Prussian monarchy, which has rendered education popular in Germany and has made intellectual striving a striking feature of German national character. It is the monarchy which has given to Germany a national army which, in spite of undeniable autocratic blemishes of the officers' caste, has bound the German people together as no other institution has done and has created a democracy of service perhaps unparalleled in history. It is the monarchy which in the conflict of parliamentary parties has consistently held the governmental policy to a middle line of non-partisan compromise between these conflicting interests, upholding the common good as the supreme guide in all legislation. It is the monarchy which thru a highly trained, enlightened, and public-spirited class of expert functionaries has made the German civil service a model of popular usefulness and has given to German city administration in particular its sted- [*Continued on page 337*

THE GREAT ADVENTURE

FROM HOME LETTERS WRITTEN IN CAMP AND AT THE FRONT

THE INDEPENDENT has never had a pleasanter task than the examination of the soldiers' letters which our readers sent in response to our request in the issue of September 29 that those who were fortunate enough to have correspondents among the men fighting under the American flag in the cause of humanity share with the rest of us interesting descriptive bits from "the letter home." In printing extracts from a few of the letters which you have generously shared, we wish to express our sincere regret that necessary limitations of space have forbidden us even to quote from the majority of those which we have received, many of them so interesting that selection was almost an impossibility. We have in every case omitted the names and addresses of our correspondents and every detail of military information that could conceivably be of use to an enemy or arouse the suspicion of a censor. You must therefore think of the boys whose letters we here publish not as particular individuals but as types of the true American soldier; men whose courage, kindliness, humor and matter-of-fact devotion to the daily task prove them to be worthy comrades to your own husband, son or brother.

The impulse of patriotism makes nothing of distance; perhaps it is even keener in a far country than at home. At all events, this is how an American aviator, who enlisted while in South Africa, looked at the matter:

I arrived here an American, a very ardent, staunch American for twenty-four hours a day, and I was and still am an American. I had many difficult positions, and many occasions to take serious offense, which I did not do because I could quite appreciate the standpoint of these people who were making every sacrifice for an ideal, and, after all, what is finer than to battle for an ideal? You can see by what I have written that immediately a man leaves his own shores, his nationality becomes a most vital thing, instead of an accepted fact — a something he takes for granted.

I was in Pretoria on business the day war was declared. . . . I was told on my arrival in Johannesburg of the excitement here. A huge crowd had gathered outside the consul's office and there was much cheering and speechmaking. As if by magic the American flag appeared everywhere. The next day steps were taken to organize a South African American corps. It fell thru because the consul could not recognize it officially and because there were only five Americans of military age. Of course, I handed in my name to the American consul as being quite ready to do my bit. You could expect a son of yours to do that . . . when the honor and position of my country in South Africa rested one-fifth on my shoulders.

© *Underwood & Underwood*

THE first Americans serving at the front were, of course, the men of the Red Cross. We have received several letters from members of the American Ambulance Service. Let us quote a vivid pen picture from one of them:

Picture me here, if you will, hunched up beside my flickering yellow light that jumps and fades every time the big 220s back of us go off; while underfoot the lean gray rats sniff and squeak, and outside the batteries are thundering.

There, farther back, are five blanketed figures huddled up on five stretchers slung from the ceiling by means of cloth bands—slung thus to keep the hungry, evil-eyed rats from taking a sample of finger or ear. . . .

It's a night of wonder, the air soft and cool and fragrant with the odors of the French countryside—and yet all around me the guns are pounding, and from every wood and orchard and ruin the vicious tongues of flame flash out, and the soft whush-whish of the speeding shells is overhead.

What a sight! Those ever-flashing guns; the crash and thunder of them; the explosion of the German shells falling in front of us. And there, just ahead, the rockets shooting up in wavering lines of fire, while the star-shells hang like ghost lanterns, shedding their sickly, greenish radiance over No Man's Land.

But war is not all pyrotechnics and slaughter. Another ambulance worker gives us an equally good description of the dull, daily routine which makes up nine-tenths of the soldier's life:

The kind of parade one does see, one comes upon at almost any time of the day or night, on any road. We will be driving along, perhaps at night. If in convoy, we will see the car ahead move out a little nearer the right hand side of the road and maybe go a little slower. Then we begin to pass them—men marching in the same direction maybe—stragglers first, men with walking sticks and rifle slung across a shoulder with the innumerable canteens, musettes, etc., which are strapped across each shoulder, and the pack on top of that.

It is very dusty; men do not like the camions. They cannot breathe. It is dumb work—just plugging.

As one comes up the column the men—the line of backs—look all the same. They turn their heads to the light and look up from below, wondering who it is. Some of them may yell something. Is it far?

They know it is; and care not. It isn't worth while. They are just serving. It is for France. We always wonder what they think. Heaven knows how they stick to it.

Up to the trenches! Days and nights in dust. Dust. Then their turn in the trenches. They are going back "en repos"—coming out of the utterly desolate region, little by little seeing more signs of life—marching mainly at night, resting by day perhaps. It is only a few hours' walk to the trenches of the first line from the best of "repos" camps. Routes are circuitous tho. There are a good many soldiers, so that "en repos" may mean far to the rear, or just a few hours behind the lines.

Ambulance men were the first Americans at the front—these boys have served since 1914

An American engineer, who has also been under fire, describes the part of France laid waste by the Germans during their great retreat:

We are well inside the original German front in a town where the only thing left standing is the big crucifix which stood at the en-

Pictorial Press

"En repos" behind the trenches in France

trance of the town, and a few trees over the cemetery. As far as the eye can see there is nothing but absolute desolation which the Hun left in his retreat last April. The old men and women he sent back to Germany to work for him—the young women he took with his army, and still has unless they are dead. Airships are as common around here as robins at home. There is a fight within easy view of us in the air most every day and it is rather exciting to watch the shells bursting around the machines altho we have as yet to see one hit. Big guns booming is absolutely no attraction to us now as we have been lulled to sleep by them every night since landing here. After dark it is a wonderful sight to watch the combination of signal lights, star-shells, both English and German, which are all plainly visible from where we are camped.

PERSONAL narratives of dangers undergone are rare in these letters, but we think that our readers will agree that this young ambulance man had an experience worth relating:

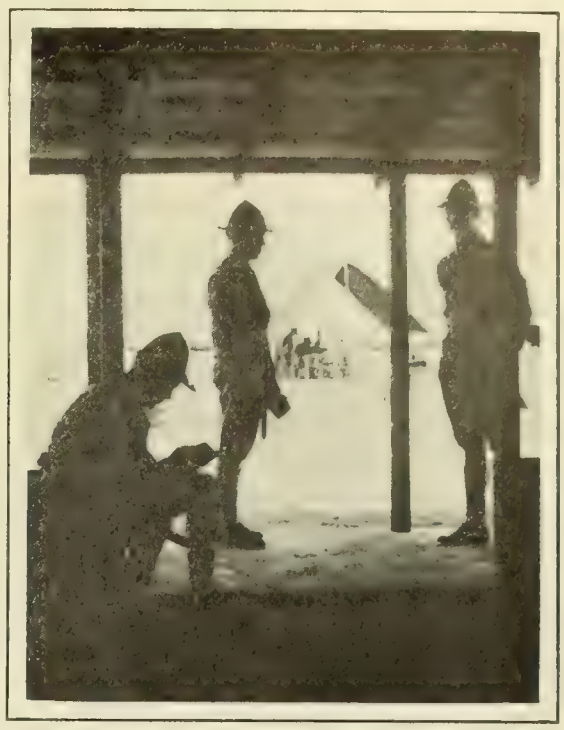
We thought ourselves real vets and able to tell just about when a shell would burst and didn't run so much. One time I got fooled, tho. I was washing in the mouth of the abri where there was a pump and a small stone trough. I heard a shell coming but did not think it would explode very near. On she came screeching and on I went washing. Zowie! she exploded about thirty yards away and a piece of shrapnel came whinnying along, honestly, within a foot of my face, and plopped into the trough. After that I kept my head and neck in the abri. I have that piece of shrapnel in my watch pocket.

Nothing else happened until the evening and then I saw a thrilling sight. About five Bosche planes were hovering over the trenches and shrapnel was bursting all around. All of a sudden we heard the French guns snapping away and we saw a plane give a sudden swerve, hesitate, and then begin to fall like a sparrow with a broken wing. I was all tense and as you may know nearly lost my jaw from keeping my mouth so wide open. It was a thrilling sight and only half a mile from us.

If we should go to France what should we see? This is the natural query of the civilian, sated with laconic cablegrams from the front, articles on strategy, war maps and other dry, unimaginative summaries of the progress of the world conflict. Let our correspondents picture the war zone for us:

The depots, stables, camion stations, hospitals, aviation grounds are everywhere spread out over the whole country, and even the woods are full of soldiers, living in tiny little shacks of wood and canvas. It must appear from a "bird's eye" view as an ant-hill looks to us—moving objects swarming back and forth, busy always, nothing lying idle, each object with some burden, quite intent upon its work. And then on the road: French poilus in their blue coats and steel helmets march past with guns and packs on their backs, and some funny little Chinamen from northern India leave off shoveling rocks and patter out of the road. And in the field right at the side some German prisoners in their grayish green uniforms and little hats with red bands slouch along with picks and shovels. An officer passes by in the back of a limousine, dignified and drest as tho on parade.

Further on, at the station, you run into first a Belgian, then a French Moroccan, then an Indian with his turban, later some Englishmen, an American officer, some troops from Egypt—black as ink—until one thinks the whole world must be represented in that little crowd around the train. It seems like a romance, that there should be anything great enough to bring together so many strange peoples to work side by side for a cause, it speaks a great promise for Internationalism.



HONORS come to these boys, but they take them very modestly and usually cover their glory with a barrage of badinage. One young American thus describes the bestowal of the much prized "Croix de Guerre":

We were standing in line with a company of French soldiers from one of our leading regiments at 4 o'clock. Then a long, uncomfortable wait for the general. Finally the bugles sounded again and the general approached, a strong, confident man with a kindly face. . . . He showed the greatest consideration when he said in English, "I am happy to give you this cross." Then he spoke in French, shook hands and said: "Bien Merite." Then he put his arm around my neck and being a short man I was obliged to stoop while he kissed me on both cheeks. I had met General H. before and have pleasant memories of the way in which he kidded me about my French.

A rookies' camp somewhere in U. S. A.

The letters from the training camps naturally contain less that is striking and picturesque than those from the men on foreign service, but they have, perhaps, an even wider appeal since few Americans as yet are actually at the front, while nearly all of us know somebody who will be there in a few months if the war continues. The boys in camp make light of their hardships and much of their pleasures and they find an infinity of ways to spend what little leisure time is allowed to them. This is from an artilleryman in the regular army:

Not long ago our captain said that if I could save money out of the mess we could spend it for a smoker, or what is known with you as a stag, similar to the ones the Y. M. C. A. has. But to have a stag one must have a bonfire, and we are located six miles from town in the middle of a big, barren field, free from vegetation and infested with dust. However, one night I was taking a pleasure ride when I ran into about an acre of boxes over beyond the National Army camp. So I got some wagons and we collected four big wagon loads. At all past army stags they have had beer and none of the old timers thought we could make a success out of it without that. But with the help of the mess sergeant we froze 25 gallons of ice cream and the cooks baked cake enough for 360 men. The regimental band came and played for the sake of all the ice cream they could eat, and we also got a small orchestra from one of the other batteries.

It was a great success from start to finish. When we started, our bonfire was so large nearly the whole regiment came around to see what was doing. The band played, the men yelled and we let everybody know that A Battery was alive and kicking. We had boxing matches galore, pulled off a whole lot of stunts, tossed men about fifteen feet high in a big tarpaulin, had tugs of war and a dozen other things. . . . B Battery is going to play us in a football game this coming Thursday, which is Field Day and a holiday for us. The regimental coach has disbanded his team and is coaching Battery B to see if they can't beat us, because the officers say the regiment can't do anything till A Battery is put back into its place. Not only do the men come out for practise when I ask them, but they (Continued on page 339

"OH, SAY, CAN YOU SEE?"

BY HENRY T. FINCK

MUSICAL CRITIC OF THE NEW YORK EVENING POST

AN amusing anecdote is related about Wassily Safonoff. When that eminent Russian was conductor of the New York Philharmonic Orchestra he went back to Europe every summer, as most musicians did before the war, America being considered the better place to earn money and Europe to spend it. He suffered much from seasickness, and on one of the trips he was lying on his steamer chair looking very pale and unhappy. Suddenly he heard Mrs. Fritz Kreisler, who was standing near him, humming the Russian national hymn. "For heaven's sake," exclaimed the suffering conductor, "don't sing that, or I shall have to get on my feet."

That air is no longer the Russian national hymn, because its words glorify the dethroned Czar. This is most unfortunate, because musically it is the most inspired of all national hymns, and it is to be hoped that, rather than discard the song permanently, the Russians will provide it with a new text, reflecting republican sentiment.

OUR own national hymn has become within the last few days a first-page and editorial subject in the newspapers, and the chief topic of conversation in musical circles, all because Dr. Karl Muck did not conduct it at a concert of the Boston Symphony Orchestra in Providence. He had been requested to conduct it, either before or after his program, by the presidents of nine local women's clubs, but their joint message was ignored on the ground that the subscribers themselves had not asked for "The Star Spangled Banner."

The manager of the Boston Orchestra refused to sell tickets at the last moment, for fear, perhaps, that individuals might enter prepared to make a demonstration against the Prussian conductor. Major Henry L. Higginson, who created this orchestra and put aside a million dollars for its maintenance, tho a staunch patriot, sided with his conductor, going so far as to declare that he would disband the orchestra and sell Symphony Hall in Boston if the public clamor for the performance by it of "The Star Spangled Banner" continued. On his return to Boston Dr. Muck aggravated matters by declaring that the Symphony Orchestra was "a classical musical organization," not "a military band or a ballroom orchestra." "To ask us to play 'The Star Spangled Banner' is embarrassing. It is almost an insult."

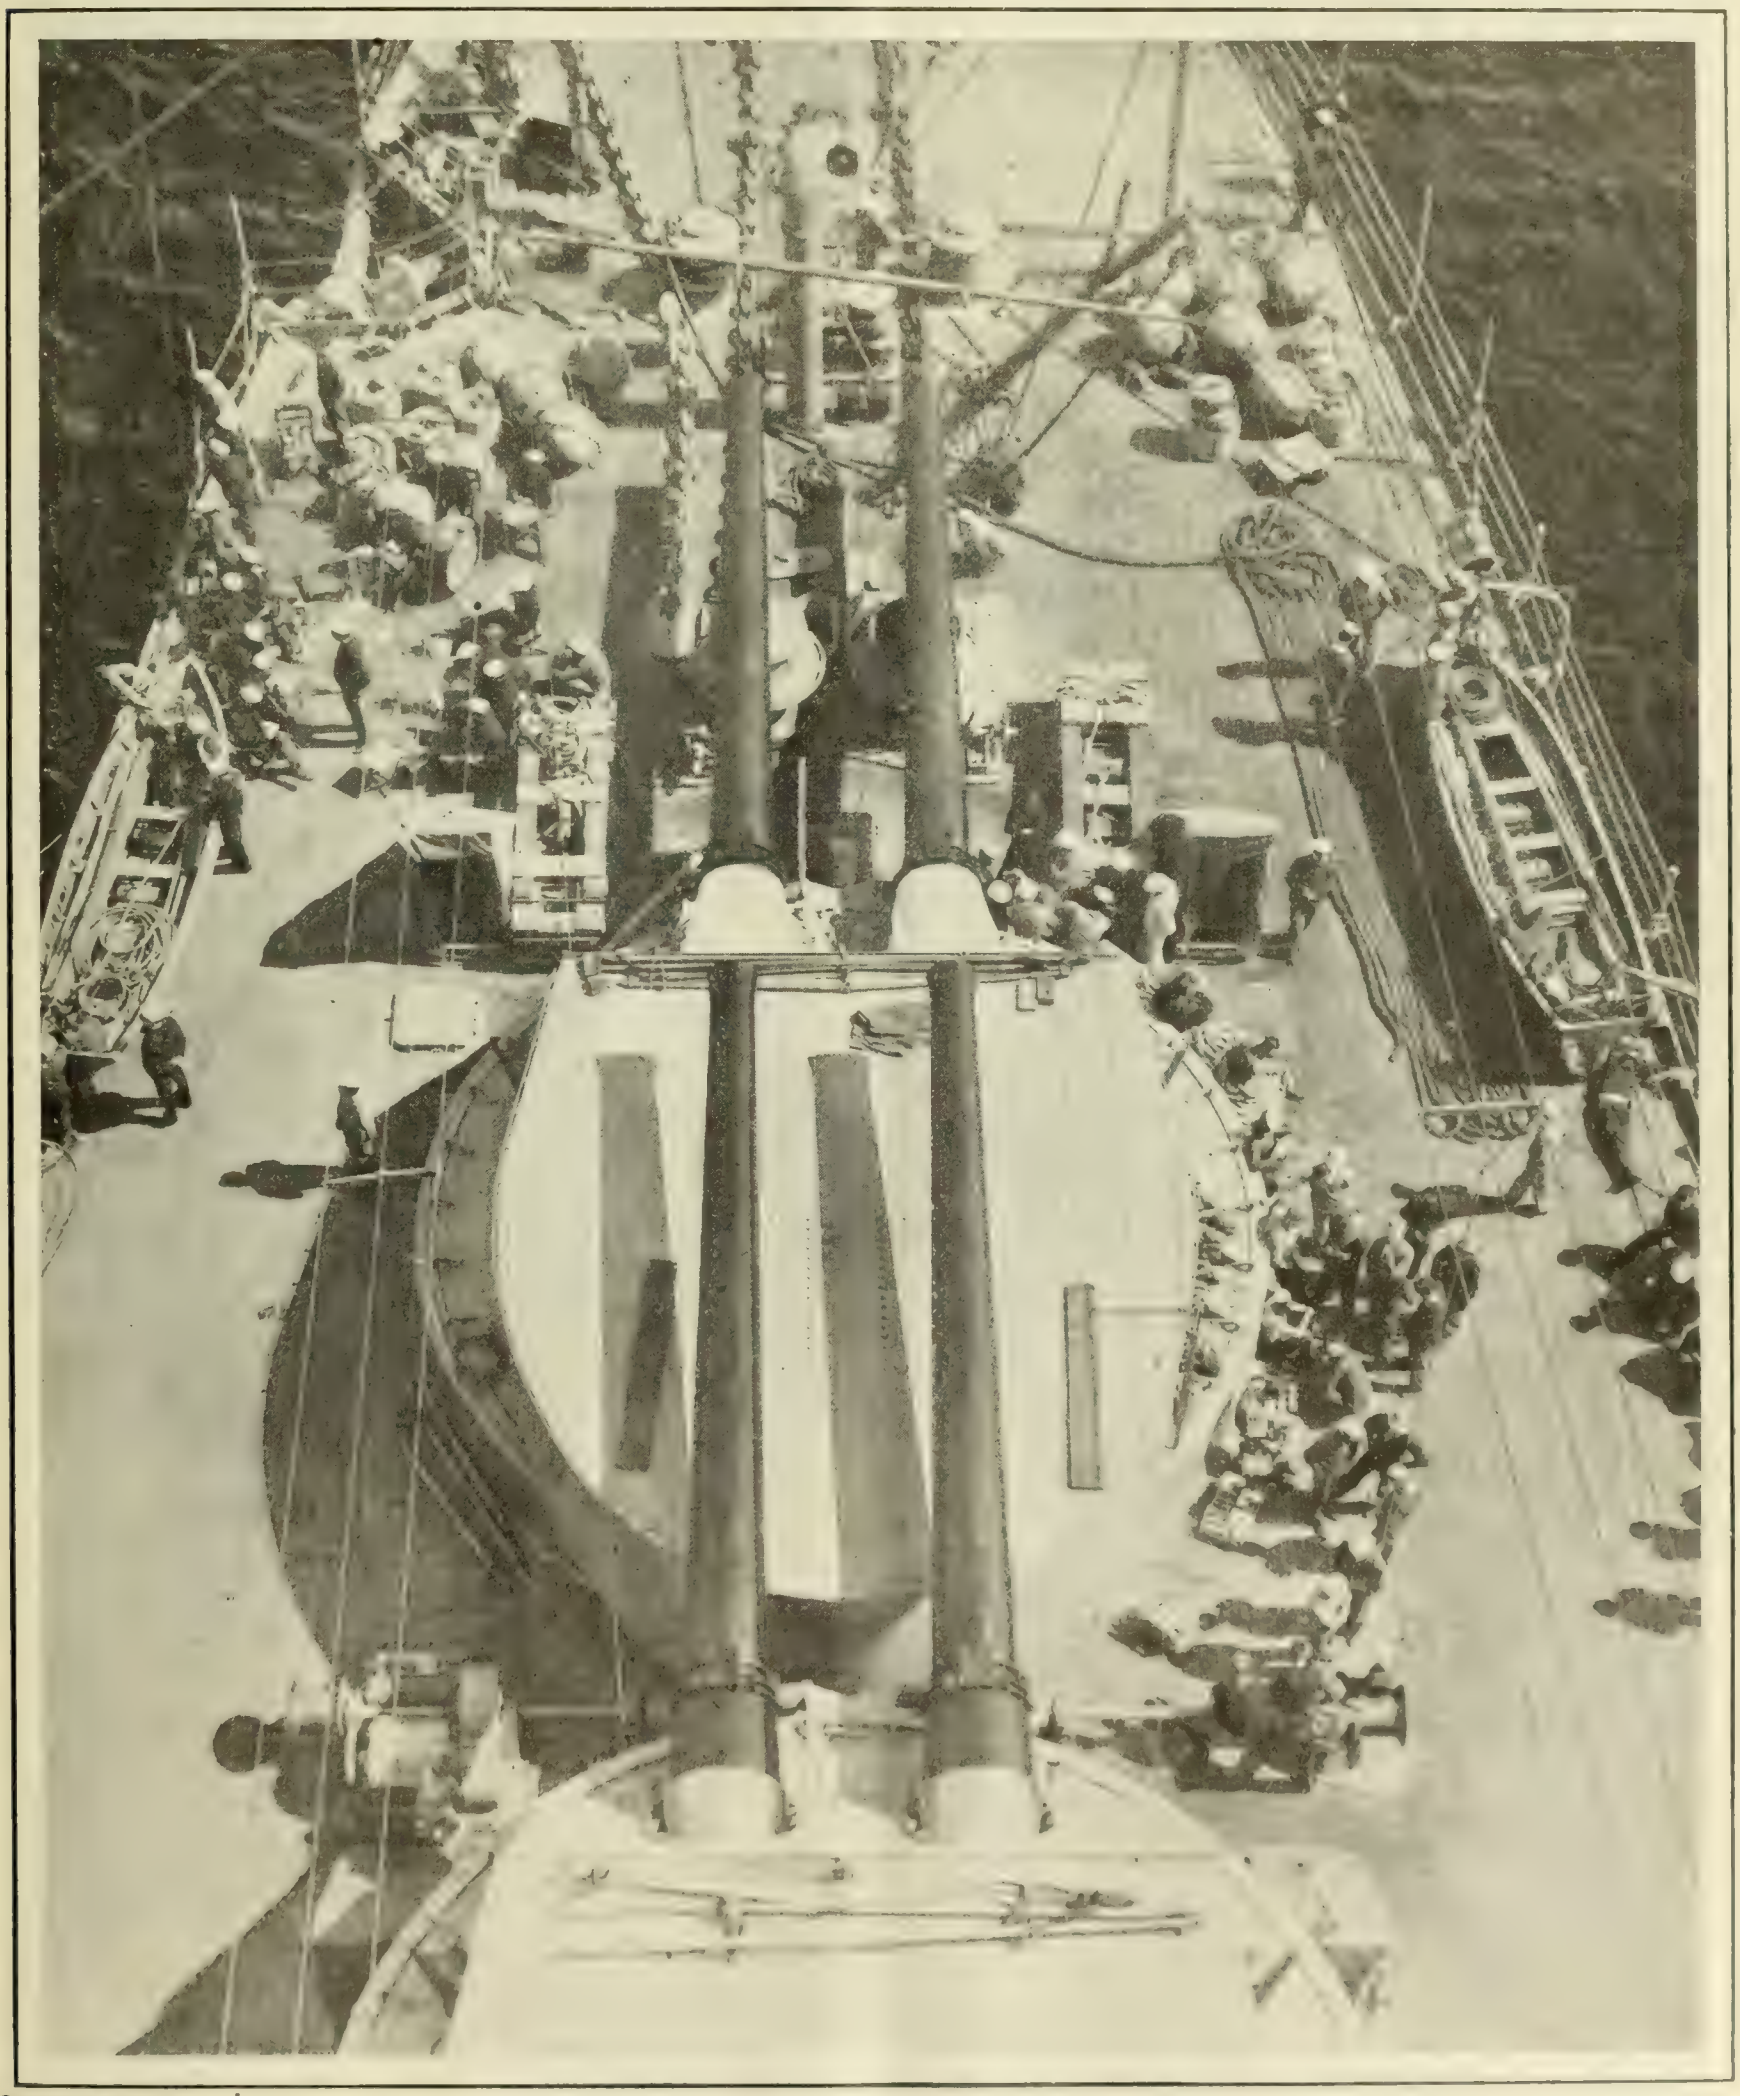
Nevertheless, he did conduct this anthem at the Friday concert in Symphony Hall and then placed his resignation in the hands of Major Higginson, who, in announcing it to the audience, declared that "to lose him would be a calamity. The matter rests with me. It will have my earnest consideration."

The whole thing was in extremely bad taste. The trouble with Major Higginson is that extravagant praise of the organization created by him has evidently made him look on it as a thing apart from and above everything else of its kind, and above criticism of any kind. He has found out his mistake, for the press has been practically unanimous in censuring the attitude of the Boston Orchestra. As a matter of fact there are half a dozen orchestras in this country quite as "classical" as the Boston band, and at least one of them, the New York Philharmonic, is in some respects superior to it. Its leader, Josef Stransky, is an Austrian subject, a Bohemian, yet he cheerfully conducted the anthem of the country which has welcomed him so cordially and given him profitable employment. So did Walter Damrosch (who was born in Prussia, but is now an ardent American) at the first concert of the New York Symphony Orchestra. So did Dr. Kunwald of Cincinnati, and the conductors of all the leading orchestras in the country.

While one cannot but rejoice that this foolish attempt of the Boston Orchestra to evade a national custom has failed dismally, one cannot but feel that the playing of our national anthem at *every* symphony concert thruout the season would be a little trying. Not that this anthem is musically contemptible, as "Yankee Doodle" for instance would be. As music, "The Star Spangled Banner," while inferior to the Russian and Austrian national hymns, is not at all bad—far better than "The Watch on the Rhine." Its best setting, in part, is in Puccini's "Madama Butterfly," where some delightful effects are achieved with it. But it is not well to flaunt patriotism and make it a matter of mere routine which may become irksome and thus create the opposite of the effect desired. In our theaters there are not a few spectators, who, tho patriots, resent getting on their feet so often. Others feel that the cheap shows they witness are hardly a proper background for the performance of a patriotic air.

WHEN Theodore Roosevelt heard about Dr. Muck's action he declared that "any man who refuses to play 'The Star Spangled Banner' in this time of national crisis should be forced to pack up and return to the country he came from." Perhaps Dr. Muck would not be unwilling to do so and return to Berlin as Hofkapellmeister of the Kaiser, who holds him in special esteem. Should he decide to leave us, who is there to take his place? How about Ossip Gabrilowitsch, or Leopold Stokowski? Three American names also might be considered: Frank Van der Stucken, Victor Herbert, Henry Hadley. But this is idle speculation. The latest report from Boston is that Major Higginson takes all the blame on himself. He now declares that Dr. Muck never refused to conduct our anthem, and that he will meekly do it wherever the orchestra plays.

Thus this regrettable incident is closed. It is to be feared, however, that it has had an unfortunate effect in New York, for it was followed promptly by the announcement that no operas in German would be given at the Metropolitan this season. This came as a surprize, for the management had retained all of the German singers except Gadski and Goritz, and announced the usual Wagner repertory. The whole thing was thrashed out last spring, when all the New York daily newspapers had editorials approving of Mr. Gatti-Casazza's policy, on the ground that there was no connection between opera and the Prussian militarism we are bent on exterminating. Why, then, this sudden change of face?



IT is no secret that among the influential directors of the Metropolitan there are some who have never wanted German opera at that house for the simple reason that it bores them. They have reluctantly submitted to its sway because, even with Caruso and Farrar, opera cannot be made to pay without Wagner, whose operas always receive more performances than those of any Italian or French composer. These directors, it is surmised, saw their chance and by a flank movement, overthrew the repertory at a critical moment. The reason advanced—that our tolerance of opera in German would make the Teutons think we were divided in sentiment—is absurd. We shall simply be accused of chauvinism and narrow-mindedness. The Germans themselves have not banished French or Italian opera; in Frankfort, for instance, "Aïda" and "Rigoletto" were sung last month. In Paris, it is true, the name of the Rue Richard Wagner has been changed to that of a French composer, Alberic Magnard, a victim of the war. But in London the Wagner nights at the Promenade Concerts are as popular as ever and Wagner operas have been produced in several English cities since the war began.

It is particularly stupid to banish the operas of Wagner, because he himself was as anti-Prussian as a French general. Were he alive he would be a leader of the revolution which is bound to come; he was exiled eleven years for taking part in one revolution; and to Mathilde Wesendonck he wrote in April, 1859:

"It is interesting that, upon an outbreak between Germany and France, I should be seeking refuge in the enemy's country. I am much afraid of losing all my patriotism, and being secretly delighted if the Germans receive another sound thrashing. Bonapartism is an acute, a passing ailment for the world—but German-Austrian reactionism a chronic, an abiding one."

NATIONAL EFFICIENCY

A MONTHLY SECTION DEVOTED TO BUSINESS, PERSONAL AND NATIONAL EFFICIENCY, CONDUCTED IN ASSOCIATION WITH THE NATIONAL INSTITUTE OF EFFICIENCY AND THE EFFICIENCY SOCIETY

UNCLE SAM'S WAR-MADE INDUSTRIES

BY DONALD WILHELM

AUTHOR OF "THE ONLY WAY"

NATIONAL efficiency, like national preparedness—so we Americans began to discern clearly about the time that two Hohenzollern torpedoes leaped out of the night and found their mark in the Lusitania and in the hearts of a hundred women and children—is of various kinds. There is one kind that is piracy. But there is another kind—*real* national efficiency—that is the handmaid of *real* national preparedness.

Real national efficiency is, in fact, virtually synonymous with *real* national preparedness. It is that which makes for progress—world progress. It is the accumulation of meritorious and constructive effort by all individuals in whole nations of people.

It has, it has had to have, much to do with munitions of war. But it has, and it has had to have, vastly more to do with traditions and devotions and innate facility and promptitude in the realization and demonstration of ability to perform constructive achievements necessary to human happiness, civilization and the things constituting civilization.

There was something all wrong, thus, in the fact that the Germans were, before the war, supplying America with the dyes for many of our soldier and sailor uniforms; that the Germans, in fact, were actually putting the red and the blue in our own American red-white-and-blue.

And dyes, millions of dollars' worth of them, were only the smallest part of the things that the Germans, and other nations, too, were sending us, making us pay for, making us negligent of our own *real* preparedness.

They sent knit goods, very much of them, from Saxony. Rather cheerfully we paid the Imperial German Government virtually, about two millions of dollars a year for goods even so nationally unimportant as these. They sent hides and gloves, glass, porcelain, cutlery, a thousand things more, all. "Made in Germany," right down till August 2, 1914, and the new order of things, and even thereafter they sent dyes and a few things more, via submarine.

It was not so very long after that when the Imperial German Government sent two torpedoes at the "Lusitania."

And now, very likely, the Imperial German Government wishes that it hadn't!

For those two torpedoes traced on the surface of the ocean, and in the history of the world, the setting for an important American Magna Charta that we may call Our Declaration of Industrial Independence. "In resolute manner," observed Dr. Thomas H. Norton, of the Bureau of Foreign and Domestic Commerce, "American industry issued an economic Declaration of Independence worthy to be ranked alongside the political declaration of our great-grandfathers."

Well, we used to get many of our paints and pigments, lacquers and varnishes, from Germans; now we make all such materials ourselves.

We make our own knit goods now; in the year 1916, we *exported* twenty millions' worth.

We used to buy much cutlery from Germans. Now we make our own—and German butchers in America find it very satisfactory.

We used to send the German potash center, Strassfurt, over $17,000,000 a year. And it is in our Declaration of Industrial Independence that we shall never do that again.

For the potash industry in America needed merely to be delved into. "Potash comes from Strassfurt," we Americans long had said, as if that settled the matter, inasmuch as we were busy at things other than potash. And now the men of a new American industry say "Strassfurt can go where the Germans sent the Lusitania, for we are making in America more and more potash, and very soon we shall be making more than America and the western world can use."

"But where?" the Imperial German Government, doubting, wishing it had not sent those torpedoes, might well ask. "And how?" The answer is that we have sources of potash so huge that all the Kaiser's horses and all the Kaiser's men could not exhaust them in half a century's work.

It is in superabundance in kelp, or seaweed, on both our coasts, and on both of them huge industries are busy moving and reaping it. And reaping is about all that is necessary. An aquatic reaper, in other words, or a hundred of them, goes out into the ocean along our Pacific littoral, mows and reaps a harvest that Nature repeatedly supplies in unlimited quantity. This is dried and ground. Then it's ready for use as fertilizer, or ready for further treatment for uses innumerable, in the dyes and arts. There is a great new industry thus, with a score of factories, on the Pacific Coast.

BUT that isn't all! Providence gave America vast veins of a common rock called feldspar, vast deposits of Utah alunite, copious brine in western springs and lakes, and all these are transmutable into potash.

More than that, Americans are finding ways to gather it from the by-product of molasses distilleries, of which there are twenty-six in America. And they are recovering it from the gases of blast furnaces and from those of cement mills; making it from tobacco stems, too.

And America needed nitrogen. The Army and Navy needed it—the fact that Congress appropriated $20,000,000 in 1916 to organize and establish the industry shows that. And it is important to the arts, to agriculture, even tho the kelp from the Pacific littoral, Dr. Norton says, in addition to having potash that at pre-war rates is worth $90,000,000 a year, has nitrogen also worth, to farms, $60,000,000. We are relying on Chile for the bulk of our nitrate now; yet an American chemist told me, "It would be a good thing if the Germans could cut off Chile, because we would be forced to produce—and we could!" For American scientists are busy once more conquering the air, making nitrogen by fixation of it. And forthwith there is still another industry being born, in the spirit of our Declaration, and in it is invested vast aggregates of capital.

Mr. Edison, visiting in Germany a few years back, made mental note of the fact that some evening by way of relaxation he would, in order to have his own supply of carbolic acid with which to make phonograph records, "put his mind to it," that is, to getting his own supply. When the Germans cut his supply off—and the Germans made nearly all that America used—one evening he "put his mind to it." In a few hours he was out of German bondage, in a few days he had arranged for five times the amount of benzol, a coal-tar product that he needed, and in a few weeks not only was he making all the carbolic he needed, in a small factory in Orange, but, in addition, about two thousand dollars' worth of aniline every day, besides his two thousand dollars' worth of carbolic.

IN this war we have expanded our steel industry till our capacity is two-thirds that of the entire world, which, by the way, is enough to dispel the fear of the "Yellow Peril," inasmuch as Japan can make only 500,000 tons a year, about one-one-hundred-and-fiftieth part of our production. One of the three elements of steel is coke. Making coke means, nowadays, making coal-tar products in big, smug smelters that do their work mysteriously but mightily. And these coal-tar products constituted raw material for an industrial evolution such as has never been witnessed in all the annals of industry. In other words, whereas prior to the war in some six establishments 400 Americans were manufacturing 3,300 short tons of coal-tar colors, principally from intermediates from the banks of the Rhine, the Main, the Spree, now not only are we providing colors for our gigantic textile industry with its annual output close to two thousand millions of dollars, not only are we providing colors for our vast leather, paper, ink, paint, varnish, feather, fur, woodwork, shoe-dressing industries and many others that altogether hire over two millions of workers and produce output worth far over fifteen hundred millions of dollars every year, and making an end of the enforced vacations imposed upon many industries because of lack of German dyes, but we have about one hundred and fifty firms in this industry to stay, done forever with German industrial bondage. And some of these are of the consequence of the Du Ponts, whose chemists probably saved the Allies early in the war.

But these are just a few instances of new American industries given abortive birth by the pugnacity of German Kultur.

There are other examples too numerous to chronicle altogether here, but let us select at random a few:

There is at Perth Amboy, for instance, a gigantic smelter, the first of its kind in America, to refine half of Bolivian tin, instead of depending on Europe. At Pomeroy, Ohio, at Mason City, West Virginia, and in Pennsylvania and Michigan, Americans are now producing bromine. Lanolin, or refined wool grease, for salves, ointments and emulsions, was imported into America before the war at the rate of 2,500,000 pounds a year, and the unrefined wool grease, for use in cordage factories, tanneries, etc., was imported at the rate of 12,000,000 pounds a year. Now we make it.

We paid out $580,000 a year for prussiates, in a year we reduced importation a third; now vast American plants are furnishing our supply. We imported around 8,000,000 pounds of oxalic acid, which has innumerable uses, every year; now our chemists have hazed upon sawdust and caustic alkalis and are likely soon to seize upon our western mountains of corncobs, making oxalic, all having done, incidentally, with importation of it. American chemists, noting that we imported about 90,000 tons, worth $500,000, of carbonate, chloride and dioxid which are derivatives of barite, sauntered into the depths of America and opened up immense deposits of the finest quality of barite and in two months, from Tennessee, two carloads of barium salts were fang north to chemical centers. The submarines and other factors thwarted our supply of Russian petrolatum. So Americans "put their minds to it." In short order they not only discovered a substitute quite as good as the original, but eleven or twelve improvements.

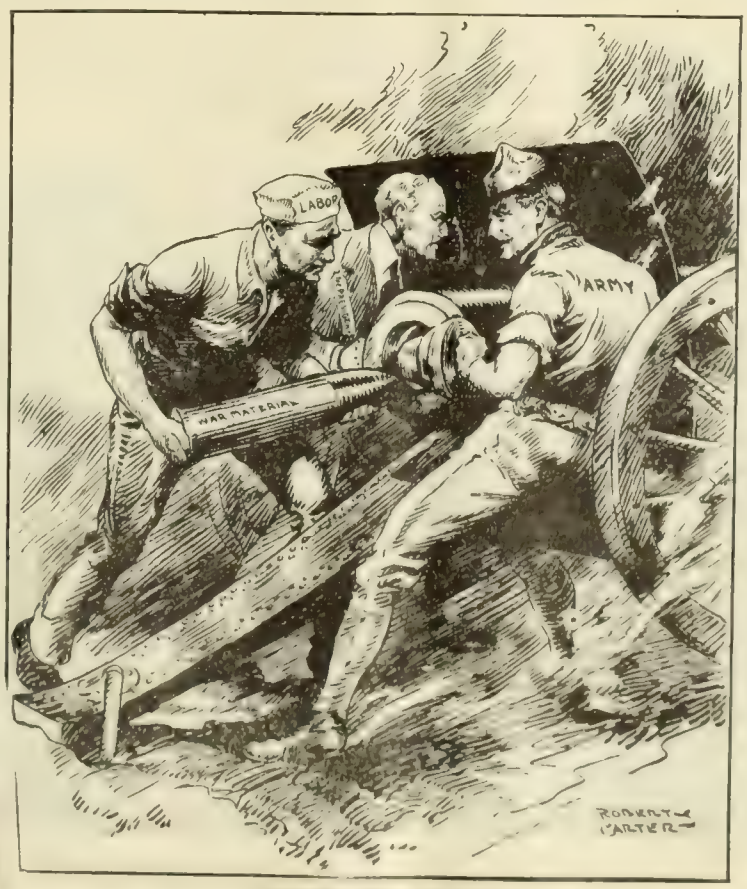
ANOTHER new industry rapidly becoming one of gigantic proportions is that for the making of aeroplanes. Figures again tell the tale: Since January 1, 1915, down to September of the present year, the aggregate of capital of new aeroplane and munition firms amounted to $303,225,000, $36,400,000 of which was for August, this year. With the aeroplane industry has been born a great family of "little industries" that are thriving lustily—industries for the making of special engine parts, for the treatment of spruce for fuselage and propellor, for the making of "dope," which is a difficult coating for the planes that has to be light, strong, resistant to water and to great and abrupt extremes of heat and cold. Likewise the munition industry gave birth to numerous "little industries." Many of these have been described, but one which is peculiarly striking came to notice in New York City labor circles, along with a scarcity of jewelers. In a word, many jewelers were discovered in East Side lofts making high wages at a new industry—notably that of making gages, which are used by the hundred in the making of guns and shells, where inspection is incessant.

It is worth pointing out that some of the rubber manufacturing companies have discovered what is for many purposes virtually as good a product as synthetic rubber could be. It is also worth note that in August of the present year nineteen new millions of capital went to ships and ship-building, which raised the total of capital turned by American firms to that work since the beginning of the war to $354,165,000. And this industry, which for America is, in a sense, new, has also bred a great many smaller "feeder" industries, for making ships' equipment, etc.

SPAGHETTI used to be *Italienne;* now the very finest qualities of it, even, are American, for the American manufacturers discovered in Durham wheat a wheat sufficiently hard to make it satisfactorily. Before Christmas, 1914, a dealer in novelties in New York City, along with not a few others, was intent on taking away from Germany her toy industry, and now in a throbbing five-story building he is demonstrating, as the others are doing, that the American public likes American toys—and exports show, indeed, that even the South African public does, also! And these manufacturers rapidly are getting patents. A mica industry has been established and it is utilizing American mica deposits. A porcelain industry is making chemical porcelains of a kind obtainable before the war only from France and Germany, both of which have kept methods and constituents secret twenty years.

Another industry is taking the business Germany had worked up in imitation Turkish rugs. Germany has long made most of our finest gloves and other leather objects; now, in Gloversville, New York, and in other centers, Americans are finishing the skins that used to be sent to Germany. We have long produced the greatest number of raw sealskins, which we sold to English furriers, and then, at an advance of 52 per cent on the cost, as an average, bought them back again—bought more than any nation whatever; now America is establishing a fur industry of the first order. Our sensitive photographic paper and many of our photographic supplies came from Germany; now we make them. Much of our fancy and filled paper and letter lithographic work came from the same source; now we make it. That is why souvenir postals are cheaper than ever before.

Hardly had August, 1914, passed when some of our watchmakers told the Department of Commerce that they could not get curved watch faces, inasmuch as their supply had come from Thuringia, in the very heart of Germany. The department passed the word to the American glass makers. In a month a satisfactory supply was forthcoming; in two months production was up and costs down—down so that prices were lower than ever. Smaller musical instruments to the value of $1,500,000 a year we imported from Germany; now we make them. We have discovered how to treat native clays effectively; we have learned how to utilize glass that Germany got from Nebraska, to turn into quartz glass that was highly resistant and high-priced because useful for test tubes, retorts, etc. We have learned how to make many kinds of laboratory utensils and laboratory apparatus and machinery. We are making our own optical glass in quantities huge enough for our increasing Army and Navy. We are making invar metal, an alloy of nickel and steel invaluable for its low coefficient of expansion. Our manganese ore and metal industry is being developed, in Virginia, Tennessee, Colorado, California.



WE are making ichthyol, an Austrian pharmaceutical drug. Indeed we are making for the first time drugs without number; common, much-used aspirin—a derivative of salicylic acid to make which new works are going up in New York—is a familiar one selected almost at random. We are making chemicals, too, without number. The authorized capital of firms organized between January 1, 1915, and September 1, this year, to manufacture drugs, chemicals and dyes was $230,670,000, $13,000,000 of which was for the last August, with an indicated investment for 1917 of over $75,000,000. Already nineteen firms, with a capital of over $1,000,000, have been established. The results of this investment are reflected already in the fact that imports of drugs, chemicals and dyes are steadily becoming negligible; and exports are growing by leaps and bounds. In 1914, thus, we exported chemicals, drugs and dyes to the amount of $27,000,000; in 1917, despite shipping difficulties, we raised this amount to $185,000,000. The value of explosives jumped from $6,000,000 in 1914, to $820,000,000 in the last fiscal year; and under another heading, "other explosives" exported, amounted to $420,000,000.

There are vital lessons in all these figures and in all this evidence of a vast and comprehensive change in the economic position of America—lessons no less bitter to the Imperial German Government, one may imagine, than gratifying to the U. S. A.

In one word, America already has avenged the "Lusitania"—the army of civilian chemists and business men have attended to that, on a gigantic scale.

In another word, America has put into effect, conclusively, past all doubt, her Declaration of Industrial Independence.

One might write a book on what all this means when reflected in the future of America. It means, in one sentence, that no nation can invade us industrially and put us into bondage again—particularly since the Extra Reserve Law, approved September 8, 1916, blocks "dumping," which was Germany's weapon of subjugation, so that henceforth any attempt to sell goods below cost of production makes the seller liable to criminal action and his goods liable to confiscation. It means, in another sentence, that no nation in the world dare. [*Continued on page 351*

UNITED WE STAND

This Austin Standard Type No. 4 Building, 300 ft. x 300 ft., a 60-day building, was ready for the Nordyke & Marmon Co., Indianapolis, two weeks ahead of time. On this performance record the owner ordered another, and larger building.

Austin Standard

So far in 1917, we have buit 109 buildings
flo

Every one of these buildings has been ready for the owner *on ti*
or ahead of time.

Every building has been built within it scheduled cost.

Each building stands, and will stand i years to come, an eviden
of the high quality of Austin Constrction.

We built this building, Austin Standard No. 9 mill-type construction, 80 ft. x 308 ft., 3 stories, for the Pittsburgh Transformer Co., Pittsburgh, in 78 working-days, finishing the building proper several days ahead of schedule.

Ready for the Ov

This sureness of results in meeing your needs for fact
your equipment and material, order an Austin Fact
on time,

Owners have found this same surenessf results in retaining us to han
from start to finish, industrial building roblems of any size or kind.

With our comprehensive, well-distrilted organization we take the
sponsibilty for the successful design, onstruction and equipment of co
plete factories, power plants, etc.

"Results, not Excuses," is the slogan on the cover of our new catalog. It is worth your while to send for this if you need a new building. Write, 'phone or wire the office nearest the prospective work.

THE AUST
INDUSTRIAL BUILDE

This foundry building 120 ft. x 480 ft., for the General Electric at Schenectady, contcted for on 60 working-day schedule, was completed one week ahead of time.

Complete
uction
le"

This Building was ready for the New York Air Brake Company at Watertown, N. Y., 10 days ahead of completion schedule. Our record here brought orders for four more buildings for the same owner, all larger than this one.

Factory-Buildings

4 owners, aggregating 5,370,000 square feet of pace.

It is, therefore, with an almost certain sureness of results that we offer the prospective owner Austin Standard Factory-Buildings—*Delivered complete on a production schedule. Quality, cost and time of completion guaranteed.*

er Ahead of Time

ce means that you can close that pending contract, order uilding to house them, and that building will be ready, *ad of time.*

We do the engineering work, either in our office or we lend you our engineers to act as a part of your staff, to develop your own ideas, in your own plant.

Using the Austin Organization for the entire work means *unit responsibility,* a short phrase but full of meaning to the experienced.

Contracted for on a 70-day schedule, we finished this foundry building for the General Electric Company at Lynn, Mass., 36 days ahead of time. The building is an extension of an older one. Note the better lighting in the new building.

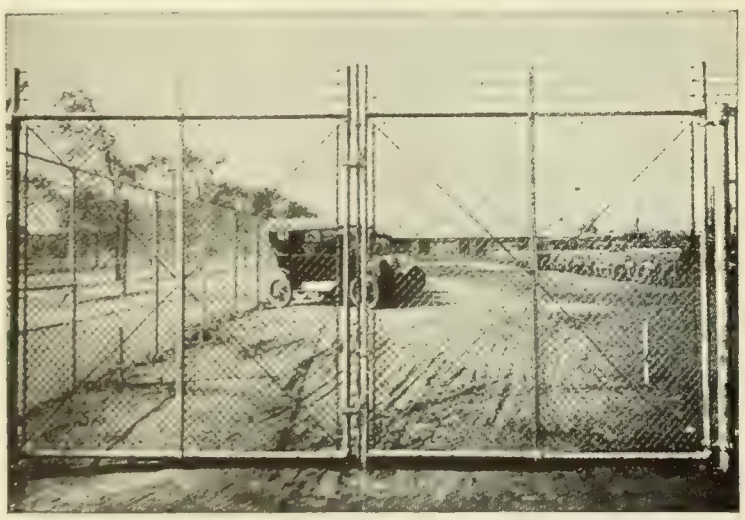
The longest building the General Electric Company ever built at Schenectady, 860 ft. x 100 ft., completed in 76 working-days after the order, 4 days ahead of schedule.

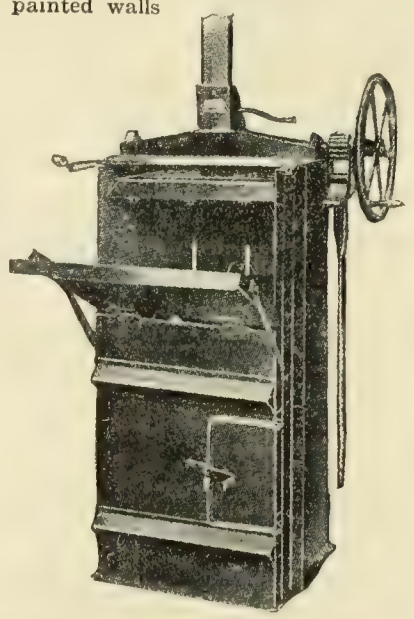
A Better Day's Work

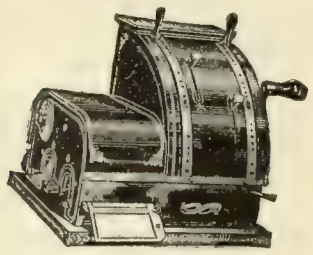
Ask the Plan and Purchase Department of The Independent
to Advise You on Factory Equipment for Efficiency



Would you find it a benefit to have an automatic counter on any of your machines? One by which you could tell at any moment how many articles in the grand total have passed thru the machine?

Night work can be carried on under lighting conditions so comfortable for the workers, and so efficient in the matter of clear, shadowless illumination as to resemble closely the quality of sun-light. There is an advantage in having this equipment—proper fixtures, properly placed, reinforced by properly painted walls

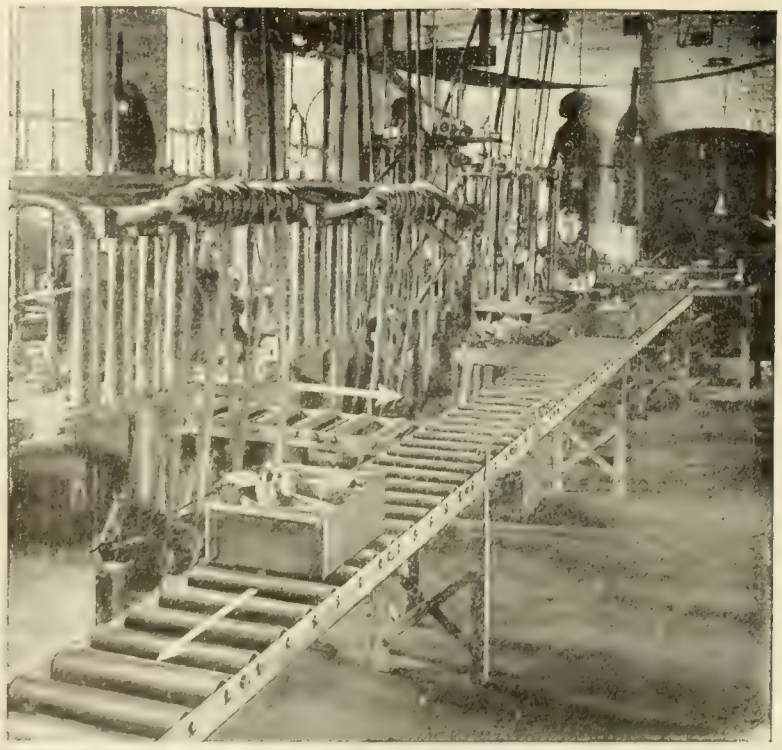


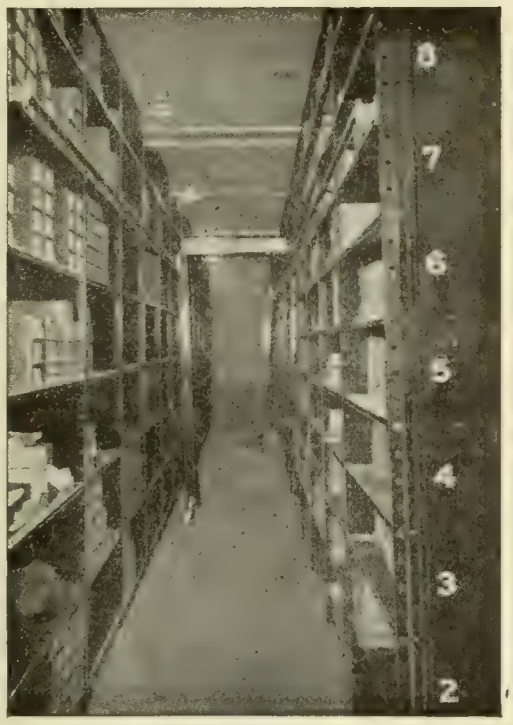


This small device contains chemicals which directed on an incipient fire will put it out and save unknown loss. Think in how many places you need it!

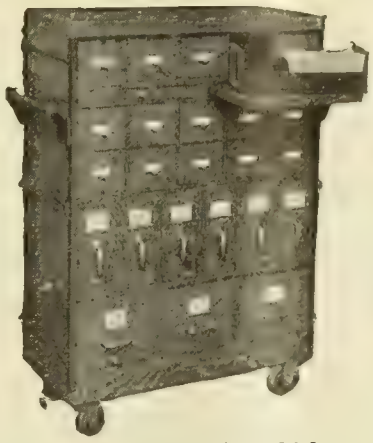
When you go home at night do you feel sure that your plant is protected from prowlers? During the daytime can you be sure that even the most distant part of the yard is secure? A properly constructed fence will save you money, time and much worry

You can't eliminate fire danger altogether, but you can reduce it to the minimum. One source of danger is loose paper. Don't allow it to accumulate. This baler will compress the loose waste paper into 100-lb. bales —or bigger if you like. Made of metal, a good baler can be listed among the fire prevention devices—besides which it pays its way. If you are burning old paper now, you are burning money!

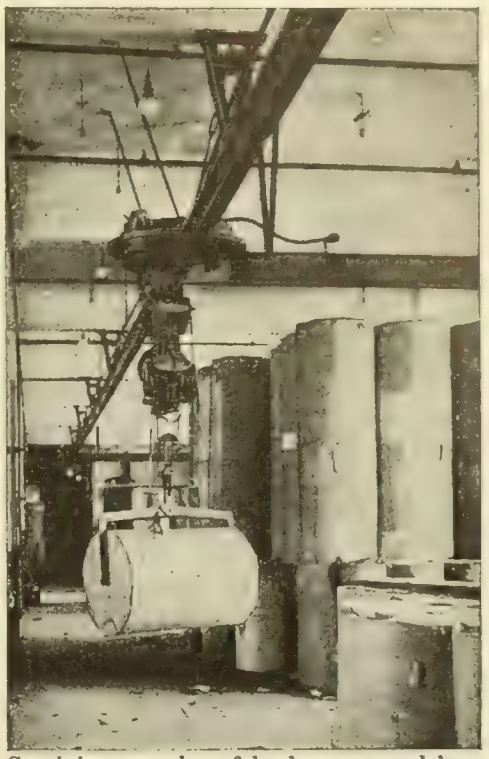




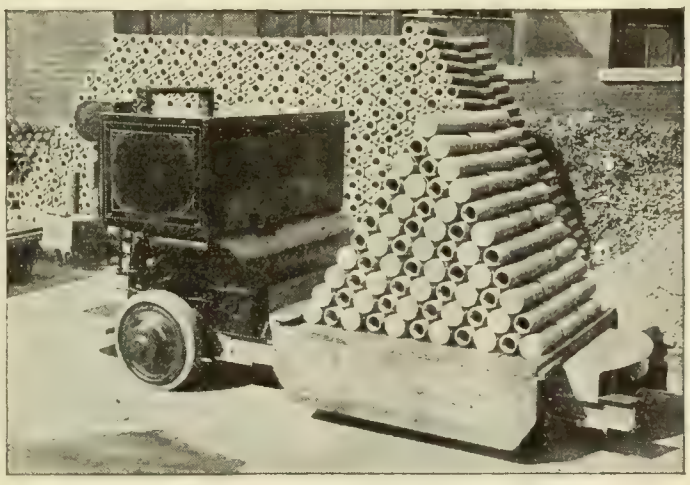
Did you ever have packages go astray in transit? Why not do away with such trouble by using a tag-addressing machine like this, which can print, address and count one hundred tags a minute?



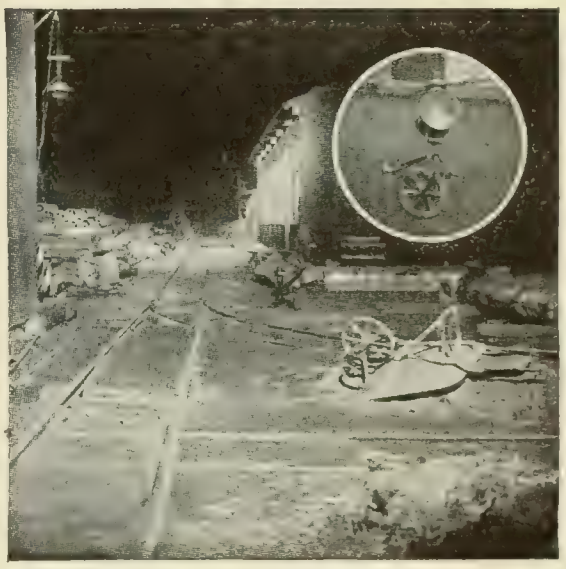
Fire danger is always present in a factory or storehouse. Means to reduce fire-hazard have been highly developed of recent years, under the spur of public opinion against preventable loss of life and fire wastage. Today automatic sprinklers such as these on the ceiling, with water ready to be let loose if a fire occurs, are in general use in factories, warehouses, institutions and office buildings



Moving along on a chosen path, turning corners, and arriving at their proper destination without being touched by human hands, boxes of parts start off from one point in the plant and arrive at another with a saving of time and labor that is truly astounding, if one compares such results with the methods of but a few years ago. After a study of your problem install a set of rolling tubes



Have you a system by which tools, parts, and finished goods are all allotted to certain places? Does any one person know where to find them? Look at the orderliness of this stock room, with its steel racks, capable of standing the strain, the hard use, and of withstanding fire. Note the designations on sides and ceiling. Similar racks can bring similar order to your plant



Are the foremen of all your departments able to turn at once to all necessary records—and yet to feel assured that this valuable material has full fire and loss protection? This movable file case (which can be made up in any required arrangement and size of compartments) can be easily and quickly run into your vault or fire-proof storeroom at night, and in the morning can be pushed to the desk where its contents will be used all day

Straining muscles of back, arms and legs used to mark the lifting and transporting of heavy articles in the shop or storage sheds, and a day's work was comparatively small. Today it is possible to have such work done by heavily-constructed hoists which easily and quickly pick up, carry and place the heaviest products—of stone, paper, wood, iron or other metals

Wheelbarrows, long rows of wheelbarrows coming back empty, dragged by tired men who have spent the whole day transporting unfinished goods from one department to another, coming back for another load, are a disappearing feature in many manufacturing plants; even the small car on a narrow track to be loaded and pushed about, and which replaced the barrow in many plants, is giving way to the electric truck, which can lift and transport without man-power or tracks, and man-power or tracks, and without getting tired

"There's some of them out in the yard beyond the main track—but it's time to quit; we'll get 'em in tomorrow." Old stuff, isn't it? It's what you used to hear; but not today. In these days we can throw a flood of intense light into the darkest corner, can spread rays of light over a wide extent, can concentrate them on a near or a distant point, in short, for time-saving or protection the manager now has at his command apparatus that doubles the day and leaves no place in the plant unguarded

Tin, glass, china and enamel-ware drinking cups are not as numerous as they once were in factories—but there are still some plants in which the bubbling fountain would prove an economy. If your help are obliged to have dirty hands, the cupless drink will be a boon to them. If you are troubled with water waste, the automatic feature of these drinking fountains will appeal to you, too

Stand near the wash-basins in your factory at noon today and watch for evidence of time lost because of poor accommodations, to say nothing of the discomfort of the men and their forced neglect of a common need and a sanitary measure. Good arrangements, giving sufficient room for quick use by all hands, good equipment, so constructed as to be kept clean easily and to assure plenty of water—hot and cold—are proved to be an economy, as well as evidence of efficient management

Opening a long row of windows, or several rows, one after the other, is a waste of time. You can arrange your sash overhead so as to be opened all at once by one motion of an easily moved lever—a plain case of economy and real efficiency

Have you thought of what ventilation would do in increasing the comfort of your help and bettering your entire output? Look at the large tube in the upper left hand corner of this picture; it's full of the bad air that without it (and the electric fan at one end) would be filling this plant—and it's carrying it out and away all the time

THE MANUFACTURER'S PROBLEM

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

SUPPOSE you were engaged in a life-and-death grapple with a burglar who had come to rob you while your family were sleeping. The fight was desperate. You were about evenly matched. Whoever prevailed would have to do it by killing the other. And you understood the situation.

Furthermore, you knew the burglar would kill the whole family if he had to in order to get off with his booty. Suddenly you heard cries of alarm from the next room, where two of your little brothers were sleeping. They had evidently waked and were on the point of rushing in to help you.

Then the burglar gave a long whistle to his pal outside. The pal shot in thru the window, straight to the room where your little brothers were sounding the alarm. Soon the little fellows would be stabbed into everlasting silence. What could you do? Nothing, but keep on fighting—and *calling for help!*

Here, in a rough parable, we have the position of the Allies at this moment. The international burglar, bully and braggart named Wilhelm of Germany, starting to plunder the human family in the night of his moral darkness, found the unexpected opposition too strong in France. Then he whistled to the minor members of his criminal band, who jumped in to stab Italy dead, and choke Russia helpless. In this new crisis, all Europe is calling to us to save it from destruction—and to save ourselves also.

Military experts consider that the Kaiser had three objects in pushing toward Petrograd and Venice at the same time. The first was to deliver a grand-stand play in home politics, by making the German people think a series of triumphs had really begun. The second was to divide and disintegrate the French and English forces, by luring them off suddenly to help Italy and Russia. The third object, and the most dangerous, was to overrun Italy and put her out of the game in the next few months, then concentrate the German and Austrian armies in France for combined attack before the United States could put a great army in the field!

WHAT can France and England do? Very little more than they are doing. The whole situation is up to the *American manufacturer*. He is the only man who can save Italy, by producing and shipping enough supplies in the next few months to make possible an effective and permanent resistance by the Italian army. The desperate need of Italy has placed the key to the future of the world in the hands of the American manufacturer.

Why did so marvelous a fighter as General Cadorna lose more than two hundred thousand men, killed, wounded or captured, in a single week? Because the guns, shells, materials and supplies of the Italian army had run out. This unparalleled loss of men was chiefly due to the lack of certain manufactured articles, that we alone could furnish. The Austrians were able to seize hundreds of guns because the guns had no ammunition, and thousands of men because the men had no food. No army can win a battle without weapons and rations.

The hand of Destiny has painted on the horizon of the world a huge sign. It reads: The way to world victory starts in the American factory.

War evolution proceeds in cycles. The first six months of our participation in the war was the cycle of conservation. The next six months will be the cycle of production. Conservation is a feminine virtue, Production is a masculine. They must be united. We have been learning how to save, we must learn as effectively how to produce. Greater, faster and better production by the American manufacturer seems now likely to become the deciding issue of the war. How shall we force the issue?

THE war has driven home a truth we had forgotten—that every human interest is bound up with every other. The manufacturer's problem is our problem. Whoever makes clothing or canned goods, shells or ships, yarn or bandages or medical supplies, or anything else the soldiers need, fights our battle for us and deserves every bit of moral and material support we can give. The manufacturer is probably carrying the heaviest war burden of any citizen of the United States. The world expects him not only to make bricks without straw, but to make two bricks where before he made one.

His raw material is reduced in some cases to less than half the normal supply, yet the world asks him to achieve a modern miracle and reach a 200 per cent output from a 50 per cent supply. He is greatly handicapped by the shortage of labor, some of his most reliable men have been drafted for battle service or have enlisted for home service, and he cannot fill their places. He cannot ship goods promptly and hold his regular customers in line, because the railroads, now in the service of the Government, are two to six weeks behind schedule in delivering freight. He cannot make the sales he used to make; he has to charge higher prices, yet people are economizing more than ever before; some of his keenest salesmen have gone to war, others are selling Liberty bonds or doing something else uncommercially patriotic; and the manufacturer himself, provided he is a big man, is too much absorbed in the nation's welfare to give much thought to personal profit. He cannot make his collections on time and thus meet his obligations when they mature, because the man to whom he sells is even harder pushed by the run of high prices and short resources.

But in spite of these and many more difficulties, the manufacturer has taken a long lead in patriotic work. When the Council of National Defense called for aid from private institutions, a hearty response came from more than 20,000 manufacturing and allied concerns—a larger enlistment for regular war service than came from all the schools, churches, reform societies and business associations combined! Furthermore, many of the head officials of the largest manufacturing corporations have resigned their positions, temporarily or permanently, for the sake of helping the Government win the war, and without pay. A half dozen of these men, recently photographed together, have been receiving salaries all the way from $50,000 to $1,000,000 a year; these royal incomes they promptly and cheerfully sacrificed when they heard the call to a greater work—national war efficiency. To a great business man, business means all things desirable, from pleasure to religion. When he gives that up, he has reached a point of superhuman devotion.

A new epoch of industrial progress for humanity was quietly but everlastingly marked the other day when the steel and iron makers of America, representing the largest corporate interests of the world, bound themselves in a patriotic pledge to unite their forces under the direction of the United States Government, whose advice they would seek and follow for the duration of the war. It is the man of high place who knows how to be really humble.

The demand for increased output by the American manufacturer will extend years beyond the close of the war. Take one item, for example. Building operations in England are now at a standstill. The dearth of homes for workers is appalling. An estimate last week shows that 1,000,000 new houses will be required for English families at the close of the war. Most of the lumber will have to come from the United States—and our production is not sufficient for our own use. Hundreds of examples like this might be mentioned, applying to other manufactured goods. We must not only supply and equip the armies of the Allies and our own, we must prepare to become the manufacturing center of the world for the next ten years.

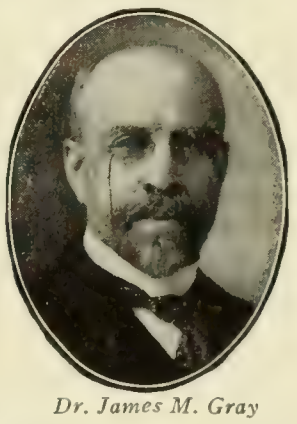
THE great American war triumvirate is the soldier, the government official, and the manufacturer. We have been told how to help the soldier, how to coöperate with the Government official—newspapers, magazines and trade journals are full of these suggestions. But without the loyalty, labor and skill of the manufacturer, the hands of the Government official would be tied, and the feet of the soldier would be hobbled. May we not give a little serious thought to the problems of the men who are conducting the master workshops of the world, by whose output the future of humanity will be largely determined?

Every American citizen should be a moral partner of the American manufacturer. We all use a variety of manufactured goods every day of our lives, we bear a direct relation to the manufacturer of these goods, we should study this relation and our war duty and responsibility rising from it. We have learned how to assist conservation, we must learn how to assist production. Conservation is a personal endeavor—production is a national enterprize. The factory has become the molder of the world's fate.

Here are some of the things we can do, in moral and material support of the great war industries:

We can patronize the patriotic manufacturers. Local dealers should know of the war activities of the manufacturers whose goods they sell. A manufacturer of baking powder publishes a booklet of war bread recipes; a manufacturer of business books devotes his full time to federal work; a manufacturer of [*Continued on page 347*

Your Boy—Your Brother Your Friend



Professor Sellers and his son Rodney who is now serving in France.

Will Soon Be in the Training Camps of Europe

Prof. E. O. Sellers, a member of the faculty of the Moody Bible Institute, was one of the six men invited by the British National Council of the Y. M. C. A. to make a tour of the training camps in France and England. He spent several months in those two countries, doing evangelistic work and taking part in the activities of the Y. M. C. A. He was also in London during an air raid. He tells a great story of his experiences and also of the wonderful work being done among the soldiers and prisoners of war by the Y. M. C. A., which is an inspiration in itself. Being an able writer, Prof. Sellers knows how to tell what he has seen and describes in a vivid manner the conditions into which our chaps are going. **The story of his experiences will be told in a series of articles to appear exclusively in The Christian Workers Magazine, so that every one may quickly become familiar with the Christian work that is being done among the soldiers in Europe.**

There also appear in The Christian Workers Magazine illustrated articles by Mrs. Ralph C. Norton on **"Work Among the Belgian Soldiers,"** and Mrs Ada Wallace Unruh on **"The Soldiers and Moral Restraints."** Beginning in December will be another collection of touching articles from the pen of F. C. Hoggarth of Huddlesfield, England, entitled **"Short Studies on War Incidents.'**

Dr. James M. Gray writes regularly for The Christian Workers Magazine. He is known the world over as one of the leading writers on prophecy, and during the next year his articles will be of unusual importance to Christian people.

Dr. James M. Gray

God's Call to the Christian in Regard to the War

THE CHRISTIAN WORKERS MAGAZINE

The Leading Independent Religious Monthly

Dr. James M. Gray, Editor

In each issue appear articles by Dr. Gray on one or more subjects; also many strong helpful articles by leading religious writers. All these valuable contributions appear in addition to the regular departments.

In November, Now Ready:

"The Great Thanksgiving Psalm"
Rev. J. H. Jowett, D. D.

"The Overcoming Life"
Rev. A. B. Winchester

"Our Lord Jesus Christ in the Epistle to the Hebrews"—Rev. Harris H. Gregg, D.D.

"Work Among the Belgian Soldiers"
Mrs. Ralph C. Norton

"The Soldiers and Moral Restraints"
Mrs. Ada Wallace Unruh

Seven Interesting Departments

The Sunday School Department—Contains the exposition of the Sunday School lessons.

Young People's Society Topics—Rich in suggestions for meetings.

Practical and Perplexing Questions—Answered for readers that are troubled by difficult questions on the Bible.

For Sermon and Scrap Book—Full of good stories and illustrations.

Foreign Missions Department—News and letters from the field and timely articles on present conditions.

The Evangelistic Field—News of the work of evangelists.

Book Notices—Carefully edited to warn against false teaching.

What is the Christian's duty in the world war? Why are wars dreaded and hated as they are? Is God the author of war? Is war a consequence of sin? Is war a divine punishment for sin? What about the Christian who has conscientious scruples concerning war? These questions are clearly answered in a recent lecture entitled—

What The Bible Teaches About War

AND THE CHRISTIAN'S ATTITUDE IN THE PRESENT CRISIS

By Dr. James M. Gray, Editor of The Christian Workers Magazine

In response to many inquiries received by Dr. Gray regarding these questions, **this lecture is an attempt to answer these numerous inquiries as to the Christian's relation to war in the light of prophecy.** Thousands of people have anxiously waited for this lecture, which is now published in booklet form and will be sent free to all that send in the coupon; also we will send you free booklet containing the remarkable lecture

THE BATTLE OF ARMAGEDDON

By Dr. James M. Gray

This lecture answers the question regarding the great war and its relation to the battle of Armageddon mentioned in the Book of Revelation; also its relation to the end of the age or the second coming of Christ. Thousands of copies of this lecture have been distributed, and only a limited supply is left.

Write Today—Use the Coupon

Send $1.50 today; and we will enter your year's subscription to The Christian Workers Magazine beginning with the current issue, and we will mail you free both of Dr. Gray's lectures in booklet form. These lectures are very instructive. They set forth the facts regarding the relation of the world war to the Bible prophecy in a clear and conclusive manner. You will find The Christian Workers Magazine worth many times the subscription price. No Christian worker can afford to be without it. Send in your subscription today, sure.

GIVE THE UNIONS A CHANCE

BY JULIUS HENRY COHEN

Mr. Cohen's advice on the settlement of industrial disputes is based on his experience as counsel to the manufacturers in the garment industry under "The Peace Protocol"; special counsel to the Public Service Commission of New York City in the street car strike of 1916 and adviser to Chairman Oscar S. Straus in devising the "Straus Plan"; special counsel for the Chamber of Commerce, Merchants' Association and Special Attorney General for the State of New York in the "New York-New Jersey Rate Case," and now counsel for the "New York, New Jersey Port and Harbor Development Commission." Mr. Cohen is vice-chairman of the Citizens' Union of New York City, and author of "Law and Order in Industry."—THE EDITOR.

IT is said authoritatively by those who are in a position to know that, in the prosecution of the war, the country has suffered more from strikes and interruption of work than it has suffered from all the German submarine warfare combined. Without ships, we cannot win. Without ship-building, we cannot get the ships. Without ship-builders, there is no ship-building. Germany could well afford to finance all the strikes she can foment in this country.

What are we doing about it? The President has appointed a commission of able men and a well-trained secretary to take hold, as they arise, of labor troubles in governmental work. Obviously, there must be such commissions, and this particular one will, we may be sure, do its work well. But the method is still the familiar one of settling industrial difficulties as they arise. The theory, in brief, is this: *Pray to God that no trouble will arise; if it does, patch it up the best you can, and get back to work as soon as you can.* This, in the main, seems to be the extent of our program of preparedness for industrial war. Patriotic response to the President's call to the country's need alone saves us from what would be a real cataclysm if we were not at war.

For lack of a national policy, we drift toward a struggle—the worst, some of us believe, ever yet seen between two contending human forces in organized society—a war of the *classes* after this war of the *nations*. Is it not high time we took to heart the experiences of the last two decades, the lessons of the anthracite coal strike, the cloak and suit trade, the national railway peril of 1916, the 1916 New York street car strike, the 1914 Colorado experience, the present San Francisco street car strike—and actually prepared ourselves?

THERE are some things of immediate practical utility. For one, we can begin to understand the problem and popularize its meaning.

What are the elements of the problem? Well, for one thing, like international controversies, these matters have been heretofore disposed of, with rare exceptions, upon the basis of "material power of arms" rather than upon the basis of any "moral power of right." In brief, *the power to interrupt work* has been pitched in battle array against *the power to "starve 'em out."* Sometimes one wins; sometimes the other: in the end neither wins and both lose—lose the chance of making progress and waste, waste, waste, in loss of men's time and in capital, follows wantonly.

Now, so far as concerns public utilities, the United States Supreme Court made it clear when deciding the constitutionality of the Adamson Law, that Congress has the power in interstate regulation of public utilities to go into the field of wages, hours and working conditions.

But leaving the field of public utilities, where the legal power is authoritatively defined, and turning to the war situation, a fair field for industrial experimentation opens before us. Under the war power vested in the President, almost any industrial machinery of which he approves can be put into operation and tested out, as a means of ensuring prompt deliveries of munitions, of ships and clothing for the troops, at the same time providing for fair, human treatment of the workers on the job.

But before we decide upon machinery, let us ask ourselves what it is we seek to accomplish. Human controversy is not an abnormal symptom—it is normal. It is an agency of progress. In the absence of legal and orderly methods, men fight because they must. If there be no tribunal with power to decide between them, what else is there for us to do but fight it out? We did exactly this before we had parliaments or law courts. Today we go farther than the parliament or the law court. Finding that neither or both combined are adequate agencies for solving human controversies promptly and soundly, we establish commissions, boards, and like agencies. Always, however, we are careful to preserve these essentials, full opportunity for complaint, for public hearing, and somewhere we lodge power to decide, after the facts are ascertained. The greatest agencies in a democracy for provoking the truth from its hiding place are public criticism, cross-examination and debate. Without them we should be driven either to autocracy or anarchy. If we are successfully to maintain the principle of democracy, we must apply to industry the lessons we have learned in statecraft. Men must be given opportunity to struggle upward by debate, by conflict of reason, if we would save them from the dangers of violence.

The contract is one of the most effective pieces of legal machinery ever devised. It is at the base of all commerce. Preceding its making is haggling, bargaining, diplomacy, sometimes fair exchange, sometimes not, but always a binding obligation subject to revision by mutual consent. Upon it rests the partnership, the corporation—the financial transactions of the world. What have we done to safeguard the industrial contract as we safeguarded the commercial contract?

THE first stage in the evolution of a sound public policy in industrial matters is the *legalizing of collective agreements, in the establishment of carefully devised machinery for their enforcement, and in the creation of adequate and fair tribunals for the interpretation of such contracts when approved of.* Otherwise such contracts, like treaties, will be treated as "scraps of paper" whenever "stern necessity" requires hacking thru to Paris.

But how are such treaties to be sanctioned? The answer is, that in industries other than public utilities they may be sanctioned in the war contract. That is, the terms of the contract by which the Government purchases something that is to be produced can provide the conditions under which the work shall be done, so as to prevent interruption in the service to the Government. It can also provide for the machinery and the agencies for enforcement and interpretation of the contract. Crude attempts to do this are already under way in the clothing industry. Why not standardize such contracts? It can be done.

But how about industries wherein government does not yet play a part, where there are no governmental orders or purchases? As to such, we should vest the Federal Trade Commission (or, if we do not like that body, create a new commission, an "Industrial Relations Commission,") with power to receive and record industrial (collective) agreements and to approve of them when made, if satisfied that they are in the public interest. *The certificate of the commission to protect the employer and the workers from the condemnatory provisions of the Anti-Trust Law. Leave to enforce the agreement by strike or lockout to be obtainable from the commission upon presentation of a proper case, if it appear that judicial enforcement of the agreement is not otherwise practicable.*

HERE is provided opportunity for public record, investigation and safeguarding of each of the groups from the abuse of power by the other. As soon as either is willing to play "with the cards on the table," he may compel his adversary to do likewise. Secrecy as to the true facts is the ready provocative of violent war in industry as in the international realm.

But lest I be misunderstood, let me hasten to say that this plan involves the clear "recognition of the union" wherever the workers desire it, in the sense that that union which the men freely select becomes their attorney in fact, its legalized spokesman with a standing equally as good as the employers' association. But it involves also the searchlight of publicity ever turned upon the conduct of all spokesmen who seek the aid of the commission.

The American Federation of Labor has played a master-stroke in this war. By cooperation in the prosecution of the war itself and fighting the radical Socialists, it has taught business men to differentiate between the constructive Liberal and the *Bolsheviki* in the labor movement. Give it a chance to make good on the basis of fair and open dealing and you will soon substitute for the I. W. W. the methods of men with whom often you will disagree, but who at least know the importance of having public opinion upon their side. And having public opinion on one's side means playing the game square, not for today or tomorrow, but for the next day and the day after.

I should say the next step is to sit down with the leaders of the American Federation of Labor and work out a plan that will make it unnecessary hereafter for any representative body of workers to wage battle for the mere right to negotiate collectively. Coöperation and coördination of effort is the order of the day. Associated business men and associated workmen each playing their game in the open and on the level, must help, with the aid of government, to produce in each industry a system of internal and efficient industrial management. Thru such a system we shall stop the waste of strikes and harness the efficiency of the employer with the free effort of the workers.

BOOKS OF THE MONTH
THE WAR - - - - FICTION

A JOURNAL FROM OUR LEGATION IN BELGIUM: When the Germans Came
By HUGH GIBSON, First Secretary

This is Mr. Gibson's own personal diary, whose revelations Germany will never be able to explain away. "A book so informative, so rarely valuable, that when we commend it whole-heartedly to the perusal of all America it seems like an undue heaping up of adjectives to state in detail why."—(From the *New York Times.*) A gift book pre-eminent. *64 pages of illustrations. Size, 5¾x8¾. Net, $2.50.*

Published by DOUBLEDAY, PAGE & CO., Garden City, N. Y.

ALSACE-LORRAINE UNDER GERMAN RULE
By CHARLES DOWNER HAZEN

Author of "Europe Since 1815," etc., Professor of History, Columbia University.

Belgium has suffered under our own eyes, but the earlier fate of Alsace-Lorraine lies in a period of European history which is hazy to most Americans. This book provides a brief and reliable account of the matter. It gives the facts upon which opinion may safely rest. *(Just ready. Net, $1.25.)*

HENRY HOLT & CO., 49 W 44 St., New York

A SHORT HISTORY OF ENGLAND
By GILBERT K. CHESTERTON

Author of "Heretics," "Orthodoxy," "The Crimes of England," etc.

This new book of Chesterton's—his first in nearly two years—deals with principles rather than facts. He takes the view that the Reformation was a step in the wrong direction, and that Medieval England was a great deal nearer the ideal State than Modern England. "Chesterton is to be welcomed in this new rôle of political philosopher for the fresh interest he brings."—*The Bookman.*

Cloth, 12mo. Net, $1.50.

JOHN LANE COMPANY, New York

THE BRAZILIANS AND THEIR COUNTRY
By CLAYTON SEDGWICK COOPER

Author of "American Ideals," etc.

With South America daily becoming more important from a commercial point of view, this interpretation of the Brazilian by a well-known lecturer and traveler is of especial timeliness. The author contrasts the two mammoth countries of North and South America and shows how they can render invaluable service to each other. *Fully illustrated. Cloth, 8vo. Net, $3.50.*

FREDERICK A. STOKES COMPANY, New York

FRANCIS JOSEPH AND HIS COURT
From the Memoirs of Count Roger de Resseguier (Son of Francis Joseph's Court Chamberlain)
By HERBERT VIVIAN, M.A., *Author of "Servia, the Poor Man's Paradise," "The Servian Tragedy," etc.*

The career of Francis Joseph was marked by the successive misfortunes of a fate which dogs the house of Hapsburg. The history of the family is rife with violent tragedy, and it is stained with scandal. "A particularly authentic revelation of Austrian court life for the last half century and more. as it is unquestionably a singularly vivid and fascinating narration."—*New York Tribune.*

With sixteen illustrations. Cloth, 8vo. Net, $2.50.

JOHN LANE COMPANY, New York

A TRIP TO LOTUS LAND
By ARCHIE BELL

Author of "The Spell of the Holy Land," etc.

The purpose of this delightful book is to convey to the reader something of the joys of a six weeks' tour of Nippon. Without claiming to be a guide-book, the volume, nevertheless, gives all that is necessary to the prospective visitor to Japan in the way of advice as to where to go, what to see, how much to spend, etc. The 56 illustrations are unusually charming. *Boxed. Cloth. Net, $2.50.*

JOHN LANE COMPANY, New York

THE WORLD PERIL

America's Interest in the War: by Members of the Faculty of Princeton University

Introduction by President Hibben

"American Rights," by Henry van Dyke

Chapters in democracy, international law, American interests in the Far East and South America, world balance of power and world peace. *Cloth. 245 pages. Net, $1.00; by mail, $1.06.*

PRINCETON UNIVERSITY PRESS, Princeton, N. J.

BENEFITS FORGOT
By HONORÉ WILLSIE

Author of "Lydia of the Pines," etc.

Every man in the Service—and every mother at home—will enjoy this true story of Lincoln and Mother Love. It tells of a young army surgeon in the Civil War who repaid with neglect his mother's patient devotion. How his thoughtlessness was rebuked by the personal intervention of President Lincoln—and how he came to realize his ingratitude—make the rest of a deeply touching story. *Illustrated. Cloth, 12mo. Net, 75c.*

FREDERICK A. STOKES COMPANY, New York

THE HEART'S KINGDOM
By MARIA THOMPSON DAVIESS

The story of America's spiritual unrest, and of one woman's doubt and searching, and what a man from the trenches did for her life and that of a community. *At all bookstores. Illustrated. Net, $1.35.*

THE REILLY & BRITTON COMPANY

THE HEART OF O SONO SAN
By ELIZABETH COOPER

Author of "My Lady of the Chinese Courtyard," etc.

What "My Lady of the Chinese Courtyard" did for the women of China, this book does for the women of Japan. It is the story of the life of a true Japanese woman, of her self-sacrifice and submission to the stern precepts of old Japan. Never before has the inner life of ancient Nippon's courtyards been so wonderfully revealed. *31 illustrations in duotone. Cloth, 8vo. Net, $1.75.*

FREDERICK A. STOKES COMPANY, New York

HOW TO GET WHAT YOU WANT
By ORISON SWETT MARDEN

How the other fellow makes good—what you must do to win success—how to do it—inspiration and practical, common sense suggestions—all these and more make Dr. Marden's new book one of his best. Full of things worth quoting. *12mo. Cloth. Net, $1.25. Order of your booksellers,*

THOMAS Y. CROWELL COMPANY, Publishers, New York

INTERIOR DECORATION FOR MODERN NEEDS
By AGNES FOSTER WRIGHT

Helpful ideas and accurate information for those who cannot employ decorators, or who employ them and wish to work understandingly with them. Mrs. Wright, as editor of the Department of Interior Decoration in three magazines of different classes and as President of the League of Graduate Decorators, knows how to present her subject from every angle. *Fully illustrated. Cloth, 8vo. Net, $2.25.*

FREDERICK A. STOKES COMPANY, New York

THE MARVEL BOOK OF AMERICAN SHIPS
By MAJOR FRANK E. EVANS and COMMANDER ORTON P. JACKSON

Just what every boy wants to know about every kind of American ship—Man-O'-War's-Man, Superdreadnought, Submarine, Liner, Yacht, etc. With chapters on ship-building, great sea battles, deep-sea diving and countless other subjects connected with the sea. *12 illustrations in color and 150 in black and-white. Cloth, 4to. Net, $2.00.*

FREDERICK A. STOKES COMPANY, New York

NON-TECHNICAL CHATS ON IRON AND STEEL
By L. W. SPRING

Of especial value to those handling metals, this volume traces the fascinating history of the iron industry, from its crude beginnings through the various interesting stages of its evolution down to the present day. The author, chief chemist and metallurgist of the *Crane Company*, Chicago, treats every aspect of his subject in a simple, narrative style. *384 illustrations. Cloth, 8vo. Net, $1.50.*

FREDERICK A. STOKES COMPANY, New York

ARE YOU WORKING TOO HARD?

BY FRANK B. GILBRETH AND LILLIAN MOLLER GILBRETH

MONTHLY ARTICLE OF THE NATIONAL INSTITUTE OF EFFICIENCY

WITH a little consideration of the subject of eliminating unnecessary fatigue half the people in the United States could easily arrange their daily activities so as to increase the value of their working time at least ten cents per day apiece. The present preventable loss in the United States due to unnecessary fatigue is therefore more than $5,000,000 per day or more than $1,500,000,000 per year. This estimate is conservative. The money value of this loss is one of its least important elements, but it helps us to gain some idea of its immensity.

Such loss is not confined to the United States. Similar loss is taking place in every country, among every class of people, in every occupation and with no apparent decrease, in spite of the pressing need for conservation nowadays along all lines.

This loss is no new thing. The ravages of over-fatigue have always existed, and have always been recognized, to a greater or less extent, but it has required the very definite shock of the havoc due to recent results of over-fatigue in the munition industries abroad to bring the subject of the dangers of over-fatigue to the attention of the public.

When we speak of fatigue elimination we do not mean doing away with necessary fatigue that is the result of needed activity.

We mean always decreasing that fatigue that results from unnecessary or unproductive activity from work done in an inefficient manner.

ETIQUET VS. EFFICIENCY

NOW the causes of such unnecessary fatigue are very simple and very easy to observe. One great cause is a confusion of issues—that is, a lack of knowledge of what one is trying to accomplish by the work in hand. Such a confusion exists in the hospital, where discipline is confused with etiquet or with efficiency, and where unnecessary fatigue arises from restrictions on posture, clothing, etc., that are designed to create a certain mental attitude, but that too often result only in unnecessary fatigue.

The same thing is seen in the schoolroom, and was until recently to be seen also in certain practises of the army. In the marvelous development of efficiency in the army during the last few years, and in the realization of the importance of eliminating unnecessary fatigue, such strides have been made in doing away with confusion of issues and in separating discipline and necessary etiquet from efficiency that the army may now serve as an excellent example of fatigue elimination to other fields of activity.

THE WRONG PLACE

A second cause of unnecessary fatigue is improper assignment to work. That is to say the placing of individuals at work at which they are unfitted, and which, from its very nature, tires needlessly. This cause of unnecessary fatigue may not lie within the field of observation or direction of all of us, but it is one of the utmost importance to those directly concerned.

A third cause for unnecessary fatigue that does effect all of us is the distribution of work and rest periods. We all realize that no work can be done in the best fashion possible and in the greatest amount possible without intervals for rest, yet little or no scientific data on the subject of rest periods is available, and little *will* be available until more interest is taken in this subject.

A fourth cause for unnecessary fatigue is the condition of the workplace itself, the amount of noise, the nature of the lighting, the excellence of the ventilation and heating, the condition of the workbench in its relation to the workchair or stool, if such exists, the placing of the equipment and tools, etc. These terms are the terms of a shop, but they are equally applicable in all lines of activity, be it in the hospital, the office, the school, the household or in those most interesting of all workplaces today—the workplaces of the soldiers.

WHAT TO WEAR—AND WHY

A fifth cause of unnecessary fatigue is that of inappropriate clothing. This, again, is a subject that is rapidly gaining attention, and in this field again the army is furnishing excellent leadership. The proper colored clothing, the proper weight clothing, the properly fitting clothing—we all have hopes that this may become not only available, but popular, as the efficiency of the present day uniform gradually becomes realized.

A sixth cause for unnecessary fatigue is the lack of fatigue eliminating devices such as chairs, arm-rests, foot rests, couches, etc. These must be not only available but also attractive and actually profitable to the user.

A seventh cause of unnecessary fatigue is lack of interest both in fatigue and in the activity from its results. This is being strikingly illustrated today, during these strenuous times, when each of us has become able to realize the importance and intrinsic interest of all activity, and of the motions therein involved. It is for us to seize upon this interest in something that is fundamentally interesting at all times, and to cultivate it for the lasting good of the country.

Those who have made scientific studies of work know that no type of activity strenuously and persistently investigated or performed can remain uninteresting—it is for us to arouse the interest of all, not only in what each one has to do, but in every type of work.

THE REALLY IMPORTANT THING

THESE causes of unnecessary fatigue by no means cover the entire field, but they are sufficient basis for a preliminary investigation. The important thing is not that this investigation be prest to its limit at the beginning or that it cover all fields. The really important thing is that it be made by each and every member of the community.

Let each one of us feel that his own particular field is crying for investigation, for this is actually the case in every field of activity. Let the business man carry it to his plant or his office; the school teacher to her school room; the housewife to her household; the officer or soldier to his camp; the surgeon, doctor, nurse or superintendent to his hospital; the worker to his workplace; the child to his day's activity at home or during school hours.

There are four things that might with profit be done by each one of us toward fatigue elimination. The first is to read something on the subject, to make an investigation of the literature and to spend some time, if only a few minutes, studying some of the things that have been done, that are being done or that should be done. The second is to make some sort of a survey of one's own living conditions. The third is to talk "fatigue elimination" to some one—to get the thing going, to arouse a spirit of coöperation and to get a community feeling on the matter. The fourth, and perhaps the most important, is to do a practical bit of fatigue elimination. This, in the case of a child, may consist of relieving some adult of activity that he may profitably put aside—work already being done by the Boy Scouts and Campfire Girls.

It may consist of a rearrangement of one's own working equipment or of one's own program. It may be arranging for the supply of some fatigue eliminating device or some aid toward passing the rest period more profitably, such as the Home Reading Box, or the new movement for sending all used magazines thru the mails to the soldiers and sailors in service. Thru this *doing* not only will come an actual, positive increase in fatigue elimination, but also an enrollment of each and every doer as a permanent fatigue eliminator, for nothing arouses and holds anyone's interest like actually accomplishing for oneself the thing in hand.

GOING ON WITH IT

FOR more intensive work, we suggest following the example of our clients and several other large industrial organizations and hospitals who are planning to make special surveys of the conditions in their factories and hospitals that cause unnecessary fatigue. They will devote whole rooms to "anti-fatigue museums." They will furnish better chairs, tables and benches with adjustable arm rests. They will have an interchange of ideas and information on fatigue reducing apparatus and methods. They will study what Volmer, Schlesinger, Butterworth, Kent, Spooner, Amar, Imbert, Sanborn, Ayars, Sexton and other authorities are doing to disseminate such ideas.

It must be remembered that the work of fatigue elimination is not something aside from the other activities of today, it is a part of them. Doing fatigue elimination work does not mean taking your mind off other things—scattering your activities. It simply means doing whatever you are doing in the light of, and with the thought of, cutting out unnecessary fatigue. What is the real aim of the knitting, etc., done by the Red Cross workers? Is it not to prevent unnecessary fatigue? What is the thought back of the Y. M. C. A. activity? The profitable utilization of all rest periods!

What is the aim of food conservation? Using each atom of our supply to create energy that may be used constructively, and cutting out all possible kinds of waste. So much for war work.

As for other work such as teaching, such as housekeeping, such as philanthropic work, in which we are engaged, and after all these are only indirect war work, we have the same reasons to emphasize the necessity for lack of waste and for cutting out that fatigue which is the most cruel, the most far-reaching and the most costly of all wastes.

Providence, Rhode Island

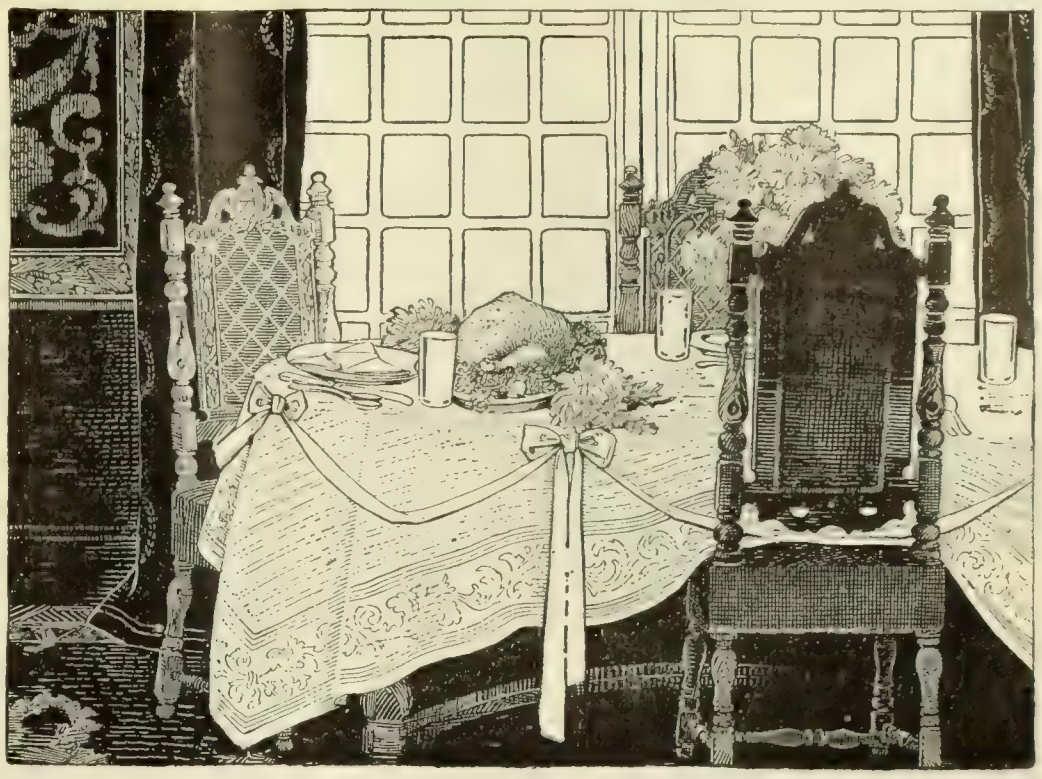
DEMOCRACY IN GERMANY

(*Continued from page 319*)

fast course toward the goal of popular improvement. And it is the monarchy which more effectively than any other power in German public life has attempted to assuage the evils of industrial competition and to pave the way for social peace.

It cannot be in the interest of Germany to throw aside a political factor which has done such service in the building up of an unusually high state of national civilization. It cannot be in the interest of the world to see this civilization disrupted by the passions and excesses of civil war, to which the attempt to destroy the monarchy would lead. It is in the interest both of Germany and the rest of the world to have this civilization raised to a still higher level thru a still closer interpenetration of its two dominant forces, the monarchical and the democratic.

If the war, as seems to be the case, has really bridged the chasm existing heretofore between the monarchy and the Socialist masses, and has bridged it permanently; if common suffering has swept away caste feeling and official arrogance; if the reorganization of the army on the basis of the Swiss militia system is going to be accomplished; if parliament is going to acquire a position coördinate with the crown, instead of being subordinated to it—then the nameless tragedy of these years will not have been in vain. Germany will then be a republic, not in name but in fact.



Cambridge, Massachusetts

Coeds in a Crisis

THE call of the college and the call of the country came into conflict at the University of Wyoming recently. The professor of agriculture posted on the bulletin board "A Patriotic Appeal," calling upon the boys to come out to the farm on Saturday afternoon and gather in the potato crop. But with the proverbial absentmindedness of professors he ignored the fact that a football game was scheduled for that same afternoon. Even Hoover and the Ag prof and the danger of running short of potatoes at the commons could not divert the eleven huskies from the gridiron. The war must be won—but so must the game.

The dilemma was solved in the Wyoming way, by women coming to the rescue. The required number of volunteers turned up at the farm at the appointed hour, but they wore middy blouses instead of overalls. But the crop was saved. According to the calculations of the mathematical department, each girl on an average picked up five times her weight of potatoes in four hours. And the girls got back to Laramie in time to meet the returning, and defeated team, with flags and tin whistles. Thanks to the coeds, the Wyoming students will not need potato cards this winter—but would the game have been won if the girls had been cheering from the grandstand instead of picking up potatoes?

Thanksgiving Table Linens *at* McCutcheon's

Beautiful Linen lends an added charm to any table, but never more than when family and friends gather to celebrate the year's great festival of Thanksgiving.

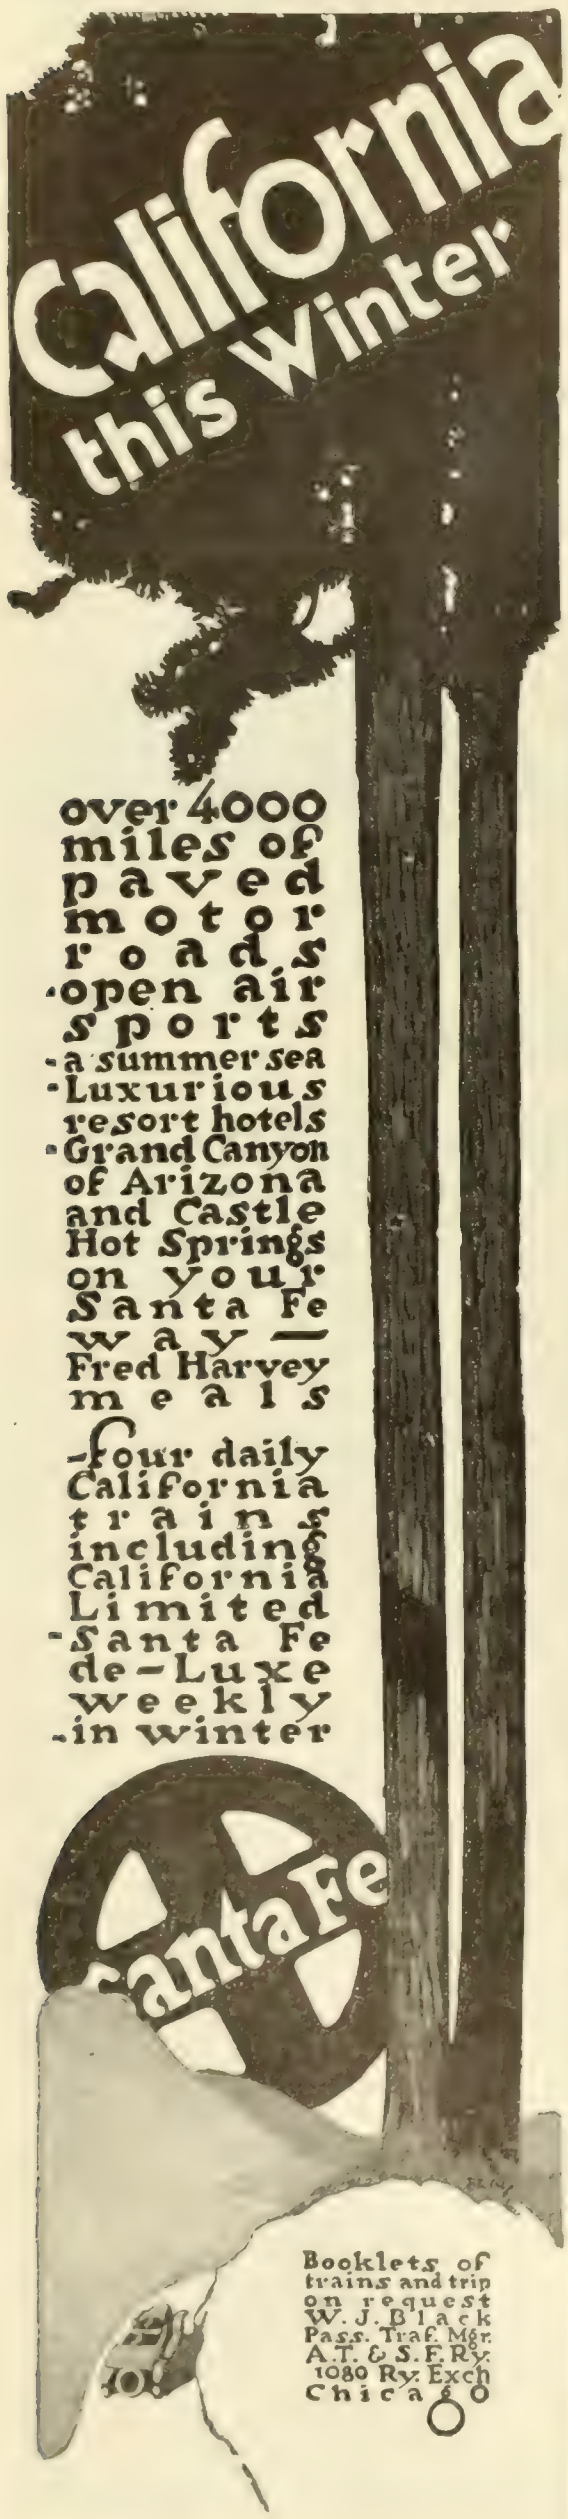
For sixty-two years McCutcheon Table Linens have been famous for their beauty and durability.

"Linen" at this store means, now as always, *pure* Linen, the most reliable in quality and exclusive in design.

Notwithstanding the fact that present-day conditions have greatly increased the difficulty of securing supplies, our stocks will be found equal to the most exacting requirements.

The prices at which they are offered represent real economies for the reason that our purchases were made many months ago when prices were much lower than at present.

This season's designs include many beautiful floral effects, classical Scrolls and Stripes, Indian and other Oriental patterns as well as a multitude of scalloped, hemstitched and embroidered styles from the finest looms of Ireland, Madeira and other world-famed centers of the linen industry.



An early selection is earnestly advised. Stocks of many desirable patterns are limited and cannot be replaced.

If you cannot make a personal visit to our store, write for catalogue. Orders by mail receive our prompt attention.

DO YOU USE MARGARINE?

BY DONALD M. STERN

THE Commissioner of Health of New York City has declared himself for oleomargarine. He is advocating legislative action at Albany and at Washington which will encourage rather than discourage the production and consumption of butter substitutes.

Says Commissioner Emerson:

> Oleomargarine is made exclusively in Federal inspected slaughter houses and is subjected to a pasteurizing process during manufacture. Butter is made from cream from untested cattle, probably twenty to thirty per cent tuberculous, and made in a multitude of farm and dairy premises and butter factories, unsupervised and known to be, in many instance, insanitary. . . . Weight for weight and quality for quality, oleomargarine is of equal value with butter, and is as wholesome, nutritious and palatable.

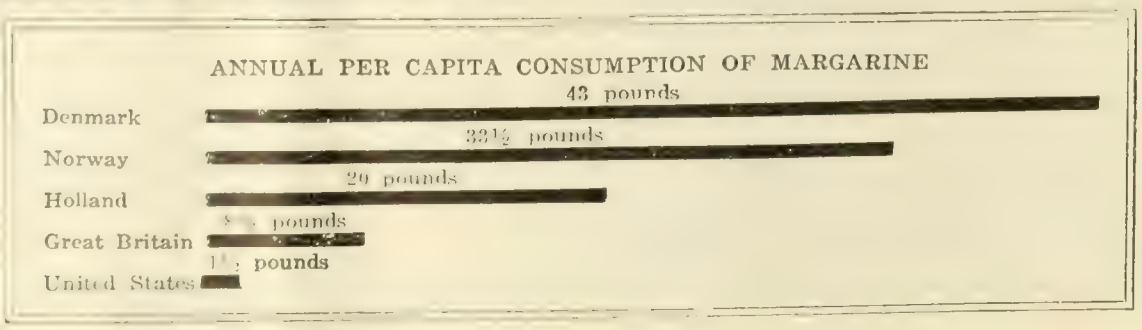
The fats of butter compose an important part of our diet. These fats are available for use not only in butter but in several varieties of butter substitutes which can be produced in large quantities at a cost considerably less than that of ordinary butter. The chief obstacle to greater production is an unnecessary tax and the chief obstacle to greater consumption is a primitive prejudice against margarine.

Butter substitutes have long been looked upon with disfavor by the American people. While we have held on with determination to the traditional use of creamery butter, the peoples of northern Europe have been consuming a constantly growing quantity of butter substitutes. Not that our butter is the best made—for, according to the editor of the *American Food Journal*, in the English market there is only one grade considered worse—the Siberian. But we have insisted on butter alone, because we have been foolish enough to believe that there is no "just as good." In provincial mood we have been satisfied to add the one and the two cents to the cost per pound and we have been happy in the delusion that we were getting our money's worth. Today, when the nation faces the most serious food situation in its history, we cannot afford to indulge these myths.

WHILE we have been spreading expensive creamery butter on our bread, the thrifty people of Denmark, Great Britain, Norway, Holland and other countries have seen the advantage of spreading margarine as well. And this is not a question of war economy for these nations. Years before the war the margarine industry was well established on an important and large scale in all of these countries.

Surely the annual per capita consumption of one and a half pounds in this country does not represent the exclusive possession of wisdom on our part. Our larders have been so full we could afford to be careless. The war has only hastened the general knowledge of the menace well understood by those who were watching the statistics—that we were rapidly approaching a point where food and especially food stuffs from animal sources would be produced in quantities much less than needed to supply the demands of the community. The war has helped us to understand our problem. Fats we need, and if they can be obtained thru the use of substitutes we cannot afford to maintain the place we have taken at the bottom of this list of margarine consumers.

Little serious effort is made to demonstrate that butter substitutes are not "just as good." It would be a difficult case to establish. Not only are these products "as good," but there is reason to suspect that they may be better. In artificial butters due to the Federal inspection of the slaughter houses the danger of tuberculosis is minimized, and in the butter substitutes made entirely from vegetable fats, this danger is eliminated.



Chemical examinations show that butter and artificial butter are equivalents. There is, however, a difference in taste. But the use of a butter culture, produced in a laboratory, will give margarine a taste that will defy the most expert of butter tasters.

OLEO oil, cottonseed oil and copra oil are the most important ingredients of margarine, tho many others may be used, such as sesame oil, peanut oil, soya bean oil, solza oil or palm kernel oil. Oleo oil is made by separating animal fats into oleo and stearin. We are large exporters of oleo oil to Europan countries where it is used in the manufacture of margarine. In 1914 we made 16,000,000 gallons, valued at $12,000,000. Exports are estimated at about $10,000,000. Cottonseed oil is chiefly produced in the United States. In 1914 the product was 229,000,000 gallons, of which 42,000,000 gallons were exported.

We control the great sources for the large scale production of margarines. Copra oil, the other great ingredient used in artificial butters, is an important Philippine product. In 1915 the Philippine Islands exported about 137,000 tons of copra oil. Only 20,000 tons came to the United States, while France took more than 60,000 tons. The present shipping conditions make it impossible for large exports to reach France and much has been diverted to the United States. Everything seems to favor great margarine manufacture.

Production here has been restricted and hampered by revenue taxes. The tax is ten cents on colored and one-quarter of a cent on uncolored margarine per pound. It is a fact, however, that even the best qualities of creamery butter are colored. The dye used most frequently is annatto, a harmless vegetable substance. When used in butter there is no taxation, but when used in margarine to produce the desired shade the food is subject to an almost prohibitive tax. It is manifestly unfair to tax one and not to tax the other. To make available new sources of food is a national demand at this time. We must maintain exports as well as support ourselves. We must remove the obstacles to wider consumption. Unfair legislation must be repealed and public intelligence awakened to the real value of butter substitutes.

New York City

THE GREAT ADVENTURE

(*Continued from page 321*)

have quit smoking and will run a mile every night to get into shape.

It is hard for a civilian (unless he has made a summer habit of camping trips) to appreciate all that good food means to a soldier. One officer's proudest boast is of an extemporized dinner party which he prepared for some important occasion:

All went pretty well until it came time to serve the brick ice cream, when my poor excited soldier forgot to remove the paraffin paper. I was able to smooth matters over a little by some remark about trying to be as sanitary as possible. It was during the preparations for this party that my cook paid me the greatest compliment I have received so far in my military career. Said he: "Lieutenant, before you came down here you were in the hotel business, weren't you?"

The same officer tells us of some of the strange, unmilitary types swept into the army by the draft law, for example:

The poor fanatic who came in with braids of hair half way down his back and a long silky beard and thought it was sinful to shave. When he received the order to have his hair cut to one-half inch like all the rest of us, he wept all night, and when morning and the time for his enforced tonsoring approached he threatened suicide.

Certainly a "conscientious objector" if there ever was one!

The American negro has a happy temperament and gets as much fun out of army life as anyone. Here is a word from a Georgia camp:

The negroes have captured the camp. Everybody is talking about them and all predict that they will make the best fighters. They are always happy. Even now, at 9 o'clock, I can hear them singing across the camp. A lieutenant of one of the companies was telling me this afternoon that at a rest period when they were all singing, one of them got down on his knees and started to pray just about the time to fall in. The lieutenant said the negro told him he wanted to talk to the Lord, and he told the negro to fall in, he had to walk for Uncle Sam. They are always saying and doing something funny.

One officer tells us that the laborer outside the army who builds the cantonments forms an unfavorable opinion of army life. He quotes verbatim from one of the workmen:

"Naw I never was in the army, and what's more I never will be. Look at that bunch of birds sloppin' thru the mud out there on the main road. What'll they have to do but haul a gun all over kingdom come for three months straight now, drill night and day—but that's not the worst; they have to salute these bloomin' hot-house officers and kow-tow to them, what don't know their own foot from a two by four, and when they're all thru here what do they git? They git their blank necks shot off by the Germans, that's what they git! And all for $30 a month! Not much, I'd rather do this." Which bit of philosophy makes them all so glad they are not soldiers that they grab their tools and exert themselves; inasmuch, also, as the foreman hoves in sight just then around the end of the officers' barracks.

The raw recruit is also apt to form too hasty and unfavorable an opinion of army life:

Two hundred and more rookies arrived tonight to join our regiment. Some of them look kind of doleful, and my heart goes out to them as they dubiously look out on this queer, unusual combination of rude, bare buildings, unlimited quantities of mud and hear the none too polite commands of the non-commissioned officers. I'll bet that more than one of them will be glad to get to bed tonight and dream of the home his heart aches to get [*Continued on page 341*

Five-Cent Breakfasts

Based on Quaker Oats

Make Quaker Oats the central dish at breakfast. It costs one-eighth as much as eggs per unit of nutrition.

One 12-cent package of Quaker Oats contains about as much nutrition as the average person needs in a day.

The average mixed diet costs four times as much as Quaker Oats per unit of nutrition. So each dollar spent for Quaker Oats saves you about $3.

Also use Quaker Oats in bread and muffins, in cookies and pancakes. It adds delightful flavor. And no other grain can match the oat as an energizing nutrient.

Quaker Oats

The Supreme Food Made Delicious

The world-wide fame of Quaker Oats is due to a matchless flavor. These flakes are made from queen grains only—just the big, rich, luscious oats. We get but ten pounds from a bushel.

So here is Nature's greatest grain food with the maximum of flavor. And it costs you no extra price.

Oat food is nowadays doubly important because of its economy. So it is doubly important to get Quaker Oats to make oat food inviting.

12c and 30c per package in United States and Canada, except in Far West and South where high freights may prohibit

(1-23)

HANDLING MEN

BY G. S. RADFORD

MONTHLY ARTICLE OF THE EFFICIENCY SOCIETY

EVERYONE will admit that good management calls for a knowledge of the technique of the business as well as for a thoro appreciation of system and its uses: but more important still is the ability to select the right men for the work, to shape the assignment of work to fit the men available, and to obtain their co-operation.

Early this year one of the largest shipbuilding concerns in the country sent out a committee to investigate employment, safety and welfare work in some twenty companies, employing from 600 to 42,000 men each. The committee report is interesting, particularly as it probably will not be published. It states, among other things, that the five reasons given by these companies for a reduction in their labor turnover are, in the order of their importance:

1. Wages.
2. Fair treatment.
3. Promotion.
4. Good working conditions.
5. Welfare work.

This arrangement of headings may be taken as a fair statement of general experience in handling men. The subject of wages calls for little discussion, as it has been written up too much, if anything. Being the basis of the economic relationship between employer and employee, it is naturally the first thing that men consider in choosing a place to work. I once asked a most successful manager (who had reduced his labor cost 40 per cent in five years) to what he principally attributed his success in handling men. He replied: "I endeavor to pay them for what they do. That is all there is to it, isn't it?"

Fair treatment is naturally the next thing to be considered after wages, for it implies so many things of vital interest to the individual, and so deeply affects his peace of mind. The report just referred to contains a statement of special interest in this connection. A company employing 10,000 men informed the committee that the establishment of a court of appeal for their workmen cut down discharges by a most unexpected amount. This bears out the experience of many concerns, that one of the best aids to contentment is the knowledge that the company means to see that its employees shall be treated honestly.

Nearly all men will answer to fair treatment.

I recall a case where even a misunderstanding was turned to secure coöperation by the way in which the men were handled. The case occurred in a plant, and in a shop in that plant, where labor had been restless for some time. The plant was one of a chain of similar works. Several years before, the central office sent out a new set of standard forms, time cards and the like, with orders to put them into use. In the shop in question the time was ill chosen and the next morning about 500 men declined to go to work until they knew more about the new "card system," as they called it. The superintendent was sent for. He came down with a big dog at his heels. Just as he stepped up to address the men, the dog got in his way. He said, "Down, Sir! I'm master here." Then he talked for some minutes, and the men struck. That experience, followed by various changes in system work, was the preparation, if it can be called that, which preceded a reorganization some years later. You will readily understand that the sample of bad management just related, made the managing of the plant, and of that shop in particular, a ticklish proposition. Within a month after the new management took hold, an accident happened. A clerk was told to make up a new directory of the men. He chose the easiest way, and without the management's knowledge, sent the foremen a set of forms for the men to fill out, and there were a good many personal questions on those forms. The next morning the shop superintendent of the plant received a letter from the men, thru the foreman, that gave him something to think about all day. He took advantage of the opportunity to gain the goodwill and confidence of the men by sending for their committee and telling them that he was delighted, for once in his life, to find a shop where the men took an interest in the system work. He explained how forms are needed in a big plant to control the work, and how the men could help him by making the system work a success; also that he'd be glad to tell them at any time what he was trying to do in the way of such work and why. Then, when they were quieted down, he told them how the particular form that had caused the disturbance was a scheme gotten up by a clerk to save himself trouble, and they could help out the clerk, or not, as they chose. The men held a meeting that night, and sent the superintendent a letter thanking him for his courtesy, and promising their co-operation. The men who struck four years before under somewhat similar circumstances were willing to meet him more than half way. They answered to fair treatment; and barring accidents, they always will.

PROMOTION for merit is really a part of fair treatment and is the part of common sense in management. The best men will go where they are given a chance to advance themselves.

There is a certain technical bureau in the Navy Department that can always have the pick of the civil service employees. Men try to get the vacancies there. Why? Because they know that if they prove their worth they will be promoted, or else have a chance to take an advanced position in some outside concern.

Promotion from the company's force to fill vacancies, rather than bringing in outsiders, is an accepted policy in more and more concerns. Such a policy requires that men be in training for jobs higher up. Sound organization calls for understudies for all positions of responsibility anyway. Further, good management has in it an element of *teaching* such men to fit them for their work. The spirit of helping men to help themselves is one that should be cultivated thruout the plant. Encourage men to be ambitious. They are an asset.

Another good and growing practise that we may well consider at this point, is that of giving the man who has failed on one job a chance to make good in some other part of the plant. It is a fact that nearly every man is good for some particular kind of work. Of course you must except the habitual drunkard, the dishonest, the trifler and the trouble maker; but even among these there is sometimes a chance if you can *interest* the man, and develop the pride of personal achievement and the pleasure and interest of good craftmanship.

It is only good business sense for the management to provide a clean and comfortable place to work. So much depends on systematic and orderly arrangement of the working space that there is no excuse for not keeping a shop unencumbered. One of the first things, is not *the first* thing, to do with a run down shop, is to clean it out. Tell the foreman to clear out everything not used in the business. When he says he has done so, go thru the shop yourself and have all the unnecessary furniture, signs, locker doors, drawers and shelves removed. It is a curious fact that just as sure as a stow hole is available it will be filled, usually with junk. A plant consisting of several detached shops cleared $5000 on such a clean-up, over and above the cost of putting the place in order. The principal gain, however, is thru the influence on the personnel.

WE hear a good deal nowadays about the importance of the arrangement of machinery so that there will be a direct flow of material thru the shops. It is equally important that the machines and working places be arranged with an eye to the convenience and comfort of the men. There is no general rule for this, and there is room for considerable thought in working out each case. A sensitive drill whose table is fed up by a foot treadle, calls for a stool for the operator. A man who is using a file should stand up. He will do so naturally if he is paid on piece work, but will sit down just as naturally if paid by the day.

Environment plays a very large part in influencing the spirit and attitude of men, as all of us have found out while trying to work in the old-fashioned, dark, stuffy or cold office. A good *general* lighting system is a splendid cure for a "blue" Monday morning. Even if it is light enough to work without artificial light on a chilly, rainy day, switch on the light and watch every one cheer up and "get busier."

When it comes to the question of beautifying factory grounds, we begin to enter the domain of welfare work, which bears a definite relation to the matter of pleasant working conditions. There is a shipyard here in the East employing several thousand men, and strikes have not been infrequent. A short time ago it changed hands. The new management began by cleaning up the yard, and just inside the gates where the men entered, they replaced a mud hole with a beautiful bed of flowers. Now there are all sorts of men employed in a shipbuilding plant, on account of the great variety of trades. Many of them are used to specially severe work with not very high wages. It takes hard men to work out of doors on steel in the winter. There is an element of pathos in the fact that the day this flower bed was put in, the men congregated about it on their way out, and *cheered*.

Among the many things that must be considered in connection with handling men, is one that is unusually difficult to discuss—probably because it involves much that is personal and intimate. I refer to the personal relations of the executive with his workers.

Every executive can have the friendship and respect of his men, if he studies them and their interests with real and genuine sincerity. When you have a new scheme to put into effect, consider it from the workman's standpoint. He may be part of a machine in one sense, but he nevertheless is a man, with all the perfectly natural limitations and variable feelings of a human being. I venture to say that there is nothing in the entire field of management that will yield so large a return, both in actual accomplishment and in personal satisfaction, as the study of the men themselves.

THE GREAT ADVENTURE

(*Continued from page 339*)

back to. What an army of heart throbs and deep desires that can't be fulfilled for a long time, are assembled on an occasion like this, along with the physical specimens that the cold militarist sees, and sees only! But if the newcomer will only keep a stiff upper lip, he comes gradually to find it endurable, at times even enjoyable; and the great lesson can come to any one that reaches out a little for it—that there's something within a man that no officer can command tho his body be forced to do a hundred irksome things each day. I think the army is a great place to discover the independence and absolute security of a man's soul.

The men in service say little about the cause for which they have placed their lives in peril; probably they have made up their minds about that before they enlisted and thenceforth taken it for granted. But an Italian-American, who could neither read nor write when he came to this country at the age of seventeen but who speedily learned both arts and Americanism as well at one of our public schools, probably speaks for many of his silent comrades. He attended a moving picture show, "Uncle Tom's Cabin" possibly, and because deeply thoughtful. He writes to his some time school teacher as follows:

It was very bad to see this man beat his poor slave like a dog. Then came in my mind that if we don't keep busy the Germans will do the same to us; but believe me she is fooling herself, for when we get over there we are going to knock them to pieces and show the Kaiser that he is not going to control all the world.

We must not forget the naval arm of the service. Let a sailor tell us of the cake of soap which bulks so largely in shipboard routine:

I have been scrubbing clothes this evening. We don't wash them, we scrub them—get down on our knees with a cake of Ivory soap, a stiff bristled brush and go to it. That's one place where we fellows miss "Mother" and miss her badly. There are a number of fellows aboard who have been used to having everything done for them, and it is hard for them to get used to doing the family washing. And believe me when I say that there is lots of opportunity for scrubbing. We wear white uniforms on the ship and in the yard and you can understand how hard it is to keep those clean. Last week one day we were expecting an inspection by the Committee on Naval Affairs of the House who were here on the "Mayflower" and I didn't have a thing to do for half a day but keep my uniform clean, and I couldn't do it.

A final quotation will serve to show the spirit in which the new armies are facing their mighty task:

It is just the question of seeing the only right course and doing it as quietly and efficiently as possible. I am frank to say—and I speak for the others, too—that we are sorry it became necessary for us to go. I am equally frank to say that it would have been disastrous beyond measure for America to stay out longer. . . .

Just remember that your position is the same as millions of other parents who go about daily in the ordinary way, silently playing their greater part to win this last war that will end war. My parents, because of their superior mentality, and superior everything else, will bear it even better than the average. I have the utmost confidence that when the time for real concern comes (a whole year away) they will rise to the occasion as I will try and rise to the occasion and be the kind of son they would want me to be.

Such being the American army, what need we fear? One thing, and one thing only, that we, the civilians, may prove unworthy of the high-hearted men who represent us on the battle line.

Protectograph

Check Writer

Makes Your Check "O. K."

The 1918 Model Protectograph protects the amount *as it writes*—a whole word to each stroke of the handle. Leaves no room for argument between yourself and the bank as to whether you signed a check for, say, $500, or only $5.

Protectograph System (Todd Patents) "shreds" each character into the fibre of the check, draft, acceptance, or whatever it may be, in words (not figures), in Dollars and Cents, exact to the penny, in two vivid colors of insoluble ink for maximum protection and legibility.

This is the original Todd principle that has never failed—adopted and endorsed by over 600,000 users, including Business Houses large and small, Banks, Government Treasuries the world over.

1918 Model illustrated above, with the new improvements for speed and greater efficiency, $40 to $75. Other Protectographs in all sizes and prices, a model for every business and individual requirement.

PROTOD Chemical-Fibre Checks and Drafts, Forgery proof (Registered like U. S. bank notes), printed to your specifications. Samples and prices on request.

If you knew how many bank accounts are overdrawn daily through checks being raised, forged and "counterfeited" and cashed for large sums, you'd appreciate the importance to you of the Todd system. **Use this coupon**

Finger Training for Stenographers

Doubles and Trebles Salaries

For speed in striking the keys

Now, for the first time, has an idea been discovered which puts speed — great speed and accuracy—within the reach of every typewriter user. Thousands of business college graduates and so-called "touch" writers who formerly never exceeded 30 to 40 words a minute are writing 80 to 100 words with less effort and with infinitely greater accuracy than ever before. And their salaries have jumped from a meager $8 to $15 per week to $30, $40, $50, and even more.

European music teachers, when training their pupils for the piano, invariably give special gymnastic finger exercises. The best results cannot be obtained unless the student develops the proper muscles.

This training is even more essential to expert typewriting. The reason that so few people can write no more than 30 to 40 words a minute is because their fingers are not flexible or nimble enough. This new easy method overcomes this at once—develops finger strength and flexibility by exercises *away from the machine*—trains the fingers *beforehand* for their work on the machine—and the results in speed, accuracy and increased earnings, border on the miraculous.

Making each finger independent

The New Way in Typewriting doubles and trebles stenographers' salaries by enabling them to double and treble their output. For example, here are actual figures showing how the New Way increases salaries *the very first year*. J. H. Krull, *increase* first year, $70 a month; O. B. Hunter, $65 a month; S. Shainin, $150 a month; A. H. Gardiner, $75 a month; Richard Clarke, $75 a month; R. L. Rankin, $35 a month; Carlos C. Guerre, $166 a month; J. P. Jones, $75 a month; H. K. Temme, $45 a month. These are but a few of the hundreds of reports sent in by New Way operators, proving the money-value of *great speed and accuracy* in typewriting.

In a few days you notice the difference

No matter how low your present speed, no matter how labored your efforts, no matter how weak or clumsy your fingers now seem to be, no matter how little or how much experience you have had, no matter what other courses you have taken, this new method will positively bring you the desired results, as thousands have already proven. The exercises, figuratively speaking, put wings on stenographers' fingers, and the new kind of machine practice makes the keyboard as simple and as familiar as a pencil.

If you are interested in this New Way Typewriting, write to The Tulloss School, 3831 College Hill, Springfield, Ohio, for their free catalog describing the method in detail. State also whether you are interested in New Way Shorthand.—*Adv.*

THE NEW BOOKS

Women in the War

A BOOK of special timely interest to women is *Women War Workers*, edited by Gilbert Stone. Herein has been gathered the personal experiences of some half dozen English women in as many new vocations brought to them by the war. We read how women have taken up mail carrying, banking, street car conducting, and driving delivery wagons; of both the mental and physical requirements for success in such channels of usefulness. It is noteworthy that self control and a sense of humor help along mightily either on the rear platform of a street car or in collecting the weekly butcher's bill. If the Comforteer as a distinct war worker, apart from the nurse, is still new to us, those who may occupy the position of entertainer of wounded or sick soldiers will find this chapter replete with common sense suggestions. Employers of women, also, will gather from these representative worker writers valuable hints for the preservation of their employees' health and strength.

Of how the French aristocracy have fared during the war, Mary King Waddington gives us an entertaining account in *My War Diary*. If the dukes, counts, and what not, who flit thru her pages, perforce came down to *pain de ménage* at tea time, they appear to have accepted this and similar deprivations gracefully enough, as they, also, responded to the call to arms in a spirit of unalloyed patriotism. But most of these people remain unknown outside the rarified atmosphere of high French society. The big Frenchmen of the war, the great statesmen and generals, do not appear to have been on Madame Waddington's calling list. These today are of first interest. One wishes the author could have told us something about women of the position of Madame Poincairé or Madame Joffre. Her book, however, has its valuable side in an alert observation of current events.

Towards the Goal, by Mrs. Humphry Ward, is the publication of letters written by the author to Theodore Roosevelt, prefaced by a glowing tribute from the recipient. In these letters Mrs. Ward describes, with all the masterly vigor of her pen, the rise of the British peoples to fight for the cause of universal democracy. From showing how, at first, the bewildering onslaught of the German hosts found Great Britain totally unprepared, once the danger was brought home few indeed remained unwilling to meet whatever sacrifice was demanded. To this sacrifice heroically performed she points as she tours the battlefields of France, to remain forever as a binding tie between France and Great Britain. She adds her heartfelt gratitude on that day when the United States cast in her might on the side of human liberty. As a work of contemporary history, Mrs. Ward's book must win a lasting reputation.

If Maud Mortimer in *A Green Tent in Flanders* had merely described her experiences with the Red Cross, and if, in addition to this, she proved herself an artist of power in light and shade, still her book might pass these times with many others without compelling distinguishing notice. But Maud Mortimer, with her delightful humor over the problem of her California gold pieces in the Pisa-Paris train, comes presently to look upon the face of the eternal problem, stripped of all pretense, in all its helplessness, with not a shred of human vanity to mask its sordid reality. She does not recoil from it, nor does she affect to pass it by lightly; but in that dismal, battle scarred swamp of a place puts to herself, and the reader, the supreme question which must be encountered by each one of us some day. And she answers it (on page 119) in words which approach the divine in their symbolical significance. All unconsciously, it would seem, she has struck an immortal chord vibrating thru the silence of mortality, and by it lifts her book out from its haunting shadows into that white light by which many may find faith restored and grief comforted.

Women War Workers, ed. by Gilbert Stone. T. Y. Crowell Company. $1.65. *My War Diary*, by Mary King Waddington. Scribner. $1.50. *Towards the Goal*, by Mrs. Humphry Ward. Scribners. $1.25. *A Green Tent in Flanders*, by Maud Mortimer. Doubleday, Page & Co. $1.25.

The War Path

MILITARY morale is clearly placed before the embryo soldier in *How to Live at the Front*, by Lieutenant Hector MacQuarrie. If a soldier is disposed to question whether the strict rule of cleanliness and neatness is, at all times, necessary to his fighting ability, the author presents conclusive reasons in proving such are manifestations of the good soldier's healthy mentality, and consequently his usefulness. If an exception now and then demonstrates brilliant heroism, in him dependable qualities are still lacking. The author frankly proclaims the German soldier perfect in his discipline. *On the Road from Mons*, by Captain A. Clifton-Shelton, is an absorbing account of the author's experiences in that memorable retreat. Captain Shelton throws a sidelight on the still clouded operations at Le Cateau which should be of value to the future historian.

A comprehensive and illuminating review of events in Serbia is presented by Mrs. St. Clair Stobart in *The Flaming Sword*. Mrs. Stobart, as a Red Cross worker in Serbia, bears the distinction of being the first woman to command a field hospital, with the rank of major in the war. That she proved a capable officer in this capacity is shown by leading her unit safely thru the terrible Serbian retreat. Therefore her graphic narrative and observations come to us with the weight of the best authority. At the moment, it is noteworthy she expresses the opinion that women can be successfully employed as directors of both base and field hospitals, on the lines of communication and other military positions, thus releasing men for actual fighting.

Britain in Arms, by Jules Destrée, travels now a fairly well beaten reading path, tho none the less ably brought to our notice. Two aviation books to hand are *The Way of the Air*, by Edgar C. Middleton, and *How to Fly*, by A. Frederick Collins. While the former is more likely to interest the lay reader owing to the author's thrilling personal experiences as an air pilot, the latter, written on the plan of a text book, possibly contains greater student value. But so rapid is now the

development of this science, so numerous the new inventions pertaining to it, that i would be hazardous to pronounce any book of this kind entirely up-to-date.

From a number of technical and other books specially useful to soldiers, we select the following: *Quartermaster and Ordnance Supply*, a guide in the form of questions relative to this branch of the service, with references to sources of return information. Helpful to those about to undergo examination. *Machine Gun Practise and Tactics*, by Lieut. K. B. McKellar, a pocket volume of well-tabulated instruction for officers and men of this arm. *Gunner's Handbook for Field Artillery*, by Captains John B. Hammond and Dawson Olmstead, U. S. A., in concise form, meets all the requirements for gunner rating, and enhanced by excellent diagrams. *Army and Navy Information*, by Major D. W. C. Falls, is of a general character relating to organization of forces, uniforms, insignia, pay, etc., together with similar matter concerning foreign armies. As a handy reference, this book will be found serviceable to civilians as well as soldiers, and all those who write about the war.

A capital little linguistic aid for our soldiers in France is to be found within the covers of *War French*, by Col. De Witt Willcox. By this it will be found easy to explain how one wants his hair trimmed, a new pair of pants cut, and the numerous likely needs of a soldier.

How to Live at the Front, by Hector MacQuarrie. Lippincott. $1.25. *On the Road from Mons*, by A. Clifton-Sheldon. Dutton & Co. $1.25. *The Flaming Sword*, by Mrs. St. Clair Stobart. Doran. $1.75. *Britain in Arms*, by Jules Destrée. John Lane Company. $1.50. *The Way of the Air*, by E. C. Middleton. F. A. Stokes Company. $1. *How to Fly*, by A. F. Collins. Appleton. $1.10. *Quartermaster and Ordnance Supply*. The University of Chicago Press. $1.50. *Machine Gun Practise and Tactics*, by K. B. McKellar. Macmillan. 90 cents. *Gunner's Handbook for Field Artillery*, by John B. Hammond and Dawson Olmstead. Dutton & Co. 60 cents. *Army and Navy Information*, by D. W. C. Falls. Dutton & Co. $1. *War French*, by De Witt Willcox. Macmillan. 75 cents.

Ways and Means

PARTICULARLY in these times when food conservation is of such vital importance do we turn to those menus which will tempt the appetite while furnishing a balanced ration at minimum expense.

To some a prejudice against Chinese foods must be overcome before their delicacy and economy can be enjoyed. However, a trial will prove their value to the thrifty American household.

The popularity of the chop suey restaurants in New York City has grown tremendously during the past two years as the public is beginning to recognize the merits of their food as well as its cheapness. For 30 cents a person can get a meal consisting of soup, a generous serving of chop suey (meat and secondary vegetables), rice and an unlimited supply of tea with rice cakes.

In *The Chinese Cook Book*, by Shiu Wong Chan, are recipes for over one hundred dishes. The directions are so explicit that a woman with little experience can follow them and by so doing prepare in a novel way satisfying combinations of meat, vegetables, rice and eggs.

Rice has, to some of us, been an unwelcome substitute for the tuber. But the least friendly will succumb if fried rice is served. This concoction includes all of the essential food properties and is as wholesome as palatable.

FRIED RICE

Four bowls cooked rice.
Three-quarter pound chicken or pork cut into cubes.
Two cups secondary vegetables.

LET THE COMMERCIAL DUPLICATOR EARN MONEY FOR YOU

THE Commercial DUPLICATOR SIMPLIFIES DETAILS

The Firm Needs It Because—
The COMMERCIAL DUPLICATOR is a great factor in rendering better service. It speeds up delivery from 35% to 40%. It reduces labor and expense by developing economical management.

The Office Manager Needs It Because—
It does away with rewriting, eliminates all copying errors, cuts down supply expense and reduces labor to a minimum.

The Sales Manager Needs It Because—
Every time a price is changed, a delivery date is revised or a good idea develops it is possible to transmit it at once to the sales force.

The Auditor Needs It Because—
With it financial statements, operating reports, and other accounting forms can be copied in perfect alignment with unequaled economy and extreme simplicity.

The Order Clerk Needs It Because—
It saves the time lost in rewriting of salesmen's orders, and reduces the dangers of errors to a minimum—because only one original, or master copy, is required. All possibility of costly mistakes, due to errors in rewriting, is done away with.

And yet these are but a few of the many uses to which the COMMERCIAL DUPLICATOR can be profitably put. It is—in all truth—the machine of a thousand uses. That is why it is in general use by business firms of every size and description, in every section of the country. Without one cent of obligation on your part, ask us to show you what the COMMERCIAL can and will do for YOU. Use the coupon NOW.

Duplicator Manufacturing Co.

HOME STUDY

In addition to resident work, offers also instruction by correspondence.

For detailed information address

26th Year U. of C. (Div. M) Chicago, Ill.

Five eggs.
One cup primary soup.

(a) Put the rice in a hot, oiled pan and cook until it changes color, turning frequently with a cooking shovel.

(b) Fry the meat and secondary vegetables for three minutes in a hot, oiled pan. Add cold water and cook for fifteen minutes. Pour off the water and add the rice.

(c) Beat the eggs well and add to the rice.

(d) Add the primary coup and continue to cook until the egg appears to be done.

To the primary soup is due the quality of flavor peculiar to Chinese foods and it is generally used as a substitute for water.

This soup is always made of equal weights of chicken and lean pork, say one-half pound of each for each pint of water. It is advisable to use not less than six pints of water and meat in proportion.

(a) Chop the meat into small pieces.

(b) Cook slowly for two and one-half hours, or until half of the liquid has evaporated.

(c) Strain thru a thick cloth until the liquid is as clear as water. Skim off any remaining oil.

Let the soup cool. Keep in the refrigerator to be used as needed.

To those women who postponed canning vegetables and fruits for fear of failure, a practical handbook for next season will be found in *Successful Canning and Preserving*, by Ola Powell. This comprehensive book, a member of the Lippincott's Home Manuals series, is adaptable for schools, clubs and home use.

In *American Indian Corn* the author, Charles J. Murphy, formerly Commissioner for the State of Nebraska, brings to our attention the value and importance of Indian corn (maize) as a supplementary food, particularly at this time when America must supply the allied world with grain. A full series, 150 recipes in all, for cakes, breads, puddings and cereals made of corn is given, some light for the invalid and others of a substance suited to meet the demands of hard labor.

"Waste not, want not," is the keynote to *Practical Food Economy*, by Alice Gitchell Kirk. In a readable way the author shows how to eliminate waste by intelligent buying, preparation and cooking of foods. To the average housewife a definition of and a technical treatise on the familiar word *calorie, is* not particularly illuminating. In this book Mrs. Kirk has incorporated a generous list of examples representing approximately 100 calories and Professor Atwater's nutrition table which shows the waste and fuel matter (measured in calories) of every food variety. By following the suggestions and consulting the food values this book offers, it is possible for the housekeeper to do her bit in food saving and at the same time to serve her family according to its various nutritive needs.

Frederic C. Howe, Commissioner of Immigration, Port of New York, in a recent book, *The High Cost of Living*, makes a critical examination into that grave problem. The author, an accepted authority on economic questions, asserts in the preface that the high cost of living is not a war product but that the war has aggravated conditions, has given opportunities for speculation and extortion and that the increase in cost of living will continue after the war unless radical steps are taken to prevent it. Mr. Howe builds his arguments on solid facts and his solutions are the logical result of thoro study into the economic and social causes of the situation. The production of wheat and meat, the mainstay of the nation's food supply, must be increased. It is decreasing because of actual loss to the farmer and cattleman, the producers. This condition can be remedied by eliminating the privately owned stockyards, packing houses, terminals, the wheat gamblers, stock exchanges and railway corporations. In their place a system of state control functioning for the whole nation must be instituted. In the chapter The Transportation Embargo, Mr. Howe writes:

Thousands of different railroad officials, each one of whom is interesting in *carrying the freight that brings the highest return and that insures the longest haul over his particular road are determining for us what commodities shall be carried and what not. There is little thought of the needs of the whole nation or concern for*

the industrial and agricultural life of the whole people. Railroading is run for the railroads. It must be run for national service—possibly for national existence.

The student and serious reader will find this book a mine of valuable information representing progressive legislation. (Scribner's, $1.50.)

The Chinese Cook Book, by Shiu Wong Chan. Stokes. $1.50. *Successful Canning and Preserving*, by Ola Powell. J. B. Lippincott, Philadelphia. $2. *American Indian Corn*, by Charles J. Murphy. Putnam, New York. 75 cents. *Practical Food Economy*, by Alice Gitchell Kirk. Little, Brown Company. $1.25. *The High Cost of Living*, by Frederic C. Howe. Scribners. $1.50.

Information Wanted?

Bookkeeping and Accounting, by Dr. Joseph J. Klein, is a very full textbook of business technic with an abundance of drill exercizes on each topic. (Appleton, $2.50.)

In attractive form, *New York of Today*, by Henry Collins Brown, editor of *Valentine's Manual*, is ready for those who want a readable, beautifully illustrated description of contemporary New York. (The Old Colony Press, New York.)

A complete instructor and guide to success with flowers and plants in the home is found in handy form in *Milady's House Plants*, by F. E. Palmer. This valuable little book is compactly written and well illustrated. (A. T. Delamare Company, Inc., New York.)

It is a pleasure to know that the war has not interrupted the publishing of *The Oxford English Dictionary*, which, as a lexicographical product, stands preëminent. An additional section (ver to vis) just issued of volume X includes 3002 words. (Clarendon Press, Oxford, $1.75.)

In another field the Japanese are cutting out the Germans. The series of *Official Guides to Eastern Asia* are as good as Baedeker or better. Vol. V, just out, covers the Philippines and the little known regions of the Dutch, French and British possessions in the East Indies. (Putnam's.)

Thruout the country there are many would-be authors who are at a loss to know of where and how they may dispose of their literary product. To such *Where to Sell Manuscripts*, compiled by W. L. Gordon, is of great service as it contains the names and addresses of over one hundred publishers in the market, specifying the *kind* of material each publisher wants. (The Standard Publishing Company, Cincinnati, $1.)

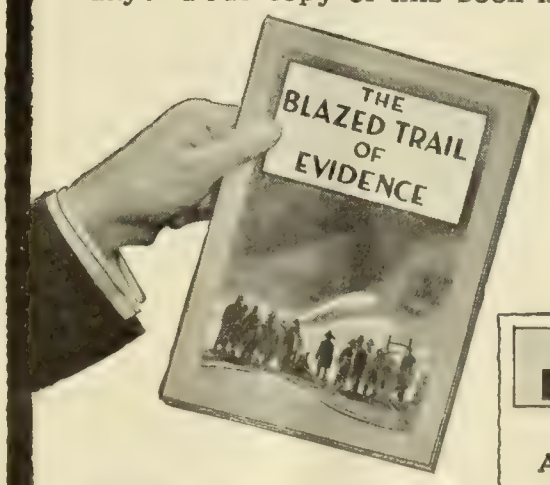
What is the classification of deposits?
What is a bank acceptance?
How is it carried in the accounts?
What is the big economy that will be effected by the adoption of the federal reserve clearing system?
What is the effect upon the bank statement if the stockholders of the bank deposit their dividend checks?
What is meant by the batch system?

These questions are clearly and concisely answered in *Practical Banking*, by O. Howard Wolfe. The author speaks from actual experience and with authority, on matters of vital importance to those about to enter the banking business or already engaged in it. (La Salle Extension University, Chicago.)

In *Pictorial Photography: Its Principles and Practise*, Paul L. Anderson has produced a helpful manual, broad in scope but not too technical for the comprehension of the amateur, particularly adapted to the needs of those workers who, without wishing to undertake a study of the abstruse scientific phases of photography, have gone beyond the elementary stages and desire to achieve pictorial expression. The author takes pains to make clear not only the technical methods but also the fundamental principles underlying those methods, since a grasp of the principles is essential to the worker seeking to correct and grow away from his mistakes. There are chapters on the technic of color photography and motion picture photography, and the book has some attractive illustrations. (J. B. Lippincott Company, $2.50.)

Steel Files Save Million Dollar Records

A five-story brick building in flames! Papers valued at $1,000,000 in steel files on third floor! The burning building collapses! Files fall three floors to the basement! Buried under tons of red-hot brick!



Yet not one precious paper was lost!

This is the true story of the Birmingham (Alabama) Railway, Light & Power Company's fire.

It is but one of many true stories of the proved protection of

Art Metal Steel Office Furniture & Files

—that make this new book—"The Blazed Trail of Evidence"—vitally interesting to every business and professional man. Think what the loss of *your* records would mean to your business today! Your copy of this book is waiting the coupon.

Investigate the Art Metal *absolute* Automatic Locking Knob—that makes Art Metal Steel Files such sturdy and sure fire-fighters.

Art Metal Construction Co., Inc.
638 Metallic Avenue
Jamestown, N. Y.

FREE Fire Book for Business Men

Filled with photographs and facts about fire. Proves that steel is the only real protection for your records. Get this book *before* your fire not after. *Mail the Coupon.*

COUPON FOR FREE FIRE BOOK!

Art Metal Construction Co.
638 Metallic Ave., Jamestown, N. Y.

Send me your new book, "The Blazed Trail of Evidence," and tell me the address of the nearest Art Metal Store. I want to know more about the way steel does protect from fire.

Mr. Purinton's War Service Question Box

Mr. C. A. K., Pennsylvania. "In your recent article, 'Every Man's Workshop,' you say that a pulp mill designed to produce twelve tons per day was made to produce thirty-six tons. I am in the paper making industry, would like more detailed information regarding above mentioned performance and efficiency work in general as applied to my own trade."

Consult Frederic Taylor's book "Principles of Scientific Management." Apply to the following concerns for literature and details of professional service: *Engineering Magazine,* 6 East Thirty-ninth Street; Harrington Emerson Company, 30 Church Street; Business Bourse, 261 Broadway; Efficiency Society, 119 West Fortieth Street, all New York; and A. W. Shaw Company, Wabash and Madison, Chicago. Look up advertisements of efficiency publishers and engineers in the factory trade papers, some of which you doubtless have on file in your factory library.

Mrs. W. P. A., New Jersey. "I write verse in many veins, serious and comic, and in many meters. My husband, who has literary training, thinks they do not lack charm and style. Nevertheless, only occasionally is one printed, and semi-occasionally is one remunerative. The enclosed small effusion has just been returned by *The Atlantic.* Are you permitted to suggest a publication that might consider it kindly?"

No. You want a publication, and a young army of critics, that would receive it *harshly.* You have a slight poetic gift; but in order to get your muse really working, you must be starved, or deserted, or at least misunderstood, condemned, hurt. A poet who has not suffered greatly has not learned the true ring of poetry. Ask your husband not to praise you, but to pick your verse to pieces, line by line, word by word. Get a job as a factory hand, or work ten hours a day in the slums, or join the Red Cross and go where blood flows. Then you will know tragedy—and feel poetry. You only *think* poetry now, and maim it with metaphysics.

Join the New York Woman's Press Club, meet real authors, obtain real criticism. And look up Question Box answer 382, first nine lines, from Independent of January 29, 1917.

Prof. E. H. J., Ohio. "As a physicist, in college laboratory and classroom, I am particularly anxious to learn what opportunities are open to scientists in which they may make the best use of their special training."

The National Research Council has sent forth an urgent appeal to the physicists of America who have the time and facilities to aid in solving the submarine problem. If you could work out a practical method for the detection and destruction of U-boats in American waters and the European shipping lanes, you would be recognized immediately as one of the great benefactors in world history, and as lifetime leader in your profession. Ask George Ellery Hale, chairman of the National Research Council, Washington, D. C., how to apply yourself to this problem and similar needs for the scientist to fill. Put your students also on the trail of this wonderful chance for service.

Mr. H. H. D., Massachusetts. "Your article, 'What Can I Do?' seems to strike the keynote of the whole situation, by telling the individual how and where to serve his country. (a) What method would enable a young man to determine the military, or naval department he is best fitted for? (b) Are there employment bureaus to assist men to find jobs on farms? (c) Where are the men coming from to man the 1000 wooden vessels now building? (d) General Joffre recommends training men in France; would the French or British officials accept volunteers, and furnish free transportation?"

(a) Get a book on each different branch of service, compare physical and mental requirements with your own, also learn which branch appeals to you most. Obtain specific, technical knowledge by application to various authorities named in the "Directory of Service" (20 cents), from secretary of Columbia University, New York.

(b) Write U. S. Department of Labor, also U. S. Department of Agriculture, also Federal Employment Bureau, Washington, D. C. Inquire, too, of local postmaster.

(c) Volunteers may apply to U S. Navy, Washington, D. C., or to American Federation of Labor, Washington, or to General Shipping Board, Washington.

(d) No. All American soldiers in France belong now under General Pershing.

Mr. F. D. W., Washington. "Have been factory superintendent and mechanical engineer for twenty years, specializing in tools for rapid production of machine parts. Am in retirement with a competence. Shall be glad to give the Government my services as long as the war lasts. Where can I do the most good?"

Apply for a chance to serve as factory official or consulting engineer, to Secretary of the General Munitions Board, Washington, D. C. You might enlist as a member of the Corps of Engineers, Reserve Officers, Class B, according to *Army Regulations No. 1493;* write for particulars to the Chief of Engineers, U. S. Army, Washington, D. C. Or you might qualify as a Master Engineer; obtain details from Col. C. H. McKinstry, Corps of Engineers, Room 302, Army Building, 39 Whitehall street, New York. We think your best opportunity would be as Major in Ordnance Officers' Reserve Corps; send application for examination to Chief of Ordnance, U. S. Army, Washington, D. C.

Mr. C. B. N., Virginia. "The war demand for highly trained and forceful men seems to show the increased importance of scientific vocational guidance. (a) Are there any correspondence schools that offer to prospective students advice on choosing a vocation? (b) What recent books might be of assistance? I am a young man of twenty, earning good wages, but not in my real work. I am anxious to serve my country better in making the most of myself."

We heartily approve the resolve you have made; but we would suggest that you also undertake a specific and immediate war duty of some kind. Watch these columns for ideas available or adaptable.

(a) Yes. Write International Correspondence Schools, Scranton, Pennsylvania; also Bryant and Stratton Business College, 80 East Randolph, Chicago; also American Correspondence Schools, Chicago.

(b) One of the newest books is "How to Choose the Right Vocation" by H. W. Merton, from Funk & Wagnalls, New York. Other publications from Ginn & Co., Boston; Fowler and Wells, 1388 Broadway, New York; Review of Reviews, Irving Place, New York; Rocine and Vaught, 59 East Van Buren, Chicago; Boston Vocation Bureau, Beacon street, Boston; New York University Press, 32 Waverly Place, New York.

Miss M. E. G., Illinois. "What can I do in the 'Service Army?' Would like to be matron or general utility person in a hospital, but might be helper to a doctor, or collector on a street-car, or employee on an elevator. I can do almost anything. Put me where I'm most needed."

We wish we had the right place for you, but our work is to put you in touch with many possibilities and leave the choice with you. The national registration of women, conducted by the Council of National Defense, should have reached you by now, and placed you somewhere. If not, ask for particulars and a war registration blank from Dr. Anna Howard Shaw, Woman's Committee of the Council of National Defense, Washington, D. C. Any woman's club that belongs to the General Federation should be able to open different avenues of service; talk the matter over with leading clubwomen you know personally. The editor of your weekly or daily newspaper could inform you as to local patriotic organizations; find what all these are doing, ask officials how you might help. For index to war activities of women, see page 10 of "Directory of Service" (price 20 cents), from Columbia University, Morningside Hights, New York.

The Manufacturer's Problem

(*Continued from page 332*)

steel and iron specialties hires his salesmen to neglect their own business in order to sell Liberty Bonds; a manufacturer of automobiles turns his plant over to the Government without charge, for the production of war machinery; hundreds of other manufacturers are doing practical things, unselfish thing, to free the world of kaiserism. When we go to buy goods made about equally well by different concerns, we should, if possible, find which concern is most patriotic, and buy accordingly.

We can appreciate and approve the war service of big manufacturers. Only a week or two ago, I read in a periodical having about a million circulation, a long editorial article lampooning and condemning, wholesale and haphazard, the frightfully unscrupulous methods of "Big Business"—and on another page of the same periodical I read a wonderful account of sacrificial war service by the very kind of business man the editorial damned! The writer of that article was a traitor as vile as tho he had tramped on the American flag. There is nothing now more unseemly than to abuse with libelous language a national corporation whose product is needed in the war. When you see a great manufacturer whizzing by in his motor car, don't envy him—he is doubtless carrying in one hand a burden that you could not shoulder with your entire body.

We can pay all bills promptly. Every cash payment is a real war measure. How? Because every cash payment somehow benefits the ultimate producer of war manufactures.

We can buy fewer export articles. A good plan would be to stop and ask ourselves, before making any purchase: Could this article be used by a soldier in France, or could the raw material be made up in some other form to be used? If the answer is affirmative, then we should buy the article only in case of absolute necessity. We know that leather, lumber, steel, iron, wool, cotton, a dozen other kinds of raw material, are acutely needed in the operations of war. Yet most of us are buying these goods as freely as ever, with apparently no thought of the effect on war production.

We can offer the benefit of our experience to some manufacturer. The modern scope of the factory has become so broad that almost any man who is a leader in his business or profession could aid the manufacturer in solving one or more problems. The physician could put the manufacturer in connection with the Public Health Service, and could work out a system of preventive hygiene to reduce the illness of employees and multiply their energies. The teacher could evolve a plan of industrial education that would increase the knowledge and improve the skill of the workers. The editor could put life into the factory bulletin or house organ published for the mutual interests of employer and employee. The banker could prepare a number of easy methods for saving money, and offer special service to the members of the factory. The librarian could help to install an efficiency library, and could instruct employees how to use it effectively. The problems of the factory are now the problems of the community. Almost any public spirited man, whatever his work may be, could think of a way to increase the output of a manufacturer whom he knows personally.

We can buy only standard goods that we know to be reliable. The object of this move is both to aid the manufacturer and to protect ourselves. It is generally the great manufacturer who is doing great war

Salt Mackerel

Direct from the Fishing Boats to You

Old Gloucester

Your pail is ready—fat, meaty, juicy mackerel —send no money—try the fish first.

Frank E. Davis PRESIDENT

It's thirty-three years, come next September, since I began supplying the choicest of Gloucester's famous mackerel direct to the homes of families throughout the country.

Our Own Home Kind

People here in Gloucester, the leading fish port of America, laughed at me when I began to sell mackerel by mail. They didn't realize how hard it is for other people to get good fish. But I did. So I decided to make it easy for everybody, everywhere, to have full-flavored, wholesome fish, the kind we pick for our own eating here at Gloucester. 65,000 families are buying from us today.

Fishmen for Generations

You see, I *know* fish. My folks, 'way back, have always been fishmen. They helped found Gloucester in 1623. My boyhood days were spent aboard fishing boats. Catching fish, knowing the choicest and picking 'em out, cleaning and curing them the *right* way, has been my life's job.

Thirty Years' Development

Today our business is housed in a modern, four-story, concrete building, with 20,000 square feet of floor space; fitted with the most improved and sanitary equipment for cleaning and packing fish. Standing at the water's edge, the fishermen's catches are brought right into the building. They go to your table with "the tang of the sea" in them.

Such a *Good* Breakfast!

A fat, tender, juicy Davis' Mackerel broiled to a sizzling brown; some butter, a sprinkling of pepper, a touch of lemon, if you wish—how good it smells, how tempting it looks, how it tickles the palate, and, oh, how it satisfies!—the favorite breakfast dish of thousands.

Fall Mackerel, Fat and Tender

Most of the fish your dealer can buy are Spring fish, thin, dry, and tasteless. What I've selected for you are Fall fish, juicy and fat with the true salty-sea mackerel flavor. We clean and wash them before weighing. You pay *only* for *net* weight. *No heads and no tails.* Just the white, thick, meaty portions—the parts that make the most delicious meal imaginable. You probably have never tasted salt mackerel as good as mine.

Send No Cash— Try the Mackerel First

I want you to know before you pay that my fish will please you. If there is any possibility of a risk, I want it to be at my expense. Just mail the coupon today, and I'll ship at once a pail of my mackerel containing **10** fish, each fish sufficient for 3 or 4 people, *all charges prepaid,* so that your family can have a real Gloucester treat Sunday morning.

Then—if my mackerel are not better than any you have ever tasted, send back the rest at my expense.

If you *are* pleased with them—and I'm sure you will be—send me $3.90, and at the same time ask for "Descriptive List of Davis' Fish," sold only direct, never to dealers.

Remember: Meat, flour, potatoes, *everything* has gone 'way up in price. In comparison, Davis' mackerel is low. An economical food—so good to eat, so nutritious! The "Sea Food Cook Book" that goes with the fish will tell you just how to prepare them.

Mail the coupon now with your business card, letter-head or reference.

Frank E. Davis Co.
302 Central Wharf
Gloucester, Mass.

Frank E. Davis Co.,
302 Central Wharf
Gloucester, Mass.

Without obligation on my part, send me your Descriptive List of Davis' Fish, and ship me a pail of mackerel containing 10 fish, each fish sufficient for 3 or 4 people, all charges prepaid, for which I will remit $3.90 in days after receipt of fish.

IT'S real economy to buy good lockers. An installation of Durand Steel Lockers is a permanent asset; a satisfactory investment.

Durand Steel Lockers are fireproof, practically indestructible, sanitary and convenient; they promote order and efficiency.

Write today for illustrated catalogue.

We are also manufacturers of steel shelving, steel bins and general steel factory equipment.

DURAND STEEL LOCKER CO.

1572 Ft. Dearborn Bk. Bldg. Chicago — 972 Vanderbilt Bldg. New York

work. The small producer lacks resources and facilities to make possible a real national service on his part. Hence, in buying only the standard, well-advertised manufactured articles, we are much more likely to aid the concern that is aiding the Government.

Perhaps the most valuable service we can offer to the manufacturer is that of a clearing house of ideas, to put him in direct touch with the great national sources of information, consultation, coöperation and supply. This we hope to do, in the following paragraphs. You certainly have one or more acquaintances who are manufacturers, or employees of manufacturers, or friends or relatives of manufacturers. Please call their attention to the remainder of this article, outlining special points of interest to the American manufacturer, whether he makes diving suits, airships, or anything between.

The manufacturer's war problems are so many and diverse that we could not hope to solve them, or even to classify them, here. But we do hope and believe that you could find a solution for almost any manufacturing problem by means of one or more of the following dozen suggestions for increasing factory output and improving factory management.

1. Coöperate with the Government. Line up your factory under the national service banner. Get information from the War Industries Board, Washington, D. C. Register with the Board. You will also be advancing your own interests, because the registered concerns are on the ground floor in obtaining particulars of the investigations, regulations and other war developments by the Government.

2. Apply for solution of your problem to federal departments, or national efficiency organizations. The particular help you need could be had from one or more of the following institutions: Federal Trade Commission, United States Departments of Commerce and Labor, National Chamber of Commerce, National Institute of Efficiency, National Efficiency Society, Manufacturers' Information Bureau, Manufacturers' and Dealers' League, Manufacturers and Dealers' Protective Association, Trade Experience Interchange Bureau, Factory Method Company, Factory Distributors Company, Industrial Research Company. That you should have an unsolved problem is extremely doubtful—it is merely unsolved to you. Find the man, publication or institution that has done the solving for you. So your real problem is not to form but to find the solution of your problem. Our work is to help you do it.

3. Watch closely all the trade journals you can get hold of. Don't let a month go by without carefully studying five to ten such periodicals. In their pages will appear the answer to many of your war difficulties. A list of the most valuable trade journals may be had without charge from the Independent War Service Bureau, 119 West Fortieth Street, New York.

4. Make a leading man from each department a member of a book efficiency board. Give him one or more of the recent books in his line, have him dig out, then try out, suggestions there contained for meeting the war emergency. Almost every question that could arise in factory operation is now met by a standard book. A list of the foremost publishers of business books may be had on application to the Independent War Service Bureau.

5. Consult business efficiency engineers or production specialists, on matter too large or too personal for the somewhat slow and roundabout reference to a book, magazine, or institution. The announcement

Filling "his" or "her" place

War-need may have called "him" or "her"—your detail assistant—away and left a big question mark in their place. Now is the time to install

Graffco

VISE SIGNALS

They are so simple—so easy to understand—so *efficient* in getting at the exact data you want instantly, that everything is "smoothed out" for the new assistant. In hundreds of offices, short-handed on account of war work, Graffco VISE SIGNALS will be doing "home guard" duty—classifying credits, advertising, follow-ups, shipments and all detail.

GENERAL DEVELOPMENT COMPANY
61 Broadway, New York.

November 5, 1917.

At a meeting of the Board of Directors of the General Development Company held this day, a dividend of One Dollar ($1.00) per share on the capital stock of the Company was declared payable December 1, 1917, to stockholders of record at the close of business on November 15, 1917. Books will not close.

SAM A. LEWISOHN, Treasurer.

RUN IT AS A UNIT

not as several semi-related sections. You can save time, labor, expense and worry by thinking out and adopting a plan which will coördinate all branches of your business. Perhaps information on what others have done in this line will help you to find your path to improvement.

Write for our free Check List.

Independent Efficiency Service
Plan and Purchase Department
119 West 40th Street New York City

of efficiency engineers may be located in the advertising pages of the factory journals mentioned above, or may be obtained from the editors of these publications.

6. Look over my recent articles on Factory and Office Efficiency, published in The Independent. They offer a large number of the current factory methods and ideas, some of which may be new to you. Obtain list of subjects from The Independent.

7. Be sure that money and time are not being wasted in a single department, on old-fashioned, cumbersome, tools and equipment. Write the Independent Efficiency Service for the check list of the Plan and Purchase Department. Have all the items on the list checked up as indicated, then refer doubtful points or needs for equipment to the Plan and Purchase Department. No fee is required, all the service costs you is postage.

8. Collect and study all the publications of *general factory knowledge* presented by the manufacturers of factory tools, materials or supplies. These various booklets are advertised in the pages of business and factory magazines. A typewriter company sends a pamphlet on reducing typewriter costs; a maker of steel cabinets offers one on improved business methods; a maker of automobile trucks has a publication for the expediting of your delivery problem; a publisher of a business journal offers a book on factory costs without charge. Get all this free knowledge, and apply where suitable.

9. Prepare a booklet of your own that will render a timely patriotic service to each customer or dealer buying your goods. Every sale should carry a service, apart from the sale. And every wartime sale should carry a wartime service.

10. Substitute women workers for men wherever possible. Begin training them *now*. Don't wait until the 5,000,000 army draft suddenly takes a number of your best men, with nobody ready to fill their place. Analyze the duties of every man—you will be surprized to learn how many could be handled as well, or better, by a woman specially trained for the job. In England more than 1,200,000 women are now doing the work formerly done exclusively by men. And official reports indicate that a large percentage of this work is done to better advantage by women.

11. Organize a tour, by one or more of your leading men, of the most efficient factories in the United States. You may learn more new methods from a day's visit to another factory than you could evolve in your own plant from a year's experimenting. Or, if you cannot send a committee for this purpose, get all available literature describing the methods and products of a number of great factories, then apply lessons to your own. A list of modern factories will be furnished on request by the Independent War Service Bureau.

12. Learn how to take your employees into your confidence. Most of the problems of industrial management resolve to the selfishness or the ignorance of the head of the concern. Get rid of the superstition that a "boss" is a boss. He isn't. A boss is a partner and friend of each employee, or he is an old fogy and a fool. It is likely that 80 per cent of your factory problems could and would be solved by employees, if you expected and rewarded the best they could give.

Every problem of industry is a problem of the individual. Factory output is an overflow of human interest. And the way to set a man going is to fill his head with cold facts and his heart with warm sympathies, both together.

Can Consumptives Get Well?

R. L. ALSAKER, M.D.

By R. L. Alsaker, M.D.

Author of "Maintaining Health"

Consumption is the most deadly of all diseases. About one-seventh of the human race dies from this affliction.

It is so tragic because it does not give the individual a chance to live his life and accomplish what he is capable of doing. We are doing something to overcome consumption, but the question is, can't we do more? Here is an interesting letter on the subject:

"Dear Doctor Alsaker:—I have always been fairly healthy until six months ago, when I broke down. My cough then got worse, and I saw red streaks in the sputum. I began to run an afternoon temperature, and had some night sweats.

"In childhood I had enlarged glands, adenoids and sometimes the tonsils bothered me, but I had no worse ills than the average boy.

"Yes, I am tubercular. My doctor has told me to sleep out of doors. He is feeding me raw eggs and fresh milk until I see green and yellow—my eyeballs are green. He tells me to eat rare beefsteak and take plenty of cream. When I began treatment my stomach seemed all right, but now I am nauseated and feel like vomiting. This stuffing is torture. I take soda, creosote, occasionally a little whiskey to stimulate the stomach, and some cough mixture. I was given tuberculin which made me deathly sick.

"I've had lots of time to think of late, and it has just dawned upon me that everybody whom I have known who has received the treatment that I am getting has died. What is the need of this torture if it is to end in death? I am almost in rebellion, but I don't know what to do. I am only twenty-two years old, and as I have been ill less than a year, it seems to me that there ought to be some way out of it. I don't want to go to Arizona, as the doctor advises. A tubercular young lady has just returned from Arizona—in a wooden box. E. N. T."

Consumption is an individual and family problem. Intelligent parents can raise their children so that there is not a particle of danger of their becoming consumptive. Intelligent adults can keep themselves free from tuberculosis—and all other diseases.

Germs are said to cause tuberculosis, but they are not the real fundamental cause, for they can not gain hold in a healthy body.

The real cause of tuberculosis is wrong living, and where we make our greatest mistake is in eating. Children who are properly fed do not develop tuberculosis or enlarged glands. Adults who eat correctly do not become tubercular. Eat right and avoid tuberculosis.

Taken in the beginning, tuberculosis is curable. The recovery is as prompt and complete as in most other serious diseases. If the condition is allowed to advance, no one can tell what the outcome will be. Sometimes individuals recover after they have suffered long and severely, but those who would be sure of conquering this disease must take it in the early stages.

It is wrong to treat tuberculosis as described in this letter. Medicines never cure anything. Forcing a patient to gorge on milk, eggs, beefsteak and other foods ruins the stomach, and then there is tuberculosis plus indigestion. The fattening cure is a failure. The tuberculin superstition is exploded, but some doctors still cling to it. It is easier and cheaper to live properly at home than in Arizona.

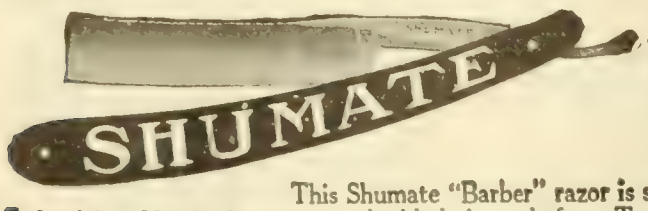
The right thing to do is to get the individual to give himself the proper care. That means to educate the patient into right ways of taking care of himself. It means that he must learn how to breathe, exercise, relax, rest, eat, drink and think.

The feeding is most important. The individual should have enough of good food, but he should not gorge. An excess of food always poisons the body and a poisoned body is a diseased body. Two eggs and two glasses of milk a day, with other foods, will probably be good for the patient. But twelve eggs and two gallons of milk per day, in addition to other foods, will surely make the patient worse. Is it any wonder that such feeding abuse prevents recovery? The consumptives are fed to death.

In the early stages nearly all *consumptives can get well*, if they will get right down to business and take good care of themselves. If they will give themselves proper care as soon as they begin to notice signs of being run down and feverish, they have a splendid chance to recover.

It is marvelous what proper eating will do, when other means fail. Don't take my word for it, but prove it in your own case and on your own person.

In a small volume on the subject I have explained in plain English the true cause of consumption and how to get relief in the early stages of the disease, without leaving home. This book also shows how to conduct yourself so that there will not be the least danger of contracting this scourge. A plain, simple, dependable plan of living is given you that includes eating, drinking, breathing and thinking that any one, young or old, can understand and follow. No hospitals, no sanitariums, no drugs, or serums—just a pleasant, common sense home treatment that harmonizes with and helps Nature.



The price of "CONQUERING CONSUMPTION" (the title of this new book) is one dollar, with ten cents additional to cover packing and postage—considerably less than your doctor would charge for prescribing a single treatment—less than your druggist would charge for a patent "cure-all" *that doesn't cure*—less than it would cost you to lose a day's pay on account of sickness—less than the cost of an evening at the theatre. In fact this small investment will pay big dividends in health and happiness till the end of your days.

Send one dollar and ten cents to my publisher, Frank E. Morrison, Dept. 88, 1133 Broadway, New York City, and get your copy. Follow my plan of treatment for one month; then if you are not entirely satisfied with the improvement in your health, return the book and your money will be refunded.

Remember this: You have your choice of living right or living wrong. This book teaches you the truth and nothing but the truth. Do you want it?

PUBLISHER'S ANNOUNCEMENT: R. L. Alsaker, M.D., is an eminent authority on the subject discussed in the above article. He has put the net result of his many years of professional experience with sick people into his writings and it is a real pleasure for me to recommend them, because I know from personal experience and observation that good results always follow an observance of his simple instructions. Frank E. Morrison, Publisher, Dept. 88, 1133 Broadway, New York.

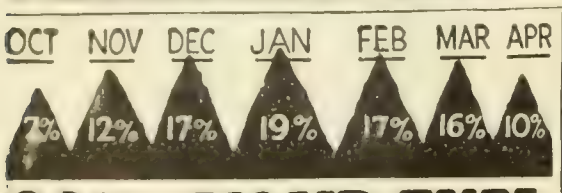
You Take No Risk

This Razor is GUARANTEED FOR LIFE

This Shumate "Barber" razor is so good that we dare guarantee it to you for *life*. Here's the reason—the blade is made from Tungsten Alloy Steel, which takes a keener edge than any ordinary steel *can*—and it holds it. You can use it for years without honing. The secret of this wonderful steel is *ours alone*, and we guard it jealously.



Here's our *unqualified guarantee:* Buy a Shumate "Barber" razor and use it—not once, but as long as you like. If you say after an exacting trial that you don't like it, we'll exchange it *without a word.*

Sent postpaid, $2.00 — In remitting, mention your dealer's name, and a chamois lined, rust-proof case will be included with your razor.

State whether you want light, medium or heavy blade. Heavy blade for very strong beards.

Established 1884
Capacity 6,000 razors daily

Shumate Razor Co., 753 Locust St., St. Louis, U.S.A.

Remarkable Remarks

JOSEPH COLLOMB—Be limp if you want your sleep placid; emulate the dishrag.

REV. I. MANLEY SHARP—Nero was a sanctified angel as compared to the Kaiser.

ROSE PASTOR STOKES—All personal net incomes over $6000 should be conscripted.

MRS. GROVER CLEVELAND PRESTON—The woman slacker is as guilty as the man slacker.

ELIHU ROOT—Self-governing democracies are indeed liable to commit great wrong.

GEORGE MOORE—Art must be parochial in the beginning to become cosmopolitan in the end.

ADMIRAL VON TIRPITZ—A submarine war success cannot be expected immediately.

H. W. GOSSARD—Women can sell anything—threshing machines as well as corsets.

PROF. H. A. OVERSTREET—Absentee capitalism may be as bad for a country as absentee landlordism.

EMPEROR WILLIAM—Bend your knees before the great Ally who has never forsaken the Germans.

PRESIDENT ARTHUR T. HADLEY—Christianity, as we and our fathers have understood it, is on trial.

DR. FRANK CRANE—The man who is doing the best piece of work for the world is William Howard Taft.

ANGELO M. READ—It does not seem possible that music as a study in our schools can be put aside indefinitely.

DR. CHARLES E. JEFFERSON—Making the world safe for democracy is nothing to making the world pleasing to God.

DR. HENRY GODDARD LEACH—The Scandinavians exhibit a power of racial endurance rarely found among other people.

MACHINE GUNNER EMPEY—After looking thru the periscope, don't stick your head over the top to see what you saw.

THEODORE ROOSEVELT—We are to decide whether we have got a country or whether we have simply got a polyglot boarding house.

"MA" SUNDAY—Never judge a girl by how she looks when you are courting her, boys. Always wait till you see her the morning after.

WERNER SOMBART—Let us reflect on the inexhaustible wealth in German character which contains in itself everything of real value that kultur of man can produce.

PEARSON W. BANNING—Congress can well afford to offer not less than $100,000 for a new national hymn and an annuity of $10,000 for life to the successful composer.

POLICE COMMISSIONER ARTHUR E. WOODS—By street accidents in New York City one person is killed every fourteen hours and one person is injured every twenty-three minutes.

MRS. FLORENCE KELLY—If we are daughters of the men who framed the Constitution and fought against the tyranny of England, we will wear black until this conscription law is repealed.

BILLY SUNDAY—The man who will not accept God's word has a small brain. You could put 10,000 brains like his in a mustard seed, and they could turn hand springs for 500 years and never get a stone bruise.

IRVIN S. COBB—The circumstance of a man having been harnessed up at the baptismal font with the name of Clarence does not necessarily imply that the individual thus burdened laces up his union suit with baby ribbon.

CONGRESSMAN BLACKMAN—It may be that there will be many women in the next Congress and unless the President settles down to business and follows the well settled principles of procedure that govern, or ought to govern, this body, it might not be surprizing if we had a lot of children elected to the next Congress.

UNCLE SAM'S WAR-MADE INDUSTRIES

(*Continued from page 327*)

politically to defy us. For we have realized our aims—that army of ours in and en route to Europe indicates that; and we have realized our true preparedness—there are plenty of indications in this article of that.

We need only to hold our ground and to extend it. Then we are safe. And the world is safe.

And the ground work has been done; the new era has been achieved; our new Declaration has been put into force.

And "trade is an eminently practical matter," as Marion Letcher, head of the Foreign Trade Advisers of the State Department, told me.

"Then what," I asked him, as I thought an American business man would desire me to do, "should our industrial leaders now do?"

He answered: "First, make up their minds to go into this situation seriously.

"Second, remember that trade is concrete, an eminently practical matter. There is no such thing as abstract trade. You cannot handle trade on paper, and no matter how big or how small the operation is, the principles are always the same. Our business men must know their fields, their markets, their men. Travel and study, therefore."

New York City

Pebbles

In the event of a quarrel in the house, harmony can always be obtained on the piano.—*Pennsylvania Punch Bowl.*

Husband—Can you tell me of my wife's whereabouts?

Maid—Faith, sir, I think you will find them in the laundry.—*Pennsylvania State Froth.*

Lives of bad men must remind us
We should live a life sublime,
Or departing, we will find us
With them, in a hotter clime.
—*Lehigh Burr.*

Henry—He may be a great artist—but he has a peculiar way of doing things.

Happy—How's that?

Henry—He says he painted his greatest masterpiece on an empty stomach.—*Cornell Widow.*

The latest example of English "as she is spoke" comes from Egypt, where a native interpreter who had overstayed his leave wrote the following letter to his chief:

"My absence is impossible. Some one has removed my wife. My God, I am annoyed."—*New York Evening Mail.*

Private (sadly)—Excuse me, sir, could I have a couple of hours off—to go and see my dying father?

Officer (sternly)—Dying father? Why, I left him not ten minutes ago!

Private (hastily)—Ten minutes ago! Sir, you take the bun—he's been dead seven years.—*Sydney Bulletin.*

A German Captain of Engineers has related how he once sent a green corporal and three men back with instructions to put a railroad station completely out of commission so that it could by no possible means be of use to the enemy.

The corporal rejoined the command in a surprizingly short time considering the nature of his task. The captain asked if he had carried out his instructions.

"Ja wohl, Herr Hauptmann," said the corporal, "the Russians will never be able to use that station again. You see," pointing to a large sack on his back. "I have carried away all the tickets."—*London Opinion.*

For Quick Expansion — a Truscon Steel Building Fireproof *and* Economical

When you need more room and *need* it *quickly*—when some department of your business becomes suddenly cramped for room, a Truscon Steel Building will permit *quick* and *economical expansion.*

The standard units of Truscon Steel Buildings are carried in warehouse stock, assuring immediate shipment and avoiding the delay of shop fabrication. Truscon Steel Buildings are speedily erected—easily enlarged—readily taken down and moved to a new location.

Truscon Steel Buildings come to you in steel panels, all ready to erect—made of interchangeable steel units, assembled by means of a simple locking device.

Fireproof, weathertight, strong and permanent. Every part of the building is steel,—walls, window-sash, doors and roof.

Supplied in all sizes, any length, widths to 60 ft., various heights, any desired arrangement of doors and windows. Used for machine shops, storehouses, offices, garages, hospitals, schools, restaurants, railroad sheds, etc.

What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 24th year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. A dollar bill mailed at our risk will bring you the Pathfinder for a full year, or simply send **15c** to show that you might like such a paper, and we will send the Pathfinder on probation **13** weeks. The 15c does not repay us, but we are glad to invest in new friends. **Pathfinder, Box 39, Washington, D. C.**

USING THE TRACTOR INDOORS

BY CLARKSON LLOYD

DIRECTOR OF THE INDEPENDENT MOTOR EFFICIENCY SERVICE

ALMOST every factory has hauling and delivery problems on the inside entirely apart and separate from those directly involved in transporting its goods to the user thereof. And the speed with which these internal deliveries are made and the cost of making them are vitally important; for they affect not alone the deliveries of the finished product, but also its manufacturing cost. In these busy times it behooves everyone to speed up. Wherever it is possible to use machinery to save man power such machinery should be used. It is no longer a case of throwing men and women out of employment when a manufacture installs machines. The whole country is labor-hungry.

In the old days the job of getting materials from one department to another depended on leg power. Later on, when the first gleams of efficiency began to penetrate into our industrial nooks and crannies, a good deal of the leg power was superseded by mechanical and gravity conveyer systems, chutes, traveling cranes and miniature railroads. The mechanical and gravity conveyers are growing in popularity. They eliminate the need for human carriers. They are quick. They never take things to the wrong place. Workmen never have to wait for them to come back from a previous errand. And, once installed, they require a minimum of attention.

Traveling cranes, for some businesses requiring the transportation of bulky materials—such as steel girders, boilers, ores and the like—are undoubtedly useful, as are the miniature railroads. But the expense of installing and maintaining these devices makes them unavailable for any but the very big plants. And besides, their usefulness is limited by the fact that they run on fixed tracks from which there can be no deviation.

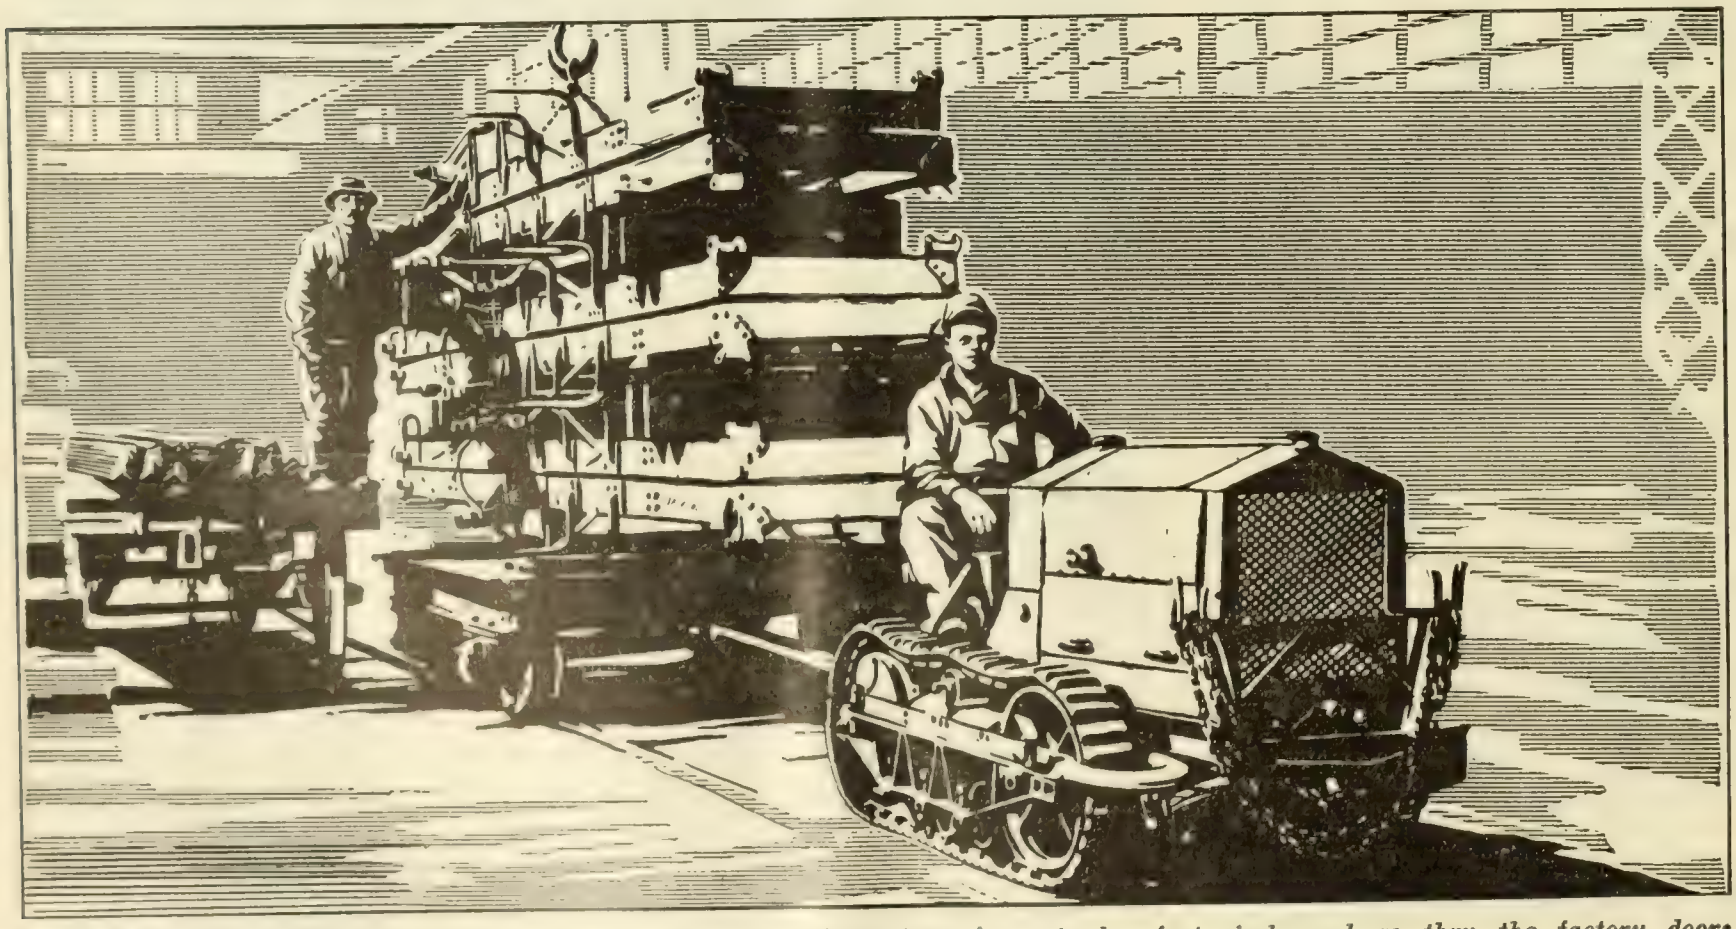
To supply a definite need in this matter of internal hauling, one of our well known motor truck engineers has recently invented a motor tractor which is now being successfully marketed. It is a small, comparatively light machine and its possible uses are legion. With a draw-bar pull of 1500 pounds, it is capable of drawing loads out of all proportion to its size.

This new tractor employs a form of caterpillar drive. It can run on any surface, from the roughest to the smoothest, laying its own track as it goes. It can pull raw material up a grade from the freight cars right into the factory. Being only 50 inches wide and 52 inches high it can go thru the average factory doors with ease. It can turn in a 12-foot circle—which not even the smallest automobile can do—and it can handle a load forward or backward with equal facility.

This little tractor costs $1185. You can use it outside the plant and inside. It is so small that you take it on an elevator and use it on any floor. And not alone can it handle almost any hauling job you may have, but in emergency it can furnish belt power for one or more of your machines.

Needless to say, this tractor is at home on the farm as well as in the factory. If you would like to receive more information about it and what it can do, I shall be glad to send it to you by mail on request.

ANOTHER form of time and labor saver is the electric industrial truck With these, as with the tractor already described, one man can do work which would require scores of men with the old-fashioned hand truck. In fact, they make it possible for one man to do work that men with hand trucks can never do. For instance, one electric truck that I have in mind will carry 4000 pounds with ease up a 20 per cent grade. Not even an expensive industrial railway can negotiate a grade as steep as that. In conjunction with trailers this electric truck has hauled 8600 pounds of pay load at a speed of about six miles per hour.



The truck itself has a loading platform 7 feet 6 inches long, 48 inches wide and 23 inches from the ground. It steers on all four wheels, and can therefore be turned in a very small radius. The battery will drive it at a speed of five to seven miles per hour with a full load of 4000 pounds for ten hours at a stretch without recharging.

Another interesting device that saves time and much labor is what is called a lift truck. It works by human motive power, but has this very pronounced advantage over the ordinary, old-fashioned hand truck. The lift truck is in reality a chassis only—that is a frame without a body or platform. The platform is separate and you have a number of them.

Suppose your shipping department is 30 feet or so from the curb where your street motor trucks are loaded. With the ordinary hand truck all packages or boxes or crates would have to be lifted on in the shipping room and lifted off again at the curb. If they were not lifted off the hand truck the truck would have to stand idle until the stuff had been loaded. With the lift truck you have any number of platforms. These may be loaded in a dozen different places at once. Then one man slides the lift truck under the platforms, one by one, wheels them to the curb and leaves them there. When the street truck arrives its load is waiting for it.

The lift truck is exceedingly simple. The operator slides it under the loaded platform. A slight pressure downward on the truck handle and on a foot pedal lifts the platform clear of the ground and locks it there. When he wants to lower the platform again he merely steps upon the foot pedal. A hydraulic check cushions the fall of the platform, allowing it to settle gently to earth, thus preventing the damage of the load thru jar.

The lift truck may be had in load capacities of 2000 and 5000 pounds. And the principle of separate platforms has also been adapted for use with electrically propelled lift trucks suitable for long distance and interdepartmental hauls.

The little tractor with a big pull. It can run on any surface, turn in a twelve foot circle and go thru the factory doors

EDUCATION Is the Salvation of HUMAN LIBERTY

"Without popular education, no government which rests upon popular action can long endure."—President Woodrow Wilson.

Our free democratic Government, made possible by popular education, is now in grave peril, and we *must* win this war or human liberty will perish from the earth. Every loyal American should prepare himself for any emergency in this critical period by becoming more efficient than ever before. One of the greatest means of efficiency is a practical, accurate, reliable, and up-to-date Reference Library, and this is

You Are Slumping!

You Are Slumping And Do Not Know It. You Are Half Alive And Do Not Realize It. You Are Only Half as Efficient As You Could Easily Be and Do Not Know What To Do About It. You Are Living An Inferior Life—You Are Taking Far Less Than Your Full Share of Life and Pleasure. I Have Shown Over 262,000 Men and Women From 7 to 97—Including Millionaires and Paupers—How To Acquire New Life, New Vigor, New Energy and a Higher Realization of Life and Success.

Do Not Deceive Yourself

There is no fraud like self-deception. You may think you are young, strong, brainy, energetic and happy, yet when compared with other men or women you are ill, weak, dull, listless and unhappy. You do not know what you are capable of accomplishing because you have not begun to use your powers. The truth, if you will only acknowledge it to yourself, is that you are only a dwarf in health and mind when you could easily become a giant—only thru conscious development of every cell, tissue and organ of your body.

The Swoboda System is as Effective for Women as for Men

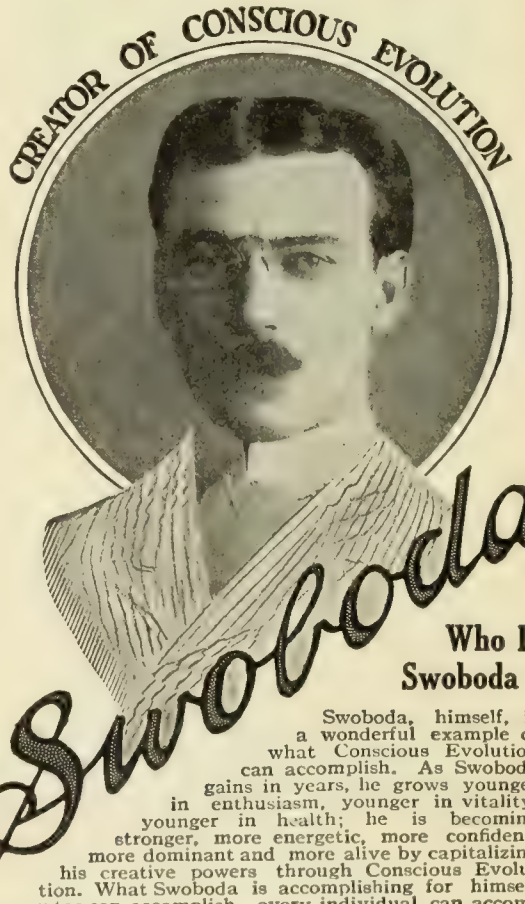
You Are Only Half Alive

If you possess only sufficient energy and vitality to carry you thru each day—if you are normal in health only under the most favorable conditions—if you are not full of "pep," energy, confidence and ambition every moment of your life—if you are unable to abuse yourself without flinching—if you are over tired mentally or physically—you are only half alive—you are not thoroughly qualified to win against the competition you are up against.

Some Parts Of You Are Dead

The body is made up of billions of tiny cells. These cells are of varied degrees of activity. Some are alive, some are weakened, some are practically lifeless and some are totally dead. When your stomach troubles you, when your heart bothers you, when your liver complains, when your intestines protest, when your bones ache, when your brain becomes cloudy or foggy, it is a sign that the inactive, non-alive cells have secured the upper hand. Only through Conscious Evolution of the cells can you bring them to the point of efficiency and energy that should rightfully be yours.

What Is Conscious Evolution?



Conscious Evolution is a simple, scientific, practical, convenient and easy method of developing every cell in the body to its highest pitch of vitality and energy. Without drugs, medicines, apparatus—without electricity, cold baths, massage or dieting—without asking you to deprive yourself of any of the pleasures or habits that you enjoy—without asking you to do anything you do not like to do. Conscious Evolution will give you energy and vitality to spare, digestive power to spare, self-reliance to spare, youth to spare, living power to spare and working power to spare.

Become Superior to Others

The Swoboda System makes you a better human being than others, physically and mentally. It enables you to dominate others—it enables you to out-think others—it enables you to out-endure others. It so vitalizes every organ, cell and tissue as to make the mere act of living a joy. It gives you a thrilling and pulsating nature—it can increase your very life. I not only promise it, I guarantee it. Read my guarantee and learn what I mean by perpetual youth.

Your Earning Power

Your success depends entirely upon your health, vitality, memory and will power. Without these all knowledge becomes of small value for it cannot be put into active use. The Swoboda System of Conscious Evolution can make you tireless, improve your memory, intensify your will power and make you physically just as you ought to be.

Swoboda

Who Is Swoboda?

Swoboda, himself, is a wonderful example of what Conscious Evolution can accomplish. As Swoboda gains in years, he grows younger in enthusiasm, younger in vitality, younger in health; he is becoming stronger, more energetic, more confident, more dominant and more alive by capitalizing his creative powers through Conscious Evolution. What Swoboda is accomplishing for himself you too can accomplish—every individual can accomplish, for every individual is governed by the same laws and principles, and every individual has it within himself to make use of these laws and principles.

My New Copyrighted Book is Free

It explains the SWOBODA SYSTEM OF CONSCIOUS EVOLUTION and the human body as it has never been explained before. It will startle, educate and enlighten you.

My book explains my new theory of the mind and body. It tells, in a highly interesting and simple manner, just what, no doubt, you, as an intelligent being, have always wanted to know about yourself.

You will cherish this book for having given you the first real understanding of your body and mind. It shows how you may be able to obtain a superior life; it explains how you may make use of natural laws to your own advantage.

My book will give you a better understanding of yourself than you could obtain from a college course. The information which it imparts cannot be obtained elsewhere at any price. It shows the unlimited possibilities for you through conscious evolution of your cells; it explains my discoveries and what they are doing for men and women. Thousands have advanced themselves in every way through a better realization and conscious use of the principles which I have discovered and which I disclose with my book. It also explains the dangers and after-effects of exercise and excessively deep breathing.

Mail the Coupon Today

Write today for my Free Book and full particulars before it slips your mind. You owe it to yourself at least to learn the full facts concerning the Swoboda System of Conscious Evolution for men and women. Mail the coupon or a post card now, before you forget.

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. COMPOSITION.

The Story of the Week.

1. Give a clear, oral account of the progress of the war during the past week.
2. Give a similar account of the most important events that have occurred in the United States during the past week.
3. Give a summary of the reasons that led the Western Allies to create a common war council. Explain what the council is expected to do.
4. After the recent elections you heard a man say: "I wonder if the Germans are interested in politics these days." Tell him about the present political situation in Germany.
5. Write a clear explanation of the reasons why the six questions recently asked by Mr. Balfour should all be answered in the negative.
6. A French Canadian has a relative who lives in Paris. They write to each other concerning the political conditions in their respective lands. Write the Canadian's letter and the Parisian's reply.
7. Give a speech, as if to a body of workingmen, explaining the provisions of the Government questionnaire for drafted men.
8. Prepare a circular letter giving the new regulations for the manufacture of bread and bakery products.
9. Give a patriotic speech in which you explain the work of the Council of National Defense.
10. Select any two pictures in The Independent, and write a comparison or contrast of the two.
11. Write an original story based on the cover design of this number.

Editorial Articles.

1. Give a speech, in the form of Persuasion, urging some of your fellow citizens not to deserve the name of Bolsheviki.
2. Write for your school paper a summary of the reasons the United States has this year for celebrating Thanksgiving.
3. Show in what ways "The Acquisition of Eldorado" is an effective title.

We Must Stand Together. By President Wilson.

1. Write paragraphs in which you explain the following quotations from President Wilson's speech: "The power of the American spirit"; "I respect the ancient processes of justice"; "If our men have not self-control, then they are not capable of that great thing which we call democratic government"; "We must yield to and obey common counsel."

Creative Chemistry. By Edwin E. Slosson.

1. Write a brief of the entire article. Explain by what means the article has been made clear; instructive; interesting.
2. Point out examples of the following: point of contact; personification; simile; metaphor; humor; use of the commonplace; development by detail, by comparison.

The Promise of Great Russia. By Meyer London.

1. Condense the thought of the article into a single paragraph. Add an original paragraph of comment.

Governments in Business. By Joseph E. Davies.

1. In a single paragraph tell what important social changes have been brought about by the war. Add a paragraph of comment.

Having a Good Time.

1. If you have read Ruskin or Carlyle tell in what way the article reminds you of the work of either writer.
2. Write a short composition in which you present the author's opinion of how to have a good time.
3. Write a composition of contrast on life in the East, and life in the West.

SECTION II. WORD STUDY.

1. Give the derivation and the meaning of every one of the following words from the article on "Creative Chemistry": ameliorate, febrifuge, environment, evolution, epoch, horticulturist, synthetic, efficacious, antiseptics, diluted.

SECTION III. LITERATURE.

Phantasms of War. By Amy Lowell.

1. What is the occasion of the poem? What is the author's purpose? What style has the author adopted in order to accomplish her purpose? What is the effect of the poem?

SECTION IV. GRAMMAR.

1. Give the syntax of the subordinate clauses in the leading editorial article.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. United States Interests in the Caribbean Sea—"The Acquisition of Eldorado."

1. At the present time the United States controls directly or indirectly several countries in and about the Caribbean Sea. Under what circumstances did the control of each come about? What has been the result?
2. The advantages to the United States of acquiring the Guianas were discussed in The Independent for February 28 and April 17, 1916. What was said in these issues of the economic advantages of owning the Guianas?
3. Several years ago we used to hear a great deal about "dollar diplomacy." What is the meaning of the term? Would the acquisition of the Guianas be another example of "dollar diplomacy"?

II. Is Peace in Sight?—"The Land of Darkness," "Unity for Victory," "French Ministry Quits," "Peace Talk in Germany," "British Discuss Peace Terms," "Northcliffe Assails British Government."

1. Why has Russia ceased, for the time being, to be one of the factors in determining the probable terms of peace?
2. Which is more important for the Allies' cause—the breakdown of Italy or the establishment of the interallied war council?
3. What is the significance of the resignation of Premier Painlevé?
4. Are there any signs that Germany and Austria are weakening?
5. Do you attach any significance to the reported debate in the House of Commons and to Lord Northcliffe's discontent with the way things are going in England?

III. The Russian Revolution—"The Promise of Russia," "Bolshevikism," "The Land of Darkness."

1. Fill in, as far as you can, what Mr. London says he is forced to omit: "a historical analysis of the causes of the upheaval."
2. "The autocracy was a mere superstructure." "The country is essentially democratic." In what sense are these statements true?
3. "This ["Land and Liberty"] was the slogan of the Russian people for more than sixty years." Give some of the facts which justify this statement.
4. "The problem is not so simple when one approaches the industrial situation." Why not?

IV. Organized Labor and the War—"We Must Stand Together," "Wilson Appeals to Labor," "Labor Unions Denounced," "The Railroad Labor Crisis."

1. Compare the attitude of the National Founders' Association with that of the Railroad Brotherhood. Do the facts seem to justify the President's statement: ". . . you are more reasonable . . . than the capitalists"?
2. What are the handicaps under which organized labor is forced to operate during war? Is capital subject to the same or similar handicaps?
3. What is the President's exprest attitude toward I. W. W. agitation? toward the unauthorized attempts at the suppression of this agitation?
4. What answer has the convention made to the President's appeal?

V. The New Industrial Revolution—"Governments in Business," "National Defense Council's Work," "War Bread."

1. In what industries and in what commercial undertakings has the socialization of industry discussed in the first paragraph of Mr. Davies' article taken place?
2. Why are the powerful forces in both capital and labor circles disposed to look forward to the return of "the old individualistic order in industry"?
3. In what sense do the facts presented in the references justify the heading adopted for this topic?

VI. Modern Industrial Problems—"Synthetic Perfumes and Flavors."

1. According to Dr. Slosson what are the two stages of industrial organization thru which the world has thus far passed? What is the third stage upon which it is just entering?
2. Look up in some convenient history of commerce the facts about the trade in perfumes, spices, drugs and gems. Does Dr. Slosson's article overstate the importance of this trade?
3. What is happening at the present time to the trade in perfumes, drugs and gems?
4. Does your mother use spices as freely as your grandmother did? If not, what has she substituted for them?

One Father Writes of BILLIARDS

"We've a Full House All the Time!"

Put a Brunswick Carom or Pocket Billiard Table in your home and watch how quickly it surrounds your boys and girls with good companions.

Young people idolize Home Billiards. And these princely contests act as a tonic on older folks.

Low Prices, Easy Terms
Balls, Cues, Etc., Given

Brunswick prices today are extremely low for tables of such masterly construction and beauty.

Our Popular Purchase Plan lets you play while you pay.

With every table we give a high-class Playing Outfit Free—Balls, Cues, Rack, Markers and Expert Book of 33 Games, etc.

Carom and Pocket Billiards are never twice alike, but ever enlivened by friendly jest and laughter. Among life's most enduring memories are the happy hours and comradeship of billiards

BRUNSWICK HOME BILLIARD TABLES

Even the cottage or small apartment has room for a genuine Brunswick. And it gives you *scientific* Carom and Pocket Billiards—life, speed and accuracy!

The "Baby Grand" is a home-size regulation table for spare rooms, attics, basements and private billiard rooms.

The "Quick Demountable" can be set up anywhere and easily folded away when not in play.

See these tables in handsome color reproductions, get our low prices, easy terms and home trial offer. All contained in our new billiard book. Send your address at once for free copy.

HARPER'S WEEKLY

AMERICA'S THANKSGIVING

NOT for more than half a century have the people of the United States gathered in the churches and at their hearthsides to render thanks to God on an appointed day while the blood of their best and bravest was flowing under the hand of the enemy. For a fitting parallel we must recall Thanksgivings which are to the oldest of us a remote memory, when Pennsylvania artizan and Alabama farmer engaged in fratricidal strife, or those of a yet more distant past, when red-coated soldiers policed our cities and hungry, footsore Continentals built rude encampments in the woods. It may in fact be said that this is the grimmest and most tragic of all our Thanksgivings, for today our fate is linked with that of every other free nation and it is no longer a question of keeping the torch of liberty aflame in a western wilderness, but of bringing that torch back to the Old World to burn the highest citadels of tyranny.

In such an hour it would be unmeet to thank God simply because our broad lands are spread with harvests as a table might be spread for a banquet, that the pulse of industry beats with a stronger and steadier pressure than in any other country, and that some of our youngest commonwealths are wealthier than the whole nation that made Washington its President. Our wealth our industry, the very resources of our soil would be but a shame to us if we could not use them to relieve the sufferings of the less fortunate. But our gratitude should not be small that the lavish bounty of nature and the labor of our forefathers have made it possible for us in some measure to play the Good Samaritan and bind the wounds of the world.

Nor can we offer thanks, as is our custom, for the blessings of peace; tho surely none can appreciate those blessings more sincerely than the nation at war. We may not cry peace where there is no peace. But we may well be thankful that it rests in our power to make the world safe for peace. We have today the vision, surely not altogether unwarranted, of an international order which will spare our children and their children any need to repeat our horrible and necessary task.

Most of all we may be thankful that however great may be the sacrifice which we as a nation are called upon to make, it cannot be greater than the cause in which it is offered. War, in itself, is simply the killing of men and the destruction of all that they have labored to create. But we know that the very prosperous civilization which existed in 1914 was built over the wreckage of ages of war and that one more war could not annihilate either the potential wealth of nature or the creative energy of mankind. And we who are Christians know also that death is doubly unimportant. All men must die in the body and all men are immortal in the spirit. But there is a deeper evil in war than death and devastation. It is the fact that the majority of wars have been useless or worse than useless; that blood has been shed like water and as vainly; that brave and honorable men have died and left the world worse by their warfare. If it were an unjust or even a dubious cause which America had espoused, who could endure the horror of so much wasted suffering? But, as if with the deliberate intention of lightening our hearts for the struggle, the despotism which has challenged us has exhibited every form of cruelty, perfidy, arrogance and cynicism which free-born Americans have ever fought or hated. We know what we fight and why we fight. We know that the world will be a better place to live in by our victory. And no other comfort will suffice to make even victory sweet in such a war as this. We thank God, therefore, for the privilege of making this supreme and holy sacrifice.

BOLSHEVIKISM

THE pacifist faction of the Russian revolutionists is known to the world as the "Bolsheviki." Russians tell us that by derivation the word means "those of the majority," referring to a bygone schism in one of the revolutionary parties under the old Tsardom. However that may be, the Bolsheviki are really, in the whole population of Russia, a very small minority. Their relation to the rest of Russia is characterized by a paradox: they are of all political groups the most radically republican, democratic, pacifistic and anarchistic, and yet they are the most willing to consent to a German peace, or, in other words, to the triumph of everything that is monarchistic, aristocratic, militaristic and bureaucratic in Europe. Were the Bolsheviki logical extremists, did they simply carry their principles beyond the limits of moderation, we should expect to find them emblazoning on their banners such devices as "Death to the Hohenzollerns" or "No Peace with the Prussian State." Instead we find them willing to fraternize with the armies of despotism, to give friendly ear to the agents of the Kaiser, to abandon republican Poles and Czechs to Hapsburg rule, and to denounce in fiery language the democracies of England, France and the United States.

But every country is faced by a similar problem, and we may well use "Bolshevikism" as a general term for those extreme radicals who for temporary factional purposes ally themselves with the deadliest enemies of all that they believe and hope. The Sinn Feiners are typical Bolsheviki. What they profess to desire is the creation of a small independent nation on their verdant island. To achieve this aim they call upon the assistance of a vast and arrogant empire whose attitude toward the small nations may be read in Serbia and Belgium and whose political philosophers have repeatedly declared to the world that great military might alone gives a people the right to independence. By using

Drawn for The Independent by C. R. Macauley

THE PASSWORD IS "REPUBLIC"

Germany to wreck England the Sinn Feiners are doing their best to ensure that Ireland shall for all coming time be a despised vassal state of Greater Germany.

In Canada the French population complain that insufficient recognition is given to their national language and distinctive culture. But what shall be said of the folly of these champions of Gallicism who are trying to hamper the military activities of the Canadian Government, and are thereby giving aid and comfort to the enemies of France? Should the Germans ever rule Quebec, and the military power of the Entente Allies is the only shield that protects Canada from annexation, there will be no language problem. German alone will be tolerated, as German alone is tolerated in Metz and Strassburg today.

There are other Bolsheviki. The anarchists who wish to abolish Government and are selecting the present time to attack the public order of the United States are, whether they realize it or not, "doing their bit" to bring to this country the Prussian Superstate, the rule of *strengst verboten* and the trampling out of the last embers of individual liberty. The Industrial Workers of the World are deliberately crippling American industries necessary for the prosecution of the war, tho nothing human can be more certain than that the man who was detected in such activities in Germany would face a firing squad at sunrise. The pacifists who object to serving in the American army would soon have an opportunity of tasting the cruel discipline of the Prussian army if they were successful in converting their fellow countrymen to their non-resistance policy. The little knot of militant suffragets (to the credit of the sex they do not comprize one suffragist in ten thousand) who are denouncing President Wilson as their "enemy" and badgering him in Washington might well reflect if they are not giving aid and comfort to that well known anti-feminist, Wilhelm von Hohenzollern, and how much chance they would have of a real share in the Government if they lived in Germany. Finally the good liberal, justly concerned over a free speech and a free press, sometimes urges an immediate peace with the Government which censors newspapers even in time of peace and imprisons for years the mildest critics of the Kaiser.

If you are a monarchist, an aristocrat, a reactionary politician, an anti-feminist, a militarist or just a naturally servile and submissive person, you have a right to be a pro-German. But if you call yourself a republican, a democrat, an individualist, a rebel, a pacifist, a feminist or a liberal you ought to be not only a pro-Ally but more strongly pro-Ally than any one else. In any other case you are a catspaw, a tool, a dupe. You belong to the Bolsheviki.

ECONOMIC PRESSURE

THE Boston Chamber of Commerce has made a direct challenge to the business men of Germany. In a resolution just adopted it calls upon the American business men to be prepared to boycott German goods after the war if the German Government does not become democratized. The theory is that Germany's armament after the war will fundamentally depend on her receipts of raw materials and profits from her foreign trade, and if Germany is not democratized the German rearmament will be the measure of the greatness of the rearmament forced on all other nations.

This is a timely suggestion, tho it apparently does not take into account the profest willingness of the Central Powers to join in a general reduction of armaments. There is no doubt, however, but that Germany is giving more attention at this moment to her economic rehabilitation after the war than any other belligerent. Even questions of territory are of secondary importance. An unequivocal declaration from the business men of the greatest business nation in the world cannot fail to be listened to and heeded. The American Chamber of Commerce should refer this suggestion to its various local chambers of commerce and boards of trade thruout the United States in order to secure if possible a national endorsement of the plan by the business men of the country.

JUSTICE

THE Supreme Court has unanimously decided that the laws which several southern and western municipalities have enacted separating the habitations of whites and blacks are null and void.

Evidently the XIVth Amendment, which has something to say about life, liberty and property, is not entirely a scrap of paper.

THE ACQUISITION OF ELDORADO

THERE are various indications that the European powers holding territory in tropical America are more disposed to part with it than ever before. If so it is our duty to meet them half way and in a generous spirit, not taking advantage of their distress but aiding them in their hour of need. We have loaned them large sums of money at a low rate of interest and without security. We have given freely for the relief of suffering in France and Belgium. This is right and we shall doubtless do more in both these ways in the future. But if after lending all we can afford and donating all that we will we can help them still further by buying at a fair price some of their unprofitable property we ought to do that also. Our European Allies will need money badly in the immediate future whether for another year's campaign or to relieve the overwhelming obligations they have already incurred, and nothing is more natural than that they should desire to realize on their real estate.

Now the territory under European title that would be of greatest value to us and is of the least value to its owners is the Guianas. None of the three is now prospering in spite of the abnormal prices of sugar and rubber. It is just three hundred years since the coast was settled—and nothing but the coast is settled yet. The resources of the vast hinterland, extending to the edge of the Amazon Valley, are still unutilized and are likely to remain so until they pass into the possession of the United States. Neither France nor England will have any cash to spare for the development of this field for a long time to come. Holland, tho not yet involved in the war, is almost as hard up, and, as we pointed out in our issue of July 21 last, it would be greatly to her advantage as well as ours if she would sell us Surinam.

This is the only way for the people of the Guianas to profit by the undeveloped wealth about them. Consider, for instance, the case of Demerara or British Guiana. The project for a railroad from the coast to the Brazilian frontier, which we discussed in The Independent of February 28, 1916, was the one great hope of the inhabitants, but of course they could not now expect the British Government to grant the necessary subsidy. But if British Guiana were transferred to us, either the American Government or American capitalists would speedily furnish the funds, for it promises to be as profitable an enterprize as the Panama Railroad. That was for a long time the only railroad route between the Atlantic and Pacific Oceans. This would be for a long time the only railroad route between the Atlantic Ocean and the Amazon Valley. The watershed at this point is only 400 feet above the sea level. The road need not be more than 280 miles long and its cost is estimated at $5,000,000. For the first part of the route it would pass thru low-lying alluvium, where sugar, cacao and rubber can be grown. Then the road would enter a belt of valuable tropical timber and finally reach the prairies of the upper plateau, which would provide pasturage for herds like those of the Argentine and 6000 miles nearer New York! This seems the simplest solution of the problem of keeping

down our meat bills. The official report of Sir Walter Edgerton, Governor of Guiana, says:

> The best authorities obtainable consider that our savannahs could support three-quarters of a million cattle—more than is required to provide an export of 100,000 head a year; sufficient to provide a railway to the savannahs with adequate traffic to more than cover working expenses.

But besides tapping the interior such a railroad would open up a northern outlet to the Amazon region and all its untold wealth. If we should be unable to obtain British Guiana, the Dutch or the French would serve almost equally well, for they all have forests and savannahs, and any one of them might be used as a direct route into equatorial America. The one that first falls into our possession will be made the Golden Gate to South America. In buying the Danish West Indies we obtained a strategic point of some naval and commercial importance, but offering no possibilities of extensive development. But any one of the Guianas would not only be valuable in itself, but would also open a new trade route of incalculable opportunities. For one thing it would bring us into direct contact with Brazil, whose friendship we are most anxious to cultivate. A railroad from the Amazonas plateau to the north coast would be of even more benefit to Brazil than to the United States, and she would probably coöperate by extending it from the Guiana frontier to Manaos. The Guiana country needs only the touch of modern business enterprize to make it the Eldorado or Golden Land that Sir Walter Raleigh thought it was.

NANSEN'S MISSION AND NORWAY'S NEED

IN these days of special missions from our allies in the Great War we are apt to overlook the delegations that come to us from our allies in democratic idealism, the small neutrals, to offer us their ships and to ask in return for our food. For several months three commissions from Scandinavia, from Norway, Sweden and Denmark, have been in Washington awaiting the answer of our Government to their anxious people at home. The dean of these northern commissioners is Dr. Fridtjof Nansen, the great explorer. Why is Dr. Nansen here? It is because the embargo by the United States has practically cut off all supplies except German coal from Scandinavia, and because the people of these countries face a winter of dire necessity followed by a depletion of their economic resources and threatened starvation. Whatever their exports to Germany may have been in the first years of the war, they are very little now. No food is leaving Sweden; Norway sends Germany fifteen per cent of her fish export, as against eighty-five per cent to England. Denmark is unfortunately obliged to slaughter her cattle in large numbers and sell them to the Central Powers, because she is no longer able to get fodder from the United States with which to keep alive the herds that she has raised so patiently thru the last three decades of diligent agricultural coöperation. The Scandinavian commissioners do not ask us for what we have not got to give. We understand that Denmark no longer seeks our fodder. Norway will be content with rye if we cannot give her wheat. But something her people must have. In return they assure us that none of our exports, or other products released by them, will be re-exported to the Central Powers.

How shall we treat the commissioners? Obviously two policies of war necessity will be advanced: the first is to drive these neutrals into the war on our side. But military experts regard the entrance of any of the Scandinavian Powers into the war at this time as a liability rather than an asset. Denmark would at once become a second Rumania. Nor do we need to win their sympathy with our war aims. The peoples of these three most democratic nations are fully in accord with us. The Swedish people have now repudiated the Government which lent itself to German intrigue, and established a liberal-socialist ministry, each member of which is known to be pro-Ally in sympathy. The second argument in favor of treating Dr. Nansen and his associates coldly is that of economic exigency. Is it not better to starve out all countries adjacent to Germany? There will be less for Germany to draw upon, fewer tempting morsels roundabout to be devoured. Germany will thus be forced to supply to neutrals and deplete herself. She affects to be glad to come to their aid with the supplies which we will not sell them. Already, we are told, she has made shipments of oil and Rumanian wheat to Scandinavia. The danger is that the Scandinavians will thus come to forget both their real friends and the real malefactor.

At this point in the discussion, the moral and political considerations demand a hearing. There will be a world after the war; so we all hope. Can we afford to lose the friendship of the three Scandinavian neutrals? Do we want to drive them permanently into the economic arms of Germany? Do we consent to see crippled, perhaps forever, three of the most highly enlightened peoples on the face of the earth? Obviously there is a balance somewhere between the economic and the political arguments. The War Trade Board and the State Department are doubtless carefully weighing night and day the intricate questions crying for adjustment. Three big factors may be called, first the food question, second the shipping question, and third the question of Swedish iron. It would appear that America must accede to the desires of Dr. Nansen and the Scandinavian commissioners in so far as will keep the northern neutrals from extremities of need and will preserve their sympathy for us, without at the same time permitting them to become a source of economic comfort to our enemies. There is need for speedy adjustment, and we are confident that our Government will give its answer quickly, before the ancient friendship of our great democracy and the three democratic peoples of northern Europe becomes impaired.

CAPTURE THE SOAP BOX

THERE has been much complaint that free speech and a free press no longer exist in America because local authorities have suppress the pacifist agitator and the Postmaster General has debarred seditious publications from the mails. We do not agree with these critics. The Government, which has the right to compel us to do military service, to hand over any part of our income which may be needed for the national defense, to determine what we shall eat and drink, has certainly the right to see that the prosecution of the war is not balked by the copperhead.

Nevertheless, we admit that the repression of the anti-war agitator is as unfortunate as it is necessary. Among other unhappy consequences of repression is that it gives a pretext to the disloyalist to say: "You cannot answer our arguments and so you appeal to force." The soap box disappears and in its place—vacancy. But it is a commonplace of psychology that you cannot replace something with nothing. The only way to make sure of the suppression of error is to teach the truth.

We need to supplement the purely negative censorship of disloyal utterances with a positive campaign of education. Do not take away the soap box; leave it on the sidewalk and let a patriot mount it. Do not let the professional sorehead write all the letters to the correspondence page of the daily paper; let the man of education tell the public the facts of modern international politics. We are fighting in the noblest cause of modern times and we can prove it. Truth is no treasure to be hidden in some guarded vault; it is the irresistible lightning which challenges and slays every error that ventures in its path. Of course, we realize that the patriot is too busy fighting or working in these times to devote much attention to propaganda. The anti-patriot is usually the man of leisure, with little to do but talk and write. But if you find yourself temporarily without other war work you can do something very useful in your country's cause by telling the actual truth to those who have been the victims of the propaganda of our enemies.

THE STORY OF THE WEEK

THE GREAT WAR

November 9—Russian revolutionary movement spreads to Moscow. General Diaz succeeds Cadorna as head of Italian army.

November 10—Italians abandon Asiago. British army advances in Palestine beyond Askalon.

November 11—Kerensky marches against Petrograd rebels. Italians make stand on the Piave River.

November 12—Six British ships sunk during previous week. Battle rages in Moscow between Bolsheviki and Moderates.

November 13—French Cabinet resigns. Germans cross Piave River.

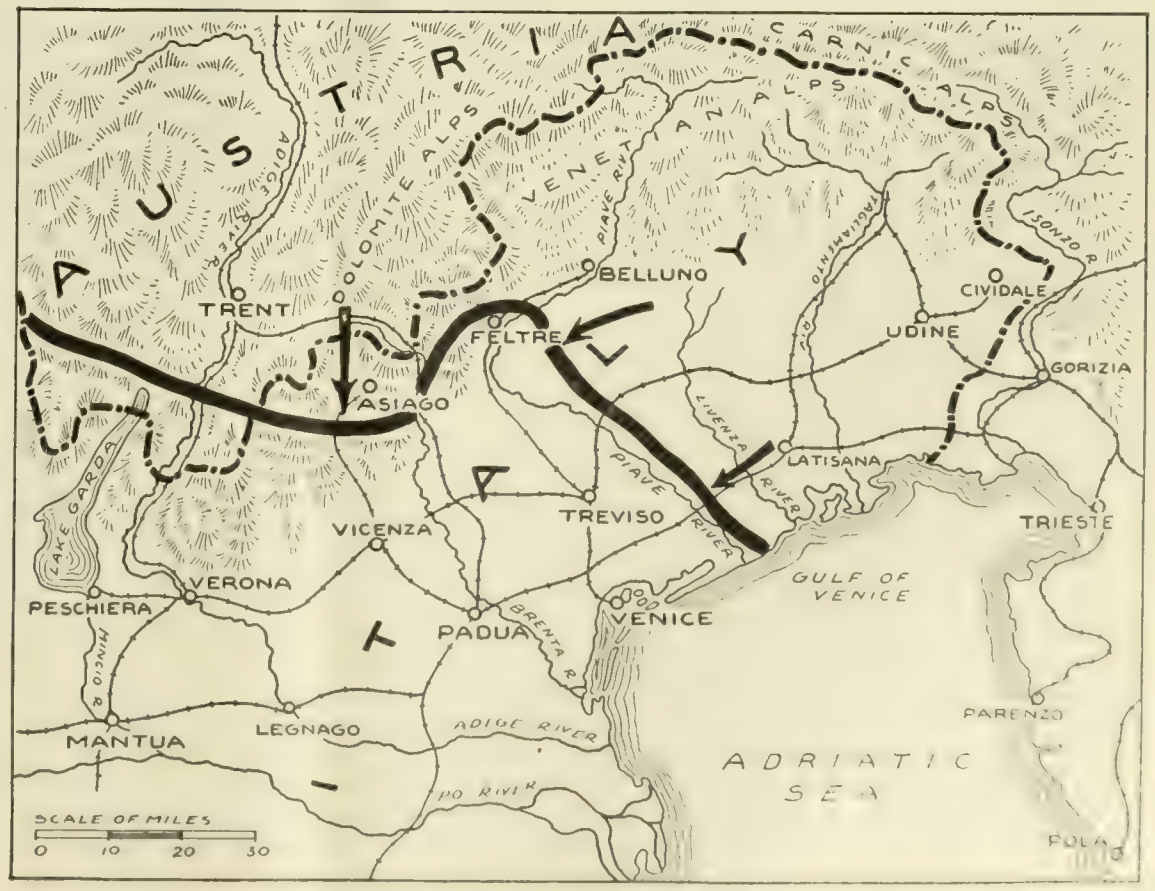
November 14—German attack repulsed at Passchendaele. Fighting in Petrograd suburbs.

November 15—Georges Clemenceau appointed by French President to head new Cabinet. Lord Northcliffe refuses post in British Cabinet.

The Land of Darkness

Since the Bolsheviki outbreak in Petrograd, involving as it did the seizure of the chief means of communication between Russia and the outside world, everything that has happened has taken place behind a curtain of silence which it is still impossible to penetrate. It is as hard to find out what is actually happening in Russia, which is our associate in the Great War, as it is to follow the course of events in an enemy country separated from us by an unbroken barrier of entrenchments. Of course rumors are not wanting, but these are so conflicting that they but increase the darkness of our ignorance. Reports have reached us of a great victory for the Bolsheviki and the retreat of Kerensky's army from Petrograd; of a German attack on Helsingfors, Finland; of the triumphal entry of Kerensky into Petrograd and the crushing of the Bolsheviki in Moscow; of an attempt to make Siberia an independent nation under Czar Nicholas II, who is still an exile in that country, and of negotiations for the formation of a coalition Government containing both Bolsheviki and moderate Socialists.

How many of these reports are trustworthy it would be impossible to say. It seems evident, at least, that Kerensky and his followers fled to Moscow after Petrograd fell into the hands of the Bolsheviki; that he collected a loyal army for the recapture of the capital, and that there was a battle at Gatchina, a few miles south of Petrograd. The Bolsheviki seem still in control at the capital. Nikolai Lenine is the head of the new revolutionary Government and Leon Trotzky the Foreign Minister. Both are suspected of pro-German tendencies. All the other posts in the cabinet have been filled with Bolsheviki, and some of the new rulers of Russia were, prior to their elevation to office, laborers and common sailors. The Russian military forces appear to be divided in their allegiance. The sailors and the Petrograd garrison, together with an indefinite number of the soldiers at the front, are with the Bolsheviki, who have done much to win their favor by declaring the abolition of capital punishment for infractions of military law. The Cossacks and many other sections of the army (including the women's regiments) stand with Kerensky. The Finns are neutral and working for their own independence from any Russian control. Finland is said to have run out of bread and to be on the verge of a general famine.



Is the Submarine Beaten?

During the week ending November 11 the British lost one ship of more than 1600 tons and five smaller vessels. This is not only the lowest record of destruction since the beginning of unrestricted submarine warfare, but a very low record for any period of the war. If the Allied navies can keep future tonnage losses down to anything like this figure the U-boat will have ceased to menace the lines of trans-Atlantic communication and will no longer be able to prevent an increase in the merchant fleets of Great Britain and the United States. It is possible, however, that the submarine slump is temporary; that the majority of the U-boats were kept in port for repairs and reëquipment, and that there will soon be a new outburst of activity. During the same week the French lost two ships and the Italians one. This seems to indicate that the paralysis of U-boat warfare is general and applies to the Mediterranean as well as to the North Sea.

The amount of shipping tonnage at the disposal of the Entente Allies has been increased by the conclusion of agreements with Japan and with the northern neutrals of Europe. Japan will sell outright to the United States a number of her ships in the Pacific in exchange for American steel. Holland and the Scandinavian countries have agreed that commodities sent by the United States shall be consumed within those countries and not reëxported to Germany or used in place of other commodities sent to Germany, and our Government in turn has agreed to permit the neutrals to buy here the foodstuffs and raw materials which they need. This agreement releases many ships at present held up in American ports thru failure to obtain export licenses.

The Campaign of the Rivers

The series of rivers which cross the Venetian plain are so placed that each forms a barrier to an invasion from the east. The Austro-German army of invasion has driven the Italians to abandon each successive line of defense as far as the Piave, and yet these "moat rivers" have been useful to the Italian army in delaying the advance of the enemy and giving the soldiers time to recover their military spirit. The greatest danger for the Italians is not that their front would be directly pierced, for the speed and skill of the retreat and the natural difficulties of the advance have prevented such

THE BATTLE ON THE PIAVE

The Italian army has been forced to abandon in succession the Isonzo, Tagliamento and Livenza rivers as lines of defenses and is now being forced, in the direction indicated by the arrows, beyond the Piave. A further retirement would probably involve the loss of Venice

a disaster, but that a sudden blow from the Trentino would cut the lines of communication of th. army and either force it to make a general surrender or to abandon its positions with disastrous haste. Such a stroke was actually attempted, but the Italians were watchful and did not permit themselves to be surprized. The invaders suceeded, indeed, in taking the town of Asiago in the Venetian Alps, but the Italians replied with an immediate counter-thrust which held the enemy in check.

The Piave did not prove an absolute barrier to the army of invasion. Belluno, a town directly north of Venice and about fifty miles distant from it, was taken on November 11 and over 10,000 Italians were made prisoner in the fighting along the upper Piave valley. The lower part of the river proved to be a good line of defense.

Further details throw new light on the rout in the Julian Alps which was the immediate cause of the whole Italian disaster and the abandonment of more than 2000 square miles of Italy to the forces of the enemy. The portion of the Second Italian Army stationed in the Julian Alps region, was not only honeycombed by seditious propaganda but actually contained spies of enemy nationality drest in the Italian uniform and speaking the language to perfection. False reports, even "faked" Italian newspapers, were circulated among the soldiers. After a period of "fraternization," German shock troops were secretly substituted for the passive Austrian regiments which had held the opposite trenches and clouds of poisonous gas, of at least two kinds, were poured over the Italian lines preparatory to the attack. Panic seized even the troops in the rear trenches, and those front line troops who chose to hold their positions found themselves without support and were speedily killed or captured.

Unity for Victory

As a direct result of the Italian collapse, which was due in part at least to the failure of war supplies to reach Cadorna's army, the Western Allies have created a common war council for the adjustment of military problems of common interest. The three members of the interallied military committee appointed to have charge of the war zone from the Flanders coast to the Gulf of Venice, are General Cadorna, who was recently succeeded by General Diaz as chief of the Italian army, General Wilson, of the British army, and General Foch, Chief of Staff of the French War Ministry. General Cadorna, however, is said to have refused the post offered to him. Other nations at war with Germany will be asked to participate so that the whole military problem on all fronts may be treated as a unit. Each nation taking part will appoint a permanent military representative as adviser to the war council who would be independent of the general staff of that nation. These military representatives and their assistants will remain in permanent session at Versailles and will act as advisers to the Allied governments. At a reception in Paris, Premier

VICTORY IN THE HOLY LAND

General Allenby is directing the Allies' campaign in Palestine, which has accomplished the defeat of all the forces Turkey could send against it

Lloyd George explained why the creation of an international war council had become a necessity. He instanced the destruction of Serbia as a military factor in the campaign of 1915 as an example of the failure of the Entente Allies to coöperate. Russia could send no help, Italy was unwilling to do so, the British and French sent a small expedition to Salonica which arrived too late to stop the German drive. "Half the men," he declared, "who fell in the vain effort to pierce the western front in September that same year would have saved Serbia, saved the Balkans and completed the blockade of Germany." In 1916 Rumania was sacrificed in exactly the same way, each of the Allies preferring to take care of the war zone nearest home or of greatest national interest. "Italy's misfortune," he continued, "may still save the alliance, because without it I do not think that even today we would have created a veritable superior council." He exprest regret that the urgency of the Italian situation made it necessary for England, France and Italy to form the council without consulting the United States or Russia, but he hoped that these nations would soon be represented on it.

The March on Jerusalem

General Allenby's present campaign in Palestine is causing something like panic in Turkish military circles. The British have not advanced far into the enemy's country but they have advanced over and thru Turkish armies sent to bar their passage and, unless Germany comes to the rescue of her hard-prest ally, the Jews and Syrians will soon be under the shelter of the Union Jack and no longer subject to the tyranny of the Crescent. The British army is advancing northward with cavalry, artillery, "tanks" and airplanes; supported on the Mediterranean coast by detachments of the British and French navies. While engaged in this work of coöperation a British destroyer and a monitor were sunk by an enemy submarine.

On November 9 the British army took the city of Askalon and with it 700 Turkish prisoners and thirteen cannon. The retreating Turks, who were supported by Austrian artillerymen, fell back on Hebron, about twenty miles south of Jerusalem. During the whole campaign the Turks are estimated to have suffered more than 10,000 casualties, exclusive of their loss in prisoners.

Foreign Secretary Balfour has promised British favor for the establishment of a Jewish nationality in Palestine. The British stipulate, however, "that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine or the rights and political status enjoyed by Jews in any other country."

French Ministry Quits

On November 13 Premier Painlevé and his associates placed their resignations in the hands of the French President. According to French practise a ministry is required to resign whenever the popularly elected Chamber of Deputies refuses a vote of confidence. This custom makes for much more frequent cabinet changes than the German system of appointing ministers at the will of the Emperor, the American system of making them responsible to a President with a fixed term of office, or the English system of keeping ministers in office so long as the political party to which they belong can hold a majority on important questions of legislation. An accidental coalition of political factions and groups having little in common but discontent may at any time upset a French ministry, and it is rare for such an overturn to cause any important change in the course of national policy. The Painlevé ministry had

held office for barely two months before its overthrow.

The resignation of the French cabinet followed a debate on the creation of the new war council of the Entente Allies. Several deputies raised the point that an advisory military council was not enough; the situation demanded a supreme military command. The Chamber of Deputies, however, voted by a small majority to endorse the action taken by the Government in establishing the council. The opponents of the ministry then demanded an immediate discussion of various rumors of plots and conspiracies, involving some Frenchmen high in public life, which grew out of the recent arrest of "Bolo Pasha" for treason. The Premier asked that discussion of these questions be postponed until the end of the month. The Chamber of Deputies refused by 277 votes to 186 to consent to this. The Socialists withdrew their support from the Government on the test vote and the "Right," or conservative parties, went over to the opposition. Faced by this coalition of conservatives and extreme radicals the Government was left in a minority and forced to resign. Georges Clémenceau has been selected as successor to Premier Painlevé.

China Protests

The Lansing-Ishii agreement, which aimed to settle outstanding disputes in the Far East and to prevent their recurrence, has been received in the United States with enthusiasm, in Japan with approval and in China with no little protest. On the surface, this is hard to understand because China is the greatest gainer by the agreement, which guarantees her national independence and her right to trade at will with any other nation. The probable explanation is that the Chinese feel their dignity somewhat affronted by the conclusion of any treaty in respect to China without consulting the nation chiefly concerned. Some of the Chinese may also see a menace in the recognition by the United States of the fact that "Japan has special interests in China, particularly in the part to which her possessions are contiguous." But since those "special interests" already existed, and even threatened to develop into something much more menacing to the integrity of the republic, it must seem to the foreign observer that China gained much and lost nothing by the conclusion of the agreement between the United States and Japan. However that may be, the Chinese Minister to Tokio presented a formal protest against the Lansing-Ishii agreement from his Government on November 9, and Dr. Koo, the Minister to the United States, presented a similar protest at Washington three days later.

Peace Talk in Germany

It is impossible to guess at this early stage what may be the effect upon the public opinion of the Central Powers of the civil war in Russia and of the Italian retreat from the Isonzo. The comments of the German press which have reached America show surprizingly little enthusiasm for the Bolsheviki cause in Russia. It may be that the Germans fear that these pacifists will not be able to keep their hold and that any settlement made with them will be overturned by a counter-revolution, or it may be that the Germans dread anarchy upon their eastern frontier as much as they do a hostile army. The improved military situation will, however, encourage the Germans and Austrians to keep on fighting during the hungry winter and may possibly save Chancellor von Hertling from being forced out of public life like his predecessors, Chancellors von Bethmann-Hollweg and Michaelis.

The new Chancellor, after assuming office, held a consultation with the party leaders in the Reichstag and also with the chief generals of the army to make certain that he had sufficient support in every quarter to enable him to rule the Empire in security. The National Liberals, the Center or Clerical party, the Progressives, a majority of the Socialists and many Conservatives pledged their support to his administration. The Independent or anti-war Socialists and the Pan-German Conservatives, the two extreme groups of the Reichstag, are alone in refusing to rally around the new administration. A number of prominent Reichstag leaders are suggested for important posts in the Imperial and in the Prussian Governments, both of which are under the direction of Chancellor von Hertling. The Chancellor is said to have endorsed the peace program of the Reichstag and the German reply to the Pope's peace message, and to favor the reform of the Prussian franchise.

The conferences between the Chancellor and the Reichstag leaders are viewed by some Germans as a great advance in the direction of Parliamentary control of the Government.

British Discuss Peace Terms.

The House of Commons on November 6 held a formal debate on the question of terms of peace. The issue of immediate negotiations was raised by H. B. Lees-Smith, a Liberal member of the House and one of the leaders of the pacifists. He offered a resolution declaring that:

This House is of the opinion, providing

© *International Film*

WHEN THE SUGAR GAVE OUT

The temporary shortage in sugar found unpreparedness thruout the country and people found it hard to adjust themselves at once to the "sweet uses of adversity." These protests of the poor were photographed in Boston

satisfactory guarantees can be obtained with regard to the independence and restoration of Belgium and the evacuation of occupied territory, that no obstacle should be placed in the way of preliminaries toward negotiations for a peace settlement which ought to embody an equitable solution of the problem of Alsace-Lorraine and of devising the enforcement of effective international machinery for the avoidance of future wars.

Mr. Lees-Smith in moving his resolution asserted that the Entente Allies had entered into secret agreements embodying war aims that, if realized, would be the cause of future wars. He mentioned particularly the rumor that Germany, in addition to Alsace-Lorraine, was to lose other territories along the Rhine if the Allies were triumphant. He advocated the abandonment of the idea of conquests, the revocation of the Paris resolutions looking toward a partial economic boycott of Germany after the war, and the immediate summoning of a peace conference.

Mr. Balfour, Secretary for Foreign Affairs, replied. He denied that any secret treaties dealing with peace terms existed and said that "It never was, and is not, the object of the Allies to take from the German Empire admittedly German territory." "Is it imperialistic," he asked, "to desire to see an independent Poland? Is it imperialistic to desire to see Armenia released from the tyranny of Turkey? Is it imperialistic to desire to see Alsace-Lorraine restored to France? Is it imperialistic to desire to see Italy embrace those of her own race, civilization and language? Is it imperialistic to desire to see Rumania under Rumanian rule? Is it imperialistic to desire to see the Serbian community again a great and flourishing united power?" Thus he reaffirmed the principle of nationalities as the essence of the peace terms of the Allies and repudiated all rumors that any violation of this principle was contemplated by them. The House of Commons then voted, by 282 votes to 33, to close the discussion, and Mr. Lees-Smith's resolution was rejected without a division.

Northcliffe Assails British Government

Lord Northcliffe, who has returned to England from his war mission to the United States, has rejected the position of Minister of Air Operations, offered to him by Premier Lloyd George. The tone of his letter is one of marked discontent with the present British Government and seems to foreshadow an attempt to overturn the cabinet. This is by no means an impossibility, for Lord Northcliffe's opposition, voiced by the chain of newspapers which he controls, was largely responsible for the overthrow of the Asquith ministry and the elevation of Premier Lloyd George to his present post.

In his letter Lord Northcliffe praised the war preparations of the United States and Canada "little understood on this side of the Atlantic" and contrasted them with the mismanagement prevalent in England where "there are still in office here those who dally with such urgent questions as that of the unity of war control, the eradication of sedition, the mobilization of the whole man and woman power of the country and the introduction of compulsory food rations." He also criticized the censorship and "the absurd secrecy about the war which is still prevalent." "Unless," he declares, "there is swift improvement in our methods here the United States will rightly take into its own hands the entire management of a great part of the war. It will not sacrifice its blood and treasure to the incompetent handling of affairs in Europe."

Laurier Presents His Platform

The Canadian Government announces that a general election will be held on December 19 for the Dominion Parliament. The coalition Government of Conservatives and Liberals which is headed by Premier Robert Borden has appealed to the people for support in the interest of the vigorous prosecution of the war. The election will be fought under the new franchise which gives the vote to soldiers and the immediate relatives of soldiers, even if they are women, and deprives recently naturalized persons of enemy birth from sharing in the suffrage. Owing to the fact that so many Canadians are now fighting in Europe, the final returns will be delayed and the result of the election may not be known with certainty till January.

The leader of the opposition, Sir Wilfrid Laurier, has announced the policies which he will put into effect if the result of the election enables him to assume office. He opposes the draft and promises to suspend its further operation until the Canadian people have had a chance to vote on the question by referendum. It will be remembered that in Australia a compulsory military service law was defeated when submitted to popular vote and has not since been introduced. But the present Canadian election will practically be a referendum, for the one great issue of the campaign is the draft law. Sir Wilfrid Laurier also attacks the Government policy on the ground that "it conscripts human life only and does not attempt to conscript wealth, resources, or the services of any persons other than those who come within the age limit prescribed by the Military Service Act." He promised to meet the economic problems of Canada by repealing the additional tariffs imposed during the war, by controlling foodstuff, producing factories, and by using the strong arm of the law to put a stop to profiteering. If necessary, he declared, the Government would not hesitate to take control of all the war munitions factories of the Dominion.

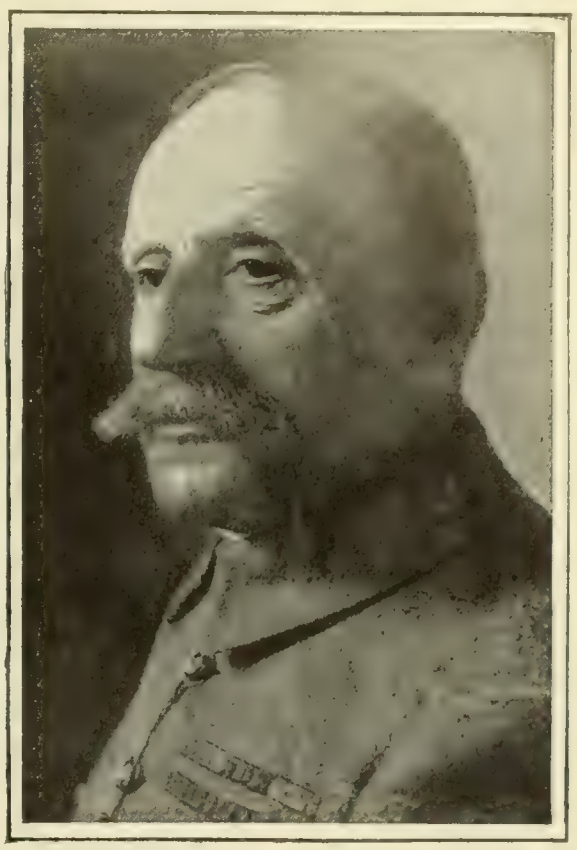
Inquisitive Uncle Sam

Every man who is registered for the draft will soon have an opportunity of telling the military authorities of the nation all about his private affairs. The Government has prepared an elaborate questionnaire, which will be sent to registered men about December 15, designed to make possible the distribution of these men into five general classes arranged in the order in which they will be summoned for service. The first draft was necessarily a hit or miss affair, in which the question of exemption was decided for each individual by local draft boards. Many were taken into the army who would have been of greater service to the nation had they remained in civil life. But the second draft will be based on a carefully gathered mass of information which will make infinitely easier the task of the draft boards.

The questionnaire is divided into twelve sections. The first, which must be answered in full by all registered men, asks information as to the name, address, age, parentage, schooling and occupation of the person to whom it is sent. The second section inquires into the registrant's physical fitness. This schedule enables registrants to make a claim for exemption on grounds of health; tho no one, of course, will be taken into the army without a physical examination. Sections three to eight inclusive make it possible to claim exemption on such grounds as holding a federal office, being a minister of the gospel or a student of divinity, being already in the army or navy, being an alien or being a state or municipal official, a custom house clerk, an artificer in an armory or navy yard, a pilot or a mariner. Exemptions on some of these grounds are not absolute, but, if allowed, they

THANKSGIVING DAY

From President Wilson's Proclamation



"We have been given the opportunity to serve mankind as we once served ourselves in the great day of our Declaration of Independence, by taking up arms against a tyranny that threatened to master and debase men everywhere and joining with other free peoples in demanding for all the nations of the world what we then demanded and obtained for ourselves. In this day of the revelation of our duty not only to defend our rights as a nation, but to defend also the rights of free men thruout the world, there has been vouchsafed us in full and inspiring measure the resolution and spirit of united action. We have been brought to one mind and purpose. A new vigor of common counsel and common action has been revealed in us. We should especially thank God that in such circumstances, in the midst of the greatest enterprize the spirits of men have ever entered upon, we have, if we but observe a reasonable and practicable economy, abundance with which to supply the needs of those associated with us as well as our own. A new light shines about us. The great duties of a new day awaken a new and greater national spirit in us. We shall never again be divided or wonder what stuff we are made of."

postpone the time when the registrant will be summoned for service. Section nine is for the member of a religious sect which has conscientious scruples against war. Section ten, which goes into much detail, permits the registrant to specify the persons dependent upon his earned income and to offer proof of this dependency. Sections eleven and twelve, the most elaborate of all, deal with industrial and agricultural occupation in order that it may be possible to determine how "essential" to the war necessities of the nation is the work of the registrant. Every registered man, even if he was exempted by the draft tribunals last summer, must return the questionnaire sent him within a week of the time he receives it, with every query which concerns him fully and accurately answered.

Because of the difficulty which many persons of slight education, or unused to filling out detailed printed forms, may experience in complying with the requirements of the Government, President Wilson has asked "men of the legal profession to offer themselves as associate members of the legal advisory board to be provided in each community for the purpose of advising registrants of their rights and obligations and of assisting them in the preparation of their answers." So if anyone finds any difficulty in understanding the questionnaire, he can find a lawyer to tell him, without charge, just how he should answer. This is the first war work which lawyers, as a profession, have had a chance to perform for the nation.

TO THE AID OF ITALY

General Wilson, of the British army, and General Foch, one of the most prominent of French military chiefs, have been designated advisers of the Allied defense in Italy. This appointment, like the decision to hold a war council of the Allies in Paris, is a definite step toward the achievement of real coöperation among the forces that are fighting Germany

National Defense Council's Work

The Government has summarized for the public the work of the Council of National Defense, its advisory commission of experts, and the various boards and committees subordinate to the Council. In the matter of administrative organization the Council has to its credit the creation of the War Industries Board for the purchase and most useful distribution of the munitions of war; the establishment of an Aircraft Production Board, which developt the so-called "Liberty motor" and is now at work on the greatest airplane building plan in history; the establishment of a General Medical Board, consisting of many of the most highly qualified surgeons and physicians of the country; the selection of physicians for the Medical Officers' Reserve Corps and the standardization of surgical instruments and supplies; the creation by the President on the advice of the Council of a Federal Labor Commission to settle labor disputes affecting the work of the war; the organization of a conference of State authorities in Washington under the auspices of the Council, and the sending of a railroad committee to Russia and the enlistment of reserve engineer regiments for the railroads of France.

Besides the prosaic, necessary task of creating administrative machinery, the Council claims the credit of securing raw materials for the use of the army and navy at prices much below current market rates; the encouragement of coal production; the elimination of the middleman in purchases made on behalf of the Government; the rapid construction of training cantonments for the National Army; the creation of the standard heavy war truck; the mobilization of the 262,000 miles of railroad in this country for the Government's defense; close coöperation with the telegraph and telephone companies in developing rapid communication by wire in the interest of the war activities of the nation, and the maintenance of peace-time labor standards even under the stress of war.

War Bread

President Wilson, acting under the authority of the Food Control Act, has extended the supervisory power of the Food Administration to the manufacture of bread and other bakery products. All persons or organizations who manufacture for sale bread, cake, rolls, crackers, biscuit, pastry or in other ways consume flour in food production are required to procure a license on or before December 10, 1917, unless their monthly consumption of flour or meal amounts to less than ten barrels. This exception will exempt a few small-scale bakers from the regulations of the Food Administration, but, on the other hand, the restaurant, hotel, boarding house or club which bakes its own bread in large quantities is in the same position as the regular baker.

The new regulations impose upon the bakers and hotel men a standard loaf of bread. One pound is set as the minimum weight, but pound and a half, two pound and four pound loaves are also tolerated. The use of sugar is limited to three pounds to a barrel of flour. Lard or other shortening of animal origin must not be used in excess of two pounds to a barrel. Milk used in bread manufacture must be skimmed. Bakers are not allowed to accept the return of unsold bread. Various kinds of fancy rolls are banned. A reduction of price to consumers who carry home their own purchases is suggested but not made compulsory. Mr. Hoover asserts that, apart from the cost of delivery, it would be possible to sell bread for seven cents a pound loaf. The estimated saving to the nation thru the regulation of the baking industry has been placed at 600,000 barrels of flour, 100,000,000 pounds of sugar and 100,000,000 pounds of lard. Since, however, three-fifths of the nation's bread production comes from the home kitchen and only two-fifths is made in bakeries or hotel kitchens, it is of the greatest importance that the housewife should follow voluntarily the same counsels of food economy which are imposed on the baker by Federal authority.

Wilson Appeals to Labor

At the Buffalo convention of the American Federation of Labor President Wilson was the guest of honor and the chief speaker of the occasion. We print a portion of his speech on another page of this issue. He explained the war policy of the United States at greater length than perhaps on any previous occasion. He showed that by the peaceful competition of trade Germany was winning all the wealth and power that any nation could wish for, but that the Germans "were not content with success by superior achievement; they wanted success by authority." He declared that the Berlin to Bagdad railway was not undertaken as a commercial speculation but "was constructed in order to run the threat of force down the flank of the industrial undertakings of half a dozen other countries."

THE LEADERS OF BOLSHEVIKI REVOLT

Premier Lenine, suspected of German affiliations, and Leon Trotzky, popular demagog of the Russian pacifists, are addressing two of the street meetings by which they aroused the revolt against Kerensky. The left-hand photograph shows Trotzky; in the one at the right is Premier Lenine

President Wilson described the present status of the Pan-German dream of conquest in vivid terms:

> Take the map and look at it. Germany has absolute control of Austria-Hungary, practical control of the Balkan States, control of Turkey, control of Asia Minor. I saw a map in which the whole thing was printed in appropriate black the other day, and the black stretched all the way from Hamburg to Bagdad—the bulk of the German power inserted into the heart of the world. If it can keep that, she has kept all that her dreams contemplated when the war began. If she can keep that, her power can disturb the world as long as she keeps it, always provided—for I feel bound to put this proviso in—always provided the present influences that control the German Government continue to control it.

The President exprest his wonder that any revolutionary faction in Russia could dream that its new found liberties would remain secure in the immediate neighborhood of a powerful and hostile despotism. The only road to peace lay thru victorious war:

> What I am opposed to is not the feeling of the pacifists but their stupidity. My heart is with them, but my mind has a contempt for them. I want peace, but I know how to get it, and they do not.
>
> You will notice that I sent a friend of mine, Colonel House, to Europe, who is as great a lover of peace as any man in the world, but I did not send him on a peace mission. I sent him to take part in a conference as to how the war was to be won. And he knows, as I know, that that is the way to get peace if you want it for more than a few minutes.

The attitude of the convention as a whole was one of aggressive loyalty and zeal for the national cause. The report of the executive council of the American Federation of Labor declared it an imperative duty of all American citizens to "support our Government in its righteous effort to defend principles of humanity and to establish democracy in international relations." The report demanded "adequate and direct" representation at the forthcoming peace conference for organized labor. The declaration on foreign policy opposed "indemnities and reprisals based upon vindictive purposes" and all hostile economic leagues after the war, but it permitted indemnities "to right manifest wrongs." All territorial changes were opposed "except in furtherance of the welfare of the peoples affected." The declaration on domestic policy opposed child labor, indorsed the basic eight-hour day, favored equal pay for men and women workers and urged a national employment bureau to secure a distribution of labor according to the war needs of the country without resorting to any form of industrial conscription.

Labor Unions Denounced

At a very unfortunate moment, while the American Federation of Labor was passing resolutions expressive of loyalty to the nation and the Government was engaged in delicate negotiations with the railroad unions, President Barr of the National Founders' Association took occasion to denounce all labor unionism unconditionally and even to accuse the Department of Labor of acting as a catspaw for the trades unionists. He assailed with particular vehemence the introduction into industry of the eight-hour day. "In war time," he declared, "the eight-hour day is a luxury which must yield to the demands of national necessity."

The convention of the Founders' Association sent a telegram to President Wilson denouncing the "autocracy of labor," demanding that "industrial and labor conditions as existing prior to the war should exist for the duration of the war" and declaring that "any action to the contrary, whether of industry shirking its duty or labor interposing restrictions of production or attempting to change existing conditions, should be recognized as treason and punished as such." The National Founders' Association is said to contain the employers of more than 500,000 steel and iron workers.

The Railroad Labor Crisis

A referendum on the question of submitting to the railroad companies demands for wage increases aggregating $109,000,000 a year has been secretly taken by the railroad Brotherhoods of Trainmen and Conductors. One hundred and seventy thousand men are involved in the movement. If the managers reject the wage increase demands, after the union leaders have been authorized to present them by a favorable referendum vote, there will be still another referendum necessary to call a strike. The engineers and firemen have not as yet taken any stand on the strike question, but they will almost certainly follow the example of the other two Brotherhoods if matters come to a crisis. The American Federation of Labor, it is understood, will refuse to give any moral or material support to the four railroad Brotherhoods if they should decide to reject Federal mediation and start a general strike in war time. President Gompers and the other leaders of the American Federation of Labor have actively exerted their influence to stop strikes, especially on such Government work as arsenal construction.

The railroad Brotherhoods will probably accept Federal mediation rather than run the risk of alienating public opinion, especially in labor circles. They will also discover a new and more stubborn temper in the national administration than when they prest their wage demands in time of peace. President Wilson significantly wrote to Judge William L. Chambers of the Federal Board of Mediation and Conciliation: "The last thing I should wish to contemplate would be the possibility of being obliged to take any unusual measures to operate the railways." Some interpret this statement as a threat to take over the railroads and have them run directly by the Government.

THE PROMISE OF GREAT RUSSIA

BY MEYER LONDON

Examination into the economic and social causes of the Russian revolution enables us to understand and predict in part the future Russia which it is instrumental in producing. Mr. London, a native Russian, is particularly well fitted to do this. He has the distinction of being the only Socialist Member of Congress.—THE EDITOR.

THERE is a distressing lack of information about Russia. Not only is there an absence of knowledge of present events, which is bad enough, but there is a failure to grasp the meaning of those forces the working of which has resulted in the greatest change in modern history.

While Russia was ruled by a Czar our press was reticent about Russia. The Duma, Russia's parliament, had been for years the storm center of the inevitable revolution. The parliamentary battle of the people with their Government, a struggle that waged fearlessly and unremittingly, went unnoticed.

The revolution came as a surprize and looked to the uninformed as the work of a handful of men. I cannot undertake in the brief space allotted to me to enter into a historical analysis of the causes of the upheaval.

The average newspaper correspondent, no matter how well intentioned, unfamiliar with the language of the country, seeing things that strike the eye only, necessarily limiting his observation to the surface of things, cannot give us an adequate idea of the most significant factors in the remaking of Russia.

That is why some of the slogans of the revolution appear so ultra radical and so impossible. Many fear even a return to previous conditions. Such a thought is inconceivable to me.

The autocracy was a mere superstructure. The people never knew the Government except as an oppressor. The Government was never a source of help. It was there to check, to prevent, to obstruct, to postpone. The removal of the old Government did not involve an organic change. A heavy stone was rolled down from the shoulders of a people.

The spiritual as well as the material needs of the people had no connection with the existence of their Government. It was not the case of destroying an institution that permeated every branch of life of the people. It was the cutting away of an unhealthy growth from the body politic.

One should not fear a return of the old régime.

The country is essentially democratic. There is alarm here over the demand for the re-distribution of land. To the uninitiated it looks like the old-fashioned agrarian rebellions. It is nothing of the sort. The principle of collective ownership of land is strong in the economic life of the people. The village community owns the land in common today. The efforts made since 1905 to introduce private ownership in the village community have proven abortive.

While the theory of collective ownership of land is firmly imbedded in the the thought of the people, only twelve per cent of the land is owned collectively by the people, while eighty-eight per cent is under individual ownership. Of this eighty-eight per cent one million square miles (640 million acres) was the property of the Czar and his family. All this of course will go to the people. The property of the church will also go to the people. The problem of endowing the farmer with sufficient land to live on is a practical problem, not a dream of dreamers, but an immediate reform the accomplishment of which is within the reach of the people. Not a theory to be debated, not a new gospel, but a mere application and extension of a principle strong in the lives of those who live by the work of their hands and in the sweat of their brows. Those who still reap the benefits of the old feudal system and who own millions of acres of land may not grasp the importance of it. To them the demands of the Russian peasant may mean bloodshed, violence and all sorts of horrors, but to the student of Russia it means only the next step to be taken in building Russia's future.

The program of the peasantry consists of the two words "land" and "liberty." This was the slogan of the Russian people for more than sixty years.

Russia's peasantry wants access to the land. Their demand is no more revolutionary than the American Homestead Law was revolutionary. The platform will now become a reality. It is only a question of method, of tactics. Russia's sacrifices will have been in vain unless the great masses of the people will gain access to the land.

Take the subject of woman suffrage, a smile goes over the face of the American who reads about the enfranchisement of women in Russia. With a majority of the states of the Union looking upon the very idea of political equality of women as a dangerous heresy, he cannot get himself to understand how that Slav democracy, only a day old, seeks to outdo him, to outstrip republican France, to excel old England. How presumptuous, indeed. But there is nothing peculiar about it. The emancipation of women has been for more than two generations an accomplished fact in that strange land. The Russian woman was probably the first woman in the world to obtain the privilege of attending universities. She was the first to rebel against stifling conventionality. And then her part in the revolutionary movement.

The martyrology of that sad people

Photograph by Donald Thompson from Underwood & Underwood

A mob of Russian women marching to the Duma to present their demands

abounds with the names of women. Out of a batch of seven hundred and seventy political prisoners during three months in one year, one hundred and fifty-eight were women.

The chief of the secret service reported to Alexander II in 1874 that in the most aristocratic families the women were the most dangerous revolutionists. Three of the women mentioned in that report are alive today and are shaping the course of the revolution. Vera Zasulich, Cathrine Breshkovskaya and Vera Figner, who has survived twenty years of solitary confinement.

Women marched under convoy to Siberia and ascended the scaffold alongside of men. She did not claim superiority and no one dared to question her equality. The extension of the suffrage is but a recognition of her share in the rejuvenation of a people.

The problem is not so simple when one approaches the industrial situation. Russia's industries are still undeveloped. The efficiency which comes from the organization and concentration of capital is unknown. While there is plenty of striving for industrial democracy the necessary preliminary for democracy in industry is absent. There is no foundation upon which to build. The prerequisite of a highly organized capitalistic state is missing, and it will be up to Russia to show whether democracy in industry can be attained by the mere strong desire to be democratic. In any event, the barbarity which accompanied the growth of industry in other countries will be avoided. There will be no exploitation of women, no crushing of children, no suppression of labor organizations, no class legislation by the money bag.

And if anybody had any doubt as to the genuineness of Russian democracy, that doubt should be dispelled by Russia's attitude in the war. Hungry, exhausted and bleeding at every pore, Russia announced her readiness to support her allies. All she asked was the elimination of selfish designs and the proclamation of a higher code of international morality. What a pity that the Allies have not yet grasped the full import of her plea.

New York City

TWELVE LOYAL FISHERMEN

ANOTHER PHANTASM OF WAR BY AMY LOWELL

Thousands of Tiny Fish-hooks Found in Canned Meat for the Allies. Employees of German Extraction or Sympathy Discharged.—Daily News Report

And were of good report.

The winter evenings they did spend
With pipes and cards and beer,
But on a certain night one said,
"Brothers, the Spring is here.

"Our fishing time has come," said he,
"The signs are very plain;
The thunder mutters in the air,
And I can smell the rain.

"The fish will soon be rising,
And we must be prepared;
It's time we got our tackle
That not one may be spared.

"For the first man who angles
Above a swollen stream
Is he who overflows his creel
With spotted trout and bream.

"I know you've saved your silver
The whole long winter thru,
So let us count it bit by bit
And see what we can do."

Bit by bit they counted,
And quarters, nickels, dimes
Fell scattering on the table
Like sweetly ringing chimes.

Twenty broken dollars
They made it at the end.
And those with more divided,
And gave part to a friend.

"We'll buy our tackle separately
So none will be the wiser,"
Then each raised up a mug of beer
And whispered: "Hoch der Kaiser!"

Next day, twelve valiant fishermen,
After work was done,
Slipt into twelve little shops,
And oh! they thought it fun.

Fun to kill the silly fish
Jumping at a fly,
Fun to hook the foolish fish
And watch them gasp and die.

Twelve little bits of packets
Neatly tied with string.
"Tomorrow," said the fishermen,
"We'll do this splendid thing.

"For fish must eat or perish,
They never think of hooks,
And ours will be a doughty deed
Which men will print in books."

That night the twelve bold fishermen
Lay staring at the dark,
Until the round-edged sun uprose
To pace them to the mark.

Each stalwart sportsman shut his door
And stepped out in the street
At half-past six, but none of them
The other ones did greet.

All silently they took their way
As tho out for a stroll;
But how comes it that not a man
Has either rod or pole?

All silently they take their way
Along streets dry and brown,
But something very strange is here,
For they go to the town.

Toward the smoky town they go,
And the clanging of a bell
Blows by upon the gusty wind
And each man knows it well.

It calls them to their daily task
Of canning fruits and meat,
But where is the twinkling silver
stream
And where the woods so sweet?

Can fish be caught within the walls
Of a gloomy cannery?
I pray your kind indulgence, friends,
For wait, and you shall see.

Twelve fishermen, all primed for sport,
With bait right to their hands:
It's ham for this, and beef for that,
And chicken of all brands.

Quick, pack the meat within the cans
And pack in with it, too,
The contents of those packets.
A pleasant thing to do.

A lively sport this morning!
Ten thousand tins of meat
Each specked with tiny fish-hooks
For soldier-men to eat.

Goring, gashing fish-hooks
No bigger than a pin.
And all the twelve bold fishermen
Are working with a grin.

Such fishing never was before,
And ne'er will be again,
"We've torn the entrails out of
Three thousand fighting men!"

So sang the loyal fishermen
In the silence of their souls,
But—"Ouch!" said the inspector,
For his hand was full of holes.

Now where are those gay fishermen!
For not one can they see,
Altho they've searched for many days
About this broad countree.

One of the chief results hoped for from the war council is the coördination for efficiency of the resources of the Allies, and some definite action with a view to reconciling the varied and often conflicting needs of the European nations for commercial and financial aid from the United States

HAVING A GOOD TIME

BY THE WRITER OF "CONFESSIONS OF A WESTERNER"

AFTER fourteen years' residence in New York City, which makes me one of the "early settlers" in that great whirlpool of ever-shifting population if not quite the "oldest inhabitant," I have come to the conclusion that the reason why New York stands first in wealth, trade and productive industry is that the people of the city keep at work most of their waking hours. They dare not stop, because they don't know how to play. Under the fierce pressure of business the New Yorker loses his health and the family physician makes him stop for a while to recuperate. Under the still fiercer pressure of public opinion, especially as voiced by his wife and daughters, the New Yorker enters "Society." But play in the true sense of the word is unknown to the dweller in great cities.

A single fact suffices to prove my contention up to the hilt. At the admirable recreation centers of New York and similar crowded municipalities there are men and women paid by the public purse to teach the children of the poor to play. Teach *children* how to play! Do you realize the ghastliness of it? In the Rocky Mountain community where I spent the first eleven years of my life the great educational problem which drew furrows down the foreheads of teachers and parents was to get the children to stop playing long enough to study their lessons and bring in the wood. Yet there is no question that the money given to the playgrounds of New York is well spent, for the small boy of Gotham has less ingenuity and imaginative resourcefulness than a savage of the Australian bush. He can *be* amused if taken to the moving pictures or to Coney Island, but he cannot amuse himself.

TAKE the question of holidays. I had not spent a year in New York before I noticed that the children failed to observe times and seasons in the ritualistic fashion dear to the tradition of youth. There was a horrible sameness in their way of celebrating every red-letter day in the calendar. On New Year's Day they wore masks, blew tin trumpets, begged pennies and made chalk marks on gentlemen's coat tails. Very good. But on April Fool's Day they wore masks, blew tin trumpets, begged pennies and made chalk marks on gentlemen's coat tails. They repeated all this on Easter, Decoration Day, the Fourth of July, Hallowe'en, Thanksgiving and Christmas. In the West each holiday had a subtle flavor of its own. St. Valentine's Day was sacred to valentines and Easter to colored eggs (colored from our own paint boxes, by the way; not bought ready made at the store). Chalk was all right for April Fool's Day but out of the question on any other holiday with the possible exception of Hallowe'en. The Fourth of July was for pyrotechnics and nothing else. On Hallowe'en many things might be done. The favorite amusement was to unhook the gates from people's wooden fences and secrete them till the following day; but there were many less questionable diversions, such as bobbing for apples in a tub of water, trying to get a bite out of apples swinging on a string and the careful manufacture of pumpkin ghosts (carved from real pumpkins, *not* the miniature imitations palmed off on the city children). Thanksgiving meant football, turkey, cranberry sauce and mince pie. Christmas meant a spruce tree in the parlor and the giving of presents. A stranger who had forgotten the time of year could always fix the date by watching how the children spent a holiday.

THE same passion for monotony which obliterates the distinction of times and seasons to the child of the big city obliterates also the distinction of ages. Out of a thousand games which are the heritage of the race one has swallowed up all the rest, as Aaron's rod devoured those of the false prophets. This is baseball. Boys of three and a half spend all their play time batting rubber balls with sticks, and at seven, ten, thirteen and seventeen they remain devotees of the game; drawn by the diamond as if it were a lodestone. As the children grew older the ball became harder, the equipment more costly, the pace swifter, the rules more exacting. Other change there was none. Watch the boys playing on any vacant lot in New York City at any season of the year and you will find them playing baseball and rarely anything else. Baseball is a good game, but it does not deserve a monopoly.

At any rate, the children really play baseball. But the adult New Yorker (unless he is rich enough for golf and polo) usually confines his athletic life to viewing professionals play the only game which he learned as a boy, or to standing on the sidewalk to watch the score pasted on a newspaper bulletin. That is surely play at third hand! He feigns great patriotic joy in a victory of the New York team over the Chicago team; knowing all the time that there is nothing really local or representative about either. For all he knows or cares every member on the so-called "New York" team might be born in Chicago and every player for "Chicago" a native of New York. There is less expertness but far more of the real spirit of play when Farmer Jones makes a home run for Podunk Crossing and thus brings shameful defeat on the hated natives of Cabbage Corners than when Mr. Rufus Midas, the Wall Street magnate, discusses with other lights of finance the "points" of Southpaw Jones, the star of the New York team (recently drafted from New Orleans), in exactly the same tone in which he would speak of the prospects of a rise in Amalgamated Copper.

How did we children of the Rockies amuse ourselves? To answer that question would require a book from which I may not here take more than a very brief page. It may, however, be summed in one word: Imagination. Freedom and imagination are two words for the same thing, the power and range of choice. Of what avail is it to tell people to do whatever they like when they cannot find enough things worth doing to make leisure other than a task? No man with a cramped or fettered mind is free, any more than a paralyzed man is free to walk simply because he has been unshackled.

There is a kind of grass called Shepherd's Purse. Placed in a field of it the New York boy would take off his coat, pick up a bat and yell to his companion: "Hey, Chimmie! Le's play some baseball." We transformed ourselves into highwaymen, grabbed up the grass in handfuls and carried it away to a treasure chest (made of an old cigar box). It was great fun to rob the imaginary shepherds of their purses.

A storm broke down tree branches all over the city. New York would have waited for the street cleaners to carry them away, or, at most, built a bonfire. We youngsters collected them all together on a vacant lot and built Indian wigwams of elaborate structure by sticking the biggest branches in the earth like tent poles and plaiting the smaller branches around them. Within a few hours there was a city of leafy tents on that lot and an Indian tribe, garbed in the weirdest fashion, playing in it. The history of all we did in that improvised wigwam village would be as interminable as a romance of King Arthur by a medieval chronicler.

A neighboring boy, who is now a first lieutenant of artillery in France, erected on his own initiative a four story shack in the backyard, covered the floors with strips of carpet discarded from the house, decorated the walls with magazine covers and made it a comfortable, livable place for rainy days. I think he was ten years old at the time. The shack has sustained innumerable sieges by Indians, pirates and warriors of every nation. It was but one of a dozen such structures built by the youth of the town. None of them had studied manual training in school, and none acted on the suggestion of parents. Quite the opposite, very frequently.

I had less skill than other in building wigwams, shacks, battleships and other triumphs of the architect, but I delighted to model imaginary landscapes in the wet sand of the irrigation ditches which lined the roads. I drew much of my inspiration, beginning at the mature age of seven, from a popular scientific manual called "Fourteen Weeks in Astronomy." Do not be alarmed; I was not in the least precocious. I did not study the book in the way that the author would probably have approved. Instead of learning the facts of science I invented the fiction.

I still keep a few of the myriad topographical maps which I sketched for Neptune, Saturn and other planets, but I have no reason to believe that they correspond to reality.

PERHAPS the boundless landscape of Wyoming did something to stretch our imaginations, and yet in the books I have read of rural childhood in New York and New England a generation ago I find the same creative wealth of games, sports and ceremonies which characterized the boyhood life of my own town. The true contrast seems to be less between East and West than between the over-organized big city where everything, including play, is ready made and the open country where if people do not amuse themselves there is nothing and no one to amuse them.

The city is also bound by convention. Where it is "the thing" to play baseball a small boy is ashamed to do anything else. If the fashion should change, the next generation will be ashamed to be seen with a bat. How much more this is true with regard to the very formal amusements of the adult man or woman!

Generally speaking, there are four principal ways in which "society" takes its pleasure: cards, dancing, dining, and dress. A dinner party is dining and dress. An afternoon party is cards and dress. A ball is dancing and dress. The cabaret is dining, dancing and dress. A "stag" is dining and cards. A club is cards. A young people's society is dancing. The four counters are shuffled in every possible way, but no heretic ventures to break the charmed circle. I know a church social club which has met weekly for years and in which no one has ever yet done a single thing but dance.

NO one will deny that these four activities can be productive of great pleasure. But New York gets as little fun out of them as possible. The secret of enjoyment of any card game, or of any other indoor game, is to take the thing lightly. But to see men bent over a table for hours at a time, shuffling the cards over and over again, hardly daring to speak or even shift expressions, suggests a somber intenseness which is the opposite of play. Of the many possible card games only a few are commonly played, and any disregard of the manual is an unthinkable crime. The much smaller class of chess "fans" make the same mistake of turning into a science what should be a diversion. They would be horrified if any one should suggest a change in the time-honored arrangement of the pieces or any other alteration of the rules, "just for the fun of it."

DANCING is doubtless delightful, but I pity these folks of the metropolis who cannot give even one evening party in a thousand without it. Just think of all the things that might be done; that are done in the village. Corn huskings, quilting bees, masquerades, charades, amateur theatricals, "capping" rimes, "what's my thought like," three-legged races, blindfold pillow fights, spelling bees, popcorn parties, candy pulls—the alternatives are endless. But who would dare revive for "society" any of these old-fashioned ways of spending an evening? Who would even dare revive any of the old-fashioned dances?

THIRD on our list comes dinner. One could weep when he thinks of all the enjoyable variety that the art of the cook could produce and contrasts it with the rigid menu which was ordained once upon a time in France (probably by order of Richelieu) and has since been binding on all hotels, restaurants, boarding houses and fashionable homes in every part of the world. I know that menu by heart. I have eaten it in every city where I have spent a mealtime. For 50 cents you get: 1. A plate covered with dew called consommé or a mixture of carrots and onions called vegetable soup. 2. A slice of raw beef, tepid mutton or cold storage chicken with several little dabs of vegetables, each the size of a postage stamp. 3. A lettuce leaf positively drenched in vinegar and oil. 4. A hard block of ice cream in four colors. 5. Demi-tasse of strong coffee. For a dollar you can have also: 6. A grapefruit with a maraschino cherry in the center. 7. A small piece of whitish fish soggy with dressing and oil, or six oysters. 8. Cheese and crackers. For a larger sum you can have wines and music.

NOT only is the substance of the menu invariable, but even the manner of cooking, the order of serving, and the rules for the manipulation of the necessary implements. I wonder, for instance, why no one thinks of serving soup on the first floor of an apartment house, fish on the second, meat on the third, and so on. Such dinner parties were not uncommon in the West, with the difference that it was necessary to go from house to house for each course since people lived beside each other and not on top of each other as they do in New York. And what would happen if they began the dinner for once with the ice cream or substituted chocolate for coffee? Dare you try the experiment?

But slavish submission to convention is at its worst in the matter of dress. The way to get fun out of dressing up is to encourage each person to express his own personality; to introduce as much variety as possible. A fancy dress ball is well enough in its way, but why confine individuality in costume to these rare occasions? Society, however, prescribes a rigid uniform for its functions, and woe to the man or woman who dares disregard the mandates of the fashion plate.

BUT what can be done for a people that cannot find pleasure in any way but playing card games in the same way, dancing the same fashionable dances, eating the same perennial menu and wearing "what the gentleman will wear" (to quote the theater programs)? Nothing but let them work themselves to death; and serve them right for being afraid to play!

New York City

THE POET'S ROOM

BY HARRY KEMP

I have a table, cot, and chair
And nothing more. The walls are bare.
Yet I confess that in my room
Lie Syrian rugs rich from the loom,
Stand statues poised on flying toe,
Hang tapestries with folk a-flow
As the wind takes them to and fro.
And workman Fancy has inlaid
My walls with ivory and jade.

Tho opening on a New York street
Full of cries and hurrying feet
My window is a faery space
That gives on each imagined place:
Old ruins lost in desert peace;
The broken fanes and shrines of Greece;
Ægean islands fringed with foam;
The everlasting hills of Rome;
Troy flowing red with skyward flame,
And every spot of hallowed fame.

Outside my window I can see
The sweet blue lake of Galilee,
And Carmel's purple-regioned hight,
And Sinai clothed with stars and night.

But this is told in confidence,
So not a word when you go hence,
For if my landlord once but knew
My attic fetched so large a view
The churl would never rest content
Till he had raised my monthly rent!

GOVERNMENTS IN BUSINESS

BY JOSEPH E. DAVIES

MEMBER OF THE FEDERAL TRADE COMMISSION

THE economic significance of the Great War is, to my mind, preeminently, the fact that all of the belligerent nations and most of the neutrals have gone into business. War, it might be said, and state socialism, in some salient respects, are not unlike: both project governments into business. War socializes industry for the supreme purpose of saving the state itself; in other words, what perhaps hundreds of years of socialistic peaceful propaganda could not have accomplished in Europe, a few months, relatively, of war have served to bring about. Government function or control in all forms of productive industrial and commercial activity has been projected by the European war by practically all of the belligerent nations and by many neutrals.

It is not meant to infer that these conditions have come, necessarily, to remain. There will be very powerful forces at work tending to restore former individualistic conditions. Property will cease to be imprest with national need to the same vital extent and will again be valuable as an individualistic right. The heroic attitude of mind will subside and yield to practical considerations of living necessity. The men running these governmental activities are for the most part representatives of the industrial and capitalistic class who have been called in by governments to displace the old landed proprietors; and by reason of their training and outlook they might naturally be disposed to a resumption of the old order of things, tempered with broader outlook upon public need. And organized labor, which in stress of war has made great concessions, will probably insist upon the re-establishment of rights it has taken years to establish; and it is easily conceivable that labor might object to permanent government control of industry, which would deprive organized labor of the advantage it now has in bargaining with capital for better hours and working conditions, for government ownership would make these matters dependent not upon contract between employers and employees but upon considerations of the general good, determined by government. Powerful forces are working toward the resumption of the old individualistic order in industry, in short; but there are great forces making for the retention of business activities by governments in times of peace. If governments are permanently to remain, or to attempt to remain, in business, it is doubtful whether the economic efficiencies now obtaining would persist after the stress of war necessities had subsided. Should these governmental activities obtain for any considerable length of time after the resumption of peace, however, the effect upon the commerce and industry of the world and, indeed, even upon the peace of the world itself, would be far-reaching. Governments engaged upon large-scale productive industrial and commercial enterprizes, would, themselves, be rivals in world commerce, and the very combinations in industry known as international trusts, even, would yield to the competition of government monopolies.

No man can foretell what conditions will prevail in the future. But America should understand what the facts now are; for they are not speculative; they exist—and will be the basis of future conditions.

In the warring nations two changes of serious and fundamental character seem to have occurred. (1) Property seems, temporarily at least, to have lost its individualistic character. Private rights have yielded to the needs of the state. (2) There seems to be complete acquiescence in the propriety of governments engaging in all lines of enterprize and activity that were formerly the recognized field of individual effort.

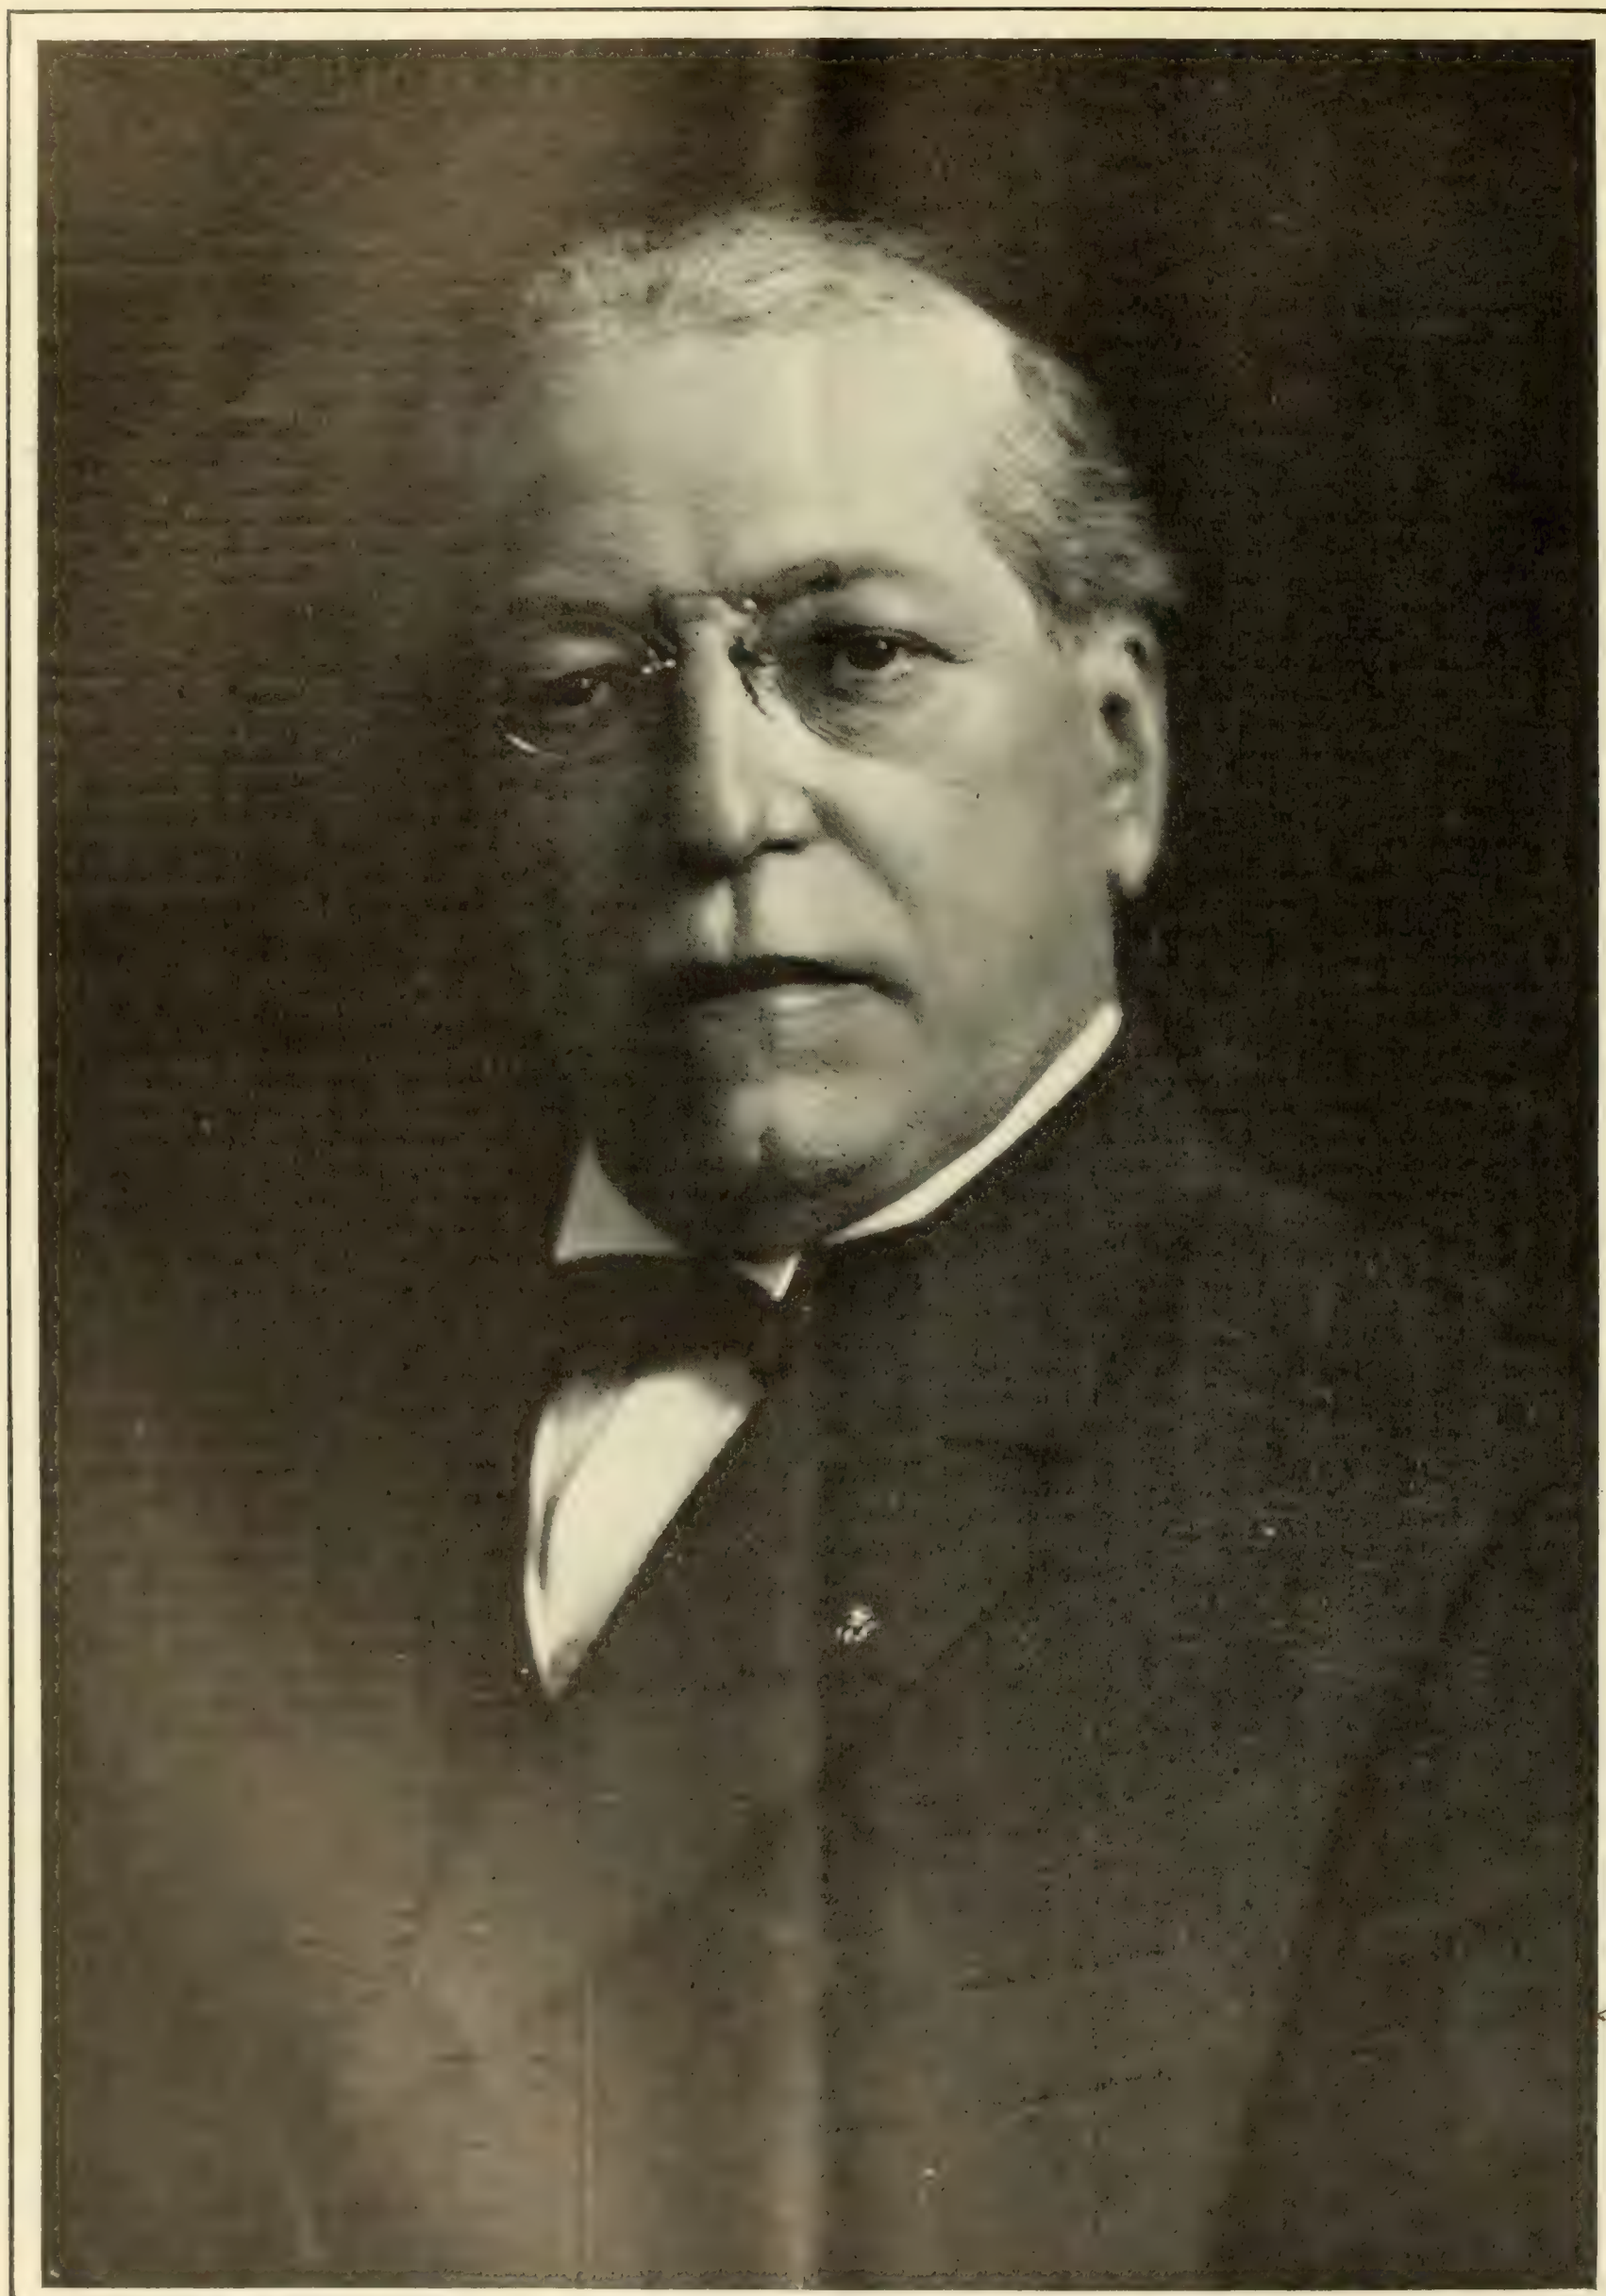
In face of any great calamity private property, doubtless, takes on a communistic character. Men shipwrecked on a raft in mid-ocean have but little respect for private property; their necessities invest what food or other resources they have with a common right. Fires, earthquakes, have the same effect. And war, of course, is the greatest of national calamities. War needs have affected the psychology of whole nations. Hotels in London may be commandeered and peremptorily emptied for war purposes. Considerations of property right therein are thrust aside. In the war regions property has become hopelessly confused, and all this is taken as a matter of course; families of great wealth have made themselves destitute by giving what they had to the state or to war sufferers. The warring peoples, in short, are not thinking in terms of private property but in terms of national need and preservation. To an extraordinary degree private property has been imprest by public interest; and this fact will have much influence in the future, undoubtedly, upon the conceptions of society.

© Harris and Ewing

COMMISSIONER DAVIES

Modern war, in short, is a business—"a grim business," as the President said. Neither England, France, or any of the Allied Powers could sustain the present war without their remarkable industrial organization of munitions, foundries, shell factories, steel mills. The fact is, the European war is really a conflict between two of the most gigantic industrial undertakings the world has ever known.

Modern industry, thus, has become a part of modern war. So the warring states are running industrial enterprizes. They have to do so to win. And the result is, European industry is becoming socialized on a gigantic scale. War, in a word, has completely revolutionized industry and upset all the hitherto established relations between governments and business.



But how?

Let us note, in a few illustrative instances, just how.

NOT much needs to be said about Germany. It is generally conceded that at the outbreak of the war Germany was best prepared for the fullest possible cooperation between industry and government. Her industrial preparation was no less remarkable than her military. Her railroads were state owned or regulated, laid out, planned and operated, with consideration of national need. Thirty-eight per cent of all the financial requirements of the federated states of Germany in 1913 were met out of the profits of government-operated or government-owned enterprizes. Iron, coal, steel, chemical goods, textiles, leather, rubber, many other fundamentals of industry were closely syndicated thru cartels, which were in direct touch with central authority and immediately available for speedy and effective war mobilization. The war tended promptly to intensify further this centralization and control of industry by government, and the scientific and exacting degree of control, which in the emergency the German Government exercized over all processes of industry, whether of extraction, manufacture, or distribution, has been one of the marvels of the war. The German War Bureau, organized for taking over the control of all industrial works in the empire, with offices for production and distribution of fleet ordinance, munitions, war raw materials, factories, food supply, export and import and substitution service, was ready. The rapidity of the movement of troops over railroads, the remarkable degree in which the armies in the field have been supplied with equipment, munitions, big guns, all bespeak the extraordinary control that Germany projected over her industry by reason of these conditions.

England has taken over the operation of all the

[Continued on page 386

THE LEADER OF ORGANIZED LABOR IN AMERICA

Samuel Gompers, president of the American Federation of Labor and a member of the National Defense Council, has done much to increase America's war efficiency by coordinating the attitude of labor and the needs of the Govèrnment

WE MUST STAND TOGETHER

FROM PRESIDENT WILSON'S ADDRESS TO THE AMERICAN FEDERATION OF LABOR

IF we are true friends of freedom—our own or anybody else's—we will see that the power of this country, the productivity of this country, is raised to its absolute maximum and that absolutely nobody is allowed to stand in the way of it.

When I say that nobody is allowed to stand in the way, I don't mean that they shall be prevented by the power of the Government, but by the power of the American spirit. Our duty, if we are to do this great thing and show America to be what we believe her to be, the greatest hope and energy of the world—then we must stand together night and day until the job is finished.

While we are fighting for freedom, we must see, among other things, that labor is free; and that means a number of interesting things. It means not only that we must do what we have declared our purpose to do, see that the conditions of labor are not rendered more onerous by the war—but also that we shall see to it that the instrumentalities by which the conditions of labor are improved are not blocked or checked. That we must do. That has been the matter about which I have taken pleasure in conferring from time to time with your president, Mr. Gompers. And, if I may be permitted to do so, I want to express my admiration of his patriotic courage, his large vision, and his statesmanlike sense of what is to be done. I like to lay my mind alongside of a mind that knows how to pull in harness. The horses that kick over the traces will have to be put in a corral.

Now to "stand together" means that nobody must interrupt the processes of our energy, if the interruption can possibly be avoided without the absolute invasion of freedom. To put it concretely, that means this: Nobody has a right to stop the processes of labor until all the methods of conciliation and settlement have been exhausted; and I might as well say right here that I am not talking to you alone. You sometimes stop the courses of labor, but there are others who do the same. And I believe that I am speaking of my own experience not only, but of the experience of others, when I say that you are reasonable in a larger number of cases than the capitalists.

I am not saying these things to them personally yet because I haven't had a chance. But they have to be said, not in any spirit of criticism, but in order to clear the atmosphere and come down to business, everybody on both sides has got to transact business, and the settlement is never impossible when both sides want to do the square and right thing. Moreover, a settlement is always hard to avoid when the parties can be brought face to face.

I can differ with a man much more radically when he isn't in the room than I can when he is in the room, because then the awkward thing is that he can come back at me and answer what I say. It is always dangerous for a man to have the floor entirely to himself. And therefore we must insist in every instance that the parties come into each other's presence and there discuss the issues between them, and not separately in places which have no communication with each other.

I always like to remind myself of a delightful saying of an Englishman of a past generation, Charles Lamb. He was with a group of friends, and he spoke very harshly of some man who was not present. I ought to say that Lamb stuttered a little bit. And one of his friends said: "Why, Charles, I didn't know that you knew So-and-so?"

"Oh," he said, "I don't. I can't hate a man I know."

There is a great deal of human nature, of very pleasant human nature, in that saying. It is hard to hate a man you know. I may admit parenthetically that there are some politicians whose methods I do not at all believe in, but they are jolly good fellows, and if they only would not talk the wrong kind of politics with me, I would love to be with them.

And so it is all along the line in serious matters and things less serious. We are all of the same clay and spirit, and we can get together if we desire to get together. Therefore, my counsel to you is this: Let us show ourselves Americans by showing that we do not want to go off in separate camps or groups by ourselves, but that we want to coöperate with all other classes and all other groups in a common enterprize, which is to release the spirit of the world from bondage.

MOB SPIRIT

I would be willing to set that up as the final test of an American. That is the meaning of democracy. I have been very much distrest, my fellow-citizens, by some of the things that have happened recently. The mob spirit is displaying itself here and there in this country. I have no sympathy with what some men are saying, but I have no sympathy with the men that take their punishment into their own hands, and I want to say to every man who does join such a mob that I do not recognize him as worthy of the free institutions of the United States.

There are some organizations in this country whose object is anarchy and the destruction of law, but I would not meet their efforts by making myself a partner in destroying the law, I despise and hate their purposes as much as any man, but I respect the ancient processes of justice, and I would be too proud not to see them done justice, however wrong they are. And so I want to utter my earnest protest against any manifestation of the spirit of lawlessness anywhere or in any cause.

Why, gentlemen, look what it means: We claim to be the greatest democratic people in the world, and democracy means, first of all, that we can govern ourselves. If our men have not self-control, then they are not capable of that great thing which we call democratic government. A man who takes the law into his hands is not the right man to coöperate in any form of or development of law and institutions. And some of the processes by which the struggle between capital and labor is carried on are processes that come very near to taking the law into your own hands. I do not mean for a moment to compare them with what I have just been speaking of, but I want you to see that they are mere gradations of the manifestations of the unwillingness to coöperate.

NEW INSTRUMENTALITIES

AND the fundamental lesson of the whole situation is that we must not only take common counsel, but that we must yield to and obey common counsel. Not all of the instrumentalities for this are at hand. I am hopeful that in the very near future new instrumentalities may be organized by which we can see to it that various things that are now going on shall not go on. There are various processes of the dilution of labor, and the unnecessary substitution of labor, and bidding in distant markets, and unfairly upsetting the whole competition of labor, which ought not to go on—I mean now on the part of employers—and we must interject into this some instrumentality of coöperation by which the fair thing will be done all around. I am hopeful that some such instrumentalities may be devised, but, whether they are or not, we must use those that we have, and, upon every occasion where it is necessary to have such an instrumentality, originated upon that occasion, if necessary.

And so, my fellow citizens, the reason that I came away from Washington is that I sometimes get lonely down there. There are so many people in Washington who know things that are not so; and there are so few people in Washington who know anything about what the people of the United States are thinking about, I have to come away to get reminded of the rest of the country; I have to come away and talk to men who are up against the real thing, and say to them, "I am with you if you are with me." And the only test of being with me is not to think about me personally at all, but merely to think of me as the expression for the time being of the power and dignity and hope of the United States.

November 13, 1917

CREATIVE CHEMISTRY

A Popular Explanation of Recent Progress in Chemical Industries

BY EDWIN E. SLOSSON

SYNTHETIC PERFUMES AND FLAVORS

THE primitive man got his living out of such wild plants and animals as he could find. Next he, or more likely his wife, began to cultivate the plants and tame the animals so as to insure a constant supply. This was the first step toward civilization, for when men had to settle down in a community (*civitas*) they had to ameliorate their manners and make laws protecting land and property. In this settled and orderly life the plants and animals improved as well as man and returned a hundredfold for the pains that their master had taken in their training. But still man was dependent upon the chance bounties of nature. He could select, but he could not invent. He could cultivate, but he could not create. If he wanted sugar he had to send to the West Indies. If he wanted spices he had to send to the East Indies. If he wanted indigo he had to send to India. If he wanted a febrifuge he had to send to Peru. If he wanted a fertilizer he had to send to Chile. If he wanted rubber he had to send to the Congo. If he wanted rubies he had to send to Mandalay. If he wanted otto of roses he had to send to Turkey. Man was not yet master of his environment.

This period of cultivation, the second stage of civilization, began before the dawn of history and lasted until recent times. We might almost say up to the twentieth century, for it was not until the fundamental laws of heredity were discovered that man could originate new species of plants and animals according to a predetermined plan by combining such characteristics as he desired to perpetuate. And it was not until the fundamental laws of chemistry were discovered that man could originate new compounds more suited to his purpose than any to be found in nature. Since the progress of mankind is continuous it is impossible to draw a date line, unless a very jagged one, along the frontier of human culture, but it is evident that we are just entering upon the third era of evolution in which man will make what he needs instead of trying to find it somewhere. The new epoch has hardly dawned, yet already a man may stay at home in New York or London and make his own rubber and rubies, his own indigo and otto of roses. More than this, he can make germs and colors and perfumes that never existed since time began. The man of science has signed a declaration of independence of the lower world and we are now in the midst of the revolution.

Our eyes are dazzled by the dawn of the new era. We know what the hunter and the horticulturist have already done for man, but we cannot imagine what the chemist can do. If we look ahead thru the eyes of one of the greatest of French chemists, Berthelot, this is what we shall see:

> The problem of food is a chemical problem. Whenever energy can be obtained economically we can begin to make all kinds of ailment, with carbon borrowed from carbonic acid, hydrogen taken from the water and oxygen and nitrogen drawn from the air. . . . The day will come when each person will carry for his nourishment his little nitrogenous tablet, his pat of fatty matter, his package of starch or sugar, his vial of aromatic spices suited to his personal taste; all manufactured economically and in unlimited quantities; all independent of irregular seasons, drought and rain, of the heat that withers the plant and of the frost that blights the fruit; all free from pathogenic microbes, the origin of epidemics and the enemies of human life. On that day chemistry will have accomplished a world-wide revolution that cannot be estimated. There will no longer be hills covered vineyards and fields filled with cattle. Man will gain in gentleness and morality because he will cease to live by the carnage and destruction of living creatures. . . . The earth will be covered with grass, flowers and woods and in it the human race will dwell in the abundance and joy of the legendary age of gold —provided that a spiritual chemistry has been discovered that changes the nature of man as profoundly as our chemistry transforms material nature.

But this is looking so far into the future that we can trust no man's eyesight, not even Berthelot's. There is apparently no impossibility about the manufacture of synthetic food, but at present there is no apparent probability of it. There is no likelihood that the laboratory will ever rival the wheat field. The cornstalk will always be able to work cheaper than the chemist in the manufacture of starch. But in rarer and choicer products of nature the chemist has proved his ability to compete and even to excel.

What have been from the dawn of history to the rise of synthetic chemistry the most costly products of nature? What could tempt a merchant to brave the perils of a caravan journey over the deserts of Asia beset with Arab robbers? What induced the Portuguese and Spanish mariners to risk their frail barks on perilous waters of the Cape of Good Hope or the Horn? The chief prizes were perfumes, spices, drugs and gems. And why these rather than what now constitutes the bulk of oversea and overland commerce? Because they were precious, portable and imperishable. If the merchant got back safe after a year or two with a little flask of otto of roses, a package of camphor and a few pearls concealed in his garments his fortune was made. If a single ship of the argosy sent out from Lisbon came back with a load of sandalwood, indigo or nutmeg it was regarded as a successful venture. You know from reading the Bible, or if not that, from your reading of Arabian Nights, that a few grains of frankincense or a few drops of perfumed oil were regarded as gifts worthy the acceptance of a king or a god. These

Picking orange blossoms for the Antoine Chiris Company near Grasse, France

products of the Orient were equally in demand by the toilet and the temple. The unctorium was an adjunct of the Roman bathroom. Kings had to be greased and fumigated before they were thought fit to sit upon a throne. There was a theory, not yet altogether extinct, that medicines brought from a distance were most efficacious, especially if, besides being expensive, they tasted bad like myrrh or smelled bad like asafetida. And if these failed to save the princely patient he was embalmed in aromatics or, as we now call them, antiseptics of the benzene series.

Today, as always, men are willing to pay high for the titillation of the senses of smell and taste. The African savage will trade off an ivory tusk for a piece of soap reeking with synthetic musk. The clubman will pay $10 for a bottle of wine which consists mostly of water with about ten per cent of alcohol, worth a cent or two, but contains an unweighable amount of the "bouquet" that can only be produced on the sunny slopes of Champagne or in the valley of the Rhine. But very likely the reader is quite as extravagant, for when one buys the natural violet perfumery he is paying at the rate of more than $10,000 a pound for the odoriferous oil it contains; the rest is mere water and alcohol. But you would not want the pure undiluted oil if you could get it, for it is unendurable. A single whiff of it paralyzes your sense of smell for a time just as a loud noise deafens you.

Of the five senses, three are physical and two chemical. By touch we discern pressures and surface textures. By hearing we receive impressions of certain air waves and by sight of certain ether waves. But smell and taste lead us to the heart of the molecule and enable us to tell how the atoms are put together. These twin senses stand like sentries at the portals of the body, where they closely scrutinize everything that enters. Sounds and sights may be disagreeable, but they are never fatal. A man can live in a boiler factory or in a cubist art gallery, but he cannot live in a room containing hydrogen sulfide. Since it is more important to be warned of danger than guided to delights our senses are made more sensitive to pain than pleasure. We can detect by the smell one two-millionth of a milligram of oil of roses or musk, but we can detect one two-billionth of a milligram of mercaptan, which is the vilest smelling compound that man has so far invented. If you do not know how much a milligram is consider a drop picked up by the point of a needle and imagine that divided into two billion parts. Also try to estimate the weight of the odorous particles that guide a dog to the fox or warn a deer of the presence of man. The unaided nostril can rival the spectroscope in the detection and analysis of unweighable amounts of matter.

What we call flavor or savor is a joint effect of taste and odor in which the latter predominates. There are only four tastes of importance, acid, alkaline, bitter and sweet. The acid, or sour taste, is the perception of hydrogen

Concrete road near Greer, S. C., on National Highway, built by Slattery & Henry
P. F. Patton, County Engineer

Inefficient Highways Must Go

EVERY day or two some disturbance threatens a source of food supply, principally because of lack of transportation facilities. Greater production by farm and factory will avail us little with inadequate transportation. Perishable products must be moved to market quickly.

Never before has there been such pressing need of hard, permanent roads — connected systems of concrete roads, good 365 days a year—enabling trucks to handle short hauls, thus relieving congestion on railroads.

War supplies must not be held up because railroads have to handle short haul traffic which should go via the motor truck and concrete highway. But the motor truck can work economically only on the best paved highway. Gravel and macadam roads cannot stand the strain of swiftly moving, heavily loaded motor trucks. The wear and tear of such traffic makes expensive repair necessary frequently. Eventually they must be rebuilt. We must literally pave the ways with concrete.

Only about one per cent of our country highways has been improved. Hundreds of thousands of miles are awaiting the magic of concrete pavement to make each of these miles an efficient arm of our railroads. Agricultural, industrial and military needs are insistently demanding concrete roads.

Be sure you know what a concrete road is. Concrete is made of portland cement, sand and pebbles or crushed stone, and water. It is hard and durable, rigid and unyielding. Concrete is the material used in building concrete dams, factories, bridges, and big engineering works like the Panama Canal, requiring great solidity and strength.

CONCRETE ROADS
Their Advantages

No Mud—No Dust
No Ruts—No Holes
No Slipping
No Skidding
Easy Hauling
Smooth Riding
Long Life—Safety
Always ready for use
Low Maintenance
Moderate Cost

Concrete Roads Are Not Expensive

Materials required in the construction of concrete roads are obtainable practically everywhere. Their first cost is moderate and upkeep is insignificant. They are good many years after the debt incurred to pay for them has been wiped out. They reduce taxes by saving maintenance expense. Concrete roads are permanent.

CONCRETE FOR PERMANENCE

atoms charged with positive electricity. The alkaline, or soapy taste, is the perception of hydroxyl radicles charged with negative electricity. The bitter and sweet tastes and all the odors depend upon the chemical constitution of the compound, but the laws of the relation have not yet been worked out. Since these sense organs, the taste and smell buds, are sunk in the moist mucous membrane they can only be touched by substances somewhat soluble in water, and to reach the sense of smell they must also be volatile so as to be diffused in the air inhaled by the nose. The "taste" of food is mostly due to the volatile odors of it that creep up the back-stairs into the olfactory chamber.

A chemist given an unknown substance would have to make an elementary analysis and some tedious tests to determine whether it contained methyl or ethyl groups, whether it was an aldehyde or an ester, whether the carbon atoms were singly or doubly linked and whether it was an open chain or closed. But let him get a whiff of it and he can give instantly a pretty shrewd guess as to these points. His nose knows.

ALTHO the chemist does not yet know enough to tell for certain from looking at the structural formula what sort of odor the compound would have or whether it would have any, yet we can divide odoriferous substances into classes according to their constitution. What are commonly known as "fruity" odors belong mostly to what the chemist calls the fatty or aliphatic series. For instance, we may have in a ripe fruit an alcohol (say ethyl or common alcohol) and an acid (say acetic or vinegar) and a combination of these, the ester or organic salt (in this case ethyl acetate), which is more odorous than either of its components. These esters of the fatty acids give the characteristic savor to many of our favorite fruits, candies and beverages. The pear flavor, amyl acetate, is made from acetic acid and amyl alcohol—tho amyl alcohol (fusel oil) has a detestable smell. Pineapple is ethyl butyrate—but the acid part of it (butyric acid) is what gives Limburger cheese its aroma. These essential oils are easily made in the laboratory, but cannot be extracted from the fruit for separate use.

If the carbon chain contains one or more double linkages we get the "flowery" perfumes. For instance, here is the symbol of geraniol, the chief ingredient of otto of roses:

$(CH_3)_2C{=}CHCH_2CH_2C(CH_3){=}CHCH_2OH$
geraniol

The rose would smell as sweet under another name, but it may be questioned whether it would stand being called by the name of dimethyl-2-6-octadiene-2-6-ol-8. Geraniol by oxidation goes into the aldehyde citral, which occurs in lemons, oranges and verbena flowers. Another compound of this group, linalool, is found in lavender, bergamot and many flowers.

Geraniol, as you would see if you drew up its structural formula in the way I described in the last article, contains a chain of six carbon atoms, that

CREATIVE CHEMISTRY

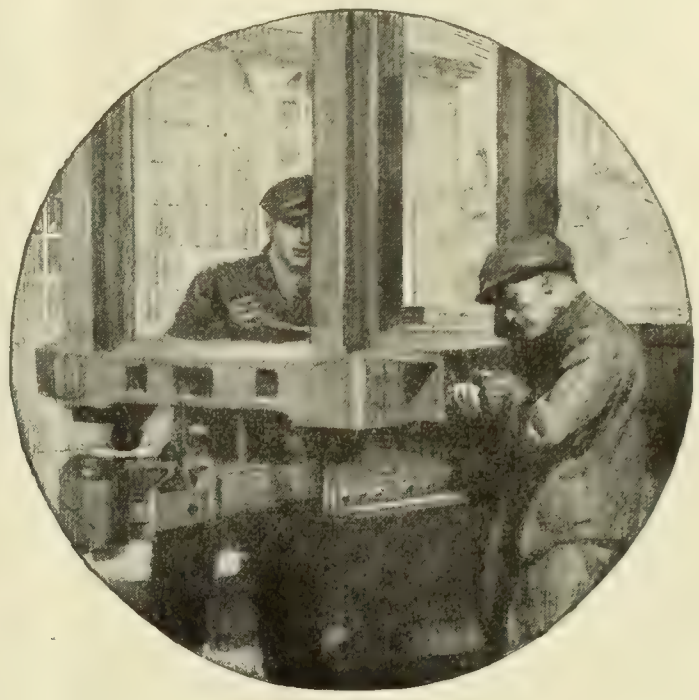
This is the fourth of a series of twelve articles on the development of the chemical industries and the part they play in modern life. The articles are intended for three classes of readers: (1) those who have never studied chemistry, (2) those who are now studying chemistry and (3) those who studied chemistry so long ago that they need to refresh their minds on its recent advances. The first article on "The Fixation of Nitrogen" was published in The Independent of October 13; the second, "Feeding the Soil," on October 27, and the third, "What Comes From Coal Tar," on November 10. Succeeding articles to appear in the second and fourth issues of the month will discuss such topics as cellulose and its derivatives, rubber, resins, sugar, alcohol, rare metals, new alloys, the electric furnace, the products of corn, cotton and petroleum, and the new theories of atomic structure.

is, the same number as make a benzene ring. Now if we shake up geraniol and other compounds of this group (the diolefines) with diluted sulfuric acid the carbon chain hooks up to form a benzene ring, but with the other carbon atoms stretched across it; rather too complicated to depict here. These "bridged rings" of the formula C_5H_8, or some multiple of that, constitute the important group of the terpenes which occur in turpentine and such wild and woodsy things as sage, lavender, caraway, pine needles and eucalyptus. Going further in this direction we are led into the realm of the heavy oriental odors, patchouli, sandalwood, cedar, cubebs, ginger and camphor. Camphor can now be made directly from turpentine so we may be independent of Formosa and Borneo.

When we have a six carbon ring without double linkings (cyclo-aliphatic) or with one or two such, we get soft and delicate perfumes like the violet (ionone and irone). But when these pass into the benzene ring with its three double linkages the odor becomes more powerful and so characteristic that the name "aromatic compound " has been extended to the entire class of benzene derivatives, altho many of them are odorless. The essential oils of jasmine, orange blossoms, musk, heliotrope, tuberose, ylang ylang, etc., consist mostly of this class and can be made from the common source of aromatic compounds, coal tar.

THE synthetic flavors and perfumes are made in the same way as the dyes by starting with some coal tar product or other crude material and building up the molecule to the desired complexity. For instance, let us start with phenol, the ill-smelling and poisonous carbolic acid of disagreeable associations and evil fame. Treat this to soda-water and it is transformed into salicylic acid, a white odorless powder, used as a preservative and as a rheumatism remedy. Add to this methyl alcohol which is obtained by the destructive distillation of wood and is much more poisonous than ordinary ethyl alcohol. The alcohol and the acid heated together will unite with the aid of a little sulfuric acid and we get what the chemist calls methyl salicylate and other people call oil of wintergreen, the same as is found in wintergreen berries and birch bark. We have inherited a taste for this from our pioneer ancestors and we use it extensively to flavor our soft drinks, gum, tooth paste and candy, but the Europeans have not yet found out how nice it is.

But, starting with phenol again, let us heat it with caustic alkali and chloroform. This gives us two new compounds of the same composition, but differing a little in the order of the atoms. If you refer back to the diagram of the benzene ring which I gave in the last article, you will see that there are six hydrogen atoms attached to it. Now any or all these hydrogen atoms may be replaced by other elements or groups and what the product is depends not only on what the new elements are, but where they are put. It is like spelling words. The three letters *t*, *r* and *a* mean very different things according to whether they are put together as *art*, *tar* or *rat*. Or, to take a more apposite illustration, every hostess knows that the success of her dinner depends upon how she seats her guests around the table. So in the case of aromatic compounds, a little difference in the seating arrangement around the benzene ring changes the character. The two derivatives of phenol, which we are now considering, have two substituting groups. One is —O—H (called the hydroxyl group). The other is —CHO (called the aldehyde group). If they are opposite (called the para position) we have an odorless white solid. If they are side by side (called the ortho position) we have an oil with the odor of meadowsweet. Treating the odorless solid with methyl alcohol we get audepine (or anisic aldehyde) which is the perfume of hawthorn blossoms. But treating the other of the twin products, the fragrant oil, with dry acetic acid ("Perkin's reaction") we get cumarin, which is the perfume part of the tonka or tonquin beans that our forefathers used to carry in their snuff boxes. One ounce of cumarin is equal to four pounds of tonka beans. It smells sufficiently like vanilla to be used as a substitute for it in cheap extracts. In perfumery it is known as "new mown hay."



YOU may remember what I said two weeks ago about the career of William Henry Perkin, the boy who loved chemistry better than eating, and how he discovered the coal tar dyes. Well, it is also to his ingenious mind that we owe the starting of the coal tar perfume business which has had almost as important a development. Perkin made cumarin in 1868, but this, like the dye industry, escaped from English hands and flew over the North Sea. Before the war Germany was exporting $1,500,000 worth of synthetic perfumes a year. Part of these went to France where they were mixt and put up in fancy bottles with French names and sold to Americans at fancy prices.

The true vanilla flavor, vanillin, was made by Tiemann in 1874. At first it sold for nearly $800 a pound, but now it may be had for $10. How extensively it is now used in chocolate, ice cream, soda water, cakes and the like we all know. It should be noted that cumarin and vanillin, however they may be made, are not imitations, but identical with the chief constituent of the tonka and vanilla beans and, of course, are equally wholesome or harmless. But the nice palate can distinguish a richer flavor in the natural extracts, for they contain small quantities of other savory ingredients.

A true perfume consists of a large number of odoriferous chemical compounds mixt in such proportions as to produce a single harmonious effect upon the sense of smell. In a fine brand of perfume may be compounded a dozen or twenty different ingredients and these, if they are natural essences, are complex mixtures of a dozen or so distinct substances. Perfumery is one of the fine arts. The perfumer, like the orchestra leader, must know how to combine and coördinate his instruments to produce the desired sensation. A Wagnerian opera requires 103 musicians. A Strauss opera requires 112. Now if the concert manager wants to economize he will insist upon cutting down on the most expensive musicians and dropping out some of the others say, the supernumerary violinists and the man who blows a single blast or tinkles a triangle once in the course of the evening. Only the trained ear will detect the difference and the manager can make more money.

Suppose our mercenary impresario were unable to get into the concert hall of his famous rival. He would then listen outside the window and analyze the sound in this fashion: "Fifty per cent of the sound is made by the tuba, 20 per cent by the bass drum, 15 per cent by the cello and 10 per cent by the clarinet. There are some other instruments, but they are not loud and I guess if we can leave them out nobody will know the difference." So he makes up his orchestra out of these four alone and many people do not know the difference.

The cheap perfumer goes about it in the same way. He analyzes, for instance, the otto or oil of roses which now costs about $250—if you can get it at any price—and he finds that the chief ingredient is geraniol costing only $5 and next is citronelol costing $20; then comes nerol and others. So he makes up a cheap brand of perfumery out of three or four such compounds. But the genuine oil of roses, like other natural essences, contains a dozen or more constituents and to leave many of them out is like reducing an orchestra to a few loud-sounding instruments or a painting to a three-color print. A few years ago an attempt was made to make music electrically by producing separately each kind of sound vibration contained in the instruments imitated. Theoretically that seems easy but practically the tone was not satisfactory because the tones and overtones of a full orchestra or even of a single violin are too numerous and complex to be reproduced individually. So the synthetic perfumes have not driven out the natural perfumes, but, on the contrary, have aided and stimulated the growth of flowers for essences. The otto or attar of roses, favorite of the Persian monarchs and romancers, has in recent years come chiefly from Bulgaria. But wars are not made with rosewater and the Bulgars are now engaged in other business than cultivating their own gardens. The alembic or still was invented by the Arabian alchemists for the purpose of obtaining the essential oil or attar of roses. But distillation, even with the aid of steam,

Building the Pullman Car

THE strength of the Pullman Car represents one of the best forms of insurance the traveler can buy.

For seven years every car built by the Pullman Company for its service has been of solid steel. These cars possess the rigidity and strength of a battleship.

During this period a large proportion of the older, but still modern cars, have also been rebuilt to almost equal strength.

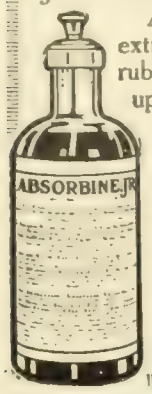
This has been accomplished by introducing steel under-frames, steel vestibules and steel sheathing on the sides.

In addition to the factor of safety, fifty years of experience in designing and building cars has brought about an almost unheard of development in traveling convenience and luxury.

The modern Pullman is fully equipped with the most up-to-date steam fitting, electric wiring and plumbing.

It offers a degree of safety, innumerable luxuries and a personal service that have established a world-wide reputation.

THE PULLMAN COMPANY
Chicago



For Swollen Veins

Absorbine Jr.
THE ANTISEPTIC LINIMENT

That Absorbine, Jr., would relieve Varicose Veins was discovered by an old gentleman who had suffered with swollen veins for nearly fifty years. He had made many unsuccessful efforts to get relief and finally tried Absorbine, Jr., knowing its value in reducing swellings, aches, pains and soreness.

Absorbine, Jr., relieved him, and after he had applied it regularly for a few weeks he told us that his legs were as smooth as when he was a boy and all the pain and soreness had ceased.

Thousands have since used this antiseptic liniment for this purpose with remarkably good results

Absorbine, Jr., is made of oils and extracts from pure herbs and when rubbed upon the skin is quickly taken up by the pores; the blood circulation in surrounding parts is thereby stimulated and healing helped.

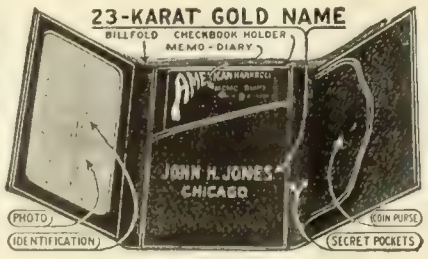
TEMPERATURE INSTRUMENTS



Tycos Instruments are confined to no one particular industry or application. In every industry where temperature is a factor will be found *Tycos* indicating, controlling and recording temperature instruments. In the home, in the medical profession, on the farm, in fact in almost every walk of life *Tycos* products are in daily use. Our factory thus supplies the world with some 8,000 types and styles of temperature instruments. Let us have your address for folder "On the Trail of the Thermometer" and other literature.

Guaranteed Genuine Leather Pocketbook

The "American Bankroll" – 1918 Model. Combination **Billfold, Coin-purse, Card and Photo-case of Finest, Genuine Black Seal Grain Leather** with the snap and elegance of a **Dollar Article** for only **50c**, postpaid. ($5.40 per doz.) Any name beautifully engraved in **23-Karat Genuine Gold** free (street number and city 20c each extra.) Iron-strong, yet wonderfully limp and flexible. Measures 3x4 3-4 in. folded. Has coin-purse, bill-pocket, photo or pass-window, 2 secret pockets, check book holder and 48-page Memo-Diary brimful of interesting and necessary information. If unable to get money order or bank draft, send postage stamps. 128-p. annual catalog of high-grade **GUARANTEED LEATHER GOODS** and **NOVELTIES** free with orders for "Bankroll" or sent alone for 10c postage.

U. S. LEATHER GOODS COMPANY *Established 1906*

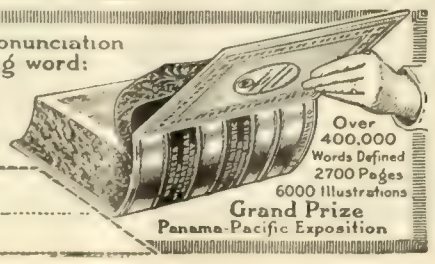
What 15c Will Bring You from the Nation's Capital



Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its **25th** year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send **15c** to show that you might like such a paper, and we will send the Pathfinder on probation **13** weeks. The 15c does not repay us, but we are glad to invest in new friends. **The Pathfinder, Box 39 , Washington, D. C.**

WEBSTER'S NEW INTERNATIONAL DICTIONARY

Whatever your question;—be it the pronunciation of a new term; the spelling of a puzzling word: the location of Nigeria, the meaning of tractor, white coal etc...—this New Creation contains a clear, accurate, final answer

ADDRESS .....

is not altogether satisfactory. For instance, the distilled rose oil contains anywhere from 10 to 74 per cent of a paraffin wax (stearopten) that is odorless and, on the other hand, phenyl-ethyl alcohol which is an important constituent of the scent of the roses, is broken up in the process of distillation. So the perfumer can improve on the natural or rather the distilled oil by leaving out part of the paraffin and adding the missing alcohol. Even the imported article taken direct from the still is not always genuine for the wily Bulgar sometimes "increases the yield" by sprinkling his roses in the vat with synthetic geraniol just as the wily Italian pours a barrel of American cottonseed oil over his olives in the press.

Another method of extracting the scent of flowers is by *enfleurage* which takes advantage of the tendency of fats to absorb odors. You know how butter set beside fish in the ice box will get a fishy flavor. In *enfleurage* moist air is carried up a tower passing alternately over trays of fresh flowers, say violets, and over glass plates covered with a thin layer of lard. The perfumed lard may then be used as a pomade or the perfume may be extracted by alcohol.

But many sweet flowers do not readily yield an essential oil, so in such cases we have to rely altogether upon more or less successful substitutes. For instance, the perfumes sold under the names of "heliotrope," "lily of the valley," "lilac," "cyclamen," "honeysuckle," "sweet pea," "arbutus," "mayflower" and "magnolia" are not produced from these flowers but are simply imitations made from other essences, synthetic or natural. Among the "thousand flowers" that contribute to the "Eau de Mille Fleurs" are the civet cat, the musk deer and the sperm whale. Some of the published formulas for "Jockey Club" call for civet or ambergris and those of "Lavender Water" for musk and civet. The less said about the origin of these three animal perfumes the better. Fortunately they are becoming too expensive to use and are being displaced by synthetic products more agreeable to a refined imagination. The musk deer may now be saved from extinction since we can made tri-nitro-butyl-xylene from coal tar. This synthetic musk passes muster to human nostrils, but a cat will turn up her nose at it. The synthetic musk is not only much cheaper than the natural, but a dozen times as strong, or let us say, goes a dozen times as far, for nobody wants it any stronger.

Such powerful scents as these are only pleasant when highly diluted yet they are, as we have seen, essential ingredients of the finest perfumes. For instance, the natural oil of jasmine and other flowers contains traces of indols and skatols which have most disgusting odors. Tho our olfactory organs cannot detect their presence yet we perceive their absence so they have to be put into the artificial perfume. Just so a brief but violent discord in a piece of music or a glaring color contrast in a painting may be necessary to the harmony of the whole.

It is absurd to object to "artificial" perfumes for practically all perfumes now sold are artificial in the sense of being compounded by the art of the perfumer and whether the materials he uses are derived from the flowers of yesteryear or of Carboniferous Era is nobody's business but his. And he does not tell. The materials can be purchased in the open market. Various recipes can be found in the books. But every famous perfumer guards well the secret of his formulas and hands it as a legacy to his posterity. The ancient Roman family of Frangipani has been made immortal by one such hereditary recipe. The

Farina family still claims to have the exclusive knowledge of how to make Eau de Cologne. The requirements are strict. A perfume must be lasting, but not strong. All its ingredients must continue to evaporate in the same proportion otherwise it will change odor and deteriorate. Scents kill one another as colors do. The minutest trace of some impurity or foreign odor may spoil the whole effect. Then, too, the combination that would be suitable for a toilet water would not be good for a talcum powder and might spoil in a soap. Perfumery is used even in the "scentless" powders and soaps. In fact it is now used more extensively, if less intensively, than ever before in the history of the world. During the Unwashed Ages, commonly called the Dark Ages, between the destruction of the Roman baths and construction of the modern bathroom, the art of the perfumer, like all the fine arts, suffered an eclipse. "The odor of sanctity" was in highest esteem and what that odor was may be imagined from reading the lives of the saints. But in the course of centuries the refinements of life began to seep back into Europe from the east by means of the Arabs and Crusaders, and chemistry, then chiefly the art of cosmetics, began to revive. When science, the greatest democratizing agent on earth, got into action it elevated the poor to the ranks of kings and priests in the delights of the palate and the nose. We should not despise these delights for the pleasure they confer is greater, in amount at least, than that of the so-called higher senses. We eat three times a day; some of us drink oftener; few of us visit the concert hall or the art gallery as often as we do the dining room.

QUESTIONS FOR STUDENTS

Find out from the Bible—or Arabian Nights—what were regarded as the most precious gifts and articles of merchandise. How are they regarded now? In what ways are you richer than an ancient king and why?

What febrifuge comes from Peru and what fertilizer from Chile?

Look up in the dictionary all the definitions of all the words that you do not know—also while you are about it find out what they mean.

What did the alchemist mean when he talked of "the essence of a flower" and "the spirit of wine"? What is the meaning of the Latin word *esse?* What is the derivation of quintessence?

Put a little methyl alcohol and salicylic acid in a test tube, add cautiously a few drops of concentrated sulfuric acid and heat gently. Smell the vapor and you will detect the odor of wintergreen (methyl salicylate). Do not taste, for the sulfuric acid is poisonous. The product would have to be purified by distillation. Try the same experiment with methyl alcohol and benzoic acid and sulfuric acid. The product is methyl benzoate, a constituent of jasmine. Try the same experiment with ethyl alcohol and acetic acid and sulfuric to get a fruity odor.

READING REFERENCES

Read up on the methods of extracting perfumes from flowers in any encyclopedia or in Duncan's "Chemistry of Commerce" or Tilden's "Chemical Discovery in the Twentieth Century" or Rogers' "Industrial Chemistry."

The pamphlet containing a synopsis of the lectures by the late Alois von Isakovics on "Synthetic Perfumes and Flavors," published by the Synfleur Scientific Laboratories, Monticello, New York, is immensely interesting. Van Dyk & Co., New York, issue a pamphlet on the composition of oil of rose. Gildemeister's "The Volatile Oils" is excellent on the history of the subject. Walter's "Manual for the Essence Industry" (Wiley) gives methods and recipes. For recent information and addresses see current numbers of *The American Perfumer.*

At the end of my first article I mentioned several books of popular chemistry that might be read with profit in connection with this course. To these I can now add "Everyman's Chemistry" by Ellwood Hendrick, just issued by Harpers in the Modern Science Series ($2). It is written in a lively style and assumes no previous knowledge of chemistry from the reader. The chapters on cellulose, gums, sugars and oils are particularly interesting.

I ought also to call attention to the "Chemistry of Common Things" published by Allyn & Bacon, Boston, a popular high school text-book but differing from most text-books in being readable and attractive. Its descriptions of industrial processes are brief but clear. The "Achievements of Chemical Science," by James C. Philip (Macmillan), is a handy little book, easy reading for pupils.

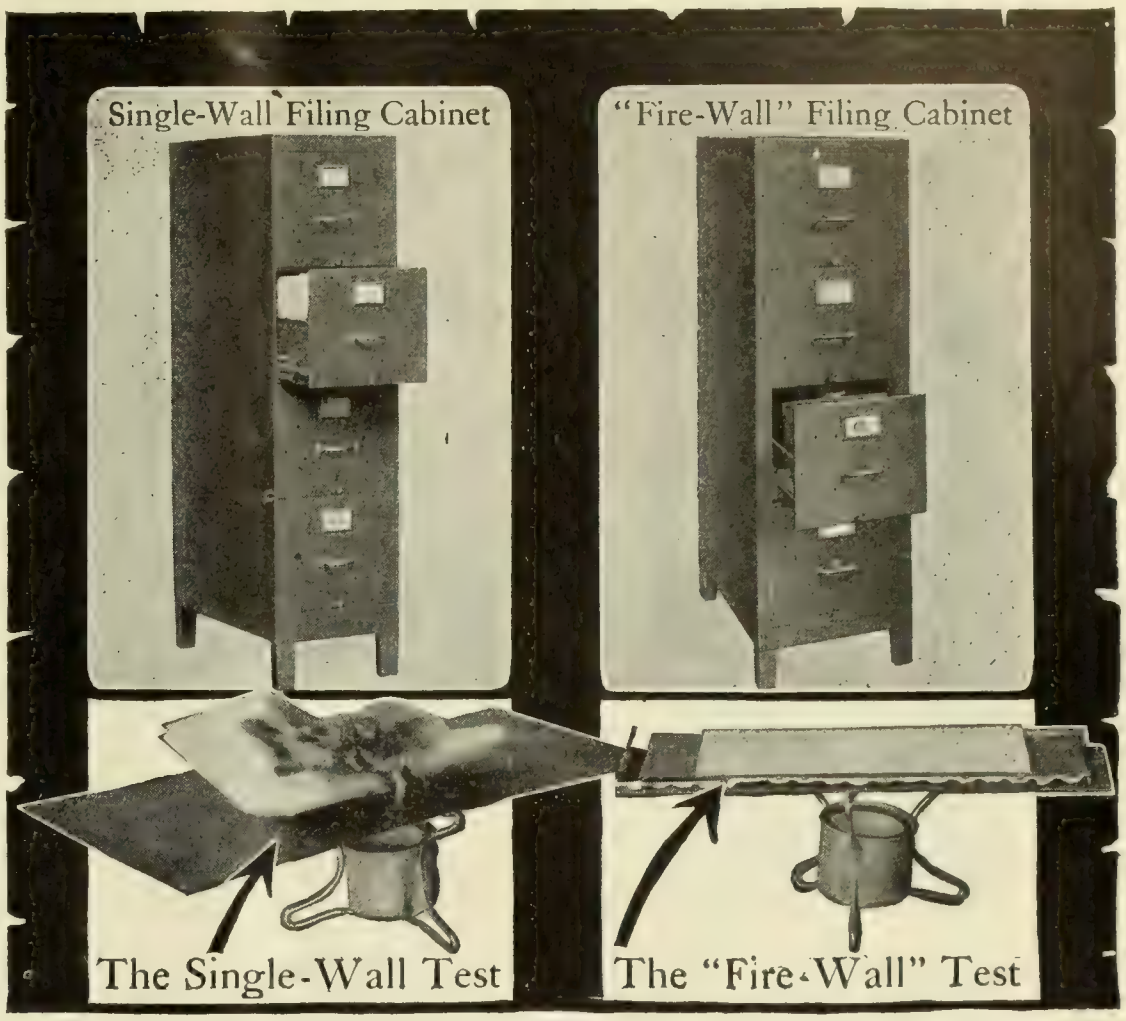

Photo shows what happens to a piece of paper after heat is applied for a minute or so to a section of the wall of a *single-wall* filing cabinet. Single-wall cabinets are wholly inadequate for fire protection. For safety you must use "Y and E" "Fire-Wall" Cabinets or "Y and E" Super Wood.

As photo shows, paper remains unscorched no matter how long you apply the same alcohol flame to a section of a "Fire-Wall" cabinet. "Fire-Wall" construction means double steel walls with asbestos and air chambers between, like a safe—an exclusive "Y and E" invention.

The Conclusive Test Warns You to Buy "Fire-Wall" Filing Cabinets

The ordinary steel filing cabinet is made with single walls. In addition to our "Fire-Wall" and Super Wood we ourselves make and sell certain single-wall filing cabinets; but, from our long experience we recommend them only for vaults or where the papers are so unimportant that their destruction would not matter.

Fire heats the interior of a single-wall steel filing cabinet like an incinerator, chars the papers, and withers them away to ashes. If you want steel and want fire-protection also, the only thing you can buy is a stack of "Fire-Wall" filing cabinets. It is better to use the heavily veneered *wood* cabinets of today than the ordinary steel cabinets of single-wall construction. "Fire-Wall" construction means built with double steel walls, with asbestos lining and dead-air insulating chambers between—*like a safe.* This type of cabinet is an exclusive "Y and E" invention.

"Y and E" REG. U.S. PAT. OFF.

As a further protection we equip each drawer with automatic safety latches which lock and unlock without a key and keep the drawers shut. This feature is especially valuable when the cabinets are tipped up or over, as during a fire or when moving. Also the drawers move on "Y and E" *"frictionless"* suspension slides. These also are exclusive "Y and E" features.

"Fire-Wall" cabinets are manufactured in standard sizes for correspondence, bills, legal-cap papers, documents, storage, cards, etc. Olive, oak, or mahogany finishes.

Ask us for our new pocket-size reference book of fine office equipment No. 3016-M. Check coupon and mail today.

The New Books

Barnard's Lincoln

IN our issue of November 3 we published pictures of various statues of Lincoln and asked our readers to vote for which they preferred to send to London. The statue by George Grey Barnard arouses in different people fervent admiration or violent antipathy. What the sculptor himself meant by it is given, together with ex-President Taft's speech, in a dedication booklet of the Cincinnati monument. Speaking of the Lincoln life mask which he used as a model for the face Mr. Barnard says:

With the order for a Lincoln my work began. An imaginary Lincoln is an insult to the American people, as thwarting of democracy. No imitation tool of any artist's conception but the tool God and Lincoln made—Lincoln's self—must be shown. I found the many photographs retouched so that all form had been obliterated. This fact I have never seen in print. The eyes and mouth carry a message, but the rest was stippled over, to prettify this work of God, by the photographers of the time. Nearing election, they feared his ugly lines might lose him the Presidency. So the lines were softened down, softened in cloudy shades of nothingness—this man, made like the oak trees and granite rocks. To most, the life mask is a dead thing; to the artist, life's architecture.

For one hundred days I sought the secret of this face in the marvelous constructive work of God. Here is no line, no form, to interpret lightly, to evade or cover. Every atom of its surface belongs to some individual form, melting into a larger form and again into the form of the whole. The mystery of this whole form nature alone knows—man will never fathom it, but at least he should not bring to this problem forms of his own making.

People say who saw: "Lincoln often looked the Christ." This face is infinitely nearer an expression of our Christ character than all the conventional pictures of the "son of God." That symbolic head, with its long hair parted in the middle and features that never lived, is the creation of artists, Lincoln's face the triumph of God thru man and of man thru God. One, fancy; the other, truth at labor. Lincoln, the song of democracy written by God. His face, the temple of his manhood, we have with us in the life mask.

Barnard's Lincoln. Stewart & Kidd Company. 50 cents.

Operas, Mostly Modern

IN 1909 Henry Edward Krehbiel, the veteran music critic of the New York *Tribune,* published "A Book of Operas: Their Histories, Their Plots and Their Music," which is very different from the ordinary handbook of opera plots. He now continues a work of scholarly exposition in entertaining form by putting forth a second book of the same kind. In this he writes of "Biblical Operas" and "Bible Stories in Opera and Oratorio"—an historical and anecdotal discussion preliminary to chapters on "Rubinstein and His Geistliche Oper," and on "Samson et Delila," "Die Königin von Saba" and "Hérodiade." Then he considers a dozen other operas not dealt with in the earlier book, including such modern works as "Madama Butterfly," "Der Rosenkavalier," "Königskinder," "Boris Godounoff," "Madame Sans-Gêne" and Wolf-Ferrari's "The Inquisitive Women" and "The Jewels of the Madonna."

Besides telling the plots of these operas, the book gives much interesting information about their origin, their sources, the circumstances of their composition, production and subsequent history, their place in

Short-Story Writing

A COURSE of forty lessons in the history, form, structure, and writing of the Short Story taught by Dr. J. Berg Esenwein, for years Editor of Lippincott's.

Dr. Esenwein

One student writes: "Before completing the lessons, received over $1,000 for manuscript sold to Woman's Home Companion, Pictorial Review, McCall's and other leading magazines."

Also courses in Photoplay Writing, Versification and Poetics, Journalism. In all over One Hundred Courses, under professors in Harvard, Brown, Cornell, and other leading colleges.

art. Mr. Krehbiel writes with learning and authority, but without pedantry, and in an easy and pleasant style. It must be added that at times his prejudices sit heavy upon him. The book is illustrated with portraits of composers and of singers in character.

A Second Book of Operas, by Henry Edward Krehbiel. The Macmillan Company. $2.

Henry Finck on Richard Strauss

FOR more than a quarter of a century, says Henry T. Finck, Richard Strauss has been the most prominent composer in the world. And for more than a quarter of a century Henry T. Finck, using every opportunity afforded by the office of music critic of the New York *Evening Post*, has been one of the bitterest, most savage and most blatant disparagers of Richard Strauss's compositions. Now Finck has written a book on Strauss, a whole big book of 325 pages, which is at once not only the biggest but also the most interesting and the most valuable work on this composer yet produced in English. For, while the German literature on Strauss is voluminous, and while there have been countless articles about him in English and American periodicals, hitherto there had been only one small book in English concerning the man and his music: Ernest Newman's excellent monograph published about a decade ago.

Percy Grainger contributes to the Finck volume a glowing appreciation of Strauss as a seer and idealist. Mr. Finck's own introductory chapter is headed "Genius or Charlatan?" and the whole book is Mr. Finck's confession that he is unable to answer that question.

Almost he is persuaded that Richard Strauss is a genius; but not quite. He says that the tone poem "Don Juan" is the most inspired and the most popular of all the works of Strauss "because it has more melody than any of the others." The fact is that there is an abundance of melody in the other works also (in nearly every one of them); only, it is Richard Strauss's own new melody, and not Schubert's, and therefor Mr. Finck has not as yet been able to hear it.

If the book contained only this sort of intensely personal dislike, paraded as an attempt to determine Strauss's place in the history of music, it would be of small worth. But it contains a deal of more profitable matter. The story of Strauss's life is the account of an extremely interesting character, a fascinating personality; and it is told vivaciously, with many authentic anecdotes that illustrate personal traits and characteristics. Full descriptions of, with comments on, Strauss's more important compositions, including all the tone poems and operas, make the book useful for reference. Finally, it is vastly entertaining because, as Mr. Finck says, he deals with such an interesting subject that it is difficult to be dull in writing about it.

Richard Strauss: The Man and His Work, by Henry T. Finck. Little, Brown & Co. $2.50.

A Sordid Chronicle

WINSTON CHURCHILL in his latest novel, *The Dwelling Place of Light*, has abandoned his secured place in American literature as a conscientious and dignified historical writer for a perilous adventure in the uncharted seas of so-called realism. He is apparently trying to show Theodore Dreiser the high honor of imitation. He has not Dreiser's savage equipment, and lacks the ponderous sledge-hammer stroke that makes its effect by heavy iteration of details. He lacks, too, the evident sincerity of Dreiser, who, however unpleasant he may be, is always unmistakably in earnest. Mr. Churchill is a sheep in wolf's clothing, and the costume suits him not at all. *The Dwelling Place of Light* is an unsavory story of the seduction of an ambitious, discontented, fiery stenographer by her employer. There is no reason for the snobbish sense of inferiority of the girl which prevents the marriage the mill-manager has promised her. Her tragedy is too useless and sordid to have any redeeming dignity. There is also a strike and the usual inconclusive situation between the mill-owners and the workers, dramatized in Galsworthy's "Strife." We feel the author's sympathy more keenly than his wisdom.

In title as well as topic Mr. Churchill has broken with his past. He made his first success with "The Celebrity" and followed this with "The Crisis," "Coniston," "Richard Carvel," "Mr. Crewe's Career," "A Far Country" and "The Inside of the Cup," all of which went into the list of "best sellers." So it came to be a superstition of his readers, if not of himself, that to be successful he must have his own initial in the title. We are inclined to hope that the superstition will be confirmed by this volume.

The Dwelling Place of Light, by Winston Churchill. Macmillan. $1.

A Syndicated Novel

IF fourteen good writers of excellent fiction could write among them fourteen splendid novels without turning a hair, could they write one novel fourteen times as good if they all got together? The answer is a resounding No; for they have got together, they have written it, and it isn't. In fact it isn't as good, we believe, as any one of them could have done alone. You see, fourteen men and women of the pen proposed to write a novel dealing with—we might even say, boosting—woman suffrage. The result is *The Sturdy Oak*, which is a good suffrage tract, a not bad story, and an interesting study in comparative literary workmanship. Each author wrote a chapter. Some chapters are better than others—but wild horses shall not influence us to indicate which ones. Nevertheless, read the book if you like literary "stunts," if you like—or don't like—suffrage, if you like a readable story. (Henry Holt, New York, $1.40.)

Detective Stories

NO. 13 RUE DU BON DIABLE, by Arthur Sherburne Hardy, is a detective story with a difference. We are not sure that Mr. Hardy has not sacrificed something of the reader's interest by letting him into the secret of the murder at once instead of making him share the puzzles of the detective. Mr. Hardy's style has the old distinction; his people are clear-cut as cameos; his psychology is never at fault, and there is a real fascination in watching the clever M. Joly uncover the clues that lead to the detection of the murderer.

So many readers are on the qui vive for anything new from the pen of Dr. Watson on the subject of his own stupidities and the cleverness of his friend, Sherlock Holmes, that hardly more than an announcement of a new volume is necessary. It's title is *His Last Bow*. We do not like that word "last." We are sure that if Sir Arthur Conan Doyle will persist in bothering Dr. Watson some more, he will find that Holmes has performed many other sterling services for his country and her Allies since the Great War began.

No. 13 Rue du Bon Diable, by Arthur Sherburne Hardy. Houghton-Mifflin Company. $1.35. *His Last Bow*, by Conan Doyle. Doran Company. $1.35.

Santa Claus—Advance Agent of Thrift

The "sane Fourth of July" is to be followed by the "sane Christmas"—and this is the year to start.

Because—it is vital this year that every ounce of energy—every moment of labor be *saved*.

Material gifts cost *labor* and *goods*

Every Thrift Bond sold this Christmas means $10 worth of goods and labor *saved*.

This Christmas, men of means and men of foresight are going to give presents that develop Character, Thrift and Patriotism.

Thinking men will give Liberty Bonds or Thrift Bonds as gifts to their wives, their sons and daughters, their loyal employees and faithful friends.

$10. THRIFT BONDS

are the very best of gifts because:

(1) They earn interest for their owner.

(2) They start the habit of saving and investing.

(3) They are absolutely sound and safe — conservative in every way and representative of the highest development of the Thrift principle in practice.

Thrift Bonds are 3% certificates of ownership in Governmental obligations held by the Equitable Trust Company of New York as Trustees.

Thrift Bonds are issued in $10 and $100 units, and are accepted at par in exchange for bonds of the Liberty Loan with no charge to holders except transportation, accrued interest, and premium, if any, at the date of the exchange.

Any bank or store can get them for you, or they will be sent by registered mail prepaid on receipt of price by

National Thrift Bond Corporation

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

DIVIDEND

The Board of Directors of The American Cotton Oil Company, on November 8, 1917, declared a semi-annual dividend of three per cent. upon the Preferred Stock, and a quarterly dividend of one per cent. upon the Common Stock of the Company, both payable December 1, 1917, at the Banking House of Winslow, Lanier & Co., 59 Cedar St., New York City.

The Stock Transfer Books will be closed on November 15, 1917, at 3 P. M., and will remain closed until December 7, 1917, at 10 A. M.

GOVERNMENTS IN BUSINESS

(*Continued from page 375*)

privately managed railroads and they are now being run by the state. Duplication in service has been eliminated, the various competing systems have been articulated, and the result, it is said, is that England has transported the bulk of her troops and war supplies without cost while paying interest on the railroad bonds and some interest on the stock. War necessarily induces efficiencies; whether they will persist under ordinary peace conditions remains to be seen. Steel and munition factories covering square miles, built and manned entirely by the Government, are commonplace in England. Peat bogs have been transformed into communities devoted solely to the making of munitions. One of these is described as employing 16,000 workers in a plant 30 square miles in extent—a plant built with government workers, manned with government employees, housed in government houses, fed from government kitchens with government cooks preparing government food. Within eighteen months after the war had been declared 2500 factories employing 1,500,000 workers were being operated in England under government control. It is now stated that the number of factories so operated is far over 5000 and that no less than 7,000,000 men and women are employed under control of Government operation. But that is not all. The British Government is engaged in collective buying on a tremendous scale, just as the United States now is. Even the raw materials not subject directly to use in the manufacturing of munitions but necessary in the conduct of the war—hides, leather, glass, coal, many other articles—are under strict Government supervision. There are few important commodities, in short, the prices of which are not fixed by the English Government.

Italy is reported to be controlling and operating about 2500 plants employing about 3,000,000 workers. The situation in France is even more intensified. But there is not space here to tell, in detail, the miracles of change that have been wrought in Russia, which constructed about eighty grain elevators for the benefit of its population; in Australia, where wheat crops were pooled by the Government and prices fixed thereon, where, in New South Wales state abattoirs, even, were established and state bakers in the year 1915 made a profit of $30,000 tho reducing the price of bread four cents; where brick works, lime works, quarries, timber yards, clothing factories, have been taken over and operated by the state. Sweden, Switzerland, Holland, Spain, Norway, Denmark, have all projected governmental function into industry to an extent never dreamed of before. As to some commodities, even, not only has one government resorted to collective buying for its people and collective distribution, or selling, but several governments themselves have combined. Italy, France and England, thus, established a joint commission for the purpose of buying sugar in the markets of the world, tho six or seven American refineries of raw cane sugar refrained from collective buying of the raw product and sought individually to meet this collective competition of the three governments. And now even this step has been passed by Mr. Hoover's collective purchasing for all the allies, and our other efforts at similar collective buying in the metals, etc.

This remarkable new interpretation of public interest in industry, these remarkable experiments in industrial and commercial activities have been impelled by great national needs brought about by this extraordinary war. They are, of course, war measures. To what extent they may persist after the treaty of peace is a problem that is fraught with great significance to the character of future civilization.

There will be strong forces at work to retain these governmental activities. The simple startling fact that were the war to end today some of the belligerent nations could not, from ordinary sources of revenue such as taxation and tariffs, pay interest on their debts and current expenses, is evidence that resort must be had, in some measure, to governments going into business. Should the war last much longer the very inertia of these established institutions will tend to preserve them. The need of finding employment for large bodies of men returning from the front will naturally have a similar tendency. The stimulus of war necessity, the necessity of future industrial preparedness, will tend to make these efficiencies persist. There will be a disposition to refuse to give up the efficiencies in railroad management which these conditions have developed, and it will be only natural, if collective buying and distribution of food stuffs has materially reduced the cost of living to consumers for consumers to believe that in times of peace the same economies and efficiencies be conserved and that thereby the real wage of wage earners be increased.

What the future will develop is uncertain, of course. The facts suggested here, however, disclose great forces at work which will have great effect upon the governments projecting them. Certainly it is only by taking cognizance of these facts and forces, which are working alterations everywhere, here in America no less than in Europe, that the United States will be enabled to protect its interests and sustain its place in world industry and commerce.

The problem which the United States has to solve for democracy and for civilization is to retain the efficiencies that have been demonstrated and hold to the fundamental concept of coöperative democratic individualism, which alone will preserve industrial and political democracy for mankind.

Washington, D. C.

One incident at Camp Devens, in Ayer, Massachusetts, which has now reached civilian ears, should help somewhat toward making the new United States Army democratic. As the story has been heard by outsiders, while nearly all of the officers who have come from the training camp in Plattsburg have been respected and liked, a few have been regarded as martinets. A short time ago a private passed one of these officers, a lieutenant, without saluting.

The lieutenant, as the report goes, saw fit to impress the lesson on the new arrival more forcefully, and ordered him to make amends, on the spot, by saluting 200 times. The soldier began his task, but the officer, in his haste, had set a rather high figure, and, after a few minutes, many other men of the camp had come along and stopped to watch the performance. When quite a company had collected, a colonel came that way and paused to learn what was going on. After hearing the lieutenant's report, the superior officer asked the private for his version. Upon hearing it, the colonel, turning again to the lieutenant, inquired, "And when a private salutes you, what do you do?" "I return it," was the reply. The colonel then quickly concluded his own part in the incident, which on the whole must have been quite entertaining to the bystanders, by saying, "Return the salutes."

But I got no ax ter cut 'im down,
An' I lef my 'possum dog in town.
(Long ways fum home!)
—*Frank L. Stanton in Atlanta Constitution.*

A lady knit a pair of stockings and sent them to the war, with her name inside, hoping to hear from the recipient. The word she received was as follows:

"Lady:
The socks received; they almost fit;
I wear one for a helmet, and one for a mitt,
I hope to meet you when I've done my bit.—
But where in —— did you learn to knit?"

Mark Twain had a protégée who wrote him one day that she was not feeling well; so he wrote her back, advising her to buy a certain magnetic health belt. After she had worn the belt for a few days the girl wrote the humorist:

"I bought one of those belts, but it did not help me a bit."

By wire back came the answer:

"It helped me. I own stock in the company. "SAMUEL L. CLEMENS."
—*Ladies' Home Journal.*

"Some un sick at yo' house, Miss Carter?" inquired Lila. "Ah seed de doctah's kyar eroun dar yestidy."

"It was for my brother, Lila."

"Sho! What's he done got de matter of 'm?"

"Nobody seems to know what the disease is. He can eat an' sleep as well as ever, he stays out all day long on the veranda in the sun and seems as well as any one, but he can't do any work at all."

"He cain't—yo' says he cain't work?"

"Not a stroke.'

"Law, Miss Carter, dat ain't no disease what yo' broth' got. Dat's a gif'!"—*Everybody's.*

United States Depositary in France

THIS Company's opportunities for service abroad have been greatly increased by its official designation as a United States depositary for public moneys. This designation includes our Paris Office, which will act as paying and receiving agent for United States paymasters and other American disbursing officers in France.

Our Paris Office is a fully equipped banking institution, similar to our office in London, supported by the responsibility of the Guaranty Trust Company of New York. It places the facilities of an American bank with American methods at the disposal of all the officers and men of the forces of the United States wherever they may be in France.

American business concerns and individuals having interests abroad will find it to their convenience and advantage to bank with our Paris or London offices. It will be our effort to be useful in every possible way to American citizens traveling abroad and to those with the armies in France.

THE CHAUTAUQUA IDEA

THE MOST AMERICAN THING IN AMERICA

HOW TO STAY EDUCATED

THE Chautauqua Reading Circle has two purposes: to convince people that they need education and then to educate them for a little while at a time. They will "stay" educated only while they continue to exercize their minds; for the greatest permanence that education can ever have is that of a confirmed habit. Chautauqua gets people into the habit of being educated.

Everybody needs a systematic reading course, tho there are a great many people who don't know that they need it. Bless you, they graduated from lessons and that sort of thing a long time ago! In the United States these unfortunates are much more often men than women. It is a matter of wonder to foreigners traveling in this country that while American women belonging to families of position and influence are largely interested in things intellectual, the men are generally confined to business and club life, sometimes with politics added. As Samuel Crothers has it, mention Botticelli and they will think you refer to some kind of cheese or pickles. If such men would study almost anything at all outside their own trade or specialty, it would do them good. It is not, however, to go deeply into some other one subject that they need, but to alleviate their total ignorance on a variety of subjects. The Chautauqua home reading course is designed to afford such relief to them and to other sorts of people. Twice as many women take it as men, which is not surprizing. There are more women in the churches than men. There are more women who attend cultural lectures and concerts and art exhibits than there are men. There are more women who have generous leisure than there are men, to be sure; but some of these things do not require generous leisure. The Chautauqua course does not.

All the little fragments are to be conserved, under our present war dispensation. Bishop Vincent's project a generation ago, under the name of the Chautauqua Literary and Scientific Circle, was to conserve the little fragments of time and turn them to personal and social account.

THE Chautauqua home reading course has made for thousands of people ever since all the difference between narrowly limited intelligence on the one hand and liberal education on the other. This is the most essential difference that a college course makes to its beneficiaries. The Chautauqua course is not a substitute for a college course, offering to impart the same instruction and discipline by a different method. It does not teach Greek or Latin grammar or mathematics, nor enable anybody to speak French. Those subjects of study all have their value. They may even be taken up at home with some success, by the aid of correspondence instruction; but they are not the things which would help in a course like this, designed to give a general increase of knowledge and of culture thru use of small margins of leisure time. For such purposes, the thought and imagery of Homer are more important than a study of his verb modifications; the beauty and visible movement of the stars are more important than formulas for computing their distances.

A Chautauqua diploma has not the immediately recognized value among all sorts of people that a college or a high school diploma has, because it is a less conventional thing. It means more or less, according to the individual. Almost anywhere in the United States, however, the fact that a man or woman has taken a systematic four-year course for self improvement, voluntarily, after school-boy or school-girl days were past, will be accepted as a pretty good sign. The Chautauqua reading course is not the prescribed or regular preparation for any special pursuit, but as a contribution to general fitness its value is very high and is everywhere recognized. In the final result it is not the diploma hung on a wall or kept in a roll in some dark corner, but the enlightened mind and the enlarged personality that counts.

Every ambitious, courageous person who has not had a college course, wishes to be able, when asked, to say, and particularly he wishes to tell himself truthfully, "While I have not had a college course, I have used the best means available to me for making myself broad-minded and intelligent. In doing that, I have been seeking what are also the fundamental objects of the college course."

NOW men and women who lacked college opportunities, or who had such opportunities and found the results imperfect, were never offered any other scheme by which they could find their way out into a world of larger ideas, a world of more democratic and more catholic ideals, so naturally and so surely as by reading the Chautauqua course. To many thousands of men and women it has given more real education than a college course yields to great numbers of young students. These young students are given Greek and Latin partly for the sake of Greek and Latin, but mainly for the sake of education. They are given mathematics, or French, or technical laboratory studies, partly for the sake of the mathematics, or what not, but mainly for education. Being young, they, too, often fail to assimilate the mere knowledge imparted, fail to set it into any perspective or scheme of knowledge, fail to reflect upon and ponder it so that it becomes part of their available resource. Most of it they have no subsequent use for anyhow. The really important benefits that they receive are two. One is in having exercized and stretched their minds upon the thoughts of great men and women, in having sharpened their understanding upon hard matters. The other is in having kindled their spirits by response to great enthusiasms. Discipline and sympathetic intelligence are the two valuable products.

Bishop Vincent made the discovery, and it may be characterized as an actual discovery at that time, that mental discipline is acquired in many ways outside the schools. Life imparts it. There are men and women in every community who lack the earmarks of school and college, yet who have effective control of well regulated minds. They can think, and can determine action by their thoughts. They are educated in this respect of discipline. If their wills have been stiffened by self control, if some spiritual influence has made them gentle and taught them to love beauty of form and of character, they have the most essential elements of all personal culture. Still they are not liberally educated. Acquaintance with the great world of culture in past ages and in lands remote has been denied them, so that they are mentally uncouth and outlandish if judged by the standards of such a realm. Having got discipline from life, they must find outlook thru some special medium. "High thoughts and noble, in all lands," must be interpreted to them, and made familiar as part of their heritage, along with all mankind. The sweep of human thought and progress must be shown them from some eminence. They must be taught the language, not the vocabulary, but the fashion of speech of the cultivated and the thoughtful of all times. If this can be done, they become liberally educated.

If the process is arrested at any stage, they lose the vital character that belongs to all growing things. But if it be kept up, tho never complete, it will be perpetually effective in its liberation of their lives a little from the merely provincial, personal, special, momentary, to the social, the cosmic, the eternal.

The Chautauqua home reading course introduces men and women to this largeness of view and of understanding. Proof is in the testimony of ever increasing thousands, and in the recognition accorded them in the communities of work and of social activity in which they live.

On the Chautauqua Platform

MRS. PERCY V. PENNYBACKER—Good advice to follow is, "If in doubt, don't."

HENRY TURNER BAILEY—To the artist, beauty is a soul-satisfying revelation of God.

FRANK CHAPIN BRAY—It is as bad to be unprepared for peace as to be unprepared for war.

THOMAS ADAMS—If we secure life, liberty and happiness it will only be thru efficient business methods.

ANNA BARROWS—The spirit of the Lord's Supper should not be occasionally observed, but at every meal.

DEAN SHAILER MATHEWS—There is a type of patriotism that puts a flag on your auto, and lets your neighbor's son volunteer.

J. HORACE MCFARLAND—To waste less, work more intelligently, and be brother-keepers, are the duties of citizens in war times.

IDA M. TARBELL—We are smiling now; soon we will not smile. If by our suffering we can make the world safe for democracy, it will worth it all.

DR. GEORGE A. BELLAMY—First, all individuals and all nations that have used their leisure well have risen in power, and second, all nations and individuals who have wasted their leisure have declined in power.

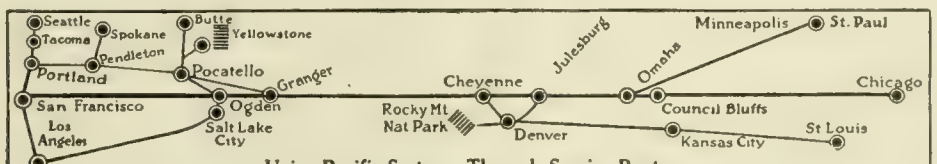
UNION PACIFIC

What the Union Pacific Is Doing To Save Food

FROM day to day the Union Pacific is co-operating with the Government in different branches of war work. As an example, every suggestion of the U. S. Food Administration is followed immediately and conscientiously on Union Pacific Dining Cars.

Bordering the Union Pacific are the Nation's greatest agricultural states, bounteous producers of grain, cattle, hogs, beet sugar, fruit, vegetables, poultry and dairy products from which our Commissariat replenishes its larders with choice foods.

But few readjustments have been necessary to carry out the plan of using chiefly fresh and perishable products. Sea food from the Pacific, trout from mountain streams, game in season, fresh vegetables and fruit have long been the delight of Union Pacific passengers.



So the nation-wide observance of meatless Tuesdays and wheatless Wednesdays, suggested by the Food Administration to help win the war, is made easy for Union Pacific patrons.

Passengers on our trains are gladly joining in this patriotic duty. They find that our chefs are stimulated to new efforts. Menus gain new interest.

For half a century the Union Pacific—in war and peace—has fulfilled its Federal obligations.

Typical war menus are sent free on request.

Union Pacific System—Through Service Routes

The Brunswick

ALL PHONOGRAPHS IN ONE

Not Merely a Phonograph But a *Brunswick!*

YOUR good judgment in the selection of gifts is recognized when you present a Brunswick. In this final type phonograph are expressed by master craftsmen all those features music lovers have wished for so long.

Brunswick Superiorities

Plays ALL Records, including Pathe.
All-wood sound chamber—better tone.
Two reproducers, instantly interchangeable.
Accurately timed automatic stop.
Throat-way volume control.
Extra capacity motor.
Improved index files.
Finer cabinet work.
All phonographs in one.
Costs less.
Regular models:
Prices $32.50 to $180.
De Luxe models:
Prices $350 to $1500.

Here is an instrument that plays all records—not limited to one particular make.

One whose tone carries no metallic nor nasal sounds.

Because of its all-wood sound chamber built like a violin.

The Brunswick combines all the merits and discards the handicaps. It is the supreme achievement of The Brunswick-Balke-Collender Company—famed for 76 years in the woodworking art.

Only your own ear can prove to you the charm of Brunswick tone. And its superiority.

Aside from tone, such a demonstration will convince you also that you must have this *all-record* phonograph.

Hear The Brunswick and compare. Then judge for yourself.

HOW TO STUDY THIS NUMBER

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. COMPOSITION.

The Story of the Week.

1. Your father has had difficulty in procuring coal. Show him exactly how the war has affected the production and the use of coal.
2. You are at a neighborhood meeting. Give a speech in which you show how it is possible for every one who uses coal to aid the Government in coal conservation.
3. You are employed in a railroad office. Write to a friend and explain in what ways the railroads are doing war service, and in what ways they show a praiseworthy spirit.
4. You are present at a meeting of laboring people of your district. Give a speech in which you tell of the patriotism displayed at the Buffalo convention of the American Federation of Labor, and of the loyal stand taken by President Gompers.
5. You are a resident of Minnesota. Write an enthusiastic letter telling about the patriotic rally in the Northwest, and expressing your hearty approval.
6. Write a public notice giving the new restrictions for enemy aliens resident in the United States.
7. You belong to a Current Events club. Explain to the club the nature and the purposes of the Supreme War Council.

Editorial Articles.

1. Ten students should be appointed to speak, as if at a congress, concerning the political factors of the war in as many different lands. An eleventh student should act as chairman, and conduct the meeting. The chairman will explain the general situation, and will call for reports about the different nations.
2. What is the purpose of "If We Were Russia"? How has that purpose been attained? In what spirit is the article written? Write a similar article on "If We Were Mexico," or "If We Were China."

Special Articles.

1. Write a composition on "New Information That I Gained from This Number of The Independent."
2. Write, in a single paragraph, the principal facts presented in "Speeding Up the Busy Bee."
3. Read "Which Is the Side-Issue?" Assuming that the article is a letter written to you, write an answer, commenting on the various points presented, expressing your approval or disapproval of every point.
4. Write a public notice concerning the food fight.
5. Look in your encyclopedia for information concerning famous tapestries. See if you can find something about literary references to tapestries. Write a composition in which you present what you have learned. Explain how tapestries may now be had by everybody.
6. Write a clear description of any picture in this number of The Independent.

SECTION II. WORD STUDY.

1. Study the page called "Words of the Week." Find ten other words or expressions in The Independent that are new to you. Look up the meanings of these additional words, and give an oral report to the class.

SECTION III. LITERATURE.

A Literary War Map of Venetia. By Edwin E. Slosson.

1. Explain the meaning of "A Literary War Map."
2. Write a similar article entitled, "A Literary Map of My Own State."
3. Tell something about the literary work of the following authors mentioned in the article: Virgil, Catullus, Tom Moore, Tennyson, Dante, Longfellow, Browning, Byron, Mrs. Browning, Ruskin.
4. Tell how every one of the authors named in the above question is connected with the scenes of the war in Italy.
5. Select the most beautiful quotations in the article. Give the meaning of each quotation. Tell why each quotation that you name has literary beauty.
6. Read one of the quotations to the class in such a way that your reading will at once present the meaning and the beauty of the quotation.

SECTION IV. GRAMMAR.

1. Give the syntax of the adverbial elements in the first editorial article.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Radicalism in the United States—"If We Were Russia," "Perplexing Russia."

1. Who are the people alluded to in the second paragraph? Do you see any similarity in the supposed conditions to those in Russia previous to the Bolsheviki uprising?
2. Who are the people alluded to in the last paragraph? Why did the writer select each of the group as a subject for satire?

II. Is Peace in Sight?—"The Political Factors of the War."

1. Does the information which has been coming to us during the past few weeks justify the statement: "In every European belligerent nation there is an anti-war movement that is daily gathering force," etc.?
2. "In Russia the process of national disintegration has reached its hight," etc. What are the facts?
3. "Austria-Hungary is in almost as serious a situation." In what way?
4. Justify the statement: "Germany has crost the political Rubicon."
5. How do you account for the temporary military collapse of Italy?
6. What is the significance of the resignation of Premier Painlevé?
7. "In England the party truce has broken down and the old parties are breaking up." What effect will this have upon the progress of the war?

III. The Inter-allied War Council—"The Only Way," "Lloyd George Makes It Plain," "Our Part in the War Council."

1. Why has the creation of the War Council been so long delayed?
2. Summarize the arguments for and against the establishment of the War Council.
3. What were Mr. Asquith's reasons for attacking Lloyd George in the House of Commons on November 19? What answer did Lloyd George make to the attack?
4. What is Lord Northcliffe's attitude on the same subject?

IV. The War at Sea—"United We Stand," "The War on the Water."

1. An examination of a map of the North Sea and the Baltic will help you to understand Mr. Benjamin's analysis of the reasons why there has been only one great naval battle in European waters during the war.
2. What course does Mr. Benjamin advise the Allies to take in the future? Quote his words in proof of your statement. If the Allies were successful what would be the result?
3. What has the navy of each of the great belligerents done thus far in the war?
4. "The maximum of German U-boat activity has been declining for the last few weeks." Does the chart published in this week's issue justify this statement?

V. 1500 Years of Italian History—"A Literary War Map of Venetia."

1. Describe one or more of the invasions of Italy referred to in the second paragraph. The withdrawal of the Austrians in 1866.
2. Describe one or more of the attacks and counterattacks which centered around Aquileia—that of Maximinus, of Constantine II, of Julian—referred to in the article.
3. "Attila, King of the Huns, . . . wiped it off the map in 452." How does your textbook describe this affair?
4. What were the events which led up to "the Treaty of Campo Formio in which Napoleon ceded Venice to Austria"?
5. "As the City on the Seven Hills declined the City on the Twelve Islands rose," etc. Explain this sentence.

VI. The Government of Japan—"The People's Chance in Japan."

1. "In 1890 the political system of Japan was . . . transformed," etc. Describe the system of government before and since 1890.
2. Wherein is the Japanese system of government similar to that of Great Britain? Wherein is it different?
3. Why does the author feel that the creation of the Council of Foreign Affairs justifies the title of the article?
4. "It is no exaggeration to say that as to her foreign policies Japan is a most misunderstood country," etc. What are the facts?

VII. The Economic Position of Women—"Which Is the Side Issue?"

1. Describe the "Bachelor Maid's" method of solving her domestic problem. Compare this method with that in use in your own home.
2. "It ought to be possible for a woman to have both a home and a profession." Make this the subject for an informal debate.
3. Discuss the assertion: "Most women try to serve about twenty-two [masters]."

STERLING

A GORHAM CHRISTMAS

THERE are a thousand transitory offerings which may serve to remind the recipient of your sentiments this Christmas, but it is the peculiar charm of a gift of Gorham Silverware that it remains as a permanent reminder, not only of this Christmas, but of many Christmases to come, renewing the sentiment annually regardless of whether you supplement it with future giving.

GORHAM STERLING SILVERWARE is sold by leading jewelers everywhere and bears this trade-mark

THE MAN OF THE HOUR, PREMIER LLOYD GEORGE

THE ONLY WAY

THE remarkable thing about the proposal for a Supreme War Council for the prosecution of the war is not the plan itself but the fact that it took more than three years for the governments of the Allies to realize the necessity for it. The war of the defence of civilization against the menace of German imperialism can only be won by unity. Germany has unity already, for its allies, Austria, Turkey, Bulgaria, have been made to be little more than vassal states. The Allied nations must strike together or they will all be struck down separately.

The plan is one that cannot fail to commend itself to the American people. We have but one purpose in this war—to break the arrogant and malignant power of the German militaristic ideal. This is the one thing that we have in common with every one of our Allies. We have struck hands with them on this righteous purpose and we shall insist that in pursuing it they and we shall have one mind, one strategy, one attack.

There can be no question that it is American insistence and support which has emboldened Mr. Lloyd-George to advocate the proposal with such splendid firmness and fire. He has himself declared that not only does the plan commend itself to America, but America wants an even larger measure of unified control than is provided in the agreement already made between England, France and Italy. Lord Northcliffe, who has been in America as the head of the British War Mission, has said that the idea itself originated with Secretary McAdoo. When the full history is told, it will probably be found that a powerful impulse toward sending Colonel House and his associates to Europe just at this time, instructed to favor strongly the move for unity of action, came from prominent leaders of American finance, transportation and industry.

America wants united action because America wants victory, because American business and American industry know the danger and the wastefulness of divided action for a single end. America can exert a tremendous influence for unity because it is the resources of America—in men, in money, and in goods—which will be the deciding factor in the struggle. America can urge unity with a single mind because America has no conflict of interest with any of its Allies, no individual ambitions, no desire for a personal gain.

The President is backing the move for unity of action with splendid force. The American people must back the President no less powerfully.

That way lies victory and the salvation of humanity and the world.

LABOR, LOYALTY AND WAR

IT is no more possible to win a modern war without the war power of labor than to win it without the war power of armies. From the beginning of this present war there has been anxiety in every country of the Entente Allies over the labor situation. There has been no such anxiety in Germany or in Austria because in those empires labor does as it is told to do under penalty of facing the firing squad.

Whatever Prussianization of our thinking and our conduct may happen temporarily in the lands that are fighting for democracy, there will be no questioning of the right of labor to that consideration which is due to every group of citizens in a republic from every other group. In France and in England, and now in the United States, the loyalty of wage earners is taken for granted, and all negotiations for the adjustment of differences arising between employers and employees proceed upon the assumption of equal and unquestioned devotion to the nation and the common cause.

The charge has been made that labor has taken advantage of the war situation to hold up the employers and the public and to extort terms that could not be obtained under normal peace conditions. We deplore this charge alike on grounds of justness and of expediency. In our judgment it would be exceedingly difficult to prove that labor in any country has outdone the profiteers in taking advantage of war circumstances.

And it is certain that both exploiting profiteers and exploiting labor groups have been minorities. The overwhelming majority of business men and the vast majority of the wage earners have been both loyal and generous.

On the basis of these facts all parties and interests should seek to bring about adjustments in the industrial world that are thoroly fair and grounded in wisdom. It is right and proper that labor should at all times try to better its condition by lawful and expedient means. No honest man, adequately informed upon the history of labor conditions, would contend that labor has always had adequate wages, adequate leisure, sanitary workshop conditions, or simple humane consideration. Women and children, in particular, have suffered injustice and much cruelty. There is no reason in the world why labor should not, within the limits determined by loyalty and the sacrifices which all good men are making, seek to improve its status in days of war as much as in days of peace.

Difficulties and apprehensions have arisen, largely thru suspicion.

In all countries there has been profiteering—altogether too much profiteering—and the wage workers have been entirely right when they have said that they were willing to "do their bit" for the cause, but not for the profiteers. Nothing could go farther to substantiate in the minds of humble folk the wild socialistic charge that this war is, on the part of the Entente Allies, a capitalist's war. That so far as Germany is concerned it is in large measure a capitalist's war, has been abundantly proven. There must be no ground upon which to base any such contention against the nations that are fighting on the side of justice and of decency.

Both Lloyd George and President Wilson have taken the statesmanlike attitude toward the whole problem. They have taken organized labor at its word, assumed its thorogoing loyalty, and given it their confidence. Also they have assumed that labor ought to get an increasing share of the economic product, and that its total efficiency, so far from being curtailed, would certainly be increased by diminishing fatigue and increasing satisfaction, hopefulness and health. We are confident that events will amply justify this wisdom on their part.

A situation that threatened to become critical in this country has for the time being, at any rate, been happily arranged.

In the railway labor dispute both sides have agreed to abide by the President's decision. In the coal industries there is now every probability of uninterrupted activity. By a vote of 21,579 to 402, organized labor has declared its intention to subordinate all other considerations to faithful performance of industrial duty during the war. We believe, as we sincerely hope, that the whole public will give to organized labor the confidence and the respect which Lloyd George and the President of the United States have exprest in it.

GOLD STARS FOR BLUE

THE red-bordered service flags are flying on every street with blue stars on the white field, one, two, three or many more, each household or factory sending its due proportion of its young men. Soon—and we must frankly and fearlessly look the fact in the face—the names of some of these brave men will be missing from the roll of the army over there. Already the cable brings a daily death list. What, then, shall we do with the star when he for whom it stands has joined the nine million victims of the war? Shall we erase his star from the banner? No, for he and his household are not less but more worthy of honor. Shall we put a black star in its place as the emblem of the sorrow of those who have lost him? No, for their sorrow is swallowed up in the sense of his heroic end. Let then the star of blue be replaced by a star of gold, most precious and imperishable of metals, fittest to memorialize one who has given his life, not merely for his country, but for the liberty of all countries.

IF WE WERE RUSSIA

EVER since the revolution which overturned the immemorial rule of the Tammanoff dynasty and banished Czar Murphyski to the steppes of Alaska, the young American republic has been in a state of confusion. Able men, to be sure, came to the front at first. The scholarly historian, Prof. W. Wilsonovitch, was the first President but he proved unable to cope with the difficulties of the situation. The Germans occupied part of the Atlantic coast and were eagerly fraternizing with the American soldiers in the Appalachian passes. Even had our army been filled with martial ardor any sustained offensive would have been impossible as our chief manufacturing centers, such as Boston, New York, Philadelphia and Baltimore were in the hands of the enemy and military supplies had for the most part to be brought from Japan across the ocean and thence carried by the Union Pacific Railroad across the Rocky Mountains and the western prairies. In the San Francisco freight yards a square mile of supplies were piled up waiting transhipment. To make matters worse, the railroads were hampered by a general strike; the employees demanding thirty cents a day instead of the customary fifteen. Nationalist movements in Finnesota and many other sections of the country threatened to divide one republic into half a dozen. Power was rapidly slipping from the old conservative Congress into the hands of a Workmen's and Soldiers' Council, consisting of the American Federation of Labor, the Industrial Workers of the World and a number of delegates elected by the soldiers and sailors.

After Wilsonovitch resigned the cares of office, an ardent young Socialist who had been revivifying the courage and patriotism of the army in a series of wonderful speeches became President in his stead. Charles Edward Russelloff gathered a following of war Socialists to the support of his administration and undertook to drive the enemy from eastern Pennsylvania. Unfortunately the soldiers, demoralized by pacifist propaganda, ran the other way after shooting their officers. Some regiments stood firm but were unable to save the situation. The troops who did most to redeem the reputation of the army were the women's regiments, composed of the old suffrage organizations, commanded by the Grandmother of the Revolution, Dr. Anna Shawskaya, just returned from Alaskan exile, and the Rough Riders under that typical Cossack chieftain, Colonel Rooseveltski. An unfortunate quarrel between the Russelloff Socialists and this dashing warrior gave the pacifist Bolsheviki their opportunity. By a sudden insurrection in the streets of Washington Russelloff was forced to flee and set up a new capital farther in the interior at Chicago. The Germans, in the meantime, seized strategic positions along the Virginia and Maryland coasts and entrenched within easy striking distance of Washington.

The new Government set up by the radical revolutionists was composed of members of the I. W. W. (the American Federation of Labor under Gompersinski remaining loyal to the Russelloff Government in Chicago), a number of prominent pacifists or pro-Germans, and some literary "intellectuals" from Greenwich Village and other Bohemian settlements. Morris Hillkowitz, an emigrant from Riga, was President; Jeremiah Olearienski, Secretary of State in charge of foreign affairs; Lafollettinski Secretary of Agriculture; Emma Goldmanovitch, Secretary of the Treasury, and Georg Vierecker, from the German provinces, Secretary of the Interior. The other members of the cabinet were of less note. A sailor from the Atlantic fleet became chief of the Navy and a private who had just entered the Yaphank training camp Secretary of War. Both, however, were eloquent speakers and ardent members of the I. W. W. Michael Pszbshtwxnski, a Pittsburgh miner, was made Secretary of Labor, and a clever *vers librist*, Amy Lowelloff, whose poem "The Ogre Capitalism" had attracted favorable mention, Secretary of Commerce. The administration thus set up issued a proclamation calling for immediate peace, the division of the Adirondack estates and the Rockefeller oil lands among the poor, and the punishment of Russelloff, Wallingski, Ghentovitch and others of the recent Government.

But the American Bolsheviki found that their victory had turned to ashes in the very moment of its realization. The "Government" which they had established was obeyed by no one outside the District of Columbia, and even in the city of Washington its orders were calmly disregarded by striking workmen and riotous soldiers. The Russelloff Government in Chicago was no better off, since its existence depended upon the support of a few Rough Rider regiments who secretly wished to see their old leader, Colonel Rooseveltski, in the Presidential chair. From far distant Alaska came the rumor that Murphyski the First, the last scion of the Tammanoff dynasty, had been proclaimed Alaskan Emperor. In a word, there was no Government either national or state, and every man did what he thought right in his own eyes. Those army officers who had not been executed by their own soldiers owed their positions to their suffrages and did not dare to restore discipline. The police, the hated instruments of old-time tyranny, had vanished, and the state and city authorities could only issue decrees and let any one obey them who felt that way. Detective Burnsovitch and Police Commissioner Woodski, particularly famed for their ruthlessness, were forced to seek safety in Mexico. Even the Germans were perplexed; for how could they negotiate a separate peace with Washington when Detroit or Galveston might at any time start a separate war?

THE DIFFERENCE

THE United States is a democracy.

Great Britain is a democracy in everything but the name.

Mexico is a democracy in everything but the fact.

Germany is a democracy in everything but the name and fact.

KEEP THE CROSS AT THE FRONT

THE American Bible Society has set aside the first eleven days of December for a publicity campaign on behalf of the American soldier. It is the intention of the Society to place a khaki covered Testament in the hands of every man in the army and navy. The cost of this gigantic undertaking is placed at $400,000 and the fund which backs it is the generosity of the American public and especially, the patriotism of the Christian Churches. All gifts should be sent to the American Bible Society in New York City.

We trust that no argument is necessary to support the simple announcement of this appeal. If religion is needed

anywhere, it is needed in camp, in trench and on shipboard, where unfamiliar temptations assail the recruit and where the heaviest demands are made on faith and courage. If good reading is needed anywhere, it is needed in the tedious idle hours when the soldier has done his work and lacks opportunity for play, and especially on the battle line during the interminable and intolerable period of waiting that precedes the order to go "over the top." By giving the best book in the world you will certainly contribute to a boy's happiness and you may save his sanity or rescue his self-respect. What will be your answer?

THE POLITICAL FACTORS OF THE WAR

WITH the fourth year the world-wide war assumes a new aspect. A military decision is not yet in sight and it seems likely that during the coming months political influences will be more important than army maneuvers. Even the battles now being fought are dictated more by the intent of affecting public opinion than of making conquests. The recent attacks of French and British on the Hindenburg line, the German demonstration toward Petrograd and the Austrian invasion of Italy, are obviously designed to strengthen the war sentiment at home and the peace sentiment in the enemy country. In every European belligerent nation there is an anti-war movement that is daily gathering force and becoming more outspoken.

As each country entered the war a wave of patriotism swept over the land and washed away the barriers between parties, sects and classes. Conservatives and liberals, clericals and anti-clericals, capitalists and socialists, joined hands and rivaled one another in devotion and self-sacrifice to the national cause. A "party peace" was declared; a sacred union was established; coalition cabinets were formed; local issues were buried; personal ambitions were subordinated. This era of good feeling has lasted longer and resisted greater strain than could have been expected, but it now shows signs of breaking up everywhere. Rumors of revolution are afloat in regard to various belligerents and however little their foundation their mere existence points to a rise of mutual suspicion and a breakdown of the national unity.

Let us consider what information we have as to the internal condition of each country in turn.

In Russia the process of national disintegration has reached its hight and has practically removed that country from the list of belligerents. When Kerensky said recently that Russia was "worn out" and henceforth the Allies "must take the heaviest part of the burden on their shoulders," his words were received with incredulity, but a few days later they were unfortunately confirmed by the news that Kerensky was a fugitive and the capital in the hands of anarchists determined upon immediate peace. Finland has declared herself an independent republic. Ukrainia has practically seceded. The Poles, Letts, Lithuanians, Cossacks, Georgians and Armenians demand independence. The establishment of the Russian republic is the greatest victory for democracy yet gained by the Allies and the freedom of these 170,000,000 is the greatest stake in the war. But that is likely to be lost either thru external conquest or internal dissensions unless peace comes soon so that the Russians can get a chance to organize with the aid of their allies a stable government.

Austria-Hungary is in almost as serious a situation. This polyglot and composite monarchy has hitherto astonished the world by its stability, but is now subjected to internal strains that threaten to disrupt it. The southern Slavs have affiliated with their Serbian brethren and plan to join with them in founding a new nation, Jugoslavia. The Magyars have lost their chief reason for clinging to Austria now that the Russian menace is removed. The aspirations of the Czechs and Slovaks to start an independent Bohemian republic have received the promise of support by the Allies, and efforts of the Austrian Government to suppress them by wholesale hangings have failed. A few months ago a couple of Bohemian regiments in Galicia went over in a body to the Russians, tho they regretted it shortly afterward, for the Russians slipt away and left them to bear the brunt of the Austrian attack, which virtually annihilated them. Austria-Hungary has been almost equally humiliated by the repeated defeats she has suffered when fighting her own battles and by the arrogance of the German officers under whom she has won her only victories. The drive on Italy is intended to restore confidence and put a stop to internal dissensions, but it is doubtful if it will succeed in its political aim even tho it attains its military object. When this unparalleled Austrian victory was announced in the Reichsrat the Czech and Slovak deputies refused to rise and cheer. Suppose our troops in France had conquered two thousand square miles of German territory and taken two hundred thousand prisoners in two weeks; what would be thought if when the good news were reported to Congress the members from New York and Pennsylvania sat in sullen silence?

It is useless to consider Turkey, for that empire never was unified. The whole of Arabia is now in revolt and all the subject peoples, Armenians, Syrians, Greeks, Jews, are eager to be freed from the Ottoman yoke. Turkey has nothing to gain and everything to lose by the continuance of the war.

Bulgaria is so war-weary that the English press is openly talking of making a separate peace with her. She gained in her first brief campaign all the territory she aspired to and now is only anxious to hold as much of it as she can. Many of the Bulgarian leaders were educated in Roberts College and are much attached to America. The entrance of the United States into the war has shaken the confidence of the Bulgars in the justice and the success of the German cause. The Government majority in parliament is reduced to nine and desertions on the Salonica front are becoming very numerous now that winter is coming on. "Fully fifteen per cent of these deserters have lived in the United States," says a British officer at Salonica.

"Germany has crost the political Rubicon and in the space of five days changed from an autocracy into a democracy. This has been the most momentous week since the founding of the empire." These are the words of Mathias Erzberger, leader of the Center or Catholic party of the Reichstag. From our standpoint the accession of the aged, reactionary and autocratic Count von Hertling in the place of the relatively moderate-minded Herr Michaelis seems a doubtful gain for democracy, but, nevertheless, it means a great advance for Germany. Last July Herr Erzberger turned against the Government and denounced it for the blundering diplomacy and submarine campaign that had made an enemy of America. The Socialists who had hitherto supported the Government joined with the Clericals and by a vote of two to one passed a peace resolution. It was commonly said here at the time that the Kaiser was an autocrat and would disregard an adverse vote in the Reichstag as he had before. But it did not prove so. Chancellor von Bethmann-Hollweg went out of office and Michaelis went in, but his profest concurrence in the Reichstag resolution was distrusted, so he has now been replaced by a man who is not a Prussian but a Bavarian, not a Protestant but a Catholic, not an imperialist but an open advocate of an immediate peace without annexations or indemnities. Here is what a Reichstag deputy, Herr Gothein, said of the situation in October:

> The overwhelming majority of the soldiers at the front are also not inclined to fight longer for any kind of aims of conquest, but only for Germany's vital security and for the peace aims of the Reichstag resolution. At home the prolonged hours of work and the insufficient nourishment, especially the latter, have increased in the great cities and in the industrial districts the longing for peace, as have also the increasing ruin of the middle class

and the sorrow and care in countless families. Strikes are to be feared in working-class circles if the war continued for aims of conquest. Even for this reason an unambiguous repudiation of the annexationists is an indispensable necessity. One of the weightiest tasks now is to decide people at home to hold out.

The revolutionary spirit of Russia has spread to Germany and infected the German navy. We have the best of evidence to that effect, nothing less than the word of the German Secretary of the Navy, Admiral von Capelle. This is his statement:

> It is, unhappily, a sad fact that the Russian Revolution has turned the heads of some persons in our navy, and has introduced revolutionary ideas among them. Their insenate plan was to recruit representatives on all ships, to cause the crews to refuse to obey orders, to paralyze the fleet, and to force peace upon the country.

It is said that the crews of four battleships at Wilhelmshafen took part in the mutiny and the captain of the "Westfalen" was thrown overboard and drowned. Such a revolt is practically unprecedented in docile Germany and a curious, perhaps significant feature of the affair is that only one of the mutineers was shot for it, altho many were sentenced to prison.

Several months ago it was intimated in the British Parliament that Italy was threatened with a collapse like that of Russia due to internal causes. It is now admitted the break in the Italian line, thru which the Teuton invasion poured, was due to the disaffection of the troops, who threw down their arms and surrendered by the thousand. The overthrow of the Boselli Cabinet and the removal of General Cadorna followed. It will be remembered that in the days when Italy was hesitating whether to enter the war or remain neutral the anti-war party was led by ex-Premier Giolitti. When in spite of his opposition Italy espoused the cause of the Allies he acquiesced and has loyally supported the Government until recently. But on October 18, a week before the Austro-German drive began, he returned to Rome and organized an opposition party of eighty-eight members. Violent speeches were made in the Chamber and when the news of the defeat came the Government went down. The new Premier, Orlando, is a former follower of Giolitti's and dependent upon him for parliament support. The Socialists, Republicans and Syndicalists, who just before the war were engaged in a riotous anti-militarist campaign, have supported the war hitherto, but recently have resumed the agitation. Another uncertain factor is the papal party. The old quarrel between the Vatican and the Quirinal has never been made up, altho the intensity of the feeling has somewhat died down. The Pope still regards himself as a prisoner in the Vatican and the King as a usurper in Rome. Austria as the chief Catholic country of the world is supposed to favor a restoration of the temporal sovereignty of the Pope, or at least some amelioration of his position. The Allies have been free with their charges that the Pope is pro-German because he did not break with Germany on account of the rape of Belgium, but it seems to us rather that he, like the President, has been simply trying hard to maintain an impartial neutrality in a warring world. His peace note was more favorably received in Austria and Germany than by the Allies. but that does not imply that it was pro-German. It merely means that the Teutons are more anxious to begin peace negotiations now than the Allies. And those who in Italy, France and Belgium support the Pope in his peace movement ought not on that account to be called disloyal or accused of a desire to submit to ignominious conditions.

In France at the outbreak of the war the Socialists, even the most fanatical anti-militarists like Hervé, rallied to the side of the Government. All parties buried the hatchet and the most orthodox Socialists like Guesde entered the cabinet, altho this was contrary to the principles of the party. Now, however, a large part of the Socialists have withdrawn their support from Premier Painlevé, and he, altho a Socialist, has been compelled to resign. At the Socialist congress in Bordeaux last month patriotism was passionately denounced as the cause of wars and "peace at once without annexations, without indemnity" was demanded by nearly half the assembly. But finally a compromise resolution was adopted demanding that the Allies revise their war aims and renounce all their plans of conquests, and favoring the holding of a Stockholm conference to discuss the terms of a just and lasting peace.

In England the party truce has broken down and the old parties are breaking up. A new party has been formed. Republicans are beginning to speak out after a silence of more than a generation. The London *Times* has published a series of articles to prove that

> There exists at the present moment a revolutionary movement in this country which has gathered considerable momentum, has long passed the stage of mere talk and has realized itself in formidable action.

Some Liberal papers are demanding that the Allies state their peace terms and if possible open negotiations. The Manchester *Guardian* says:

> We acknowledge cordially the great effort America is making, and doubt neither her whole-hearted resolution nor her power. But for Europe and this country the outlook, if the war is to run two years more, is devastating.

In Ireland the Sinn Feiners have again proclaimed an independent republic and more troops are required there to maintain order than the United States has sent to France. In South Africa the party favoring an independent republic is rapidly rising to a majority. In Canada the struggle between the English and French over conscription has become intense. Australia has been paralyzed by a strike and the Labor party is decidedly disaffected.

The United States, fresh in the fray, shows less internal strain and greater national unity than any of the other belligerents.

In this brief survey of the political conditions we have disregarded rumors and wild speculations and have merely enumerated the known factors which, whatever their relative importance, should be frankly recognized for they must be taken into consideration. Some count on one side and some count on the other. How much any of them count cannot be said. They introduce a new and incalculable element into the war problem and may decide the result.

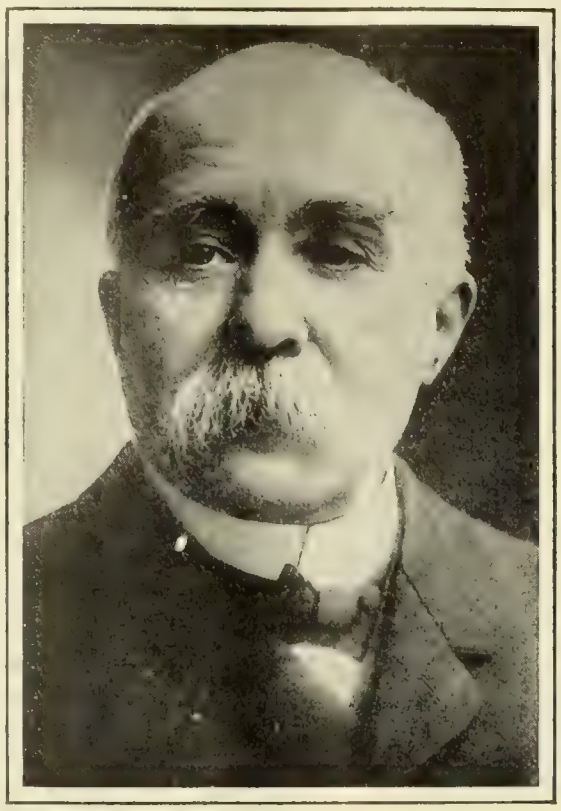
REMEMBER

That this is a war Christmas and it imposes upon you the duty of giving wisely and patriotically.

That the nation's defenders have first claim upon your benevolence. You cannot reach the boys in France by Christmas with personal gifts sent now, unless they are sent via Hoboken, New Jersey, before December 5, but you can make a Christmas gift to the Red Cross or the Y. M. C. A. that will be much appreciated.

That the men on shipboard, at the front, or in the training camps may have left a wife and children at home who are sure to have a lonely Christmas and perhaps a poverty-stricken one.

That the railroads are overburdened to the last degree with necessary transportation and that Uncle Sam's mail force is overworked on account of war conditions. If you must send gifts to people at a distance, send them early and make them small and light.



That if you give all you should to war charity and also remember with gifts the people whom you really love, you will have no money left to spend on purely formal or conventional gifts to remote acquaintances. Don't set out with the idea of being economical. Be generous where you know you ought to be and you will have to be economical elsewhere.

THE STORY OF THE WEEK

The New Ruler of France

Georges Clémenceau, the recently chosen French Premier, is possibly the most interesting figure in French political life. No one has had greater personal influence, altho he has sought power rather than office and distinguished himself rather as a wrecker of ministries than as a constructive statesman. At the age of seventy-six he retains the audacity of temperament and policy that got him into prison when he was twenty for the offense of carrying on republican propaganda. France was no place for him under the Empire of Napoleon III, so he came to America soon after his release from prison and lived quietly for some years in this country as a physician and as a teacher of French. During the siege of Paris by the Germans and the subsequent civil war between the Government and the Paris Communards (a radical faction which desired a socialistic republic), Clémenceau was mayor of Montmartre, one of the administrative districts into which the city is divided. The great capacity which he showed at this trying period ensured his election to the Chamber of Deputies, where he fearlessly championed the interests of the radical republicans and upset many cabinets which had the misfortune to displease him. As a journalist he vigorously defended Captain Dreyfus, whose trial for treason was for many years the storm center of political controversy in the nation. At one time he was Premier, in which position he distinguished himself by putting down the riots of striking miners by means of the military power. Since 1902 he has been a member of the French Senate. During the war he came into conflict with the censorship and his paper, *L'Homme Libre* (the free man) was suppressed. He promptly issued it again under the new title of *L'Homme Enchainé* (the fettered man), and it has been published under that title ever since, tho the announcement now is made that since Clémenceau has become Premier the old name will be restored.

On November 20, Premier Clémenceau obtained a vote of confidence from the Chamber of Deputies, only sixty-five refusing their support to 418 deputies who were willing to back the new Government. His ministry contains representatives of many parties and factions, but the extreme "right," the Conservatives and Royalists, and the extreme "left," the regular party Socialists, are not represented on it. Clémenceau's speech was an eloquent appeal for national unity and the concentration of the entire energies of France on the single task of bringing the war to a victorious conclusion. His most significant statements of policy related to the recent revelations of treason and espionage and to the censorship. Two ministries have already been overthrown because of the failure to handle the treason cases with sufficient vigor; Clémenceau promises to bring all pro-German conspirators before courts martial. On the other hand, he spoke in favor of a somewhat more liberal treatment of the loyal press; commending the censorship of military information that might be of value to the enemy, but advocating a greater range of freedom for political comment and criticism.

Underwood & Underwood

THE NEW FRENCH PREMIER

M. Clémenceau has accepted his office with the pledge to center all national effort on the war. "The single, simple duty is to stand by the soldier, live, suffer and fight with him. Let every zone be the zone of war. We shall not forge a greater France without putting our life into it"

THE GREAT WAR

November 16—Italians flood lowlands along the Piave River to check Austro-German advance. Bolsheviki bombard Moscow with heavy artillery.

November 17—British and German cruisers have gun duel near Heligoland. Socialists seize Government of Finland.

November 18—Turks retreat from Jaffa. Cossack army blockades Petrograd.

November 19—Seventeen British ships sunk during previous week. Premier Lloyd George defends his war policy before House of Commons. Italians make counter-attacks near Asiago.

November 20—British make attack northwest of St. Quentin. Clémenceau gets vote of confidence from French Chamber of Deputies.

November 21—British pursue retreating Germans to the outskirts of Cambrai. Bolsheviki Government recalls Ukrainian regiments from the front.

November 22—Italians lose mountain positions between the Brenta and Piave Rivers. Germany proclaims barred zone around the Azores Islands.

A Helping Hand to France

Captain André Tardieu, French High Commissioner to the United States, has given to the public a brief outline of what has been accomplished by the commission in securing aid from the generosity of America to relieve the difficulties of France. He pointed out that up to May, 1917, France had borrowed only $650,000,000 at an interest rate of six or seven per cent, whereas from May to the end of the present year France will have received from this country $1,130,000,000 at only four and one-half per cent. Powder exportations from the United States to France doubled since our entrance into the war. In the matter of transportation our services have been greatest. The French commission obtained from this country 300 locomotives, 1250 miles of track and 5000 pieces of rolling stock. This does not include the supply of locomotives reserved for the use of the American army in France or the large numbers of motor cars which have also been sent to carry part of the burden of supplying the needs of the western front. Two thousand agricultural implements were shipped in five months to help the French farmers.

Our Part in the War Council

The plan for the Supreme War Council, which is to superintend military operations on the western front, has been made public by Premier Lloyd George. It will consist of the Prime Minister and another member of the government of each of the great powers whose armies are represented on the western front; but it may later be extended to other war zones and other belligerent nations. The Supreme War Council is only advisory; the final decision resting with the individual governments to which each general staff is responsible. Each power will also choose a military representative to act as technical adviser to the council. The War Council will be a permanent body, with conferences at least once a month, and it will usually meet at Versailles, not far from Paris. Lord Northcliffe credited the idea of the War Council to Secretary McAdoo of the Treasury Department. He blamed the English Government bitterly for not acting earlier on the matter. "When I think," he said, "of the time wasted between those hot mornings in Washington, when Mr. McAdoo was pressing for this conference, and these cold winter days in London, I feel a good deal more than angry."

It has been officially announced that Colonel E. M. House will represent the United States on the War Council and

that General Tasker H. Bliss will be our military representative. These two men, together with Admiral Benson, Thomas N. Perkins of the Priority Board, Dr. Alonzo Taylor of the Food Administration, Bainbridge Colby of the Shipping Board, Oscar T. Crosby of the Treasury Department and Vance McCormick of the War Trade Board, were accredited to a conference with representatives of the British Government at which Premier Lloyd George explained the military system as it appeared to him. Colonel House, head of the American War Mission, was not present at the first session of the conference. Lloyd George emphasized the necessity of tightening the blockade of Germany, building up an adequate merchant fleet to outdistance the submarine menace and the development of a large fleet of airplanes manned by American aviators, but he laid greatest stress on the necessity of increasing the size of our expeditionary force. "The collapse of Russia and the recent reverses of Italy," he said, "make it even more imperative than before that the United States should send as many troops as possible across the Atlantic as early as possible. I am anxious to know how soon the first million men can be expected in France."

Lloyd George Makes It Plain

On Monday, November 19, the House of Commons was treated to one of those elaborate and formal Parliamentary debates in which the British public delights. Mr. Asquith, who was Premier at the beginning of the Great War, led the attack on Premier Lloyd George over the question of the establishment of an inter-Entente War Council. He admitted the necessity for close coöperation among the Allied Governments and "more frequent communication between the General Staffs," but he thought it impossible to set up any organization to override the authority of the individual governments and dreaded the possible conflict of opinion between the advisory War Council and the commanders in the field. Mr. Asquith denied that a general War Council could have prevented the military disasters experienced by the Allies in Serbia, Rumania, Russia and Italy, [illegible]

Premier Lloyd George in his reply denied that he had adversely criticized the general staffs of any of the Entente nations. The failure of the Allies to make greater progress was owing to a defective system, and the first to recommend the establishment of a permanent War Council was, himself a military man, Lord Kitchener. America and France, he said, were in favor of going much farther than he himself had ventured to propose; they desired the creation of a War Council which would not only be advisory but have the actual authority to direct military operations. This was more than Lloyd George considered yet necessary, but he admitted that the Allies might be "driven to it by the failure of the present experiment" unless the War Council could count on the cordial support of the governments participating in it.

Lloyd George then turned to the defense of his Paris speech, which had been widely attacked as an alarmist utterance. He said that his address was not impulsive but deliberate: "I determined to deliver a disagreeable speech that would force everybody to talk about this scheme, and they have done it." He exprest strong objection to the phrase "hands off the army" and reminded his audience that only twice during the whole war had he ventured to act against military advice, in the matter of enlarging the supply of artillery and in the matter of appointing a civilian to reorganize railroads behind the lines, and in both cases the military authorities who had criticized him later admitted that he was in the right. He said that, while no politician should ever meddle with detailed questions of strategy, "there is a vast sphere in war which is partly political and partly military. Supplies, transport, shipping, the distribution of man power, diplomacy and the morale of the people—all these things are political even more than they are military." He closed his speech with a fiery denunciation of the newspaper writers "who for purely political or personal reasons are disseminating distrust and jealousy of France," and with reassurances as to the submarine menace. He declared that in a single day the British had sunk five U-boats and that the decision of the war by the submarine was an impossibility. Only one other hope remained to Germany, the possibility of preventing harmony among the Allies.

The War on the Water

On November 17 there was a duel between light cruisers of the British and of the German fleets near the island naval base of Helgoland, which protects the German North Sea coast. The British suffered no loss in ships and few casualties. Two German cruisers were reported damaged in the London account, but the Berlin version mentions no losses on either side and

AS THE GOVERNMENT GROWS IN WASHINGTON

Congestion is too mild a word to describe conditions these days in Washington. There isn't even standing room in some departments, and buildings, temporary and permanent, are being erected with all possible speed to meet the increasing needs of war administration. Playgrounds and parks near the Capitol have been utilized and structures such as these shoot up almost overnight

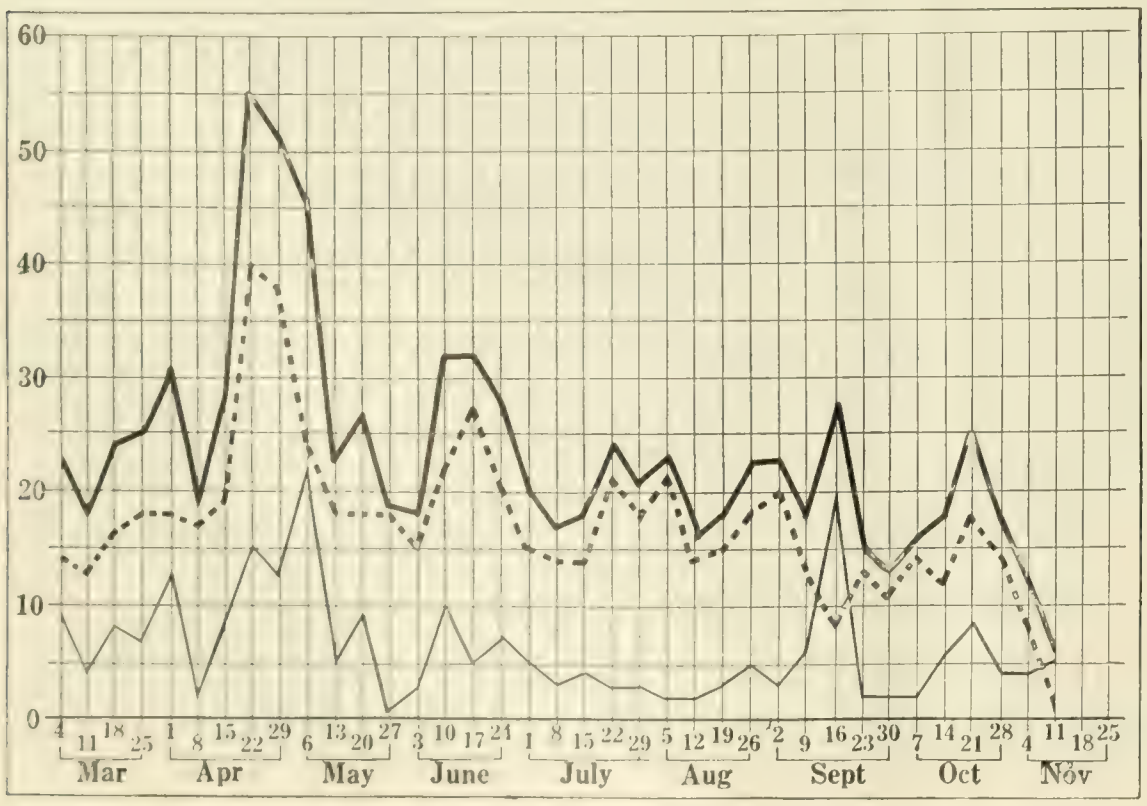
claims that the British ships were "easily repulsed." This was true at least in the sense that the British made no attempt to follow up the retreating German vessels into the dangerous mine fields around Helgoland.

The American destroyer "Chauncey" has been sunk by a collision. Two lieutenants, an ensign and eighteen enlisted men were lost in the disaster. The loss of life was the most serious aspect of the accident, as the "Chauncey" was an old boat of only 420 tons and a complement of ninety-one officers and men.

During the week ending November 18 the British lost ten vessels of more than 1600 tons and seven of smaller tonnage. This is in striking contrast to the record of the previous week, during which only six ships were lost and all but one of these were of small tonnage. The chart shown in this week's issue of The Independent illustrates the three fundamental facts of the submarine situation: that there is great variability in the weekly reports of losses, that the periods of greatest loss come in "waves" about three or four weeks apart, and that underneath all these variations there is a general tendency to decreased submarine destructiveness. Even this week's reported losses, tho not so encouraging as those of the previous fortnight, are considerably lower than the average for the entire period of submarine warfare. The reader who is interested in the progress of the U-boat campaign will do well to add this week's figures to the chart and to continue it for himself with each week's report hereafter.

There are two methods possible for the defeat of the submarine campaign on which Germany has staked her hopes—one might almost venture to say her only hopes—of victory. One is the construction of merchant shipping faster than it can be sunk and the other is the destruction of the submarine. Our monster shipbuilding program is proceeding at a rapid rate, and Thomas A. Edison has brought forward the suggestion that it may be still further enlarged by making over sailing vessels by putting engines into their holds. The French also are experimenting. It is reported that twenty cargo ships of a new type, with water-tight compartments so constructed and arranged that the engines and other internal equipment of the vessels are safeguarded from torpedo attack, are to be constructed in American shipyards under the sanction of the French Government. The expected agreement with Japan, by which much Japanese shipping would be transferred to transatlantic use, has been held up by objections from the Japanese Government. The destruction of German U-boats continues, but we have no method of testing whether the British estimate that nearly half of the enemy submarine fleet has been put out of commission is too optimistic or too conservative.

British Crush Hindenburg Line



After the French attack north of the Aisne River, nearly a month before the beginning of the British drive at Cambrai, the western front was comparatively quiet. The British extended their gains beyond Passchendaele and the French repulsed German attacks near Verdun and in the Vosges, but there were no actions to compare in magnitude with those of previous weeks: the British capture of Passchendaele or the shattering blow which the French delivered in the Aisne Valley. Many supposed that the western Allies had already taken up their winter positions, or that German reinforcements from Russia had halted further progress on that front.

Then suddenly, on the 20th of November, the world was electrified by the news that General Sir Julian Byng had delivered a general attack along a thirty-two mile front from St. Quentin to the Scarpe River. Along the entire line gains were made, but near Cambrai they were most extensive. Here the German line was indented to a distance of more than five miles and cavalry were brought into use in the open country behind the first two belts of trenches: the so-called "Hindenburg line" and the "Hindenburg support line." The first day's action brought in 8000 prisoners and many cannon.

The details of the battle reveal some wholly novel features. The most striking characteristic of the British attack was that there was no preliminary bombardment. Hitherto every great attack has been preceded by hours, frequently by many days, of intensive cannonading. This has the disadvantage of warning the enemy that an attack is intended and of giving him opportunity to take precautions against it; but, of course, it is out of the question to send unsupported infantry to charge an entrenched enemy protected by fence after fence of tough barbed wire network. What General Byng did was simply to substitute the "tank," or armored automobile, for the preparatory artillery fire. These monstrous leviathans broke down the barbed wire fences and crushed in the earthen parapets of the trenches as effectively as any shell fire could have done and at a much smaller expenditure of time and material. The Germans were taken wholly by surprize, for the St. Quentin to Scarpe River region has long been one of the quietest parts of the western front and their intelligence department seems not to have brought them warning of any unusual concentration of men and artillery.

In the wake of the tanks, never before employed on so extensive a scale, came English, Scottish, Irish and Welsh infantry regiments. There do not seem to have been any colonial or French troops on this part of the front, tho the French coöperated by starting minor attacks on a different part of the front, north of the Aisne. After recovering from their surprize, the Germans hurried fresh regiments to the endangered positions before Cambrai and succeeded in checking somewhat the momentum of the British drive and even recaptured one of the villages which they had lost. The Germans estimate that from 150 to 200 tanks were used in the advance and claim to have smashed many of them with shell fire.

To have captured about fifty square miles of territory in a single action and at a cost of fewer casualties than the number of enemy prisoners taken was in itself a notable achievement, but the real measure of the victory is that it has proven the famous "impregnable Hindenburg line" to be a fiction. By the new methods of attack it is evidently possible for any army, granted a sufficient superiority in men and munitions, to crush the best defenses that human ingenuity can create. The political importance of the blow at Cambrai is considerable, since it may compel the Germans to relax their pressure on Italy, give up any plans they may

FRIGHTFULNESS FAILS

The heavy black line indicates the total number of British ships sunk by mine or submarine in each successive week ending on the dates given in the chart. The dotted line shows the loss in ships of more than 1600 tons each; the light black line the number of smaller ships sunk

have formed to send aid to the Turks, and prevent them from taking full advantage of the disappearance of organized government in Russia.

The Battle on the Piave Whether or not the Italians intend to make a final stand on the defense line of the Piave River, they have certainly held it for a longer time than most students of military affairs ventured to hope. It is not probable that the Austro-German army of invasion will be able to force a passage across the lower Piave, but all the Italians are watching with a certain apprehension the slow advance of the enemy southward from the Venetian Alps. Here, on a front between the Piave and the Brenta, the armies of the Central Powers have been hammering continuously in the hope of smashing the left wing of the Italian line on the Piave and compelling a general retreat which would involve the surrender of Venice. The Italians have attempted, with only partial success, to check this menacing movement by gallant counter attacks near Asiago.

The Austrians suceeded in sending small forces across the Piave at Zenson and other points, but the Italians drove them back to the river and killed and captured by the hundred those who were unable to recross to safety on the opposite bank. The annihilation of the Austrian detachments that ventured across the Piave greatly encouraged the Italians, as it was their first considerable victory after a month of almost unrelieved disaster. In order to strengthen the lower Piave as a line of defense the Italians flooded the country near the mouth of the river and thus fenced off Venice from direct attack by a broad belt of swamp.

The Austrians are still confident of taking Venice, and the Government has given its promise to spare the historic buildings of the city provided that the Italians do not so fortify and defend it that its capture without bombardment is impossible. The Greek flag is now floating over the captured city of Udine, which seems to prove that, altho Greece is now one of the Allies, some partizans of the ex-King Constantine and his pro-German policy are fighting on the side of the Central Powers.

At the Gates of Jerusalem The British are now fighting in the hills of Judea within six miles of the city of Jerusalem. Unless the Germans are able to send speedy relief the capture of the city and the subsequent occupation of the whole of Palestine appears inevitable. When this has been accomplished, the British will have an opportunity to erect an independent Jewish state in the Holy Land. The most important recent success in this theater of war has been the capture of Jaffa by Australian and New Zealand mounted troops. Jaffa is the Mediterranean seaport which is connected by railroad with Jerusalem and serves as its commercial outlet to the ocean trade routes. The Turkish accounts of the Palestine campaign confess to a military defeat at Beersheba, but contend that "there have been no serious engagements in these regions since the evacuation of Gaza and Beersheba," and that their line of defense was not driven back by the British but "has been withdrawn in conformity with a prearranged plan."

WHAT THE WOMEN OF ENGLAND ARE DOING

Just one storeroom in just one factory where English women are working day and night to make munitions for the big guns that are helping to win in France

The successes of the British army in Mesopotamia have been clouded by the death of its gallant leader, Lieutenant-General Sir Frederick Stanley Maude. To General Maude was due the capture of Bagdad and a series of brilliant victories which wiped out the disgrace of the surrender of a British army to the Turks in Mesopotamia the previous year.

Constantinople has been the target for recent air raids. Greek naval air men took part with the British in bombarding warships in the harbor. One British airplane which raided Constantinople flew from England to a British base in the Mediterranean in a series of eight flights; a distance of about 2000 miles. This is believed to be a world's record flight for a bombing machine of similar weight.

Perplexing Russia From Russia there comes no news; only rumor. The Bolsheviki still hold the reins of Government in Petrograd and Kerensky seems to have dropt out of sight, tho no one is able to say what became of him. The Cossacks were not faithful to Kerensky, as most of them are disgusted with the whole Socialist party; confounding together the war Socialists who have supported Premier Kerensky and the anti-war Bolsheviki. Deprived of this last support, the Kerensky Government, which, it must be remembered, is the only Russian Government which any other nation has yet recognized, disappeared from the political situation. The Bolsheviki seem to have gained control of Moscow, after a bloody street fight and some damage to the Kremlin and other historic buildings struck by artillery fire. General Kaledines and his Cossacks have seized coal fields upon which Petrograd depends for its fuel supply and have prevented provision wagons from entering the city. In whose behalf General Kaledines is carrying on this siege does not yet appear certain. There is a rumor that the Cossacks and other conservative Russian elements have turned to the Grand Duke Nicholas and propose to restore the Romanoff dynasty in his person. All confirmation of this report, however, is lacking. Finland is in the hands of the extreme independence party with the aid of the Russian Bolsheviki. There is, however, no Finnish Government, unless civil war is a government, for at least half of the Finnish people are in open revolt against the rule of the Bolsheviki.

Over the seething caldron of anarchy which is Russia the Bolsheviki "Government" at Petrograd has little control. Their party has already been split into factions even in the capital. They are devoting themselves mainly to the task of securing an immediate peace and have proposed a general armistice, not between Russia and Germany alone but among all the belligerents. But since the Entente Allies refuse to recognize them as the real Government of Russia and since the Central Powers seem afraid to treat with them, fearing that any peace they could make would be overturned by the next party that got into power, there is little hope or danger of a speedy peace by this channel. The revolutionist Government has ordered the recall from the front of the Ukrainian regiments, numbering about 360,000

DELEGATES OF CHURCH UNITY

The Federation of French Protestant churches has sent over to this country two military chaplains to urge the coöperation of Protestant churches here and in France. Chaplain Georges Lauga was an ambulance attendant and later chaplain at Verdun, where he was wounded. Chaplain Victor Monod served at the Dardanelles and at Salonica

men. This move greatly weakens the Russian defensive front and gives the Germans full opportunity to occupy such parts of southwestern Russia as they can spare the men to garrison.

Swiss Pacifists Riot

Altho Switzerland is one of the few regions in Europe still neutral and at peace, this fact has not saved the little republic from anti-militarist riots. The city of Zürich has lately been the scene of pitched battles between the police and a pacifist mob. The trouble began with a public meeting at which radical orators urged their hearers to promote peace by refusing to serve in the Swiss army or to afford it supplies. Since compulsory military service exists by Swiss law this propaganda was directly treasonable. Fired by stirring speeches, the mob marched thru the streets, smashed the windows of a munitions factory that was producing goods for Germany, compelled another factory to shut down and wrecked the offices of a local newspaper. Of course many arrests were made. The following night another mob, singing the Socialist "war song" *L'Internationale*, attacked the prison to rescue the arrested rioters. The police repulsed them with sabers, revolvers and a machine gun. Finally the outbreak was put down, not without some bloodshed on both sides, and the city placed under martial law.

The Mexican Mess

The fact that the interest of the American public has of late months been withdrawn from Mexican problems to European does not mean that our sister republic to the south has at last attained peace within her borders. The Government of President Carranza seems, indeed, to have kept in power with unexpected tenacity. But there are still wide tracts of the Mexican countryside which do not recognize Carranza's authority, especially in the north, where Villa's armed raiders have managed to avoid capture and have succeeded in outwitting or outfighting most of the punitive expeditions sent against them.

On November 14 a Mexican force under General Cordova crost the national boundary and surrendered to American troops stationed near Presidio, Texas. They had been forced to evacuate the border town of Ojinaga by a large army under the personal command of Villa. About three hundred Mexicans surrendered to the Americans and some two hundred more were either killed or captured by Villa's men. Only a few of Villa's command were killed in the fight; the attacking force having the advantage of numbers and of surprize. After the victory, Villa, who appreciates the value of publicity as well as any guerrilla leader in history, issued a personal statement to the press, proclaiming the purity of his patriotism, claiming credit for humane treatment of prisoners and challenging the Carranzista General Francisco Murguia to personal combat.

The Patriotic Northwest

Eight thousand delegates, from every county in Minnesota and from the neighboring states, gathered in St. Paul for a patriotic rally intended to put the Northwest ineffaceably on the map. Resolutions urging the Government to send "an overwhelming force" to Europe, approving the President's statements of our national aims, condemning the pacifist minority in the House and the Senate, and desiring public authorities "to strike down disloyalty, sedition and treason wherever and whenever they raise their ugly heads," were passed without dissent. Senators Knute Nelson and Frank Kellogg made patriotic addresses, and T. P. O'Connor, one of the leaders of the Irish Nationalists in the British House of Commons, explained why every lover of Irish freedom should throw his whole soul into the war on the side of the Entente Allies. The meeting voted to organize a permanent "America First Association" and elected F. W. Murphy, of Wheaton, Minnesota, its president.

President Wilson was unable to come, but he sent a letter of regret in which he approved the purpose of these representatives "of that western empire in which the sons of all sections of America and the stocks of all the nations of Europe have made the prairie and the forest the home of a new race and the temple of a new faith." He prophesied that American determination would "make the masters of Germany rue the day they unmasked their purpose and challenged our republic."

Railroads Leave It All to Wilson

The railroad executives have decided to entrust the whole problem of wages and rate increases to the Federal Government. The letter sent by Fairfax Harrison, chairman of the executive committee of the American Railway Association, to Judge Chambers, chairman of the United States Board of Mediation and Conciliation, may mark the beginning of a new era in the relation existing between the nation and big business:

We confirm what we said to you this morning in reply to your inquiry as to what will be the attitude of the railroads with respect to the manner of settlement of any demands for increases in pay or changes in working conditions which during the war may be made upon them by employees.

Speaking for all the railroads today, we reiterate our belief in and general acceptance of the principle of arbitration. In the midst of war we are, however, prepared to go further. As no interruption of continuous railroad operation can be tolerated under war conditions we are ready, should any crisis now arise, unreservedly to place our interests in the hands of the President for protection and for disposition as he may determine is necessary in the public interest.

The statement issued by the Brotherhood chiefs after a conference with the President is also very reassuring in its tone: "They fully realize that the most serious thing that could occur during the conduct of the war would be any interruption of railroad transportation and they are determined to do everything within reason to avoid such interruption." The labor men disclaim any intention to improve their position at the expense of the national interests but desire "an increase in present rates that will meet half at least of the increase in cost of those things which they are compelled to purchase." The railroad executives hope that in case the demands of the unions for revised wage schedules are granted, the Government will make good the loss to the companies by permitting a further increase in freight rates. The higher freight rates granted in June have already, it is claimed, been absorbed by the increased wages of the operatives.

The demands of the war have burdened the railroads very heavily. From the beginning of August to November 12 they moved 1,200,000 soldiers to training camps, cantonments and ports of embarkation. This necessitated the use of 2750 special trains. The railroads are bringing to the training camps at present about 75,000 carloads

of supplies a month. In order to give the right of way to the most necessary transportation, the Railroads' War Board has compiled a list of non-essential commodities which should not be transported to the detriment of munitions of war, coal and other essentials.

Unhyphenated Labor

The Buffalo convention of the American Federation of Labor was the scene of a dramatic struggle between patriots and disloyalists in which the latter found themselves in an insignificant minority. The test came thru the introduction of a resolution to approve the action of Samuel Gompers, president of the Federation, in organizing the American Alliance for Labor and Democracy. After a three-hours' debate, in which the anti-war delegates had full opportunity to present their side of the case, the vote was taken. Out of a total of 450 delegates only fifteen opposed the resolution and only the Ladies' Garment Workers' Union, under the leadership of Rose Shapiro of New York, refused to vote either way. What was of even greater significance, the delegates supporting President Gompers represented, for the most part, the larger unions. According to labor custom, the delegates did not cast individual votes but were credited with "blocks" of votes varying in number with the size of the unions which they represented. Counting in this way, the resolution was carried by a majority of 21,579 to 402. Delegate Barnes of Philadelphia began the debate against the resolution; and he cast against it part of the vote of the Cigarmakers. Among the other anti-war leaders were Joseph Cannon of the Mine, Mill and Smelter Workers, John Burke of the Pulp and Paper Makers, Cornelius Foley of the Bartenders, and a few representatives from some of the New York clothing trades unions. Many delegates from the powerful unions pledged their active loyalty to the country, but the speech of the occasion was made by President Gompers. He said in part:

President Wilson and the members of his Cabinet were peace-loving men. I know of no militarist in their number. But now they are fighting men, and I publicly declare now that I am a fighting man and will continue to fight for the country to which I owe all, the country which I love and in which my hopes and aspirations are bound up. I propose to do a man's duty in helping to make this war the last war of this world. All my energies shall be laid at the feet of America and of our allies to do what I can toward the establishment of democracy, even in Germany.

A Cold Winter for the Spy

President Wilson has proclaimed new and very drastic regulations restricting the freedom of the enemy aliens now resident in the United States. By the terms of the proclamation male subjects of the German Empire of fourteen years and upward are forbidden to approach within a hundred yards of any canal; or of any wharf, pier or dock used by large vessels engaged in trade other than fishing; or of any warehouse, elevator, railroad terminal or other storage place on the waterfront near wharves, piers or docks. The Attorney General is empowered at his discretion to proclaim similar prohibited areas near railroad depots, yards and terminals. No enemy alien is allowed to navigate the territorial waters of the United States (that is, within the three mile limit from the shoreline) except on public ferries. No enemy alien is allowed to use an airplane, balloon or airship. The District of Columbia and the Panama Canal Zone are closed to aliens of enemy nationality, and those now resident there must leave at once. The Attorney General is authorized to compel enemy aliens to register and carry identification cards.

Coal Badly Wanted

Some of our readers may well have been surprized at the double fact that the coal production of the United States has greatly increased in recent months and that ever since we entered the Great War the nation has been worried more by the fear of a coal shortage than by any other economic problem. Fuel Administrator Garfield announces that the annual output of anthracite and bituminous coal in the United States has increased by 50,000,000 tons thru the efforts of the Fuel Administration and other public agencies, state and national, and yet there is a "deficit" equally large which must still be made up either by further increase of production or by a decrease in the amount of coal consumed. The explanation of this seeming contradiction is that our entrance into the war has increased the demand for coal by about 100,000,000 tons. Munitions plants, now running twenty-four hours a day, are using up enormous quantities. The Bethlehem Steel Company, to select one example from many, is using twelve times as many tons of coal as a year ago. The coal directly required by the army and navy has increased since last year by 300 per cent. The railroads, also, are needing more coal than ever before on account of the increased volume of traffic.

In two directions economy is possible. In the first place, the Fuel Administration may restrict the supply to non-essential industries; that is, industries not contributing to the carrying on of the war. There is no desire to starve any form of business out of existence, but naturally those which are most directly related to the national defense will be first served when the coal is "passed around." Another way in which coal may be saved is by conserving the supply in the home. No small part of the coal production of the country is burned in stoves and furnaces for domestic purposes, and much of this is wasted thru carelessness. Householders can perform a most useful service to the nation by taking care that no coal is uselessly or needlessly spent in their homes.

UNITED WE STAND

BY PARK BENJAMIN

THE proverbial weakness of allies is due to inferior power of concentration. "Exclusiveness of purpose," said Napoleon, "is the secret of great successes," and exclusiveness of purpose by a league of sovereign states, each with its own interests to consult and its own resources to conserve, is difficult to attain. But we have seen Serbia overrun, Rumania crushed, Russia driven into anarchy, the Gallipoli failure, and now Italy defeated, under a system which left each to pursue its independent measures and in which no real coördination of the several forces has existed.

An international council, if made up, as recently proposed, of military and political representatives, with administrative and not executive functions, does not seem likely to better matters. It is axiomatic that debating societies cannot win wars. All experience teaches that the power to concentrate must be wielded by unit control, and this whether the various coördinated activities be those of a single nation or several nations. Last winter we decided that we did not want a Committee on the Conduct of the War to supervise the military acts of the President. For like, and indeed stronger, reasons an international synod to oversee the military plans and acts of several independent executives seems of even greater futility. On the other hand, an international conference charged with finding out how most effectively to pool and coördinate the allied forces and with selecting a supreme head to direct their energies is now a plain and urgent necessity.

THE sole object of war is the disruption and destruction of the organized forces of the enemy, and that can be done by but one means—battle. The battle with the submarine has been going on since the present war began. The maximum of German U-boat activity has been declining for the last few weeks. The German sailors are mutinying against being sent to craft which depart but do not come back. There are symptoms of weakening, even among the most determined advocates of underwater ruthlessness. The venom of Von Tirpitz seems less virulent and much abated, there is a mournful note in the outgivings of the conservative Persius, and the ever blatant Reventlow is now vociferous by his silence. The British Admiralty, altho asserting that forty or fifty per cent of the submarines infesting the danger zone have been sunk, is apparently apprehensive of something up the German sleeve, and deprecates too hasty rejoicings, and our Navy Department concludes that while the U-boat "has not proved the decisive factor, it is still a serious one, of course, and cannot be underestimated."

Whatever may be the cause of the present diminution of the U-boat activities, they may be expected to bear some relation to the need for them. If, at any time, the numbers of men or the quantities of munitions sent across the ocean should be suddenly increased, and especially if either were known to be massed in unusually large ships, special preparation might be anticipated, and in that case the ordinary freight or passenger vessels or similar tonnage sunk by submarines during the preparation period would naturally fall off.

THE promenade of the German fleet in the Baltic was a timely maneuver ingeniously calculated to divert the Teutonic mind from socialism, hunger and the mutinies, to show that the ships could do something even if bottled, and to set the stage for further happenings, some of which have taken place. The capture of the islands at the mouth of the Gulf of Riga consolidated the German grip on the city, besides releasing portions of the army which "retreated" into Italy. At the outbreak of the war Russia had building four 28,000-ton battle-cruisers, which should have been finished long ago, and four others completed and less formidable, but still good vessels. What has become of them is not apparent. Presumably they are, as hitherto, in Cronstadt. Why they did not attack the German vessels is probably explained by the civil disorders. The fourteen year old "Slava" nevertheless made a brave fight, and sank gloriously. The Germans have since leisurely invested Helsingfors and occupied the Aland Islands, which are in persuasive proximity to Stockholm should Sweden hereafter be forced to decide as to her future neutrality. The real question, however, is on the unused new Russian ships. If the Russians cannot utilize them, a unit control of the Allied navies can.

Naturally, the Baltic operations have caused the renewal of a popular demand in England that the British fleet—to use the current idiom—get busy. At the beginning of the war it was estimated that its total force exceeded that of the German array by sixty per cent. The Admiralty has recently announced that its displacement has increased from 2,400,000 tons to 4,104,000 tons, and its personnel from 146,000 men to 390,000 men. Further details are not given, other than that the number of mine sweepers and auxiliary patrols has risen from 18 to 3366. This deliverance has seemingly rather augmented the desire for offensive action against the Germans than lessened it. But to all arguments the steady official answer is "It is impossible." The North Sea bases wherein the German fleet is harbored, we are told, in general terms, are elaborately mined and tremendously fortified, and besides are to a great extent self-defensive, because the endless shoals and sand-banks and the tortuous passages between them are constantly changing, so that with sea-marks and beacons removed pilotage is full of peril. As for going into the Baltic to meet the fleet which is wreaking its will on Russia, it is pointed out that the narrow channels in the Danish Archipelago and between Denmark and Sweden are neutral waters, are themselves mined, and any military forcing of them would involve the capture of the adjacent islands, with consequent provocation of more wars. It is further argued that the invading vessels immediately on their emergence from these channels would have to encounter the concentrated German battleships from Kiel, which would overwhelm them one by one before they could reach an area in which they could deploy. That is the conclusion, be it observed, of the British Admiralty, echoed by Vice-Admiral Sims. Either these authorities know exactly why it is impossible, or they don't. If they don't, the matter is one of opinion, in which others may differ; if they do, as all the naval strategy is not locked in official breasts, a more complete elucidation of the military conditions at the bases, than is summed up in the present general assertions of their impregnability, might result usefully, and certainly could impart no information to the enemy. The decision is plainly one for unit control.

In any event, it has long since been recognized that it is the achieving of the impossible which marks the highest military genius. Fifty-three years ago the foreign newspapers teemed with technical demonstrations of the utter impossibility of seven frail wooden ships, as many weak gunboats, and some primitive monitors passing a heavily armed fort literally within stone's throw of its guns, over thickly planted mines in order to encounter the then strongest ironclad afloat, and after that proceed fifteen miles up a bay and far from their base of supplies, and there capture a city. But Farragut did it. And because he did it, people are wondering now whether it is more dangerous for the colossal dreadnaughts of today to attack the German defenses at Wilhelmshaven than for the "Hartford" and her mates to challenge Forts Gaines and Morgan guarding Mobile, and the mines which sent the "Tecumseh" plunging to the bottom in the very agony of the fight, and to defy the supposedly impregnable "Tennessee." Omelets cannot be made without breaking eggs. There are two great naval watchwords: "England expects every man to do his duty," and "Damn the torpedoes—go ahead." The last is American.

JAPAN, following her traditions, keeps her fine fleet, save some destroyers reported in the North Sea, at home guarding the Asiatic coast, as Brazil is henceforward guarding the South American. Is that the best disposition of this great force? And of the French navy and its whereabouts, little has been made public. It has done its share in protecting

the Mediterranean; it has sent its destroyers to work in the danger zone; it had vessels in the Adriatic, and it lost a battleship in the Dardanelles. Should the German fleet finally decide to risk its fortunes in a general action, the warships of France will doubtless take part in it, with brave men to fight them in a way worthy of their navy's splendid record and the great name of Suffren. But if French naval critics are to be trusted, many betterments must be made. The curse of political interference, the absence of any continuous constructive policy for long periods of time, the constant changes in ships, guns and armor, and indeed in about every detail have worked their inevitable consequences. "The workmen who build our fleet are the same who worked on the tower of Babel," bitterly writes one of the first of French naval strategists, who pictures the "debauch of novelty that has cost us one hundred and twenty-eight different projectiles." "A French Minister of Marine," he adds, "contemplating all this disorder, called out 'Our fleet is a fleet of samples.' The phrase, struck like a coin from the die, has remained—the thing also."*

This was written five years before the war. If there has not been unreported and radical revolutionizing in the interval, the [*Continued on page 431*

UNITED STATES WARSHIPS TESTING THEIR TEAM WORK

THE PEOPLE'S CHANCE IN JAPAN

BY DR. G. ETSUJIRO UYEHARA

VICE-CHAIRMAN, PARLIAMENTARY DELEGATION OF JAPAN TO THE UNITED STATES

IN 1890 the political system of Japan was, legally speaking, suddenly transformed from an absolute monarchy to a parliamentary system of government by the proclamation of a constitution and the establishment of an executive body known as the cabinet, a judiciary system subordinate to it after the continental European system, and a legislative body known as the Diet after the Prussian pattern; and thus Japan obtained a form of parliamentary government nearly thirty years ago.

However, the form of government in Japan before that time was really rather an oligarchy in its nature than an absolute monarchy; that is to say, the real power of government in Japan was in the hands of a few officials usually known to the western people as the makers of modern Japan, and as a matter of fact, the Emperor himself has never exercized in person the real political powers, so that even before the proclamation of the constitution the monarchy of Japan was not absolute, in the real sense of the term, and as far as the Emperor was concerned, he had been for many centuries occupying a political position similar to the constitutional King of England. Particularly, the Meiji Emperor, known to the western people as Mutsuhito, being one of the wisest and the greatest rulers among all the crowned heads of the world, did not assume in fact any real political power, and always acted upon the advice of the makers of Modern Japan. Therefore, it may be properly said that he was, if not in form, in actuality, a constitutional or a limited monarch, even before the establishment of a constitutional system of government. Thus the real nature of the government in Japan before and after the proclamation of the constitution has not changed much as far as the real political power of the country is concerned; and this being the case, tho the form of government has been changed by the constitution, the real working of the government remained practically unchanged for many years after the establishment of the Diet.

It is needless to say that in a real parliamentary government the ultimate sovereign power of state must be vested in the legislative body of the country, whether it is unicameral or a bicameral system. The legislative body in Japan is a bi-cameral system, one chamber known as the House of Peers, more or less similar to the House of Lords of Great Britain, and the other known as the House of Representatives, more or less corresponding to the House of Commons. In Great Britain the ministry is responsible to Parliament, whereas in our country the cabinet ministers are not responsible to the Diet; that is to say, the real power of state in Japan is still in the hands of the cabinet ministers, and not in the legislative body. So, in Japan the government is still parliamentary in form, but not in reality.

However, for the last thirty years the people of Japan, particularly the political parties, have been constantly struggling to establish real parliamentary government and make the cabinet ministers responsible to the Diet. It is interesting to observe that recent happenings now clearly show that the political tide is rapidly drifting toward a real parliamentary system of government. In order to explain the real significance of recent political happenings in Japan I take one instance.

It must be understood that by the constitution of Japan the treaty making power is vested in the hands of the cabinet ministers, or in other words, they exercize it in the name of the Emperor as a part of the executive power. So up to a few months ago all the foreign relations were handled usually by the Minister of Foreign Affairs, and at critical times often with the advice of the so-called Elder Statesmen, the survivors of the makers of modern Japan. And as a matter of fact, the legislative body of Japan has no power over matters concerning foreign affairs except the power of criticism. Here in the United States the Senate has the power of ratification of all treaties, and the British Parliament controls, tho indirectly, all foreign affairs of the state, but our Diet can do nothing directly with matters relating to foreign affairs. Indeed, as I already stated, our constitution does not give the Diet the treaty making power, and our government is irresponsible to it.

THIS great European war, producing many difficult international complications, necessitated Japan's adopting a more or less popular form of government. The great pressure from within and without made all statesmen and politicians of Japan gradually think of the necessity of making the government stronger, if not more efficient, especially in reference to its dealings of foreign affairs. The Elder Statesmen themselves became conscious of the declining of their power and prestige, and consented to instituting, tho temporarily, an advisory board of foreign affairs. As a result, there was established last May the Gaiko Chosakwai, the Council of Foreign Affairs, which occupies practically the same position held by our Elder Statesmen for many years, and takes all the foreign affairs into its own hands.

Legally speaking, this Council of Foreign Affairs is merely an advisory body of the Emperor, particularly in matters concerning foreign affairs, but it is so organized that it may initiate our foreign policies, at least for the time being, and advise or direct the cabinet ministers to carry them into effect in the name of the Emperor. This advisory body consists of ten members, four cabinet ministers and six outsiders. The most noticeable fact is that two of the greatest leaders of the political parties in Japan have seats in it, and this is a most unusual thing in Japanese politics. Formerly all bureaucratic officials and Elder Statesmen were always trying to create a chasm between the Emperor and the poitical parties, in order to keep the powers of the state in their own hands in the name of the Emperor; but now it is interesting to note that the pressure created by this great European war from within and without has forced our bureaucratic officials and the Elder Statesmen to consent to let the leaders of the political parties approach and come directly in contact with the throne, and take seats in this advisory board, the Council of Foreign Affairs.

THIS is a radical change, the like of which has never before occurred in Japanese politics. The leaders of the political parties now become advisers of the Emperor, and this means that the great gap which hitherto existed between the throne and the legislative body is partially bridged. Formerly, some conservative people of Japan thought it blasphemy that the people, or the leaders of political parties representing the people, should come directly in contact with the throne or the divine personage of the Emperor. However, this superstition is now almost completely swept away.

Yet, strange to say, the political significance of such radical development of political institutions in Japan, which almost amounts to a revolution, is not fully realized even by the people of Japan themselves, for it occurred quietly soon after the great stir of the general election last April. Of course, it still remains to be seen whether this development has permanency or is a momentary affair; but it is quite probable that this Council of Foreign Affairs will remain and be active as a most influential and strong initiative power of our foreign policies until the conclusion of the peace treaty after this great world war.

It is no exaggeration to say, that as to her foreign policies, Japan is a most misunderstood country; and there are many reasons for this. One of the causes for this is due to the fact that all the foreign policies of Japan were hitherto carried out by a few persons behind a screen. It is very probable that the influence of Mr. Inukai and Mr. Hara, two of the strongest and most influential leaders in the Council of Foreign Affairs, will play a considable part in shaping Japan's future foreign policies, for it is now their constructive period and will likely lead Japan more strongly toward her industrial and economic development than toward her imperialistic expansion.

THE RUSSIAN TRIANGLE

There are three factors in the revolutionary tangle of new Russia: the Bolsheviki, pacifism and labor propagandists, whose leaders (photographed at the left) are Nikolai Lenine and Leon Trotsky; the head of the Constitutional government and commander-in-chief of the armies, Premier Kerensky (at the right); and the Russian soldiers, whose support will bring temporary, perhaps permanent success to either side

PREMIER KERENSKY

Paul Thompson

A NEW TRADE FOR THE BLIND

The possibilities of work for blinded men and women have been meager in the past: cane-seating chairs or playing the piccolo on street corners were the most common. But with the stimulus of wounded soldiers needing remunerative work several successful experiments have been made in finding occupations for the blind. One of the best, perhaps, has been carried out at the factory of the Crocker, Wheeler Company in New Jersey, where twenty blind men and women wind armature coils

DR. WHEELER AS INSTRUCTOR

The first blind workmen to learn winding were taught by Dr. Wheeler, whose idea it was to use them in his factory

WINDING ARMATURES

To give blind soldiers from the armies of our Allies a chance in his factory is the next step in Dr. Wheeler's plan. The demand for skilled workers at armature winding is far in excess of the supply and Dr. Wheeler's experiments have already proved, not only that blind people can be taught the work, but that their dependence on touch achieves a smoothness and precision in the coils decidedly above the average. The blind workers are paid by the piece and all earn a living wage

SELF-SUPPORTING AT LAST

One of the workmen who has been blind from birth. His specialty is winding the mica strips which must be exactly edge to edge so as to fuse evenly

THE CHAMPION WINDER

Instead of pulling the strip thru at arm's length for each turn he has worked out a thumb and wrist movement that saves nearly two-thirds of the time and energy

WHICH IS THE SIDE-ISSUE?

A PROFESSIONAL WOMAN'S EXPERIMENT AT KEEPING HOUSE

BY THE BACHELOR MAID

If you already know the Bachelor Maid as an occasional contributor to The Independent of keen and entertaining criticisms on feminism and education, this new development in her interests will surprize—perhaps amuse you. It's an omen—so they say—when a Bachelor Maid discovers charm in housework. And while she still insists on putting the School-ma'am viewpoint first, the Bachelor Maid permits herself a very interesting dissertation here on the hitherto unconsidered problem of matrimony.—THE EDITOR.

I had said for a good while that if dresses only fastened in front, I should go and live by myself in an apartment—and in 1913 dresses began to fasten in front. I did continue to board for a year after that, having a considerable supply of 1912 (or still more remote) garments my inductions into which required the assistance of amiably disposed fellow-boarders and housemaids, but June, 1914, found me adrift, the result of my fatal gift for taking up with landladies who retire from business. While, on a blistering afternoon, I was sadly inspecting "back gallery rooms" and similar contracted quarters supposed to be adapted to the requirements of single ladies, I strolled into an apartment house. It was only the recklessness which comes of the consciousness that your nose is shiny and the perspiration has gone thru your shirt-waist in the back that made me ask the spick-and-span janitor to show me the furnished apartments, and then examine the most expensive one as minutely as if I could pay for it or fill it. After I had committed myself to certain comments on the kitchen range and the pattern of the bedroom window-down curtains, and was wondering how I ever was going to get out, I said, as airily as you *can* with a shiny nose, that it was very attractive in many ways, but that I hardly cared for one quite so large—I—*wasn't* married, and one person didn't really *need* five large rooms and a bath.

Jerry is a clever negro, and I think he had sized me up correctly from the moment I was pretending to know something about a gas range. He said, without the slightest visible diminution of respect, that there was a suite on the other side of the house that he believed would be just what I wanted.

It was—and I could pay the price. I could hardly believe that an apartment with a real, for-true sitting-room, and electric lights and gas and heat and vacuum-cleaning and electric bells and perennial hot water were *all* within the reach of one who had looked ahead thru a long vista of back gallery rooms and callers entertained in corners of boarding-house parlors until her sixty-fifth birthday and the Carnegie Foundation should set her free to divide the evening of her days between the homes of her married sister and brother. But it was, and in September following I moved in.

EXCEPT for some fearful premonitions (quite unnecessary) of difficulty respecting milk and ice, it had not occurred to me as differing greatly from previous removals; but I soon found that in public estimation it did differ widely. My friends did not all express equal horror at the thought of meals prepared and a carpet-sweeper and dustless mop wielded by my own fair and hitherto lady-like hands, but all were equally fervid in depicting the desolation of "sitting down to meals alone," and similarly confident that I "would get sick of it."

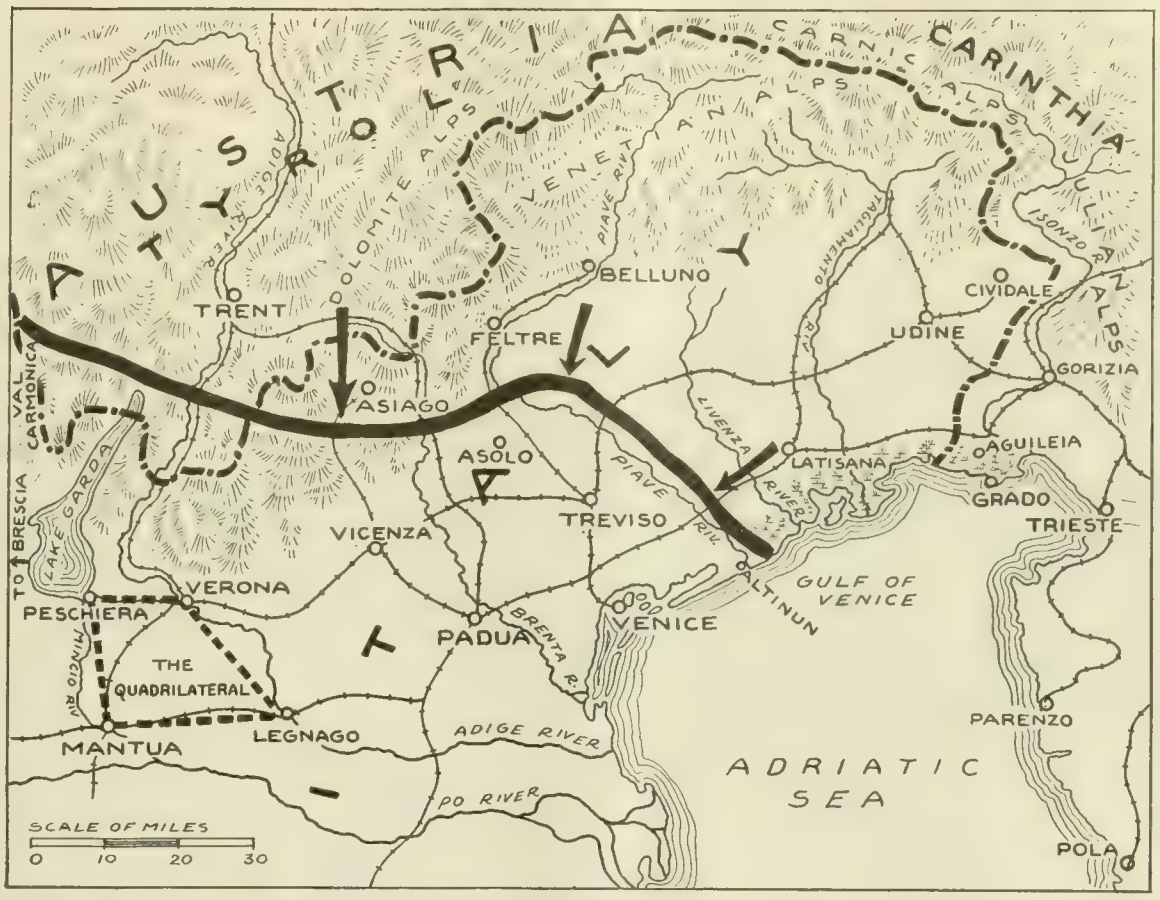
Even those who regarded the undertaking with no outward show of unkindness wondered "how I could find the time," and still others, who had hailed certain of my writings as the Evangel of a New Light, reproachfully declared that my practise had squarely contradicted my preaching. There were still other few who gloried in my step as one which in a small way had solved a problem. Mainly in response to these last two classes I now take my pen in hand.

I think I have omitted to state that my "suite" is kitchenless. It was designed, in truth, as a habitation for unattached ladies or gentlemen who would go out for their meals. As a means toward peace I did not dispute my clamorous friends when they said that I too would at least go out for my dinners. I knew that I should not—except when they and others invited me. For I saw nothing to prevent my attaching the little gas stove upon which I had made fudge and boiled my tea-kettle too many boarding-house years not to know its possibilities. And while I was contemplating the purchase of its duplicate, a dear friend presented me a most adorable electric grill, within whose diminutive compass—something like 6x7x10 inches—it is possible to have three things cooking at once. With this combined gas and electric apparatus I can serve a five or six course dinner, and I have—*to guests*. I eat on a folding table, spread regularly three times a day in my living-room. For I do not eat out of a paper sack, nor do I breakfast on crackers and milk from the top of my trunk. When not in use, the table just fits a nook behind the wardrobe. My great-grandmother's beautiful blue china had been given to me long ago, and silver spoons have been coming my way at intervals thru life, even if one was conspicuous in my mouth at birth. Only the year before an aunt with the same name as my own had left me the most of her silver, all aptly engraved, and, of course, I had books and pictures and "pretty things," so that "setting up housekeeping" really cost me very little.

As to ice. That, with no kitchen, had worried me just a bit, being a consideration inseparable from milk and butter and other food fundamentals. Did you ever see a nursery refrigerator? I never had until, quite providentially, a young couple in my last boarding-house had a baby. Thru them I discovered the nursery refrigerator. It looks like a somewhat magnified cake box, and you can carry it in your arms. But it holds ice, and a lot of other things besides. Furthermore, it does not drip. Every morning before I set out for my professional duties I also set out the refrigerator for the iceman. I return in the early afternoon to find it duly filled.

Now with cook stoves that do not "smut," and can be put in a cupboard when not in use, and a refrigerator that you don't have to keep a pan under (and forget to empty), it is perfectly obvious that you can cook in the parlor, or anywhere, without the least excuse for a "mess," so I hope that *that* difficulty is settled to the silence of all scoffers. The truth is, there is nothing essentially very dirty in housework, except that so many women do it in a dirty way.

NEXT arises the question of time, wherein my distrustful friends did touch a real difficulty. It does take time to sweep and dust and wash dishes and cook, and I am the person who published words upon women's deadly dissipation of their time in multifarious occupations, domestic especially. It does seem illogical on the face of it. But only on the face of it, I think. I have not kept a tabulated account of my time as I have of my money. Therefore, while I could give the figures to prove that I have lived more cheaply as well as more to my taste than when I boarded, I cannot give them to prove that I have spent no more time. Yet my very strong impression is that all the time that I now give to household duties went to other things just as remote from my "higher life" when I boarded. The previously mentioned carpet-sweeper and cognate domestic implements afford a considerable proportion of the physical exercize that I formerly must deliberately set aside an hour to go out and "take."



My hours differ on different days of the week. When my schedule demands that I present myself for my professional duties at 8:15 a. m., I am rather likely to lock my door upon unwashed dishes and an unmade bed. But, observe, *the door is locked.* And it does not take long to put things in order when I return.

And I do not think it dismal to sit down to my meals alone! If earth can supply any more joyous sensation than freedom from the necessity of talking when you don't want to, except freedom from the necessity of hearing others talk when you don't [*Continued on page 432*

A LITERARY WAR MAP OF VENETIA

BY EDWIN E. SLOSSON

IN earlier issues of The Independent I have endeavored to recollect some of the legendary, historical and literary lore associated with the battlefields of France, Belgium, Poland and Asia Minor. Now the tide of war has swept into another region rich in memories of the past which we may wish to recall.

The Land of Mars and the Muses. The invading Austro-German army, whose position is indicated by the heavy line, is crossing historic ground. Many of the places on this map were, as this article shows, already sacred to the Italian patriot and to the tourist

The Austro-German armies broke into Italy thru an ancient gateway, thru the eastern entrance by which their predecessors and ancestors, the Goths, Vandals, Huns and Slavs entered the fertile valleys of the Piave and the Po. This, too, was the passage way between the eastern and western empires, between Rome and Constantinople. Thru this door the Corsican attacked the Holy Roman Empire. Thru this door the Austrians withdrew when at last they left Italy in 1866.

And thru this door General Cadorna has for three years striven to invade Austria. When first he crost the Austrian boundary on his way along the coast toward Triest he passed a village on the lagoon, too insignificant to be mentioned in the dispatches, yet which was one of the most wealthy and important cities of the ancient word, Aquileia. Here where the Roman eagle perched a fortress was established to guard the uttermost march. It became a great seaport with several hundred thousand inhabitants, ranking third among the cities of the empire. But the silting of the Italian shore that has diverted the big steamers from Venice to her parvenu rival, Triest, has shut in Aquileia and when the tourist wants to visit it he must take a switch-back railroad from Cervignano or come in from Grado by a boat that the conscientious Baedeker condemns as dear, dirty and disobliging. Professor Freeman was one of those whose antiquarian zeal led him to this out-of-way spot, as he tells us in his "Subject and Neighbor Lands of Venice." Of this region he says: "It was Venetian ages before the name of Venice was heard of in its present sense; it was Austrian long before the name of Austria was heard of in its present sense." Here the East and the West, Austria and Neustria, came together—and came in conflict. The name of Neustria has vanished from the map, but Austria has perpetually prest eastward and now covers much more territory than it should. The Italians also have been pressing eastward, for Gorizia (or Görz as we must call it this month) was a Slavic town and had largely become Italian before the war.

But Aquileia, only ten miles west, founded by the Romans in B. C. 181 to shut out Balkan invaders, proved a trusty sentinel. It certainly earned its reputation when it stood off the Emperor Maximinus in 238 A. D., for he was by all accounts a most redoubtable warrior, eight feet high and capable of eating thirty pounds of meat a day and washing it down with seven gallons of wine. (If you don't believe it consult your Gibbon. I have cut down his figures.) Anyhow, he was big enough to lick the Germans. But the patricians of Rome did not like the idea of being ruled by a Thracian shepherd, so they set up three emperors in opposition, doubtless because they could not find any one man to match him.

Maximinus crost the Julian Alps, but when he came to the Isonzo River he found, as did the Austrians a few weeks ago, that it had been swollen by its seven streams so as to be unfordable. He crost the river by means of a pontoon bridge made of hogsheads and then erected his engines against the walls of Aquileia. But the Aquileians put up an unexpected resistance. They showered Greek fire on the enemy and burned up his artillery. (This is against the Hague rules, but of course they did not know that.) The city was short of rope for the catapults so the Aquileian women cut off their hair to make them. Just so we hear that the Alsatian maidens are volunteering their hair to make belts for the machinery in the German munition works and are wearing coquettish caps inscribed "For the Fatherland." I wonder if they will be rewarded for their sacrifice as the Aquileian women were. After the siege was over the city erected in their honor a temple "To the Baldheaded Venus."

Heaven helps them that help themselves, so it is not surprizing that Belenus, god of the place, took part in person in the defense of the city just as St. George came to the rescue of the British in their retreat from Mons as has been attested from English pulpits. Relief finally came thru the assassination of the shepherd-king by emissaries of the Roman Senate.

Not many years later Constantine II came over the Julian Alps into the province of Aquileia to fight his elder brother Constans for their father's throne. But Constans feigned flight and drew the impetuous young man into a wood where he was ambuscaded and slain.

Julian the Apostate, who tried to overthrew the cross, in which sign Constantine the Great had conquered, was halted at the frontier by the opposition of Aquileia, which held out with its traditional courage until the death of Constantius, the rival of Julian. But the Apostate had not time to carry out his plans for the revival of paganism, for shortly after he entered upon the conquest of Persia and met his death, as I have noted in my literary war-map of May 8, 1916, at Samara on the Tigris, which the British have now taken.

But the glorious career of Aquileia, lasting over six hundred years, was soon to come to an end. Attila, King of the Huns, whom Kaiser Wilhelm holds up as a model to his soldiers, wiped it off the map in 452. Not, however, without a siege that taxed his patience to the uttermost. First the Aquileians broke the dykes and flooded the river delta just as the Italians did a few weeks ago. But the Huns made a dam out of the trees cut from the grove wherein had fallen Phaëton, earliest of aviators, while trying to loop the loop around the sun. [*Continued on page 440*

YOUR PLACE IN YOUR TOWN

BY J. HORACE McFARLAND

PRESIDENT OF THE AMERICAN CIVIC ASSOCIATION

ON the occasion of a civic visit to a flourishing but unorderly town of an Atlantic state, I was entertained at dinner by a former home neighbor who had been practising as a dentist in this ambitious community for a decade or more. He told me at length and in detail of the poor local government, of the "graft" at the city hall, of the low ideals of the men in power. After listening for a half hour to the unpleasant exposition, I remarked, "I should think you and other good citizens would vote out this bad crowd." His reply was instant: "Oh, I never have voted here. My Bible study keeps me busy; I want nothing to do with politics!"

This well-meaning man, who of course paid taxes and took without thought the benefits of citizenship, was only a perfunctory citizen, because he could not escape the money cost of citizenship. I think, too —as I told him—that he was only a perfunctory Christian, failing to apply in his life Christ's clear injunction to "render unto Cæsar the things that are Cæsar's," spoken under a government of complete selfishness and imperialism.

This man's place in his town was as at least a half-voter, for the support of the evils he complained of. "He that is not with me is against me," said the same holy good citizen of Judea who paid taxes and enjoined civic participation, while He was laying down the basis of "love your neighbor" government.

In a recent election in the third city of the United States, a "fifty-fifty" ticket of good and bad men was elected, insuring several years of negative or inefficient government, at a time when President Wilson's injunction that "War must not destroy civic efficiency" emphasized the necessity for positive and constructive advance. In that city about 320,000 men were eligible to register for voting, but only 270,000 did so. Of this number, 50,000 failed to vote. Thus there were a full hundred thousand civic slackers, who neglected their primary civic duty, requiring not more than an hour of their time, once a year. These sneak citizens are actually worse and more guilty than are the open forces of evil in Pennsylvania's metropolis. Their place in their town is with the priest and the Levite who passed by. In the present world crisis, each of them gave some help to the German autocracy, for each of them is guilty, in condoning and permitting municipal inefficiency, of depleting the reserves which must support our fighting front. No one of them is honestly entitled to wave the stars and stripes or to sing the national hymn.

There is a middle-states town, nestled among forested hills, and beautiful for situation, in which I found several years ago, among other troubles, an almost complete lack of the facilities for recreation now known to be absolutely necessary to productive citizenship. The councilmen and the burgess, all earnest men, were anxious to make some proper recreational provision for which there was notable opportunity. But they had no money, and a probing of the financial condition of the town disclosed an astonishing state of corporate insolvency. The legal debt limit had long been exceeded, and in addition, the council had floated many notes for current expenses which made the annual interest payments rise to an uncomfortable proportion of the town's total receipts. It appeared, on deeper probing, that barely half of the borough taxes were collected, that the tax collector only went after enough money to give him a living from his percentage, and that even the judge of the county court had not paid his taxes for two years! I told a gathering of the "prominent citizens" that they did not need me to propose recreational facilities so much as they needed a receiver for their bankrupt town!

Two populous and badly managed boroughs in Pennsylvania have voted to combine under a city charter. The burgess of the larger town was a saloon-keeper. The working vice-president of a very large industrial concern in that town was asked to stand for election as mayor. First demurring because of his heavy business duties, he finally consented to serve, and he has been elected. He at once secured the best available advice toward bringing the new city into good order financially, toward planning for the future, toward city efficiency equal to his own corporate efficiency. The place of that man in his town is definite. He is a fighting general in the front line of the great home army that must earn the money, make the munitions, grow the food, and build the citizenship upon which depends America's early triumph in the war for democracy, for working Christianity.

READER of these words, what is your place in your town? Are you a civic mendicant, receiving the unequaled benefits of American citizenship without giving anything but the taxes forced from you? Are you a civic whiner, always complaining about the way "they" who govern you do things, despite the fact that "they" is really *you*, and that until you have thought straight and voted straight, until you have gone frankly and fairly with your criticisms to the proper elected officials, offering help as well as kicks, you are in deficiency?

Are you a civic coward, afraid of losing worthless friends, or of "interfering with business," if you call attention to inadequate service or poor methods in public school administration, or in the street cleaning, or in some other portion of the public service?

Are you a civic sneak, trying to avoid just taxation by evasion or downright dishonesty, and thus putting upon your neighbor part of the burden which is yours? Are you a civic waster, considering that the water supply, the food and fuel you buy, the service of collecting garbage and refuse, the city's parks, and in general the community service for which you pay or do not pay, is to be used less carefully than if it was not related to the present needs of the fighting world?

Are you a civic "uglifier"—to use Dr. Eliot's good word—who throws refuse into the streets, who fails to keep his home premises pleasant in the eyes of his neighbors? Do you, in your business, spread the virus of civic smallpox thru either using or permitting the placing of the advertising signs which assault the eyes of your defenseless neighbors?

Where do you come in when the spiritual machinery of the Government begins to function thru the Red Cross and the Y. M. C. A. War Work? Do you realize that it is your defense, your army, your home, your business, that these solicitors are concerned with, and greet them with a cheerful smile and a payment—it is *not* a contribution, please!—as liberal as you can manage?

Or are you like the bank president in a prosperous city who met a young woman collecting for the Y. M. C. A. War Work, thus, all in one breath: "Now-I-know-what-you-want-I-haven't-anytime-to-talk-here-are-two-dollars-I'm - very-busy-good-morning." She took the two dollars, told him every little helped, and heroically refrained from describing the two-dollar soul which was concealed somewhere in his contemptible body.

Determine the status of your citizenship. By searching self-inquiry, find out whether you are a negative, and therefore half-bad, citizen; whether you are a selfish and destructive citizen, pulling down what others are endeavoring to build up; or whether you are truly a constructive citizen, jealous for the quality and the honor of the government of which you are a part.

This land of ours, in which we now enjoy the oldest civilized government on earth, is a goodly land. It is no possession of king or kaiser; it is ours, yours and mine, for mutual use, in a wonderful democratic frame of mutual relationship. Citizenship here is nearly equal, and soon will be completely so, when adult women vote. Responsibility is equal, opportunity is equal. My place in my town is to help make it and the whole nation the best place on earth in which to live. What is your place in your town?

POTTED PLANTS

Erica Gracilis, well adapted to house use and not nearly so widely known as it deserves

THE Christmas cheer that comes in bottles is rapidly—and high time it is, too!—going out of fashion. But the Christmas cheer that comes in pots—and in bulb pans, and jardinieres and baskets—is finding greater favor each year. There is nothing surprizing in that, for if there is anything which can better serve as the messenger to carry the tidings of good-will from one heart to another, than a cheery fresh green plant, or a flower in bloom, against the general background of snowdrifts and icicles, I for one cannot summon it to mind.

It is at Christmas-tide that the *living* plant is especially appropriate. In many instances it is the best answer to the what-to-give problem; you know it will be gladly received; that it won't get lost in the shuffle of other presents; that it won't be exchanged, or put away in a drawer and forgotten—and that you can't be suspected of having saved it over from the year before yourself!

Nevertheless you should be enough of a "spug" (member of the society for the prevention of useless giving) to use some judgment and care in selecting your gift plants. For there are some that will be hanging their heads before the red ribbons and the wrappings are removed, and that will go into a quick decline thereafter; there are others which will remain perky and cheerful thruout the holiday season, and for weeks or months afterward, if they are given proper care. There are not a few which, if handled with intelligence on the part of the recipient, will be a source of pleasure and a constant reminder of the good-will of the giver, not for a number of weeks, but for a number of years! So one should not be content with merely giving a plant; give a plant that has been selected with thought, picked to fit the conditions and adapted to the care it is likely to receive after delivery.

One of the "tough customers"—a pot-grown orange tree that can be kept for years

Determining what *kind* of plant to give is not the whole of the story. Its condition is equally important. The best place to buy your Christmas plants, if possible, is at the greenhouse where they have been grown. There are several reasons for that. First of all, every time a plant is moved or handled, even if it is merely changed from one bench to another in the greenhouse, it receives more or less of a shock: the less handling and moving about a plant gets from its growing quarters to the table of the person who is to receive it, the better. Then the atmosphere of the average retail florists' shop is decidedly close, moist and hot: plants removed from such an atmosphere, even tho they have been there but a few days, to the ordinary living-room conditions, often go thru somewhat of a collapse. And the plants on sale in show windows are those which have been picked to be at their best several days before Christmas, and frequently have been unduly forced to attain that result. So where you can, by motor or trolley, go to the "grower" himself for your holiday plants; if not, you can probably find a retail establishment with a small range of glass attached in the city, where the different plants can be carried under suitable conditions.

In selecting the particular plants for your own use, do not be guided, as so many persons are, wholly by size and the number of full open flowers. Remember that

"Old Time is still a-flying;
And this same flower that smiles today
Tomorrow will be dying."

Pick rather those which are well set with buds, just "coming on" nicely, so that their full glory is yet to be attained. They will stand handling and delivering better, and will increase in beauty, instead of beginning to fail, after they have been received.

In choosing a fern or dracæna or other foliage plant, get a young shapely plant that has been repotted recently enough so that it can continue to develop for some time without another shift, rather than an old, pot-bound specimen that has nothing but size to recommend it, and is ready to begin to "go backward." Avoid, on the other hand, plants which have just been repotted and have not yet had time to become "established." Repotting is in itself quite a shock to the plant; and if on top of this it has to be carted about, and try to contend with the new conditions of growth it will encounter in the house, the result may be fatal. Many thousands of plants come to an untimely end every holiday season from this combination of adverse conditions.

Keeping these factors of general application in mind, one still will have to decide *what* plants to give.

WHAT *is* the best Christmas plant? "There ain't no sich animal!" As with most other best things, it all depends. It depends on the personal tastes of the giver and the receiver; it depends on whether the latter appreciates plants merely for their beauty, or really cares for them enough to want to "bother" with them as a permanent thing in the house. In the former case something that will be a blaze of glory while it lasts, like a Lorraine begonia or a pan of poinsettias, or a basket of roses, would probably give the most satisfaction; while in the latter a new fern,

You can keep a cyclamen all thru the winter with plenty of water and not much heat

or an azalea, or a primula, would prove a greater source of pleasure. And then living conditions have to be considered; not even the greatest flower enthusiast can keep plants thriving where air, temperature, moisture and light are all such as to foredoom such an attempt to failure, as they are in many city houses. The substitution of electricity for gas in lighting, and hot water or steam in place of "stoves" for heating, has done a great deal to make it possible for the average person to really be able to keep worthwhile plants in a city house; but these improvements are as yet not universal.

As to the merits of the individual plants available, they may be considered in three general classes, the separation being not along botanical lines, for that has little bearing on the matter in hand, but based upon the practical question of *how much they can stand in the way of uncongenial conditions, and still survive.* For that, in a nutshell, is the acid test by which a house plant must be proved.

FOR CHRISTMAS

BY F. F. ROCKWELL

In the first group, then, are those things which, under ordinary conditions, cannot be expected to long survive the contact with house conditions; that are beautiful, as cut flowers are beautiful, but not for very much longer than cut flowers.

The second group comprizes those which can be kept in fairly good condition, with a reasonable amount of attention, thru the winter, and in many cases, from year to year.

In the third group are the ones which cannot be discouraged without actual neglect, and in some instances, a good deal of that. When in doubt, it is safer to give something of this kind.

Among the best known of the plants in the first group are lillies and other flowering bulbs in pots; "forced" roses in carefully trained designs; poinsettias; the beautiful "Christmas begonia" (Begonia Gloire de Lorraine); ferns of the maidenhair type, and a number of others which are not especially suited to house culture; in addition to these, each season sees a number of novelties or specialties which are beautiful enough while they last, and well worth the purpose they are meant to serve, but not suited for *growing* in the house. Bulbs in flower will last for some time, if given water enough and kept fairly cool, but they are of little use for forcing

The Christmas begonia—beautiful, but it seldom lasts for more than a season

a second time; fresh new bulbs are so cheap that it does not pay to save the old ones.

The Lorraine begonia, to make it last as long as possible, should be kept quite cool, and in a subdued light. It can be carried over for another season if one has some skill with plants, by being kept in a cool, partly shaded location outdoors during the summer.

The plants that are more adapted to house use, tho not really "tough," include other flowering begonias (the "fancy leaved" sorts are not in fashion these days, but make good house plants); the "Christmas pine," auracaria; azaleas; daisies of various sorts; primulas; ardisia, the bright red-berried Christmas plant that looks as if it had been designed especially for the occasion; cyclamen; several of the ferns, especially the descendants of the old "Boston"; and a number of the beautiful, dainty and well-lasting ericas and acacias, which are not nearly so well or widely known as they deserve to be.

If you're willing to "bother" with a plant there's nothing lovelier than an azalea

Many of the flowering begonias are familiar to every one who has attempted to keep flowers in the house; given a moderate amount of heat, 50 to 55 degrees at night, and plenty of light, and pinched back occasionally to keep them from getting too tall and lanky, they are among the most satisfactory of house plants, because so free flowering and free from insect pests. The great mistake usually made with the popular azalea when it comes into the house, is to keep it too warm and not give it half water enough; the tremendous amount of bloom on an azalea at the hight of flowering makes it drink water like a sponge, and the hard, densely packed root ball makes it difficult to water in the usual way. The easiest and most certain way to give it enough is to soak pot and all in a tub or large pail, and then drain off the surplus; and *don't* keep it in a close, hot, devitiated room if you want it to retain its beauty; give it as cool a place as you can. The araucaria is another beautiful Christmas plant that generally is kept much too hot, but in contradiction to the azalea, it requires but little water at the season when it is received; new growth will be made in spring and summer, when, plunged out of doors, it will use considerably more water. The "heather" plants, ericas and acacias, also want to be kept cool during the winter—40 to 50 at night, and not much higher in the day; and don't let the pots dry out! The beautiful cyclamen, in spite of its somewhat tropical generosity and color of bloom, is another coolblooded sister, with something of a thirst.

The most common cause of failure with ferns is in not giving them enough to drink. A good sized fern will handle three glasses of water a day—one at every meal! Others in proportion. Of the ferns there are many good varieties—Scottii, Smithii, Teddy, Jr., and Norwood are only a few of a dozen good ones of this type. The Pteris or "Brake" ferns are also good for house conditions, a number of them being used for the "made up" fern dishes or centerpieces which are deservedly popular. Water your fern dish every morning after breakfast, and set it in a light north or east window for the day, and see how much longer it will last than its predecessor!

In the third group—the real tough customers—there are some ferns also. The holly fern (Cyrtomium falcatum) and the bird's nest fern (Asplenum Nidus) will both survive low temperatures. Two good palms that will live thru a lot are Phoenix Roebilini, one of the most satisfactory of all house plants, and Cocos Weddeliana, the most graceful of all palms. The red Dracæna terminalis is very widely used as a Christmas plant, and is fairly hardy. The variegated pineapple, which has a broad golden stripe down each side of the leaf, is an out-of-the-ordinary thing that has real merit and stamina both. Among bulbs, there is the gorgeous but not, unfortunately, very graceful, amaryllis. It will survive a great deal of punishment. For real downright thick-skinned insensibility, however, altho I confess, without any especial Christmas cheer, one must fall back on the ubiquitous rubber plant and the evergreen aspidistra. In spite of the fact that the common forms of these two plants are so well known, there are other forms of each comparatively little known, and tho not quite so hardy, very striking and satisfactory.

In addition to any special cultural suggestions given above, there is of course the necessity for a frequent change of air in the room where any plants are kept, regular attention, a careful watch and immediate steps against any appearance of insects, and above all a *normal amount of moisture in the air*, attained if necessary by keeping water evaporating near the plants.

The poinsettia strikes just the right note of Christmas cheer, but it is temporary

A couple of colorful story tapestries: Bouches on the left, Teniers on the right. Numbers 1 and 2: These tapestries cost $6 each

TAPESTRIES FOR EVERYBODY

BY GEORGE LELAND HUNTER

TAPESTRY is a broad word. It ranges from ten thousand dollars a yard on Fifth Avenue to ten cents a roll on Sixth Avenue. It includes not only Gothic and Renaissance and Gobelin masterpieces slowly and laboriously made with bobbins by hand, at the rate of from two to twenty square inches a day, but also embroidered and machine woven and painted and printed imitations of them, even the imitations printed on paper and carelessly called tapestries in the wall-paper shops.

Not everybody can afford masterpieces in tapestry. No more can everybody afford masterpieces in painting.

Just as in painting there are engravings and photographs and prints for the small purse, so in tapestry there are inexpensive reproductions and modifications, some of them often mistaken by the layman or amateur for the real thing.

ONLY last year on Fifth Avenue there was a shop which boldly displayed in its windows "Genuine Flemish and Gobelin tapestries," at prices ranging from three to fifteen dollars each.

I entered one day to see how they did business.

A lady stood there in conversation with one of the salesmen. "I think," she remarked, with an air of experienced conviction, "it is awful the way some of the shops fleece the public. Up at X——'s," mentioning the name of a firm famous for tapestry weaving in America, "they wanted three thousand dollars for a modern piece only a little larger than this," pointing to a panel about three by five feet which was priced at nine dollare. "Are you sure this is really a genuine antique?"

The salesman assured her that it was. Whereupon she ordered not one but five of his tapestries, and had them sent out to her home in Yonkers, to be framed in the wall in wooden moldings; but not, let us hope, under glass.

Furthermore, several years ago, a member of a prominent New York family discovered in a little antique shop on Fourth Avenue what he thought was a Gobelin because CH. LE. BRUN. PINXIT. was woven into the panel, and was willing to pay ten thousand dollars for it, until I assured him it was one of the jacquard productions worth not more than thirty dollars.

A block printed Renaissance tapestry, four by seven feet. Number 9. $25

LIKEWISE I know a lady of wide travel and extensive culture, who has the living room of her country house very attractively paneled with what she frankly says are jacquard panels.

But the *tenières* in her dining room, she insists, are "real Flemish tapestries."

As a matter of fact they, too, are jacquards.

Far be it from me to attack these jacquard panels made in France. Examples like Nos. 1 and 2, photographs of which are published at the top of this page, and No. 3, the small tapestry called "all the world loves a soldier," which is illustrated on the opposite page, I recommend with enthusiasm and there are many more tapestries of a similar sort which are equally good.

To be sure, instead of the ribbed texture of real tapestry, they have a square point texture imitating petit point needlework.

But when well selected and hung, and framed in unobtrusive rep

or metal or leather galoons, they are far softer and more agreeable to the eye, and less monotonous, than pictures painted on canvas or printed on paper.

Even less expensive are jacquard tapestries in simpler designs and patternized repeats, like Nos. 4, 5, 6, 7. Tapestries of this type, in verdure patterns, are the kind used in upholstery work by makers of inexpensive furniture.

Nos. 10, 11, 12, 13 are not in cotton like those previously mentioned, but in wool and made in England. Furthermore, they are imitations not of woven tapestry but of needlework tapestry. Which perhaps is only a just retribution, because what is commonly known as cross-stitch and petit point needlework was in its inception an imitation of the work of the loom. They range in price from fifteen dollars a yard and are 54 inches wide. Similar designs in real needlework cost from one hundred and thirty-five dollars a yard.

Of all imitations of picture tapestries, the type illustrated in No. 9 is in many respects the most satisfactory. While the design is not woven but printed—printed by hand with wooden blocks like hand-blocked chintzes and wall papers—it has the horizontal-ribbed texture of real tapestry, being printed not on a smooth cloth but on one that has a surface of coarse ribs. The tapestry illustrated is 4 feet wide by 7 feet high and sells for only twenty-five dollars. Moreover, there are other panels the same size which add on at the sides and make a tapestry 8, 12 or 16 feet wide as may be desired. Jacquard

"All the world loves a soldier"—a tapestry two by three feet, for $5. Number 3

verdure borders about five inches wide are commonly used as a frame.

Reproduced in these block-printed panels are selected and adapted parts of some of the most famous sets of tapestries ever made, such as (1) the fifteenth century Gothic Trojan War series of which there are three scenes in the South Kensington Museum, and at the Metropolitan Museum of Art one scene lent by Mr. Edson Bradley; (2) the famous Renaissance Hunts of Maximilian also called the Belles Chasses de Guise, in the Louvre, designed by Bernard van Orley, court painter of Margaret of Austria, who ruled the Netherlands in the early part of the sixteenth century, first for her father the Emperor Maximilian, and later for her nephew the Emperor Charles V; (3) the famous Romulus and Remus Renaissance set in the Royal Spanish collection, also designed by Van Orley.

Imitation is the sincerest form of flattery. Good jacquard and block-printed imitations of famous tapestries, not only do no harm, if sold and owned honestly (I add owned honestly, because some owners like to exalt the virtues of what they have), sound the glory of the masterpieces that they remotely reflect.

A jacquard tapestry, I should perhaps explain, is one woven on a machine loom with the help of the jacquard attachment invented in the time of Napoleon, which by the aid of punched cards weaves out pictures just as a mechanical piano weaves out music. The first cost of a square yard of woven picture is much greater in jacquard than in block print, but duplicates cost comparatively little. So that for the reproduction of large tapestries in small quantities the block print is commercially to be preferred. I also like it better artistically, and would much rather have it than the imitation of tapestry *painted* on ribbed cloth and often sold as "genuine Gobelins."

These are cotton tapestries, made in America: Numbers 4, 5, 6, 7

Wool tapestries which were made in England: Numbers 10, 11, 12, 13

A house with a hilltop view placed over the edge of the hill and sheltered by a screen of trees. The outlook must be good if the house is to be truly livable. House of Mr. Clayton I. Cooper, at Fieldstone, New York. Albro and Lindeberg, architects

BEFORE YOU BEGIN TO BUILD

BY AYMAR EMBURY II

THE livable house must not only be itself comfortable, practical and agreeable to look at, but it must be in a satisfactory neighborhood among pleasant surroundings, and the business transactions which are necessary preliminaries to its completion must be conducted without friction, and in such a way that no unforeseen financial spectre may arise to haunt it. Too many people begin to build in much the same fashion they would go into a country drug store and order goods to be sent to their houses. They assume too much on the part of the people with whom they do business, and realize too little that a house is not a standard piece of goods to be picked from a counter and taken away, but that it is a rather complicated article of commerce, which must be, as it were, wrapt up by many hands before it is finally received.

In the first place, it is not easy to find exactly the right spot for a livable house, and the requisites which taken together constitute the right spot, are so many and of such varying importance that it is rarely possible to find a piece of ground which combines them all, and probably every piece of land as finally selected is the result of a compromise in the buyer's mind between his various desires. Of these requisites perhaps the most important is a good neighborhood, and the word is here used in its true sense, a place with good neighbors. Very many of the real estate companies who offer property otherwise desirable cannot provide these, the prime requisites, either because the property which they are developing has as yet few or no houses upon it, and the character of its future tenants is therefore as yet indeterminate, or because the people whom they have attracted to the property comprize many various elements which cannot be fused into a pleasant social amalgam. No young married people, for example, would wish to go into a community of elderly ones; they would themselves lack the social companionship which is essential to content with a country community, and their children would be forced to do without the constant companionship of a number of other children, which is perhaps a better training for life's more serious duties than any amount of scholastic education. Again, one should be careful, in considering the purchase of land in an old and staid community, to consider not so much the characteristics of the community but whether one's own tastes, means and diversions are such as to enable one readily to fall into the established social life. The misfit has a hard and unpleasant time, which may be due not to defects of character on either his own part or that of his neighbors, but simply to divergencies of taste and training.

Having selected the town in which you want to build, the next thing is to find a lot which conforms to your ideas of the sort of life you want to lead. In general the size of the lot will be determined largely by comparison with those about it, and less by the means of the purchaser.

THERE are certain desirable features which are common to places of all sizes, differing perhaps in degree but not in kind. We all want a view; it may be from a hilltop overlooking an extended valley, or it may be down a pleasant village street, nevertheless the outlook must be good if the house is to be truly livable. On a small place it is more easy by planting and shrubbery to shut out undesirable features than on a large one; on the other hand, a large place probably offers several possible house sites, while the variation of the position of the house on a small lot could not be great. The property should also be so selected as to afford a house site reasonably sheltered in winter, and equally assured of some breeze in the summer, and fortunately in the East these two requirements are generally found in conjunction; the coldest winds in the winter are from the

In general the size of the lot will be determined largely by comparison with those about it, and less by the means of the purchaser. Alfred Busselle, architect

northeast, and the coolest breezes in summer are from the southwest. A house on a windy hilltop can never be very completely sheltered, and while an excellent view may more than compensate for this, at the same time, if it is possible to place the house behind a screen of trees, or over the edge of the hill, and still preserve the view, the location will be by so much the better.

Another very important requisite to the location is the possibility of drainage both for the plumbing and for the cellar; and this point should be inquired about before the purchase is made. I have known several pieces of property, otherwise excellent, which were utterly unavailable for house construction without tremendous expense for filling, because the street sewer was not low enough to take the water from the plumbing system in the house.

In many communities it is illegal or forbidden to use the sewage system for cellar drainage, and in certain soils cellar drains, and drains around the exterior walls, are a real necessity.

This drain must, of course, have an outlet lower than the cellar of the house itself, a thing easily provided in a hilly community where the lot is higher than the street, but in a flat country a way to dispose of it is often not so readily to be found.

One should also find out, before buying a piece of property, if the mains for water, gas and electricity have been laid to the property line, and it will generally be found that cheap property is no longer cheap if much has to be done to bring these into the house. If there is no public water supply available, a well has to be driven and a tank installed; the driven well will probably cost on the average of $3.50 a foot, and will probably not be less than one hundred feet deep, while the pumping outfit and the storage tank will cost perhaps $500 more. Gas companies, as a rule, will make short connections from the street to the house without charge, and the companies supplying electricity follow the same principle, but if the extensions are long they will probably be made only if the expense of making them is paid for and on condition that a guaranteed minimum revenue is assured the company. The telephone also is becoming a necessity, and while the telephone service is of such excellence that we are accustomed to order a telephone one day and have it installed the next, this in isolated communities is not always the case, and one of my clients was forced to take his choice between a party line with twenty-eight other subscribers and a payment of $1800 for an independent wire.

THE question of roads and general accessibility is, in some degree at least, of importance only to people who cannot afford private means of transportation, tho houses on small lots should not in general be located on main highways, because of the dust, the noise, and the danger to children from passing vehicles. Conversely, people purchasing large pieces of property, especially those remote from railroad stations, should remember that the possibilities of quick transportation in the winter are dependent largely upon the number of people who use the roads, so fairly easy access to the main traveled highway is best.

Certain other considerations will naturally be considered; schools, churches, places of entertainment, golf links, or tennis courts are usually among the first things that a real estate agent describes, or that he is asked about, so no explanation of their desirability need be made; perhaps all the points above made will even seem to many to be too obvious to have required repetition, and yet I have found my clients so very greatly ignoring them, forgetting them, or even not realizing that they were points to be considered, that it has seemed best to go over them thus fully.

Having determined upon the lot, the question of purchase arises, and it is perhaps best to have the advice of a competent lawyer in every such transaction, altho when dealing with a reputable company, and when the deed to the property is guaranteed by one of the large title insurance companies, no attorney will be necessary.

So many homes have been lost by inattention to the question of title that I feel it should be looked into with perhaps more caution than any other single piece of business in the whole building operation.

A good way to proceed is to purchase the property, paying down whatever amount is mutually acceptable, giving a mortgage for the balance, to be paid to the vendor in instalments; thus the title passes clearly to the owner; and if the property is worth what he pays for it, and a foreclosure should be necessary because of his inability to meet payments, he will get back at least the money he put in; if the property has in the meantime advanced in value, he will profit by the advance. In purchasing from private individuals even more scrupulous care should be preserved; certain "get-rich-quick Wallingfords" have been known to sell property which was not theirs; and because of the dower law which exists in many states it is usually necessary to ascertain if the vendor is married and to secure his wife's signature to the deed.

Of course if a man has money enough to buy his land outright, and to build his house without a mortgage, there are not many difficulties in his path, since it is smoothed before a man with ready money. There are, however, very few houses built in this way; most people finance or assist to finance their building operations by a mortgage of one of several kinds, and it may be worth while briefly to describe the three commonest types by which money can be secured to build a house.

The first, and simplest, of these is in the case where the company selling the land, either directly, or thru business connections, makes the loan, and in these cases the loan will be generally larger than if it is secured thru disinterested people, running perhaps to 70 or 75 per cent of the value of the house and land. Such mortgages when made by a building company are usually for a term of from three to five years, sometimes ten, but not frequently less than three years. They are usually required to be partially paid off in instalments, so that at the end of the term of the mortgage the amount remaining unpaid will be small enough so that a new loan can be secured from disinterested people, or from one of the trust companies which habitually loan on real estate.

A house admirably adapted to its site, and made the more charming by thoughtful planting and shrubbery. The Rabbit house at Wyoming, New Jersey. Jay Wheeler Dow, architect

The second, and perhaps the safest way of financing the operation, is to secure a loan from a trust company; these loans are not made for more than 60 per cent of the value of the land and house combined, and are usually made for one year only, altho companies as a rule will permit loans made to reputable people upon property which they consider good security (and which does not depreciate) to stand until it is convenient for the borrower to pay the face of the mortgage. They are renewed by the mere payment of interest; no new mortgage being necessary at the end of each year. Such a mortgage generally costs the borrower 3 per cent of the face of the loan at the time when it is made, this 3 per cent covering the expense of examination of title, drawing the papers, etc., and a loan from a responsible company is generally as satisfactory an endorsement of the value of the property as a guarantee of title from a title insurance company. As a matter of fact the largest lenders of money on improved real estate are the trust companies which are also title guarantee companies.

THE third way to finance a building operation, the most complicated, and in some ways the best, because the most economical, is to borrow the money from a building loan association. Fortunately during the past ten years the character and management of the building loan associations have very greatly improved; there was a time when their methods were in general not financially sound, and even in some cases there was flagrant dishonesty in the management. Of late, however, dishonesty has been practically eliminated, and it is safe to say that ninety-nine out of a hundred of the building loan associations are honestly and well run, tho before attempting to secure a build- [*Continued on page 436*

SPEEDING UP THE BUSY BEE

BY E. I. FARRINGTON

THE little busy bee will have to be busier than ever if it is to meet the present demands for honey. Never before in the history of the country has honey been so scarce or the price so high. Practically all of the honey in the United States, if not all of that which is available in the whole world, will have been cleaned up long before next season's crop can be harvested; this, too, in spite of the fact that the bee keepers of the country were urged last season by the Government to greatly increase their output, and especially to run their bees for extracted honey instead of comb honey, as the former is easier to produce. As a result of the Government's propaganda, which was carried on by experts sent thru all the bee keeping states, a much larger volume of honey than usual was put on the market. The surplus, however, was quickly taken up by the demand for honey to be shipped across the seas. It is said that one ship carried a cargo of honey alone, this honey being designed for the use of the Italian army. Never before in the history of the country had a shipload of American honey been exported.

An apartment house roof is as good as a backyard for bee-keeping

Then came the shortage in sugar, especially in the Eastern states, with the result that honey immediately came into great demand to use as a substitute. The price jumped to 25 cents a pound at retail, for extracted honey, and then to 35 cents. Comb honey is sold as high as 40 cents, altho most of the department stores have been selling it for 30 cents. In former years the heavier, darker grades of honey could be purchased at wholesale in any quantity for from 6 to 10 cents a pound. This year these same grades have sold as high as 15 and 18 cents. The better grades have gone much higher.

Of course this does not mean that the bee keepers have made a proportionately increased profit. The prices of all supplies have shot upward, wax, among other materials, selling at unheard of prices. Wax is used by most bee keepers in the form of foundation, as it is called. This foundation is a thin sheet which is drawn out by the bees to make the cells in which their honey is stored.

This brief review of the situation explains why an extra effort is to be made the coming season to double the output of honey. Bee keeping, which has been purely incidental on most farms, if indeed any bees at all have been kept, is coming to have a greater prominence than ever before. It is not the purpose of the Government, tho, to urge the keeping of more bees so much as the production of more honey, which can be done by devoting more care to the bees now owned.

Bee keeping on a large scale offers many complications, but in sections of the country where the flora is plentiful, there are many men who devote themselves solely to this industry, keeping all the way from five hundred to several thousand colonies.

Even the man or woman who keeps only a few colonies must learn how to manage them, if the results are to be anywhere near commensurate with the possibilities. It is the small bee keeper, who has allowed his bees to "gang their own gait" as the Scotch say, who needs to be prodded into greater activity. In a good season every colony of bees ought to average at least thirty pounds of honey. This will not be done, tho, unless attention is given to requeening and other important points which are commonly neglected.

Every year thousands of swarms escape to the woods, the product of their labors being lost. Swarming can be prevented to a large extent and practically every swarm kept at home if the proper precautions are taken.

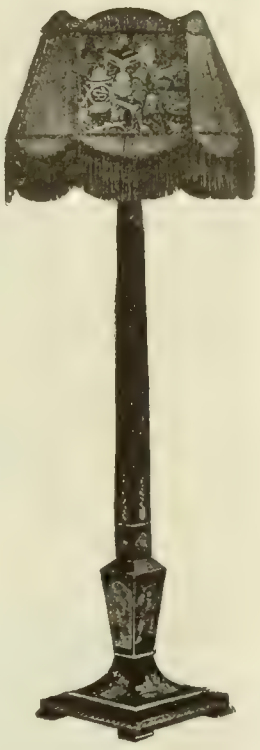
When the bees are run for comb honey, there is a great waste of time and effort because the wax is not saved. Now it takes from ten to fourteen pounds of honey to make a pound of wax. The comb is pure wax, and when extracted honey is sought, special frames for the combs are given the bees. When these combs have been filled with nectar, they are placed in a separating machine, where the revolutions of a big wheel throw all of the honey out of the cells by centrifugal force. Then the combs can be put back into the hives to be filled again. This eliminates all comb making, and leaves the bees free to devote their whole time to the gathering of nectar. If bee keepers everywhere would confine themselves to the production of extracted honey the coming year, the total yield would be vastly increased.

There is always considerable waste wax, and it is really a patriotic duty of bee keepers to save every scrap at the present time. Wax is needed for many purposes, and should be turned over to dealers in bee keeping supplies, even tho one has only a small quantity. One of its principal uses is to take the place of the mineral wax used by electrotypers. This mineral wax was formerly imported from Europe, but is now impossible to get.

Bee keeping is a line of work which can be taken up to advantage by women. If the present war continues, it is not unlikely that this field will be entered to a much greater extent by women than it ever has been before.

A honey extractor will increase your profits

The extractor opened to take out the frames



Christmas Gifts for the House

Instead of having to pass the butter, and the cream, and the toast, and all the rest, simply set them on "Lazy Susan" and round they go. In mahogany, three sizes, 16", 20" and 24" diameter, priced respectively $9, $10.50 and $13.50. In fumed oak, 20" diameter, $10

There's always a place for a mirror as adaptable as this. The frame of polished mahogany and antique gold will fit into various decorative schemes and the size is a convenient one—24"x26".

A colorful lamp in Japanese lacquer like this may be just what your living room needs. It is decorative in itself and it brings the light wherever you may need it

A cellarettte "camouflaged" to look like a sewing table. It costs $12.24. Smokers can't char the mahogany stand at the right, no matter how careless they are. It has a glass top for protection and the handles are convenient for moving it. Cost, $13.49

If first impressions count, consider the door knocker! Here are two excellent examples in brass: the one above, "Newport," is a conventional pattern, $7\frac{1}{4}$"x$2\frac{3}{4}$" — it costs $4; at the left a businesslike knocker for a heavier door, cast from the original knocker on the Daniel Webster home at Marshfield, Massachusetts. It is $8\frac{1}{4}$"x $2\frac{1}{2}$" and costs $12

Knitting bowls like these are the latest fad—made of split bamboo, hand painted in bright colors and curved at the top to keep the yarn from rolling out. They come in five sizes, nested, each differently decorated. The same tripod can be used for all sizes. The set costs $7.50 and tripods are 75 cents each

Could you give your house a better gift than a fireplace? Here are all the fixings: a Georgian mantel, $115; an Adam cast iron grate and steel fret, $35 to $45; a pierced brass fender, $95; and complete set of brass fire tools, $40

This lamp achieves the distinction of being beautiful whether it is lighted or not. It has a metal base and lacquered shade. Shade $15, lamp $21

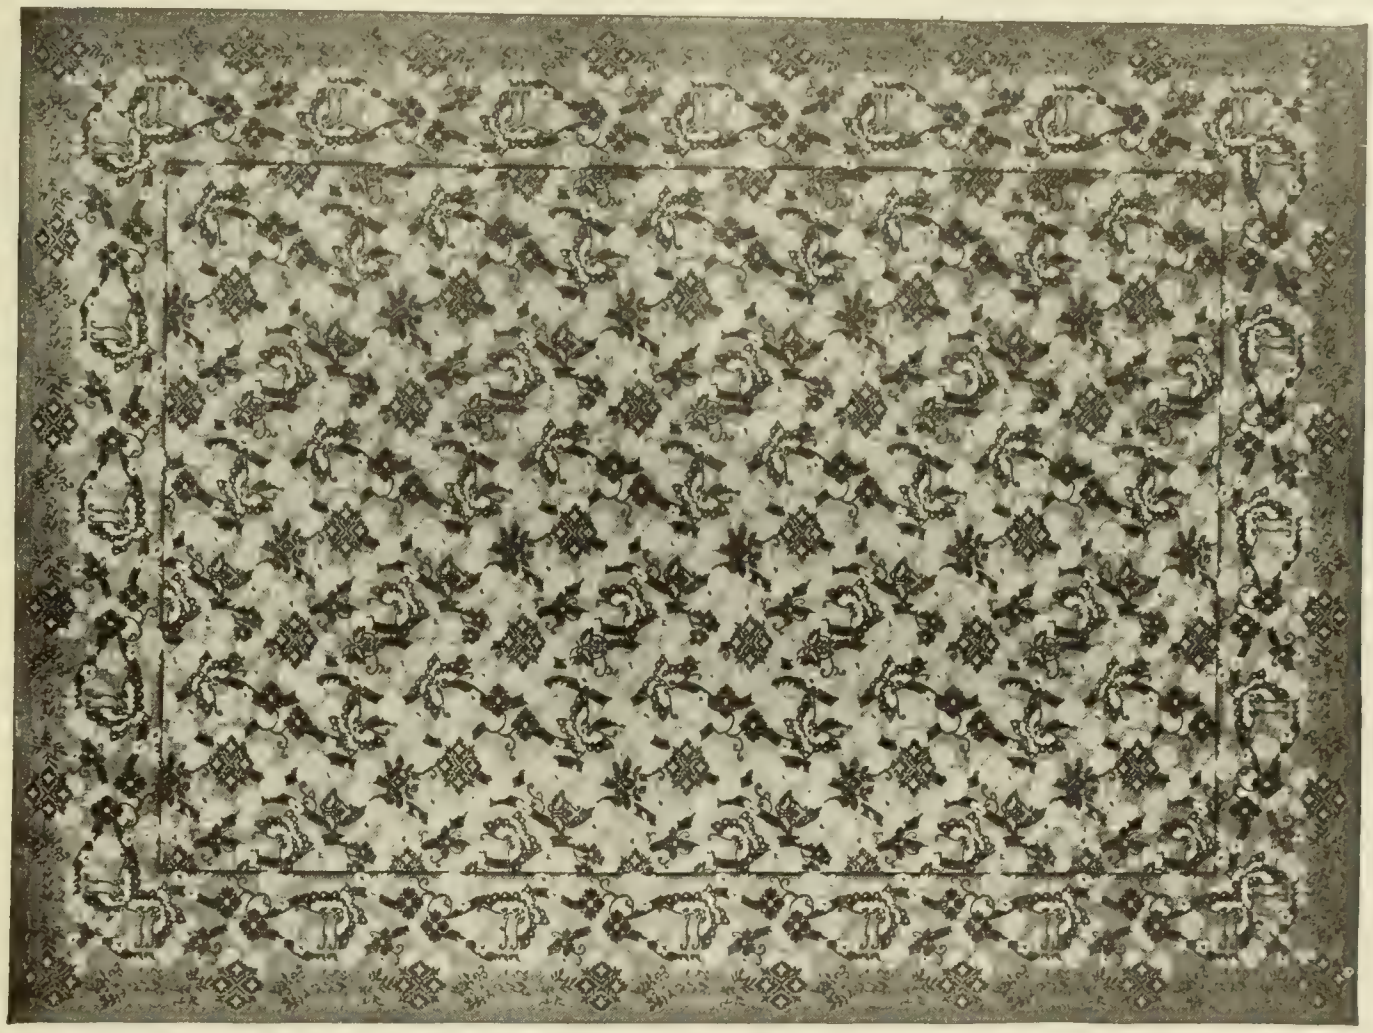
This mahogany sewing cabinet is unusually convenient; it has a handle to carry it around by and a neatly partitioned, removable tray inside. It's economical, too, only $4.75

The guest bedroom isn't apt to be much more than an odd corner in the city apartment. But here's a bed that solves the difficulty; it looks well in a room for daytime use, it is comfortable and doesn't take much space. Cost, $18

Solid Comfort

A suburban home that combines admirably the good qualities of both city and country living. Its built-in veranda and big windows make an excellent connection between indoors and out and the harmony of design and setting is particularly successful

Making the porch an integral part of the architectural scheme gives spaciousness and unity, too



Big arches throw the living rooms and hall together and achieve an effect of roominess without the sacrifice of space. There is an interesting use of tiles for the big fireplace and the floor in front of it. Comfortable wooden settles have been built in on each side of the fireplace making the alcove in front of the fire almost a room

None of the possibilities of comfort, both indoors and out, were neglected in planning this residence. The photographs prove the advantages of its setting and architecture, but the essential, tho less obvious points have been considered too: an excellent system of heating, the details of modern service equipment, and unusually ample closet room

RESIDENCE OF V. V. McNITT, AT RIVERDALE, NEW YORK. DWIGHT JAMES BAUN, ARCHITECT

The illustration shows a Rug made of "Karnak" Wilton Carpet and Border in a classic Japanese design, effectively brought out in black and taupe colorings.

The "Made-Carpet" Rug

Solves the Problem

of obtaining immediately and at a moderate cost, a Floor Covering of suitable size, shape, design and coloring for any room or apartment.

The large variety of designs available from our stock, makes it possible to properly complete any decorative scheme.

What to Do in December

A GARDEN GUIDE BY HUGH FINDLEY

PROFESSOR OF HORTICULTURE IN SYRACUSE UNIVERSITY COLLEGE OF AGRICULTURE

THE GREENHOUSE

Bulbs Christmas bulbs of hyacinths, narcissi and tulips should be forced during this month. Bulbs planted in flats, stored under the benches, may be brought to the light.

Lily buds should open from five to ten days before Christmas. Feed the plants liquid cow manure and keep a night temperature of 50° F., day 75° F.

Blooms that have opened earlier than was expected may be held back for Christmas by placing the plant in a cool dark place.

Easter lily bulbs should be brought into a cool house the week after Christmas so as to have the bloom for Easter.

Calla Lilies May be forced by planting the bulb in one-half decayed cow manure and one-half soil and decayed sod. This should be mixt thoroly. All side shoots of the calla should be cut off. Water freely after the leaves start to form.

Poinsettias This is the critical month for poinsettias. Apply a little dried blood each week and stir it into the surface soil which should always be moist but never wet. The dried blood has a tendency to make the leaves greener and they hold longer to the stem.

Cuttings The latter part of the month, make cuttings of the gardenia. Keep the atmosphere close and the bottom heat of the propagating bed at 75° F. until the cuttings callous. Ventilate gradually. Cuttings of carnations, chrysanthemums, and most of our bedding plants may be made the latter part of the month. Always use a clean sand in the propagation bed to prevent disease. Water the sand before setting cuttings, pack it with a board or flat mallet, cut the furrow with a thick knife before placing the cuttings. Never jam the cuttings into the sand. Press the sand closely about the cuttings and shade the bed.

Glorinias If the bulbs of the glorinia show any signs of growth in the old soil, remove it and repat in a 5-6 inch pat. The soil should be a light rich loam with a little sand sprinkled thru it. Give the bulbs only a little water until the roots appear then increase the water.

Roses December is a hard month on the rose house on account of the lack of sun. Top dress the bed with sheep manure and bone meal. Clean off all yellow leaves. Paint the pipes with a paste of flowers of sulfur. Fumigate by burning tobacco stems or paper saturated with nicotine on dull days especially if any sign of the green fly (aphides) appears on the tender shoots. Evening is the best time to fumigate but never when the wind is high.

Grapes Place a heavy blanket of horse manure outside of the grape house and along the wall. This protective covering of the roots should extend from wall 4-5 feet out and 2-4 inches in depth.

Dig this manure into the soil in March.

Palms This is a good month to wash the palms. Take a soft sponge, water with the chill taken off and make a suds of Whale Oil Soap. Place the palm of the hand on the under side of the foliage and with the sponge in the other hand wash the top of the palm leaf. Care should be exercized not to crack or injure the foliage. Spray the plant with clear water the day after washing. Never use oil to make the foliage shiny, this stops up the breathing pores.

Vegetables Dig into the soil a heavy coating of decayed manure before planting the Grand Rapid lettuce. Radishes may be sown between the rows. As soon as they appear scatter a few tobacco stems about so as to keep in check the green fly. Every 2½ feet in the row and the rows 3-3½ feet apart plant the early June tomatoes. After the radish and lettuce crop are off the tomatoes should be given attention, trained to a single stem. Night temperature of 60° F., day 70° F. Early model beets and Chantenay carrots should be planted this month.

Cut Flowers Cut the roses and carnations early in the morning, plunge the stems in cold water and place in a cool, dark room for 2-3 hours. Cut flowers treated in this way will last longer when brought into the warm living room. Place the cut flowers in a cool place over night.

Christmas Peppers The Salanums or Jerusalem Cherries should be red by December 10. The Aucuba japonica is the best variety. After the berries become red, decrease the watering but never allow the soil to dry out. Keep the plants in a moderate temperature.

Boiler Clean out the boiler each week. This will mean a saving on coal and a more even and efficient heat.

FRUIT AND BERRIES

Hedge Rows There is no better month to clean out the hedge rows of wild cherry and plums. In doing this the breeding places of the tent caterpillar are destroyed. Also the dreaded disease, black knot, should be cut out and burned.

Orchard Clean up the wood, branches, etc., from the orchard and lawn. The old wood pile of apple logs is an ideal place for insects, detrimental to the orchard, to hibernate in. Keep a close watch on your young trees. If you have neglected to protect the trunk from rabbits wrap a strip of tar paper 2 feet wide around the base of the tree and tie it firmly.

Injury Brace up the lower limbs of the low headed trees to prevent their breaking down with the weight of snow.

Grapes This is a good month to prune the grape vines. Leave 2-4 buds on each cane that is to become a leader. There should not be more than six leaders to a single vine. It is not necessary or advisable to remove the old bark. If new vines are to be planted make the cuttings now. Leave three buds to each cutting, pack these in sand, two buds below the surface. Early in the spring, transplant to the garden.

Spray Material Buy your arsenate of lead now. It is a poison; keep it in a safe place out of the reach of animals. Get your supply of lime sulfur so as to be ready for the dormant spray before the buds start. Sulfacide is a good spray for apples, peaches, pears, plums and cherries just before the bloom. Two ounces of sulfacide and three teaspoonfuls of calarsenate to three gallons of water will check disease and destroy chewing insects. Look your spray machine over and replace worn parts.

Tree Surgery If the weather is mild take advantage of this favorable condition and clean out the decaying cavity in the old apple tree and fill it with concrete. Brace the branches that form bad crotches so as to prevent splitting.

WAR GARDEN BUREAU

The Independent-Countryside War Garden Bureau, 119 West Fortieth Street, New York, will answer your garden questions freely and promptly and will give you expert advice about any of your garden problems. The dates given on this page are for the latitude of New York City. For every hundred miles north or south subtract or add from five to eight days.

FLOWER GARDEN

Bulb Beds Throw a few branches on the bulb beds so as to keep the snow blanket over the soil. This snow keeps the bulbs warm, supplies moisture and is considered a poor man's fertilizer.

Vases Empty out the dead plants and soil. Wash both the stone and metal vases and place them in a protected place or overturn them out of doors so as to prevent ice from forming in the bowl of the vases. Stone vases are many times cracked by neglect. Protect bird baths by covering the bowl with a metal hood.

Spring Seeds Make out your orders now and deal with a reliable firm. Let your best judgment guide your desire or fancy. Better to have a few choice flowers that are perfect than a great collection of plants not suited to soil, climate or location.

Birds Place large pieces of suet on the limbs of trees so that the birds may get sufficient fat to keep their bodies warm. One Nut Hatch, Junco or Woodpecker kept happy in your garden may save you much sorrow next spring and summer. Suet placed in a net and hung on a limb will prevent the sparrows from monopolizing the lunch counter and it is usually out of the reach of cats.

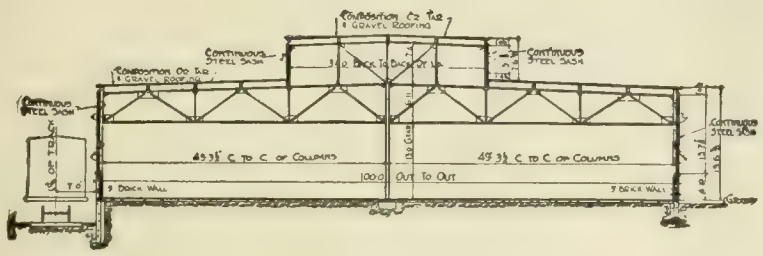
VEGETABLE GARDEN

December's tasks in the vegetable garden may seem less urgent but they are nevertheless just as important as the work done in April or May.

South In some sections of the country, this month is truly an open month and the soil easy to work. Sow smooth varieties of peas, New Zealand spinach, endive and Early Jersey Wakefield cabbage. White potatoes are sometimes planted the last of the month and mulched. They get an early start and are shipped north 5-6 weeks before the Jersey crop is ready.

Asparagus and Rhubarb This is the month to force both of these perennials. Thaw the roots out gradually and finally pack them in flats or under the greenhouse bench covering the crowns in a temperature of from 45° to 55° F. Keep the soil moist but not wet.

Lettuce Set out the last planting of lettuce (Grand Rapids) in the hotbed the early part of this month. Cover the sash with mats and shutters to keep out the cold. Ventilate on bright days. Cover the hotbed early in the afternoon so that the heat from the sun may be retained.



Storage Keep a close watch on the vegetable cellar. Remove all vegetables that have started to decay. Bad odors often cause decay. Add a little more soil to the out-of-door pit in order to keep the frost out.

Sort over the potatoes for the first time and cover them with a little soil or burlap bags. Ventilate the storage house on bright days. On very severe nights place a lamp in the cellar. Always ventilate a little the following morning so as to replace the oxygen taken up by the flame.

An Austin Standard Factory-Building Built for the General Electric Company at Schenectady, N. Y., in Thirty Working-Days

Austin Standard Factory-Buildings

This is the cross-section of our Austin Standard No. 3 Factory-Building for light manufacturing. Building 89 of the General Electric Company, Schenectady, is a Standard No. 3, 100x300 feet.

Building No. 89 of the General Electric Company at Schenectady, N. Y., on May 19, 1917, 21 working-days after day of order. The steel is more than half up and the roof deckings going on.

Building No. 89 of the General Electric, the exterior. Finishing this building on time last June brought us orders for five more buildings for the same customer, all of which have been finished *on time or ahead of time.*

Can be Occupied in 30 Working-days

YOU can move into a new Austin Standard Factory-Building in thirty working-days from the day you sign an Austin *Thirty-Day Guaranteed-Delivery Contract.*

This is possible because the Austin Company—subject to prior sale—actually has all the materials in stock ready for immediate shipment.

The General Electric Company, The Dayton Metal Products Company, the United States Government, and many others have already taken advantage of Austin 30-day Guaranteed-Delivery of completed floor-space.

You can close the contract for which you are negotiating, buy your machinery for delivery at a given date, and buy your building on the same basis: from a catalog, at a given price, for guaranteed delivery, ready for occupancy in thirty working-days.

Write, phone or wire the office nearest the proposed work.

POULTRY WORK FOR DECEMBER

BY E. I. FARRINGTON

ACCORDING to Mr. Hoover it is a patriotic duty now to keep hens. The world is face to face with a meat famine. The number of meat producing animals has decreased during the past three years at a most alarming rate; it will be years before Europe can replace the stock which has been sacrificed to war-time necessities. This means that America will have to feed a large part of the world even after the war has ceased. Now, the best way to meet the present shortage is to increase the number of chickens raised during the coming year. It takes a comparatively long time to raise enough beef animals, sheep and hogs to greatly increase the total supply. But a chicken is ready for the table in from three to six months after it has been hatched.

With all these considerations in mind, Mr. Hoover and his advisors have undertaken a nation-wide campaign to stimulate poultry production, and to recruit new poultry men and poultry women from among the thousands of home makers thruout the country who have back yards large enough to accommodate at least a small flock.

During the past year the high price of grain has impelled hundreds of commercial poultrymen to sell off their birds. It is difficult for men who depend wholly upon poultry for a livelihood to make a living when grain is high, but there has never been a time yet when a small flock could not be made to pay satisfactory dividends.

It is on the general farmer who can allow his hens to run over a wide range, and the backlotter whose flock can be fed largely on table scraps and garden waste, that the salvation of the poultry industry now depends. It costs but little to feed a small flock, and if the birds are properly managed they will yield a big return in eggs.

It is particularly important that there should be no waste of grain, and experiments have shown that a small flock of laying hens will thrive even tho the grain ration be small, if an abundance of nutritious food of other characters is provided. One method which can be followed successfully is to grind all the table scraps thru a common meat grinder, and then to mix them with a little meal, adding beef scraps if necessary, and making a crumbly mash. All sorts of surplus vegetables, including small potatoes and immature cabbages, may be added to this mash. When this plan is followed, it will be found that the hens can be kept in good laying condition at very low cost.

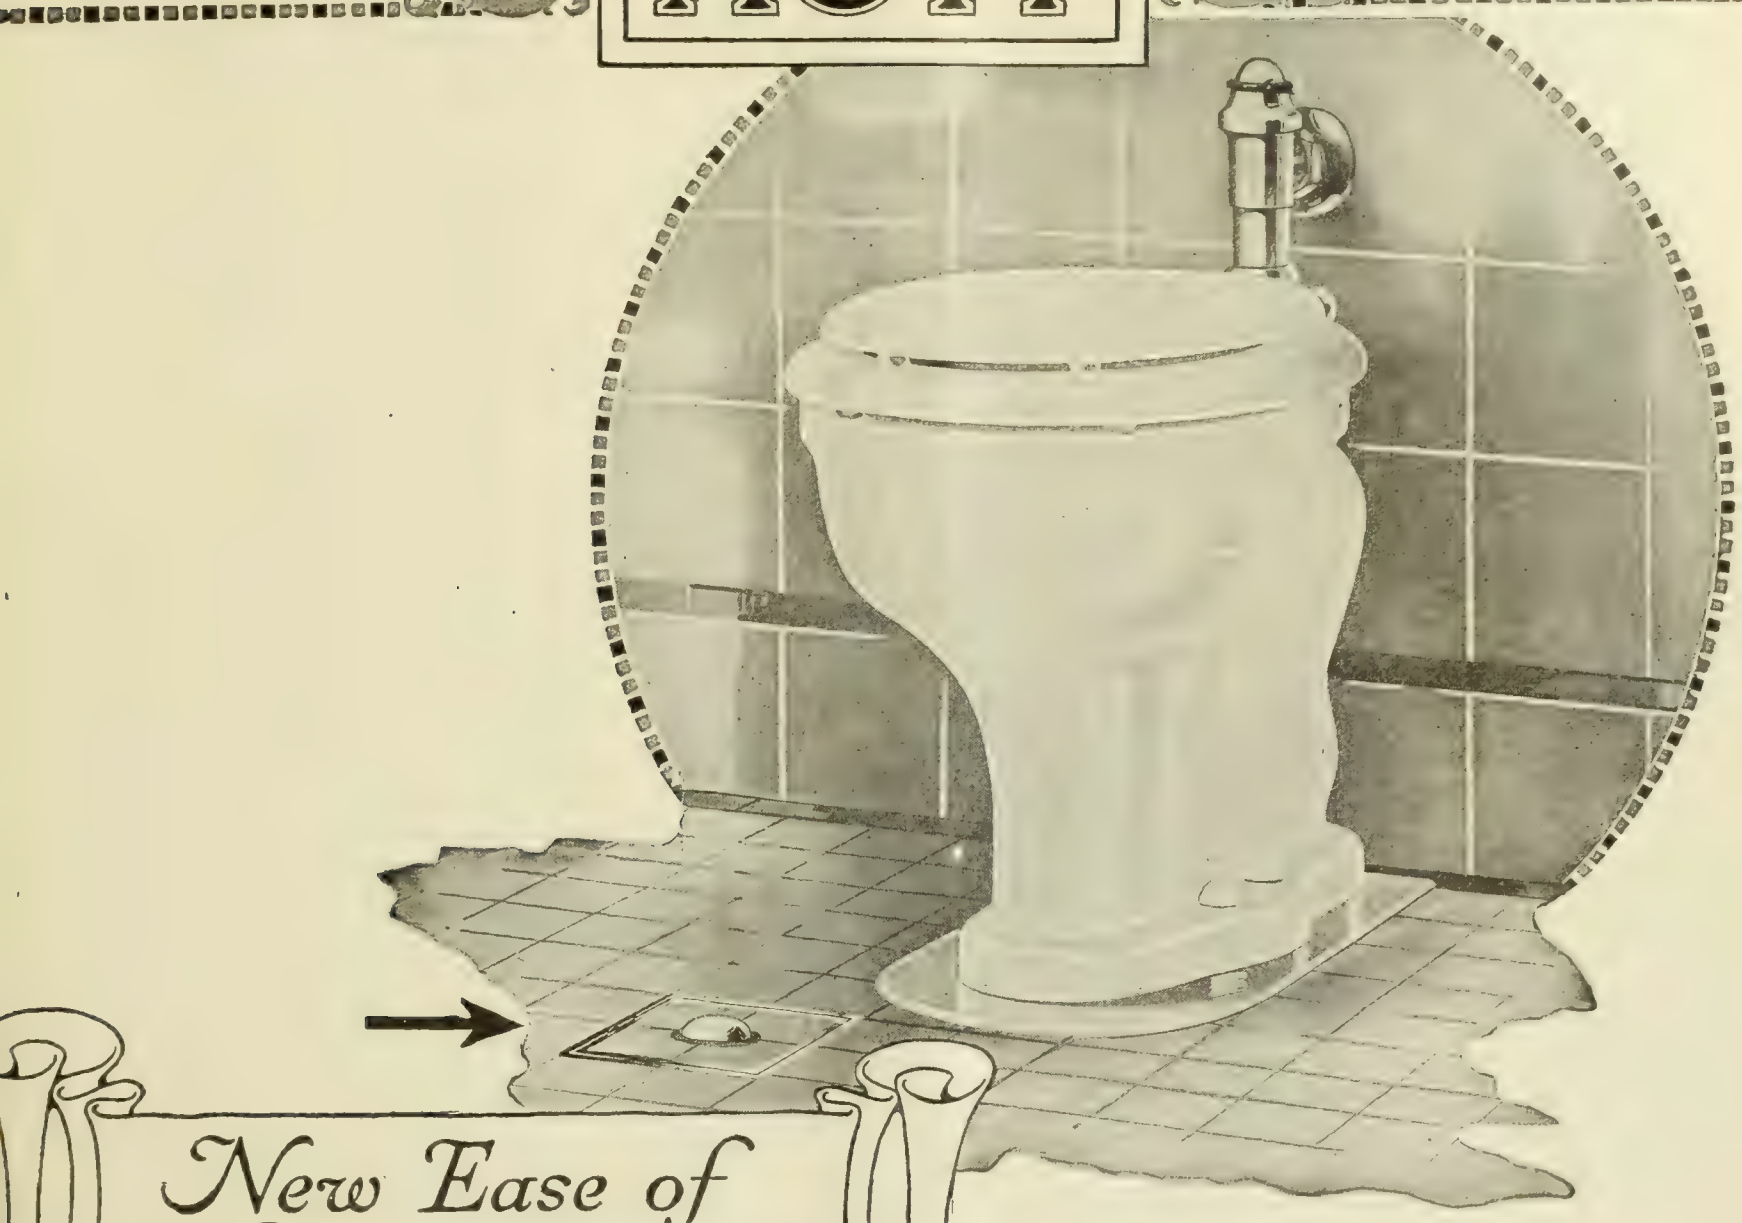
Much new corn will be coming on the market this month. Of course it will be welcomed, because its distribution will mean doubtless lower prices. It is not wise, tho, to change abruptly from old corn to new. New corn, however, may be fed safely if it is first put into the oven and parched. The hens will relish the warm corn, too, and it will serve as a sort of gentle stimulant.

It is important, also, to have the poultry house dry and free from drafts, in order that the birds may remain in the best possible condition. An attempt should be made to detect any loafers, and to get rid of them promptly. It may be a small matter, and yet every hen which does not pay its way is a drag on the whole industry.

The hens that remain on the roosts last in the morning and return to them first at night are not likely to be good layers. Usually the hens which eat most lay most.

Eggs should be collected several times a day in cold weather. They may freeze if left too long in the nests. In this connection it may be said that the loss from the careless handling of eggs costs the country millions of dollars every year. It is time for poultry keepers everywhere to mend their ways in this respect.

Geese for the Christmas table should fatten several weeks. Altho geese do not stand confinement well for a long period, they may be kept in rather small yards for two or three weeks, and fed a ration of three parts corn meal to one of bran, with some beef scraps added. Then they will put on fat very rapidly. Geese are especially good birds to be raised in times like these, especially if a considerable amount of pasture land is available. They are grazing birds, and if allowed their liberty, will pick up nearly all of their living until it is time to fatten them for the table.



This is the month to buy breeding geese, as they need to be mated several months before the laying season begins. Young geese usually mate in pairs, but a mature gander will often run with three females. Breeders should be at least three years old, but ganders which are over eight or nine should be avoided, as their dispositions are likely to get crabbed after this age, and a vicious old gander can do considerable real damage with his wings.

MOTT

1917

New Ease of Operation —

THE *quiet action* of Mott's "Silentis" and "Silentum" closets can be taken for granted. Mechanical skill can not further silence running water and still produce a thorough, *sanitary* flush.

What we would especially call your attention to is the *manner* of flushing.

This operation is accomplished, *with utmost convenience*, by a slight pressure of the foot on the valve set in the floor. Or, if the valve is set in the wall, by a pressure of the hand.

All working parts are out of sight. Yet they can be gotten at readily, in emergency.

Everything we sell, we make.

MOTT'S quiet-action closets are further described in our new "Bathroom Book," which shows 22 model bathrooms and quotes prices on modern bathroom equipment. Sent for 4c postage.

"Books, like friends, should be few and well chosen—like true friends, they will never fail us."—Anon.

BOOKCASES, like Macey sectional bookcases, will be the best of friends to your books. Such excellent construction and beautiful finishes would be impossible were it not for our many years of patient study of bookcase problems and bookcase requirements.

There is a Macey dealer near you who will gladly show you the Macey sectional bookcases and go into details regarding their superior construction. He will also tell you why he can offer them at such reasonable prices.

Now is the time to get Macey sectional bookcases to guard your books from dirt and dust. Better place your order at once and have it delivered at your home for Christmas.

"One Hundred Quotations About Books"

The wise men of all ages have said many interesting things about books. In a booklet entitled, "One Hundred Quotations About Books," we have compiled and published these quotations. They are interesting and instructive. This booklet and our complete catalog of Macey sectional bookcases, will be mailed free to anyone who asks for them. A postal card will bring the booklet.

THE AMATEUR PHOTO-PLAY SOCIETY

BY ERNEST A. DENCH

ALL schools and many churches and most communities have their amateur dramatic associations. Some of them are very good and some of them are very bad, but they all manage to have a glorious time and quite frequently to learn a good deal by that done-without-your-knowing-it method so dear to the heart of modern educators. Most of the arguments in favor of the organization of an amateur dramatic association in a community hold good for the organization of an amateur photoplay society, and there are certain advantages which are the peculiar property of the "movies." An amateur photoplay association is within the abilities and the finances as well as the interests of even a small community.

The successful amateur photoplay is one in which the local atmosphere predominates. People like to recognize familiar scenes, especially as the motion picture camera presents them from a viewpoint. The community's leading literary light should be able, with the assistance of a good book on photoplay writing, to master the technique of scenario construction and produce perfectly actable dramas.

The photoplay in which exteriors comprize the majority of the scenes has, for some unexplainable reason, become associated with thrilling stunts, but it is not essential for you to do the same stunts in order to hold the interest of your spectators. The new school of directors have introduced a subtler kind of action—that by which a player expresses a great deal by a twitch of the face. It takes years of experience to master this knack—so it is best, perhaps, to adopt the broader means of expression. Attempt either a slapstick comedy or a melodrama. You can have the villain ducked under the village pump, the hero tied to the railroad tracks at the local crossing, or the fight between the hero and villain staged at the edge of the nearest cliff. These things have been done innumerable times, and I have only mentioned them as suggesting lines along which to work. While it is better to think up new incidents, even the commonplace ones will interest if presented in a new dress. This is not to suggest, however, that you kill off any members of your filming party in actual reality. If reasonable precautions are taken, the dangers incurred in putting over thrilling scenes are very small.

The big mistake made by the average photoplay director is in repeating exteriors. If he chose to do so, he could introduce a wide variety of natural backgrounds, but he seems to prefer to confine himself to a few. Your footage will, for cost of production reasons, be limited, and it is to your advantage to make every foot count. If you must repeat a scene, take a new angle of the setting, otherwise a "close-up."

In addition to the "drama" there is a field full of possibilities for the amateur society in the recording of village pageants and local athletics. The appalling number of bad snapshots which are taken at all such affairs suggests the enthusiasm with which an even fairly good film would be hailed.

And then there is the family life of society members. However good the printed page or photograph album may be in recalling the past, there is nothing to equal the film. We should make the motion picture one of the family. The latest development is film motion portraiture. Who would not like to have a permanent record of all the gestures and poses that make a baby so adorable? As he grows older they are lost to us, but if he were to pose on every birthday for ten feet of film we would be able to trace every stage of his childhood. Children can be shown indulging in their favorite pastimes and playing with their pets. As children are born actors, they require comparatively little coaching. Both Siegmund Lubin, the well known photoplay producer, and William Hearst, the newspaper proprietor, to name but two, are preserving motion pictures of their children until they attain their majority.

Yes, it is quite possible for an amateur photographer to take motion pictures and for an amateur society to act them, but how about the cost? That is quite possible, too.

The price of a reliable camera for all-round work varies from $35 to $250. The purchase of the right camera at the beginning is very important. Raw film, both negative and positive, is obtainable in reels of 100, 200 and 400 feet at 3¾ cents a foot. A motion picture film is subjected to so much wear and tear at the hands of the theater operator that in order to retain its perfect appearance for as long as possible it should be printed upon a reliable stock. Developing has been so simplified that the process is no more involved than ordinary photography. But should you prefer to have this done outside, there are firms who make a specialty of the work, charging 5½ cents a foot for positives and ½ cent a foot for negatives. Any titles—explanatory matter that is thrown upon the screen you may wish to use—cost 8 cents a foot.

There are several ways and means of recovering your production expenses, such as getting the local photoplay shows to exhibit your product and pay you a small fee. If the negative is sufficiently widespread in appeal and interest you can probably get it purchased by one of the regular motion picture concerns.

There is an excellent opportunity to specialize in home entertainments or exhibitions for the edification and amusement of local clubs and societies.

First of all, a projection machine is necessary. There are two kinds of these on the market. The miniature projector has a shorter throw but points in its favor are that it is easier to manipulate and does not consume so much current. It also costs several times less than the standard machine. If you intend to confine exhibitions to ordinary country homes, the miniature machine will cover all your requirements. For large halls, however, the standard machine is essential.

Next there is the problem of a satisfactory screen. A screen about three feet long by three feet wide will fit in the average room, but in a large room a screen several times as big will be necessary. The material must be selected with discrimination if results are to please. It is also possible to hold exhibitions at garden parties and other outdoor affairs, for there is a screen which gives as good results by day as by night.

The usual fee to charge is $10 for an hour's entertainment, comprizing about four reels, and $5 for each additional hour. It is advisable to vary the films as much as possible, for it is variety on which the photoplay industry has been built up.

It is well to count the cost, and count carefully, before you begin, but you will undoubtedly find that an amateur photoplay society is not nearly so expensive a matter as you had thought.

Shorthand in Seven Days

Alexander Lichtentag, Inventor of the Famous PARAGON System

of Business Shorthand, has now arranged his complete course in Seven Simple Lessons for self instruction at home which you can learn easily in Seven Evenings.

SEVEN days! Does it seem to you incredible? Do you doubt it? We will *prove* it at our expense and without its costing you a penny until you are convinced. Paragon is the simplest and most efficient and most easily learned system of shorthand in the world. It will equip you in almost no time to take a fine position in business. Whatever may be your business or profession you will find a knowledge of Paragon Shorthand a priceless aid to efficiency, and an instrument for advancement and achievement.

See how perfectly simple it is. The entire system consists of

1. The Paragon Alphabet—24 characters, each of which can be written mechanically, with a single stroke of the pencil.
2. 26 simple word signs.
3. 6 prefix abbreviations.
4. 1 general rule of contractions.

THAT IS ALL. Speed comes easily and swiftly with practice.

Now prove this—to yourself.

Here, at the right, is a lesson that will teach you the first 5 characters. Try it. See how little time it takes you to master it. Then consider that you have learned 5 out of the whole 24 characters.

Now do you doubt that you can learn Paragon in Seven Evenings?

This is our Home Study Course. We will send it to you—without asking you to send us any money in advance—on Seven Days' Free Trial. But we believe you will say "Yes, I want it," the first evening. The new price to introduce Paragon broadly is

Only Five Dollars

This for exactly the same Course that has been taught for 15 years by the inventor—personally by mail—at a regular fee of $25 with examinations after each lesson. The author has now arranged his whole course in Seven Simple Short Lessons for wide distribution at a popular price of $5 which will be allowed to Independent readers for a limited time. With this Course you can teach yourself at home—in seven evenings—with the seven lessons and an ingenious self-examination system devised by the author.

Remember that Paragon Shorthand is an

Efficiency Instrument of the Hour

The Government needs more stenographers and is offering large salaries for expert writers. The President of the United States Civil Service Commission, in his nation-wide appeal, says:

"Appointments in large numbers are to be made as soon as eligibles are available. It is the manifest duty of citizens with this special knowledge to use it at this time where it will be of most value to the Government."

American Business Needs Shorthand Writers

In every city and town, business houses are feeling acutely the shortage of capable stenographers. Salaries for shorthand writers are being constantly advanced. The demand simply cannot be supplied—yet. Thousands of offices are ready to pay any salary within reason to get this service which their business needs so sorely.

This Is Your Opportunity

And "Paragon in Seven Days" is your key. Thousands of young ambitious men and women who have failed to learn the old complicated forms of shorthand have mastered Paragon with ease. They have since become court stenographers, reporters, assistants to business heads, and in many cases big executives of prominent concerns and institutions. Thousands of grateful letters now in our files attest this fact. Here is a sample letter, from J. Martian Hamley, Official Court Reporter, Ninth Judicial District, Louisiana:

"I have been using your Paragon System of Shorthand for the past eleven years, and have been engaged in all kinds of stenographic work. With it I am able to do any kind of work with as great rapidity as the occasion may demand. I was taught this system by mail in seven lessons."

E. C. Alley, in the service of the United States Government, says:

"At the beginning of this year I sent for your course in Paragon Shorthand. In one week's time I could write the system nicely. I owe my rapid advancement to Paragon Shorthand."

Paragon in the High School

On the basis of competitive tests Paragon Shorthand was unanimously adopted as the exclusive system for the Atlanta High Schools. These tests showed that of several hundred boys and girls, only 47 were able to master the old systems of shorthand. But of 63 taking Paragon 61 *passed the examinations successfully.* In one school 28 began Paragon, 25 graduated. Another school, after two years of the old system, had NO graduates. Now Atlanta and other cities are teaching shorthand by the Paragon System—no other system being officially recognized in their city schools. You can't get away from facts like these.

Try This Lesson Now

Take the ordinary longhand letter *d* Eliminate everything but the long downstroke and there will remain / This is the Paragon symbol for D. It is always written **downward.**

From the longhand letter *e* rub out everything except the upper part—the circle—and you will have the Paragon E. ∘

Write this circle at the **beginning** of / and you will have Ed. /

By letting the circle remain **open** it will be a **hook,** and this **hook** stands for **A.** Thus / will be **Ad.** Add another **A** at the end, thus / and you will have a girl's name, **Ada.**

From *o* eliminate the initial and final strokes and ∘ will remain, which is the Paragon symbol for **O.**

For the **longhand** *m* , which is made of 7 strokes, you use this **one** horizontal stroke —

Therefore, —∘ would be **Me.**

Now continue the **E** across the **M,** so as to add **D**—thus / and you will have **Med.** Now add the **large** circle for **O,** and you will have / (medo), which is **Meadow,** with the silent **A** and **W** omitted.

You now have 5 of the characters. There are only 26 in all. Then you memorize 23 simple word-signs. 6 prefix abbreviations and one rule of contractions. That is all.

Speed, Simplicity and Accuracy

are demanded of the shorthand writer by present-day business. With Paragon you can write without mental friction—no complicated rules to remember, no "lines" to watch, no heavy and light "shading," no arbitrary word signs, no tedious memorizing, no confusion of meanings through the old elimination of vowels. Paragon notes never get "cold"; they are just as easy to read after 10 years as after 10 minutes.

Now You Have Your Wish

You wished you could write shorthand, didn't you? You knew what it would mean to you in efficiency and advancement. But you dreaded the months of hard study, the memory tax, and the excessive cost, of the old systems. Now—with Paragon—you can learn shorthand in seven days. Ask any man, or woman, who has ever *started* it. We have their names. They always finish strong.

Send No Money Now

Just mail the coupon now and receive the complete Home Study Course of Seven Lessons on seven days' free trial. If by any chance you don't want it, return at our expense and owe us nothing. Five Dollars buys it all, if you act NOW.

Paragon Institute Home Study Department

119 West Fortieth Street, New York City

Send me your complete Paragon Shorthand Course of 7 lessons on seven days free trial. I will pay you $5 on examination or return at your expense.

SETH THOMAS

CHRISTMAS morn. All outdoors blanketed with snow. Inside, a cheery fire blazing on the hearth, and on the mantel reposes the most welcome gift of all—a Seth Thomas Clock. How the heart swells in appreciation when contemplating the generosity which prompted such a beautiful gift. And how admired the taste of the giver. For the name Seth Thomas guarantees a lifetime of accurate time-telling service.

Your jeweler has or will procure for you, through our new illustrated catalog, this or others of our mahogany clocks from $10 to $75. Prompt delivery.

SETH THOMAS CLOCK COMPANY
New York

PEER
High grade mahogany case. 4 in. white porcelain convex dial, convex beveled glass, 15-day cut steel pinion pendulum movement. A most precise and noiseless timepiece. Height, 8 in., width, 17½ in. Strikes hour and half hour on soft toned Cathedral bell.

KELSEY HEALTH HEAT

SAVES COAL

BY saving coal, we mainly mean that it gives more heat from the same coal. You may not burn any less coal; but you will have every room of your house filled with a delightful tonic health heat. A heat that is noiseless, leakless and dustless.

You get more heat, and you get a heat that ventilates while it heats. A heat that you can use to warm your house in the winter, and cool it in the summer. A heat that does away once and for all with radiators and their attendant bothers and troubles.

Send for booklet.

A JEWISH HOMELAND

The Zionist Movement as a Factor in the War

BY DR. STEPHEN S. WISE

THE statement issued by the British Government on November 3, declaring its approval of the Zionist Movement and favoring the establishment of a national home for the Jewish people in Palestine, toward which end "His Majesty's Government . . . will use its best endeavors to facilitate the achievement of this object," changes the status of the Jewish people, which for the past nineteen hundred years has been the "tribe of the wandering foot"—without a center, without a home, without a welcome.

The Jewish people has now risen in a twinkling to a national status, and the Zionist ambition, which is to establish a Jewish homeland in Palestine, recognized by law, is brought within the domain of practical politics.

The Zionist Movement is twenty years old, and it has already entered the realm of practical politics. Its formula has been adopted by the British Government, which employs almost the identical language of the Basle program, in making its declaration.

I regard this as a great day in the history of the world, the significance of which cannot, of course, break thru the clouds of war, but the importance of which will become clear ten years hence or even less when the stream of Jewish migration will be tending toward Palestine and the two thousand year dream of the Jewish people will be completely realized.

The immediate effect of the declaration, which has the sympathy of our own Government, will be to shake the Jewish world to its center and there will come about a reunification of Jewish forces thruout the world such as has never been seen before.

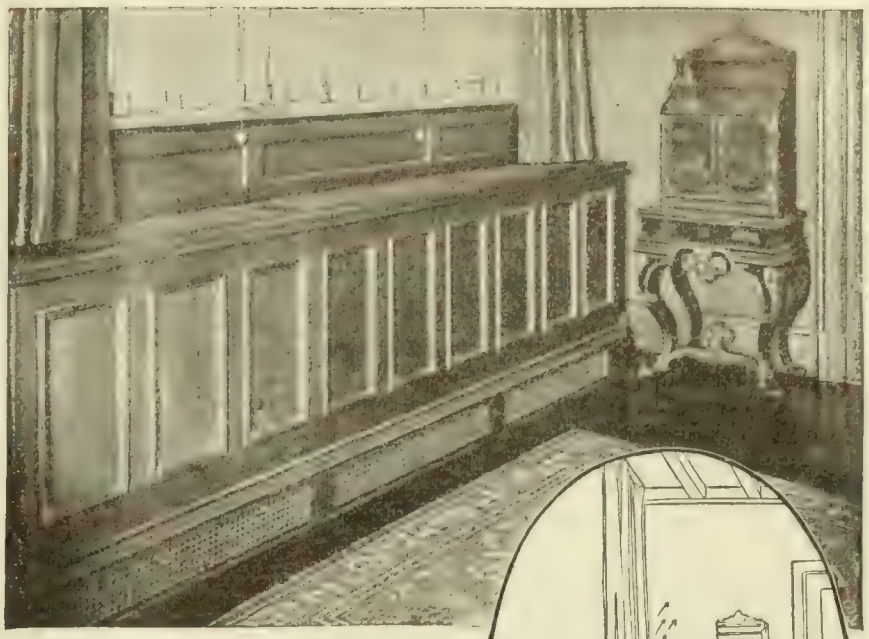
At the same time it puts a new face upon some phases of the war which makes clear that the Allied declarations and those of President Wilson that we are fighting for the smaller nationalities is no war slogan, but a very decisive and impartial purpose. It not only gratifies the Jews, but it implies that the victory of the Allies will bring healing and comfort to all the small nationalities, while at the same time it makes clear that there are no imperialistic ambitions afoot.

We Zionists anticipated this and our organization is prepared to deal with it. But our plans can be held back in the same cool manner as we have carried on our work thruout these last three trying years. We can simply say at this moment that the suspense involved in the negotiations is at an end and that our organization has accomplished its first duty.

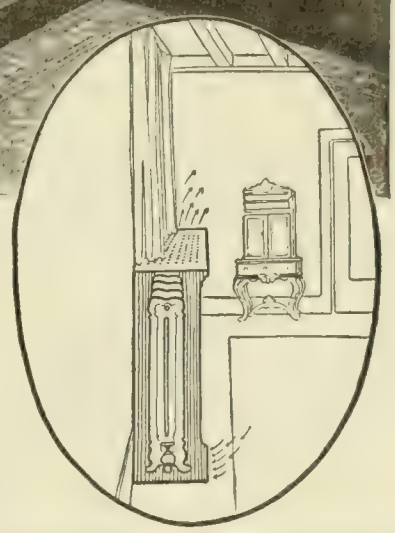
The second actual achievement of Zionism awaits us. It is practically the greatest task put upon a group of human beings to reorganize itself and to resettle upon its own national soil. But we will accomplish this so that the millions of our brethren in Poland and in Russia buffeted by every condition that existed prior to the war and harassed by every condition that has been part of the war, will see in the announcement of the British Government the first real ray of hope, not only for themselves, but the first light that has come into the dark prisons which thruout the centuries the Jewish people have inhabited.

UNITED WE STAND

(*Continued from page 405*)



task of coördinating the French navy with other navies may well demand the power which resides only in unit control.



The Italian navy found itself during the Tripolitan War, in which it made an enviable record for efficiency and discipline. During the present conflict, its principal task has been to keep the Austrian fleet imprisoned in its Adriatic bases, mainly Pola and Fiume. It has constrained the Austrian fleet and commanded the Adriatic so completely that any Austrian naval offensive—save in the case of a few submarines—has been stopped. Night and day its transports have traversed that sea unhindered, and whole army corps have been carried across. It succored the Serbian army in its retreat and brought some quarter of a million Serbians in safety to Italy. It has sent its torpedo boats thru the protecting mine fields of fortified harbors and insulted the Austrian battleships at their anchorages in an unavailing effort to goad them to a fight. It has protected the wholly exposed eastern coast of Italy from Venice to Brindisi. It has organized and manned the extraordinary movable forts which run at express speed on tracks close by the water's edge to any point menaced from the sea and, on arriving, get into action in less than a minute. It has maintained the air defense of Venice. It has redeveloped the monitor and has built the largest and most formidable vessels of this class which have yet appeared. It has used them to shell the Austrian flank, and is using them now against the Germans in the Piava marshes. Here there has already been joint action, for the British monitors and both British and French cruisers have helped; and, therefore, in accordance with international naval custom there must have been local unit control of the assembled force.

Of the twenty-one Italian battleships of all classes, two have been destroyed by fire and internal explosion and one was sunk by a mine. Of the ten armored cruisers, two have fallen victims to submarines. The Italian fleet is good and efficient. The condition of the Austrian fleet is questionable because large quantities of bombs have been dropt on it from Italian aeroplanes. As the fleet of Italy always has been and still is hungry to get at the Austrian ships and is far the stronger force, how the Austrian ships which don't want to be got at are going to annihilate the fleet of Italy and then, as recently predicted, batter down Venice in aid of the Austro-German invasion, is not plain.

This is the naval situation, which may change before these words are printed. To the creation of unit control the usual objection to subjecting national arms to foreign command is already being urged. This merely indicates but one of the many and great problems of unit plan and unit control of all the Allied forces which has now become absolutely essential. Nor is there any time to be lost in establishing it, especially in the navies. Italy is the first country to be imperiled which has a thoroly effective fleet. Her gallant resistance is increasing, and with the aid now approaching there is every belief that she will repel the invaders: but should the fortune of war in the end prove adverse and the transfer of her navy be made a condition of separate peace, there can be no delay in dealing with that crisis, no shuffling over expedients, and no wrangling between different authorities. The ships must not get into the Atlantic. In the presence of a hostile fleet in being, armies cannot be sent across the sea.

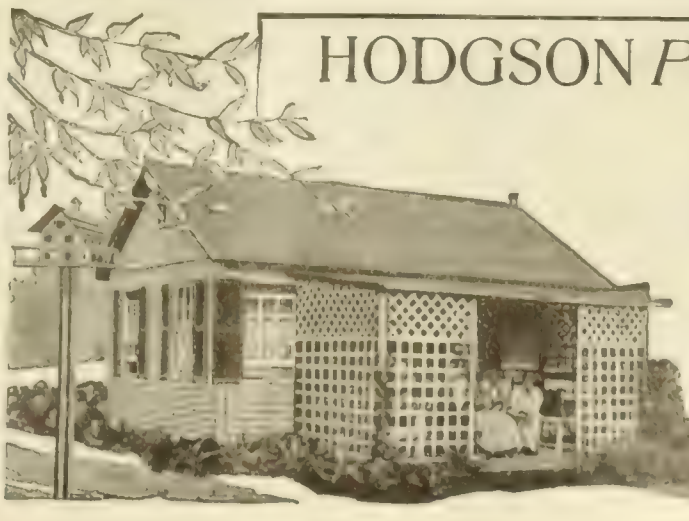
New York City

With the decorative grille at the base and top a complete circulation is secured insuring high heating efficiency

Radiator Obscuring With Decorative Metal Grilles

THIS panelled window closet effect is in the magnificent home of Arthur Curtiss James, New York. The panels are hinged, carrying out the closet effect, and making the radiator accessible for heat control or repairs.

We should be glad to make suggestions for the solution of your radiator-obscuring problems, or be pleased to co-operate with your architect.



Send for Booklet No. 66-A.

"THE BEAUT-I-ATOR"

The "Beaut-i-ator" is a *portable* all metal Radiator Enclosure. You simply *place* it over your radiator. Nothing to put together. Nothing to fasten. No outside help needed. Instantly removable. Ask for the "Beaut-i-ator" Booklet, when you ask for Booklet No. 66-A.

WHICH IS THE SIDE ISSUE?

(*Continued from page 440*)

want to. I do not know what it is. When I desire companionship at my meals I can easily secure it. Three besides myself can sit at my little folding table, and those whom I invite to do so make an admirable bluff at acting as if it were fun.

Various ladies ask me in sepulchral tones "how I manage about my marketing." Perhaps I manage very improperly, for, to be candid, it has never occurred to me as demanding "management." I gather, from remarks of Housewives' League members, that to buy food other than *in propria persona* is most scandalous domestic ethics; but I declare that I cannot see, when telephones exist, and fruit and vegetable wagons stop at the door daily, the necessity or the virtue of marching off before breakfast to a horrid, smelly market, and I should not do it if I had a family of ten to cater for. Probably I do not at all appreciate the solemnity of the Marketing Problem, but I do have what seem to me very good things to eat. And, as my monthly expenses for food and rent has always averaged a little less than I paid for board, it would appear that in the price of food I do not get swindled as much as my landladies did, for they have all, with one exception (and she died prematurely) assured me that they lost money at the prices they charged for board.

I have now, I believe, met the most frequently recurring questions as to "how I do it." Oh, no! my hands. Well, I wear rubber gloves, with heavy cotton ones (ten cent store type) for sweeping. So far as I can see, my hands look about as they did when I was emulating the lilies of the field in a boarding house.

Now, if you please, we have reached the point for the moral lesson and the reply to those who believe that I am not living up to my own published precepts. We will take the moral lesson first, because in the course of it I hope to introduce proof of my own consistency. I cherish no illusion so wild as that I am the first bachelor maid to live in an apartment, or even to "do her own work" in it. But I think that perhaps not so many have consciously combined with the pursuit of happiness therein the pursuit of a miniature social experiment. If I have had a supreme hobby, it has been that it ought to be possible for a woman to have both a home and a profession, and to make a success of each. My experience now confirms my belief.

Of course, my plan of life would require modification according to your appetite and other tastes, your occupation, and your spinsterhood or wifehood. I think you could hardly be successful in a mere "suite." If you possess a husband—or if you liked onions, I cannot conceive of either being disposed of agreeably in a kitchenless apartment. But personally I do not see how onions can be kept with decency even in a ten acre lot. However, there exist little apartments as inexpensive as mine with kitchenets, if your heart is set on one, and I think I could manage a husband and my profession together in that first apartment which Jerry showed me. And while the introduction of the masculine element into apartment life means the introduction also of an element of uncertainty which, at my time of life, I have lost the first flush of enthusiasm to try, yet, if there were some way generally held in good repute of making the experiment merely temporary, I should be almost willing to attempt it, purely in the interest of science, that I might confound the preachers from the execrable text, "A woman must choose be-

tween marriage and a career." But, since divorce continues both expensive and unpopular, I am constrained to try to demonstrate by reasoning alone instead of personal statistics that what I know can be done by one is mathematically possible when multiplied by two.

I do not recede from my contention that women generally fail of any important achievement because they attempt too many things. But I do disagree with the application which most persons make of the feminine version of the inspired truth that a man cannot serve two masters. Most women try to serve about twenty-two, incidentally. It is not serving two masters to have, besides the one great purpose in life, what an able lawyer whom I know calls a side-issue. He maintains that every professional man or woman especially needs one. His is a chemical laboratory in his cellar, but if it were truck gardening or fancy chickens, it would be just as worthy a relaxation for a brainy man, as well as less fraught with possibilities of blowing up the family residence.

I do not believe that *individual* housekeeping is fit to be the great purpose in life for any educated woman. Every such woman who has been swept into the popular current of trying to make her housekeeping her "profession" will tell you that it is a constant struggle to save her intellectual life from being engulfed in the vortex of mere "things." Nothing which has not in itself the power to produce mental growth has a right to the first place in the life of men and women who have gone to school, and that forever bars out housekeeping as we now do it.

But housekeeping may very properly be the side issue of the professional woman who has a liking for it. It need not mean that she should perform all the manual work of "keeping" her house. I do, because I can without the expenditure of any more time and strength than is actually needed as a relaxation from the mental strain of my real business in life, and I happen to prefer it to tatting. If I were presiding over an apartment for two—or four—I should have no right to take the time and strength then required from the business which it is both my ambition and my obligation to do well. It would not, however, take an undue share from my professional duties to direct some one else in a part of the housework. Not that I think the ordinary servant, even tho a "treasure," at all the proper solution of the housekeeping problem.

Whatever innate dignity the work of the house possesses will be liberated when my domestic science colleagues, instead of teaching a lot of girls with heads already full of the craze for doing what *looks pretty* to "make homes" and fancy salads, will provide a food laboratory equipt to serve meals to every apartment in such houses as this, and a corps of trained, intelligent women to do such putting to rights as each apartment head desires, and then go away. If the women who have ability for work of this sort would make a real profession of it by undertaking to supply the food and household care for groups of families rather than for one only, household economy might rise to something well worthy of the first place among intelligent women. For it would both raise the standard of living and set free the many other women who ought to be doing other things, and it would be dignified work for only educated women could do it. It may be that something like this will come to us, as it already actually has to England, among the compensations we are being taught to expect for a world war, but

Tells How Anyone Can Easily Develop a Strong Personality and How It Helps in a Business and Social Way

The Most Interesting Man I Ever Met

By J. A. Butler

MEN usually are fluent only when talking about their own business or sport. Women—at least most I've met—can talk of little other than household duties and their children. Instead of broadening out as they grow older—instead of constantly adding to their fund of information—they have literally gotten into a rut, they are backsliding.

But fortunately this condition is not universal. There are, in spite of our manifold distractions and hurried living, a few who do manage to keep up with the really worth-while things of life, and it is indeed a rare treat to meet them.

A Chance Acquaintance

Not long ago I was coming from Chicago to New York on the Century. After dinner I picked up an acquaintance with a quiet man sitting near me. Starting out with a pleasantry about the weather, we gradually drifted from one subject to another until I looked at my watch and found that three hours had passed and it seemed scarcely but a few moments, so quickly had the time flown.

Never before had I met such a well-informed man. He seemed to know and to love all that is the best in Art; he knew little intimate things about the great writers; he could talk interestingly about almost any place of historical importance, and about the big men of all time. And so it was with Music, with Popular Science, with Nature, and with all the Arts.

Naturally I was intensely interested in this man. Who was he? Where had he gotten this fund of information? Surely he must be some rich dilettante with nothing to think of but developing his mind.

When we finally got up and decided to turn in for the night, I asked him for his card and gave him mine. Picture my amazement when I read the name of a big manufacturer in the Middle West who had a reputation for having pulled himself up by his boot-straps.

Risking a rebuke, I asked him how he had been able to spare the time from his business to master the wonderful store of interesting information of which he was the possessor.

Worth Dollars and Cents

Here is what he said: "A few years ago I began to feel in a very definite way my lack of knowledge—for up to then I had devoted my entire waking hours to business—thought I was too busy—that culture was merely a luxury, all right for the idle rich, but not meant for the hard-headed business man.

"Suddenly one day I realized that this attitude was entirely wrong. It was brought forcibly to my attention by a new associate—a young man who had made an amazing success in our line, having attained a reputation out of all proportion to his years. I noticed that this man, in every situation—in any company—seemed to be more at home than anyone else. He seemed to have 'something on' the others. He was so easy and confident—such a fluent talker—and made such a telling impression that he seemed to be able to make every one he met do anything he wanted them to.

"Right then I determined to somehow find the time to improve myself—and I want to say that I consider the things I've learned—the ability to talk and think other things than business—one of my greatest dollar and cents assets. Personality is one of the greatest powers in business. And culture—if you want to call what I've gained by that name—is the backbone of personality.

"And the remarkable part about it all is that I gained all of this in less than five minutes a day by joining the Mentor Association, which solved the problem of finding time to keep up with the finer things in life. The Mentor Association is a group of men and women, now numbering one hundred thousand, who have determined to learn just one new worth-while thing every day. And it is really marvelous, the ground that can be covered in this way. All my appreciation and knowledge of the great works of the big masters in all the fields of art, my viewpoint in travel and nature, has come from my membership in the Mentor Association—by learning one new thing each day."

What Membership Brings

Membership in the Mentor Association entitles you to six distinct services:

First—24 issues of "The Mentor," bringing a beautifully printed and illustrated story every two weeks, all about one subject, written by a leading authority upon that subject—300 pages during the year.

Second—600 beautiful illustrations, distributed during the year through the text of the 24 issues of "The Mentor."

Third—144 gravure or color pictures, reproduced on heavy paper, all ready for framing, in deep, rich tones that bring out all the beauty of the originals. If you bought these in an art store they would cost you from 50c to $1.00 each. On the back of each picture is a crisp five-minute description of the subject that is portrayed.

Fourth—Answers to any question on Art, Travel, Literature, History, Nature or Architecture, the Theatre—any subject, in fact—each answer by an authority.

Fifth—Authoritative Club Programs. Any program you may want for a club, a reading circle, a literary afternoon or evening. Your entire club program will be outlined for the year.

Sixth—You may get any book published at publishers' prices, postpaid. If you are a booklover this one item will save you many times the membership dues.

All for About 1c a Day

One of the most surprising things about the Mentor service is its low cost, made possible by the large membership. Were this information to be prepared especially for you it would cost a great many thousands of dollars, but because the cost is distributed among many the cost to each is nominal—a little more than a cent a day! But you may examine The Mentor carefully before sending any money, and if you are not entirely satisfied your membership will be immediately cancelled if you notify us within 10 days. Otherwise, send only $1.00 on receipt of bill and $1.00 a month for three months. This is a special offer and may never appear here again. So mail the coupon today. You have everything to gain and nothing to lose. THE MENTOR ASSOCIATION, Dept. 811, 222 Fourth Ave., New York, N. Y.

since at present my domestic science friends themselves mostly keep colored cooks, and the prospect of a food laboratory is probably not more brilliant for other neighborhoods than for mine, shall we not see what we can do with conditions as they exist?

If we can only begin to believe that a woman is not *neglecting something* when she has at once a home and a profession, we shall have taken a great step. Let us admit that it is not in the homes of educated women that we find disgusting kitchens and untidy bedrooms, or even the traditional "neglected child." But intelligent women are recognizing that their kitchens and their babies may be provided for without their own eternal presence. Unintellectual women have long recognized that kitchens and babies may be a delegated care. The funny thing is that such delegation only raises a public howl when the delegator wishes to devote the time thus secured to a "career." If she only takes it for shopping or the movies, or "to rest," nobody writes a book about it, no matter how ignorant or dirty a *delegatee* she may hire.

On the other hand, if some pious imbecile omits to upbraid professional women for "neglecting the home," some gentleman devoted to "high professional standards" will make good the omission by declaring that, because of a divided interest, they are failing to give their best in research, *et cetera*, to their professional labors. They should not, if our domestic methods were better, and the most of them do not as it is have interests more "divided" than the professional man who has a home. Even he must permit considerations of keeping the lawn mowed or the furnace fed to intrude upon those of his latest surgical case or college presidential responsibilities. And the unmarried woman worker *who boards* is just as likely to be going in for distractions as for "research," if she has more taste that way. But nobody asks how *she* spends her time.

There still live some, too, who cling to the ancient prettiness of "meeting the husband at the door with a smile," as well as to the support to the married male mind of the thought of a little wife at home in the hours of his absence. Anyway, in these days it must be largely necessary for him to adjust the thought to some other man's home, where the little wife is drinking tea or playing bridge more likely than not, and whence she may get home so late that it is the husband who meets her at the door with a smile (we hope). But we are to understand that he would have a well-founded grievance if she should be made late to dinner by a pneumonia patient or a faculty meeting.

I believe that one of the really great issues of the century, in its way as vital to the world's economic relations as any of the outwardly more compelling ones which the last tragic three years have raised, is the effort of woman to adjust herself to a life that shall at once give free scope to the intellectual power of which she grows ever more conscious, and yet have unimpaired all that is *essential* in the domestic relation. I cannot be silent in contemplation of the infinite pity that so much feminine talent and trained intellectual power should be simply losing itself in the aimless ocean of domestic duties as now understood. It is not a little thing, altho it involves consideration of many little things, homely and apparently trivial, for educated women to find a way out for themselves.

My way, I grant you, does not provide for large families. But then, neither do apartment houses—nor decency.

The Food Fight

IF food saving does nothing else than call the attention of the American people to the wealth of vegetables available for their diet, it will have been well worth while.

Probably no other country in the world has such a range of vegetables and fruits, for our climate makes it possible to grow everything from the cool weather staples, such as cabbage, cauliflower, and garden peas, to the rarer tropical delicacies.

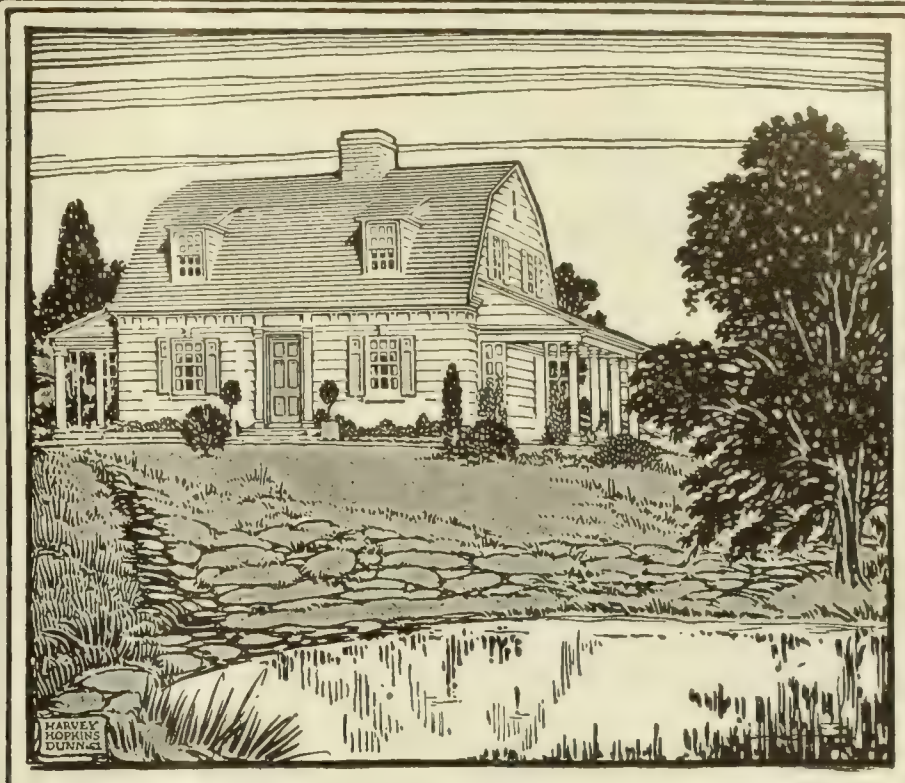
Besides having most of the staple fresh vegetables available all year round, thru the development of winter trucking in California and the South, we possess dainties of our own unknown elsewhere, such as sweet corn, and have widened our range of delicacies, like melons, by importation of varieties, cross breeding, adaptation to favorable localities, and development of long-distance shipping facilities to put them into every consuming market.

The average American has to go abroad and live a few weeks on the comparatively narrow range of vegetables in a country like England to appreciate fully the advantages he may enjoy at home. For English vegetables comprize only about half a dozen, such as green peas, beans, and vegetable marrow in summer, and leeks and cabbages in winter.

But there is a world of room in this country for improvement in both the growing and cooking of vegetables. Coarse and tasteless varieties are too often raised for marketing, and arrive in unpalatable condition because of careless shipping methods, and vegetables are too often served stingily or with careless cooking, especially in our hotels and restaurants, where the whole scheme of the bill of fare centers on meat dishes, and vegetables are neglected.

The attention of the hotel and restaurant men, as well as the housewife, is invited to the following pithy suggestions from *Through the Meshes*, a little monthly periodical published by a Cleveland business house:

"The ability of a cook has too long been judged on the basis of meats and pastries.



"But the real test of a chef is mashed potatoes. Order mashed potatoes in the average hotel and you will get something sloshy like soaked bread. In the best hotels and restaurants the vegetables are uniformly well cooked, but in the great majority of the medium-grade restaurants, and even the average restaurants in smaller towns, the chefs do not seem to take vegetables seriously.

"Ask for a steak and you will get a palatable dish; ask for spinach and you will probably get something that looks like soup and tastes like wet hay.

"For instance, in a New York eating house I saw these signs prominently displayed on the walls:

" 'Squash, onions, cabbage, cauliflower, potatoes, Brussel sprouts, spinach, yellow turnips. We steam to retain all their mineral food ingredients—natural delicious flavor. Carrots, parsnips, lima beans, green peas, white turnips, string beans are cooked in just enough water for serving—and preserve all their food properties.'

"This appeared to be an indication that vegetables are beginning to get the attention they deserve. In these days when the Government is calling upon us to eat lightly of meat and grain, it would be a good thing if we became better acquainted with vegetables. Eat one meal a day of vegetables, exclusively. The habit will be good for your health and good for your country."
—United States Food Administration, Washington, D. C.

Make *Yours* Not A House But A Home.

Avoid indifferent looking trim. Color in woodwork, whether stained, enameled or painted, is the keynote of taste in home-like rooms.

Daintiness, warmth of tone and artistic effect are totally dependent upon the kind of wood on which the desired color scheme is carried out.

ARKANSAS SOFT PINE

With its individual physical qualities, is the ideal base for stains or enamel. Either finish will retain permanently, its luster or original whiteness, due to the non-resinous character of the wood.

Dreer's 1918 Garden Book

IN the spring thousands of new gardens will be started to add to the food supply, and thousands whose 1917 gardens were not an entire success will try again.

Dreer's Garden Book is more than a mere catalogue. It is a companion of dependable information for the gardener; and if the expert cultural directions are followed will save money and disappointment. Tells when to plant, what to plant and how to plant.

It contains 256 pages, four full page color plates and four duotone plates. Lists all the dependable, tested standard varieties of vegetables and flowers as well as the promising novelties.

Whatever is worth growing you will find in Dreer's Garden Book for 1918, with descriptions and cultural notes.

Mailed free if you mention this magazine

HENRY A. DREER, Philadelphia, Pa.

BEFORE YOU BEGIN TO BUILD

(*Continued from page 419*)

ing loan from one of these companies it is desirable to look over the past record and present management of the company.

The system is on the whole the cheapest, the safest and the best for the man with small capital, but because it is not so comprehensible as simply borrowing the money and paying interest on it; also because of the uncertainty of securing a loan at precisely the desired time, and because he is forced to pay up his loan, it is not so commonly resorted to in most communities as the former two systems.

After the lot has been bought, and the financing of the house arranged for, the next question is the architect, and in spite of the fact that everybody ought to know what the duties of an architect are, there are many persons who do not completely understand them, and I intend to state them here as briefly as possible.

In the first place an architect makes preliminary drawings, which are intended to show the general layout of the rooms, disposition of closets, and treatment of the exterior; these preliminary drawings being made in general conformity with the client's ideas. As a rule they represent some kind of a mean between what the client wants, and what he can afford, being rarely both and generally neither. An architect can not guarantee the cost of a house. In the first place he has not much of an idea (until the sketches are approved) just what sort of a house the client wants, and in the second place his primary duty is the making of a plan which will secure the accommodation desired at the least possible cost consistent with good construction and a decent treatment of the exterior, rather than to begin the other way around, and design a house which will not cost more than a given sum, regardless of the client's desires as to size, number of rooms and materials.

After he prepares his working drawings and specifications he usually sends out copies of the working drawings and specifications to several builders for estimate, and part of the architect's duty is to see that these plans do not go to irresponsible or incompetent builders. The lowest bid should be accepted, and the owner enters into a contract with the builder to construct the house in accordance with the drawings and specifications of the architect, and with such further explanatory drawings and instructions as the architect may make from time to time. It is the architect's duty to superintend the house, to see that the materials used are those which are specified, and that they are assembled as shown on the drawings. For this work the architect receives a percentage on the total cost of the house, which varies in different localities from 6 to 10 per cent. This fee is payable as a rule in three instalments, one-fifth of the estimated whole commission when the sketches are accepted by the owner, two-fifths additional when the working drawings and specifications are completed, and the balance when the house is done, altho when the house is a large one and the amount involved is considerable, it is customary to split up this last fee into monthly payments in proportion to the amount of work done.

The client should remember two things in dealing with an architect: First, that he is not a contractor; and second, that he assumes during the construction of the house a quasi-judicial position—the contract between the owner and builder usually provides that the architect's judgment as to the quality of materials, their con-

The Price and the Purchase

If you will look at what you get just as carefully as you look at what you pay, you will find The Hollenden one of the most reasonably priced hotels in the country.

If you will consider that The Hollenden is almost as well known to the traveller as the name of the city in which it is located, and that it has been the preferred hotel of the really particular traveller for a quarter of a century, you will have the most forceful testimony of its service you can find.

If you will remember that The Hollenden is both old and new, that it is bigger and better today than it was last year, and that its patronage includes many new guests and nearly all the old ones that still come to Cleveland, you will have the most satisfactory reason why you should register at The Hollenden the next time you are in Cleveland for a meal or a month.

European Plan with Bath

For One Person - $2 to $5
For Two Persons - $3 to $6
With Twin Beds - $4 to $6

formance to the specification, etc., shall be final and binding upon both parties—and he is therefore under an obligation to treat both his client and the builder with absolute fairness. Care should always be exercized to see that the architect is competent and the client should exercize as much care in his selection as in the choice of a lawyer or doctor.

The payments to the builder are generally made in one of two ways: either monthly, when a proportion of the cost of the work done in the preceding month is paid to the builder (usually about 85 per cent); or by what are called progress payments, that is, a certain proportion of the total sum is paid as the work reaches particular points. In these progress payments the first payment is generally due when the cellar is built, and the first tier of beams is on; the second when the framing is up, and the roof shingled, and so on; but of the two methods the first is distinctly the best, since it offers no temptation to the builder to hurry certain parts of the work named in his contract, so that he may secure his payment, omitting to do certain other parts which should properly have been completed first. Provision should be made in advance for prompt payment of the amounts when due; since failure to make the payments at the times stated in the contract may release the builder from contractual obligations on his part, so that the owner will be unable to insist on the proper performance of the work.

People who build houses will relate to you varied tales of their experiences. Some take the work hard; they have had a dreadful time with the architect; the builder was slow and unreliable, and in general they move into their houses with sighs of relief, feeling that the work would never have been finished if they had not been constantly on the job. To others the actual construction of the house is a rather tiresome business, neither interesting nor annoying, but something which is to be got over and forgotten as soon as possible. A third class, and those for whom architects and builders alike take most pleasure in working, select competent architects and builders to begin with, take constant interest in the progress made, freely express their opinions as to points of taste, and leave technical details to the men best fitted to handle them. To such the act of building is the inspiring business it should be; all construction work is an accomplishment, and should be something to rejoice in; something which is done for the good of the community, as well as for the good of the individual, and every one concerned in construction work should enter into it feeling that he is erecting something worthy, substantial, enduring and beautiful. It has been said that every good bargain must benefit both the men making it, and nowhere is this more true than in building a house. When I hear of a builder who has lost money on a job, I am sure that the house is not as good as it should be; that the architect and the owner have lost something which should have been theirs; perhaps something intangible, but not less vital, because it cannot be measured or valued in common terms.

MAY BE OLD BUT IT'S GOOD

What does Ghoughphtheightteeau spell? Give it up.

"Well!" "Gh" stands for "p," as in "hiccough"; "ough" stands for "o" as in "dough"; "phth" stands for "t" as in "phthisis"; "eigh" stands for "a" as in "neigh"; "tte" stands for "t" as in "gusitte," and "eau" stands for "o" as in "beau." Put them together and you have P-O-T-A-T-O, potato. Easy, isn't it?

Scientific study coupled with practical manufacturing methods—this is the basis of the MAZDA Service that helps lamp-makers produce better lamps. :: :: ::

MAZDA

"Not the name of a thing, but the mark of a service"

The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady, New York.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

101 Fulton Street, New York

Remarkable Remarks

CORRA HARRIS—Prophets hate each other.

VON BETHMANN HOLLWEG—Necessity knows no law.

WILLIAM FAVERSHAM—There never was a matinee idol.

IRVIN S. COBB—To the very pure all things are putrid.

WOODROW WILSON—The time has come to conquer or submit.

DR. C. FAGNANI—Communion is the sacrament of solidarity.

GEORGE M. COHAN—New Yorkers don't get drunk in the morning.

MARSHAL VON HINDENBURG—Let us continue to be victorious.

PORTER EMERSON BROWNE—Tammany Hall works while you sleep.

LINA CAVALIERI—You should arrange to weigh yourself every day.

BILLY SUNDAY—I wouldn't let Willard hit me once for 50,000 bucks.

ELSIE JANIS—It has always been inspiring to me to play in college towns.

DR. HARVEY S. WILEY—When you are going to ride a short distance, walk.

ARNOLD BENNETT—No feminine raiment has ever equalled the classic Greek.

LINCOLN STEFFENS—The real hero of the revolution in Russia is the mob.

SECRETARY MCADOO—If necessary the Government will conscript the money.

HERBERT HOOVER—A properly cared for pig is no more unsanitary than a dog.

GLENN BUCK—A single spool forms a hub around which the universe revolves.

EDWARD BOK—A great deal of trouble in the world comes from writing letters.

EX-KING CONSTANTINE—I would prefer to commit suicide than go against Germany.

CHOLLY KNICKERBOCKER—The John R. Drexels have rearranged their winter plans, I hear.

ADMIRAL SIR JOHN R. JELLICOE—We have only to set our teeth and the war will be won.

THOMAS DRYER—If I were to spend a million dollars a year in advertising, I'd give the account to Glenn Buck.

PROF. BRANDER MATTHEWS—Why should a young actress make a *debut* when it would be just as easy for her to make her *first appearance?*

SECRETARY MCADOO—My three sons have volunteered for the navy. I would not give one of them for all of Germany and a dozen Hohenzollerns. But I would give them all for America.

MAJOR-GENERAL GORGAS—The life of every boy who falls upon the field of France while fighting under the stars and stripes will be saved if medical science and human care can do it.

LISSIE C. FARMER—That which saves money is economy; that which saves money and time is a greater economy; and that which saves money, time and strength is the greatest economy of all.

DAVID LLOYD-GEORGE—Napoleon's failure taught France a lesson it never forgot; a similar lesson must be burned into the heart and memory of every Prussian before this war is done with.

PROF. THEODORE S. WOOLSEY—I think there can be no doubt that the U-boat is to be regarded as a surface cruiser with no additional rights and privileges and with the same duties and liabilities.

PROF. J. MCKEEN CATTELL—It would not do in the case of any particular [university] president to hint that he resembled anything except a monument of himself erected by public subscription.

WILL IRWIN—To the end of my days, I cannot see the made-in-Germany mark without remembering Louvain and the "Lusitania," gerbe'viller and the Belgian deportation—the whole lot of cold-blooded outrages.

It Gave Service—It Made Military History—It Was *There*

Today, the smooth bore, muzzle-loading brass cannon has as much standing as a one-cylinder automobile.

Once, too, longhand was the approved method of correspondence. Then came shorthand, and within recent years the still better system of The Dictaphone.

How I Sold My Property

A Successful System for Finding Cash Buyers

THIS is a short tale about a quick sale.

It tells of a modern method of selling property without paying big commissions to agents.

It tells how this System sold my property—and how it can do the same for you.

The property I wanted to sell was badly run down and I had no money to spend in repairs. It had been in an agent's hands for many months without results and I was very much discouraged.

Fortunately for me, about that time I heard of the Simplex Plans for Selling Real Estate that had just been brought out by a New York publishing house. These I secured, and much to my delight I found they contained *seven definite plans* for selling just such a property as mine. Selecting from these seven plans the one that seemed best for me to use, I put it into operation, with the following successful results:

Within three days I had eighteen people interested in my property, and within two weeks I made a satisfactory sale, having received three cash offers and two offers of exchange.

And, what is of the utmost importance, the cost of advertising and selling my property by the Simplex System was *less than $15,* whereas, if I had followed the agent's advice, I would have been compelled to spend $500 in repairs, and pay him $125 commission when he made the sale.

And my experience seems to be the same as others who have used this System. Here is what a few of them say: "Sold my property in 10 days. Recommend your method."—*Wm. H. Cartland, Mass.* "Sold my property for cash. Your Plan is the quickest I ever saw."—*Johnson String, N. J.* "Sold my farm in a short time and for cash."—*Mrs. L. A. Childs, Minn.* "Your method of finding cash buyers is without a peer."—*Benj. Lloyd, Calif.* "Sold my property when every other method failed."—*Jno. O. Brown, Pa.*

If you want to find a quick, cash buyer for your real estate, you should get and follow the Simplex Selling Plans at once. They are complete, simple and practical, and are for selling homes, farms and building lots anywhere in the U. S. The best evidence of the success of this System is the fact that it has already sold more than 5,000 properties in the 48 States.

If you will write to the publishers at once you can share in their special free-examination offer. *Send no money.* Just sign and mail the coupon and a complete set of these successful Plans will be sent to you by parcel post. You can then examine them in your own home without cost or obligation. Then if you want to keep and use them, send the publishers $5 in full payment for them. If you do not wish to keep them, simply return them and you will owe the publishers nothing.

As this special free-examination offer may be withdrawn at any time, better fill in, cut out and mail the coupon right now to THE SIMPLEX CO., Dept. 5, 1123 Broadway, New York.

THE SIMPLEX CO., Dept. 5, 1123 Broadway, New York

You may send me a set of the SIMPLEX PLANS FOR SELLING REAL ESTATE for free examination. Five days after I receive them I will either send you $5 in full payment or remail them to you. I agree not to show them to anyone unless I keep them.

A LITERARY WAR MAP OF VENETIA

(*Continued from page 411*)

Attila ordered an artificial hill erected that he might overlook Aquileia, his victim. So the Huns filled their helmets and shields with earth and carried stones upon their backs and in three days the hill was ready for the fortress. If you do not believe this, there is the hill, the same on which the city of Udine now stands. Udine, you remember, was recently taken by the Hungarian and Austrian troops and so Prince Udine, who headed the Italian mission to America, lost his titular town. I wonder if the Austrians in bombarding Udine demolished the statue of Peace erected here in honor of the Treaty of Campo Formio in which Napoleon ceded Venice to Austria.

Judging by the hight of the hill of Udine the army of Attila must have been a big one, but the walls of Aquileia resisted his artillery and the defenders rained darts, stones and fire upon his engineers. After three months of vain efforts provisions ran short and the Huns became discontented. Atilla finally conceded to their desires and issued orders to strike tents next morning. But in the evening as he rode around the walls to take a farewell look at the only fortress that he could not conquer, he noticed a stork in one of the towers preparing to fly from her nest with her young. This he took as an indication that the tower was weakening, so next morning instead of a retreat he ordered an attack on this point. But the Huns hesitated, for the walls looked as strong as ever and on the ramparts stood soldiers with helmet and shield. Now this was *camouflage*, for Menappus, King of Aquileia, being short of soldiers, had set up wooden images on the battlements. One of the Hunnish chiefs discovered this by loosing his hawk at the wall. The bird flew up and lit upon the helmet of one of the soldiers—and was not shaken off. Seeing this the Huns attacked and entered, putting the population to the sword and demolishing the city so completely that the antiquarian can find little on the site to reward his search.

The inhabitants, the Veneti, driven from their homes by the Scourge of God, fled to the sea and took refuge on the islands and the sandbars of the Adriatic shore, where the barbarians, being horsemen and not boatmen, could not follow them. The people of Altinum at the mouth of the Piave River (where the Austrians are now trying to cross) were driven to despair when the Lombards overran the country. For three days they fasted and prayed for guidance. On the evening of the third day Paul, their bishop, climbed the campanile. He looked toward the land, there were the Longbeards waiting like wolves for their prey. He looked toward the sea and beheld a glittering pathway marked by the starlight on the lagoon to the *lido* or sandbar that shut out the sea. So Bishop Paul and his flock took boats and, following the heavenly guidance, settled on the Grado.

Further down the coast there was another island, separated from the mainland by a strip of deep water (*rivus altus* or Rialto) and unoccupied save for the hut of one lone fisherman named Johannes Bonus, which I take it is Latin for Honest John. Honest or not, his title to his island home did not secure him against the crowd of refugees from Aquileia and Altinum who invaded it at noon on March 25, 421 A. D.

But these were enterprizing folk and did not long remain dependent upon his hospitality or his craft. They made a boat, La Nave of D'Annunzio, and next a bigger

one and then a bigger still. From fishing they took to trading and made money. As the City on the Seven Hills declined the City on the Twelve Islands rose and while the rest of western Europe fell under the sway of the Teuton Venice remained free. But Venice is another story which I hope I shall have no occasion to tell.

Let us now turn to the other quarter from which danger threatens Italy, the Trentino. This mountain bastion juts down into the Venetian plain to Lake Garda, of which Austria holds the upper half. At the foot of Lago di Garda are four fortified cities, Peschiera, Mantua, Verona and Legnago, forming the famous Quadrilateral by which Austria held her grip on Italy. Mantua was Virgil's birthplace, *Mantua me genuit*, and he works an allusion to it into the Aeneid:

. . . Great Mantua, rich in fame,
And rich in heroes, tho diversely bred.
. . . . . .
Mincius in front, veiled in his sedges grey,
Fair stream, whose birth from sire Benacus flows
Shines on the poop, and seaward points the way.

Benacus was the Latin name for Lake Garda from which the Mincius (now Mincio) River flows seaward. The lake had and has a bad reputation for squalls. *Fluctibus et frenitu assurgens Benace marino*, as Virgil puts it, or in Addison's superfluent verse:

Here, vexed by winter storms Benacus raves,
Confused with working sands and rolling waves;
Rough and tumultuous like a sea it lies,
So loud the tempest roars, so high the billows rise.

It will be noticed from the map that Lake Garda is split at the bottom by what the Latins and French call an almost island (*paene-insular*, or *presqu'ile*). Catullus, who was born at Verona, had his villa here at Sirmio and gave to the locality praise for which the proprietors of the lake resorts ever since had reason to be grateful. The translation I quote is, as the reader might guess, by Tom Moore:

Sweet Sirmio! thou, the very eye
Of all peninsulas and isles
That in our lakes of silver lie
Or sleep, enwreathed by Neptune's smiles.
And thou, fair lake, whose water quaffs
The light of heaven like Lydia's sea,
Rejoice, rejoice,—let all that laughs
Abroad, at home, laugh out for me.

Tennyson makes a graceful use of this in his "Frater Ave Atque Vale," ending:

Gazing at the Lydian laughter of the Garda Lake below,
Sweet Catullus's all-but-island, olive-silvery Sirmio!

But our best poet guide to this district is Dante, who lived in Trent for a while. Here is his description of Lake Garda, or Benaco, according to Longfellow:

Above in beauteous Italy lies a lake
At the Alps foot that shuts in Germany
Over Tyrol, and has the name Benaco.
By a thousand springs, I think, and more is bathed,
'Twixt Garda and Val Camonica, Pennino,
With water that grows stagnant in that lake.
Midway a place where the Trentine pastor,
And he of Brescia, and the Veronese
Might give his blessing if he passed that way,
Sitteth Peschiera, fortress fair and strong,
To front the Brescians and the Bergamasks.
Where round about the bank descendeth lowest
There of necessity must fall whatever
In bosom of Benaco cannot stay
And grows a river down thru verdant pastures.
Soon as the water doth begin to run,
No more Benaco is it called, but Mincio,
Far as Governo, where it falls into the Po.
Not far it runs before it finds a plain
In which it spreads itself and makes it marshy,
And oft 'tis wont in summer to be sickly.

Translated into geographical language this means that the dioceses of the bishops of Verona, Trent and Brescia met at Garda. Brescia lies west of the lake, and as you have seen in your morning paper the Austrians are trying to reach it by a drive down the Camonica valley from the Apennines (Pennino).

If the Italians lose their present line

No. 5589D

A Louis XV suite in handsomely carved mahogany, with finely woven cane panels and Karpenesque spring cushion upholstery.

Karpen Guaranteed Upholstered Furniture Chicago-New York

BY these characteristics you may know Karpen Furniture: its wonderfully deep, soft cushioning, the richness of its fabrics, its beauty of design, its fine construction.

Karpen Furniture

is sturdily made from fine, well-seasoned woods, by skilled cabinet-makers. Its Karpenesque upholstery is unique in its hundreds of tiny springs, of unusual flexibility and strength, hidden between the spring foundation and the filling of softest cotton or down. Its coverings of velvets, tapestries, brocades and cretonnes are the choicest obtainable.

What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its **25th** year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send **15c** to show that you might like such a paper, and we will send the Pathfinder on probation **13** weeks. The 15c does not repay us, but we are glad to invest in new friends. **The Pathfinder, Box 39 , Washington, D. C.**

P-432 Wood St., Pittsburgh, Pa.

on the Piave River, they will fall back upon the Adige, which flows past Trent and Verona to the sea below Venice. The canyon thru which it emerges from the Trentino served Dante for a model of the scenery of Hell. The Austro-German armies have during the past month crost the Tagliamento River on the east and the Adige River on the west and are now trying to cross the Piave and Brenta Rivers. The Dante reader needs no war-map to this battlefield. The poet frequently alludes to it, not in complimentary terms:

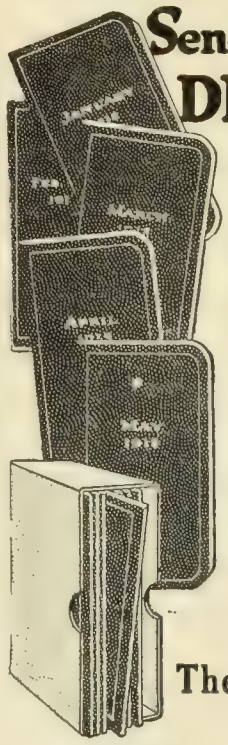
The crowd that are now girt
By Adege and Tagliamento, still
Impenitently scourged.
. . . In that part
Of the depraved Italian land which lies
Between Rialto and the fountain springs
Of Brenta and Piava, . . .
The web is now a-warping. Feltro, too,
Shall sorrow for its godless shepherd's fault.

But from near Feltro (which the Austrians took the other day) is to come the future deliverer of Italy. "He shall not feed on lands or goods, but wisdom and love and valor, and his birthplace shall be between Feltro and Feltro." One Feltro is easy to find on the map, but where the other is has been a puzzle to commentators.

Dante, altho his name has become the slogan of Italian nationalism and expansionism, was what we should call a pro-German. His name, Alighieri, indicates his Teuton blood. In that incessant quarrel between the Guelfs and Ghibellines that reduced Italy to a state of anarchy like Russia of today he espoused the latter party. That is, he championed the Holy Roman Empire against the Holy Roman Church. He called upon the emperor to conquer Italy and cursed him when he would not:

Ah! servile Italy, grief's hostelry!
A ship without a pilot in great tempest!
Ah! people thou that oughtest to be devout
And to let Cæsar sit upon the saddle. . . .
O German Albert! who abandonest
Her that hath grown recalcitrant and savage.

The prophecy of the future deliverer of Italy was spoken by Cunizza da Romano, whom, very unexpectedly considering her past, we meet in Paradise. One of her lovers, Sordello, we are familiar with, by name at least. Browning, with a poet's license, calls her Palma instead of Cunizza. The plot relates to this region, but I cannot recommend it as a guide to beginners. Only those who have taken the thirty-third degree in the Browning Club understand what "Sordello" means, and they, of course, cannot tell. One baffled neophyte confest that of the 134 pages he only understood two lines, and they were both lies. These were the first line:



Who will may hear Sordello's story told,

and the last line:

Who would has heard Sordello's story told.

But those who are discouraged by "Sordello" will enjoy "Pippa Passes," and this is more to the point since one act deals with a conspiracy to free Italy from the Austrians. Asolo, where Pippa worked in the silk mills with only one holiday a year but that well spent, lies on the plateau between the Brenta and the Piave, down which the Austrians are now striving to force their way.

"Delicious Asolo," Browning says, was "my first love among Italian cities"—it was also his last. For many years after he had first visited it in 1838 he dreamed about going there again; always the same dream, that he was traveling with a friend and caught sight of Asolo sparkling in the sunshine on the hillside. He tried to get to it, but could never reach it. Something seemed to be in the way and the struggle waked him. Finally he did get to Asolo

Send for this better DIARY for 1918

DIARIES have been the same for centuries, you say, but this one's *different. Twelve,* neatly-bound, vest pocket *monthly* diaries, each 4¾ x 2½ inches, 32 pages.

A page for each day—a book for each month

The current month's happenings right in your pocket. Don't carry a bulky year diary. Here's the handiest, most convenient, pocket Diary and DAILY REMINDER ever devised—the 12 books in a neat desk holding-box will be sent, P. P. prepaid on receipt of 60 cents. *Order right now.*

but only to die shortly after. His last book of verse, partly written there and named for it "Asolando" was published in London on the day he died in Venice, where he had gone for medical relief after catching his fatal cold in the Cet La Mura villa at Asolo. He had planned to build a campanile at Asolo to be called "Pippa's Tower" and high enough so Venice could be seen from its top. This would have formed a proper foil or antidote for the tower of San Zeno, near Asolo, the stronghold of "the thin, gray, wizened, dwarfish devil Eccelin," as Browning calls him whom Dante consigned to the seventh circle of the Inferno.

Mrs. Browning's ardent championship of Italian freedom was the inspiration or at least the instigation of much of her poetry. Her "First News from Villafranca" is particularly appropriate to quote now:

Peace, peace, peace, do you say?
What!—with the enemy's guns in our ears?
With the country's wrongs not rendered back?
What!—while Austria stands at bay
In Mantua and our Venice bears
The curst flag of the yellow and black?

Peace, peace, is still your word?
We say you lie then!—that is plain,
There *is* no peace and shall be none.
Our very Dead would cry "Absurd!"
And clamor that they died in vain
And whine to come back to the sun.

Hush! more reverence for the Dead!
They've done the most for Italy
Evermore since the earth was fair.
Now would that *we* had died instead,
Still dreaming peace meant liberty,
And did not, could not mean despair.

This battlefield is Ruskin-land as well as Browning-land. Tourists use Ruskin as a guide to towns, but they are strangely reluctant to follow him afield. But Ruskin took as much interest in geology as in architecture, and he was fonder of peasants than of popes and princes. The letters of Miss Francesca Alexander, daughter of a Boston painter, descriptive of the peasant life of the Garda, Asiago and Bassano region, "the strangest and most out-of-the-world corner of the Veneto," were published by Ruskin under the title of "Christ's Folk in the Apennines." One of her "Songs of Tuscany" is the "Ballad of Santa Zita," the canonized hired-girl from whom was named the Italian princess who is now Empress of Austria.

What Ruskin saw of Italy's past and future from the hights the Austrians hold he tells in one of his "Fors Clavigera" letters to workingmen:

This day last year, I was walking with a dear friend and resting long, laid on the dry leaves, in the sunset, under the vineyard trellises of the little range of hills which, five miles west of Verona, look down on the Lago di Garda at about the distance from its shore that Cana is from the Lake of Galilee:—(the Madonna had walked to the bridal some four miles and a half). It was a Sunday evening golden and calm; all the vine leaves quiet; and the soft clouds held at pause in the west, round the mountains that Virgil knew so well, blue above the level reeds of Mincio. But we had to get under the crest of the hill, and lie down under cover, as if avoiding an enemy's fire, to get out of hearing of the discordant practise in fanfaronade, of the military recruits of the village,—modern Italy, under the teaching of the Marsyas of Mincio, delighting herself on the Lord's day in that, doubtless, much civilized, but far from mellifluous manner: triumphing that her monasteries were now for the most part turned into barracks and her chapels into stables. . . . If ever peace and joy and sweet life on earth might be possible for men it is so here, and in such places,—few on the wide earth but many in the bosom of infinitely blest, infinitely desolate Italy. . . . A worthy and gentle race; but utterly poor, utterly untaught the things that in *this* world make for their peace. Taught anciently, other things, by the steel of Ezzelin; taught anew the same lesson by the victor of Arcola and the vanquished of Solferino,—and the supreme evil risen on the ruin of both.

There they sate—the true race of northern Italy, mere prey for the vulture—patient, silent, hopeless, careless. . . . And their blood has been poured out like water, age after age, and risen around the winepress, even to the horse-bridles.

Sold by leading sheet metal merchants.

Send for booklets "Better Buildings" and "Copper—Its Effect upon Steel for Roofing Tin" valuable to every builder, contractor and owner of roofs.

AMERICAN SHEET AND TIN PLATE COMPANY, General Offices: Frick Bldg., Pittsburgh, Pa.

New Books for the Youngsters

AN artist happened to meet a teacher of his boyhood whom he had not seen for years. During their conversation she inquired with true pedagogic zeal. "Did any of the work in my grade make a lasting impression upon you?" He racked his brain, but high school, college and three years of study abroad had effaced all details of the eighth grade, and he was constrained to reply, "I can recall absolutely nothing except the stories you told us."

Yes, it is the stories that persist, and those that are told orally make an especially strong impression upon the hearer. No less an authority than Mr. Percival Chubb says, "If literature is to regain its sway over the heart and its ministry in life, there must be a greater return to the oral and auditory basis of appeal."

Therefore it is pleasant to find in this year's harvest of books a volume consisting of two distinct parts. One is a treatise on story-telling, the other a collection of stories "tried and true," suitable to tell to children. It must not be inferred that this is the first book of that type that has been written. Since Sara Cone Bryant published her pioneer work, *How to Tell Stories to Children*, at least a dozen books similar in scope have appeared.

Now, the important and joyous thing about this excellent new book, *Children's Stories and How to Tell Them*, by J. Berg Esenwein and Marietta Stockard, is that it indicates a reiterated faith on the part of the authors and publishers that story telling is an important factor in life.

Mothers seem to recognize this instinctively when they croon little stories to the babies. In the kindergarten story-telling has always held its place on the program. It has crept up thru the grades into the high school and university. There are professional story-tellers as there are professional lecturers or actors.

Nevertheless story-telling, like woman, has a very definite place in the home. What parent has not heard in pleading tones, "Tell me what you did when you were little"? Most families have some tales of heroism on the part of parent or grandparents which are worthy of handing down from generation to generation. Children, as well as their elders, have a personal interest and pride in such narratives that no "book story" can arouse. Moreover, these stories give them standards which they feel in honor bound to maintain.

One mother told her children long years ago of a fearsome journey that she made thru a dark forest in her childhood. Many a time have those children, grown to men and women, steadily faced some painful issue, sustained by the thought of their mother's courage.

Any one prizes a piece of old mahogany, a bit of silver or a jewel that has descended in the family, but far more precious are these family traditions—the things unseen which are eternal. Several of the new books this year are ideal stories or collections of stories of this sort.

Naturally no family can have enough of its own stories to supply all the demands, but happily children are easily satisfied and one can find fascinating tales elsewhere. Books can often be classified into stories that will tell and stories that won't tell. Fifty of the former class are included in the new book by Dr. Esenwein. The kind that won't tell are usually exprest in such exquisite language that any change in it is like mutilating a lovely statue. Such stories are best read aloud. The Broom Fairies, the Stories of Anatole France and the Little Angels belong here.

Reading aloud is an art we have almost lost sight of in the rush of the twentieth century. Yet it is a definite loss in family unity. It is the common pleasures which help link parents and children together, and reading aloud is one of the pleasures most easily attained.

When all the world is knitting, why should not reading aloud be carried on at the same time, at least within the home? Surely not for a lack of enticing books.

Last year a Christmas shopper observed in a large department store two women trying to select a present for the daughter of one of them. Article after article was proposal and rejected. Finally a book was suggested. "Oh, no!" exclaimed the mother, "she does not need a book; she has one already."

Now that so many books are loaned to school children, it is more than ever important that they should have as many as possible for their own permanent possession. This is especially true of books they will need to refer to at later periods of life—books on history and mythology may be particularly valuable.

At the season of giving, books are a wise choice. When toys are broken and useful presents worn out, the book remains, a lasting joy.

Fairies and Their Magic

The key to much of the finest literature is in possession of the child who is familiar with the old fairy tales. They are of the greatest value in forming a child's literary taste and in developing true imaginative qualities.

Stokes's *Wonder Book of Fairy Tales* is a comprehensive collection of most all of the stories that children love best, including popular old tales from Hans Andersen, "The Arabian Nights," Grim and Perrault, and two modern stories, "The Tale of Peter Rabbit" and "The Story of Little Black Sambo." Every story has a full-page drawing, most of them in colors, and, in addition, a descriptive headpiece and tailpiece done by Florence Choate and Elizabeth Curtis.

Ethel M. Gate has written some delightful new fairy stories in the book *The Broom Fairies*, suitable to be read to or by a youngster. The language is charming and simple.

Sarah Stokes Halkett (Aunt Sadie) who possesses a marvelous capacity for invention and delicate fancy, has written the stories of the flowers, such as Blue-bells and Indian-Pipes. The stories so rich in fancy and the distinctive illustrations by Katharine Pyle which grace the pages will charm the imaginative child.

Patten Beard has collected the best fairy tales in the English language, from Grimm, from "The Arabian Nights," "Tales of Perrault" and many others. The compiler has illustrated the book with pictures of toys. Mother Goose and toys is such a *happy* combination.

Gertrude Kay, the author of the *Book of Seven Wishes*, understands the dream and wish-life of the child. She has written these stories of the discontented wish, the rainy day wish, a little cripple's wish, a runaway wish, a selfish wish, a very happy wish and a wicked wish with keen insight into and sympathy with the child's point of view.

Let's Act It Out

More Fairy Tale Plays, by Marguerite Merington, is an arrangement for the stage of four old favorites such as Hansel and Gretel and Puss in Boots.

The White Christmas, by Walter Ben Hare, is a collection of Christmas plays suitable for almost any age. The first represents the Biblical Christmas. They are "merry plays" and the instructions for producing them are very complete.

The dramatic instinct found in nearly every child can find expression in Lindsey Barbee's *Let's Pretend*. There are such attractive titles as "The Ever-Ever Land" and "When the Toys Awake."

Animal Tales

Animal stories make a special appeal to small children so *Uncle Squeaky's Vacation*, by Nellie M. Leonard, will interest them by its account of the adventures of the Mouse family and its amusing illustrations.

There is much information about birds with four illustrations in color in Mary Graham Bonner's *Daddy's Bed Time Bird Stories*.

The Funnyfeathers, by Lansing Campbell, tells all about the adventures and mishaps of the comic folk in the Barnyard, The Dinky Ducklings, Panty Banty, Daffy Duck, Sly Old Crooky Crow and Pidgy the Poet cannot but please the child and increase his friendly interest in and comradeship with all such creatures.

Little Boy Bear, by Belle Maniates, is an imaginative account of a polar bear cub, his mother and a little boy.

The Red Flower

Poems Written in War Time

By HENRY VAN DYKE

Henry van Dyke, who has just been crowned as a poet by the highest honor that Oxford gives, has put in this volume the poetic results of his intimate contact with the great war. It includes "The Red Flower," "War Music," "The Glory of Ships," "Jeanne d'Arc Returns" and some twenty other poems. *50 cents net*

The Life of Jesus for Young People

By WILLIAM BYRON FORBUSH

Author of "The Boy Problem," "Child Study and Child Training," and "The Coming Generation"

This beautifully illustrated "Life of Jesus" is uniform in size and style with "The Story of Our Bible." It is a deeply constructive story of the life of the Master for young people, in which modern difficulties are faced without doubt or alarm, the result of which should be a faith that cannot be shaken and that will never have anything to unlearn.

The Story of Our Bible

By HAROLD B. HUNTING

This book contains a scholarly and interesting presentation of what has been learned through centuries of study about the making of the several books that compose the Old Testament and the New. The story deals with the men and women who wrote these books, tells why they wrote them and what results they achieved, and shows how their writings were preserved and brought together so that the Bible grew to be what it is today.

Twenty-four full-page half-tone illustrations in color. Bound in purple cloth, stamped in gold. Crown 8vo.

$1.50 net

The Social Teachings of the Prophets and Jesus

By PROF. CHARLES FOSTER KENT, Ph. D., of Yale

In this book Professor Kent traces the development of the social conscience among the Hebrews from its earliest beginnings down to its culmination in the social message of Jesus, as found in the Gospels and interpreted by Paul and the other great leaders of the early Christian Church.

The Human Element in the Making of a Christian

By BERTHA CONDE

Senior Student Secretary for the National Board of the Young Women's Christian Association.

The study of the human elements in the making of a Christian is the first step to effective personal work. This clear, spirited and inspiring book will be hailed with delight by all who are endeavoring to lay the foundation of a victorious Christian life.

Cloth. *$1.00 net*

A Social Theory of Religious Education

By GEORGE ALBERT COE

Professor in the Union Theological Seminary, New York.

This book is a challenge. It is optimistic and practical. The author holds that when the principle of love is used as an inclusive law to be taught, it yields a point of view for the reconstruction of the curriculum, of methods, and of organization. It will be invaluable to all who think upon the problem of creating a social order that shall reflect the spirit of Jesus.

Cloth. *$1.50 net*

A Course for Beginners in Religious Education

By MARY E. RANKIN

Instructor in Kindergarten Education, Teachers' College, Columbia University

The one thought constantly kept in mind has been to adapt the lessons to the thoughts, feelings and actions of child life. The book is in itself a training-course for teachers of beginners. It contains chapters on Story Telling; How to Teach a Hymn; Teaching Beginners to Pray; Handwork; complete lessons and stories for fifty-two Sundays, and carefully selected songs, hymns, quiet music and rhythms. *Cloth.* *$1.25 net*

The Evolution of the Hebrew People

And Their Influence on Civilization

By LAURA H. WILD

Professor of Biblical History and Literature, Mount Holyoke College.

This book furnishes the foundation which every student of Hebrew history must have if he is to understand the development of the life, literature and thought of the Hebrews. It contains much interesting and valuable material not readily available to most students in colleges or to general readers. It is written in a clear, attractive style.

Cloth. *$1.50 net*

CHARLES SCRIBNER'S SONS FIFTH AVENUE, NEW YORK

Good Cheer for Camp and Fireside

"An exceedingly valuable book....Every American soldier will be helped by reading it."—*Boston Transcript.*

HOW TO LIVE AT THE FRONT

By Hector MacQuarrie, B. A., Cantab.

Second Lieutenant, Royal Field Artillery

12 photographic illustrations. $1.25 net

Americans will appreciate this frank and truthful presentation of facts regarding the war by one who has seen three active years of fighting. It gives an intimate informative and stirring account of Battle, Fear, Courage, Disease, Wise Precautions, The Tommy, The Poilu, etc., etc. This is a splendid gift for your soldier son, brother, or friend in the ranks. It will help him materially to safeguard his character and life.

THE WAR AND THE BAGDAD RAILWAY

The Story of Asia Minor and its Relation to the Present Conflict

By Morris Jastrow, Jr., Ph.D., LL.D.

15 illustrations and a map. $1.50 net

A book that tells the story of the Bagdad Railway—one of the primary causes of the war—in a most interesting manner and connects the story with the romantic past of the great Highway across Asia Minor, through which the Railway passes. The book makes its appeal to everyone interested in the problems of the war. A complete map and selected illustrations add to the value of this book, which will take a unique place in war literature. It is written by one who has made the East his life study.

RELIGIONS OF THE PAST AND PRESENT

Edited by Dr. J. A. Montgomery

$2.50 net

Is an authoritative yet popular account of ancient and modern religions from the viewpoint that the religion of each people has presented the highest ideals of that people. The authors are members of the faculty of Religious History of the University of Pennsylvania.

WATER BABIES, by Charles Kingsley. Every nursery library should contain a copy of this classic story. It would be difficult to find a more beautifully illustrated edition than this new one in the Stories All Children Love Series. The colored pictures are bewitching. $1.35 net.

FOR SALE AT ALL BOOK STORES

PUBLISHERS **J. B. LIPPINCOTT COMPANY** PHILADELPHIA

Altho Burges Johnson's *Animal Rhymes* (second edition) are avowedly for "the instruction of youth," they are also decidedly edifying for age.

The marvelous adventures of little Kituk, his three dogs and pet Polar bear as they went to the Land of Missing Men, is the material of *An Eskimo Robinson Crusoe*, by Roy J. Snell.

Stories for Christmas

There will be many happy readers of *In Santa Claus's House*. Little orphan Dot found her way to the Christmas Saint and after a merry visit with him and his Brownies was returned to the city as a Christmas gift to a lovely child in a happy home. The story is told by Florence Irwin and is illustrated in color.

Giovanni, Stories of an Italian Boy, told by Anita B. Ferris, is a series of tales from the life of a little lad in Naples who emigrates to New York and becomes a true American. It is an illustrated book for little children.

The Little Angels, by Laura Spencer Porter, is original in conception and couched in exquisite English. Older people will enjoy the book as well as children.

Dr. Jefferson shows clearly in *The Land of Enough* how dreary Christmas would be if no one desired anything he did not already possess.

Most attractive with its clear print and colored illustrations is Stella Perry's *Angel of Christmas*. It has a message, too—let not the Christmas gift be purchased with tainted money.

Another Christmas book attractive to the eye is *While Shepherds Watch*. This is a vivid interpretation of the Christ story suitable for the older and more thoughtful children and for adults.

For the Little Ones

A most suggestive collection of family stories by Carolyn Sherwin Bailey, *Stories for Any Day*, will prove a bit of missionary work of other grown-ups will follow the author's example and hand down to the next generation family stories and traditions.

Similar in plan is *When Daddy Was a Boy*, by Thomas Wood Parry. The fact that Daddy lived in a Kentucky home adds a delicious flavor. The book is well illustrated.

The child that most dreads the morning task of dressing will look forward to it with joy if the time is beguiled by the stories designed to accompany washing the face, combing the hair and like duties. Ruth O. Dyer has collected these in *The Daytime Story Book*. There are numerous illustrations.

Florence Peltier's fanciful tale, *Through the Rainbow*, takes a little girl on a fascinating journey thru the colors of the spectrum. The illustrations in black and white and in color are profuse and very attractive.

All Around the Sundial is a compilation of lovely verses of genuine appeal to the child's heart and mind. Rachael R. Elmer has done some jolly pictures which add greatly to the book.

In Picture Land is a book of children's favorite masterpieces with accompanying stories in verse suitable for memorizing.

Patten Beard's *The Good Crow's Shop* is a charming device for entertaining children by the use of wall paper samples.

Little Star Gazers, by Julia Schwartz, tells in story form how the stars serve as time keepers and guides. It shows their beauty and mystery but concludes that the earth is the best place to live.

The Story of the Happifats, from whence they came, how they went grouch-hunting, what they did with the grouch when they caught him, is a cheery one. Kate Jordan, both author and illustrator, has produced a delightful book that will stimulate the child's imagination and make him try to emulate the Happifats.

Girls and Boys and *Our Children* are two books of attractive stories, poetic in their simplicity, by Anatole France. They

are generously illustrated by Boutet de Monvel.

Johanna Spyri, the author of that popular Swiss tale, "Heidi," writes *What Sami Sings With the Birds*. Beautiful colored pictures mark the progress of a deeply pious story.

Adventures for Girls

Indian Folk Tales and Myths, by Katherine B. Judson, is a very attractive collection of animal stories.

Children who love Uncle Remus's stories will be glad of Andrews Wilkinson's *Boy Holidays in the Louisiana Wilds* with its effective pictures. Daddy and Mammy Coon, Mr. Fox, Mr. Buzzard and others of their train appear speaking their quaint dialect.

Mother West Wind "When" Stories, by Thornton W. Burgess, is in the style of his earlier books of entertaining morals. There are many illustrations.

Another illustrated book in the Dorothy Dainty Series is *Dorothy Dainty at Glenmore*, by Amy Brooks It will please all children who love a model little girl.

Given an old estate on the Island of Jersey, an underground passage to a cave by the sea, a secret staircase, a ghost and many other lovely things together with a group of young people—what girl, or boy, either, could fail to be charmed? This is what Edna A. Brown has provided in *The Spanish Chest*. Some of the illustrations are from photographs.

Augusta Seaman gratifies the feminine love for mystery in *The Girl Next Door*. Attractive illustrations lead on to a happy ending.

It is good to be reminded that there were once happy days in Belgium. Rebecca Samson's *School Girl Allies* describes the pranks and friendships of girls from various countries brought together in a Brussels boarding school. The few pictures make us wish for more.

The doings and adventures of a group of Camp Fire girls out in the open amid the northern Massachusetts are interestingly told in a wholesome story, *Camp Fire Girls and Mt. Greylock*. The patriotic girls, hardened by their outdoor life, form themselves into the Minute Girls of 1916, which aims at training girls to be of national service.

The Outsider at St. Agatha's is a wholesome narrative by Edith Robinson with a not too obtrusive moral—two of them in fact!

Nina Rhoades has succeeded in creating a very dear child in *Plucky Little Patsy*. The small American inherits property from an English grandfather. This event revolutionizes her own life and that of many others. The pictures show us just how she looked.

Elizabeth Bess, by E. C. Scott, is a winsome, natural little girl of the sixties. There are charming pictures of child life in that period with excellent pictures.

William and Williamina, by Frances R. Sterrett, is the story of a little girl's unusual devotion to the foster father who found her "in the bulrushes just like Pharaoh's daughter found Moses."

Peggy of Roundabout Lane, by Edna Turpin, is an unusually wholesome and pleasant story of a little girl who took care of a family of seven children while her mother was in the hospital, and learned that it is better to win the rewards of bravery from life than to win the rewards of scholarship in school. It is close akin to the Alcott books.

Scouts and Campers

Richard Harding Davis's *The Boy Scout and Other Stories for Boys*, contain five thrilling tales including such old favorites as Gallegher and The Bar Sinister.

Hitting the Line is a stirring tale of athletics by Ralph Henry Barbour telling of a Western lad who made good in an Eastern preparatory school. There are colored illustrations.

Alden French's *The Golden Eagle* is a story for boys and girls especially interested

NOW READY

The Major—Now Ready

At All Booksellers *Send for Illustrated Catalogue*

GEORGE H. DORAN COMPANY, 38 West 32d Street, New York

PUBLISHERS IN AMERICA FOR HODDER & STOUGHTON

in sail boats. It has a good ethical tone. The illustrations are appropriate.

Another mine of adventure in the wilds of America is *The Treasure of Mushroom Rock*, by Sidford Hamp.

The ever potent lure of buried treasure carries the hero of J. W. Schultz's *The Gold Cache* into a series of dangerous experiences with the Indians leading to the finding of gold. There are striking illustrations.

A new boy's book is *The Boy With the U. S. Weathermen*, the latest addition to the "U. S. Service Series." This book was written in coöperation with the officials of the U. S. Weather Bureau and is endorsed by them. It is a capital boy's story and instructive as well.

Hugh Pendexter's account of *The Young Loggers in Maine*, shows how exciting life in the woods may be especially with the aid of a man of mystery. The pictures are good.

Camp Jolly, by Francis Little, depicts the wild experiences of three boys in the Colorado Canyon. One of them is kidnapped but pluckily escapes. It is illustrated.

Winning His Army Blue, by Norman Brainerd, is filled from cover to cover by thrilling events of military school life. It has eight illustrations.

Homer Green has shown in *The Flag* how a lad in a moment of anger desecrated the flag but after years of suffering redeemed himself on a battlefield of the Great War. There are several illustrations.

Another vivid story of war intrigue frustrated by a lad is *The Island of Appledore*, by Adair Aldon.

A timely book is *The Wireless Patrol at Camp Brady*, by Lewis E. Theiss. Boys will follow with bated breath the course of the amateur operator who saved a city from destruction.

The Top of the Continent, by Robert Sterling Yard, with its descriptions of the national parks, makes one realize our country's resources. The illustrations are profuse and excellent.

World Stories

New editions of Dr. Wägner's *Epics and Romances of the Middle Ages* and *Asgard and the Gods* appear in cheerful gold and red bindings. With their many illustrations they will be welcome additions to the libraries of any boy or girl.

A selection of *Mystery Tales*, by Elva S. Smith, includes such stories as Irving's "The Haunted House," Selma Lägerlof's "The Fisherman's Ring," Macaulay's "The Last Buccaneer" and Alfred Noyes's "The Admiral's Ghost."

The Romance of King Arthur ought to feed the fancy of every growing boy. The abridged edition from Malory's "Morte d'Arthur," by Alfred Pollard, and excellently illustrated by Arthur Rackham, is of distinctive literary worth and the book itself is most attractively bound.

How They Really Lived

A variety of pictures of Rumanian life add interest to Van Teslaar's *When I Was a Boy in Rumania*, in which are described in vivid fashion many odd customs of that country.

Altogether delightful is Cornelia de Groot's *When I Was a Girl in Holland*. She tells of her childhood, her clothing, school, games and then of the national customs. There are numerous legends and anecdotes. The illustrations from photographs are well chosen.

Dr. Edward A. Steiner has shown how a great sorrow awakens one's sympathy for others. Incidentally he gives a glimpse of his own boyhood in Central Europe as he tells the story of *My Doctor Dog*.

The Boy Who Went to the East is a book of folk tales of the Iroquois and Algonquin Indians. They are entertainingly written and tell of the customs, primitive life and thought of the earliest Americans.

Hamilton's *Life of Robert E. Lee for Boys and Girls* is full of Civil War incidents told from an unbiased standpoint.

The character and outlook of the Confederate leader as presented here will appeal to young people.

D. Lange's *The Lure of the Mississippi* is a story and also is a history of Indian outbreaks during the Civil War.

Albert A. Altsheler, in his romance of the French and Indian War, called *The Rulers of the Lakes*, gives a picture of Iroquois life and warfare that is historically true. There are four pleasing colored illustrations.

Wilderness Honey, by Frank Lillie Pollock, shows the difficulties and pleasures, the skill and the risks involved in caring for bees. A villain squatter endangers the life and property of the hero and heroine but by their kindness he is changed into a friend.

The pictures in *The Village Pest* are almost as funny as the story itself. Young people will enjoy Montgomery Rollins' account of David's pranks.

Moral Training

The World's Wonder Stories, by Adam Gowans Whyte, answers the questions that arise among children as to How do things happen? How was the world made? Who was the first man? Where did the religions, the Bible and right and wrong come from?

Sylvanus Stall's *With the Children on Sundays* appears in a new edition. The aim is exprest to make Sunday the happiest and most impressive day of the week. Moral lessons are told in terms of every day life and well illustrated.

Frederica Beard's *Prayers for Use in Home, School and Sunday School* gives prayers for the usual occasions of child life arranged in groups for various ages.

The Young Loggers, by Hugh Pendexter. Small, Maynard & Co. $1.25.

Artillery Turned on a Canary Bird

HOW one little canary bird caused consternation among an entire division of British troops and brought down upon its own head a hurricane of rifle fire and finally point-blank shell fire is told by Dr. Robert Davis, recently arrived in the United States to lecture at the officers' training camps on the activities of the Red Cross in Europe.

For more than a month on a northern sector of the line the British had been secretly mining beneath the German trenches. The work was almost complete. During the operations several canary birds were, as usual, kept in the excavations to warn the workers of the presence of firedamp, which is fatal to the birds. One little songster, however, escaped from its job, flew into the middle of No-Man's-Land, and, alighting on a bush, began to sing.

Consternation reigned in the British lines. If the bird should be discovered by the Germans the work of weeks would go for naught, as the enemy could easily interpret the meaning of its presence and prepare to combat the sapping operations. The infantry was immediately ordered to open fire on the canary to destroy it. But it seemed to bear a charmed life. Even the sharpshooters failed to bring it down as it hopped from twig to twig. Finally the artillery had to be called on. A trench gun with a well-timed shell blew the bird and the bush and the song into nothingness.—*Red Cross Bulletin.*

Words of the Week

In this issue we are beginning an experiment and it rests with our readers to make it a success. We are trying to explain as briefly and clearly as possible the meaning of the unfamiliar names, words and phrases which creep into the news from time to time to perplex the American public. Should you come across any puzzling phrase or obscure reference in reading "The Story of the Week," or any other department of The Independent, you will do us a service by calling our attention to the matter and asking the "Words of the Week" editor to explain things in his column. Perhaps he won't be able to satisfy your curiosity, as even editors are not omniscient, but you will usually find it worth while to take a chance.

BOLSHEVIKI (Bol'shev'i'ki')—The Russian revolutionary party which favors control of the Government by representatives of the working class only and desires an immediate peace with Germany on the basis of "no annexations and no indemnities."

MAXIMALISTS—An English word used to translate the Russian term "Bolsheviki."

SOVIET (Sov'yet')—An organization representing the workingmen and soldiers of Russia. The Bolsheviki include the most radical wing of the Soviet but other and more moderate parties are also represented.

DUMA (Du'ma)—The supreme legislative body of Russia, called into existence by Emperor Nicholas II as a result of the revolutionary disorders which followed the Russo-Japanese War. The Emperor denied the Duma any real control over the Government; but it was allowed considerable freedom to criticize abuses, and its leaders played an important part in the revolution and the establishment of the republic.

DEMOCRATIC CONGRESS—A conference of the various radical parties in Russia called by Premier Kerensky for the purpose of organizing support for the Government and the war. It had no power to legislate.

PROVISIONAL PARLIAMENT—The present legislative body of Russia representing all parties.

CONSTITUENT ASSEMBLY—The legislative body which will shape the new Russian constitution and at the same time carry on the Government. It has not yet been chosen.

CAMOUFLAGE—A French word for the art of disguising. It is used especially for the common military practise of hiding artillery, camps, airplanes and supply stations from the enemy by streaking the objects to be hidden with such combinations of colors that they "melt into the background." The dust colored or "khaki" uniform of the modern soldier is an example of camouflage.

CADETS—A Russian nickname for the Constitutional Democrats.

UKRAINIANS—A people of southwestern Russia and eastern Galicia; also called Ruthenians and Little Russians. They speak a language closely allied to Russian but sufficiently distinct for them to be recognized as a separate nationality.

COSSACKS—Russian cavalry regiments who hold lands from the Russian Government in return for military service. Most of the Cossacks are from southern Russia.

TRENTINO—Tirol (or "the Tyrol") is the very mountainous region in the extreme western part of Austria; the Trentino is the southern part of this region. The northern section of Tirol is almost purely German in nationality, but the Trentino is inhabitated by Italians and it has therefore long been an Italian ambition to conquer it from Austria.

A Christmas Feast

Select Your Gifts From This List

ALL IN IT

By Major Ian Hay Beith

"Major Beith puts life and vigor into every line of his book. . . . A fit successor to 'The First Hundred Thousand.'"—*Philadelphia Record.*

"Has all the fascination of his former book. Ian Hay has made good."—*New York Tribune.* *$1.50 net.*

At the Front in a Flivver

Independent Opinions

We are glad to say that The Independent circulates among people of the widest variety of opinion, but we did not know that an adherent of "the right divine of kings to govern wrong" still lived in America until we received the following letter remonstrating on Biblical grounds against our remark that "If the world is to be made safe for democracy, it must be made unsafe for autocracy":

"The throne of kings is established by righteousness."—Proverbs, xvi:12.

"Whoso provoketh a king to anger sinneth against his own soul."—Proverbs, xx:2.

"God made a king over the people because he loved them."—II Chronicles, ii:11.

"God anointed David king."—I Chronicles, xi:3, 4.

"God gave them Saul to be their king."—Acts 13:21.

"The Lord magnified Solomon."—I Chronicles, xxix:25.

"Curse not the king, no, not in thought."—Ecclesiastics, x:20.

"God made kings."—Acts, xiii:21, 22.

"God made thee king."—II Chronicles, ix:8.

"God liked me to make me king over Israel."—I Chronicles, xxviii:4.

"One king shall be king to them all."—Ezekiel, xxxvii:22.

"God save the king."—I Samuel, x:24.

"Honor the king."—Peter, ii:17.

"The Father is greater than the Son."—St. John, xiv:28.

Upon what grounds of this inconsistent Christianity is this queer thing of "democracy" founded? Either the Bible is true or it is NOT.

But the republican as well as the monarchist can quote Scripture to his purpose. Let us cite:

"Put not your trust in princes."—Psalms cxlvi:3.

"We have added unto all our sins this evil, to ask us a king."—I Samuel xii:19.

"When Jesus therefore perceived that they would come and take Him by force, to make him a king, he departed again into a mountain himself alone."—John vi:15.

"He hath put down the mighty from their seats, and exalted them of low degree."—Luke i:52.

"As a roaring lion, and a raging bear; so is a wicked ruler over the poor people."—Proverbs xxviii:15.

"Have any of the rulers or of the Pharisees believed on Him?"—John vii:48.

"To bind their kings with chains, and their nobles with fetters of iron; to execute upon them the judgment written; this honor have all his saints."—Psalms cxlix:8-9.

It would have been impossible to have let so conspicuous an event as the 400th anniversary of the Reformation pass without notice in The Independent and it would have been hard to find a man better qualified to say why that event was being celebrated than the pastor of a Lutheran Church of the metropolis. But there are two sides to the Reformation and many sides to Luther, so while we have no intention of starting again this four century old controversy we are glad to give such space as we can to this reply by the Rev. Frederick F. Connor, of St. Viator College:

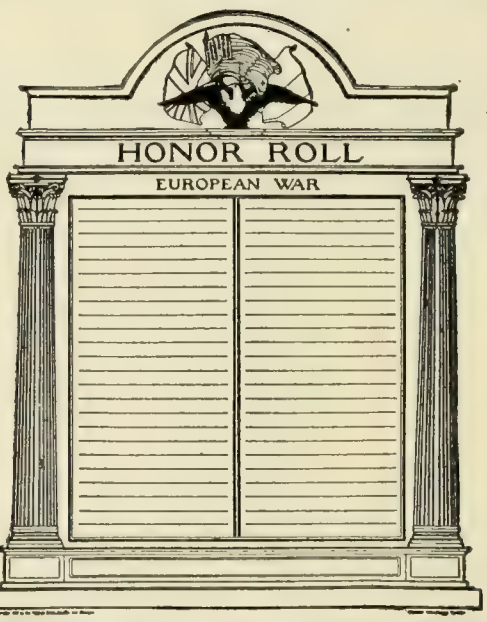
Dr. Remensnyder's article, "When Modern History Began," which appeared in the issue of The Independent, September 22, gives such a false impression of Luther and distorts Catholic doctrine so much it

Xmas Tree Outfit—$3

Complete—Postpaid

Play Safe—Light Your Tree Electrically

Candles are dangerous. Don't turn your Christmas tree into a tragedy. Xmas tree electric lights keep your tree lighted with perfect safety and less expense than candles. Send $3.00 and we will mail postpaid a complete Xmas tree outfit consisting of 8 variously colored tungsten lamps with 16 ft. Silkoline wire cord with attachment plug that will fit any socket in your home.



If house is not wired, we can furnish a similar outfit to be used with batteries, same price. Battery box including 3 long-lasting batteries and connectors $1.00 extra.

Outfit will last a lifetime—approved by insurance companies, used by churches, schools and institutions.

Order as many as you want. Specify whether for use on electric circuit or batteries. Send check, post office or express money order,

THE INDEPENDENT will make a most acceptable CHRISTMAS GIFT

should not be allowed to go unchallenged especially as it appears in a journal which enters a large number of schools. In the space of 600 words it will, of course, be impossible to answer it fully, but a few of the more glaring errors can be indicated.

In the first place it is difficult to understand how the observation of the Lutheran quadri-centennial is "not done in any spirit of hostility to the Roman Catholic Church," when it is remembered that Luther's rebellion against her authority was the most hostile act against her ever undertaken, and that Luther's followers have ever since been known as Protestants, because they protest against the Catholic Church. If this be not hostility then what does hostility mean? Dr. Remensnyder continues the observation of the quadri-centennial "is done out of fealty to the word of God, and with the conviction that the principles enunciated by the reformers are essential to a true church and to a scriptural Christianity." The implication of such a statement as this is that the Catholic Church is not the true church and not in accord with scriptural Christianity, which, to say the very least, is controvertible, and far from a demonstrated fact. The Catholic can equally well assert that the principles of the reformers are subversive of a true church and of scriptural Christianity, and can adduce good reasons in support of his contention.

Dr. Remensnyder is not quite fair in his treatment of what he calls "the trade in papal indulgences." He fails to state that Tetzel did not preach orthodox Catholic doctrine on this subject. (Vide Grisar, "Life of Luther," or any other reliable historian.) An indulgence is not a forgiveness of sin, but merely a remission in whole or in part of the temporal punishment due to sin, and the Catholic Church has at all times condemned the sale of indulgences as Simony of the grossest kind. A careful distinction must always be made between abuses and the official teaching of the church. The statement that "Luther had grasped the central idea of the Gospel; that remission of sins was to be obtained alone by heart repentance and by faith in the sacrifice of Christ, instead of being procurable by external, formal acts, penances, Ave Marias, etc., and still less to be purchasable with money," implies that the Catholic Church has taught that remission of sins is to be obtained in these ways. The Catholic Church has always emphasized the necessity of repentance and contrition and no Catholic theologian ever taught that forgiveness of sin could be obtained by any of these means alone. Forgiveness of sin can never be purchased by money.

Dr. Remensnyder, in speaking of the divine authority and supremacy of the scriptures, uses language which is hardly justifiable. He says, "This was the colossal weapon with which he was to break in pieces that false assumption which had built up a system that enslaved the minds and consciences of men in a tyranny which brooded as a nightmare over human progress and happiness." The proper object of the intellect is truth, and let us suppose, which is not beyond the bounds of possibility, that the Catholic concept of the church is correct.

If papal authority be divinely established this deference to it cannot be slavish; and to say that "the Pope was really invested with no extra Scriptural authority" opens up an entire field of theological controversy too extensive to enter upon here. These are merely examples of wrong impressions conveyed by the entire article.

In conclusion it may be said that modern historical study has demonstrated beyond any manner of a doubt that Martin Luther can hardly be characterized as pious, or that he arrived at his conclusions "after long and prayerful consideration"; or that he was a wonderful champion of the home. How a man can receive commendation for the "daring originality of his ideas," and at the same time for "his conservatism" is difficult to understand.

Market Place Talks

BY LUIGI CRISCUOLO

LIBERTY LOAN BONDS 3½S OR 4S

THE recent abrupt decline in the new issue of United States Government Liberty Bonds concerns no less than 9,000,000 individual subscribers, so it may be opportune to say something of the factors which govern the prices of the First 3½s and the Second 4s. The subscriptions received on the 4s amounted to $4,617,532,300, of which amount $3,808,766,150 were allotted, the law under which they were issued providing that one-half of the amount of subscriptions over $3,000,000,000 could be allotted by the Secretary of the Treasury.

THE DIFFERENCE

BOTH issues of bonds were offered at par and have been dealt in on the New York Stock Exchange since their issuance. While the 3½s sold at below par for a long time and the 4s held at par or slightly above, the 4s declined from 100.02, which is the high price since issuance, to a recent low of 97, while the 3½s advanced from a low of 98.44 to 99.80. These new figures were made on November 19th. Obviously there is an explanation for the opposite action, and the reason must be interesting to every one who holds any of these bonds.

It is generally known that with respect to both issues many banks and individuals subscribed to more bonds than they intended to carry in order to make the initial offering a success, but sold at the first opportunity because with money rates ruling above 4% it was not profitable to carry bonds which were yielding but 3½% or 4%.

Some reports had it that the recent selling of the 4% bonds was due to a temporary technical market condition, but it is my belief that the reason was decidedly more significant than that of mere liquidation.

There is no doubt that liquidation by people who bought more than they could carry helped to depress prices just as when a new loan will be offered, buying of these 4s on the part of banking institutions will help to make the next offering a success.

IDENTICAL VALUES

THE intrinsic value of the two issues of bonds as pure obligations of the richest country in the world is not to be doubted as *identical*.

The difference lies in the individual features possest, such as rate of interest, convertiblity and tax-exemption.

Since the 3½s were issued, many wealthy people as well as corporations and estates have purchased them because of their absolute exemption from taxation of any kind with the exception of estate or inheritance taxes.

It must be plain that if the income tax applicable to individuals having incomes of $2,000,000 or more amounts to something like 63%, it is wiser to hold 3½% tax-free Liberty Bonds than even bonds yielding 7%, altho this is based on taxation at that rate continuing during the life of the bond yielding 7%, altho this is based on taxation at that rate continuing during the life of the bond yielding 7%. However fallacious the latter assumption may seem, security values have not yet been adjusted in view of the various adverse factors such as liquidation and taxation, altho it must be said that good bonds of any sort bought at the current level will not prove disappointing to the *average* investor. The $2,000,000 class comprizes, of course, a small proportion of our investors, but is by no means enough to affect quotations.

The Second 4s are only exempt from the taxes previously mentioned to the extent of the income on $5000. The value of the tax exemption feature of the 3½s was not discounted for a long time, and I judge that it will not be fully appreciated for some time still.

If taxes continue at the present pace, the 3½s will not stop at par, while the 4s must adjust their market price accordingly.

If there were a continuously increasing demand for the 4s, the price could be held up, but in the face of an increasing demand for the 3½s on account of their tax-free feature, it seems likely that the 4s will sell below par while the 3½s will hold their own, unless economic conditions should have any material changes.

CONVERSION PRIVILEGES

THE official circular of the Treasury Department describing the first issue of 3½% bonds gave their conversion privilege substantially as follows: If, before the termination of the war between the United States and Germany, bonds are issued bearing over 3½% interest, holders of the First 3½s will be given an opportunity to convert them into the new issue on a par for par basis.

The new bonds so issued in exchange shall be identical with the new bonds offered for public subscription at the time except as to the terms of redemption and as to the maturity of principal or interest.

To take advantage of this conversion privilege the holder must exercize it within the period prescribed by the Secretary of the Treasury, the maturity of the period in the present case being six months from November 1.

THE official circular of the Treasury Department describing the second issue of 4% bonds gave their conversion privilege substantially as follows: If, before the end of the war there are issued bonds having a maturity of over 5 years from issuance, bearing a higher rate than 4%, holders of the Second 4s will be permitted to convert their bonds at par into new bonds at the issue price, with an adjustment of interest.

The conversion privilege must be exercized within six months from the date of the new issue, under the regulations which have been issued by the Treasury Department.

The bonds issued in exchange are to be substantially the same as those

to be offered for public subscription, as to interest, convertibility, non-convertibility, exemption from taxation, if any, except that the bonds issued in conversion for the Second 4s shall have the same dates of maturity of principal and interest and be subject to the same redemption features as the bonds which have been converted.

If the conversion privilege is not exercized within the period prescribed, it shall be void.

Thus, a holder of the absolutely income tax-free First 3½s due 1947 can convert into a new 4% bond due 1947 tax-exempt only to the extent of $5000, which bond will be once more convertible into a new issue bearing a higher rate. Or, he can hold his 3½s indefinitely so that if in 1918, or later, the Government should issue successively bonds bearing 4¼%, 4½%, 4¾%, 5%, etc.—he could wait until the interest rate satisfied him before converting.

The holder of the Second 4s, however, must convert step by step and he takes the risk of losing any conversion privilege after he has once converted. For while the present 4s are convertible into the next issue, there is no warrant that the next issue will be convertible into a subsequent one.

The 3½s maintain their conversion privilege into *any* issue of bonds sold before the termination of the war and at the same time they maintain their tax-free provision until they are converted.

With these factors in mind, bondholders having small amounts should decide whether they would prefer to lose 50% in interest each year by holding their First 3½s with the hope of their enhancing in value above par within the year or with the hope of converting into, perhaps, 5% bonds before the war ends. Or, whether they would rather take 4% now and convert into new issues step by step as they are offered until the conversion privilege is withheld.

For the investor who is subject to the very large super-taxes, there is no question that the 3½% bonds are more attractive, and it begins to be evident that he has begun to realize it and is willing to pay more for the 3½s than he is for the 4s.

The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds. We cannot, of course, decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

Safety
In Times of War

IN times of war, demand safety doubly safeguarded. Only the soundest investments should be purchased in periods like these. Furthermore, you are fully justified in requiring the best interest return on your invested funds, sufficient to meet the increased cost of living and the burdens the war imposes on all of us.

THE first mortgage bonds, safeguarded under the *Straus Plan*, meet these requirements in every detail. They are thoroughly fortified against commercial strains and stresses and adverse economic conditions. They yield 6% net and they do not decline in value. They are the logical investment today.

OUR current investment list describes a diversified variety of these sound bonds, in $1000 and $500 amounts, secured by the best properties in New York, Chicago, and other large cities. It will be sent to you on request. Write for it today, and ask for

WALK ON YOUR HEAD

The Most Remarkable Health Discovery of All Time

It is neither food nor drink, no concoction nor contrivance of any kind. **Nothing like it ever before published.**

Just a BIG IDEA that promises not only to cure many functional and physical ailments but to keep you in good health and prolong your life. My faith comes from my own experience and that of many others including physicians.

THE BIG IDEA

what it has done for me and what it can do for you are revealed in my copyrighted "WOYH" booklet, Price $5.00. No other expense connected with it, neither directly nor indirectly. Remit by check, money order or registered letter and I will send a copy by return mail. If you do not think it worth many times its cost, return it within ten days and I will refund your money promptly. A postal card with your address will bring further advance information if you desire it.

Sunday School Workers

are finding that

The Graded Way

is

The Better Way

Every teacher, Sunday-school superintendent and minister wishes his Sunday school to be just as effective as possible. Our GRADED LESSONS known as CONSTRUCTIVE STUDIES have put new life and power into hundreds of schools. Now is a good time to consider courses for the New Year.

Kindergarten (Ages 4-5) Bible stories, songs, play and hand-work.

Primary (Ages 6-8) Bible stories, songs, prayers, texts and notebook work.

Junior (Ages 9-13) Old Testament heroes, Life of Christ, Life of Paul, and study of certain books of the Bible.

Senior (Ages 14-17) Life of Christ, Apostolic Age, Hebrew Prophets and the problems of youth.

Adult (Above 17 years) Over twenty elective courses in the Bible, Church History, Christian Ethics and Social problems.

Principles and Methods of Religious Education. A series of handbooks designed especially for teachers and directors of religious education.

WRITE TO THE PUBLISHERS FOR INFORMATION CONCERNING THESE COURSES AND HANDBOOKS.

This Holiday Season

OFFICERS AND ENLISTED MEN WILL ENJOY READING

The Life of Lieutenant General Chaffee

By William Harding Carter

Major General, U. S. Army. Commander of the Central Department

"It has remained for the present generation to witness the solitary instance in which a soldier risen from the ranks of the Regular Army has been honored with the highest military office in the gift of the nation. Not for this exceptional fact, but because of his long and remarkable career in arms, the life-work of Lieutenant General Adna Romanza Chaffee deserves to be made of record, that future generations of Americans may comprehend what men of his time endured for the nation's sake . . . . **General Chaffee's career should be an inspiration to every young man whose tastes and qualifications suggest the army as a career."—*From the Author's Foreword.***

260 pages, 16 half-tone inserts—$2.50, postage extra
(Ready December 15)

☞ *Special attention given to advance orders. Your card, if supplied, will gladly be inclosed in gift copies which you desire mailed direct to your friends.*

New Fifth Edition Completely Revised

A MANUAL OF STYLE

By the Staff of the University of Chicago Press

An authoritative guide on all questions concerning the style of a book or any other printed matter. Special features include

118 pages of rules for Composition.
Proofreader's Marks.
Hints to authors and editors, proofreaders and copyholders.

$1.50, postage extra (weight 1 lb. 8 oz.)

A Companion Volume

A MANUAL FOR WRITERS

By John M. Manly

Head of the Department of English in the University of Chicago and **John A. Powell**

A book designed to aid authors and all others who are concerned with the writing of English. It aims to answer the practical questions that constantly arise in the everyday experience of individual writers, business houses, schools and colleges, editors, secretaries, etc.

$1.25 postage extra (weight 1 lb. 10 oz.)

THE NEW PLAYS

Polly With a Past. One of the season's most notable successes. Clean, wholesome comedy admirably acted. (Belasco Theater.)

Her Regiment. A war time musical comedy, not very good and not very bad. One or two of Victor Herbert's songs decidedly catchy. (Broadhurst Theater.)

HOW TO STUDY THIS NUMBER

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. COMPOSITION.

Editorial Articles.

1. Select epigrammatic sentences from "Peace with Victory." Explain every sentence selected. What is the value of using such sentences?
2. In a single paragraph explain why "Peace with Victory" is an unusually good presentation of the best American spirit.
3. Read "How Shall I Spend My Vote?" Answer the question in an essay written in imitation of one of the *Sir Roger de Coverly Papers.* Use anecdote, characterization, direct quotation and conversation, and make a final application.
4. Explain in a single, convincing paragraph exactly what is meant by "nationalizing" our seaports.

Creative Chemistry. By Edwin E. Slosson.

1. Tell, as if to your father or mother, what you have learned from this article concerning the manufacture of familiar things.
2. Write a paragraph in which you explain the following sentence: "If the Romans had had paper to print upon the world might have escaped the Dark Ages." Write a second paragraph in which you show how the reading of The Independent helps to make a student into a better citizen.
3. Point out evidences of pre-arranged plan in this article.
4. Point out examples of the following: metaphor, personification, climax, humor, use of commonplace words for the sake of clearness.

Wartime in the Valley. By Corra Harris.

1. Show in what ways the article has characteristics peculiar to the essay as a literary type.
2. Write a paragraph in which you show that the spirit of the article is intensely patriotic.
3. Write a similar essay-like article concerning the fighting men of your own community. Make your article equally patriotic.

The Sand Man. By Donald Wilhelm.

1. Show in what ways the author has employed the methods of the novel in order to present his subject matter. What advantages has he gained by this?
2. Write a similar article concerning some person, or subject, that you know intimately.
3. Condense into a single paragraph the principal facts presented in the article.
4. Who is Ernest Poole? What is "The Harbor"?
5. Imagine that you have visited Mr. Bush. Write a letter in which you tell of your visit, and characterize the man.

Forty Thousand Million a Year. By John Skelton Williams.

1. If you have read Burke's *Speech on Conciliation* write a composition in which you contrast the statistics given by Burke and the statistics given by Mr. Williams.
2. Write a humorous story in which you tell how the Count of Monte Cristo comes to the United States and tries to awe Mr. Williams. Write a proper introduction, use conversation, and make your story rise to a climax.

Make a Friend of Russia. By Isaac Don Levine.

1. Make a summary, or an outline of this article and write a paragraph of your own comments on the author's viewpoint and his arguments.
2. Compare the cartoons on page under the heading "Her Neighbors Discuss Revolutionary Russia" with Mr. Levine's article. Which of them could you use to illustrate the points he makes?

SECTION II. LITERATURE.

1. Do you consider "My Four Years in Germany" by James W. Gerard important from a literary standpoint, or not? Give your reasons.

SECTION III. WORD STUDY.

1. Give the meaning, and the derivation, of every one of the following words used in the editorial articles: Junkers, dynastic, aggression, régime, dictator, cultural, illiteracy, "philistine," dilemma, arbiter, proletariat.

SECTION IV. GRAMMAR.

1. Imagine that you have been asked to act as substitute teacher of your class for one day. Prepare a lesson in grammar based on this number of The Independent. If your teacher will permit it, take your place at the desk, and conduct the lesson.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Nationalizing Our Railroads—"One Nation; One Railroad."

1. Write a brief summary of the history of American railroads, (a) from 1830 to 1870, (b) from 1870 to the passage of the Interstate Commerce Act, (c) since then.
2. What would be the present advantage of a nation-wide pooling of railroad interests?
3. "Talk of Federal ownership of railroads is becoming increasingly frequent." Why?

II. Woman's Suffrage in the United States—"How Shall I Spend My Vote?"

1. According to this editorial what are the three courses open to the women of New York? What settlement does the writer predict?
2. If you were a woman voter in New York what course would you take?
3. "In other states . . . this question has never arisen." Why not?
4. What do you think of the wisdom of establishing separate women's civic clubs?

III. Socialist Agitation in the United States—"The Elusive Middle Class."

1. Give a detailed description of the "social structure of England a century or so ago." Compare this with the social structure of France before the Revolution. With the present social structure of the United States.
2. "The colonies had the nucleus of an aristocratic social class." What happened to break down the social distinctions which existed in America in colonial times?
3. "With the Socialists the chief concern was to find not the upper but the lower limits of the middle class." Why did the Socialists make this search?
4. Why has the Socialist propaganda had greater success in Germany, France and Italy than in England and the United States?

IV. Present Day American Finance—"Forty Thousand Million a Year."

1. Compare the stated stock of money, the wealth, and the yearly income of the American people. How is it possible for the wealth of the people to be over forty times their annual income and nearly seven times as great as the volume of money in the country?
2. What functions do the banks play in distributing the wealth of the country?
3. Give a brief account of our National Bank system and of the Federal Reserve Bank.
4. What is meant by "the money market"? What part does this market play in our credit system?
5. Why is "our stock of gold the basis of our credit structure"?

V. The Basis for Permanent Peace—"Peace With Victory," "Make a Friend of Russia," "Lansdowne Asks for Peace," "Is Russia Friend or Foe?" "German Reichstag Meets."

1. Review the story of Germany's war with Denmark, with Austria, and with France. Show how these wars "undoubtedly converted the German people to Prussianism."
2. "He [Woodrow Wilson] presides over . . . the greatest peace society known to history," etc. Contrast the American political ideal described in this sentence with that of the Hohenzollerns. Which is more likely to bring permanent peace to the world? Why?
3. Compare Mr. Levine's interpretation of the present position of Russia with that exprest in the news item.
4. Do you find anything in common in the views of Lansdowne and von Hertling?

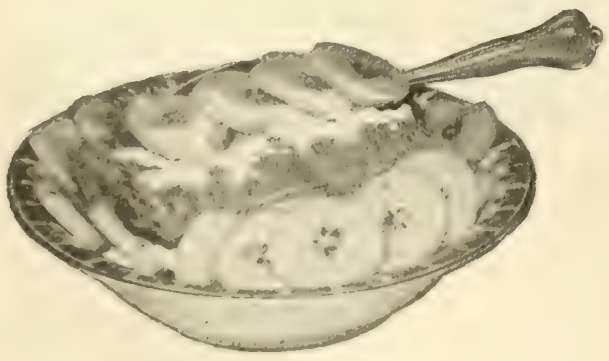
VI. Modern Industrial Problems—"Cellulose and What Is Made of It."

1. Investigate the paper industry and discuss the effect of the development of the cellulose process upon this industry.
2. Do the same for the textile industry, paying especial attention to the production of artificial silk.
3. Discuss the various uses of collodion in modern industry.
4. As a result of your investigations try to determine the relative importance of the nitrate industries, the coal tar industries, and the cellulose industries.

VII. International Trade—"The Sand Man," "Nationalizing Our Seaports."

1. "New York Harbor is not a local but a really national and international harbor." In what sense is New York Harbor a local harbor, a national harbor, an international harbor?
2. Compare the shipping of New York with that of London, Rotterdam and Hamburg before the beginning of the war. What changes has the war made?
3. What advantages has New York as an international harbor over any other port in the United States?

Your Real "Liberty Loaf"



It is easy to prepare a nourishing, strengthening, wholesome meal at low cost without spending much time in the kitchen if you only know how to select foods.

The whole wheat contains every element needed for building healthy bodies and for furnishing energy for the day's work.

Every loyal American will want to do his bit in preventing waste. When you eat wheat be sure you get the whole wheat in a digestible form. This will help the good work of conserving food —a real liberty loan to the Government.

Shredded Wheat Biscuit

is the real liberty bread. It is 100 per cent. whole wheat, nothing wasted, nothing thrown away. Pound for pound it contains more body-building nutriment than meat or eggs. It is ready-cooked, ready-to-eat.

Two or three Shredded Wheat Biscuits with milk and sliced bananas, prunes, or canned fruits, make a nourishing, satisfying meal at a cost of a few pennies.

Made only by

THE SHREDDED WHEAT COMPANY, Niagara Falls, N. Y.

The Independent

WITH WHICH IS INCORPORATED

HARPER'S WEEKLY

PEACE WITH VICTORY

FROM now on the Hohenzollerns will be continually attempting to create a sentiment in favor of an inconclusive peace. Realizing that they cannot win the war, they will endeavor to stop it before the wedge driven in by President Wilson separates them from the German people and while they are still masters of Austria, Bulgaria, Turkey and the lands they have overrun with their armies. But if the world is to be made safe for democracy it must first be made unsafe for autocracy. That is why there can be no peace until the Hohenzollerns, the Junkers and all their brood are dethroned, either by the German people or the Allied armies. For it must never for an instant be forgotten that the present German ruling class cunningly planned this war, suddenly began this war and is now ruthlessly waging this war, not for any such noble purpose as to extend liberty, to free bondaged peoples or to right injustice, but to enrich Germany, to glorify imperial prestige, and with blood and iron to dominate the world.

It must be confest that this policy of aggression has not proved fruitless to Germany in the past. The war with Denmark which gave her Schleswig-Holstein, the war with Austria which enabled her to achieve her hegemony, and the war with France which brought her Alsace-Lorraine and a huge indemnity have undoubtedly converted the German people to Prussianism. But in the end the nation that takes the sword must perish by the sword, for the world will never submit to the doctrine that might makes right. On the contrary, this war has demonstrated that right makes might. Witness the coalescing of the free peoples of the earth into a great alliance to overthrow German absolutism. To deny that German military autocracy is doomed is to assert that injustice does not sow the seeds of its own destruction and that the forces of morality will lie supine when a tyrant nation runs amuck. The issue, then, personified, is the autocrat William versus the democrat Wilson.

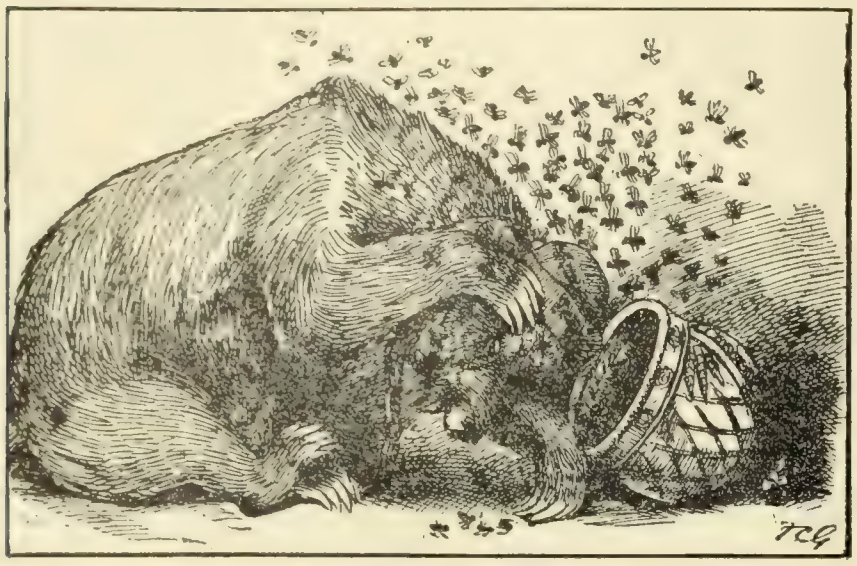
Woodrow Wilson occupies the most exalted political office on earth. He presides over a confederation of forty-eight sovereign states, the greatest peace society known to history and a living example to the nations of the earth of the way to achieve peace thru political organization. Peace is the outcome of justice, justice is the outcome of law, and law is the outcome of political organization.

The only way for a man to rise above the Presidency of the United States is to ascend into the international realm and there work for the political organization of the world, that law, justice and peace may prevail. This our President has done. At last he stands before mankind as the acknowledged leader and champion of liberty, democracy, and brotherhood. He is the first supreme head of a great power with the vision and courage to tell the nations that the single purpose of war is to substitute coöperation for competition in international affairs.

The issue he has made clear to all minkind. If, then, the autocracy that plunged the world into night is left in power, if the idea of a world reconstructed into a vast League to Enforce Peace is abandoned, if an inconclusive peace is made, then the heroes whose clay reddens Europe's soil will have died in vain and the whole world will have lapsed back into the old swelter of international anarchy, each nation armed to the teeth waiting only the breathing spell for the inevitable conflagration to burst out again.

If, on the other hand, we win this war, and establish at the peace conference the scaffolding of an international structure with legislative, executive and judicial functions, then hostile armaments will dwindle, commerce will be freed, democracy will be safe, international law will be enthroned, and mankind will have taken the first step toward that goal of all political evolution—the "world state" which the historian Freeman has said will be "the most finished and artificial production of political ingenuity."

The problem before Woodrow Wilson today is as great a problem as ever confronted mortal man. Yet it is no different in kind from that which confronted George Washington over one hundred years ago. When our forefathers proclaimed their independence, the last words of their immortal declaration read: "To this declaration we mutually pledge our lives, our fortunes and our sacred honor." The men who signed that document took no counsel of cowardice, and the United States resulted.



If now, we take no counsel of cowardice but in conjunction with our brave and stedfast allies mutually pledge our lives, our fortunes and our sacred honor to Woodrow Wilson's great declaration of Interdependence, the "United Nations" will result.

AMERICA'S DEAF AND DUMB

AMERICA, they say, has now been admitted to the congress of nations and will henceforth have a voice in all international affairs. But how can America speak if she does not know the language? And what will her advice be worth if she cannot understand what foreigners are talking about? It is an open secret that the war missions which have been sent to France, Russia, Italy and other countries that cannot be specified have been greatly hampered by the lack of secretaries, stenographers and attachés familiar with the languages of the countries to which they are accredited. We have, it is true, immigrants from all lands, but for obvious reasons they are not the most suitable material to represent America in this crisis. This has always been a difficulty with our diplomacy. Mr. Gerard's frank confession of his struggles with the German language in Berlin is amusing but also pathetic.

CARTOON COMMENT

HER NEIGHBORS DISCUSS REVOLUTIONARY RUSSIA

UPSETTING THE HONEY POT

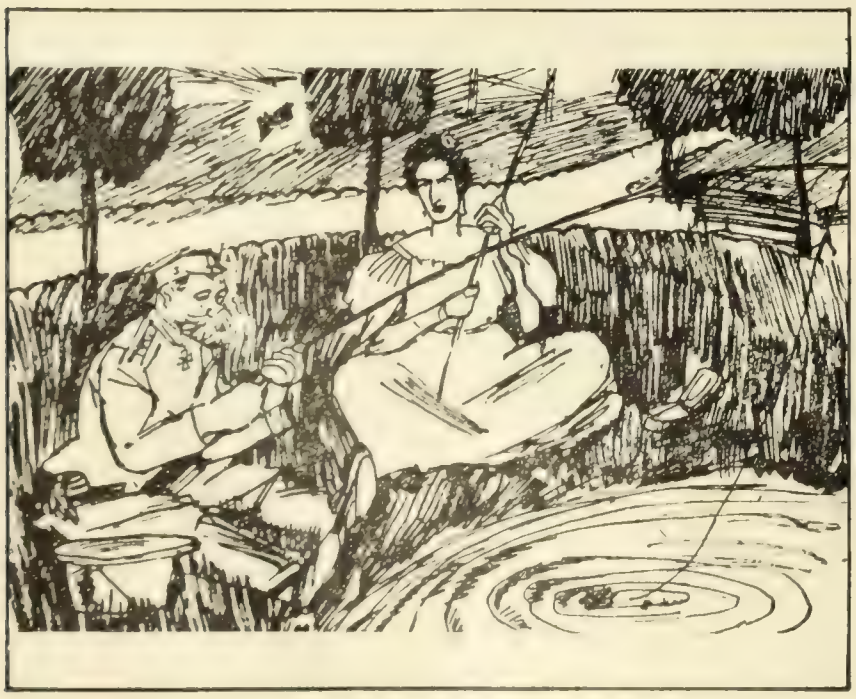
The Russian bear is being justly punished for trying to get away with unearned sweets.—"Westminster Gazette," London

THERE'S A LION IN THE WAY

Great Britain warns Russia, says the London "People," that the Prussian eagle's blandishments must not obscure the warring lion

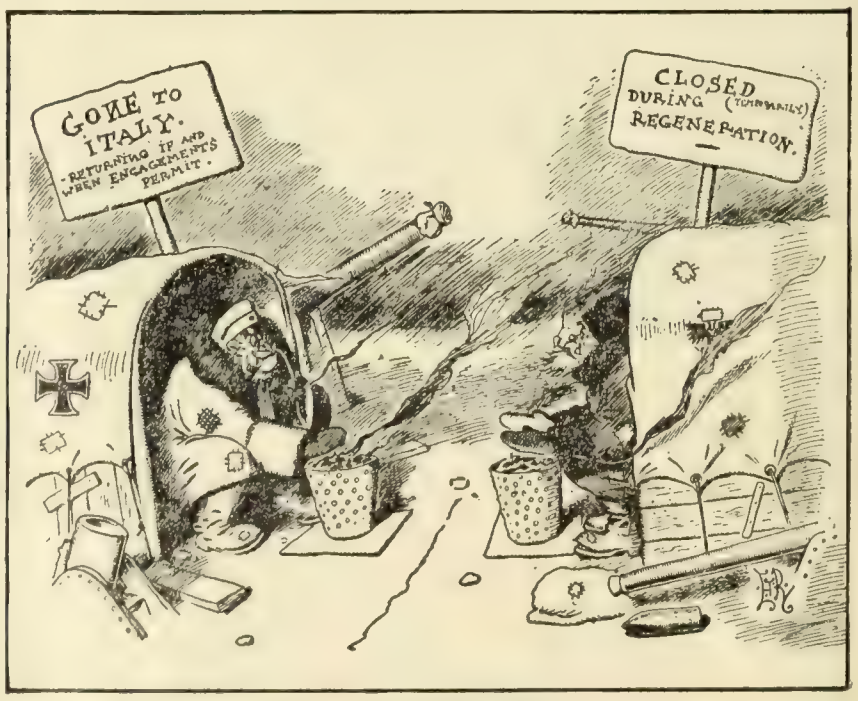
A GERMAN VIEW

"Kladderadatsch," Berlin, rejoices in the Russian army's report of dissension—"and one company too drunk to fight at all"



AT A STANDSTILL

Russia (to the Allies), "Well, boys, I'm fixed! Now it's up to you!"—a pessimistic view from "Reynold's Newspaper," London



FREEDOM?

Another German cartoon from "Kladderadatsch." The branches on the tree of freedom represent the knout of slavery

A CZAR'S SOLILOQUY

Nicholas is enjoying his vacation. "I see from the papers," he remarks to his wife, "that we stand a good chance yet of getting that old job of ours back again."—"Novi Satirikon," Petrograd

THE CARETAKERS

What Armageddon has come to on the eastern front. A British comment on the enforced inactivity of the opposing Austrian and Russian armies.—"Sunday Evening Telegram," London

Let us see what is being done to remedy this serious defect in our national education. In the last bulletin of the Pan-American Union Dr. Bard, secretary of the Pan-American Society, reports on the teaching of foreign languages in 112 universities, colleges and technical schools of the United States. He finds 110 of these institutions provide instruction in German, 108 in French, 97 in Spanish, 96 in Greek, 92 in Latin, 10 in Portuguese, 5 in Russian, 2 in Chinese, 2 in Turkish and 1 in Japanese. The actual condition is much worse than these figures indicate, for even where the minor languages appear in the catalog they are apt to be offered only a few hours and chiefly as philological exercizes. For instance, the Japanese who visit us are usually able to read our newspapers and make speeches to us—often very eloquent speeches—in our own language even tho they may never have been outside of Japan before. Can we return the compliment? Out of some six hundred institutions of higher education in the United States only one offers instruction in Japanese and that is a single half-year course of two hours a week. Who would think that Japanese was such an easy language as to be mastered in this time? Spanish is just now having a boom, but for our future intercourse with the 25,000,000 of Brazil and the 180,000,000 of Russia less than one per cent as many hours of language instruction as for German.

The remedy for this is not to cut down on the German but to multiply the facilities for other modern languages. Whatever may be said of the advisability of teaching German in the elementary schools it is essential in advanced work, for more scientific, scholarly and informational literature appears in German than in any other three languages and very little of it is translated. If Germany is to be our friend after the war it will be desirable to read her thoughts. If she is to be our enemy it will be indispensable. The Germans realize the importance of this and so should we. German educators now say that the reason why Germany has the world in arms against her is because she has been self-centered and failed to understand the mind of other nations. We may surmize that this disastrous inability to comprehend alien viewpoints is due to a more fundamental deficiency than lack of linguistic ability, but at any rate a strong movement is on foot for the greater substitution of modern languages for the Latin and Greek that have hitherto dominated secondary education. Even during the war they are increasing their facilities for the study of enemy languages. English, American, French, Russian and Italian books, periodicals and newspapers are freely sold, but the Allies exclude German publications. French and British plays, old and new, are being regularly presented in the German theaters and they pride themselves in giving more Shakespeare than London and in resurrecting a Molière play that the Theatre Francais had neglected. All this while still singing their hymns of hate. The Germans do not allow their passions and prejudices to interfere with their business or their pleasure.

We Americans have hitherto been inclined to cultivate foreign languages as an accomplishment, sometimes as an affectation. If we studied Italian or Spanish it was with the intent or pretent that we wanted to read Dante or Cervantes in the original. It did not occur to the business man and politician that it might be advantageous to read the Italian and Spanish newspapers.

THE IDEAL

IN an ideal world the individual would contribute all his work, all his thought, all his devotion, all himself, to the common good; and receive back from the common store whatever he needed for life, comfort, happiness and self-development and no more. This would be so because in an ideal world the individual would be completely unselfish, perfectly considerate of his neighbor, utterly devoted to the good of all.

This is the Christian ideal, the Golden Rule raised to its highest terms.

The only problem is to work this ideal out in practise. The characteristics of mankind which make self-preservation the first law of nature, self-gratification the instinctive reaction of man to his environment, selfishness man's incessantly besetting weakness, inevitably make the working out an interminable process.

When all men are instinctively and infallibly unselfish the Christian state will be here. But we shall get an approximation to that ideal long before that millennial time is reached. For every step in real progress that mankind makes collectively is on the road toward that far-off goal. If it does not lead that way it is not true progress, but spurious.

THE ELUSIVE MIDDLE CLASS

THERE are words and phrases in our language which, however popular, wear a lonesome air as if they were always looking around for their lost meanings. Such is the phrase "middle class," roughly corresponding to "bourgeoisie," a synonym much used by artists and Socialists whose knowledge of the French language stops at that word. In the well defined social structure of England a century or so ago "middle class" had a quite definite meaning. There were, in a general way, three recognized social castes. The top layer or aristocracy included those persons who had titles or owned a large acreage of land or held commissions in the army or were clergy of the established church. At the bottom were persons who did manual labor in town or country for pay. In between, like the meat layer of a sandwich, was a miscellaneous but fairly distinct group of clerks, tradesmen, factory owners, schoolmasters, physicians, ministers of the dissenting churches, and men of law.

We imported the word into America from England, but we could not import its meaning. The colonies had the nucleus of an aristocratic social class; but some of the men who might have been the "upper class" were driven out of the country during the American Revolution, others lost their wealth with the extinction of slavery during the Civil War, and some "old families" in New England and in the South still retain a limited and local prestige which is all but hidden by the towering fortunes of the industrial rich. The men who really dominated the country in the nineteenth century were either wealthy men of business or lawyers who entered politics; but both of these groups were by the English definition sections of the "middle class." It is true that a small group of literary and artistic dilettanti still uses the phrase in a disparaging sense, interchangeably with "philistine," but they seem unable to find in this country any aristocracy but themselves.

With the Socialists the chief concern was to find not the upper but the lower limits of the middle class. They were willing, in defiance of all grammar and logic, to admit the existence of a "middle" with nothing above it, but they insisted on discovering something below. The traditional theory was that society was like a pyramid, each class fewer in number than the one below it. Therefore the class underneath the "middle" had to be a very numerous one; the "masses" in a word. But to their surprize the masses, concerning whom Marx had spoken so eloquently, seemed not to be there. To own land was, of course, to be "middle class" at least. The proletarian, by definition, owned no capital but his own labor. But in the United States the land owning farmer is the rule rather than the exception. The farmers, the clerks, the retail salesmen, the business and professional men of every kind, the craftsmen owning their own tools and other representatives of the "middle class" when added all together outnumbered the propertyless laborers of the mines and factories. Now this was a frightful dilemma. On the class struggle theory the American "proletariat" was confronted with a hostile "bourgeoisie" superior in numbers

as well as in wealth, and it was hard to see how socialism could be brought about without overstepping the class barrier and seeking recruits from among the enemy. Some closed their eyes and denied the census figures, or at least insisted that the bourgeoisie were doomed to an early disappearance. Others revised their definitions; they declared that the farmer who worked his own land and the clerk in a big store were proletarian comrades after all. Some were yet more generous and invented a "working class" which included everybody that did not live on an independent income. The I. W. W. accepted the situation and proposed to make war on the majority with "a class-conscious minority." And in this chaos of definitions the meaning of the phrase has practically disappeared. There is practically no one below the rank of Kaiser and above that of the hobo whom you cannot call "middle class" and prove it from some sociological treatise or Socialist pamphlet or snobbish arbiter of fashion. And even the ruler and the tramp can be shown by our literary critics to be dominated by "the middle class ideals of our modern civilization."

NATIONALIZING OUR SEAPORTS

SEAPORTS of this country have traditionally been run on the theory that they should be maintained by River and Harbor appropriations but administered as local, municipal or state facilities. This fish-trap policy could hardly be more provincial in its relation to the rest of the country than if especially devised to get all and to give nothing. The past has been too much the triumph of local but divided interests operating our ports at national expense, without enough adjustment to national needs. The result is congestion galore, in which New York's magnificent port has been the greatest of victims. And, now that her special guardians have come to throw the whole situation into the lap of the Federal Government, the nation has at last a right to expect something like progress in the matter of enlightened port policy.

But the credit is not wholly due to New York. The first step toward nationalizing New York Harbor came with the persistence of New Jersey in the effort to correct what her people have long regarded as an unjust differential charge, whereby western freight is rated to Manhattan as low as Newark, for example. New Jersey's appeal to the Interstate Commerce Commission some months ago, in weeks of hearings in New York, opened the eyes of the country to the arrested development at this harbor. It was a sacrifice step for Jersey, but it actually started the ball a-rolling toward national control of this great roadstead; and New York, seeing the situation more clearly, wisely heads the procession of reform.

New York interests, after this Pyrrhean victory of theirs, at once set to work to join with nominally defeated Jersey authorities to get legislation in both of these states providing for a New York-New Jersey Port and Harbor Development Commission. This joint body, of which William R. Willcox is chairman, had gone far enough to find chaos on both sides of the Hudson in freight conditions. Then they went to Washington, seeking the highest powers there, in the heads of five separate departments, to get the dynamics of doing things and to overcome the palsy of conflicting authorities and the habit of deferring positive action. The result is the creation of the New York Port War Board, of which Irving T. Bush is the new executive head. This unified authority should immensely enhance the working efficiency of harbor facilities.

Fortunately or unfortunately, it has taken a world war to dislodge the idea that New York Harbor is not a local but a really national and international harbor. Now let Uncle Sam keep his firm grip on the premises, until this great focus of world trade is fully emancipated from the tentacles of age-long particularism. It is not going to be an easy job, but it is practicable, because it has been done again and again at nearly all other first-class ports of the world. Before the Rivers and Harbors Committee of Congress puts another dollar into harbor maintenances or development, it ought to make sure that the old régime of local selfishness is once for all ended and the new genius of National Control be put into the saddle.

HOW SHALL I SPEND MY VOTE?

THE recently enfranchised women of New York are wondering in just what manner to employ the unfamiliar weapon which has been placed in their hands. Some are in favor of disbanding all the special political organizations which the women have created during the suffrage campaign and joining the regular political parties as the young men do when they reach the age of twenty-one. Very few suffragists favor a separate "Woman's Party," but some are of the opinion that the existing suffrage organizations should be kept together in order, that the voting strength of the sex may be thrown to any party or cause that seems worthy of support. There is still a third opinion; that women should enter politics as individuals but not align themselves with any party, that they should be independent voters and "keep the politicians guessing."

In the other states where women have been fully enfranchised this question has never arisen; the women have joined the existing political parties as individuals and voted their personal convictions. But the case of New York is somewhat different from that of the other equal suffrage states. In the West the vote came to women with very little active campaigning; there were practically no anti-suffragists and few militant Feminists; there was no trace of alignment of the sexes against each other, and such opposition to suffrage as was encountered came either from popular indifference or from the fears of the liquor interests. New York is the first suffrage victory in the East, "the enemy's country" of the equal franchise movement. To win this victory the suffragists created what is probably the best political organization that women have ever made; with every election district carefully captained, and three generations of speakers and organizers enlisted in the cause. After decades of active campaigning the women triumphed, but their organization remained intact and their long tradition of political sex comradeship has made it difficult for them to work simply as individuals rather than as women. We may, therefore, expect that suffrage societies in New York will continue their existence, at least until the Federal amendment is achieved.

Many suffrage associations will also be maintained for the purpose of educating the new voters in political theory and practise in order that their participation in civic life may be helpful and effective. The chief anti-suffrage organization in New York has already been transformed, according to the statement of its leaders, into a non-partizan patriotic association. Unquestionably there will be a plentiful crop of Women's Civics Clubs and Good Government Societies in the wake of the equal franchise law; which may eventually merge with the similar organizations which the men of New York have established.

But the great majority of the enfranchised women will be Democrats or Republicans before they are Feminists, and patriotic Americans first of all. It will not be easy to trace their separate or distinctive influence on politics, altho we may expect some acceleration of public interest in humanitarian legislation and in what are termed "moral issues" as distinguished from the party game of ins and outs. Those who expect to corral the "women's vote" will come to grief, as those have done who boasted of their power to control the "labor vote," the "Catholic vote" or the "German-American vote." The only advice which we can give to the New York politicians is not to angle for a "solid sex" but to appeal to the new voters exactly as they would to any other body of educated and level-headed American citizens.

THE STORY OF THE WEEK

Lansdowne Asks for Peace

Lord Lansdowne, one of the leaders of the Unionist or Conservative Party in England, has placed himself at the head of a movement for peace by negotiation. His letter on peace terms has provoked widespread comment, not from the originality of the ideas exprest in it, which have at all times had a section of British opinion to back them, but because of the prominent place which Lord Lansdowne has filled in English public life. When the Conservatives were in power and Mr. Balfour was Premier, Lord Lansdowne was Secretary for Foreign Affairs. He is not a member of the present Government, but he held office in Mr. Asquith's coalition ministry which preceded it. In his letter Lord Lansdowne urges that the Allies assure Germany that they do not desire the annihilation of Germany as a great power, that they do not seek to dictate to Germany what shall be her form of government, that they will examine impartially the issues grouped under the phrase "the freedom of the seas," that they are prepared to submit international disputes to arbitration and to join in the establishment of a league to enforce peace, and that they will abandon any plan to continue a commercial boycott of Germany after the war.

A few extracts from Lord Lansdowne's letter will indicate its point of view:

Ministers continue to tell us that they scan the horizon in vain for a prospect of a lasting peace, and without a lasting peace we all feel that the task we have set ourselves will remain unaccomplished.

But those who look forward with horror to the prolongation of the war, who believe that its wanton prolongation would be a crime differing only in degree from that of the criminals who provoked it, may be excused if they, too, scan the horizon anxiously in the hope of discovering there indications that the outlook may, after all, not be so hopeless as is supposed. The obstacles are indeed formidable enough. We are constantly reminded of one of them.

It is pointed out with force that, while we have not hesitated to put forward a general description of our war aims, the enemy have, tho repeatedly challenged, refused to formulate theirs and have limited themselves to vague and apparently insincere professions of readiness to negotiate with us. The force of the argument cannot be gainsaid, but it is directed mainly to show that we are still far from agreement as to the territorial questions which must come up for settlement in connection with the terms of peace.

These are, however, by no means the only questions which will arise, and it is worth while to consider whether there are not others also of first rate importance, with regard to which the prospects of agreement are less remote. . . .

In the way of reparation much can no doubt be accomplished, but the utmost effort to make good all the ravages of this war must fall short of completeness and will fail to undo the grievous wrong which has been done to humanity.

It may, however, be possible to make some amends for the inevitable incompleteness of reparation if the security afforded is, humanly speaking, complete. . . .

Most of us, however, believe that it should be possible to secure posterity against a repetition of such an outrage as that of 1914, if the powers will, under a solemn pact, bind themselves to submit future disputes to arbitration.

If they will undertake to outlaw politically and economically any one of their number which refuses to enter into such a pact, or to use their joint military and naval forces for the purpose of coercing the power which breaks away from the rest, they will indeed have traveled far along the road which leads to security. . . .

A commercial war is less ghastly in its immediate results than a war of armed forces, but it would certainly be deplorable if, after three or four years of sanguinary conflict in the field—a conflict which has destroyed a great part of the wealth of the world and permanently crippled its resources—the powers were to embark upon commercial hostilities certain to retard the economic recovery of all the nations.

Some of our original desiderata have probably become unattainable; others would probably now be given a less prominent place than when they were first put forward; others again, notably the reparation due to Belgium, remain and must always remain in the front rank; but when it comes to a wholesale rearrangement of the map of southeastern Europe we may well ask for a suspension of judgment and for the elucidation which a frank exchange of views between the allied powers can alone afford.

THE GREAT WAR

November 23—Battle of Cambrai continues. German emissaries sent to parley with Russian peace faction.

November 24—Secret Russian treaties published. British occupy Bourlon Wood.

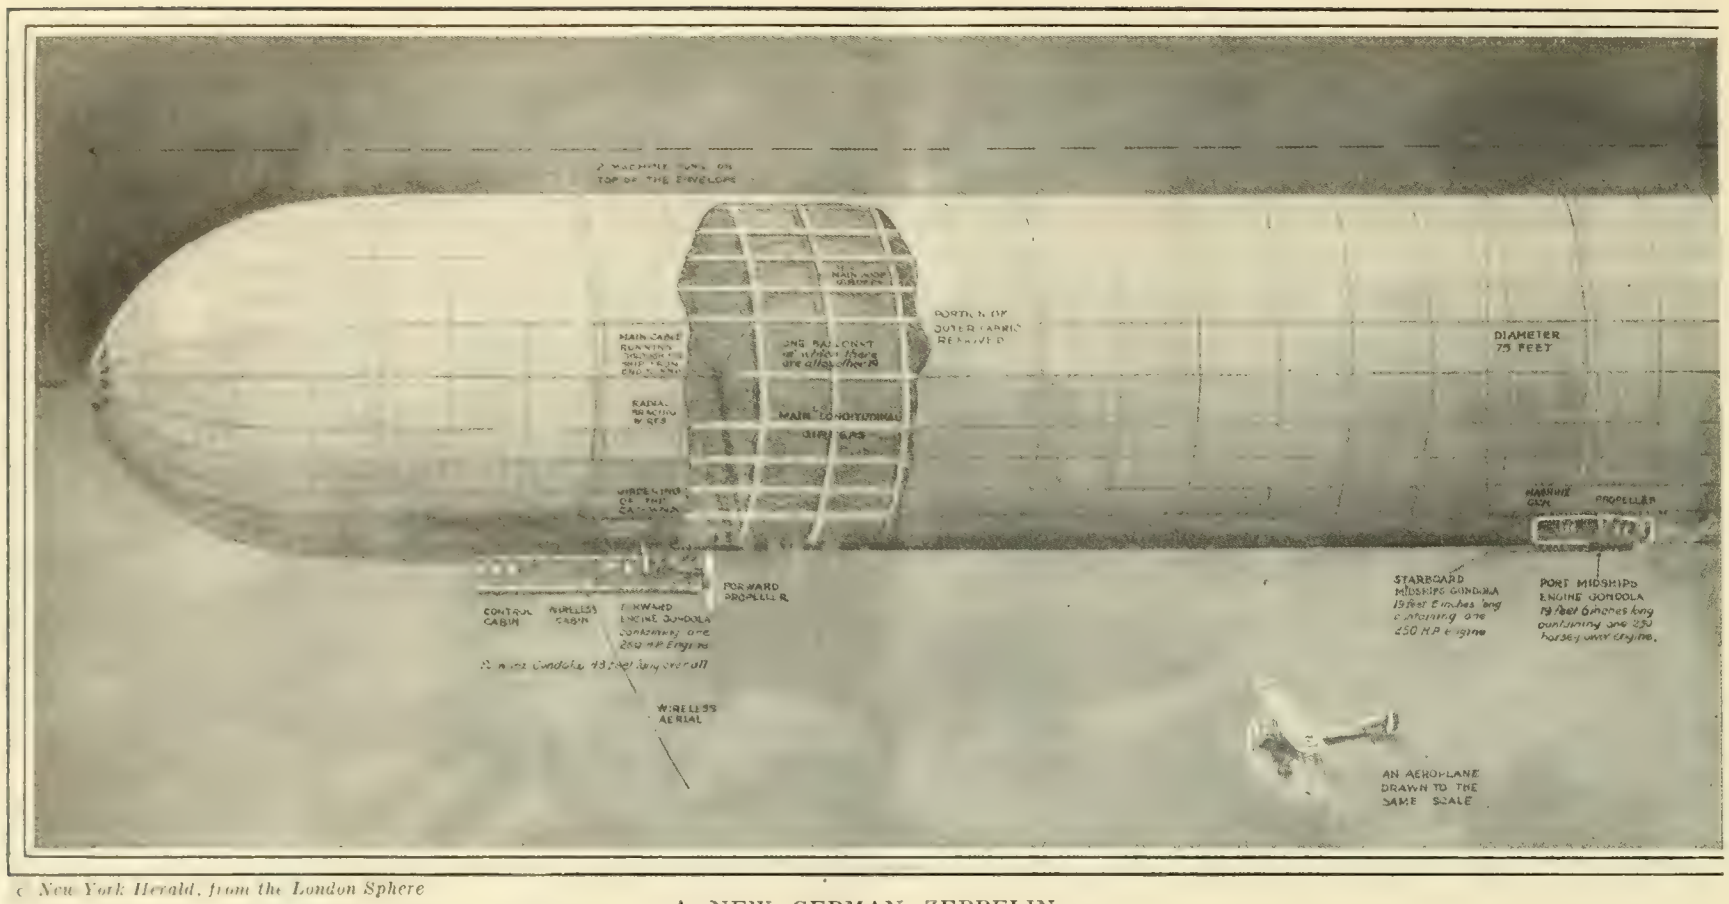
November 25—French attack near Verdun. General Dukhonin defies the Petrograd Government.

November 26—Twenty-one British ships sunk during previous week. British advance near Jerusalem. French and British infantry reinforcements reach Italian lines.

November 27—Italians repulse attacks in the upper Brenta Valley. Allied war conference assembles in Paris.

November 28—Armistice negotiations begun with Germany by Bolsheviki. Conference of Scandinavian rulers held at Christiania, Norway.

November 29—German Reichstag reassembles. Lord Lansdowne urges peace negotiations.



WHAT GERMANY BELIEVES

This photograph, reproduced from a German paper, is a fair sample of war news as it reaches the German people. The caption explained that Germany was winning on sea as well as on land

Is Russia Friend or Foe?

If the present Bolsheviki "Government" at Petrograd succeeds in extending its rule over the rest of Russia the number of the Entente Allies will be reduced by one. Lenine, Trotzky and others of the dominant pacifist faction still insist that they do not intend to make a separate peace with the Central Powers, but they are now arranging an armistice which will give Germany and Austria the substantial advantages if not the name of peace. Not only would an armistice release the large army which is now guarding the eastern war front of the Central Powers, but it would probably make possible a certain amount of trade over the frontier, which would relieve the food shortage in Germany, and it might even lead to an exchange of prisoners. Altho it is probable that more Russians have been taken prisoner on the eastern front than soldiers of Germany and Austria-Hungary, this exchange would be wholly to the advantage of the Central Powers, since their captive soldiers would at once go to the trenches on their release, while the Russian soldiers would go back to their homes. So concerned are the Allies over the situation that there is talk of cutting off all exports to Russia and virtually isolating the nation from the rest of the civilized world so long as the Petrograd Government retains power. Lenine is reported to have replied with a counter-threat that "if the Allies do not comply with our wishes we have powerful means of compelling them to obey. We can declare the State bankrupt and then all loans and other obligations to the Allies will be invalid."

General Dukhonin, ordered by the Petrograd Government to open up negotiations for an armistice "to all nations, allied and hostile," refused to do so and Ensign Krylenko was made commander-in-chief in his place. Private soldiers were authorized to set aside the authority of all commanding officers who would not consent to work for an armistice. Several units of the army, weary of war and dreading fam-

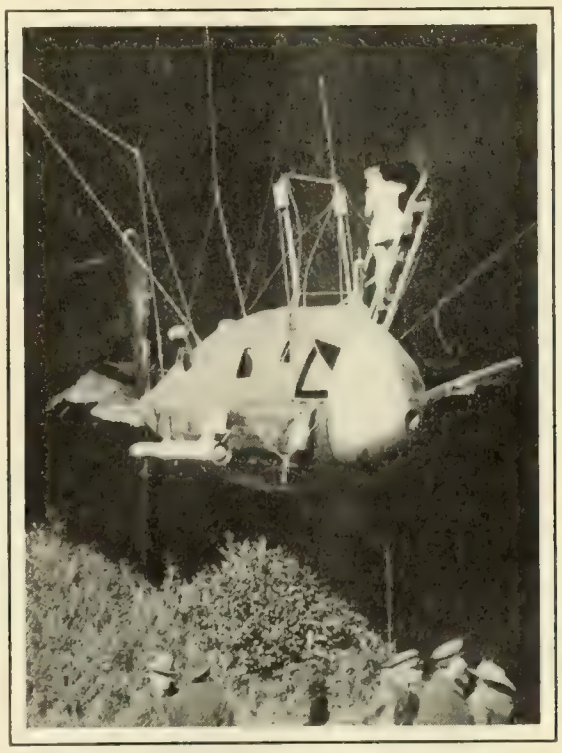
A NEW GERMAN ZEPPELIN—



"L-49" was forced to earth in France by aeroplanes and gunfire (the German reports substitute "wind and fog") after the raid on London last October. Since it was practically undamaged the Allies were able to get exact information of the Zeppelin's dimensions, design and working parts —one of Germany's vaunted military secrets

ine, have joined the Bolsheviki faction, and to this extent the Petrograd Government has gained strength during the last few days. Around the military figures of General Dukhonin and the Cossack leader Kaledines, however, a strong patriot party has gathered, including the Constitutional Democrats and many of the Socialists who had previously supported Kerensky. It may require the test of civil war to determine whether the patriots or the Bolsheviki are the stronger.

The Petrograd Government is attempting to hold elections on the basis of universal suffrage for the Russian Constituent Assembly, but in most parts of the country there is no voting either because the authority of the Government is not recognized or because local disorder is too great to permit the election. In Petrograd the Bolsheviki have attempted to suppress the newspapers of all other political parties. This violation of the freedom of the press is of a piece with the whole policy of the Bolsheviki, who have a fondness for sweeping and drastic methods which recalls the Jacobin rule during the first French Revolution. We hear of the seizure of bank funds, of the abolition of all titles and class privileges, of the abolition of the right of inheritance, of the confiscation of landed estates and corporate property, and measures of repression against non-Socialist classes and parties.

Russians Publish Secret Treaties

One of the first things that the Bolsheviki Government did when it obtained power was to abolish "secret diplomacy." As a means to this end all of the confidential state papers of the "Czaristic, bourgeois and coalition governments" which the Petrograd Government could lay hands on were made public. Unfortunately the exact text of these important documents has not been cabled over to the United States, so it is impossible for us to make a close and accurate study of them. We are forced to depend on the unofficial summaries of their contents which have reached us, probably incomplete and possibly inaccurate.

ONE OF THE GONDOLAS

There are usually four or six of these on each Zeppelin; they carry the engines, the control cabins, and bombs and bomb-dropping apparatus

The first document published confirms the report that Russia was to get possession of Constantinople and the Dardanelles in the event of a victory for the Allies. It also sets forth the demand of France and England that Constantinople remain open to international trade, that the British sphere of interest in Persia be extended and that a new Mohammedan state be recognized in Arabia. Russia agreed to these demands with certain modifications of minor importance. According to the British *Manchester Guardian* Alexandretta, on the southern shore of Asia Minor, was to be made a free port; the "neutral zone" in Persia was to be divided between England and Russia, the latter getting Ispahan and Yezd, but the region around the head of the Persian Gulf going to the British, and Palestine was to become an independent nation under the joint protection of the Entente Powers. Only the details of this plan of division are new, as the Allies have never made any secret of their desire to put an end to Turkish rule over the non-Turkish nationalities of the Ottoman Empire.

Other documents gave Russia a free hand in settling the Polish question and what is perhaps even more significant, the right to determine what the Polish boundaries should be. France and England similarly were to have a free hand in determining the western boundary of Germany. It is not clear whether this involved more than the cession of Alsace-Lorraine or not. One Russian telegram dealt with the importance of keeping for the Entente the friendship of Sweden and of Norway and discussed the question of excluding Germany from China after the war. No decision was made on this latter point. There was also a telegram from the Russian Foreign Minister acquainting the other Allies of a German attempt to make a separate peace with Russia and Japan. A few of the published documents were dated after the establishment of the republic. One, from Foreign Minister Terestchenko to Secretary Lansing thanked the American Ambassador, Mr. Francis, for refraining from joining with the diplomats of the Entente Allies in urging reforms in the Russian army. Russia, said the letter, was already doing the best she could to carry on the war actively.

Only one of the documents whose contents are now known to us is distinctly discreditable to any of the Entente Governments. This is a document signed

DISSECTED BY THE ALLIES

The drawing above, made from this information, shows the structure of the framework—a main cable giving longitudinal strength, with radial bracing wires to the girders of the aluminum lattice work. It has four gondolas. The enormous size of the Zeppelin—680x75 feet—is emphasized by the aeroplane below it, drawn to scale

by General Polivanoff, former Russian War Minister, which proves that the o'd Russian Government deliberately betrayed Rumania after inducing her to enter the war. General Polivanoff pointed out that as Rumania had been promised the Austro-Hungarian territory chiefly inhabited by Rumanians (Transylvania, Bukowina and the Banat were specified) Rumania would end the war a nation of 13,000,000 and a dangerously powerful rival to Russia in the Balkans. "In view of this," said the wily General, "the collapse of Greater Rumania is an idea not against the interests of Russia."

German Reichstag Meets

On November 29 Chancellor Georg von Hertling addrest the Reichstag on the problems of the hour. He welcomed, tho somewhat cautiously, the armistice proffer of the Petrograd Government, and declared that the German Government would enter into negotiations with any Russian representatives who had full powers to discuss the matter. Concerning the question of the status of Poland, Lithuania and Courland, an issue certain to be brought up in any peace negotiations between Germany and Russia, Chancellor von Hertling contented himself with the vague statement that these peoples would "give themselves a constitutional form of government corresponding to their conditions." He paid a fervent tribute to the valor and loyalty of Austria-Hungary, Turkey and Bulgaria, and urged that questions of internal politics in Germany be forgotten in a common effort for the attainment of military victory. He declared that "All observations give us unmistakable proof that the submarine war against merchant ships will reach the aim intended for it." He touched briefly on the political reforms proposed by the Government, emphasizing the position that "of the fundamental principles of our imperial constitution nothing can or shall be changed." He asked the Reichstag to vote a new credit of 15,000,000,000 marks and stated that in seven successive votes of credit the German people have raised already the sum of 73,000,000,000 marks for the prosecution of the war.

Invasion of Italy Checked

During the week the Italians have held the Piave line with a disciplined firmness hardly to have been expected of the same army which was so quickly routed in the battle of the Julian Alps. The mountainous region between the upper Piave and the Brenta rivers was the scene of the most continuous fighting. Monte Tomba, Monte Pertica and other highland positions were taken and retaken repeatedly at great cost to both sides. Thus far the Italians have more than held their own, but it cannot be said that the Piave will be the last line of Italian defense. The German official reports tell almost nothing of the campaign in Italy, and the Italian reports, while full and specific as to details of the fighting, do not make it clear how much hammering the army in the upper Piave valley will be able to stand.

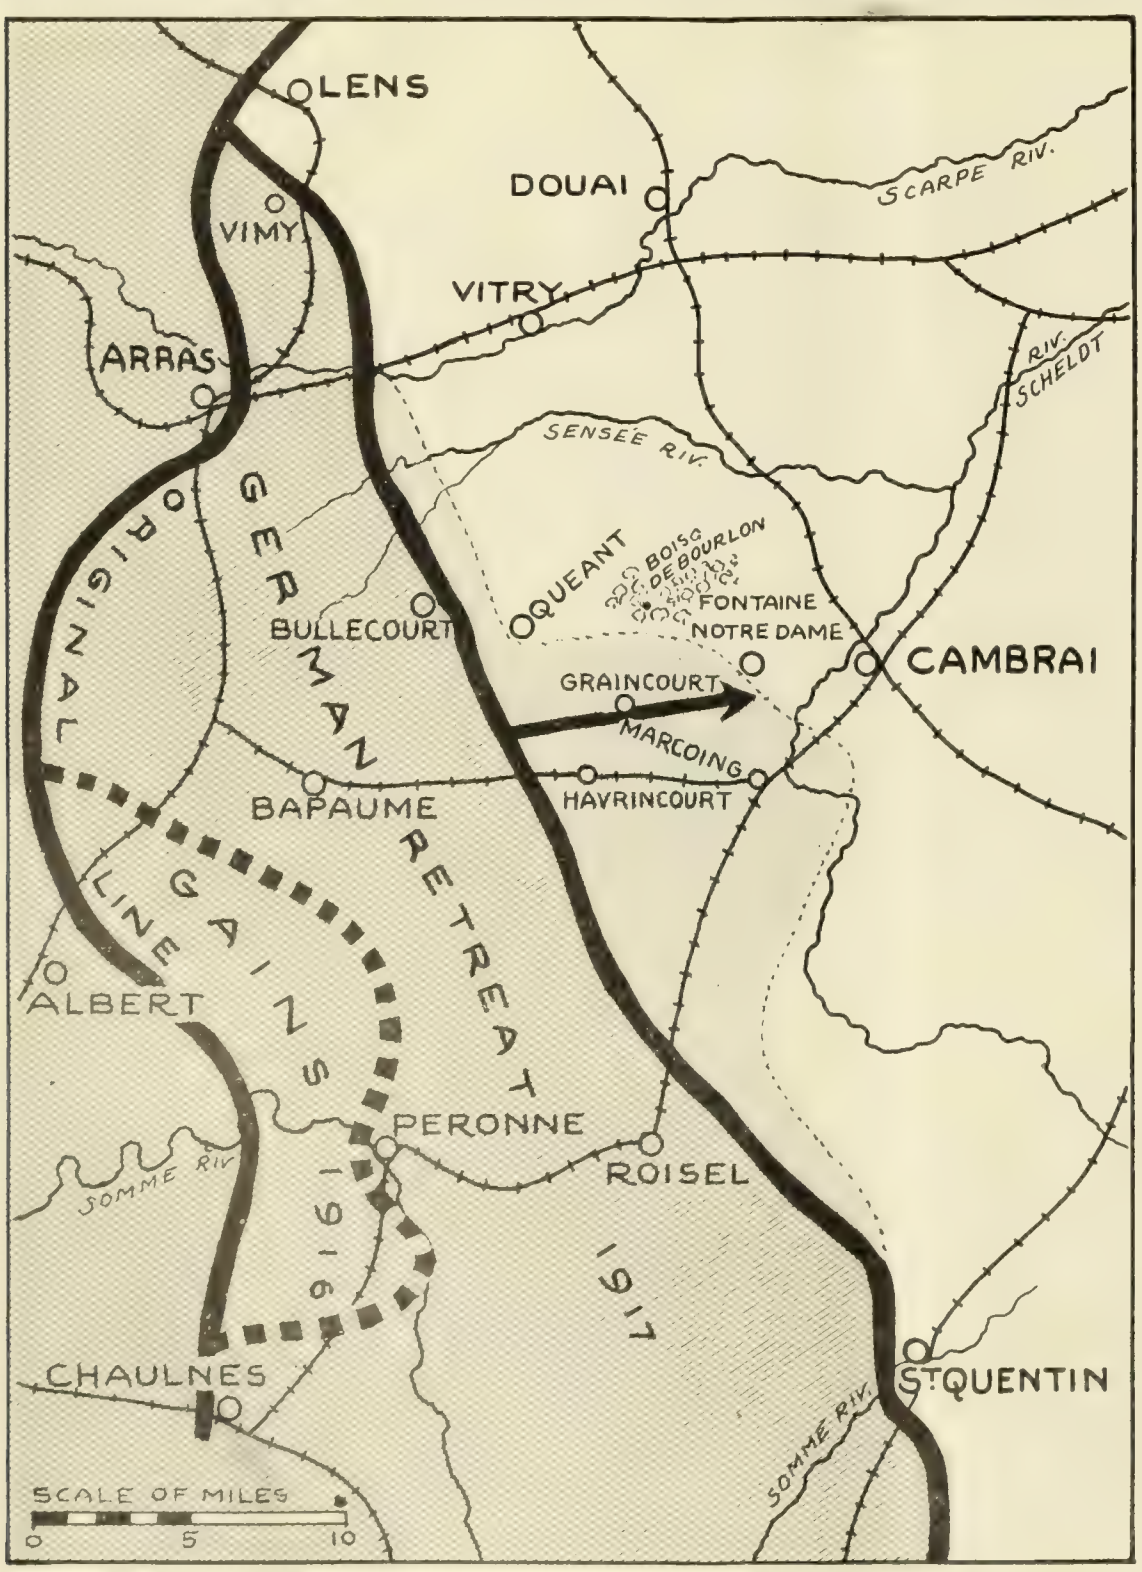
"L-49." BROUGHT DOWN IN FRANCE

It was from this Zeppelin that the Allies got the information presented in the drawing at the top of these pages. "L-49" was captured on its return from a raid upon London



At all events, the Italians have held the invaders back until reinforcements from England and France began to arrive in sufficient numbers. General Sir Herbert Plumer, famous for his part in the victory at Messines Ridge in June which opened the way for the summer and autumn campaign east of Ypres, has been appointed commander-in-chief of the British forces in Italy. French and British infantry arrived at the front after eight days of forced marching, and the German opportunity to eliminate Italy altogether as an aggressive factor from the war seems to have passed irrevocably.

The Battle of Cambrai

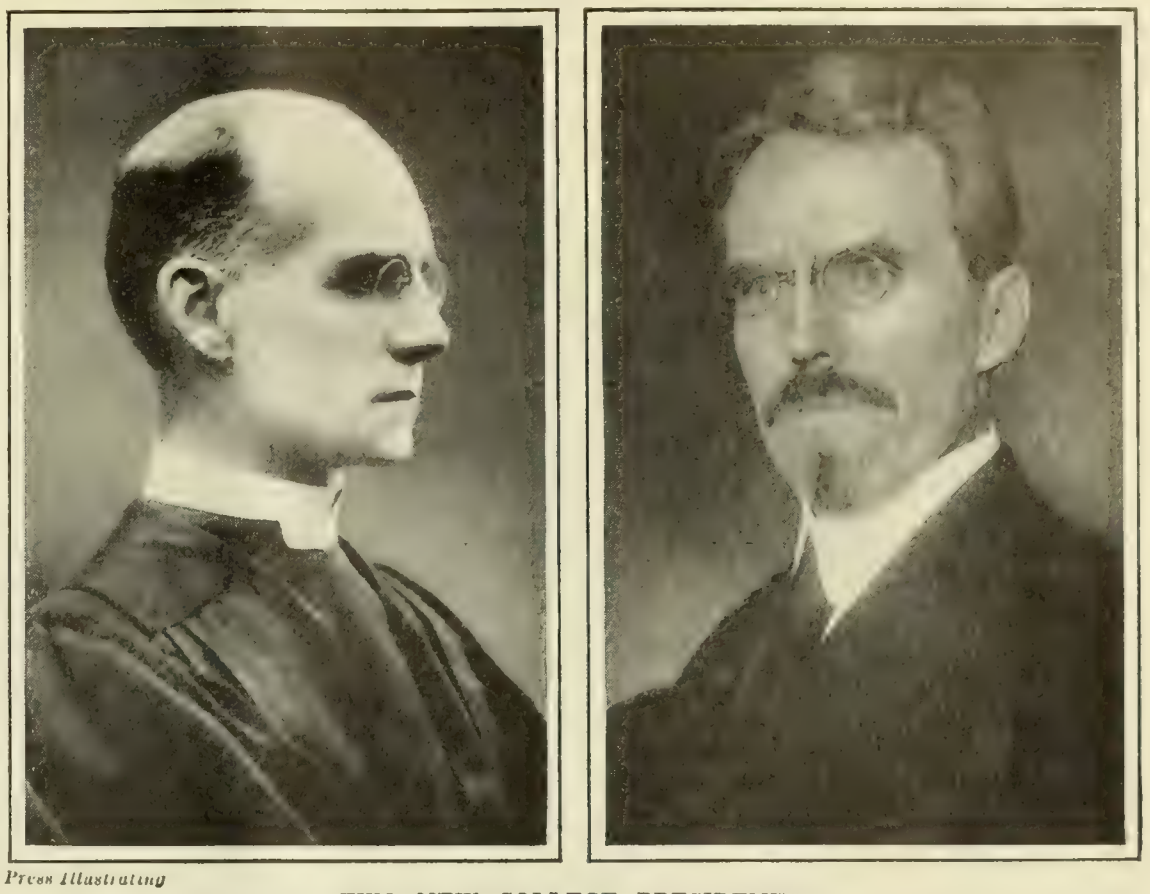
Since the first grand drive which smashed the Hindenburg line and brought the battlefront to the suburbs of Cambrai, the British have not succeeded in greatly extending their lines. A very bitter but somewhat indecisive battle raged for several days around the most advanced positions occupied by the British, particularly in Bourlon wood and at Fontaine-Notre Dame. Tanks and even cavalry were employed in the later stages of the battle as they had been in the earlier, and the fighting was of a more open character than has been known at any time on the western front since the Germans first "dug in" after their retreat from the Marne.

Near Verdun the French have made another of their effective minor attacks, reconquering ground from the Germans and taking more than 800 prisoners. In Flanders there were only local actions. The Germans have been strengthening their line in France, especially near Cambrai, by hurrying up every man from the eastern front, the Italian front and the reserves that could well be spared. French authorities estimate that at the present time the Germans have 3,724,000 soldiers in active service on the western front. Greater armies are opposed to them. The French army has probably reached its maximum number, the British army is approaching its maximum, and the remnant of the little Belgian army has recently been reorganized and reëquipt. Even Portugal, the least important of the Allies which are represented by contingents on the western front, is said to have placed 65,000 troops in the field, not counting those whose services have been required in Africa.

There is thought to be a possibility that the French and Belgian battlegrounds will continue to be in the zone of active fighting this winter. During the last three winters there has been winter warfare on the western front, but the great offensives were always reserved for the warm weather and firm ground of spring. But the snows of winter could hardly outrival as a military obstacle the heavy rains of recent months which turned Flanders into an all but impassable bog. Many military men feel that the conquest of Passchendaele Ridge under such weather difficulties is a happy omen for the success of a winter campaign.

THE THIRD STEP TO VICTORY

The area enclosed within the heavy dotted line shows the ground gained by the French and British in the campaign of the Somme; the shaded area west of the second heavy black line shows the ground gained by the Allies during the German retreat of this spring and in the Battle of Arras; the area west of the light dotted line shows the extensive gains made at a single stroke in the recent surprize attack in the direction of Cambrai. The arrow indicates the direction of the present main British offensive



Barred Zone Around Azores

The German Government has announced a new extension of the sea area within which ships may be sunk at sight. The previous German barred zone included the waters around the British Islands and the French coast and also the Mediterranean except for a lane of safety to the Aegean. By the present proclamation a barred zone is established around "the enemy base in the Azores." The Azores are a group of islands belonging to Portugal which lie in the North Atlantic about one-third of the distance from western Europe to America and thus form a convenient base for the navies of the United States and of the European Allies, especially since Portugal is one of the Allies. The channel to Greece has also been closed by the Germans "as it has been utilized by the Venizelos Government, not so much for the supply of the Greek population with foodstuffs as for the transport of arms and ammunition." Slight modifications have also been made in the boundary of the North Sea barred zone. The German official justification for extending the area of unrestricted submarine warfare is that the Entente powers "are endeavoring by the intensification of the hunger blockade against neutral countries to force out to sea neutral cargo space, which is keeping in port, and to press it into their service."

The Commission for Relief in Belgium has published a report showing in what manner Germany has exerted her naval power against the ships which by her own promise should have been safe from attack. Twelve vessels carrying supplies to the Belgians were torpedoed between February 1, 1917, and April 9, 1917. So great was the danger of destruction, even in the lane of safety, that private shipowners re-

fused to take the risk of engaging in the traffic and within three months the Belgian people were deprived of more than 270,000 tons of foodstuffs which the commission had intended to send them.

The German submarine continues to be a formidable weapon; tho no longer affording Germany a prospect of victory by its means alone. During the week ending November 25, twenty-one British vessels were destroyed; fourteen of them being of more than 1600 tons each. This week's losses were almost up to the average for the whole period of unrestricted submarine warfare and in excess of the loss for any week since that ending October 21. The total tonnage loss for the month of November will, however, be almost certainly less than for any previous month since the U-boat was given full freedom, because the losses for the first half of the month were almost insignificant. Among recent victims of the submarine was the American steamer "Actaeon," sunk November 24 with the probable loss of thirty-seven of the crew. As some compensation for this submarine triumph comes the report that two American destroyers recently destroyed a German U-boat by the use of depth bombs.

TWO NEW COLLEGE PRESIDENTS

The Connecticut College for Women, in Hartford, has just chosen as president Dr. Benjamin Tinkham Marshall (at the left), recently professor of Biblical history and literature at Dartmouth College. Dr. Arthur Cushman McGiffert (at the right) is the new president of Union Theological Seminary in New York, where he has been a professor since 1893

One Nation; One Railroad

The Railroad War Board has come to the conclusion that transportation is a single problem and that transport competition in war time in intolerable. The first step suggested for unification involves the "pooling" of the railway lines of the eastern states; comprizing about a quarter of the nation's mileage but doing more than half of the nation's carrying business. This action will combine into a single system 65 000 miles of railway with over a million cars and bring into one organization 677,000 employees. It is also recommended that the Government consent to suspend or modify such sections of the Anti-Trust Law, the Interstate Commerce Act and other legislation as would impede contracts or agreements for the pooling of freights. When several railroad lines connect two points. freight and passenger traffic will be distributed among them on an agreed basis. Shippers will no longer be able to dictate which particular line will carry their goods to the consumer, and passengers may find train service on some lines greatly curtailed and the cost of passenger tickets much increased.

The question of priority of shipments is a serious one. The railroad managers complain that so much freight is now marked with preference tags that not only is other freight indefinitely held up but it is difficult to determine precedence among the shipments tagged for immediate transportation. All the departments of the Government attempt to obtain priority for the goods which they need, whether coal, food, munitions of war, shipbuilding supplies or naval stores and the result is general congestion. As a partial relief to the burden of necessary war traffic it is proposed to curtail the shipments of 525 commodities listed by the War Board as "non-essential" and even to reduce the amount of coal and coke which may be shipped to the manufacturers of these commodities. Unnecessary passenger traffic will also be discouraged, because the demands of the war require the employment of every available car and locomotive for freight traffic.

In order to increase the amount of equipment on the congested eastern roads it is proposed that railroads in other parts of the country consent to lend cars, locomotives and repair supplies to the eastern companies. This will tend to make the projected merger of the eastern railroads the beginning of a nation-wide pooling of railroad resources. Whether this degree of centralization will prove as beneficial in time of peace as it seems to be necessary in time of war is an open question, but it is difficult to see how the railroads, once pooled, can again be "unscrambled." It is not a question merely of adjusting traffic or exchanging equipment; because this would tend to enrich some companies at the expense of others, and therefore railroad men take for granted that the operation of railroad companies as a single system must be followed by some plan of pooling and distributing profits. To expect one line to carry small-profit shipments from Chicago to Buffalo, for example, and let its rival handle all the large-profit shipments that were transported between those cities would be asking too much of patriotism, unless there were a financial merger as well as a traffic merger.

Talk of Federal ownership of railroads is becoming increasingly frequent. The Government seems to have given no encouragement to this proposal, but it finds support from unexpected quarters; even railroad operators considering it as a possibility. At the very least, there will probably be Federal incorporation of carriers and the strict subordination of the railroad commssions of the several states to Federal authority. Senator Reed of Missouri has made the interesting suggestion that Congress appropriate $100,000,000 for the purchase of freight cars to relieve the existing shortage which private effort has thus far been unable to make good.

The American War Council

The administration of the war activities of the Government has been reorganized with the purpose of securing greater efficiency. The new organization, a weekly advisory conference of administrative chiefs, includes seven members of the cabinet; all, in fact, with the exception of the Secretary of State, the Postmaster General and the Attorney General. It is thought that these three cabinet officers can do better work independently. With this cabinet of seven are associated Food Administrator Hoover, Fuel Administrator Garfield, Chairman Hurley of the Shipping Board and Chairman Willard of the War Industries Board. Altho these four men have neither the title, the rank nor the legal recognition of cabinet members, they are, in practise, heads of very important administrative departments which the war has brought into existence and the fact that they have hitherto been excluded from the deliberations of the Council of National Defense (consisting of six members of the cabinet) has resulted in much confusion and conflict of policy. When administrative affairs became tangled only the President could straighten them out, but now such matters can be brought before the weekly meetings of the War Council. The stu-

dent of administrative method will do well to compare the creation of the American War Council, an advisory conference of the chiefs of different departments meeting at regular intervals to adjust questions of military administration, with the establishment of the War Council of the Allies, which is an advisory conference of national representatives meeting at regular intervals to adjust questions of international military administration.

The Embattled Farmer

On the eve of Thanksgiving a preliminary estimate of the year's crop production showed that the farms of the United States have produced values equal to the entire national expenditures for the first year of our participation in the Great War. There were record crops of corn, oats, rye, potatoes, tobacco and beans. Corn is by far the most important crop; its value is placed at about $4,659,000,000, or more than twice last year's figure. Cotton is the second in importance. This year's production is about 600,000 bushels in excess of last year's and commands a total price of $1,981,000,000, including $336,000,000 worth of cottonseed. Hay and wheat come next in rank. The value of the 1917 wheat crop is placed at $1,320,000,000; whereas in 1916 it barely passed the billion mark. Potatoes, oats, barley, rye, beans, onions, tobacco and many other products show a great advance in values over last year's figures.. The principal farm crops in the aggregate reach more than $12,000,000,000 in value; minor crops $2,500,000,000; animals and animal products, including the poultry and dairy industries, about $6,500,000,000. These estimates are subject to revision when the Federal bureau of crop estimates makes its December report.

Our New Master Shipbuilder

Rear Admiral Frederick R. Harris, chief of the Navy's Bureau of Yards and Docks, has become general manager of the Emergency Fleet Corporation. Rear Admiral W. L. Capps, who succeeded General Goethals in this arduous post, was compelled to resign on account of very serious illness. Chairman Hurley of the Shipping Board suggested to Secretary Daniels of the Navy that the successor to Admiral Capps "should be some one trained in the same service—a naval engineer or constructor." It is evident that in the appointment of Admiral Harris this suggestion was borne in mind, for he has been an engineer since his graduation from the Stevens Institute of Technology in 1896 and an officer of the navy since 1903.

The building program undertaken by the Emergency Fleet Corporation is rapidly proceeding. Already ships constructed since the corporation began work are entering the water. On November 24, an 8800-ton steel freighter was launched at "a Pacific port." This, the first of our new merchant fleet, was launched just seventy-eight days from the time the keel was laid. Four steel and three wooden ships are expected to be completed by the last day of December; an aggregate of 45,700 tons. The corporation has already constructed 884 vessels with a capacity of 4,724,300 tons and has contracts pending for ninety-nine vessels, aggregating 610,000 tons. Vessels requisitioned number 426 and total more than three million tons. Our whole new merchant fleet when finished will contain 1409 vessels of an aggregate of 8,363,808 tons. Unless Germany is able very greatly to increase the destructiveness of her submarines, the American construction alone, disregarding the building programs of other nations, should mean a continual increase during the final stages of the war in the number of ships plying the Atlantic waterways. The building program of the Emergency Fleet Corporation contains a nearly equal number of wooden and of steel vessels, tho of course the aggregate tonnage of the steel ships is greater. A proposition to build barges of concrete has been laid before the Shipping Board by a Norwegian concern and, if this proposition is accepted, a third type of material will be brought into comparison with the traditional ship-building materials of wood and steel.

News Print Prices Fixed

The United States Department of Justice has reached an agreement with the news print manufacturers which ends a controversy over prices which for more than a year has menaced with uncertainty the newspapers of the country. The agreement was reached as the result of Federal prosecutions for the violation of the Sherman anti-trust law. The manufacturers refused to enter a defense and, while still contending that they were innocent of any attempt to force up prices by unlawful combination, paid the small fines imposed on them and agreed to dissolve the News Print Manufacturers' Association, which had been accused of being in practise a "paper trust" controlling what was virtually a monopoly of the product. The total daily output of news print paper in the United States is about 6300 tons, with an approximate value of $250,000; of this output about $225,000 worth a day was produced by the firms which were members of the association.

By the new agreement news print paper bought in rolls in carload lots is priced at $3 a hundred pounds or less. This is half a cent a pound more than the price fixed by the Federal Trade Commission this spring, but the increase is considered justified by the rise in the cost of manufacture. The earlier agreement was for a six months' period only; the present agreement will remain in force during the war and for three months thereafter, altho the Federal Trade Commission will have the power, subject to review by the judges of the United States Circuit Courts, of altering prices after the first three months of 1918 have elapsed. Paper bought in sheets or in less than carload lots are priced for the present at from $3.25 to $3.75 a hundred pounds.

From the Sydney (Australia) Bulletin

HIS CONSCIENCE CLEAR!

Wilhelm: "I swear to Heaven that I never desired this war!"

The Joke of the Family: "No, Pa; what you desired was a very different sort of war, wasn't it?"

Stamping Out Sedition

The authorities have caused the arrest of more than a hundred Italians in the state of Washington. The prisoners are alleged to be members of an anarchistic organization designed to overthrow the Italian and American Governments and to resist military service. It was thru similar propaganda that the Italian army in the Julian Alps was demoralized. The Italians who are found to have engaged in disloyal propaganda will probably be interned for the duration of the war even if they cannot be convicted on more serious charges of conspiracy to kill.

Numerous arrests along the waterfronts of important ports have been made since enemy aliens were barred from their neighborhood and the internment camps are rapidly filling up. One of the reasons why Congress is urged to declare war on Germany's allies is that when this is done the same measures of restriction may be taken in regard to Austrian, Bulgarian and Turkish subjects as are now applied to Germans resident in this country.

The anti-American press is suffering increased restriction. Jeremiah O'Leary, the most prominent of the pro-German agitators of Irish descent, has been arrested for publishing a periodical "containing articles, poems, cartoons, and pictures calculated and intended to create and promote insubordination, disloyalty, mutiny, and refusal of duty among the persons belonging to military and naval forces of the United States." There has also been an agitation for the expulsion from the high schools of New York City of all teachers who have encouraged or tolerated anti-patriotic sentiments among their pupils. The Board of Education is conducting an inquiry to determine the truth of the matter and promises drastic action. There are few large cities in the country where similar controversies have not arisen in the schools within recent weeks.

THE SAND MAN

HOW IRVING T. BUSH MAKES HIS DREAMS COME TRUE

BY DONALD WILHELM

THIS is the simple, startling story of a man who long has been in love with his job.

While still in his teens—and he has loved his job so much he lingers still in his thirties, apparently—he arrived on the horizon of the business world, just as any number of young men do every day; distinctive only in being tall, soft-spoken, disposed to read verse and adventure and to carry a book in his coat pocket accordingly; disposed to look on the world with a shrewd yet kindly appraising eye, disposed also to wonder what in the world he would do with the two hundred sand lots left him by his father—sand lots situated as the real estate men said, on Brooklyn's rocky, non-negotiable shore one long and non-negotiable mile from Manhattan's Isle.

IRVING T. BUSH

The other day Irving T. Bush, tall, wearing light top-coat, keen, youngish and leisurely, yet gray about the temples, was called to Washington by President Wilson and told that he had been made chairman of the United States War Board for the Port of New York—which, by the way, to this interesting man upon whom Ernest Poole patterned the big-business dreamer in his novel, "The Harbor," was the most gratifying thing in the world.

For New York Harbor is Mr. Bush's hobby—just as two hundred sand lots used to be. New York Harbor is, in fact, from his angle, his very own creation, so intent he has been for years now upon its betterment. That is why the congressmen who constitute the Rivers and Harbors Committee, sojourning in New York one day, put two things together that they had never thought of together before when Mr. Bush told them: "It's time we all looked on New York Harbor from the top of the Woolworth, and saw it whole."

This epigram, which is liable sometime to come to the minds of skippers entering a perfect port, meant not so much to me before I entered the triangular office of Mr. Bush and saw him stride thru the door, a tall, lithe figure with a hitch in his gait, as it meant afterward.

"Why," he said, smiling straight at me when I asked him the trouble with the world's greatest port, "we've put a lot of things on Manhattan Isle that don't belong there!"

I reasoned that this must be the cause for the Woolworth climbing so everlastingly high—squeezed up Gothically, half a mile or so! And he settled easily into his little black swivel chair, the one he used when he had only a single cotton warehouse on his Brooklyn lots, and the one round which, as it were, his present office building was built. I asked him to tell me his problem as he, a transportation engineer, chairman of a board that includes the Secretaries of War and of Navy, of Labor, General Goethals, of the New York and New Jersey Port Commission, and others, saw it.

"The problem simply is to decentralize trouble," he said, "and to centralize efficiency."

"Simple, isn't it?" I gasped.

He smiled.

I insisted that I wanted to see the harbor as he saw it.

"I see it, I guess," he said, "as one sees it from the top of the Woolworth. I've always seen it that way, since I was left the deed to those two hundred sand lots!"

"But the Woolworth wasn't thought of, then," I argued.

"No," he granted, "but Father Knickerbocker was planning his city so carelessly, any one who thought about it could see that things downtown would have to go up—up in the shape of skyscrapers; that there would be street congestion—"

He paused just a second. "There was no method; and expediency is the lord of misrule; the very city skyline indicates that." And then his voice ran on. He pointed out eloquently how, in the great city prairie there came to be docks where there should have been dwellings; dwellings where there should have been offices; offices where there should have been schools; schools where there should have been recreational facilities; how teams and trucks, as result of all the clutter, clamber, as it were, on the shoulders of one another, like the denizens of tenements packed full of uncomfortable individuals. "Instead of planning things differently we waited," he concluded at last, "for congestion to squeeze buildings up and up and squeeze other things into the harbor or to clutter up the port's facilities."

I suggested that it was plain the harbor's clutter must be eliminated now, when a vast part of the thirty thousand tons of shipping essential every day to keep a million men supplied put out from New York.

"If we have two millions of men," he said simply, "the estimate you give will have to be doubled. We must have ships—that goes without saying. And they must clear! I assume we shall have the ships. And if they cannot clear, what greater disaster could befall America?"

He went on:

"It was never so plain, I think," he considered, "that New York Harbor is national. The war demonstrates that. Of course it has been called national in the sense that it is big—like the Rocky Mountains or the Grand Canyon of the Colorado. But it has not been considered really national; the proof is in the grumbling that has always come out of the South and the Northwest whenever money was appropriated for its improvement. My argument has always been that New York Harbor is national because the whole nation pays the cost of congestion here and reaps the benefit of efficiency here. That was made clear last year when tens of thousands of cars were tied up unable to get thru the port. A very few New Yorkers—men with storage facilities, warehouses, etc., reaped a little benefit, but the people of New York paid the cost. For prices went up. And the shippers paid the cost, in numerous ways, if you think about it. Directly and indirectly both producers and consumers lost by this congestion—the nation lost, in a word, just as the nation will lose now, in war time, if such congestion is permitted to occur again. Now, of all times, we must see the situation whole. We have in the past taken a whack at Brooklyn, a whack at Jamaica Bay and at the New Jersey shore, but the appointment of the New York and New Jersey joint state harbor commission with General Goethals at its head was the first attempt to look at the situation whole, to look"—he smiled—"at the situation from the top of the Woolworth."

Mr. Bush told me one day long before "The Harbor" was published and he—"Mr. Dillon"—was pictured as the dreamer of better things for his own port, that he liked to sit back and create mentally, then actually. "Creation itself," he said another time, "is a worth-while job. Creation, in fact, is its own reward."

He is addicted to industrial as well as to harbor betterments. There is ample proof of that in his Terminal, the first by all odds of its kind in the world.

This Terminal is atop those two hundred sand lots, plus many more. Coming at it from the harbor one's boat approaches seven tremendous steel piers —seven of the largest piers in the world, at which ships dock from all the globe, where lighters bearing whole loaded trains have their cargoes yanked off to a gigantic bulkhead where workers from all the world—Coolies, Magyars, Koreans, even, and seamen and stevedores—lend a hand to the electric engines that haul trainloads off to a long, tremendous row of great U-shaped buildings of concrete. In these buildings, which constitute a whole community of hundreds of firms, floor space and all kinds of terminal and manufacturing service are obtainable on precisely the same terms by Big Jones, say, who rents a hundred thousand feet, and by Little Jones, who rents only a hundredth as much; and both have the same elevator service, feed their finished materials down the same elevators to the same consolidated cars, to the same trains, the same ships, perhaps, and there are no transportation and truckage difficulties for either of them. It is all very simple, now that its difficulties have been solved. Nearly everything is; even the international situation sometime will be.

But solution of the problem confronting New York City and its harbor presented difficulties to the youthful Bush. Imaginatively the solution was simple; actually it was very hard. Imaginatively Judge Gary or President Wilson could settle international difficulties by dint of an evening's work; but actually there would be difficulties!

First the Standard Oil Company sought to get possession of the Bush sand lots. But young Irving Bush, aged twenty-one, thwarted that, and the effort necessary simply enhanced in his estimation the value of the Two Hundred.

Next, with a shrewd, appraising eye he counted on one hand the steps to the accomplishment of what he wanted to do, and on the other hand his ready money. He went to New York's biggest bankers to get capital. They said, all of them, virtually what one, notably, said: "It's a fine idea, but it's not for us. If you've got sand—"

Young Mr. Bush showed that he had "sand" by putting into his venture every dollar of his own.

Old-guard business men looked rather dubiously on this young fellow with a book in his pocket. The banks, thus, refused to peddle his bonds. So he peddled them himself.

And having got piers built from those two hundred sand lots and buildings up atop them, the thing next in order was to get business.

Now trade is an eminently practical matter he considered, doubtless.

At any rate he sent for a shrewd young man, put much cash in his hand and told him: "Go out to Michigan, where, by the way, I was born. Buy two hundred cars of bailed hay. Buy low, but buy. Then go to every railroad you can reach, and to every station, and offer shipments of ten, twenty, and twenty-five cars to the Bush Terminal."

In this eminently practical manner he introduced his Terminal to the railroads, many of which now terminate there.

But, tho he stored this hay and sold it profitably, meanwhile past the terminal, where the two great piers and the buildings back of them would have been a success if they had had any business to do, steamed boats of numberless lines, poking their noses into congested East and North River piers. Mr. Bush watched them and wondered what the trouble was. One day a real steamer put in at the Bush piers, auspiciously. Not long afterward another one did likewise. Of course imaginative Mr. Bush had, very quietly, chartered these boats and put them to plying to the West Indies, after they had started tongues wagging in and about the harbor. And, incidentally, the cargoes they brought and took away reaped Bush, whom business men still called a dreamer, a goodly sum of money.

Not long afterward this dreamer was discovered entertaining royally at dinner about all the Greek and Italian lemon venders on all of Manhattan Isle. "What's the matter?" one of his friends asked him.

The "matter" was that the ferry line to Thirty-ninth Street, Brooklyn, was so slow and uncertain that lemon dealers couldn't get their supplies from the Bush Terminal in time. So Mr. Bush gave them a dinner to thwart their complaining too quickly to the steamship lines that docked "over there."

Then he set out to get a ferry that, to use his words, "kept running even on rainy days."

He had, and he has, his views on the right and the duty of every municipality to develop its port and railroad facilities as much as they can be developed. He insisted that New York should operate the Thirty-ninth Street ferry. But no one had ever heard of an American city going into the ferry business. So he went to the state, to Albany. Albany said that there was a greater need of a ferry to Staten Island. Mr. Bush rejoined so vigorously that he got a bill thru the Legislature providing for ferries to both Staten Island and Thirty-ninth Street. That is how New York City happened to enter the ferry business; that is why it now has the largest, fastest, finest ferry lines in the world—and they pay, not only in a broad sense but actually in nickels and dimes!

He wanted a post office at his terminal. He couldn't get it. So he hired clerks and soon was selling more stamps than half a dozen drug store stations. So the Post Office Department set up a branch.

He wanted telegraph offices, but the companies wig-wagged his p'an for them. So he became agent on commission; and before many months he had regular telegraph offices renting space from him.

He rode the polo pony that threw him and put the interesting hitch in his gait. He has ridden many another hobby, but his specialty is dreams and the realization of them.

His hobby now is seeing that ships clear regularly for Europe. His imagination is playing all about New York Harbor.

WINDS FROM THE NORTH

BY JAMES CHURCH ALVORD

Moored on a turquoise tide which burns to opal flames beneath the moon,
Spiked with high scabrous hills the noon to twisted tarnished silver turns,

The girdle of green olive trees which, swaying, swinging far below
That ridge of battered silver, flow around this tumult of twin seas,

Flings the last poignant touch above the loveliness of Italy;
That land of pain and poesy; that land of sunshine, shadows, love.

Gold are her wintry daffodils; gold are her lakes the sun soaks thru;
Gold are her roses; violets blue peek round her yellowing temple sills.

Yet a sleepless songless ghost of hate broods on her Northern crests of snow,
Or with frosty eyes glowers down below, for gold and sunshine desolate.

Then from her Alpine passes stark the savage Tramontana whoops
And drives the sneaking clouds in troops, like wolves, gray, galloping thru dark.

The sea beneath their onslaught groans; the olives grime; the high hills rot
And grin down Italy's length—a blot—a spine of megatherean bones.

Today that Northern storm roars down, cold winds of wrath and greed and lust,
Long clouds of grim gray soldiers thrust thru gashes in her mountain crown.

Pale faces under hair like ash have wrought her doleful history,
Blue brutal eyes her tragedy—God save her while these North winds crash!

WAR TIME IN THE VALLEY

BY CORRA HARRIS

The author of "A Circuit Rider's Wife," "A Circuit Rider's Widow" and "In the Valley" presents here another of her messages of wholesome philosophy and good cheer.—THE EDITOR

WE are peaceful people in this valley, but we can fight when we must fight. And we know something about it, because we are veterans of the soil and of the seasons. We have fought floods, endured drouths, accomplished poverty with courage and lived thru a century of winters without gloves or overcoats. We know how to "dig in," and how to come out "over the top" when the "spring drive" begins for another crop. The rain-drenched, mud-soaked weary soldiers in France have nothing on us except German bullets.

We are so long accustomed to warfare with just the elements that we did not wait for the Draft Bill to pass in Washington. We joined the Allies the next day after war was declared. And we have been in the first line in this country ever since with no drill sergeant to urge us on, and no martial music to inspire us.

We had broken the land for this year's crop in March. But when war came in April we added as much more land to that. We tore up every foot of ground in the valley and planted it. Before the agriculturally ignorant and commercial press of this country began its presumptuous campaign to "arouse" the farmers about saving the country and "winning the war," we had saved the country and won the war so far as food products count. Before a single selectman had reported for duty at any military camp we had raised tens upon tens of thousands of green soldiers in these fields. And now they stand in the November gales, veteran stalks of corn, rank upon rank as far as the eye can reach, every one bending, khaki brown, beneath the heavy ears. And they seem to march in the wind each bearing enough to feed a man.

This is the first army raised in this country against the enemy, and I can tell you it was no easy labor. You may train recruits by drilling and marching them and teaching them tactics of war, but you cannot raise corn by shouting "Right about face!" to it. You must plow it and feed it and plow it again and again. You must pray for rain, and for the floods to cease. You cannot quit tho your heart and strength faileth. You have got to see it thru.

Well, we have done that. And we have had our "casualties" as other fighting forces have. Some of our best men and best women have gone down in the struggle this year who might have lived longer but for the terrific and exhausting labor they achieved. We laid them away with good cheerful funerals at "Olive Vine" and Mount Pleasant, and in the old churchyard at Pine Log. Then we went back to raising that great army of corn, feeling better and braver and stronger because such men and such women had lived among us and had given their lives for what was good in the earth and best in mankind.

THERE has been a lot of fuss in the world beyond these hills among people who never conceived of hardships and war economies. And we might have been sidetracked in the Home Guard or a Conservation League, but we are born in this valley with a "single eye" for three things, the weather, the harvest and Almighty God. We have had practise in keeping our vision clear and our attention fixed on the main job. We heard much, for example, about "wheatless days" and "meatless days." But for us, this has been a "wheatless" year. The freeze in February destroyed all the grain in this section. We live on corn bread. It is the best, most nourishing bread in the world except for Yankees and foreigners who do not know how to prepare it.

And even of corn we have had little enough. Last summer the floods destroyed two-thirds of the crop, so we could not fatten pigs during the winter. Therefore we have had meatless days a-plenty, and thought nothing tragic about that. For we have an abundance of butter, milk and eggs. We have not suffered and we have never had better health. Nearly every young single man of draft age in the valley has been called and accepted in the National Army. Not one has been returned to us as "physically unfit." We are very proud of this record.

When the first quota went from this county, a great crowd met them at the railway station. Somebody made a speech and presented each man with a wrist watch. But by the time our men from the valley were called there were no more wrist watches on hand, and no speakers to speak, so we just sent them down to Camp Gordon in their Sunday clothes, and told them to do the best they could; that probably they would not worry about watches and the time of day anyhow when they got in sight of the enemy's trenches.

We are strangely quiet about these young men. We have uttered not one word of complaint. We are just dumb, holding our breath for what may happen. We are not coddling them, nor sending them boxes from home. They can live on war rations. They always have done it on less. And we reckon they will do their duty when the time comes, because they are accustomed to performing hard duties with sublimely unconscious dignity.

There is not much beside the weather between our people in the valley and the Lord at any time. And now, we are overlooking the weather and praying more than usual. We pray for Belgium and France and for the Italians who have suffered such terrible vicissitudes, and a little awkwardly for the Russians, whom we do not understand, but whom we are willing to give the benefit of our headshaking doubts. And we pray dutifully for the British, who are so close kin to us that we feel a relative's indignation for their faults, which are chiefly the faults of bad family manners. But we do not know how just now to pray for the Germans. Maybe we ought to, but we do not. For the present the only honest thing to do is to leave them to the Kaiser's God, with a sort of secret feeling that the good Lord himself will know how to have mercy on them in spite of the Kaiser's God.

Mrs. Harris and her daughter, Faith,—and "Bosco"

FORTY THOUSAND MILLION A YEAR

BY JOHN SKELTON WILLIAMS

COMPTROLLER OF THE CURRENCY

THE wealth now produced each year in the United States by our 42,000,000 workers and wage-earners, aided by labor-saving machinery, which is ever increasing in efficiency and output, is colossal. For 1917 this wealth, it is believed, will exceed $40,000,000,000, of which the Secretary of Agriculture has estimated that the products of the farm and kindred industries will contribute $17,000,000,000, a vast increase over any previous year.

With the higher wages paid to workmen—in many industries the highest ever known—and with the larger returns to capital, the savings of the people, despite the high cost of living, have increased enormously. The growth of prohibition has also stimulated thrift and helped materially to swell savings deposits. Americans have not the inherited wealth which in European countries has been handed down thru generations, but we have already become both in the aggregate and in our per capita wealth the richest nation on the globe.

THE per capita of money in circulation on November 1, 1917, was $47.03. The general stock of money in the United States on that date was $5,768,711,565. The wealth of our country is now close to $250,000,000,000. The yearly income of our people, representing the product of both capital and labor, is about $40,000,000,000, or sixteen per cent of the estimated value of all property.

The latest reports tell us that 28,000 national, state, savings banks, and trust companies of the country, have at this time approximately 46,000,000 deposit accounts. These deposit balances range from very small sums to more than twenty million dollars in a single account in one bank. While many individuals keep accounts in more than one bank, it is probably safe to assume that the accounts mentioned represent the deposits of more than 25,000,000 separate depositors.

The resources of all the banks of this country today are over $37,000,000,000. This is an increase since July, 1913, of nearly twelve billion dollars ($12,000,000,000).

These are wonderful figures. The imagination can hardly conceive them. Yet they are but the totals of our everyday life, our everyday business. Upon the strength and soundness of the banks of the country depend largely our ability to conduct successfully the vast operations upon which trade and commerce and industry all depend.

Our banks have assisted enormously in the successful negotiation of the First and Second Liberty Loans; and they have at the same time kept themselves in strong and liquid condition while financing so largely these gigantic undertakings. The power and patriotism of our banks are, and rightly so, a source of deep gratification if not of pride. The people do well to have faith in them.

Their resources now are approximately twice as great as the combined resources of the great banks of issue of leading nations of the world, including the Bank of England, the Bank of France, the Bank of Russia, the Imperial German Reichsbank, the Bank of Spain, and the Imperial Bank of Japan, according to their recent reports.

The National Banks of the country are steadily growing stronger and safer, This is largely due to the improved system of National Bank examination and the greater thoroness of these examinations and to the policy of requiring that the banks shall observe the provisions of the law intended for their protection and for the protection of their depositors and shareholders. The average losses to the depositors of National Banks for the twenty-year period up to June, 1917, were nine-one-thousandths of one per cent of total deposits. These losses have been so reduced that for the fiscal year 1916-1917 the total losses are only about one-third of the average for the past twenty years, or three-one-thousandths of one per cent of the deposits. For the past year they have amounted to only about one-seventh of what they were for either of the years ending June 30, 1908, 1909 or 1910.

OUR banks have played an important and perhaps not fully understood part in our national life in these days of stress. The remarkably satisfactory condition of the money market is exceedingly significant, but only one of the many indications pointing to the eminent success with which the banking and financial operations attendant upon the negotiation of huge issues of Government bonds have been conducted.

Very likely, many readers do not know of the many interesting phases and details involved in placing these great Liberty Bond issues thruout the country. An important feature of the loan campaign is seen in the policy early adopted by the Treasury of permitting the funds subscribed by customers of banks to continue on deposit in such banks—provided the latter qualify as government depositaries and furnish to the Government security for such deposits—until such time as these funds are required for disbursement to meet the demands of the war or for loans to our allies or for the general expenses of government.

Thru the medium of the Federal Reserve Banks, the funds are then withdrawn and disbursed with the minimum shifting of reserves or disturbance in the money market. Assisted by the Federal Reserve Board's rulings establishing special rates for loans secured by United States Government Bonds for the accommodation of both member and non-member banks, there has always been available an adequate supply of credit for the use of banks which might find themselves temporarily short of funds as the result of the shifting of the Government's credits. These operations are simply a transfer of bank credits on the books of the banks, first to the Government, and then to the credit of the corporations and individuals supplying the goods and services required in the conduct of war. These transactions, unprecedented in size and scope in the financial history of the United States, are a striking demonstration of the usefulness and capacity of the Federal Reserve System.

THE tremendous business expansion of the many months past, together with advancing prices for commodities and for labor, has called for the use of hundreds of millions of dollars of additional capital and accommodation from the banks. In past years, under inadequate and unscientific banking and currency methods and systems, a great increase in business activity almost invariably produced a money scarcity, occasioned high interest rates, and sometimes precipitated panics; but during the past two years we have had the lowest money rates the country has ever enjoyed.

These deeply gratifying conditions are to be credited largely to the operations of our Federal Reserve System, which was inaugurated just three years ago. In June last, amendments to the original Federal Reserve act went into effect improving the law along lines that experience had shown to be desirable after more than two years of operation. These amendments have added materially to the efficiency of the act as a working measure; and have, among other improvements, strengthened the Reserve System by providing for a larger control over the gold supply of the country. Our stock of gold, the basis of our credit structure, now more than $3,000,000,000, is the greatest of any nation on earth; and we have succeeded in mobilizing here an amount of gold which is now far more than this or any other nation ever held before. The gold at this time held by the Federal Reserve Banks alone approximate $1,500,000,000.

BANK and business men, even in the midst of a world cataclysm, are conducting business, as far as money conditions are concerned, with a greater sense of security and of confidence than at any time in our history as a people. They no longer live in constant fear of the recurrence of the money flurries and panics which have in the past, at such frequent intervals, visited us with disastrous results.

Business men, large and small, in the smaller cities and also in towns and rural districts, as well as in the centers of wealth, have been enabled to obtain capital for[*Continued on page 490*

CREATIVE CHEMISTRY

A Popular Explanation of Recent Progress in Chemical Industries

BY EDWIN E. SLOSSON

CELLULOSE AND WHAT IS MADE OF IT

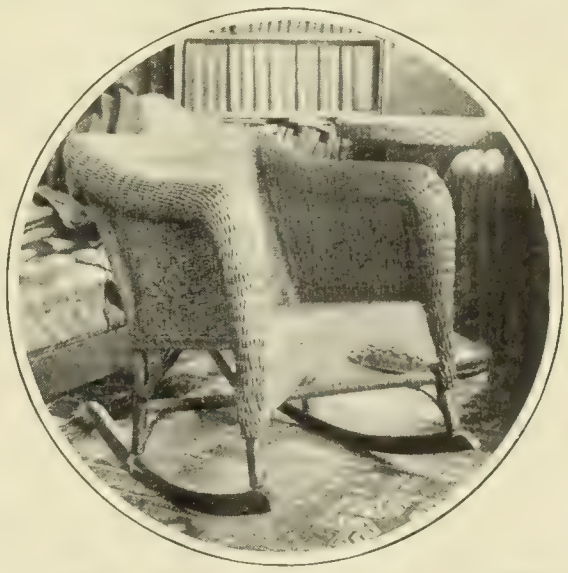
ORGANIC compounds, on which our life and living depend, consist chiefly of four elements; carbon, hydrogen, oxygen and nitrogen. These compounds are sometimes hard to analyze, but when once the chemist has ascertained their constitution he can usually make them out of their elements—if he wants to. He will not want to do it as a business unless it pays and it will not pay unless the manufacturing process is cheaper than the natural process. This depends primarily upon the cost of the crude materials. What, then, is the market price of these four elements? Oxygen and nitrogen are free as air, and as we have seen in the first article their direct combination by the electric spark is possible. Hydrogen is free in the form of water but expensive to extricate by means of the electric current. But we need more carbon than anything else and where shall we get that? Bits of crystallized carbon can be picked up in South Africa and elsewhere, but those who can afford to buy them prefer to wear them rather than use them in making synthetic food. Graphite is rare and hard to melt. We must then have recourse to the compounds of carbon. The simplest of these, carbon dioxide, exists in the air but only four parts in ten thousand by quantity. To extract the carbon and get it into combination with the other elements would be a difficult and expensive process. Here, then, we must call in cheap labor, the cheapest of all laborers, the plants Pine trees on the highlands and cotton plants on the lowlands keep their green traps set all the day long and with the captured carbon dioxide build up cellulose. If, then, man wants free carbon he can best get it by charring wood in a kiln or digging up that which has been charred in nature's kiln during the Carboniferous Era. But there is no reason why he should want to go back to elemental carbon when he can have it already combined with hydrogen in the remains of modern or fossil vegetation. The synthetic products on which modern chemistry prides itself, such as vanillin, camphor and rubber, are not built up out of their elements, C, H and O, altho they might be as a laboratory stunt. Instead of that the raw material of the organic chemist is chiefly cellulose, or the products of its recent or remote destructive distillation, tar and oil.

Made of Cellulose. Sack and sausage casings, "silk" dresses and neckties, baskets and bags, mats, rugs and furniture may now be manufactured from wood pulp

It is unnecessary to tell the reader what cellulose is since he now holds a specimen of it in his hand, pretty pure cellulose except for the sizing and the specks of carbon that mar the whiteness of its surface. This utilization of cellulose is the chief cause of the difference between the modern world and the ancient, for what is called the invention of printing is essentially the inventing of paper. The Romans made type to stamp their coins and lead pipes with and if they had had paper to print upon the world might have escaped the Dark Ages. But the clay tablets of the Babylonians were cumbersome; the wax tablets of the Greeks were perishable; the papyrus of the Egyptians was fragile; parchment was expensive and penning was slow, so it was not until literature was put on a paper basis that democratic education became possible. At the present time sheepskin is only used for diplomas and other antiquated documents. And even if your diploma is written in Latin it is likely to be made of sulfated cellulose.

The Forest Products Laboratory which is maintained by the United States Government at Madison, Wisconsin, as an experimental plant to undertake the investigation of new processes which may further the more efficient utilization of our timber

The textile industry has followed the same law of development that I have indicated in the other industries. Here again we find the three stages of progress, (1) utilization of natural products, (2) cul-

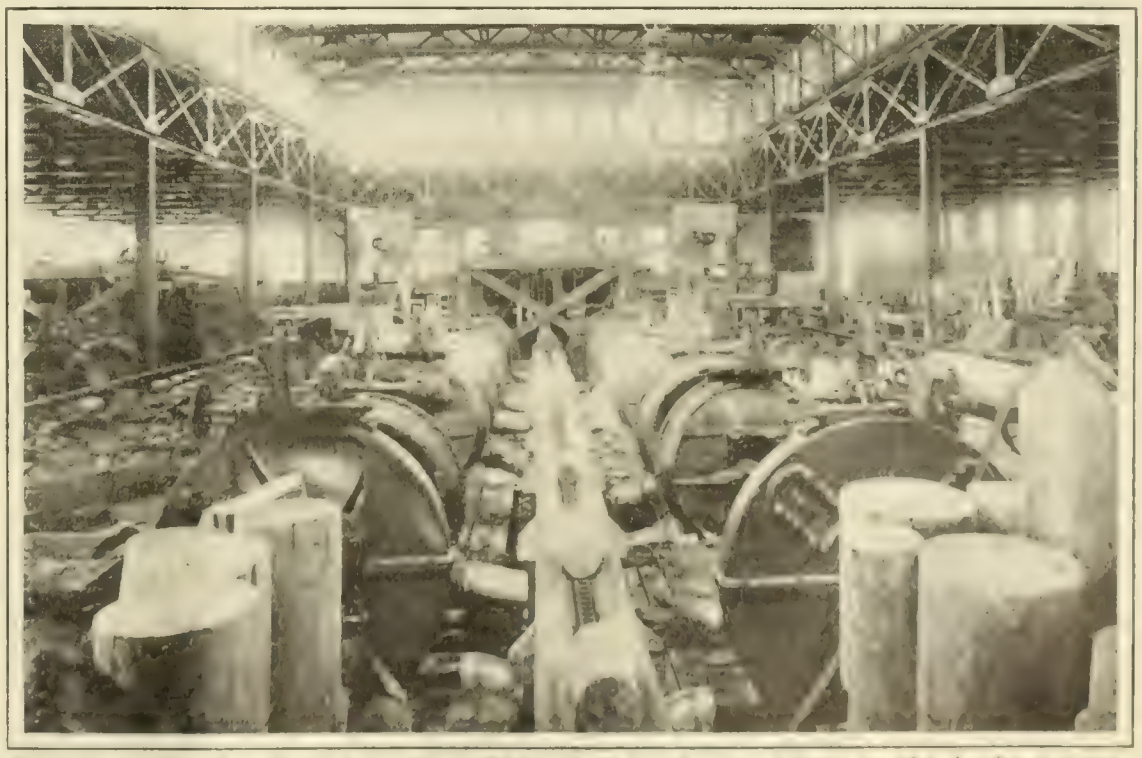


The raw material. Logs delivered at the paper mill of the New York and Pennsylvania Company at Lock Haven, Pennsylvania. One paper uses nearly 2000 acres of forest a year

tivation of natural products, (3) manufacture of artificial products. The ancients were dependent upon plants, animals and insects for their fibers. China used silk, Greece and Rome used wool, Egypt used flax and India used cotton. In the course of cultivation for three thousand years the animal and vegetable fibers were lengthened and strengthened and cheapened. But at last man has risen to the level of the worm and can spin threads to suit himself. He can now rival the wasp in the making of paper. He is no longer dependent upon the flax and the cotton plant, but grinds up trees to get his cellulose. A New York newspaper uses up nearly 2000 acres of forest a year. The United States grinds up about five million cords of wood a year in the manufacture of pulp for paper and other purposes.

In making "mechanical pulp" the blocks of wood, mostly spruce and hemlock, are simply prest sidewise of the grain against wet grindstones. But in wood fiber the cellulose is in part combined with lignin, which is worse than useless. To break up the ligno-cellulose combine chemicals are used. The logs for this are not ground fine, but cut up by disk chippers. The chips are digested for several hours under heat and pressure with acid or alkali. There are three processes in vogue. In the most common process the reagent is calcium sulfite, made by passing sulfur fumes (SO_2) into lime water. In another process a solution of caustic soda is used to disintegrate the wood. The third, known as the "sulfate" process, should rather be called the sulfide process since the active agent is an alkaline solution of sodium sulfide made by roasting sodium sulfate with the carbonaceous matter extracted from the wood. This sulfate process, tho the most recent of the three, is being increasingly employed in this country, for by means of it the resinous pine wood of the South can be worked up and the final product, known as kraft paper because it is strong, is used for wrapping.

But whatever the process we get nearly pure cellulose which, as you can see by examining this page under a



A chair made from spun paper twine

microscope, consists of a tangled web of thin white fibers, the remains of the original cell walls. Owing to the severe treatment it has undergone wood pulp paper does not last so long as the linen rag paper used by our ancestors. The pages of the newspapers, magazines and books printed nowadays are likely to become brown and brittle in a few years, no great loss for the most part since they have served their purpose, tho it is a pity that a few copies of the worst of them could not be printed on permanent paper for preservation in libraries so that future generations could congratulate themselves on their progress in civilization.

But in our absorption in the printed page we must not forget the other uses of paper. The paper clothing, so often prophesied, has not yet arrived. Even paper collars have gone out of fashion —if they were ever in. But we hear that Russian soldiers are wearing paper shirts made in Japan and that in Germany paper is used for socks and shoes as well as handkerchiefs and napkins. Our sanitary engineers have set us to drinking out of sharp-edged paper cups and we blot our faces instead of wiping them. Twine is spun of paper and furniture made of the twine, a rival of rattan. Cloth and matting woven of paper yarn are being used for burlap and grass in the making of bags and suitcases.

Here, however, we are not so much interested in manufactures of cellulose itself, that is, wood, paper and cotton, as we are in its chemical derivatives. Cellulose, as we can see from the symbol, $C_6H_{10}O_5$, is composed of the three elements carbon, hydrogen and oxygen. These are present in the same proportion as in starch ($C_6H_{10}O_5$), while glucose or grape sugar ($C_6H_{12}O_6$) has one molecule of water more. But glucose is soluble in cold water and starch is soluble in hot, while cellulose is soluble in neither. Consequently cellulose cannot serve us for food, altho some of the vegetarian animals, notably the goat, have a digestive apparatus that can handle it. It is rumored from Germany among other strange stories of chemical achieve- [*Continued on page 480*

MAKE A FRIEND OF RUSSIA

BY ISAAC DON LEVINE

AUTHOR OF "THE RUSSIAN REVOLUTION"

FREE Russia is not lost yet to the Allied cause. She can easily be converted yet into a powerful striking force against Germany, if only an immediate effort is made by the Allies to understand the Russian state of mind and the real cause of the Russian crisis.

At the basis of all of the new Russia's troubles lies the universal longing of the masses for peace, not a separate, but a general peace. The Russian revolution itself was the product of this longing. The great fact, hardly recognized yet outside of Russia, is that the revolution was an outbreak not only against Czarism, but also against the war, in so far as the Russian masses considered it Czar-made.

It is therefore a great mistake to ascribe Russia's chronic crisis during the last six months to internal causes, such as party differences, economic troubles, racial and nationalistic aspirations. These would undoubtedly have manifested themselves in a first-degree crisis had Russia been at peace and in an internationally normal situation. But what ails the new Russia now is a far deeper cause. It is the failure of the revolution up to the present to carry out its very fundamental purpose, its own mandate, the bringing about of peace.

But how could peace be brought about, from the Russian viewpoint? It is here that one will find the abyss of misunderstanding lying between Russia and the Allies. There is the idea, maliciously fostered in Allied countries, that Russia is after a separate peace. Every Russian's blood boils with indignation at this suggestion, and yet it has apparently found a firm position in Allied public opinion. The truth is, and one wishes it reverberated thruout the world incessantly, that there is not and never has been a party or faction in the new Russia favoring a separate peace with Germany. The Bolsheviki even never stood for it. If certain individuals, in the pay of Germany, were active in Russia in the interests of a separate peace, it does not follow that the Russian people are for such a peace.

Free Russia, of her own momentum, never will conclude a separate peace. But can one imagine her being driven toward it, not by Germany, but by the Allies. The latter have done their best in the last six months to alienate the sentiments of the Russian masses. By failing to recognize the cardinal fact that a new Russia has come into existence last March, a Russia which could not possibly be bound by treaties concluded by the Czar, the Allies laid the foundations of all the Russian disasters.

The new Russia, upon finding herself in the Allied camp, regarded the partners of the Czar with suspicion from the very beginning. To the Russian mind affiliation with Czarism was in itself a crime. The Russian revolution automatically severed the bonds tying Russia and the Allies. But the Allies would not face this fact. Nor would they listen to those Russians who begged them to negotiate at a conference a new alliance with the free Russian masses.

These masses, within a few weeks after the revolution, worked out their own philosophy on the war and the way to end it. Yearning for peace, the masses, thru the executive council of workmen and soldiers, issued a fiery appeal to the German masses to rise in revolt against the Hohenzollerns and make an end to the war. But the German masses failed to rise. Instead, their leaders informed the Russians that a German revolution could be made possible only by undermining the popular German belief that the Teutons were fighting a defensive war against greedy enemies.

Th Russians acted upon this suggestion immediately. Early in May the world was told of the first Petrograd disturbances since March. What happened? The proletariat marched in protest against the Foreign Minister of the first Provisional Government, Prof. Paul Miliukoff. The latter was in complete harmony with the Allied war aims. He favored very much Russia's possession of Constantinople and the Dardanelles. The Russian masses had no desire for them. In fact, they saw in Miliukoff's war aims an obstacle to peace, as they recognized these war aims as imperialistic and consequently only fortifying the belief of the masses of the Central Powers that they were waging a defensive war.

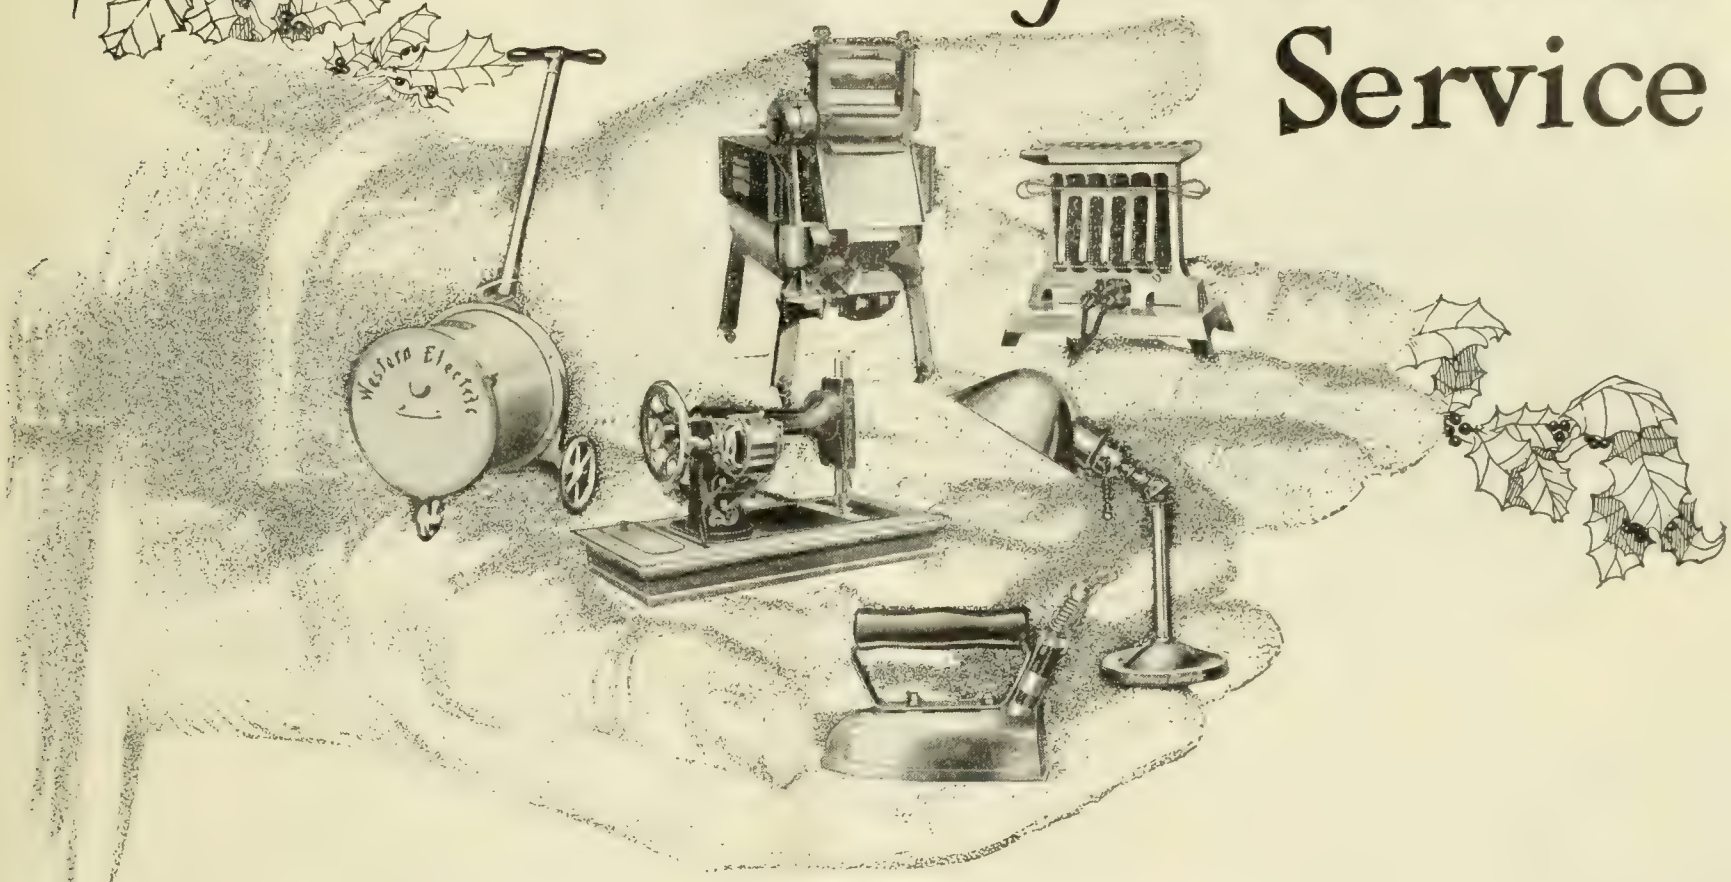
THE Russian people became convinced that a repudiation by the Allies of all imperialistic designs would breed revolution in Germany. They proceeded to repudiate Russia's aims at annexation. They forced Miliukoff out. They forced the Provisional Government to repudiate formally the Russian share of the Czar's treaty with the Allies, by which the Dardanelles were to become Russian. They evolved the famous "no annexations and no indemnities" formula and had the Government pledge it.

Two weeks after Russia's adoption of the new foreign policy Scheidemann, the leader of the Majority Socialists, made a momentous declaration in the Reichstag, which was never adequately reported in the United States. He said: "If Great Britain and France should follow the example of Russia and renounce all aims at conquest . . . there would be a revolution in this country," meaning, of course, Germany.

Scheidemann's statement naturally made a profound impression on the Russian radicals, especially so, as they considered Scheidemann before a traitor to the cause of internationalism. The Russian masses, thru their councils, compelled the Provisional Government to issue a call to the Allies for a conference to discuss war aims. It was clear to every Russian mind that a new understanding was necessary between Russia and the Allies if the former were to continue as a partner of the latter. The Allies unfortunately failed to grasp the full meaning of the Russian demand for a conference. At first they promised Kerensky to hold such a meeting, then they delayed in living up to their promise and finally withdrew it, after the nerves of the Russian masses had been strained to the limit waiting for the conference.

WHAT did the Russian masses expect of a meeting with the Allies? They expected to make Britain, France and Italy repudiate their shares of the treaties with the Czar and declare their aim in the war as the democratization of Germany only. The Russians believed and still believe that such an act would cause a revolution in Germany.

The Allied failure to understand the import of the Russian obsession with the idea of a German revolution as a short cut to peace cost them the confidence of the Russian people. As days and weeks passed by and the Russo-Allied war aims conference did not come into being, a deep wave of resentment against the Allies spread thruout Russia. Agitators and German agents thrived on it.



All the time the Bolsheviki, representing the radical wing of the Russian Socialist party, gained strength. They adopted the viewpoint that the Allies will never change their war aims, as they are afraid of a German revolution. The Russian masses were told that it was not the Kaiser, but France and England, that were in the way to peace, as they blocked the realization of the German revolution.

Kerensky fell because he failed to change the Allied war aims. The Bolsheviki have won because they adopted the original mandate of the revolution as their chief program. The Bolsheviki leaders now in control of Russia will unquestionably soon be forced out of their position, but the new government which will follow them, representing all the Russian Socialist parties, will be pledged to the very policy the Bolsheviki are now pursuing in the domain of foreign politics. Russia is united in her yearning for peace and in her belief that no peace is possible with the Hohenzollerns.

But Russia will not fight in the Allied camp so long as the Allies stick to aims which she considers imperialistic. If France and Britain should now repudiate all aims at conquest and define their purpose in the war as the democratization of Germany only, there is no question in any forward-looking Russian's mind that the Russian crisis would quickly come to an end. Moreover, Russia's striking power would be immediately resurrected in case a German revolution fails to materalize.

New York City.

Enlarge Woman's Opportunity *for* Patriotic Service

This year let the Christmas spirit merge with the spirit of patriotism

By choosing electrical gifts for your family and your friends, you simplify their housekeeping problems—you make it possible for them to give more time to the good work women everywhere are doing—you enable them to carry on easily the work of the domestic servants who are taking the places of men in industries vital to the war.

Three disagreeable tasks that waste the housewife's time and energy are the sweeping, the washing, and the ironing. Three Western Electric devices, the vacuum cleaner, washing machine and electric iron so simplify these tasks that they are no longer hard, monotonous work.

The Western Electric Portable Sewing Machine is another useful gift. This new kind of a sewing machine has made it possible for thousands of women to make their own and their children's clothes—another war time economy. With it, much more can be accomplished—and it will make sewing a joy, not a task.

Table and floor lamps, toasters, grills, warming pads and vibrators are others in the long list of appropriate electrical gifts. They can all be had, bearing the familiar quality-mark, *Western Electric*.

Go to your light company, electrical dealer or department store if you would choose gifts this year that will make your Christmas both practical and patriotic.

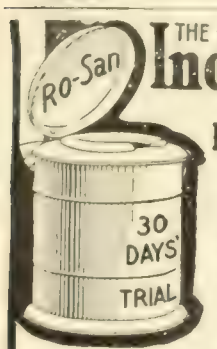
Somewhere in America

Laying submarine cable, hundreds of miles of it, to scores of isolated lighthouses is one of the telephone tasks made necessary by the war. The Bell System has also built lines connecting some two hundred coast guard stations.

It has built complete telephone systems for fifteen National Guard cantonments and fifteen National Guard camps, each a city in size, and also at many naval, officer's reserve, mobilization and embarkation camps and at army and navy stations.

It has provided an enormous increase in long distance facilities throughout the country, that satisfactory service may be maintained between cantonments, training camps, guard outposts, military supply stations, war industries, the National Capital and other centers of Government activity.

The Government facilities at the National Capital have already been increased three-fold and there has been a tremendous increase in local and toll facilities.



Fifteen thousand miles of telephone wire have been taken from other uses for the exclusive service of the Government and some 20,000 miles of telegraph facilities also provided.

Meanwhile the Bell System has given generously of its man power, until over seven thousand men are in service or recruited for military duty.

Members of the Bell System whether they have already gone to France or whether they have stayed at their posts to help mobilize the country for victory, are equally in the service of the Nation.

THE ORIGINAL CHEMICAL **Indoor Closet**

30,000 SOLD—FIFTH YEAR

More Comfortable, Healthful, Convenient

Eliminates the out-house, open vault and cess-pool, which are breeding places for germs. Have a warm, sanitary, odorless toilet right in your house. No going out in cold weather. A boon to invalids. Endorsed by State Boards of Health.

ABSOLUTELY ODORLESS

Put It Anywhere In The House

The germs are killed by a chemical process in water in the container. Empty once a month. No more trouble to empty than ashes. Closet absolutely guaranteed. Guarantee on file in the office of this publication. Ask for catalog and price.

(Continued from page 477)

ments that birch wood pulp and straw have been used not only as an ingredient of cattle food but also put into war bread. It is not likely, however, that the human stomach even under the pressure of famine is able to get much nutriment out of sawdust. But by digesting with dilute acid sawdust can be transformed into sugars and these by fermentation into alcohol, so it would be possible for a man after he has read his morning paper to get drunk on it.

If the cellulose, instead of being digested a long time in dilute acid, is dipt into a solution of sulfuric acid (50 to 80%) and then washed and dried it acquires a hard, tough and translucent coating that makes it water-proof and grease-proof. This is the "parchment paper" that has largely replaced sheepskin. Strong alkali has a similar effect to strong acid. In 1844 John Mercer, a Lancashire calico printer, discovered that by passing cotton cloth or yarn thru a cold 30% solution of caustic soda the fiber is shortened and strengthened. For over forty years little attention was paid to this discovery, but when it was found that if the material was stretched so that it could not shrink on drying the twisted ribbons of the cotton fiber were changed into smooth-walled cylinders like silk, the process came into general use and nowadays much that passes for silk is "mercerized" cotton.

Another step was taken when Cross of London discovered that when the mercerized cotton was treated with carbon disulfide it was dissolved to a yellow liquid. This liquid contains the cellulose in solution as a cellulose xanthate and on acidifying or heating the cellulose is recovered in a hydrated form. If this yellow solution of cellulose is squirted out of tubes thru extremely minute holes into acidulated water, each tiny stream becomes instantly solidified into a silky thread which may be spun and woven like that ejected from the spinneret of the silkworm. The origin of natural silk, if we think about it, rather detracts from the pleasure of wearing it, and if "he who needlessly sets foot upon a worm" is to be avoided as a friend we must hope that the advance of the artificial silk industry will be rapid enough to relieve us of the necessity of boiling thousands of baby worms in their cradles whenever we want silk stockings. But so far we have not reached a stage where we can altogether dispense with the services of the silkworm. The viscose threads made by the process look as well as silk, but they are not so strong, especially when wet.

Besides the viscose method there are several other methods of getting cellulose into solution so that artificial fibers may be made from it. A strong solution of zinc chloride will serve and this process used to be employed for making the threads to be charred into carbon filaments for incandescent bulbs. Cellulose is also soluble in an ammoniacal solution of copper hydroxide. The liquid thus formed is squirted thru a fine nozzle into a precipitating solution of caustic soda and glucose, which brings back the cellulose to its original form.

In my article on explosives I explained how cellulose treated with nitric acid in the presence of sulfuric acid was nitrated. The cellulose molecule having three hydroxyl (—OH) groups can take up one, two or three nitro groups (—ONO_2). The higher nitrates are known as guncotton and form the basis of modern dynamite and smokeless powder. The lower nitrates, known as pyroxylin, are less explosive, altho still very inflammable. All these nitrates are, like the original cellulose, in-

soluble in water, but unlike the original cellulose, soluble in a mixture of ether and alcohol. The solution is called collodion and is now in common use to spread a new skin over a wound. This great war might be traced back to Nobel's cut finger. Alfred Nobel was a Swedish chemist—and a pacifist. One day while working in the laboratory he cut his finger, as chemists are apt to do and, again as chemists are apt to do, he dissolved some guncotton in ether-alcohol and swabbed it on the wound. At this point, however, his conduct diverges from the ordinary, for instead of standing idle, impatiently waving his hand in the air to dry the film as most people, including chemists, are apt to do, he put his mind on it and it occurred to him that this sticky stuff, slowly hardening to an elastic mass, might be just the thing he was hunting as an absorbent and solidifier of nitroglycerin. So instead of throwing away the extra collodion that he had made he mixt it with nitroglycerin and found that it set to a jelly. The "blasting gelatin" thus discovered proved to be so insensitive to shock that it could be safely transported or fired from a cannon. This was the first of the high explosives that have been the chief factor in the Great War.

But on the whole, collodion has healed more wounds than it has caused besides being of infinite service to mankind otherwise. It has made modern photography possible, for the films we use in the camera and moving picture projector consists of a gelatin coating on a pyroxylin backing. If collodion is forced thru fine glass tubes instead of thru a slit, it comes out a thread instead of a film. If the collodion jet is run into a vat of cold water the ether and alcohol dissolve; if it is run into a chamber of warm air they evaporate. The thread of nitrated cellulose may be rendered less inflammable by taking out the nitrate groups by treatment with ammonium or calcium sulfide. This restores the original cellulose, but now it is an endless thread of any desired thickness, whereas the native fiber was in size and length adapted to the needs of the cottonseed instead of the needs of man. The old motto, "If you want a thing done the way you want it you must do it yourself," explains why the chemist has been called in to supplement the work of nature in catering to the wants of man.

Instead of nitric acid we may use strong acetic acid to dissolve the cotton. The resulting cellulose acetates are less inflammable than the nitrates, but they are more brittle and more expensive. Motion picture films made from them can be used in any hall without the necessity of imprisoning the operator in a fire-proof box where if anything happens he can burn up all by himself without disturbing the audience. The cellulose acetates are being used for auto goggles and gas masks as well as for windows in leather curtains and transparent coverings for index cards. A new use that has lately become important is the varnishing of aeroplane wings, as it does not readily absorb water or catch fire and makes the cloth taut and air-tight. The Germans are said to make aeroplane wings that are as transparent as those of a dragon-fly and not easy to see against the sky.

The nitrates, sulfates and acetates are the salts or esters of the respective acids, but recently true ethers or oxides of cellulose have been prepared that may prove still better since they contain no acid radicle and are neutral and stable.

These are in brief the chief processes for making what is commonly but quite improperly called "artificial silk." They are not the same substance as silk-worm silk and ought not to be—tho they sometimes

A Royal Dish

At ⅛ the Cost of Eggs

Do you know that Quaker Oats, with all its delightful flavor, is about the cheapest food in the world?

Measured by food value—by calories—eggs cost 8 times as much. Ham costs 4 times as much—steak 5 or 6 times as much. Potatoes 3 times as much. Even bread and milk cost nearly 3 times as much.

1000 calories—which is one-third a day's food for a workingman—costs only five cents in Quaker Oats.

Then think of the flavor, the aroma—such as no other grain food has. Think of its energizing value. All the needed elements are stored in oats, in just the right proportion.

This is the supreme food—more nutritious than wheat. It is the prescribed food for the years of growth. To bread and muffins, cookies and pancakes, it adds a new delight. It makes wheatless days enjoyable—which the government recommends.

Quaker Oats

The Extra-Flavory Flakes

Quaker Oats is made from queen oats only—just the big, rich, flavory grains. We get but ten pounds from a bushel.

By this selection we get in this brand an exquisite flavor, which has won the world. Everywhere, among oat lovers, this is the favorite brand. Yet in America it costs no extra price. If you ask your grocer for Quaker Oats, you'll get it.

12c and 30c per package in United States and Canada, except in far West and South where high freights may prohibit.

Quaker Oats Bread

2 cups Quaker Oats 5 cups flour
2 cups boiling water

½ cup molasses 1 tablespoon salt
1 tablespoon butter or other fat

1 cake compressed yeast dissolved in ½ cup lukewarm water

Add boiling water to oats and let stand one hour, add molasses, salt, butter or fat, dissolved yeast cake and flour. Let rise until double in bulk. Knead thoroughly and shape into loaves. Put into greased bread pans, let rise until double in bulk and bake 45 minutes.

This recipe makes two loaves.

Quaker Oats Muffins

2⅔ cup uncooked Quaker Oats, 1½ cups flour, 1 cup scalded milk, 1 egg, 4 level teaspoons baking powder, 2 tablespoons melted butter, ½ teaspoon salt, 3 tablespoons sugar.

Turn scalded milk on Quaker Oats. Let stand five minutes; add sugar, salt and melted butter; sift in flour and baking powder; mix thoroughly and add egg well beaten. Bake in buttered gem pans.

Quaker Oats Sweetbits

1 cup sugar, 2 eggs, 2 teaspoons baking powder, 1 tablespoon butter, 1 teaspoon vanilla, 2½ cups uncooked Quaker Oats.

Cream butter and sugar. Add yolks of eggs. Add Quaker Oats, to which baking powder has been added, and add vanilla.

Beat whites of eggs stiff and add last. Drop on buttered tins with a teaspoon, but very few on each tin, as they spread. Bake in slow oven. Makes about 65 cookies.

TALKS ON HEALTH

By R. L. ALSAKER, M.D., Author of "Maintaining Health"

IS THERE ANY SAFE AND SURE WAY TO CURE CONSTIPATION?

Constipation is a large subject, for it is perhaps the most widespread of all physical disorders. And it helps to build other diseases. The majority of the people have it, either periodically or all the time. It is such a big subject that it justifies the six page letter received from Mr. J. B. A. The letter is too long to quote in full, so we shall give only a few lines:

"For twenty years I took various laxatives and cathartics. They had their effect, but they did not cure me. About three years ago I was advised to take a petroleum oil then often called Russian oil; also to use the internal bath. I did try the lubricating oil. It is practically tasteless and pleasant enough to take. It acted as a gentle laxative, but when I stopped using it, the old trouble returned. Then I decided to give the internal bath a trial. I got results with that too, but only as long as I used it. No bath, no bowel movement.

"If possible, I want to return to the condition where the bowels act normally without taking medicines and without a 'wash out' every day. It's a nuisance. Is there any *safe* and *sure* way to cure chronic constipation? Why not publish an article on this universal ailment?"

J. B. A.

It is an axiom that in order to be able to cure, one must know the cause. If washing the bowels is Nature's way of removing the waste, then lack of washing is the cause of constipation, but we can find no indication that Nature intended the bowels to be washed out with injections of water. So that is not the cause of constipation, and hence the enema or internal bath is not a cure. Nor can we find any indication showing us that Nature intended the bowels to be greased with a mineral oil, so the lack of mineral oil is not the cause of constipation, and the use of this oil is not a cure.

The enema and the use of the oil are forms of relief. They help the lower bowel to get rid of accumulated waste—waste that produces disease if allowed to remain. But relief and cure are as wide apart as the poles. Mr. J. B. A. is looking for a cure, and that is what you should look for if you want to live long and well; that is what everyone who has constipation should look for.

Let us see what the cause of constipation is: That it is principally wrong eating would seem to be obvious enough even if not generally known. When a person eats too much of certain foods and fails to eat other foods that the system needs, the result is often constipation. Nearly all mistakes in eating have a tendency to produce constipation, and the eating is the most important cause, say, about nine-tenths of the cause.

Abnormal living is the *real* cause of constipation, and the chief part of this abnormal living is wrong eating. It is the normal and natural thing to obey the calls of Nature promptly, but this many fail to do, and this also often helps to bring about constipation.

Nearly every case of chronic constipation is curable. Only a few cases are beyond cure. If you are seeking relief only you can find numerous laxatives, cathartics and lubricants, or you can use various forms of injections. They all help to remove waste from the bowels.

But if you want a real cure, you will have to live so normally that the muscles in the bowels grow vigorous and active, and the glands in the bowels will secrete their own lubricants. Yes, the bowels produce a lubricant, and its name is mucus. It is the only kind of lubricating oil needed. Nature did not leave this important ingredient out of the body. When the muscles are working well and the glands are normal no internal bathing will be needed, for the bowels will then perform their functions so well that the waste is properly discharged.

Neither medicine nor mechanical apparatus will cure constipation. The *cure* for this trouble is a *natural* diet, pure food rightly prepared and properly eaten. Purgatives, laxatives, enemas and mechanical manipulations may help to "clean house" but mechanical treatment does not remove the cause of constipation.

Constipation is often obstinate, but persistence in natural living will produce a cure in nearly every case. To live naturally means to exercise, work, rest, sleep, recreate, drink and eat according to the needs of the body, and especially to eat properly. Get the body into good condition through proper living and the constipation will disappear.

Realizing the almost universal prevalence of this condition and knowing that serious sickness is often traceable to this source I have undertaken to treat the entire subject in an educational way in my book Curing Constipation and Appendicitis recently off the press. Persons troubled with chronic constipation or threatened with appendicitis will find valuable help and practical advice in this volume.

The most any reputable physician can undertake is to give his best advice based on Experience and it remains with the patient to follow it out. I have rarely seen a case of constipation or appendicitis so called which was not permanently cured by following the suggestions in this book without either medicinal or mechanical help.

Publisher's Notice

Since its appearance in popular form the demand for Doctor Alsaker's work Curing Constipation and Appendicitis has met with an extraordinary demand from physicians and the general public. There is no doubt that this wonderfully instructive treatise contains the key to the permanent cure of these ills. The subjects are treated in a sane, simple and highly illuminative way so as to appeal to the intelligence and common sense of all.

If you cannot procure Curing Constipation and Appendicitis in your locality, we will promptly forward a copy of this book on receipt of the regular price, One Dollar, with ten cents added to cover postage and packing. Address your request to Frank E. Morrison, Publisher, Dept. 105, 1133 Broadway, New York. By Dr. Alsaker's special request money will be refunded to purchasers who after 30 days fail to receive decided benefit from following the simple instructions suggested.—*Adv.*

are—sold as such. They are none of them as strong as the silk fiber when wet, altho if I should venture to say which of the various makes weakens the most on wetting I should get myself into trouble. I will only say that if you have a grudge against some fisherman give him a fly line of artificial silk, most any kind.

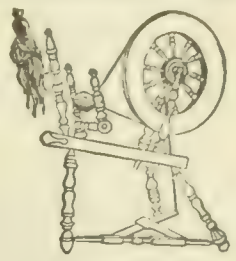
The nitrate process was discovered by Count Hilaire de Chardonnet while he was at the Polytechnic School of Paris, and he devoted his life and his fortune trying to perfect it. Samples of the artificial silk were exhibited at the Paris Exposition in 1889 and two years later he started a factory at Basançon. In 1892, Cross and Bevan, English chemists, discovered the viscose or xanthate process, and later the acetate process. But altho all four of these processes were invented in France and England, Germany reaped most benefit from the new industry, which was bringing into that country $6,000,000 a year before the war. The largest producer in the world was the Vereinigte Glanzstoff-Fabriken of Elberfeld, which was paying annual dividends of 34 per cent in 1914.

The raw materials, as may be seen, are cheap and abundant, merely cellulose, salt, sulfur, carbon, air and water. Any kind of cellulose can be used, cotton waste, rags, paper, or even wood pulp. The processes are various, the names of the products are numerous and the uses are innumerable. Even the most inattentive must have noticed the widespread employment of these new forms of cellulose. We can buy from a street barrow for fifteen cents near-silk neckties that look as well as those sold for seventy-five. As for wear—well, they all of them wear till after we get tired of wearing them. Paper "vulcanized" by being run thru a 30 per cent solution of zinc chloride and subjected to hydraulic pressure comes out hard and horny and may be used for trunks and suit cases. Viscose tubes for sausage containers are more sanitary and appetizing than the customary casings. Viscose replaces ramie or cotton in the Welsbach gas mantles. Viscose film, transparent and a thousandth of an inch thick (cellophane), serves for candy wrappers. Cellulose acetate cylinders spun out of larger orifices than silk are trying—not very successfully as yet—to compete with hog's bristles and horsehair. Stir powdered metals into the cellulose solution and you have the Bayko yarn. Bayko (from the manufacturers, Farbenfabriken vorm. Friedr. Bayer and Company) is one of those telescoped names like Socony, Nylic, Fominco, Alco, Ropeco, Ripans, Penn-Yan, Anzac, Dagor and Cadets, which will be the despair of future philologers.

Collodion varnish we are all familiar with since we have used it on our cut fingers. Spread it on cloth instead of your skin and it makes a very good leather substitute. As we all know to our cost the number of animals to be skinned has not increased so rapidly in recent years as the number of feet to be shod. After having gone barefoot for a million years or so the majority of mankind have decided to wear shoes and this change in fashion comes at a time, roughly speaking, when pasture land is getting scarce. Also there are books to be bound and other new things to be done for which leather is needed. The war has intensified the stringency, so has feminine fashion. The conventions require that the shoe-tops extend nearly to skirt-bottom and this means that an inch or so must be added to the shoe-top every year. Consequent to this rise in leather we have to pay as much for one shoe as we used to pay for a pair.

Here, then, is a chance for Necessity to exercize her maternal function. And she has responded nobly. A progeny of new substances have been brought forth and, what is most encouraging to see, they are no longer trying to worm their way into favor as surreptitious surrogates under the names of "leatheret," "leatherine," "leatheroid" and "leather-this-or-that" but come out boldly under names of their own coinage and declare themselves not an imitation, not even a substitute, but "better than leather." This policy has had the curious result of compelling the cowhide men to take full pages in the magazines to call attention to the forgotten virtues of good old-fashioned sole-leather! There are now upon the market synthetic shoes that a vegetarian could wear with a clear conscience. The soles are made of some rubber composition; the uppers of cellulose fabric (canvas) coated with a cellulose solution such as I have described. Each firm keeps its own process a dead secret but without prying into these we can learn enough to satisfy our legitimate curiosity.

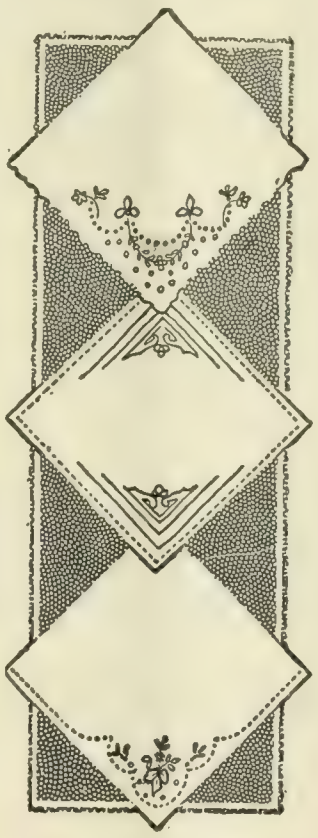
The first of the artificial fabrics was the old-fashioned and still indispensible oil-cloth, that is canvas painted or printed with linseed oil carrying the desired pigments. Linseed oil belongs to the class of compounds that the chemist calls "unsaturated" and the psychologist would call "unsatisfied." They take up oxygen from the air and become solid hence are called the "drying oils," altho this does not mean that they lose water for they have not any to lose. Later ground cork was mixt with the linseed oil and then it went by its Latin name, "linoleum."



The next step was to cut loose altogether from the natural oils and use for the varnish a solution of some of the cellulose esters, usually the nitrate (pyroxylin or gun-cotton), more rarely the acetate. As a solvent the ether-alcohol mixture forming collodion was, as we have seen, the first to be employed, but now various other solvents are in use, among them castor oil, methyl alcohol, acetone, and the acetates of amyl or ethyl. Some of these will be recognized as belonging to fruit essences that we considered in the last article, and doubtless most of us have perceived an odor as of over-ripe pears, bananas or apples mysteriously emanating from a newly lacquered radiator. With powdered bronze, imitation gold, aluminum or something of the kind a metallic finish can be put on any surface.

Canvas coated or impregnated with such soluble cellulose gives us new flexible and durable fabrics that have other advantages over leather besides being cheaper and more abundant. Without such material for curtains and cushions the automobile business would have been sorely hampered. It promises to provide us with a book binding that will not crumble to powder in the course of twenty years. Linen collars may be water-proofed and possibly Dame Fashion—being a fickle lady—may some day relent and let us wear such sanitary and economical neckwear. For shoes, purses, belts and the like the cellulose varnish or veneer is usually colored and stamped to resemble the grain of any kind of leather desired, even snake or alligator.

If instead of dissolving the cellulose nitrate and spreading it on fabric we combine it with camphor we get celluloid, a plastic solid capable of innumerable applications. But that is another story and must be reserved for treatment with rubber and artificial resins a fortnight hence.



But before leaving the subject of cellulose proper I must refer back again to its chief source, wood. We inherited from the Indians a well wooded continent. But the

Our Christmas Handkerchiefs Are Ready

Reg. Trade-Mark

All our Christmas Handkerchiefs from foreign lands are here and already our thoughtful patrons are making their selections while the stocks are full and before the final Christmas rush begins. It is much more satisfactory to shop for Christmas early in December.

Once more we exhibit a variety of styles that runs far into the thousands. The collection is just as large as usual—plain ones, elaborate ones, hard-service kinds, and filmy Cobwebs; large square ones and dainty glove Handkerchiefs, for Men, Women and Children; and every Handkerchief is pure Linen, as always at "The Linen Store."

The *Irish* and *Swiss* have provided the moderate-priced Embroidery.

The *Madeira* workers have sent their peculiar Eyelet-Embroidery and Scalloped Edges on sheer Linen.

We pack them in the dainty White boxes with the little Gold Spinning-wheel on the cover, which is to Linen what "sterling" is to silver.

Special Note: Orders for embroidery of monograms, signatures, crests, etc., should be placed at once to insure delivery at Christmas.

Orders by mail given special attention

THIS CARD WILL ANNOUNCE YOUR CHRISTMAS GIFT

Last Christmas thousands of readers of The Independent gave yearly subscriptions to their friends. You will find it difficult to buy for so small a sum a gift, which fifty-two times during next year will bring so much of interest, information, vitality and good cheer to the recipient.

Your days for holiday shopping are numbered. Save time and trouble by just writing an order for a yearly subscription to The Independent to be sent to a few of your friends. Our especially attractive Christmas Number and handsome Christmas Card will be mailed to reach your friends on Christmas Eve.

The one-color reproduction above merely suggests the beauty of the original, which is printed in four colors. Mr. Edward Edwards, creator of this design, stands at the head of his profession in America, as far as this field of art is concerned. Mr. Edwards got his inspiration for this design from a remarkable Byzantine acrostic. The inscription on the cross consists of the two Greek words: Ζ Ω Η and Φ Ω Σ—"life" and "light"—and refers to St. John 1:4: "In him was life; and the life was the light of men."

pioneer carried an ax on his shoulder and began using it immediately. For three hundred years the trees have been cut down faster than they could grow, first to clear the land, next for fuel, then for lumber and lastly for paper. Consequently we are within sight of a shortage of wood as we are of coal and oil. But the coal and oil are irrecoverable while the wood may be regrown, tho it would require another three hundred years and more to grow some of the trees we have cut down. For fuel a pound of coal is about equal to two pounds of wood, and a pound of gasoline to three pounds of wood in heating value, so there would be a great loss in efficiency and economy if the world had to go back to a wood basis. But when that time shall come, as, of course, it must come some time, the wood will doubtless not be burned in its natural state but will be converted into hydrogen and carbon monoxide in a gas producer or will be distilled in closed ovens giving charcoal and gas and saving the by-products, the tar and acid liquors. As it is now the lumberman wastes two-thirds of every tree he cuts down. The rest is left in the forest as stump and tops or thrown out at the mill as sawdust and slabs. The slabs and other scraps may be used as fuel or worked up into small wood articles like lath and clothes-pins. The sawdust is burned or left to rot. But it is possible, altho it may not be profitable, to save all this waste.

In a former article I showed the advantages of the introduction of by-product coke-ovens. The same principle applies to wood as to coal. If a cord of wood (128 cubic feet) is subjected to a process of destructive distillation it yields about 50 bushels of charcoal, 11,500 cubic feet of gas, 25 gallons of tar, 10 gallons of crude wood alcohol and 200 pounds of crude acetate of lime. Resinous woods such as pine and fir distilled with steam give turpentine and rosin. The acetate of lime gives acetic acid and acetone. The wood (methyl) alcohol is almost as useful as grain (ethyl) alcohol in arts and industry and has the advantage of killing off those who drink it promptly instead of slowly.

The chemist is an economical soul. He is never content until he has converted every kind of waste product into some kind of profitable by-product. He now has his glittering eye fixed upon the mountains of sawdust that pile up about the lumber mills. He also has a notion that he can beat lumber for some purposes.

QUESTIONS AND REFERENCES

How many articles of your daily life are made from cellulose? How many of them would you have had if you had lived a hundred years ago? What further uses do you imagine may be made of cellulose in the next century?

What measures can you suggest for the more economical utilization of timber? Would these measures pay at present?

Light pieces of cloth known to be of cotton, silk and wool. Watch the way they burn and smell of the fumes. Try the same experiment with threads separated from unknown fabrics. Examine the fibers with a microscope. Test the known and unknown cloth by moistening with dilute hydrochloric acid, and drying. Boil the cloth in a solution of caustic soda; cool and wash. Which of the three materials are attacked by the acid and which by the alkali? Attach to several different threads of the same size as heavy weights as they will hold; then wet the threads.

The bulletin on "By-Products of the Lumber Industry" by H. K. Benson (published by Department of Commerce, Washington, 10 cents) contains a description of paper-making and wood distillation. There is a good article on cellulose products by H. S. Mork in *Journal of the Franklin Institute*, September, 1917, and in *Paper*, September 26, 1917. The Government Forest Products Laboratory at Madison Wisconsin, publishes technical papers on distillation of wood, etc. The Forest Service of the U. S. Department of Agriculture is the chief source of information on forestry. The standard authority is Cross and Bevans' "Cellulose." For the acetates see the eighth volume of Worden's "Technology of the Cellulose Esters."

THE CHAUTAUQUA CIRCLE

A MONTHLY DEPARTMENT DEVOTED TO HOME READING, SELF-CULTURE AND POPULAR EDUCATION, CONDUCTED IN ASSOCIATION WITH THE CHAUTAUQUA INSTITUTION

EDUCATION ENDS ONLY WITH LIFE

IF a man or an institution could make everybody a swimmer immediately, old or young, by the simple method of letting him down gently into a clean pool, an advertisement of this fact, thru reputable channels, would fetch great returns. If the method could be as simple as that, for the learner, and if improvement were brought about by each new dip in the magic pool, this fact would be proof enough as to the right depth and slant of the pool, the buoyancy of the brine or other solution, and the management and procedure of the pool-school.

For over forty years Chautauqua has been offering access to a pool in which every bather, if he does not flounder out in panic or impatience at the first contact, will become a swimmer in the ocean of high thought and age-old experience, the literature of the world. He will become a swimmer in the purpose and meaning of his own time. He will become one the movements of whose life have been schooled to uphold and carry him forward on the intellectual tide. He is henceforth an educated person, and will live his life on an intellectual plane, as a comrade of those men and women everywhere, contemporary or ancient, who have lived the larger life. Immersion will do this not only for the poor publican in the world of knowledge, the comparatively unlettered, but also for that other unfortunate, the *blasé*, the intellectual snob, the half-unconscious Pharisee. Proof is in the records.

The depth and quality of this pool in which so remarkable initiation or renewal of function takes place are determined thru the right prescription of books to be read, which must be genuinely interpretative, popular and interesting, but of sound authority. A unity of fundamental idea for each year's set of readings, tho with satisfying variety of material and manner, are another part of the secret. A judicious arrangement of the sequence, putting first things first, is also important. None of these things is more obtrusive than the chemical content of our fancied pool of water. Their efficacy, however, has been tested on three-fourths of a million people, old and young, of both sexes, in widely varying pursuits.

A mild compulsion lays hold of the individual. He has joined something. He has made a compact with himself, which in itself is helpful, but also he has committed himself to a scheme and an institution not of his own making, which will force him at stated intervals to examine his own performance frankly with himself. The value of such compulsion can hardly be overstated. It has made men write books as well as read them. Gladstone declared that he never did anything till he had to. Very wisely, now and then, he put himself where things worthy of his doing had to be done. This compulsion, like the other influential elements of the system mentioned up to now, is applied from without—the subject has only to submit. There are some, however, that he is bidden apply to himself, as a swimmer might rub some powder or ointment upon his limbs. Obedience to the signals when given is perhaps among these, tho it is nearly automatic once he is *in*. A decent respect for his own mind is undoubtedly a thing which he himself must exercize. "Your thoughts," declared Bishop Vincent, "may or may not be worth putting into a book for the public; but they are certainly worth putting into a note book for yourself." Your real thoughts are your personal self. Fugitive they may be by habit, but if you allow them all to take flight as soon as they rise, you are making for yourself an evanescent personality. Record, discriminate, and ponder your own thoughts. Keep a little book with you every hour so that you may jot down the suggestions, the fancies, the judgments that take shape before you in your reading, your ordinary conversation, your daily walk in street or field. Mark the margins of your books and return to significant passages. Make note of interesting places and revisit them to deepen the impression. Keep the names and addresses and some memoranda of the live, stimulating people that you meet, so that if possible, you may cultivate further acquaintance and may in any case hold them more definitely in your remembrance.

THESE little records that you make, fragmentary as they may seem, will become the material of your conversation by and by, redeeming it from the commonplace to the intellectual. They will become the material of the informal speech or more studied discourse that you may be called on to give at your social club or in your business organization — the really original, personal ingredient of your address, for they were set down in sincerity by you yourself, for yourself, and were put under a saner test than you can apply in an hour of fevered artificial preparation. They may become—who knows?—the makings of a book that could never have been written had you not by some such conscious process developed your own personality.

Expression is one of the "subjects" of the curriculum in our school-at-home. Talk about the things that you have seen, the books you have read, the person you have just encountered. Write about them, discriminatingly, sincerely, fairly, in your letters. You are not sure that any idea or piece of knowledge is really yours till you have tried to impart it.

CRITICISM is a habitual, a perpetual exercize of the person who is wisely endeavoring to become or to remain educated. Pass judgment, optimistically, but searchingly upon everything that you yourself say or do which is in the nature of self-expression. Pass judgment, kindly but searchingly, too, on the utterances and the actions of others, as to whether they are effective or not, as to whether their behaviour is artistic or not, in the largest sense. Standards are thus established.

Minor counsels there are, such as always keeping a dictionary, an atlas, and one or two books of historical reference as near at hand as possible, and counting it a matter of principle, a point of intellectual integrity, to look up at the earliest opportunity whatever has raised a query in your mind.

Enlarge every wholesome interest that you find spontaneously arising in your mind. If you have read a book on English history and have become curious about the common law, give your next free hour to some book or essay on the subject rather than to some unrelated thing. A person's mind should be like a continent, not like a scattering of detached little islands.

These are only a few of the precepts of self-education which are embodied in the Chautauqua system. Part of them are as old as the history of education, some of them original counsels of the genius of the founder of the C. L. S. C. That Bishop Vincent was an actual discoverer of adult education and of capacities for growth in adult intellectual life, a diviner of facts later proved by laboratory tests and historical searchings, a practical demonstrator of philosophical theories, no student of education now denies. More valuable than any specific device is his assertion and experimental establishment of the fact that the mind is of much later maturity than the body, that it is no fatuity, but the finest sanity for a man or woman at any age to hold, "The best is yet to be," and that in his own phrase, "Education ends only with life."

Principle in World Affairs

The Christian Science Monitor, is an international daily newspaper published in Boston every week-day afternoon.

It is an organ for the world-wide expression of the highest journalistic ideals.

It has developed a unique news gathering organization reaching to every corner of the globe.

Its editorial expressions on international and other questions are being widely republished both in the United States and abroad.

Its publishers have amply proven that progressive men and women of every creed and political faith appreciate the efforts of this newspaper to establish a higher sense of Principle in world affairs.

The Christian Science Monitor is on general sale throughout the world at news stands, hotels and Christian Science reading-rooms at 3c a copy. A monthly trial subscription by mail anywhere in the world for 75c, a sample copy on request.

THE NEW BOOKS

Germany from the Inside

TO be the representative of the greatest neutral nation at the capital of the greatest military power during the greatest war of all history is a position envied of every one who likes to get at the heart of things. So naturally few books have excited such world-wide interest as *My Four Years in Germany*, by James W. Gerard, late Ambassador to the German Imperial Court. From a literary point of view the book is a queer mixture, much of it the sort of thing that ordinary tourists turn out by the volume, part of diplomatic secrets of the highest importance which nobody else could have known. Such frank discussion of prominent personalities and such naïve self-revelation are rarely to be found outside of memoirs published fifty years after the event. The book is poorly composed and carelessly revised, but that does not detract from its importance as a historical document of the first order. As an example of interest we will quote in full the uncensored message which the Kaiser wrote out with his own hand for transmission to the President at the outbreak of the war:

For the President of the
United States personally:

1. H. R. H. Prince Henry was received by his Majesty King George V in London who empowered him to transmit to me verbally, that England would remain neutral if war broke out on the Continent involving Germany and France, Austria and Russia. This message was telegraphed to me by my brother from London after his conversation with H. M. the King, and repeated verbally on the twenty-ninth of July.

2. My Ambassador in London transmitted a message from Sir E. Grey to Berlin saying that only in case France was likely to be crushed England would interfere.

3. On the thirtieth my Ambassador in London reported that Sir Edward Grey in course of a "private" conversation told him that if the conflict remained localized between Russia—not Serbia—and Austria, England would not move, but if we "mixed" in the fray she would take quick decisions and grave measures; i. e., if I left my ally Austria in the lurch to fight alone England would not touch me.

4. This communication being directly counter to the King's message to me, I telegraphed to H. M. on the twenty-ninth or thirtieth, thanking him for kind messages through my brother and begging him to use all his power to keep France and Russia—his Allies—from making any war-like preparations calculated to disturb my work of mediation, stating that I was in constant communication with H. M. the Czar. In the evening the King kindly answered that he had ordered his Government to use every possible influence with his Allies to refrain from taking any provocative military measures. At the same time H. M. asked me if I would transmit to Vienna the British proposal that Austria was to take Belgrade and a few other Serbian towns and a strip of country as a "main-mise" to make sure that the Serbian promises on paper should be fulfilled in reality. This proposal was in the same moment telegraphed to me from Vienna for London, quite in conjunction with the British proposal; besides, I had telegraphed to H. M. the Czar the same as an idea of mine, before I received the two communications from Vienna and London, as both were of the same opinion.

5. I immediately transmitted the telegrams vice versa to Vienna and London. I felt that I was able to tide the question over and was happy at the peaceful outlook.

6. While I was preparing a note to H. M. the Czar the next morning, to inform him that Vienna, London and Berlin were agreed about the treatment of affairs, I received the telephones from H. E. the Chancellor that in the night before the Czar had given the order to mobilize the whole of the Russian army, which was, of course, also meant against Germany; whereas up till then the southern armies had been mobilized against Austria.

7. In a telegram from London my Ambassador informed me he understood the British Government would guarantee neutrality of France and wished to know whether Germany would refrain from attack. I telegraphed to H. M. the King personally that mobilization being already carried out could not be stopped, but if H. M. could guarantee with his armed forces the neutrality of France I would refrain from attacking her, leave her alone and employ my troops elsewhere. H. M. answered that he thought my offer was based on a misunderstanding; and as far as I can make out, Sir E. Grey never took my offer into serious consideration. He never answered it. Instead, he declared England had to defend Belgian neutrality, which had to be violated by Germany on strategical grounds, news having been received that France was already preparing to enter Belgium, and the King of Belgians having refused my petition for a free passage under guarantee of his country's freedom. I am most grateful for the President's message. WILLIAM, H. R.

Whether this statement of the Kaiser's is true or false it is of equal importance as showing what he regarded as his justification of his part in the war. It is curious to note that the Kaiser, tho considered a constitutional monarch, would give out on the spur of the moment, and without the approval of his ministers, such a statement for immediate publication in the press, tho later at the request of a member of his entourage it was kept private. Not less curious it is to see that the Kaiser supposed that the King of England was equally regardless of constitutional limitations and could give personal promises of what Great Britain would do and could order his Government to carry out his wishes.

Germany has several times in the course of the war announced to the world her willingness to enter into peace negotiations, but she has never officially made known her terms and intentions. Consequently the world has been obliged to guess at the Government's aims from unofficial utterances such as the ambitious program of the Pan-Germans and the more moderate proposals of the Socialists. But from Mr. Gerard we get the opinions of Chancellor von Bethmann-Hollweg on this crucial point:

From the time when the Chancellor first spoke of peace, I asked him and others what the peace terms of Germany were. I could never get any one to state any definite terms of peace and on several occasions when I asked the Chancellor whether Germany was willing to withdraw from Belgium, he always said, "Yes, but with guarantees." Finally in January, 1917, when he was again talking of peace, I said, "What are these peace terms to which you refer continually? Will you allow me to ask a few questions as to the specific terms of peace? First are the Germans willing to withdraw from Belgium?" The Chancellor answered, "Yes, but with guarantees." I said, "What are these guarantees?" He said, "We must possibly have the forts of Liège and Namur; we must have other forts and garrisons thruout Belgium. We must have possession of the railroad lines. We must have possession of the ports and other means of communication. The Belgians will not be allowed to maintain an army, but we must be allowed to retain a large army in Belgium. We must have the commercial control of Belgium." I said, "I do not see that you have left much for the Belgians except that King Albert will have the right to reside in Brussels with an honor guard." And the Chancellor said, "We cannot allow Belgium to be an outpost (Vorwerk) of England"; and I said, "I do not suppose the English, on the other hand, wish it to become an outpost of Germany, especially as von Tirpitz has said that the coast of Flanders should be retained in order to make war on England and America." I continued, "How about Northern France?" He said, "We are willing to leave Northern France, but there must be a rectification of the frontier." I said, "How about the Eastern frontier?" He said, "We must have a very substantial rectification of our frontier." I said, "How about Roumania?" He said, "We shall leave Bulgaria to deal with Roumania." I said, "How about Serbia?" He said, "A very small Serbia may be allowed to exist, but that is a question for Austria. Austria must be left to do what she wishes to Italy, and we must

have indemnities from all countries and all our ships and colonies back."

In view of the present "Peace-drive" on Italy it is interesting to note the Chancellor's words that "Austria must be left to do what she wishes to Italy." Apparently she is doing it. Bethmann-Hollweg, who kept his place thru such trying times by his ability to steer between extremes, has since been overthrown, but it is not yet certain which way the new administration will incline.

My Four Years in Germany, by James W. Gerard. George H. Doran Company. $1.50.

Economic Studies

AN authoritative work of reference has appeared dealing with the very rapid extension of governmental activity which marked the years immediately preceding the Great War and has gone on still more swiftly since it began. *State Socialism Pro and Con*, by William English Walling, Harry W. Laidler and Evans Clark, is a much more valuable study than its title would imply. It devotes very little space to argument about Socialism, but it collates definite facts and references from official sources all over the world, providing the data from which the reader is privileged to draw his own conclusions. Two studies of the great economic enigma, money, have recently been issued; *The Meaning of Money*, by Hartley Withers, which is a general view of the mechanism of banking and exchange, and *The Value of Money*, by Prof. B. M. Anderson, which is an important and rather technical discussion for the student of economics. An interesting chapter in industrial history is that of *Household Manufactures in the United States, 1640 to 1860*, related by Prof. Rolla M. Tryon. A general survey of the living conditions of the people of one of our principal overseas possessions is given in *Social Problems in Porto Rico*, by Dean Fred K. Fleagle, of the University of Porto Rico. A special study in the field of civics, best adapted to the reader who knows a little law, is *Constitutional Conventions*, by Roger Sherman Hoar, former State Senator and Assistant Attorney General of Massachusetts.

Constitutional Conventions, by Roger Sherman Hoar. Little, Brown & Co. $2. *State Socialism*, ed. William English Walling and Harry W. Laidler. New York: Henry Holt & Co. $2. *The Value of Money*, by B. M. Anderson, Jr. New York: The Macmillan Company. $2.25. *Household Manufacture in the United States, 1640 to 1860*, by Rolla M. Tryon. University of Chicago Press. $2. *Social Problems in Porto Rico*, by Fred K. Fleagle. Boston: D. C. Heath & Co.

Rural Sociology

IN his "Introduction to Rural Sociology," Professor Vogt has attacked the problem from an angle not as yet popular in the study of the American farm. He has presented it—and, indeed, it should be presented so—as a series of relations and reactions influencing our entire national existence. When we realize that about fifty-three per cent of our population lives in the open country or in villages, and that farmers constitute the largest single industrial group in the nation, we understand that the country must exert widespreading influences and hold important keys to practical questions of social theory. The points of contact between the active farmer and the cities and other communities which he serves are increasing rapidly, and must continue to do so. Beside the affiliations of the active farmer, we must remember, too, the retired farmer who has moved to town and the city-minded children of farmers who, tho they are seeking their careers upon the pavements, are yet fed and guided by the traditions of field and

Worthwhile Books for Discriminating Readers

The Story of Princeton

By EDWIN M. NORRIS

The author of the newest volume in this "story of colleges" series is well known to every Princeton man as the editor of the *Princeton Alumni Weekly*. *Sixteen illustrations from drawings by Lester G. Hornby.* $2.00 *net*

Familiar Ways

By

MARGARET SHERWOOD

Author of "The Worn Doorstep"

A volume of engaging essays on subjects close to everyday life; delightfully individual in Miss Sherwood's characteristic style. $1.25 *net*

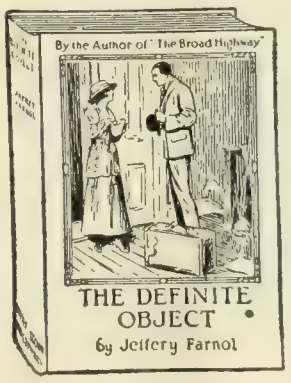
The Big Biography of the Year Just Published

THE LIFE AND LETTERS OF

Edward Everett Hale

BY HIS SON

EDWARD E. HALE, JR.



In these two volumes Edward Everett Hale, Jr., presents his distinguished father much as he presented himself to his friends. His many activities are carefully set forth, and there are liberal quotations from his more significant writings and speeches. *With illustrations. 2 vols. In box.* $5.00 *net.*

The Little Grandmother of the Russian Revolution

Reminiscences and Letters of Catherine Breshkovsky

EDITED BY ALICE STONE BLACKWELL

Seldom has so dramatic a story been unfolded; this is one of those rare human documents that cannot fail to make a profound impression on every reader. *With frontispiece.* $2.00 *net*

FICTION

By the author of "The Broad Highway"

The Definite Object

By JEFFERY FARNOL

The New York Tribune says: "We do not hesitate to say that Mr. Farnol has here produced not merely his own best work, but also one of the best works of fiction that any one has put forward this season." $1.50 *net*

By the Author of "The Blindness of Virtue"

Scandal

By COSMO HAMILTON

The author of "The Blindness of Virtue" writes a thoroughly entertaining story of how Beatrix Vanderdyke, self-willed, ran her head into the noose of a most hazardous situation; and, in getting extricated, was taught a lesson. *Illustrated.* $1.50 *net*

By the Authors of "The Blind Man's Eyes"

The Indian Drum

The remarkable mystery story of the Great Lakes by William MacHarg and Edwin Balmer.

Of which Col. Roosevelt says:

"The book has appealed to me particularly as one of those exceedingly strong bits of work peculiarly American in type, which we ought to greet as a lasting contribution to the best American work." *Frontispiece.* $1.40 *net*

How Are You Feeling Now?

By EDWIN L. SABIN

A little book in which you shall see the humorous side of such experiences as going to the dentist, or being on a diet, or even having your appendix removed.

Illustrated. 75 *cents net*

Four Days

The Story of a Soldier's Marriage

By HETTY HEMENWAY

This tale of how England's manhood went to the ordeal contains in its half a hundred pages more soul-moving emotion than one often finds in a long novel. 50 *cents net*

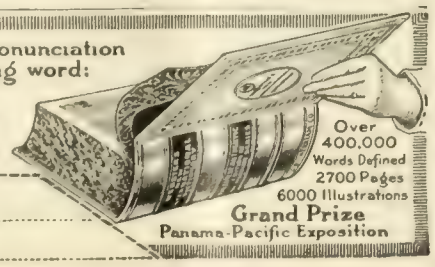
What 15c Will Bring You from the Nation's Capital



Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its **25th** year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send **15c** to show that you might like such a paper, and we will send the Pathfinder on probation **13** weeks. The 15c does not repay us, but we are glad to invest in new friends. **The Pathfinder, Box 39 , Washington, D. C.**

WEBSTER'S NEW INTERNATIONAL DICTIONARY

Whatever your question;—be it the pronunciation of a new term; the spelling of a puzzling word: the location of Nigeria, the meaning of tractor, white coal etc.,—this New Creation contains a clear, accurate, final answer

orchard. These influence city churches, city schools, and city commercialized amusements. In short, it is important to the nation as well as to the farm that a high rural civilization be maintained, and that we understand the forces operative within it.

Because Professor Vogt has set himself the task of meeting his subject in a purely scientific spirit and avoiding the historic and descriptive methods, he has robbed his book somewhat unnecessarily of a certain glow and fervor, which would have carried his message, without weakening it, to the hearts of his readers. His appeal is almost defiantly to the brain alone. Even in his discussion of the rural church, written from an orthodox standpoint, he makes us *see* the social forces at work without making us *feel* the human problem. Professor Vogt is concerned with economic forces rather than with human elements, but this dominance of scientific method gives his book undoubted firmness and stability.

The volume is enriched with illuminating tables and charts.

Introduction to Rural Sociology, by Paul L. Vogt. D. Appleton & Co. $2.50.

Icelandic Drama

OUR American stage, which has welcomed Russian, Japanese and Irish plays, might well receive some of the work of Jóhann Sigurjónsson, the best known of the modern Icelandic dramatists. The American-Scandinavian Foundation publishes in a small volume two of his plays. The theme of *The Hraun Farm* is the devotion to the soil and the homestead bred by generations of ownership and labor. The plot is compounded of such simple elements as love and filial duty, and motherly self-forgetfulness. Dignity and restraint mark the treatment. The characters, no more complex than the plot, are broadly but clearly indicated.

The second play, *Eyvind of the Hills*, is Sigurjónsson's masterpiece. Built around an old Icelandic legend, it is a tragedy as terribly beautiful as the wild mountains and fearful glaciers where its scene is laid; a tragedy of outlawed love, of agonized motherhood, of suffering and death. *Halla*, who follows her lover into disgrace and peril, is a nobly conceived and skilfully executed figure—a woman of brain and passion, loyal tenderness and iron purpose. The other characters are few in number, and their delineation is at once more subtle and more profound than that of *The Hraun Farm*. Written in prose, *Eyvind of the Hills* has that utter simplicity of vibrant strength that marks great poetry. To quote the French critic, Leon Pineau: "In this drama there is . . . nothing but poetry; the sublimely powerful poetry which creates beings of flesh and blood like ourselves—to whom Jóhann Sigurjónsson has given of his own soul."

Modern Icelandic Plays, by Jóhann Sigurjónsson. American-Scandinavian Foundation.

Some Phases of British Art

UNDER the editorship of Charles Holme, two special numbers of The International Studio deal respectively with the *Art of the British Empire Oversees* and with *The Graphic Arts of Great Britain*. The first named contains articles by several writers on the work of the leading landscape painters of Canada, Australia, New Zealand and South Africa. In the other Malcolm C. Salaman discourses learnedly, but not without wit and charm, of drawing, line-engraving, etching, mezzotint, lithography, color printing, as practised in the British Isles. But the bulk of

each of these volumes is devoted to the illustrations, of which each contains more than one hundred.

The Art of the British Empire Overseas and *The Graphic Arts of Great Britain*, ed. by Charles Holme. John Lane Company. $2.50 each.

Giants of the Railroads

THE biographers seem to be turning their attention more and more to the captains of transportation. Within a few days have appeared the authorized biography of James J. Hill and two special studies of the activities of E. H. Harriman. *The Life of James J. Hill*, by Joseph Gilpin Pyle, is interesting as the life story of one of our greatest magnates but it is even more interesting as an account of the building up of the great Northwest from a desolate expanse of prairie to the granary of the continent. The biographer is uniformly the eulogist of Mr. Hill and apparently finds nothing to criticize unfavorably in the course of his career. George Kennan's two sketches of Mr. Harriman's far-reaching schemes of economic development, *The Salton Sea* and *E. H. Harriman's Far Eastern Plans*, are similarly laudatory. *The Salton Sea* relates the reclamation of a desert region in southern California, now the prosperous Imperial Valley region, and its companion volume explains how and why American capital lost its chance to develop the railroads of Manchuria.

The Life of James J. Hill, by Joseph Gilpin Pyle. 2 vols. Doubleday, Page & Co. $5. *The Salton Sea*, by George Kennan. Macmillan. $1. *E. H. Harriman's Far Eastern Plans*, by George Kennan. Private Publication.

A Dramatized Allegory

IT is a hard enough task to write a good play with a real story about real people. To introduce an allegory into the play, and keep the plot and the symbolism separate and distinct, and yet welded into a united whole, makes the task even more difficult. In *The Rib of the Man*, Charles Rann Kennedy has not only failed to do this, but he has been carried off his feet by his convictions about a vast variety of subjects, and has yielded to the temptation to present his ideas on pacifism, feminism, internationalism, race suicide, the origin of religion and the abolition of sex. Plot, allegory and propaganda pursue each other thru five acts, becoming more and more inextricably entangled until at last the bewildered reader is left vainly wondering what Diana Brand, The Flaming Sword and Basel Martin, A Fowl of the Air, are going to do with themselves and each other when the final curtain falls. There is no action in the play; only endless talk. Some of the speeches in themselves are vigorous and stirring. Part of the dialog is witty; once or twice the plot of the play proper begins to sound very interesting. The characters of David Fleming, An Image of God, Rosie, his wife, and Archie Legge, a Gentleman, a Beast of the Earth, three types of unenlightened moderns—self-centered, overfed, parasitical—are drawn with brilliant but biting irony; and their relations *inter se* form an excellent satire on the conventional social triangle, and a rich field of investigation for Prout the psychoanalyst. As for Diana, she is a very real and very wonderful woman, and deserves a better vehicle for her power, beauty and humor. There is good material in *The Rib of the Man* for more than one play. But there can be no art without unity; and in its present condition it is neither a good story, a good allegory or a good sermon.

The Rib of the Man, by Charles Rann Kennedy. Harper's. $1.30.

Why Wild Animals Are Never Sick

Did you ever wonder why wild animals are rarely, if ever, sick and why man has such a variety of ailments?

Did you ever wonder why man's intestine is five feet long? Why it isn't a straight canal instead of a series of coils?

Professor Elie Metchnikoff, in the great work in which he first pointed out the method and effects of auto-intoxication, has an interesting theory about the large intestine. Nature made it so long, he theorized, because originally man was an active wild animal. He was often in danger from other animals and would have to run long distances. For his safety it was necessary to have an organ in which waste matter could be stored. There was, however, little danger of clogging of the colon, because continual natural exercise kept it from being lazy. Its muscles functioned normally.

Nature's Big Mistake

The large intestine, now frequently called "Nature's big mistake," was perfectly adapted to wild animal life. Man is no longer a wild animal. He is easily the most inactive large animal on earth. He is a sitting animal. He almost never walks when he can ride. The first thing physicians tell him usually, when he is in a rundown condition, is to "get out in the air and exercise." But many of us are *too busy* to exercise; and still more of us, when we exercise, exercise the *wrong* muscles. The most important, the most vital muscles to exercise are those of the large intestine, for the simple reason that those muscles *cause more trouble by their laziness* than all the other lazy muscles put together.

The colon is, in a sense, a traitor to the rest of the body. By lying down on its work, it throws the whole splendid balance of the body "out of gear." It causes many of us to become seriously diseased and the rest of us it is constantly injuring by generating poisons that are absorbed into the blood. How often do we really feel up to par—really ourselves; with brains keen and quick, and bodies tingling with vitality? So seldom that most of us talk about it, in surprise, when we feel "fit." Thanks to the lazy, large intestine it is the unusual condition for us to be *fully awake and alive*.

Wild animals, who still range the forests and plains, do not suffer from lazy intestinal muscles and in consequence do not suffer the ills that come from intestinal poisoning.

An Important Invention

Scientists agree that poisons emanating from the large intestine are responsible, directly or indirectly, for many of the diseases to which mankind is heir and that cathartics are dangerous and habit-forming. An important invention now steps into the breach left by Nature and repairs some of the ills caused by the length of the large intestine. This invention, based upon the old, old principle of massage, is being used in many hospitals and sanitoriums and by physicians in private practice. It forever eliminates the necessity of using enemas, cathartics, lubricants, salts or any artificial aid of this kind.

Interesting Book Free

A full description of this remarkable invention, together with a free copy of a very interesting book, "Colon Cleanliness" may be obtained by any reader of this magazine. The shortcomings of the large intestine, the diseases that are caused by it, the manner in which these diseases arise, and other fascinating aspects of the problem—are covered fully and clearly in this book, written by an authority, though in popular style.

To secure a copy of "Colon Cleanliness" use the attached coupon or send a postal or letter today. Do not delay as the supply for the books is now limited—only about two hundred copies remaining. You want to secure one of these interesting volumes before the edition is exhausted. *Write for it NOW*, before you turn the page.

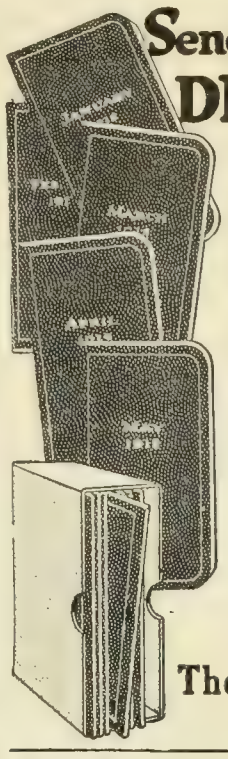
FORTY THOUSAND MILLION A YEAR

(*Continued from page 472*)

the requirements of business on terms more favorable than ever before experienced and more liberal than many thought to be possible. Banking capital is today more widely and more equitably distributed over the country than at any time in the past. Its concentration and congestion in a few great cities, which in past years frequently disturbed the business world—sometimes as a logical result of unnatural conditions and sometimes thru artificial means, but always interfering with the healthy growth of business and checking legitimate enterprize—has been relieved.

At one time, and not very long ago either, the one hundred largest national banks in the United States were concentrated in a comparatively few financial centers. A recent compilation shows that today the one hundred largest national banks are distributed thru twenty-two states embracing every section of the country.

The number of national bank failures, and the losses resulting therefrom, are showing a marked diminution. Banks nearly always are broken, not by the failure of customers to whom they have lent money, not by bank robbers who have come from the outside, but by the tying up or dissipation of the bank's funds thru loans to their own officers and directors, or else by direct defalcations and embezzlements by trusted men. It is believed that, with a proper administration of the laws governing the operations of national banks, and the enactment of much needed amendments which have been urged upon Congress by the Comptroller of the Currency, it will be practically impossible for any national bank, operating in accordance with the provisions of the law and managed with ordinary honesty, efficiency and intelligence, to fail.



Our own financial situation is sound and strong. Our banks now are not only meeting the legitimate requirements of our own people, but we have become in fact the bankers of the world. Since the beginning of the European war, our country has passed swiftly and definitely from the ranks of the debtor countries and has become the most potentially powerful of the creditor nations. Practically the whole world is in debt to us and steadily increasing its obligations. We are now financing not only our own enterprizes and making ourselves a formidable and therefore a respected power, but we are handling the commerce which is unfolding for us on this hemisphere and at the same time getting ready to meet the endless complications and demands of readjustments and reëstablishment that will follow the close of the war.

Our wealth, as I have briefly shown, is piling up with wonderful rapidity, but to do our full work in the world, to protect ourselves and perform the great duties that lie ahead of us, we may before long need every dollar of our resources, gigantic and inexhaustible as they now seem to be.

The overshadowing business of this nation today is war. Every enterprize and every activity in every section should be shaped and geared for the great purpose of contributing its maximum to the victory which we must win if our indebtedness and our sovereignty are to be maintained and our nation preserved.

It is the duty of every man, of every bank, and of every other corporation or association of men or women, in this supreme hour to stand solidly by our Government and to be prepared to make every personal sacrifice that may be needed.

Efficient Living

By Edward Earle Purinton

is more than an extraordinary book—it is a course in Personal Efficiency. Every red-blooded man, from sixteen to sixty, needs this book as it will make him of more value to himself, his firm, his family and his community. Price $1.35, postpaid.

THE INDEPENDENT
119 West 40th St., New York

Remarkable Remarks

HENRY FORD—I despise the profiteer.

CARDINAL GIBBONS—Be slow to criticize.

KING NICHOLAS—Poets, like women, are coy.

FRANCISCO VILLA—I have no personal ambition.

ED HOWE—There is no love that passeth understanding.

VICTOR EMANUEL—Every act of cowardice is treacherous.

PRESTON M. NOLAN—Work is anything one dislikes to do.

LOUISE G. CANN—Stag-eyed lover, we met in the choral dawn.

EMPEROR WILLIAM—The enemies' collapse was the judgment of God.

FRANK A. VANDERLIP—I fear Government ownership of the railroads.

SECRETARY DANIELS—If a man must shoot straight, he must live straight.

HARVEY M. WILEY, M.D.—I do not think children should eat any kind of ices.

MRS. SHEEHY SKEFFINGTON—The government of Ireland needs to be Hooverized.

GENERAL VON DISFURTH—I hope that in this war we have merited the title of "Hun"

OTTO H. KAHN—I have made up my mind to keep no income for myself during the war.

QUEEN MARIE OF RUMANIA—The mothers, children and soldiers of Rumania bless America's great name.

LINA CAVALIERI—Try turning the eyes in the socket with a circular motion a few moments every day.

LADY DUFF-GORDON—The opera-wrap should be so lovely that it is a mere preparation for the splendor beneath.

"MA" SUNDAY—A man can always buy a good meal at a restaurant, but a good wife can't be ordered from a menu card.

COUNT CZERNIN—Every state will have to give up something of its independence for the purpose of insuring world peace.

PROF. BURCHARDT DU BOIS—Belgium has suffered almost as much from the Germans as the Congo suffered from the Belgians.

W. H. TAFT—In making pajamas for the Red Cross, it isn't a matter of what your husband wears or his preferences as to colors.

ADMIRAL VON TIRPITZ—We need tangible indemnities that will enable us this coming decade to recover what we have lost in the war.

SECRETARY BAKER—I regard the work of the Commission on Training Camp Activities as the most significant factor in winning the war.

DR. DERNBURG—Our lies are coarse and improbable, our ambiguity is pitiful simplicity, and our intrigues are without salt and without grace.

DR. S. ADOLPHUS KNOPF—Tuberculosis is the most prevalent of all diseases and is chronic, communicable, infectious, preventable and curable.

BISHOP CHARLES D. WILLIAMS—There are some saints who are as hard and uncomfortable to live with as it would be to wear a starched undershirt.

CARDINAL GIBBONS—I thank God that we live in a country where liberty is granted without license and authority is exercized without despotism.

ELIHU ROOT—There is a radical incompatibility between popular self-government and continuous military discipline for military control is in itself despotic.

WILLIAM T. HORNADAY—The American people as a mass do not know more than one one-hundredth part of the crimes of Germany during the past three years.

FRANKLIN D. ROOSEVELT—My optimism comes from my heart and not from my head. It is rooted in the belief that you can't down the American people.

NELSON'S
HISTORY OF THE WAR

A Continuous Narrative of the Great Struggle Now Raging in Europe

By JOHN BUCHAN, B. A., of the British Publicity Bureau

An eye-witness of many of the events which he narrates

The author has been at the front and knows the actual conditions of the fighting in this great world war, and can therefore give an authoritative record of the events as they take place. It is written in the Author's most graphic and compelling manner.

Recently purchased by the War Department for the American Expeditionary Force

Issued in monthly volumes. The latest volumes cover The Battle of the Somme, The Roumanian Campaign, and the American Declaration of War. Each volume has a most comprehensive set of maps and plans showing the battle fronts covered by the narrative.

Bound in Red Cloth, with gold title, 12mo. Price 60 cents net per volume

WAR TIME INSURANCE PROBLEMS

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

THERE recently came to my desk from a young soldier in one of the Western training camps a request for information about the Government's life insurance scheme. He wanted to make an application for some of this protection and I was astonished to learn that he did not know how to proceed in the matter. I know that the Government has issued in pamphlet form, and that the newspapers generally have printed, full particulars of the scheme. It is therefore inexplicable that the men directly concerned were uninstructed.

It merely goes to strengthen the old belief that life insurance is sold, that is to say, aggressively pushed, not sought. For the purpose of advancing the work and aiding those who are as yet without the necessary information of the plan, I will make a brief explanation of how it works.

Any person, male or female, in the active military service of the United States, is qualified for the insurance, which may be taken in multiples of $500 in any amount from $1000 minimum to $10,000 maximum. The premiums are payable monthly and run from 65 cents per $1000 at the age 21 to $1.20 at age 51. The insurance is not compulsory.

The following persons may become beneficiaries: a wife, husband, child, grandchild, brother, sister, stepbrother, stepsister, adopted brother or sister, parent, grandparent or step-parent (either of yourself or your wife).

Commanding officers will supply full instructions and the necessary blanks.

The insurance is that which is known as "yearly renewal term"; and as the premiums are payable monthly, protection for that time only is provided. Each year the premium increases. As premiums are payable monthly, arrangements can be made to have them deducted from the monthly pay, thus keeping the policy fully protected.

As many monthly payments as the insured wishes may be made in advance; and he may arrange to have them paid by some one else for him if he prefers to do so.

After the war the insurance may be retained as "term insurance" for five years; but before the expiration of that time, the insured may convert it, wholly or partially (in multiples of $500), into any other form of policy the Government will then issue—ordinary life, 20-payment life or endowment—by paying the proper premium for the plan chosen, at attained age, without medical reëxamination. Any part of the insurance carried may be thus transferred.

The insurance which takes the place of that given up will cost more per $1000, but it will be a level rate, which means it will not increase from year to year.

It will be lower than private corporate insurance on the same plan as the Government will bear all the expense incident to its administration.

The insurance will be paid both in the event of death or in the event the insured person is totally and permanently disabled from any cause, at any time, while the policy is in force. This is true, while the insurance is in force, regardless of whether the insured is in or out of the service at the time.

The insurance will not be paid in one lump sum. The contract provides that it will be paid in monthly instalments of $5.75 for each $1000 of insurance carried. The payments will continue for twenty years at least, and as much longer as the insured himself shall survive.

Those who take the insurance are to remember that at the beginning it is "yearly renewable term" insurance, which means almost absolute cost, and that therefore, if it is allowed to lapse there will be no value remaining which the Government could surrender; after it is converted into some other more permanent form, there is a cash surrender value.

The Government will permit any one to apply for insurance on the life of a person in the service. The latter will be advised of the application and he may approve or disapprove of it.

All persons in the service who have not yet applied for insurance are automatically covered under the law until February 12, 1918, to a total value of about $4300, payable at the rate of $25 a month, to the insured himself if he is totally and permanently disabled, or to his wife, child or widowed mother if he is killed. None but those named may receive this benefit. As soon as insurance is applied for, this provision ceases, no matter what the amount applied for may be. A man may not make his fiancée a beneficiary, nor may he name his estate in that capacity and leave the insurance to his fiancée. Any number of allowed beneficiaries may be named. The names of beneficiaries must be carefully stated. The given, or baptismal, names of wives must be used and not the names they acquire at marriage; they must be, for example, Mary Elizabeth Smith, and not Mrs. John Wilson Smith.

Any person in the military or naval service wanting particular information on the subject should, as indicated, apply to his commanding officer; and, if necessary, a letter to William C. Delanoy, Director, War Risk Bureau, Treasury Department, Washington, D. C., will bring full particulars.

THERE has been much discussion, particularly in commercial and insurance circles, since the declaration of war against Germany, over the status of the insurance companies from that country which have been transacting business in the United States, a few of them for many years. Such opposition as has existed to their continuance during the period of the war has been very determined. Some months ago enemy marine companies and, a little later, enemy reinsurance companies, were interdicted by executive proclamation. As American direct writing companies had been freely using the facilities afforded by the reinsurers, it was not an easy matter to so readjust conditions in the several offices as to dispense with these services. But it was done. Finally pressure was exerted to suspend the operation of all enemy and ally-of-enemy companies. This movement at the last particularly affected four German direct writing fire, one casualty and one life companies, the Hamburg Bremen, Nord Deutsche, Aachen and Munich, Prussian National, Frankfort General and Prussian Life, respectively.

The Insurance Department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. Address all communications on insurance subjects to the director of The Independent Insurance Service

For the purpose of determining the proper policy to pursue, the Secretary of the Treasury announced that he would hold a hearing and consider the question on its merits.

Both sides appeared in force at Washington, made their arguments and filed briefs. On November 26 last, the Secretary of the Treasury rendered a decision in the matter, the effect of which was to place all the companies, those from Germany and from the countries of its allies in liquidation. Ruling on the question, the Secretary of the Treasury said:

> Upon careful weighing of the evidence submitted, I have reached the conclusion that the safety of the United States requires that enemy and ally-of-enemy marine, fire and casualty insurance companies shall not be allowed to do business as going concerns. The consideration of safety is so important as to render it unnecessary to determine at this time whether this action is also demanded by other considerations incident to the successful prosecution of the war.
>
> In these circumstances I am convinced that the best interests of the country will be served by the liquidation of these companies under the direction of their American management and subject to such regulations as the Secretary of the Treasury may from time to time prescribe.

The liquidation of the one life company is excepted from the ruling on the ground that it might work an injury to policyholders, and for the further reason that no information of benefit to the enemy is accessible from that source.

The decision is a proper one. There is every reason why the fire, marine and reinsurance companies affected should be suspended; and none why they should not be.

The claim has been made for these concerns that they are virtually American domestic companies, with their own funds and American managers. Viewed from a financial standpoint this is true. But there necessarily are relations between the American offices and the European offices. The fire and marine companies are in a position as insurers of risks—cargoes and buildings, munition factories, food warehouses and the like, to secure information of value to the enemy if it can be conveyed to him. At the best, the conditions were anomalous. The Government is clearly within its rights in halting these activities and the country is decidedly safer as the result.

Play Billiards!

Keep the Home Fires Burning

Carom and Pocket Billiards are an all-year sport—brimful of fresh surprises every game! This is not forced exercise, but healthful fun; and it brings to players life-long benefits.

Shared by boys and girls, and mothers and "old boys"—billiards instils the love of home in all. With practice you can soon control the balls, but not the merry flow of jest that often makes the best of players lose.

Give your home Carom and Pocket Billiards—not "some-time," but NOW—*this* Christmas. A small part payment puts a scientific Brunswick Table in your home. Pay the balance monthly—as you play.

BRUNSWICK HOME BILLIARD TABLES

Send Your Address For Billiard Book FREE

Life, speed, accuracy and lightning action—beautiful cabinet work in rosewood, mahogany, oak and walnut. Brunswick "Quick Demountable" Tables fit all size rooms, and are easily folded when not in play.

"Baby Grand" home-size regulation styles for spare-rooms, lofts, basements, or private billiard rooms. Balls, Cues, Rack, Markers, Tips, Cue-Clamps, expert book of 33 games, etc., all included *free*.

Write at once for handsome color-book—"Billiards—The Home Magnet" and pick out the size and style best fitted to your home.

Low prices, easy terms and home trial offer included.

Mail the coupon for this interesting book at once.

CORONA

The Personal Writing Machine

IT'S a pleasant task to make up arrears of correspondence with Corona, amid the quiet of familiar surroundings—or even to catch up with office overloads or odds and ends of personal business.

For Corona is truly the *personal* writing machine. It fits the home atmosphere, the home mood—even fits into your favorite nook as cosily as a comfortable chair. Light in weight, readily portable, and never in the way, for it *folds* into small compass—yet sturdily built and thoroughly practical, as a hundred thousand users will testify. Also exceptionally simple to operate.

Corona weighs but six pounds; complete with neat traveling case, it costs fifty dollars. A useful gift, for men or for women, and one that steadily grows in value. Fully described in Booklet No. 23. Also supplied with smart special luggage, made by Likly.

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. COMPOSITION.

The President's Wish.

"I urge that teachers and other school officers increase materially the time and attention devoted to instruction bearing directly on the problems of community and national life."—Woodrow Wilson, August 23, 1917.

The President's Message. A Great State Paper Expressing the Aims and Ideals of the United States.

PART I. THE OCCASION.

1. Write an impressive description of the scene at the time when President Wilson delivered the address to Congress.
2. Write a composition in which you summarize the events, during the past few years, that preceded the delivery of the address.
3. Write a composition on the life of President Wilson, showing in what ways he has represented the ideals of the United States (a) in his educational work, (b) in his literary work, (c) in his political life up to the time when he became President, (d) in his career as President of the United States.
4. Write a composition of comparison in which you point out resemblances in the lives and the works of Washington, Lincoln, and any other great American patriots, and President Wilson.
5. Write a composition in which you show that President Wilson is today the most interesting, and the most influential, man in the world.

PART II. THE AUDIENCE.

1. Write an interesting composition, somewhat in the manner of Donald Wilhelm, concerning the present Congress of the United States.
2. Write a picturesque description of the Capitol at Washington.
3. Write a series of very short character sketches concerning the most notable members of the present Congress.
4. Write an exposition in which you show that the entire world was President Wilson's audience.
5. Write an exposition in which you show that certain nations were awaiting President Wilson's message as a message of life or of death.

PART III. THE MESSAGE IN GENERAL.

1. Write a very short summary of the principal points in President Wilson's message.
2. Write a brief of the message, using full sentence form, and making the proper subordination of topics.
3. Write a composition of comparison in which you show how the construction of the message resembles the construction of Burke's Speech on Conciliation, or the construction of any of Lincoln's addresses.
4. Tell orally what points in the President's message should be given the greatest emphasis.

PART IV. PHRASAL VALUES.

1. Illustrate, by paragraphs of specific instance, the following quotations from the message: (a) The sinister masters of Germany; (b) The sinister forces that interrupt peace; (c) This intolerable Thing; (d) Deep and abominable wrong; (e) The impudent and alien domination of the Prussian military and commercial autocracy; (f) The law of unrestrained selfishness; (g) Their methods of warfare outrage every principle of humanity and of knightly honor.
2. Write character sketches of people who are pointed at the following quotations: (a) The noisily thoughtless and the troublesome; (b) They may safely be left to strut about their uneasy hour and be forgotten.
3. Give before your class emphatic talks in which you explain the following quotations: (a) The calm, indubitable power of the nation; (b) They [the American people] desire peace by the overcoming of evil; (c) They insist that the war shall not end in vindictive action; (d) This great war of freedom and justice; (e) This is a war of high principle; (f) Our safety would be at an end, our honor forever sullied and brought into contempt were we to permit their triumph; (g) A war of high, disinterested purpose; (h) The cause being just and holy, the settlement must be of like motive and quality; (i) We have not forgotten any ideal or principle for which the name of America has been held in honor among the nations.

(Continued on page 534)

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. The President's Message—"The President's Address to Congress," "For a Holy War," "The President's Address."

1. Under what provision of the Constitution did the President deliver his message to Congress on December 4?
2. Write a brief of the message keeping the following headings in mind: (1) our objects in fighting the war; (2) our attitude toward (a) the German Government, (b) the German people, (c) the allies of Germany, (d) the Russian revolution, (e) our allies, (f) the conquered territories in Europe and Asia; (3) the terms upon which the President is willing to consider the possibility of peace; (4) the measures which Congress must adopt to carry on the war with success.
3. What part of the message does the editorial emphasize most strongly? Justify the statement: "At last he [the President] stands today as the acknowledged leader of the forces of democracy," etc.

II. Financing the War—"Over Thirteen Billions," "Stamp Act in Force," "Stamps for Savings," We've Got the Money Too."

1. Analyze one or more of the subjects in the table of estimated expenditures, giving as many items as you can for which the money will be spent.
2. How far will the stamp taxes for war revenue affect your family?

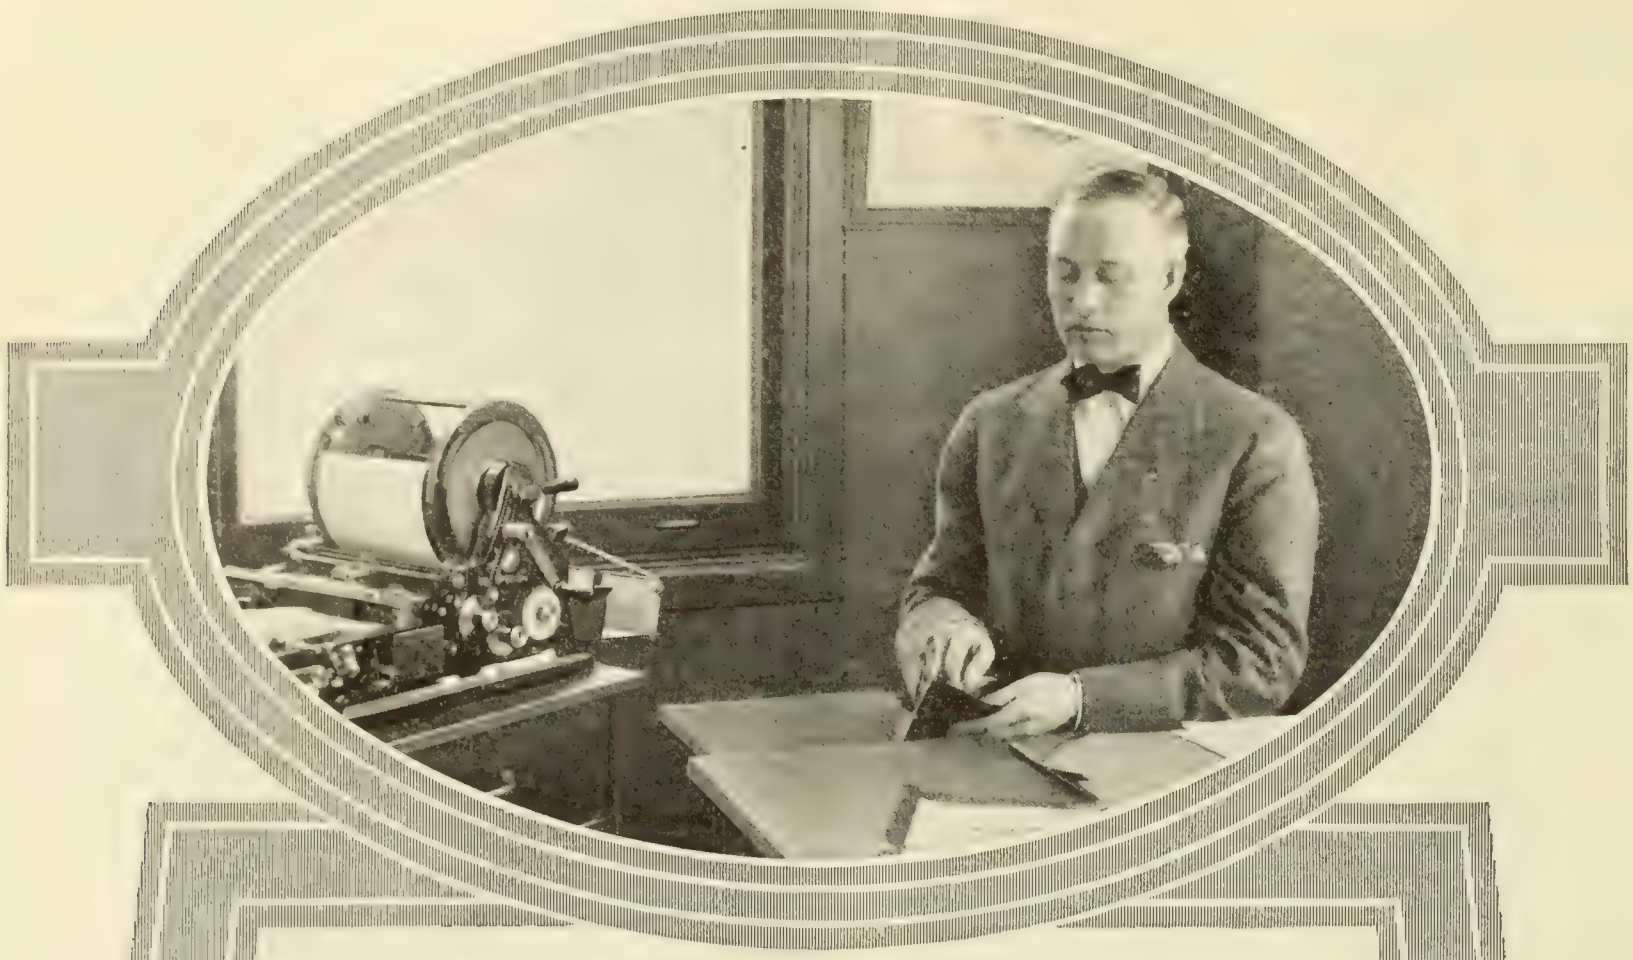
III. The Government and the Railroads—"For Unification of Railroads."

1. Classify the anti-trust laws and the anti-pooling laws which the Interstate Commerce Commission recommends for repeal.
2. Is there any precedent in our history for government aid to the railroads?
3. In the present crisis which method would you recommend: (a) government aid to the railroads, (b) government administration of the roads?
4. How do you account for the increase in the stock of gold in the United States? How does this affect our ability to handle government loans?

IV. The Russian Revolution—"Is Russia Playing Germany's Game? "Bolsheviki Peace Talk."

1. "At first it [the Russian Revolution] seemed to be a purely political revolution," etc. "But very soon it developed into an economic and social revolution." How far does the Russian Revolution correspond with the French Revolution in this respect?
2. In what sense were Milyoukov and Lvov the representatives of the bourgeoisie?
3. Professor Harper declares that the workmen, the peasants, the government officials, etc., will never return to the state of things that prevailed before the revolution. Why not?
4. What is Professor Harper's attitude toward the Bolsheviki?

V. The Electoral System of Great Britain —"The British Franchise."



1. Review the history of the British electoral franchise under these headings: (a) parliamentary representation and the franchise previous to 1832, (b) the Reform Bill of 1832, (c) of 1867, (d) of 1884.
2. Why is it proposed to grant woman's suffrage at the present time?
3. What are the important changes in the franchise proposed in the present Reform Bill?

VI. The Problem of Food—"Food Will Win the War."

1. In what sense is it true that "food will win the war"?
2. What are the causes which have led to a reduction of the food supply of the world?
3. Study the relation between our production of grain and meat and fat products and our export of these commodities during the past three years. What has been the result?
4. What measures does Mr. Hoover recommend for the alleviation of the food situation? What is your family doing to help out?

VII. Industrial Reorganization — "What America Needs Now." "What Is a Labor Shortage," "Scarcity of Fuel."

1. What does Mr. Ford mean by his statement that the war will be won by the nation that knows how to use machinery and tools?
2. Use the facts given in the news item to test the statement, "When we speak of coal shortage we do not mean that the coal veins of the country have been worked out."
3. Explain: "The so-call'ed labor shortage, then, is not a shortage of labor quantity, but of labor quality."

Net! "In my good, stout pocketbook today is a small fortune which I wouldn't have, if I had tried to get along without the mimeograph. It is a great money saver—but it is a greater trouble saver." That's just what one business man says of the mimeograph. Any message a typewriter or pen will put on paper—any sketch or working drawing, the mimeograph will duplicate quicker—easier—cheaper—more accurately than any other method of reproduction allows. From one stencil you may print the exact number of facsimiles you want, *when you want them*—twenty, or twenty thousand. No waste of stock—no need to run extra copies for possible use later. File away the stencil and run more when needed. Quickly done. Five thousand an hour. No unnecessary noise. You don't know what splendid and inexpensive work the mimeograph will do unless you have seen the *new* mimeograph. Today—send for booklet "E" to A. B. Dick Company, Chicago—and New York.

WITH WHICH IS INCORPORATED

HARPER'S WEEKLY

FOR A HOLY WAR

OUR President has again delivered an epochal state paper. In his message addrest to Congress last Tuesday he has given a definition of our war aims that can be emblazoned on our banners for all the world to read, and left flying to the breeze until the war is won. But he has done more than give us a declaration of national policy about which to rally. He has sounded a trumpet call to our allies to purge themselves of ambitions for aggrandizement. He has explicitly and for the first time laid down the inexorable terms of peace to our enemies.

It was necessary for the American people thru their constituted spokesman to take this step as a rightful debt to the civil populations of our allies, that they may surely know what it is they and we are toiling, suffering and striving for. We owe it to the soldiers on the battle line who are giving up more than their lives for something which must be made worthy of their sacrifice. We owe it to ourselves as a bloodless measure of prime military importance. We owe it to our enemies that they may know what to expect and when to quit.

Reduced to their simplest terms President Wilson asserts that our rightful aims in this war are the following:

First. To fight until Germany is helpless or free.

Second. To win from her reparation without vengeance.

Third. To win for ourselves victory without spoliation.

Fourth. To establish a League to Enforce Peace.

Let there be no mistake about our first aim. The President has not turned aside one hair's breadth from the purpose for which, as he long ago declared, we entered the war. Unless the German people themselves overthrow Prussianism, we shall fight to the last man and the last dollar, even tho the victor suffer equally with the vanquished, civilization sink to her death-bed and the dark ages descend on earth once more. There is a faint hope yet remaining that the common peoples of our enemy may help us prevent this evil day. We must leave the door open for this contingency.

Second, this is a war too vast for vengeance. No conceivable punishment would atone for the devastation and misery and sin of it. Yet the wrongs must have their appropriate reparation, a reparation that the sinning nations are physically capable of making. Belgium and northern France must be delivered from "Prussian conquest and Prussian menace" and the peoples of Austria-Hungary, the Balkans, and Turkey must be delivered from "the impudent and alien domination of the Prussian military and commercial autocracy." For the assessment of damages there must be singled out excesses of wanton destruction and brutality—the burning and plundering of defenseless towns, the levying of contributions, and the forced labor and exportation of helpless civilians. Reparation, yes, but no vengeance. Vengeance belongs not to man, nor has he the capacity to measure out the due measure for these days of cataclysm.

And, third, not "peace without victory," but victory without spoliation. Here is the stumbling block. Our allies have shown marked reluctance to publish their peace aims in concrete terms. Those secret agreements that have already been given out in Petrograd show—as we all suspected—that these terms include for some of the Allies aggrandizement for themselves in territory and political influence. No selfish aims will succeed in this war. What rightfully belongs to these nations may come to them, if only they show a disposition to work for the common good. Our fearless President has done well to speak directly on this point. "We are seeking," he says, "permanent not temporary foundations for the peace of the world and must seek them candidly and fearlessly. As always the right will prove to be the expedient."

Yet how can we blame England, for instance, if she refuses to return the African conquests to Germany. It would be a grim jest to the native population and would create a perpetual military menace to her peaceful and self-governing colonies. What shall be done with the conquered territories?

This leads us to the fourth and most important requisite of the President's war program. The Allied nations are now definitely committed to the establishment of a League to Enforce Peace. As to whether the League shall be formed before or at the close of the war opinions differ. The President evidently does not propose its establishment now. But why should not this League of Nations, when constituted, be put in control of all territories conquered by the Central Powers or the Allies? We have particularly in mind, however, the backward nations and the undeveloped and disorganized areas of the earth, which have been so fruitful a cause for dissensions and wars among the powers. Let the League administer these territories for the joint benefit of the native inhabitants, the civilized colonists and the whole family of nations. The profits from what has been mere exploitation of natural resources will furnish under enlightened and stable international supervision abundant funds for the development of these territories in communication, industry, education and all other elements of civilization. The ultimate aim will be to restore to their racial and lingual stocks such separated peoples as wish to be so restored and to make new self-governing units of the more backward and unattached areas. This joint control of conquered territories is favored by the Labor Party and many of the liberals of Great Britain. If practical it would at once solve the most difficult problems before the world, some of which would seem almost incapable of negotiated solution on any other basis.

Into this League of course all free and enlightened nations must be invited. The President wisely suggests, however that should Germany at the end of the war still retain a government that could not be fully trusted, she might not

be permitted to enter the League or enjoy its military, economic and political advantages until she democratized herself.

The plan of a League to Enforce Peace is radical and revolutionary. But it is no more radical or revolutionary than the issue that confronted our fathers in 1776. How can the statesmen of the world today begin with any better words than these found in the preamble of our Constitution?

> We, the People of the United States, in Order to form a more perfect Union, establish Justice, insure domestic Tranquillity, provide for the common Defense, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America.

What better expression can we find for the desirability—nay, in view of present and future menace, the *necessity*—of a more perfect Union for the Free Peoples of the Earth, as well as for the free states of America? What one of us is there who does not feel a dread in his heart, a gripping fear, lest the democracy our fathers fought for may be struck from our hands? What better safeguard is there than to apply on a larger scale the measures applied by our fathers on our few hundred miles of Atlantic sea coast?

Another parallel with our own history is that which the conquered areas assigned to the League bear to our own national domain before statehood was granted to our western territories. This undivided area, owned by all the states in common, was one of the most powerful of the bonds which made a nation of those thirteen states. The conquered areas will do the same service for the League to Enforce Peace.

This is a matter of extreme importance. A few miserable cubic yards of stone, brick and mortar in the Peace Palace at The Hague formed all the tangible property binding the nations together in the days before the war. Let us make *this* league worth joining, worth working and fighting for! Give the Free Peoples a stake in it! Here is the talisman which lifts the movement for internationalism above ribald jests and paper constitutions.

The third parallel is an ominous one. It is that between individual human slavery and race slavery. The time is coming when all the Free Peoples will realize that no one people is well intentioned enough, or wise enough, to hold in subjection another people who are of compact population and who occupy well-defined territory—even tho that subject people may be backward and uncivilized. Only the family of free nations has the right to administer the necessary restraints and corrective measures; and on it devolves the duty of educating and civilizing.

This serious problem may, with some misgivings, be left for the future, as our fathers left it. But the solution must not be too long delayed. Meanwhile let us start with race slavery eliminated from our common domain, as they eliminated personal slavery from theirs.

In the fourth place we have a parallel case to the Monroe Doctrine. We say to the autocratic powers, as Monroe said to the Holy Alliance in his day, "Hands off—this soil is sacred to Freedom and Democracy." As foreshadowed by our President, our own narrower interpretation will be incorporated into this disentangling alliance, this larger Monroe Doctrine, and with the merger we shall gain strength and standing for our common interests against any menacing Devil's Alliance that can confront it.

The fifth and last parallel is with the military and political considerations which led Lincoln to sign the Proclamation of Emancipation before the Civil War was won. The definition of aims and the formation of the League to Enforce Peace which we are proposing, taken together, form a military measure of the first importance.

So far as the plain citizen can judge, this war may come to a serious pass in its political aspects at a time when it should not be unfavorable to us from the military standpoint. We have been accustomed to deride the diplomacy of Germany, and with reason, so far as concerns her skill in the legitimate exercize of the art. We cannot deride, but must instead regard with great concern, her success in the lower fields of intrigue and lying propaganda among uneducated peoples.

Russia is rendered helpless and the Italian front is broken by German victories which are political rather than military. We hear rumors of war weariness among the peoples of all the Allied nations. This weariness is encouraged, propagated and given channels of expression by the same subtle agency. A peace based on any of the proposals which have been inspired by this weariness would give Germany all those tremendous material and moral gains which are listed by M. Chéradame in the November *Atlantic* and which were so vividly described by the President in his Buffalo speech.

As with the military situation, so with the political situation, salvation lies in the hands of America. We cannot, must not, fight the political battle with the same evil weapons of falsehood and intrigue. Instead we must use the strength which our military importance and our disinterestedness give us to press for such a revision of war aims among our allies as will strip our side of the contest of all its remaining sordid aspects.

To put it briefly, *the Allies can bring this war to an early and successful conclusion, if their war aims can be published in reasonable detail, and can be seen by all the world to contain no material gain for any one of them.* So long as military success entails aggrandizement in territory and political influence for the individual Allied nation, so long will opposing political propaganda have food to grow on, and so long will the end of the war be delayed. It is criminal to delay that end for the sake of material advantage. Let all the Allied nations therefore endorse President Wilson's four great aims of the war.

Thus, at one stroke, we cleanse our purposes, hearten our peoples, attract further the sympathy of neutrals, perchance retain the assistance of Russia, and with pure spiritual fires burn out the props which sustain the military organizations of our enemies.

But—can we win our allies to this program? We do not want to—we must not—unduly embarrass them in these critical times. Let us admit, once for all, that we may not win governments to this program; but we must and shall win peoples!

Governments in Europe have risen and fallen, but the peoples have fought on. Of peoples as distinguished from governments we need have no fear. Never before, indeed, has the might of mere masses of men been exhibited as in this war. It is fought not with armies, but with peoples. In their hands lies the issue.

This the clear vision of our President has discerned. At last he stands today as the acknowledged leader of the forces of democracy engaged in the overthrow of absolutism, as the great champion of liberalism on earth. To him is apparently destined the imperishable honor of first translating the dreams of the poets, prophets and philosophers into practical statesmanship. He first has had the vision and the courage to make the common purpose of this war the establishment of justice and democracy and the substitution of coöperation for competition in international relations. His message will raise the war to a higher level. It will hearten all men of good repute among the Allied nations. It will drive the wedge deeper between the German people and their Government. We shall fight it out under his high leadership, and when we and our allies have purged our aims of all selfishness this war will become a holy war. Thank God that Woodrow Wilson, President of the United States, is hastening the coming of this day.

MAKE IT A RED CROSS CHRISTMAS

ON Christmas Day, 1917, this is what you will be doing:

You will be putting a bit of gauze into the hand of of a master surgeon, to help him stop the bleeding of some boy's shell-torn body.

You will be cheering a war-weary poilu, giving him a good-natured greeting, a comforting bit of food, a few hours of rest and contentment before he goes back to the trenches.

You will be keeping American boys in khaki warm, boys who would otherwise feel the biting cold of wind-swept camps and freezing trenches.

You will be visiting Frenchmen whom the white plague has seized, and making their little remainder of life less miserable, and guarding their children from the death they face.

You will be standing beside Italian mothers, bewildered by the sudden wretchedness that has fallen upon them, and helping them to feed their hungry children.

You will be patching up a ruined cottage so that a French family, long homeless, can begin patiently to build again the normal structure of its life.

You will be caring for little children who have lived thru such horror as, please God, you will never see; and keeping them safe from dirt and disease and the death that falls from the skies.

All this you will be doing—if you share the work of the American Red Cross. You will be carrying the message of American aid and friendliness to six nations. You will be saving little shreds of happiness for those whom the war has robbed of much that they cherish. You will be saving life.

The Red Cross has asked ten million Americans to become partners in this service—and there has been none greater since wars began—before Christmas Day. There can be only one answer.

Make it a Red Cross Christmas!

ARE WOMEN ABOVE THE LAW?

"IT required but one hour and forty-three minutes for a jury in Supreme Court at Mineola, New York, last night, to reach a verdict of not guilty in the trial of Mrs. Blanca De Saulles for the murder of her divorced husband, John L. De Saulles, former Yale football star."

So runs a newspaper summary of another famous murder trial. The verdict had been anticipated from the beginning. The facts were not questioned. An unhappy marriage, abundant cause given to a high-strung woman for both grief and indignation, homicide that presented every outward mark of deliberation, a plea of insanity, which apparently the jury did not take seriously—these were the occasions and circumstances of trial and acquittal. If the public draws the conclusion that the jurymen, some of whom "talked" after the verdict, intended to say that so far as their thought and action could influence human affairs they wished it to be understood that any woman who has a grievance against a man may kill him with impunity, we hope that no juror will pronounce the public itself to be mentally irresponsible.

It has come to this. The trial of a woman for murder or for almost any serious offense in the United States has become a disgraceful farce and a waste of public money. If the American people have no intention of holding women accountable before the law, why not say so and be done with it, and amend the statutes accordingly? Let it be understood that the only crime or sin that a woman can commit is to dress unmodishly or unbecomingly, and we shall know what to expect.

Still, we do not think it right to drop the matter at this point. There is an intellectual as well as a moral problem here which ought to be put into clear terms. The American people have fallen into wretchedly loose thinking on everything that concerns misconduct. We palliate it, we seek excuses for it, we explain it as proceeding from bad environment, intolerable provocation, misfortune, anything and everything except the one outstanding and dominating thing, namely, failure of self-control.

Failure of self-control it is, and this fact carries the problem back to our education and our *mores*. We teach smatterings of languages and of sciences, we pretend to teach vocations, we miserably fail to teach self-control. Neglect begins in the family, it is fostered by an anarchistic educational philosophy, it is defended as an inalienable right, or as a duty even, by all the revolutionaries who insist that the way to develop children into intellectual and moral prodigies and "democratic" citizens is to let them go on the loose. Discipline of any kind is tabooed, as medieval and reactionary.

Boys and men are seriously harmed by this educational program, girls and women are in too many instances ruined by it. Happily, boys and men as a rule get enough hard knocks in the struggle for existence to acquire some things that formal education has omitted. The girls and women, who are finding their way into self-supporting activities, also acquire, as men do, habits of disciplined action and self-control. But for those who have little to do beyond amusing themselves and seeking their own gratification, the educational failure is fatal. They begin life as spoiled babies, they are told by everybody that they are sweet and altogether wonderful, they are indulged without restraint, they are permitted to get and to have their way by resorting to "tantrums," they develop pronounced tendencies toward emotional ebullition and hysteria in adolescence, and by the time they are of marriageable age they are well equipt to make life hell for any man who is a big enough idiot to make love to them. The next chapter is soon written. If the husbands are patient hard-working "boobs," faithful and uncomplaining, they learn to get their happiness out of their work and their companionships with men. If a husband is himself uncontrolled or dissolute, there is a story of unfaithfulness, the wife gets a gun, shoots up the offender, is put on trial for her life, calls in the insanity experts, gets newspaper headlines and portraits, and is triumphantly acquitted.

And the psychology that runs thru all this disgraceful business runs thru our attitude toward all women who seek to attain their ends by the "tantrum" method. This is the short and ugly, but strictly scientific description, for example, of the methods employed by the militant suffragets, the White House picketers and the hunger-strikers.

It is because The Independent has fearlessly and consistently stood for the rights and opportunities of women, including the right of suffrage, that it feels called upon in the present crisis—for a crisis it is—to use these harsh words. Women must have every educational, industrial and professional opportunity. They must have the right to vote and to hold office. But with these rights they must accept responsibilities and acknowledge the imperative obligation of self-control. They must set their faces against the "tantrum" method and insist, with all good citizens of the other sex, that neither women nor men are above the law.

WHAT THE FRENCH ARE NOT ALLOWED TO LEARN

THE actions of the censor are always amusing to watch—for those who are not affected by them. Before we entered the war it used to be a popular pastime to compare the German dispatches as they came to us direct from Berlin by wireless with the same as filtered thru London and from the deleted passages learn what the British Government regarded as false or unsuitable for American ears. Now we are deprived of this amusement, for we get nothing straight from Germany; but it is almost equally interesting to read such English and French newspapers as are allowed to reach us and see how much they are allowed to learn of what is going on here and we of what is going

on there. We can find out the policy of a government better from what it does not permit to be said than from what it says.

Here is an interesting instance. The *Mercure de France,* which has been for many years the best magazine of international literature in the world, publishes in its issue of October 1 an abstract of an article by H. N. Brailsford, an English economist, in *The New Republic* of August 25. The title of the article, "The Strategy of 'Economic Peace,'" is prohibited by the censor and he has also struck out a dozen sentences in the quotations. But by referring to the original article we can see what he objected to. We print below the passages involved with the deleted parts in italics:

The Germans assume that a bargain on these lines [bartering their conquests against our boycott] is possible. If we grant that assumption, the task of assessing the relative compelling force of the military and economic factors will still be difficult. *Do the Germans, for example, dread the economic boycott sufficiently to cede the Metz district, to say nothing of Alsace? Do the Allies in general, and the French in particular, care enough for Alsace to pay for it with a general "most favored nation clause," or by breaking down the French colonial tariffs?* That is the central question which the whole society of the Alliance has to face, and none is more urgent.

The ideal plan would be that the entire combination—the United States, Brazil and China, no less than the original Entente, should say to the Central Powers "Economic peace is open to you on certain conditions. Evacuate your conquests. Join us in reducing armaments. Pledge yourselves to the procedure of a League of Nations. Make your difficult and painful contribution to European conciliation, by ending the feud over Alsace, and reassure us about the future of the Slavs of Austria-Hungary. *In return we renounce all discrimination in tariffs or shipping facilities against you; our colonial markets are open to you; the door of China is not slammed on your enterprize, and in the inevitable regulation of the world's supplies of raw materials, your industry may reckon on its fair share.* End militarism and *we will give you economic peace.*" That is the inevitable dialog between land power and sea power. It is the formula of a peace of reconciliation.

The plain fact is that peace has become for Russia a necessity, a matter of life and death, and a protracted war must mean in some form dictatorship, and the moral collapse of the revolution. The Russians themselves have made their repeated appeals to us to revise our war aims. When they urge us to drop annexations and to abandon imperialism, I am not sure that they have grasped the whole problem. On the one hand the economic boycott is an obstacle to peace, no less fatal than forcible annexations: on the other hand it may be possible by an adroit use of it to extract assent to some salutary territorial changes.

From the italicized sentences, which are those the *Mercure* was not permitted to print, we can see that the censor objected to any reference to the possibility of receding from the position taken by the Allies at the Paris Conference that peace should be followed by an economic war in which the combined strength of the Allies should be used to check German commerce for an indefinite period in the future. The French people are not allowed to learn that the suggestion has been made that they might secure the evacuation of the French territory and possibly Alsace-Lorraine without further bloodshed by opening their markets to German goods as before the war. They were also prevented from hearing that Russia regarded an immediate peace as the sole salvation of the republic. Americans, or at least those who have read Brailsford's article, knew last August of the danger threatening Russia, but to the French people, from whom such information as this had been debarred, the news of the revolution in Petrograd must have come as a terrible shock.

THE MORAL VALUE OF ADVERTISING

MORALISTS have usually been severe on the advertiser. It must be admitted that advertisement does not foster the virtue of modesty and it has been known to place a strain on the virtue of truthfulness. And yet there is nothing more certain than that the recent growth of advertising is a sign of moral as well as of material progress.

In the first place, advertising is an appeal to good will. No oppressive monopoly, whether it be a world-wide trust or the only general store in a country village, takes the trouble to please and conciliate the customer that is summed up in the word "advertisement." The rectangle of paid space in the newspaper or on the billboard is not the only kind of advertisement. The attractive package, the courteous salesman, the liberal terms of purchase, even the known high standard of the product are also advertising. When a hundred competitors are trying to attract the attention and the pocketbooks of your customers you must either make your product unusually attractive or go out of business. The man who advertises must get rid forever of the frame of mind exprest in such familiar phrases as "Take It or Leave It," "Caveat Emptor" or "The Public Be Damned!" If you saw these or any similar expressions of contempt for the consumer emblazoned in electric lights along the front of a department store or printed in huge red letters on a circular you would conclude with reason that either you needed the attention of an oculist or the advertiser required the services of an alienist.

The second moral gain of advertising is that it tends to make the public a partner in private business. In fact, business is no longer wholly "private" if you must advertise. The public will not long be content with the mere assertion that "Iceberg Soap IS the Best." Your competitors will force you to explain *why* it is the best. You will have to let the consumer into the secret of its manufacture. "Iceberg Soap is Made Only from the Purest Vegetable Oils. Our Formula Is on Every Package." The public reads in the newspapers that the workers in the soap factories are badly paid. Here you find another chance to outdistance your competitors and you circulate pamphlets telling about your model factory, your pension system and other details of your business. The public suspects that you are making excessive profits. You reassure them by printing in the newspapers a statement of your annual budget, the number of sales you make a year and the fraction of a cent of profit which you make on each sale. In the course of a few years you are taking the public into your confidence at every turn; perhaps even reforming your business methods in order to make your statements square with the truth. A generation ago the manufacturer or mine operator whose workmen went on a strike fought the unions in grim silence, ignoring the public and the press. Today, business men realize that the public is arbitrator and the direction of its sympathies may make or break a strike. Both employers and workmen appeal to the public thru the press, presenting their respective cases as if they were lawyers arguing before a jury, and neither side dares take a stand that will affront public sentiment.

Frankness and good will are, then, the moral basis of advertising. You must please the man to whom you would sell your goods or services and you must also tell him what he wants to know. Many, of course, are content to pretend to give the public what it wants and to pretend to tell it the truth; but in the long run you cannot make a customer think that he is satisfied if he is not or make him believe what he can find out to be false. Carlyle and other critics of representative government have declared, with no little truth, that it is really government by advertisement. If you cannot obtain sufficient publicity you cannot get elected to any important office, no matter what your ability. But there is a good side to political advertising which is too frequently overlooked. The bureaucrat in an autocracy is under no obligation to please the public because he is not dependent upon its good will. But the statesman in a democracy must satisfy the public because it is also his constituency. If he displeases his "customers" they will transfer their votes to a rival who offers something better. That is why the people rule in fact, even if few of them vote directly on the laws or hold office in person. The average voter has the same power over Mr. Roosevelt and Mr. Wilson that he has over the automobile manufacturer and the breakfast food salesman; the fact, namely, that they cannot do without his custom.

THE STORY OF THE WEEK

The President's Address

Seldom if ever has a routine annual message of the American President to Congress been regarded by the world at large with so intense interest as was the address which Woodrow Wilson delivered on December 4. In recognition of that circumstance, steps were taken for the immediate transmittal of the text of the address to all the capitals of the world, where it was received with avidity and was discussed with a seriousness befitting its epochal character. Supreme interest centered upon the President's statement or restatement of the aims and purposes of this nation in the war, and the extent to which his policy might be affected by recent events in Russia and by the extraordinary letter of Lord Lansdowne.

The President spoke, in fact, with no uncertain voice. He spent no time nor words in considering the causes of the war. "The intolerable wrongs done and planned against us by the sinister masters of Germany," he said, "have long since become too grossly obvious and odious to every true American to need to be rehearsed. . . . Our object is to win the war, and we shall not slacken or suffer ourselves to be diverted until it is won." The President's speech is published in full in another part of this issue.

The address was received by Congress with general favor, and by the press and people with approval which in many cases amounted to great enthusiasm.

THE GREAT WAR

November 30—Germans make general counter attacks at Cambrai. Artillery duels prevail on Italian front. "Rainbow Division" of American troops announced to have gone to France in October.

December 1—Germans repulsed at Cambrai. Italians assume the aggressive in mountains. British advance toward Jerusalem.

December 2—Bolsheviki make armistice agreement with Germans, releasing German troops on Russian front for service elsewhere.

December 3—British repel German attacks near Cambrai. German reënforcements massing on Italian frontier.

December 4—Severe but indecisive fighting at Cambrai and on Italian frontier. British advance further in Palestine.

December 5—British and Italian lines both slightly withdrawn to stronger positions. German sink sixteen large British vessels in a week.

December 6—Further British retirement at Cambrai. Italians driven back with heavy losses on Asiago front.

For War Against Austria

Following the recommendation of the President, the House of Representatives on December 5 formulated and unanimously adopted a resolution setting forth that the Austro-Hungarian Government had committed acts of war against the United States in adhering to the German policy of ruthless submarine warfare, and in giving active aid to Germany in that power's war against this country, and that therefore

> A state of war be and is hereby declared to exist and to have existed since noon of the 5th day of December, 1917, between the United States of America and the Imperial and Royal Austro-Hungarian Government.

It was confidently assumed that this declaration would be promptly adopted by the House on December 7 and by the Senate a few days later.

Inter-Allied Council

The Supreme War Council of the chief allied powers met at Versailles on December 1-3, Col. E. M. House and Gen. Tasker H. Bliss representing the United States, and Great Britain, France and Italy being represented each by its Prime Minister and an eminent army officer. The sessions of this important conference were marked with much harmony and resolution, and the outcome was to effect "a complete understanding and close solidarity among the Allies for the solution of the questions in which they have a common interest in the war." Those questions, it was further explained, include the financial needs of each, the requirements of their armament, their transport, and their food. The creation of a Supreme Inter-Allied Naval Committee was determined upon, and military unity of action was "placed upon course of certain realization by the Inter-Allied General Staff, which is at work upon an established program of all military questions."

One of the most important of the

International Film

AMERICA'S WAR COUNCIL IN PARIS

In this photograph, taken just before the Inter-Allied War Council met, are America's chief war representatives. Standing in the first row, from left to right, are General Tasker H. Bliss, chief of staff of the army; Ambassador Walter Hines Page, to Great Britain; Colonel E. M. House, head of the American delegation; Admiral Benson, chief of U. S. naval operations; Vance McCormick, chairman of the war trade board; and Admiral Sims, commander of the American fleet overseas

details determined upon by the Council was that, without hampering the employment of the resources of the various nations, they should so restrict their imports as to permit the largest possible amount of shipping to be released for the carrying of American troops and their supplies to Europe.

Deadlock on the Battle Fronts Practical deadlocks prevailed during the week on the western and southern battle fronts. It became evident that the sensational British drive at Cambrai had been checked and was not likely to be at once renewed. Indeed, the narrowness and length of the wedge which General Byng had driven into the German lines made the position in a degree perilous. Great reinforcements were brought up by the Germans, and assault after assault was made upon the flanks of the British army; these fresh troops being presumably brought from the quiescent Russian front. These attacks were generally repulsed by the British, with appalling losses to the Germans, who were hurled against them in wave after wave of solid masses and were mown down literally by thousands. Nevertheless the British suffered some losses, the Germans even reporting the capture of 9000 prisoners and 148 guns, and more than fifteen square miles of ground had to be yielded for the rectification and strengthening of the lines. Additional preparations for further attacks are being made by the Germans, while the British are with equal energy and unfaltering resolution confirming their defenses; with a prospect of continued heavy fighting in which neither side is likely to make, for some time, material gains.

Similar reports come from the Italian front. The armies of the Central Powers have been greatly augmented by the arrival of many new divisions, presumably from the Russian front, and vigorous attempts have been daily made to break down the Italian defense and push on to Venice. The Italian army, which seems to have regained its morale, has received strong reinforcements, including British and French detachments, and is presenting to the German advance an opposition worthy of Ypres, Verdun and the Marne. At the Asiago plateau the defense has been compelled to yield for some distance on a six-mile front with heavy losses of prisoners, while elsewhere the aggressive has been successfully taken and the Germans have been driven back. As at the west, strenuous preparations for further conflict are being made on both sides, and the outlook is for a continued deadlock, with by far the greater losses on the German side.

At Craonne and elsewhere along the French lines no significant engagements have occurred. In the Balkans only desultory fighting is reported, from the neighborhood of Monastir. In the east the British are making steady progress, both at Bagdad and at Jerusalem, and are said to be ready to enter the latter city.

Bolsheviki Peace Talk Representatives of the Bolsheviki faction in Russia, professing to speak for the actual Government of that country, entered the German lines under a flag of truce and were received by eminent representatives of the German, Austro-Hungarian, Bulgarian and Turkish governments. A protracted discussion of proposals for an armistice and terms of peace ensued. The German and allied members of the conference insisted that their functions were purely military, and that they could therefore do no more than to arrange for an armistice, leaving all questions of peace to politicians. The Russians then proposed an armistice on all the war fronts, during which the Central Powers should transfer no troops from the Russian to the French, Belgian or Italian front and the Germans should evacuate the Russian islands around Moon Sound. This was rejected by the Central Powers, which made the counter proposal of an armistice on the Russian front alone, from the Baltic to the Black Sea, for ten days; to be automatically prolonged thru mutual agreement. This was agreed to by the Russians on December 2, with a request that the conference should reassemble seven days later on Russian soil.

The monarch of Austria-Hungary, addressing a delegation, declared that the Dual Realm was ready to conclude at any time a peace that would guarantee its own integrity, and that in that spirit its Government had entered into negotiations with Russia. Reports came from German sources that the Rumanian army also was seeking peace, but these were vigorously denied by British authorities.

Another Raid on London Another raid upon London by German airplanes, the first in about five weeks, took place on December 6. About twenty-five airplanes were engaged in it, of which six reached London. Two of them were brought down and the three men on each were captured. A few fires were caused by the dropping of bombs, but were extinguished with little damage, while the casualties were few. On the preceding day two raids over Germany were made by British airplanes, with results which have not been reported.

Disaster at Halifax The most destructive accident of the war occurred at Halifax, Nova Scotia, on Thursday morning, December 6, when, owing to a misunderstanding of signals, the Norwegian freight steamer "Imo," laden with grain for Belgian relief, came into collision with the French steamer "Mont Blanc," laden with thousands of tons of munitions of war. The latter vessel, having a deck load of benzine, was set afire and presently its cargo exploded. The accident occurred in the narrow strait between the outer harbor and the inner basin, and the high ground of the shores confined and intensified the effects of the shock. The explosion was heard and felt for more than sixty miles; the whole city of Halifax was shaken as by an earthquake; about two square miles of the poorer part were prostrated and burned; and it is estimated that between 1500 and 2000 human lives were lost.

THESE GERMANS HAVE STOPPED FIGHTING

One of the long files of prisoners captured on the western front, who are being marched back to a detention camp

The Rainbows in France The doubly significant announcement was officially made on November 30 that the entire "Rainbow Division" of the National Guard army had been dispatched to France and was then in active training near the battle front. Apart from the fine achievement of conveying this numerous body of men across the ocean in perfect safety for every one, the incident was gratifying as a proof of the possibility, at last, of our performing extensive military operations without having the news published to the world. For the "Rainbow Division" had started for France from Camp Mills, on Long Island, on October 15, and for six weeks thereafter, until

the Government voluntarily disclosed it, the general public had not an inkling of the fact. Doubtless it was known to many, including members of the newspaper profession. But such was the prevalent sense of patriotic honor that every one who knew about it kept his knowledge to himself.

Most significant, however, was the fact that this division included organizations of soldiers from every state of the Union. Presumably it was largely for that reason that it was selected to be sent across first, and that the report of its safe arrival was officially published just on the eve of the reassembling of Congress. Nothing could tend more strongly to bring all states into line, in sympathy with and in favor of the vigorous prosecution of the war, than the knowledge that men from every state are at the battle front. There is little doubt that this knowledge greatly quickened and confirmed patriotic sentiment in all parts of the United States, and assured the meeting of Congress in a frame of mind favorable to supporting the President in all his plans and policies for pressing the war to a successful issue. In that view the "Rainbow Division" may be regarded as a veritable bow of promise amid the clouds of war.

Central News

THE CAVALRY'S CHANCE AT LAST

Military critics have been contending, and with seeming justification, that modern warfare had no place for cavalry attacks. But General Byng's offensive on the western front is giving them their chance again. With tanks to pave the way the horsemen have just the conditions they can best fight under; much credit for the recent gains goes to the British cavalry

Where Famine Threatens

Bitter complaints of food scarcity come daily from the Scandinavian countries, and from Sweden most of all. In that country distress is credibly reported to be more extreme than in Germany, and it is intensified by the circumstance that Finland is, if possible, still more destitute and is looking to Sweden to save her from actual starvation. Some of the distress in all three of the kingdoms is unquestionably due to their having shipped to Germany too great a proportion of their produce, in the expectation of getting supplies from America to make good the deficit. But America and the Allies object to sending to neutral countries supplies which directly or indirectly find their way to Germany, as it is quite certain has been the case with enormous quantities of goods formerly sent to those countries.

Switzerland, too, is in need, but her necessities will be supplied. The United States, with the approval of the Allies at the Inter-Allied Conference, has made an agreement with the Alpine republic for provisioning it, the first such agreement ever made by America with any country.

Scandinavian Triad

The sovereigns of the three Scandinavian kingdoms met at Christiania for a very serious conference, which was concluded on November 30. Their situations, and the situations of their countries, have from the beginning of the war been most trying. All have suffered greatly from the war, from disturbance of commerce and industry and—Norway particularly—from destruction of shipping. Yet not one has deemed it prudent to enter the war, for fear of being overrun and ravaged as Belgium, Serbia and Rumania have been. Nor have they been altogether unanimous in sentiment and sympathy. Denmark doubtless cherishes much animosity against Germany, particularly Prussia, because of the seizure of two of her provinces more than half a century ago; and Norway is inclined in the same direction, for other reasons. But Sweden may reasonably be suspected of a considerable degree of friendly feeling for Germany, largely because for the sake of Finland she has a grievance against Russia. In these circumstances the expectations of some that the three sovereigns would decide to declare war together were ill-founded. All that they did at their conference was to agree that, however long the war might last, they would maintain among themselves their present cordial relations and mutual confidence; that each would observe toward the belligerents the most scrupulous possible degree of neutrality; and that each of the three countries would aid the others with merchandise to the fullest possible extent.

The British Franchise

The House of Commons has under way a Reform Bill of importance. The principle of woman suffrage has already been accepted by the House and recent action has placed the women's municipal franchise on the same basis as the Parliamentary. One of the most interesting features of the new franchise system is that, while practically all restrictions on universal suffrage are removed, the age limit is not the same for all classes of voters. Soldiers and sailors in active service are enfranchised at the age of nineteen; civilian men at the age of twenty-one; women at the age of thirty. Persons refusing to perform military service (including the so-called "conscientious objectors") are to be disfranchised. Along with the change in the franchise there is a redistribution of seats in Parliament. The British do not have our American system of readjusting Congressional districts after each ten years' census; a British shire or borough continues to send the same number of members to the House of Commons, regardless of increase or decrease of population, unless a special bill is introduced to redistribute the representation of the different sections of the nation. Since the last redistribution a number of boroughs, especially those situated in the agricultural counties, have declined in importance, and some industrial towns and residential suburbs have risen to prominence.

Lord Northcliffe has recently been honored by the British Government by the title of "Viscount," and Viscount Reading, Lord Chief Justice of England, by the title of "Earl." Both men have returned to England from missions to the United States, and it is understood that their new honors are conferred in recognition of their services in this country in coöperating with us for the more effective prosecution of the war. Baron Rothermere, the younger brother of Lord Northcliffe and himself an important newspaper owner, has been appointed head of the Air Ministry in the British cabinet in succession to Lord Cowdray. Lord Northcliffe had been offered this post, but he refused it in order to remain free to criticize the Government as much as he liked in his newspapers.

Latin-American Black List

An interesting sequel to one of the most controversial episodes of the earlier part of the war was announced during the week. It will be recalled that before our own entry into the war the British and French Governments made a "black list" of American firms and corporations which were believed to be conducting business transactions with Germany unfavorable to the Allies, and which were in consequence debarred from trade with Great Britain and France. Much indignation and resentment at this were exprest in this country, tho largely at German in-

Central News

THE HORSES OF ST. MARK'S COME DOWN AGAIN

Venice, taking precautions against a possible bombardment, thinks first of art. Buildings have been protected by sandbag fortifications and all the movable art objects taken to a place of safety

citement, and there was some diplomatic controversy over it. The Allies declined, however, to recede from their stand and the "black list" was maintained. Now on December 4 a similar step was taken by our own War Trade Board against a great number of firms and corporations in Central and South America. An order was issued for a general classification of all commercial concerns in those countries, and as a result about 1600 were put on a "black list," and Americans were forbidden to deal with them save under special license from the board. All exports to the blacklisted concerns have been forbidden, and importations from them will be permitted to only the extent necessary for the liquidation of whatever debts they may be owing here. It was announced that as rapidly as possible this system would be extended to all other neutral countries thruout the world, with a view to making commercial non-intercourse with Germany and her allies universally complete.

Stamp Act in Force The new stamp taxes for war revenue came into force at the beginning of the month; and tho widespread in their application, and calculated to yield a considerable revenue, are not likely to be at all burdensome. They comprize a tax on parcel post packages of one cent for each twenty-five cents' postage or fraction thereof; five cents a pack on playing cards; twenty-five cents for power of attorney; ten cents on each proxy for voting at a meeting not of a religious, charitable, fraternal, literary or educational organization; from $1 to $5 on steamship tickets according to their cost above $10; from twenty-five cents to one dollar on the entry of goods at a custom house for consumption or warehousing; from fifty cents upward on deeds and conveyances of real estate, according to its value; two cents for each $100 of face value in capital stock transfers, and a like tax on produce sales at exchanges, from which two sources a large revenue is anticipated; five cents for each $100 of face value of bonds of indebtedness and renewals thereof; fifty cents, or one per cent of the premium, on indemnity and surety bonds; five cents on each $100 face value of original issues of stock certificates; two cents for each $100 or fraction thereof on promissory notes and time drafts, but nothing on ordinary checks and drafts payable at sight. All stamps for these purposes are for sale at post offices, excepting those for stock transfers and sales of produce at exchanges, which are distributed by collectors of internal revenue.

Stamps for Savings Simultaneously with the imposition of stamp taxes for revenue, the Government has put into operation a system of stamps for savings, which will at once increase the loan revenue of the Government and also increase the habits of thrift and the savings of the people, even of those of the most limited means. The system consists of the issuing of certificates which become Government bonds according to the number of stamps affixed to them, not exceeding twenty, of a face value of $5 each, but now costing the purchaser considerably less. The present price of stamps is $4.12 each, and after next month it will increase at the rate of one cent a month. One may thus get a certificate free, pay $4.12 for a stamp and affix it, and thus have a Government bond redeemable five years hence for $5. Or he may affix twenty stamps and thus, at a cost of $82.40, have a bond which will in 1923 pay him $100.

Further to faciliate such thrift, cards are issued, to each of which sixteen savings stamps costing twenty-five cents may be attached. When the card is thus filled with sixteen stamps, it will be accepted as $4 in paying for one of the $5 stamps to be affixed to the certificates. Thus what is practically a $5 Government bond can be secured by any one who can lay aside twenty-five cents sixteen times in succession and then add twelve cents thereto. The wide distribution of these cards among school children, and also among wage earners of the most modest means, is expected to encourage valuable habits of thrift and at the same time place much ready money at the disposal of the Government.

We've Got the Money, Too In a speech to the Investment Bankers' Association at Baltimore, Maryland, Secretary McAdoo of the Treasury Department estimated that $10,000,000,000 must be raised by bond issues, certificates of indebtedness and war savings certificates before June 30, 1918. The big loans already placed and the expected yield of the new taxes voted by Congress have accounted for the rest of the year's war cost to the United States. While $10,000,000,000 is unquestionably a great sum to borrow, it is less than had been provided for in the original estimates of the Government. The expenditures of the War Department, Secretary McAdoo declared, have been fifty per cent less than was anticipated for the period from July to October inclusive. The loans to the Entente Allies have not affected the financial situation unfavorably because most of the money is actually being spent in this country to the temporary stimulation of American industry. The gold monetary stock in the United States on the first of November amounted to more than $3,000,000,000; a net increase of $174,500,000 for the last ten months. Over a third of the gold monetary stock of the world is now held in the United States. Five years ago we owned only about a fifth of the world's gold monetary stock; the difference indicates the extent to which the nations of Europe have had to buy in our markets during the war period.

Millionaire Incomes An impressive view of the wealth of the nation is afforded by the report of the Internal Revenue Bureau for the last fiscal year, in which it is shown that there are ten persons with incomes of more than $5,000,000 each, and no fewer than 196 more with incomes of $1,000,000 or more each. Of individual incomes between $100,000 and $1,000,000 there are 6402; between $50,000 and $100,000 there are 10,452; while in the very comfortable class having more than $10,000 but less than $50,000 a year each, there are 104,856. Between $5000 and $10,000 there are 150,551, and between $3000 and $5000 a year there are 157,149. If we reckon the 196 who have incomes of from one million to five millions as having an average of two and a half millions each, they have among them a total of $490,000,000 a year; while if we reckon those from three to five thousand as averaging four thousand each, they have a total among them of $628,596,000. But greatest of all, doubtless, is the total of incomes of those with still smaller individual incomes. This must be so, since the total income of the nation is reckoned by tens of billions, a sum toward which all the million dollar incomes put together go but a little way.

Over Thirteen Billions More than thirteen billion dollars in appropriations for the ensuing year was asked for in the estimates which were presented to Congress at the opening of the session on December 3. There are men not yet old who can remember the sensation which was caused when a Congress of years ago voted during its whole two years appropriations exceeding one billion, and was for that reason called the "billion dollar Congress." Its defense was that "this is a billion dollar nation." Now

for a single year appropriations of more than thirteen billions are sought, of which almost incomprehensible sum more than eleven billions are for the prosecution of the war; suggesting the explanation and defense that this is an eleven billion dollar war; as it undoubtedly is. No previous total estimate has ever exceeded two billions. With odd cents omitted, the estimates by general headings may be tabulated as follows:

Legislative	$8,026,325
Executive	65,329,369
Judicial	1,396,190
Agricultural	26,458,551
Foreign intercourse	6,535,072
Military (army)	6,615,936,554
Navy	1,014,077,503
Indian	12,255,210
Pensions	157,060,000
Panama Canal	23,171,624
Public works (practically all fortifications)	3,504,918,055
Postal service	331,818,345
Miscellaneous	1,026,208,317
Permanent annual appropriations	711,166,825
Total	$13,504,357,940
Deduct sinking fund and postal returns	485,632,345
Total	$13,018,725,595

Silver Problem Reversed

The conferences of Government officials, miners and others at Washington on the price of silver indicates an interesting reversal of the "silver problem" as it existed and convulsed the country a generation ago. At that time the value of silver was steadily and markedly falling, and national and international conferences were held to devise, if possible, ways and means of stopping the process and of keeping the white metal "precious." Those conferences were vain, and the price of silver declined until an ounce of bullion, which down to 1873 had invariably been worth more than a dollar, in 1902 and in 1909 was worth less than forty-one cents. Since the beginning of the war, however, the process has been reversed, and from a variety of causes the price of silver has been pretty steadily rising, until it has again approximated a dollar an ounce. The needs of this country and the Allies for silver, chiefly for coinage purposes, has led to the holding of these conferences, which it is expected will result in the taking of the entire output of American mines by the Government, for a period of a year, at a fixed price; probably about eighty-seven cents an ounce.

Unrest in Mexico

Sporadic disturbances continue to occur in Mexico, the most serious of which during the week were near Indio, Texas. There, on December 1, Mexican outlaws raided an American ranch and killed the foreman, a Mexican. American troops hastened to the scene and pursued the bandits across the border into Mexico, where hot fighting occurred, as a result of which one American soldier was killed and one was wounded, while thirty-five of the outlaws were reported to have been killed. Two days later Mexicans near the same place fired upon American cavalry patrols, whereupon the latter promptly crost the border again and killed twelve of the outlaws. These untoward occurrences apparently have no political significance and are not likely to lead to international complications.

For Unification of Railroads

The need of greater efficiency, for military purposes, in the transportation system of the country, referred to at length last week, has called from the Interstate Commerce Commission a significant and suggestive report, which has been laid before Congress and is being carefully considered. This is to the effect that, as the Railroad War Board has already represented, unification of operation is essential. But since the legislation of recent years has tended to forbid and to prevent such coöperation of separate roads, the Commission suggests that Congress should repeal the anti-trust and anti-pooling laws, so as to enable the roads to operate conjointly under their own management, as they profess to be eager and ready to do. In addition, it is urged that the Government should extend to the roads some measure of financial aid, in view of the greatly increased expenses of operation and also in view of the fact that the flotation of enormous Government bond issues has made it difficult for the roads to secure loans which they may need.

The alternative, the Commission says, would be for the President to take over the roads for Government control and operation; as he was empowered to do, in case of need, by the act of Congress of August 29, 1916. This course is indeed urged in the minority report of one of the commissioners, Mr. McChord, who analyzes the present chaotic state of the railroad service and argues that voluntary operation of the roads as a unit under their own management would be inadequate. If the Government should thus take over the roads, the Commission adds, Congress should make ample provision for an equitable yearly return to the companies for the use of their property, and for its upkeep and betterment while in the hands of the Government.

The heads of the principal eastern trunk lines, on the other hand, insist that they have already voluntarily unified their efforts as far as possible under existing laws and have put the service into a notably efficient condition; and that if they were set free from hampering legislation and regulations, they could and would speedily make that service all that could be desired.

A bill was introduced into the House of Representatives on December 5 providing for the immediate taking over by the Government, temporarily, of all railroads and coal mines, for their operation in accordance with the necessities of the war.

Meantime the perplexities and difficulties of the railroads were increased on December 1 by a demand by all trainmen and conductors on all lines in the country for an increase of pay amounting practically to forty per cent above their present rates. The men ask for a reply to this demand before the end of the present month.

Life Safe in the Army

Recent tales, presumably of alien enemy origin, invented and circulated to dissuade men from enlisting and to create prejudice against conscription, have been to the effect that there is appalling mortality in the army and navy, both in the training camps and at the front. To counteract these and to let the truth be known, the War Department has published a statement of mortality in the army, since our entry into the war on April 6 down to December 1. The total number of deaths in that time was 1348, of which 937 were due to "natural causes," to wit, diseases to which civilians are subject at all times; 352 to "accidents," many of which were also of a non-military sort; 18 were lost at sea; 11 were killed in action; and the remaining 30 are not yet accounted for.

Pratt Thompson

EVEN THE FIREMEN ARE KNITTING

Poker, or checkers, or whatever the fireman's habitual pastime is, has lost its [illegible] now that the ladies of the Cincinnati Red Cross are teaching the men at the fire stations how to knit. They already have turned out a really considerable number of sweaters and mufflers and socks for the soldiers in France

These figures cover practically eight months, during which time there were, in all branches of the service, at home and abroad, approximately 800,000 men. They indicate, therefore, a death rate in the army of about 2.5 per thousand yearly, which is less than a quarter as much as the death rate of civilians thruout the nation. In the registration area of the United States, comprizing two-thirds of the country, the death rate in 1915 was 13.5 per thousand, or more than five times as high as in the army.

Scarcity of Fuel There is an increasing menace of scarcity of fuel. This is apparently due to a variety of causes, chief among which are two: scarcity of labor, caused by the drafting of miners for military service; and lack of facilities for getting coal to market in the congested state of railway traffic. In order to stimulate production the President has authorized an increase of price at the mines of thirty-five cents a ton for anthracite; the effect of which is yet to be seen. Meantime various plans for decreasing the consumption of coal are being discussed; among them that of closing the public schools for two months in midwinter and keeping them open thru the summer instead. The fuel administration has directed the exercize of discretion in distribution of the stock of coal on hand, in order that industrial establishments of vital importance to the public and to the nation may have the preference, and that the use of coal shall be restricted, if at all, in those directions which have to do with nothing more than luxury and show.

Sugar Famine Ending The beginning of the end of the sugar famine was hailed on December 5, when the Government released for distribution and sale 22,000,000 pounds of sugar which had been held for the filling of Russian orders but which was taken over by the Government for domestic use. On the same day 3,000,000 pounds of the first consignment of the new Cuban sugar crop reached American refineries, and it was announced that the movement of the American beet sugar crop had begun on a large scale.

Beer Drinkers Please Notice Food Administrator Hoover announced on November 26 that hereafter the alcoholic content of beer is limited to three per cent; which is very mild beer compared to much now in stock. The breweries, also, will be limited to seventy per cent of the grain which they have habitually purchased.

Mr. Hoover admitted that from the standpoint of grain conservation it would have been a gain to have stopped the manufacture and sale of beer altogether, but he feared that an attempt to do so would have increased the consumption of whiskey. The food control bill prohibits the use of foodstuffs in the production of distilled liquor for beverage purposes, but, as there is already in stock two or three years' supply of whiskey, brandy and other distilled liquors, the prohibition of their manufacture does not put an end to their consumption. The Government, it is true, is empowered to purchase the existing stock of distilled liquors for the purpose of manufacturing alcohol for industrial use, but this power has not yet been exercized because thus far there has been no shortage of industrial alcohol.

RUSSIA'S SPOKESMAN AT THE ALLIED WAR COUNCIL

M. Maklakof, the new Russian Ambassador to France, is in the difficult position of representing Russia at the war councils of the Allies while Russia is declaring truce with Germany

The Red Cross Drive A nation-wide campaign in the interest of the American Red Cross is now in progress, the prime objects of which are to arouse interest in, sympathy with and moral and material support for that organization, and to enroll many millions more in its membership. It is hoped to increase the membership to at least 15,000,000, which, with yearly dues of only one dollar each, would mean a considerable income. The vicious propaganda of defamatory and scandalous stories about the organization and its nurses has pretty generally been checked by the prompt criminal prosecution of some of its promoters.

The need of all possible energy and efficiency in Red Cross work is emphasized by reports from the battle front. The United States army this week has issued a call for 475 more nurses, "for immediate and urgent service," and the head of the American Red Cross in Europe has urged the utmost expedition in preparing supplies, both for immediate use in field hospitals and in preparation for the immeasurably greater demand which may arise at any time when American troops in great numbers are sent into action.

Farmers' League Comes East At a mass meeting in New York City a conference of farmers and labor represenatives agreed to form an organization in the state similar to the Farmers' Non-Partizan League, which is the dominant political organization in North Dakota and is represented in most of the neighboring states. Chairman John Mitchell of the New York Food Commission presided. The other speakers were John Dillon of the New York State Department of Foods and Markets, President A. C. Townley of the Farmers' Non-Partizan League, and Representative Baer, the only member of the League in Congress. Mr. Townley gave an account of the farmers' movement in North Dakota and the quarrel between the farmers and the middlemen. He accused the Minneapolis millers of attempting to destroy the farmers' coöperative association by unfair methods of competition, and of making excessive profits.

A committee of five grangers and five labor union representatives will call a state convention in the near future for the purpose of putting the Farmers' Non-Partizan League in New York on a permanent basis. This convention will also formulate a program on which the farmers and labor unionists can make a joint fight to influence state legislation and to eliminate the middleman by coöperative organization.

IS RUSSIA PLAYING GERMANY'S GAME?

BY SAMUEL N. HARPER

The author, assistant professor of Russian language and institutions, University of Chicago, was sent to Russia as representative of the university for research work. He also served as translator to various members of the missions which were sent to Russia and is expertly qualified to write on the revolution.—THE EDITOR

MANY seem to be almost angry that Russia chose this moment to work out internal problems. Others are patient as a matter of policy, rather than from a real understanding of, and sympathy for, what is going on in Russia. Many of the acts of the extremists—the Bolsheviki—tend quite naturally to alienate our sympathy, for they seem to threaten our own security, as well as the safety of Russia, and also the very causes for which these advocates claim to be working. The Bolsheviki seem to be "playing the German game," as we say, perhaps simply by their brutal logic. When I talked with some of them this last summer, I frequently felt that same kind of nausea which I had always experienced when I had to talk with a Sturmer or a Protopopov. There was a cynicism in their attitude toward life that reminded one of the high-rank gendarmes of Nicholas II, or of the corresponding tools of German ruthlessness. But one had to make this distinction: the Bolsheviki have had some "truth" behind them. This fact accounts for the large measure of success which they have enjoyed. Thus, even in the theories of the Bolsheviki one had to accept much as true.

THE present writer was in America when the Revolution came last March. He had spent the summer of 1916 in Russia, however, and therefore thought to be able to interpret the Revolution even at a distance. At first it seemed to be a purely political revolution; and in fact that is what it was during the short first period. But very soon it developed into an economic and social revolution. Then one became alarmed: the revolution was going very fast and very far. And there was the war on one's hands, and revolution interfered sadly with the purely military aspects of the war. Many Russians became more than alarmed. Tho some might be, the majority were not thinking solely of their own selfish interests, which were being attacked. It was not that they were faint-hearted and did not have the moral courage to face the problems that had come up. They also were thinking of the bearing of the revolution on the war, and particularly of the attitude their allies might be taking on this point. On several occasions this last summer Russian friends told me quite frankly that they did not wish to see Americans whom I wanted to introduce to them: "We are ashamed to face the allies, after what has happened here, especially at the front."

Fortunately, however, the majority of the Americans who were in Russia, or who came on to see where we could coöperate with the new Russia, understood the spirit of the revolution, and even caught the spirit. In the case of several Americans we remarked that they were taking the revolution as a kind of religion. One man, I recall, observed that the revolution meant for him that now one must show why one should enjoy the good things of this life. Perhaps this particular man came from Missouri.

May I give a word on my own experience? I arrived in Russia full of enthusiasm for the revolution—for my last visit in Russia had covered the late summer months of last year, after the appointment of Sturmer to the Ministry of Foreign Affairs. The Russian custom of offering congratulations on all occasions suggested the formula with which I greeted friends, or any one. "I congratulate you on the Revolution" was my greeting to the first group of "comrades," the soldiers at the frontier station, who had replaced the gendarmes of the old régime. At the next station I saw a group of soldiers reading a special American supplement, issued by a large Petrograd daily. The cover was a picture of George Washington, set into the American flag. "The leader of our Revolution," I explained with eagerness. A sailor looked at me and commented calmly: "A prosperous-looking gentleman." Then I realized that what I was to experience was a revolution involving deep and radical changes, and not a purely political one. I was therefore somewhat prepared for the situation I found in Petrograd; it had developed during the weeks I was journeying to Russia. For I found the men who last summer were considered the dangerous revolutionists, men like Milyoukov and Lvov, now on the right of the political stage, the "conservatives," contemptuously referred to by many as "bourgeois."

FOR the "bourgeois" became the object of attack from "revolutionary democracy." Milyoukov devoted columns in his newspaper, explaining that he and his party were not "bourgeois." But the "people" continued to speak of him as such, and to treat him and his kind as dangerous opponents of the "rights of the people." Countess Panin, a genuine liberal, a woman who had devoted not only her money, but her own time and energy to welfare work among the working classes, gave me the story of her own experience. The workmen, and their wives also, came to her, very apologetic but firm in their explanations of why they must vote against her, because she was "bourgeois." I was somewhat confused by the use of the word "bourgeois" until I heard the definition of the term given by a cabman of Petrograd: "Why, a bourgeois is one who lived well under the old régime."

Demagogs exploited this idea, and used it dishonestly. But despite this fact, the idea contained an element of truth, and in any case represented a testing of the "right to enjoy the good things of this life." Thus many who had unselfishly and ardently worked for a new order in Russia, for a revolution, were brushed aside by the revolution. This is what happened to many of the Zemstvo workers. For tho they had worked against the old régime, they had worked under and thru it and they had "lived well under the old régime." One friend, who has devoted his chief thoughts and energies to Zemstvo work, which has been largely work for the broader masses of the people, spent last summer on his small estate, doing practically nothing. He had stepped aside, or rather he had been forced to step aside. Such a fact discouraged, and almost irritated one; but one saw the logic of it. Petrunkevich would have to show that he really had a place in local government work. The local government bodies were being democratized, on the basis of universal suffrage. Petrunkevich must get his place in the work on the basis of service, and not of ownership of an estate, however small. His experience and expert knowledge will of course again be used, when the readjustments have been made.

THUS many like Countess Panin and Petrunkevich have had to wait patiently, as the process of democratization completed itself. The pendulum had swung way over to the other side; and the so-called Intelligentsia had been passed by in the swing. Perhaps the Intelligentsia had thought that they would simply replace the bureaucrats, who were overthrown together with autocracy. This would have been the easiest and quickest way, and would have marked a great step forward in democracy. But the Revolution went deeper than that, and represented a complete revaluation. The broader masses also insisted on having a word, and in fact they "got the say," and fixed the values. They overvalued themselves, and undervalued others, and demagogs deliberately exaggerated this tendency, using it for their own selfish or perhaps even dishonest ends. They said that the "people" made the revolution, did it all, and that the Intelligentsia, the "bourgeois," were trying to prevent the carrying out of the "will of the people." So the Intelligentsia, who were in fact the advance guard of the Revolution, were proclaimed to be "counter-revolutionists." They had to step aside for the moment. "The Party of the Frightened-to-Death Intelligentsia," remarked one observer. They were not frightened, except as they saw how this difficult readjustment had to go on at a moment

THE PEACE WE MUST MAKE

President Wilson's Message to Congress

WASHINGTON, December 4.

Gentlemen of the Congress:

EIGHT months have elapsed since I last had the honor of addressing you. They have been months crowded with events of immense and grave significance for us. I shall not undertake to detail or even to summarize these events. The practical particulars of the part we have played in them will be laid before you in the reports of the executive departments. I shall discuss only our present outlook upon these vast affairs, our present duties and the immediate means of accomplishing the objects we shall hold always in view.

I shall not go back to debate the causes of the war. The intolerable wrongs done and planned against us by the sinister masters of Germany have long since become too grossly obvious and odious to every true American to need to be rehearsed. But I shall ask you to consider again and with very grave scrutiny our objectives and the measures by which we mean to attain them; for the purpose of discussion here in this place is action and our action must move straight toward definite ends. *Our object is, of course, to win the war, and we shall not slacken or suffer ourselves to be diverted until it is won.* But it is worth while asking and answering the question, When shall we consider the war won?

From one point of view it is not necessary to broach this fundamental matter. I do not doubt that the American people know what the war is about and what sort of an outcome they will regard as a realization of their purpose in it. As a nation we are united in spirit and intention.

I pay little heed to those who tell me otherwise. I hear the voices of dissent —who does not? I hear the criticism and the clamor of the noisily thoughtless and troublesome. I also see men here and there fling themselves in impotent disloyalty against the calm, indomitable power of the nation. I hear men debate peace who understand neither its nature nor the way in which we may attain it, with uplifted eyes and unbroken spirits. But I know that none of these speaks for the nation. They do not touch the heart of anything. They may safely be left to strut about their uneasy hour and be forgotten.

But from another point of view I believe that it is necessary to say plainly what we here at the seat of action consider the war to be for and what part we mean to play in the settlement of its searching issues. We are the spokesmen of the American people and they have a right to know whether their purpose is ours. They desire peace by the overcoming of evil, but the defeat once and for all of the sinister forces that interrupt peace and render it impossible, and they wish to know how closely our thought runs with theirs and what action we propose. They are impatient with those who desire peace by any sort of compromise—deeply and indignantly impatient—but they will be equally impatient with us if we do not make it plain to them what our objectives are and what we are planning for in seeking to make conquest of peace by arms.

I believe that I speak for them when I say two things: First, that *this intolerable Thing of which the masters of Germany have shown us the ugly face, this menace of combined intrigue and force, which we now see so clearly as the German power, a Thing without conscience or honor or capacity for covenanted peace, must be crushed, and if it be not utterly brought to an end, at least shut out from the friendly intercourse of the nations;* and, second, that when this Thing and its power are indeed defeated and the time comes that we can discuss peace—*when the German people have spokesmen whose word we can believe, and when those spokesmen are ready in the name of their people to accept the common judgment of the nations as to what shall henceforth be the bases of law and of covenant for the life of the world—we shall be willing and glad to pay the full price for peace,* and pay it ungrudgingly. We know what that price will be. It will be *full, impartial justice*—justice done at every point and to every nation that the final settlement must affect, our enemies as well as our friends.

You catch, with me, the voices of humanity that are in the air. They grow daily more audible, more articulate, more persuasive, and they come from the hearts of men everywhere. They insist that the war shall not end in vindictive action of any kind; that no nation or people shall be robbed or punished because the irresponsible rulers of a single country have themselves done deep and abominable wrong. It is this thought that has been exprest in the formula, *"No annexations, no contributions, no punitive indemnities."*

JUST because this crude formula expresses the instinctive judgment as to the right of plain men everywhere it has been made diligent use of by the masters of German intrigue to lead the people of Russia astray, and the people of every other country their agents could reach, in order that a premature peace might be brought about before autocracy has been taught its final and convincing lesson and the people of the world put in control of their own destinies.

But the fact that a wrong use has been made of a just idea is no reason why a right use should not be made of it. It ought to be brought under the patronage of its real friends. Let it be said again that autocracy must first be shown the utter futility of its claims to power or leadership in the modern world. It is impossible to apply any standard of justice so long as such forces are unchecked and undefeated as the present masters of Germany command. Not until that has been done can right be set up as arbiter and peacemaker among the nations. But when that has been done—as, God willing, it assuredly will be—we shall at last be free to do an unprecedented thing, and this is the time to avow our purpose to do it. We shall be free to base peace on generosity and justice, to the exclusion of all selfish claims to advantage even on the part of the victors.

Let there be no misunderstanding. Our present and immediate task is to win the war, and nothing shall turn us aside from it until it is accomplished. Every power and resource we possess, whether of men, of money, or of materials, is being devoted and will continue to be devoted to that purpose until it is achieved. Those who desire to bring peace about before that purpose is achieved I counsel to carry their advice elsewhere. We will not entertain it.

WE shall regard the war only as won when the German people say to us, thru properly accredited representatives, that they are ready to agree to a settlement based upon justice and the reparation of the wrongs their rulers have done. They have done a wrong to Belgium, which must be repaired. They have established a power over other lands and peoples than their own—over the great empire of Austria-Hungary, over hitherto free Balkan States, over Turkey, and within Asia—which must be relinquished.

Germany's success by skill, by industry, by knowledge, by enterprize we did not grudge or oppose, but admired rather. She had built up for herself a real empire of trade and influence, secured by the peace of the world. We were content to abide the rivalries of manufacture, science, and commerce that were involved for us in her success and stand or fall as we had or did not have the brains and the initiative to surpass her. But at the moment when she had conspicuously won her triumphs of peace she threw them away to establish in their stead what the world will no longer permit to be established, military and political domination by arms, by which to oust where she could not excel the rivals she most feared and hated.

The peace we make must remedy that wrong. It must deliver the once fair lands and happy peoples of Belgium and northern France from the Prussian conquest and the Prussian menace, but it must also deliver the peoples of Austria-Hungary, the peoples of the Balkans, and the peoples of Turkey, alike in Europe and in Asia, from the impudent and alien domination of the Prussian military and commercial autocracy.

We owe it, however, to ourselves to say that we do not wish in any way to

impair or to rearrange the Austro-Hungarian empire. It is no affair of ours what they do with their own life, either industrially or politically. We do not purpose nor desire to dictate to them in any way. We only desire to see that their affairs are left in their own hands, in all matters, great or small. We shall hope to secure for the peoples of the Balkan peninsula and for the people of the Turkish empire the right and opportunity to make their own lives safe, their own fortunes secure against oppression or injustice and from the dictation of foreign courts or parties, and our attitude and purpose with regard to Germany herself are of a like kind.

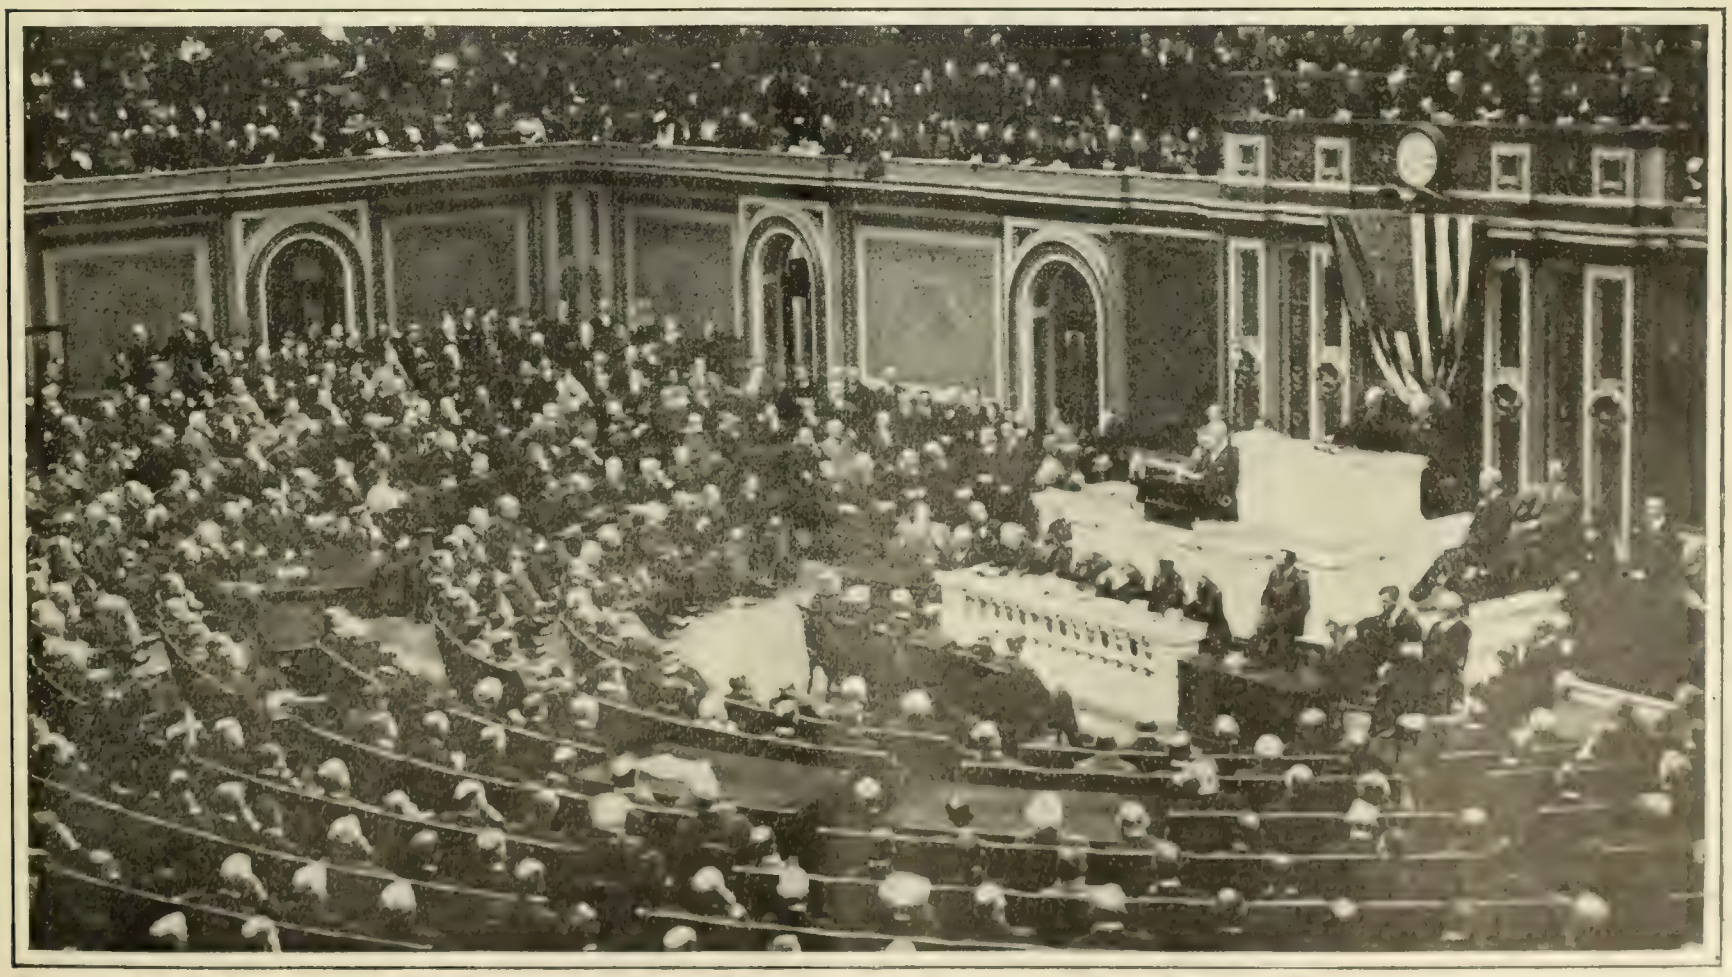
We intend no wrong against the German empire, no interference with her internal affairs. We should deem either the one or the other absolutely unjustifiable, absolutely contrary to the principles we have profest to live by and to hold most sacred thruout our life as a nation.

The people of Germany are being told by the men whom they now permit to deceive them and to act as their masters that they are fighting for very life and existence of their empire, a war of desperate self-defense against deliberate aggression. Nothing could be more grossly or wantonly false, and we must seek by the utmost openness and candor as to our real aims to convince them of its falseness. We are in fact fighting for their emancipation from fear, along with our own, from the fear as well as from the fact of unjust attack by neighbors or rivals or schemers after world empire. No one is threatening the existence or the independence or the peaceful enterprize of the German empire.

The worst that can happen to the detriment of the German people is this, that if they should still, after the war is over, continue to be obliged to live under ambitious and intriguing masters interested to disturb the peace of the world, men or classes of men whom the other peoples of the world could not trust, it might be impossible to admit them to the partnership of nations which must henceforth guarantee the world's peace. *That partnership must be a partnership of peoples, not a mere partnership of governments.*

It might be impossible, also, in such untoward circumstances, to admit Germany to the free economic intercourse which must inevitably spring out of the other partnerships of a real peace. But there would be no aggression in that; and such a situation, inevitable because of distrust, would in the very nature of things sooner or later cure itself, by processes which would assuredly set in.

THE wrongs, the very deep wrongs, committed in this war will have to be righted. That of course. But they cannot and must not be righted by the commission of similar wrongs against Germany and her allies. The world will not permit the commission of similar wrongs as a means of reparation and settlement. Statesmen must by this time have learned that the opinion of the world is everywhere wide awake and fully comprehends the issues involved. No representative of any self-governed nation will dare disregard it by attempting any such covenants of selfishness and compromise as were entered into at the congress of Vienna.



The thought of the plain people here and everywhere thruout the world, the people who enjoy no provilege and have very simple and unsophisticated standards of right and wrong, is the air all governments must henceforth breathe if they would live. It is in the full disclosing light of that thought that all policies must be conceived and executed in this midday hour of the world's life.

German rulers have been able to upset the peace of the world only because the German people were not suffered under their tutelage to share the comradeship of the other peoples of the world either in thought or in purpose. They were allowed to have no opinion of their own which might be set up as a rule of conduct for those who exercized authority over them. But the congress that concludes this war will feel the full strength of the tides that run now in the hearts and consciences of free men everywhere. Its conclusions will run with those tides.

All these things have been true from the very beginning of this stupendous war; and I cannot help thinking that if they had been made plain at the very outset the sympathy and enthusiasm of the Russian people might have been once for all enlisted on the side of the Allies, suspicion and distrust swept away, and a real and lasting union of purpose effected. Had they believed these things at the very moment of their revolution and had they been confirmed in that belief since, the sad reverses which have recently marked the progress of their affairs toward an ordered and stable government of free men might have been avoided.

The Russian people have been poisoned by the very same falsehoods that have kept the German people in the dark, and the poison has been administered by the very same hands. The only possible antidote is the truth. It cannot be uttered too plainly or too often.

From every point of view, therefore, it has seemed to be my duty to speak these declarations of purpose, to add these specific [*Continued on page 532*

FOOD WILL WIN THE WAR

LESSONS IN AMERICA'S PART IN THE WORLD'S FOOD PROBLEM, PREPARED BY THE UNITED STATES FOOD ADMINISTRATION FOR THE INDEPENDENT

It gives us great pleasure to announce that, by special arrangement with the United States Food Administration, we shall present in The Independent, beginning with this number, a series of lessons on the part that every American must take in winning the war by the conservation, the proper distribution and the production of food. These lessons will go primarily to the five thousand High Schools thruout the country in which The Independent is used as a textbook, but we wish to emphasize their value wherever The Independent is read—for home study, in Chautauqua circles, in women's clubs, in organizations of all kinds. President Wilson wrote to school officials last August: "Lessons thus suggested will serve the double purpose of illustrating in a concrete way what can be undertaken in the schools and of stimulating teachers in all parts of the country to formulate new and appropriate materials drawn directly from the communities in which they live."

FOOD ADMINISTRATION

FROM AN ADDRESS DELIVERED AT ATLANTIC CITY

BY HERBERT HOOVER

FOOD has gradually, since the war began, assumed a larger place in the economics, the statesmanship and the strategy of the war until it is my belief that food will win this war—starvation or sufficiency will in the end mark the victor.

The Allies are blockading the food from Germany; and the surrounding neutrals are under pressure to export their surplus both ways and to reduce their imports. The Germans are endeavoring to starve the Allies by sinking the food ships. Short production and limitation of markets cumulate to under supply, and all governments are faced with reduction of consumption, stimulation of production, control of prices and readjustment of wages. The winning of the war is largely a problem of who can organize this weapon.

As to our more intimate problems, to effect this end, it must be obvious that the diversion of millions of men to war reduces the productive labor of the Allies, and in sequence, the food production. But beyond this the destruction of food at sea, and of still more importance, the continuous destruction of shipping, have necessitated the gradual retreat in area from which overseas food supplies can be obtained for any given country. There has grown from this not only a limitation of supplies, but an accumulation in inaccessible markets. The result of these cumulative forces is that North America is called upon, by both Allies and neutrals, for quantities of food far beyond its normal export ability.

What this tax on our resources amounts to is evident enough from the fact that during the past fiscal year we have increased our grain exports from 120,000,000 bushels, the three-year pre-war average, to 405,000,000 bushels. This year the Allied production is reduced by 300,000,000 bushels over last year, and we must therefore meet a much larger demand. Our exports of meat and fat products have increased from pre-war average of 500,000,000 pounds to 1,500,000,000 pounds for the last fiscal year. And owing to the decrease in their animal herds, the Allies will require still more next year.

If the extremely high prices thundering at every door were not a sufficient demonstration, it is possible, by actual figures, to prove that we have been exporting in many commodities actually beyond our capacity to produce. Taking the three-year pre-war period as 100, we find in pork, for instance, the number of animals on hand at the 30th of June this year is variously estimated at from 92 to 98. The slaughter of animals during the year was at the rate of 179; the exports were at the rate of 215, and the natural consequence is that the price is at 250.

During the past year we have exported every last ounce of which the country during this period was capable of producing, and our national stock of cereals and animal products, proportionate to our population, was, at the beginning of this harvest, the lowest in our history, and many of us have been under the keenest anxiety lest we would face absolute shortage. This anxious period is now happily passed.

The demand in many commodities during the coming year is beyond our capacity to furnish if we consume our normal amounts. The necessity of maintenance of the Allies on our first line of defense, and our duty to humanity in feeding the neutrals demands of us that we reduce our every unnecessary consumption and and every waste to the last degree—and even then the world dependent on us must face privation. Owing to the limitation of shipping we must confine our exports to the most concentrated foodstuffs, grain, beef, pork, dairy products and sugar.

We must control exports in such a manner as to protect the supplies of our own people. Happily we have an excess of some other commodities which cannot be shipped, particularly corn and perishables, and we can do much to increase our various exports if we can secure substitutions of these in the diet of our people, but above all we must eliminate our waste.

THE FILIAL BALANCE SHEET

BY MARION HARLAND

AUTHOR OF "THE STORY OF MARTHA WASHINGTON," "WHERE GHOSTS WALK," "COMMON SENSE IN THE HOUSEHOLD"

"LET us look the question squarely in the face. Discarding sentimentality and traditional prejudices, we will go over the Filial Balance Sheet from the viewpoint of common sense and justice."

"Filial Balance Sheet!" The words cut the air like the whizz of a bullet past my ear. I looked up from the book that had absorbed eyes and thought during the hour spent in afternoon tea and talk by my neighbors upon the veranda of a summer hotel.

Four of them lingered about the table upon which cigar-tray and ash-cups had taken the place of the tea equipage. It was a shaded nook overlooking the sea and, excepting myself, there was no one else within hearing. The quartet of two men and their wives were well drest, refined in manner and speech.

One of the women laughed in catching up the phrase that had attracted my attention.

"Put it into uncommercial English—please! Two of us are not accountants. Define your Filial Balance Sheet."

The man addrest was perhaps forty years of age, and bore the indefinable but unmistakable stamp of a prosperous citizen of the world. He knocked the ash from the tip of his cigar with a daintily manicured finger in replying:

"In everyday English then, I would ask what does a man who has gained maturity of years, and who has fulfilled the letter of his duty to his parents, owe to his mother?" Obligation to her was the theme that began the discussion. "One moment—please!" checking an exclamation with a courteous gesture. "Let me draw up the 'sheet!' The mother has brought him into the world without his permission. I digress to remark here that the clause in the prayer-book thanking God for 'creation' ought to be stricken out. 'Gratitude for preservation' is all right. Our lad, then, owes nothing to his mother on that score. Once landed on what the hymn-maker calls 'Life's happy shore,' the Law obliges her to feed and clothe, lodge and educate him in a style becoming her means and station. It also enjoins kind treatment. It would punish cruelty or neglect. Call Dame Justice a stepmother if you like. She is the children's best friend. Until our youth is twenty-one, she keeps a sharp eye upon what are loosely styled 'his natural protectors.' Here then stands our American citizen with the ballot in hand. The mother (leaving the father out of the question—he is usually too busy downtown to think of training his offspring)—the boy's mother has kept the law in spirit, if you will—certainly in letter. Behold the product of her industry! To borrow and adapt the language of Holy Writ, she has done only that which it was her duty to do. The community would have cried out against her if she had fallen short of this. Grant that her son has obeyed her in all things. He is honest, respectable and able to play a man's part in the world. That was all she expected of him. It happens, we will say, in about one per cent of the sons who are thus educated and equipt for the main business in life—that of earning a decent living for themselves and families—that the maintenance of the old mother is added to the labor of bringing up his own family. Only yesterday I heard all manner of objurgations hurled at a fellow who let his mother enter an Old Ladies' Home, he paying a premium of five hundred dollars to secure her admission. 'What if she were willing to go to the Home?' demanded one irate dame, when I dared put an inquiry. 'So much the more ungrateful and unnatural in him! He ought to have given her a home of her own!'

"I dared not risk a riot by suggesting that she would be as essentially a pauper and charity-patient in the latter case as she can ever be in the Old Ladies' Home. But I *thought* it with all my heart, soul and strength!

"Their accounts are balanced with perhaps a credit-entry of five hundred dollars to him. She owes him a home and comfort so long as she lives. Thus stands the Filial Balance Sheet!"

Opposition came from an unlooked for quarter. The second man of the party was older than the orator by a dozen years or more, plainer in visage and in demeanor. He tossed a half-consumed cigar over the railing, and brought down his fist upon the table:

"Man alive! what are you talking about? Why, she is his MOTHER!"

I slipt away under cover of the laugh that greeted the "argument," and sought refuge and composure in my room. To say that I was horrified and angry would convey a feeble impression of the tempest that raged in my soul for the next half-hour. Then reason and the common sense the speaker had invoked rallied to cooler meditation.

SINCE this, my initiatory lesson in one branch of Modern Phase of Thought, I have purposely provoked dissertations upon what my first professor in this line (not I) named "The Filial Balance Sheet." With the result that I cannot disguise from myself the truth that the fluent spokesman of the veranda has no preëmptive right to his views. They are echoed boldly by many men and not a few women in the "higher walks of life." Speculations upon "What do I owe my mother?" have not as yet filtrated to the substratum of Society. From this soil I shrewdly suspect may have sprung, by some natural law of Evolution, the honest citizen who in one furious exclamation supplied me with the only cogent argument—cogent and unanswerable—that I have gleaned from wordy conflicts.

"Man alive! she is his MOTHER!"

My story bears a date anterior to the adaptation into English recitative by Yvette Guilbert, of a French legend which I would fain put into the memory and heart of every growing child.

Most of our readers are familiar with it. We cannot con too often and analyze too earnestly the divine lesson wrapt in the tale of which I offer a brief outline:

The dissipated son of a loving mother was wildly enamored of a beautiful courtezan who, dreading the influence of his mother over him, made him drunk and then agreed to accept his proposals upon one condition. He must murder his mother and bring to the siren the mother's heart while it was still warm and palpitating with life. The youth—crazed by passion and wine—killed his mother that night, enclosed the heart in a casket and ran at full speed by a short cut thru the wood separating him from the castle of the enchantress. In his haste he stumbled and fell with such violence as to break the casket. As he lay, panting on the earth, his ear close to the broken box, he heard a faint murmur from the poor bleeding heart: *"O, my dear son! are you hurt?"*

THE MARCHING MEN

BY HARRY KEMP

The brown lads, the brave lads go marching down the street;
It sets one's head a-whirling,—the motion of their feet!
Their legs go swinging, swinging, in row on rhythmic row,
As down the street, down the street the marching soldiers go.
They are stepping, stepping, stepping as if they hummed a song
That soon must burst in thunder a mighty million strong. . . .

The Kaiser, O, the Kaiser, if he had seen this hour
When first he dreamed a vanquished world lay sprawled beneath his power,
Had taken thought, had taken thought, and then had paused again
Before he roused the valor of all these marching men!

SHOOT STRAIGHT AND LIVE STRAIGHT

RAYMOND B. FOSDICK'S COMMON-SENSE SOCIAL SERVICE AT THE TRAINING CAMPS

BY DONALD WILHELM

"IF a man doesn't live straight, he can't shoot straight," insisted this young Princeton man, summing up much in little for the Secretary of War.

"Of course," granted the Secretary.

"Then why not give troops a chance to live straight?" queried Mr. Fosdick, coming at a new evangel of national efficiency with characteristic insistence.

The Secretary inquired "*How?*" For he was deeply interested then, and so deeply interested since then that it has been rumored that he would almost rather be Fosdick than the Secretary of War! That is why he has had so many midnight suppers with this anomalous settlement-worker and lawyer who has led the whole United States army into a gigantic social work that isn't a fad or a fancy but the sheerest common sense in the world.

I went to him, to ask him about this new social work, which is truly one of the fine gifts of the war. I told him what I had heard about him and the Secretary of War, and then I inquired "*How?*"

"Well," he began, leaning back easily in an uneasy swivel chair, comfortable in a room with its November windows wide open, "let me try to illustrate *how*."

"How," I interposed, "to make men live straight so that——"

"—so that," he resumed, smiling, "they can shoot straight."

I pointed out how disastrous neglect of social welfare abroad had been; I reminded him—what he well knew—that in the first flaming six months of the war one of the major belligerents had more men disabled by a single social blight than by all the holocausts of enemy bullets and shell. Then he came at his problem squarely:

"I was in Columbus, New Mexica,"—he went there as a special agent of the Bureau of Social Hygiene—"shortly after Villa went riding thru the town. Now Columbus isn't much of a town!"

He laughed infectiously—it was perfectly plain his windows were not up to speed all coming guests!

"Columbus isn't much of a town," he went on. "And Villa wasn't much of a general, tho he taught us a lot, I guess."

Then he went on: "Well, I was standing there in Columbus one torrid, lazy day. Here, on one side of the railway was this town, which hasn't a very large population even when all are home. And on the other side of the railway there were 5000 American troops."

He leaned forward and said easily yet impressively: "Now experience shows that the moment troops get a half hour free they hurry off to town."

He said they did exactly that in Columbus, New Mexico.

"They used to stroll over," he said.

"What for?" I inquired.

He turned his palms up with a quick jerk of his wide shoulders. "O to hang over the rotten bars——"

He continued: "It's curious," he smiled, "isn't it?—that there has been, traditionally, a notion that troops are made to do nothing but fight, and the tougher, morally, we could make them the better troops they would be." Then he leaned over the table—over the three tables jammed together to make a right angle, and a desk—and snapped out this: "Well, I made up my mind then that if ever I got a chance at a situation like that I would crack it hard."

And then, after a little pause: "It happened, when we went to war, that Mr. Baker asked me if there was anything we could do about it."

"You said——?"

"I said I thought there was."

And there was!

Thus, where, hard by army camps, there used to be saloons, now there are camp exchanges where men can meet and buy anything they want. Where once, in the eve of battle, the straight and narrow path was straighter and narrower still and the "blues" regularly followed the army; now, by dint of Fosdick and the Secretary and their admirable corps of aides, physical directors, minstrels and musicians, movies and Harry Lauders and theaters and much else there isn't a camp at all like that formerly there in Columbus "where," as Mr. Fosdick said, "there wasn't a thing to compete with the town—not a healthful thing for those 5000 men to do—not a thing to thwart the undesirable factors that existed in all those border towns!—not a place where fellows could go to write letters, no decent, interesting shows, no sports, no homes—for all along the border the fact that you wore a uniform barred you from nearly all decent homes."

He paused, waiting, perhaps for the usual question, "What, then?"

"Well, the men went to the devil! For they were men of spirit, and when men go to war they're full of the spirit of adventure."

And so we had a border army that was not a contented army, and it is only a contented army, this young enthusiast insists, that is a fighting army.

And now the armies are contented—even in the cantonments full of men called by the selective draft the morale is simply marvelous. Health—mental, physical—and happiness, it seems, go along together and men live straight, and shoot straight, because that is the patriotic and American thing to do; because this vigorous young man with "push" and "punch" and "pep" bristling thruout his vocabulary learned in years gone by, in New York City settlements particularly, the philosophy of human betterments and the duties of citizens to their communities—learned, in short, social consciousness. He was, with other social workers, intent on showing cities the science in social work, and now, of a sudden, he is showing nations, with Uncle Sam by all odds the greatest social worker ever!

"The Commission on Training Camp Activities," he said, "works regularly with two elements. There is the negative element—the elimination of vicious factors—the absolute repression of them; second, and this is far more important, there is the constructive element to take the place of the negative, which we try to eliminate entirely. It isn't enough to put *verboten* signs along the roadside. You must offer a challenge greater. So we have gone in for hard physical athletics—for everything that will bring out the competitive instincts in the men.

This isn't a namby-pamby business, not by a long shot. We are getting punch in things. We want the men to get punch into things punch——" he paused for a word with *more* "punch."

"Pep," I suggested.

"Yes," he pursued, "Punch, and pep, yes, and point!"

He gets push and punch and pep

Supervising the recreation of all our troops doesn't leave Mr. Fosdick much time to enjoy his own

and point into everything he says, this greatest of all social workers. He goes at his problem, there in his vigorous icy room, like a man putting in his paces in a shower bath.

"We want shows, theaters, boxing — anything that will absorb, healthfully, these millions of young men, anything that will broaden their outlook, anything, even if it shocks our more conservative brethren, some of whom protest."

"Protest?" I repeated.

"Yes," he said, with a swish of his arm truly Rooseveltian. "We have letters protesting against our theaters, against our prize fights. But the men want things like that; they want things with pep and punch, with all the push and pull of real war. They want to bump into their fellows and understand them."

Then he paused, and there was just a trace of a smile about his lips and eyes.

I asked him what amused him.

Commissioner Fosdick believes in putting punch and pep into social welfare

"Why," he said, beginning to laugh, "the other day a top sergeant in one of the camps was calling the roll. He sneezed and six Lithuanians stepped from the ranks."

His laugh boomed, out of the window! "They thought the sergeant had called their names!" he explained. And then seriously: "In one of the camps there are more than ten thousand men who cannot read or write. They came down from the mountains. Many of them had never seen a town or city; some had never been out of pasture! They wanted to learn. The demand for elementary books passes belief altogether; and the demand for other books is tremendous, and we have libraries at every camp as a result and we are going further than that: We are going to have a good book ready at hand for every soldier any moment he wants one.

"O, they come from everywhere, these young Americans. They want to learn everything then can learn. That is why we have over a thousand classes now in one of the camps and are entering on the biggest kind of an educational program. They want to learn, but you have to teach them as Americans like to be taught. I mean that when a young friend of mine tried to revise the table manners of a group about him in one of the camps he gave up the job as a bad one, at the end of the very first day."

He laughed again. "This young fellow went to the hospital, admitting he had got the kick instead of the halter." Yet it is perfectly possible to lead them. They will follow leadership if you make it interesting and coöperative—make them get into things heart and soul."

The best example of how best to get cooperation and enthusiasm among the millions is a very simple one. There was a commanding officer in one of the cantonments. He was of the old school; he had doubts about the efficacy of the new social work. One evening he dedicated himself to the development of a singing army. And this is why—to quote a younger officer:

"Between five and six thousand men participated in the most inspiring evening I have ever enjoyed. When everybody sang 'The Battle Hymn of the Republic' and Harry Barnhart got the soldiers emphasizing 'Glory! Glory! Hallelujah! His Truth Is Marching On!' you should have seen the faces glowing under the lights. The camp became inspired. The men cheered and cheered. Then the Southern boys called for 'Carry Me Back to Old Virginny' and 'My Old Kentucky Home.' Then we sang 'A Perfect Day' and 'My Hero.' Then they called for 'Old Black Joe.' The harmony was wonderful. Automobiles way out on the road tooted their horns and it was ten minutes before the enthusiasm subsided. We sang from eight o'clock until ten o'clock, and ended with 'The Star Spangled Banner.' I have never heard this song sung before. The commanding officer came forward after the singing and said it was the greatest thing that he had ever listened too."

"And yet," insists Mr. Fosdick, "we are just finding out *how*."

AND, indeed, a whole essay might be written on the significance of even an attempt to ascertain *how!* And such an essay might gain by a contrast between any of our great cantonments—between any of these gigantic universities full of youth with their hopes and dreams—and such an institution as Sailors' Snug Harbor, where old men in blue roam about waiting hopelessly, even impatiently, to die.

"These boys want to learn," Mr. Fosdick says. "They want to learn all they can learn, especially how to live straight so they can shoot straight! They come to us from small towns and big towns, from farms and cross-road villages, open-minded! We have a wonderful opportunity to reach all the young men of the nation. We realize that.

We are trying hard to the end that the nation shall have better soldiers and sailors, and to the end that they will come back from war—yes, *from war!*—bigger, broader, better men, physically and mentally, in thoughts and aspirations."

He said that the whole problem is a study in contacts, and that the men produced are products of their everyday contacts.

"It's a problem in efficiency, then?" I queried.

"Strictly," he said, at once. "I am interested in it, and the Government is, as a problem in efficiency. We are far more interested in the efficiency of the men than in their morals. We put it up to the men on that ground. The Y. M. C. A., which is doing wonderful work, puts it on the ground of morals and clean living."

Then he went forward, a little, to the future, when I asked him what will be the influence of these men, when returning, on American life and industry.

"One phase of that question has come home to me," he said—and it is a phase, by the way, about which one might write another essay. "I know that men will not suffer for democracy on European battlefields and then come back and suffer in industry. There are going to be a great many reorganizations."

He rose and stretched quickly, a second later, stirring out of his chair, moving to, glancing out the open window, pining, no doubt, for a ride in his Ford, out to see his small family, to get his golf sticks and make for the links, which he has not seen for many a day—not much since he was Assistant Corporation Counsel of the City of New York, and Commissioner of Accounts under Mayor Gaynor! For he has been very busy, even as now he is busy, writing books, and studying civic problems here and abroad, with endless persistence investigating all social problems.

"This work here under the commission is only a part of a vastly larger movement," he said conclusively.

"We are going to see a better America, after the war, as result of this movement and its development of social consciousness. For the war makes possible an evolution that years and years of educational work ordinarily could never have accomplished. What would take hundreds of years the war has achieved in a few months. And it has given direction to our evolution; we know that democracy is our goal."

I asked him about social work, with which he was engaged for many years, part of the time professionally.

He answered that he could not feel pacifically about the war, as many of the social workers do.

"Well, every social worker," I suggested, "has a little of the woman in him——"

He laughed.

I explained that nearly all, concerned as they are every day, with conservation of human life, make human life this first concern.

"At any rate," he said at last, "we shall send an efficient army, efficient physically as no army in the history of the world has been, and strong as Americans have ever been in their devotions, too. For they will live straight. And that means they will shoot straight, too."

Washington, D. C.

WHAT AMERICA NEEDS NOW

BY HENRY FORD

WE must think more about machinery. If this war is to be won, it will be won by the nation that knows best how to use tools and machinery; that knows the secret of quantity production thru standardization of one model. I have been disappointed to find our Government planning different sizes and kinds of equipment and machinery where one model could be used.

Ships can be built faster, better and cheaper if standardized to a single model. One model makes possible production in enormous quantities, reduces cost and improves quality. In this standardization lies the secret of American industrial power, and we need our industrial power in this war.

From a distance I thought the best work in Washington would be done by civilian aids. On my recent visit there I have seen something of the army officers. They have a discipline and training that is needed by the country at large. Their influence should spread.

Our Government must never abandon the barracks and army camps that are being built.

When peace comes the world will be ready for disarmament. The people will understand the wrong of killing each other. The German will see that the American and the Frenchman he went out to kill are just as good as he is, and the American will feel the same way about the German, too.

Then we must develop a great national army for training all our young men between the ages of eighteen and twenty-one. We can bring them together from farms and cities in the wintertime to the barracks and training places provided by the Government.

YOUNG Americans need discipline. In this service army the Government can teach them order and train them to work. They should have a few hours of gymnastice and drill, and five or six hours of work in a factory every day. Near each encampment there can be located a few factories for tractors and other implements that farms need.

Our branch assembly plants for motor cars have proved to us that the whole of a factory does not have to be congested in one place. One mother plant can send the patterns, raw castings and forgings to dozens of branch plants, each employing 2000 or 3000 men. Designing and management will center at the mother plant, so that supervision of these branch plants will be simple.

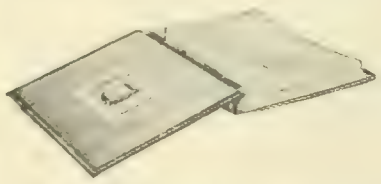
A part of this national training army of young men can be moved to places where big work for the nation is under way. They can build dams, straighten rivers, develop irrigation work and aid in constructing good roads that will bring our people closer together. In this way the workmen would always be kept near to the land.

The United States must save its labor power. Transportation for armies and supplies is a basic need of wartime. Railroads alone cannot handle the freight. The Germans are reported to have moved recently an army of 800,000 men from the eastern to the western front by auto trucks. The Ford plant can produce 2000 one-ton trucks daily, and its production can be increased in a few weeks to 3000. Each truck can haul eight soldiers with full equipment.

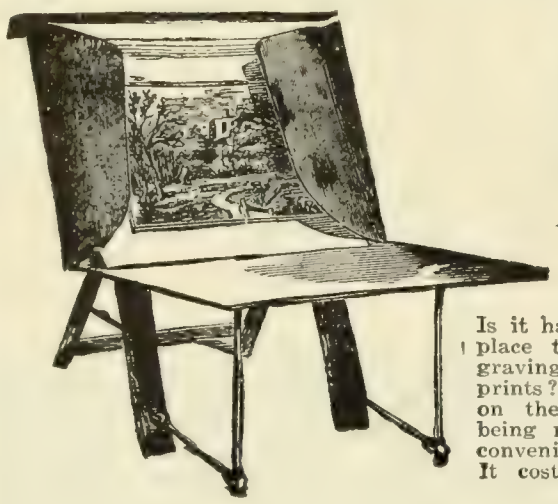
During the first month our shop could furnish trucks to haul an army of 480,000 men, thereafter for 720,000 men in each month. Each workman can manufacture a truck in fifteen days.

We are ready to furnish the Government these trucks at shop cost without profit. I will take no profit from anything produced for any Government during the war. I despise the profiteer who makes money out of war.

Detroit, Michigan



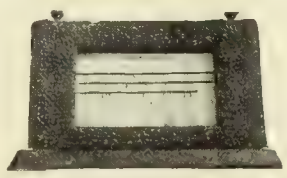
MR. FORD AT HIS DESK



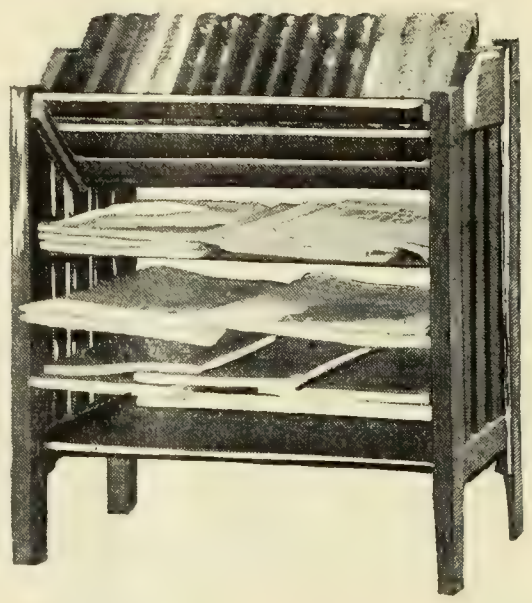
Take Efficiency Home with You

Letters are so easily misplaced. Try a file like this, compact and easy to use, with an alphabetical index. It costs 75c to $1

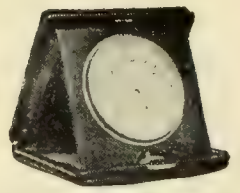
There are dozens of uses for a common sense binder like this one; try it for loose sheets or for clippings. Cost, $1 to $2.75



Is it hard to find a suitable place to keep etchings engravings, maps or large prints? The folio and stand on the left prevents their being mussed and makes it convenient to show them. It costs from $60 to $100

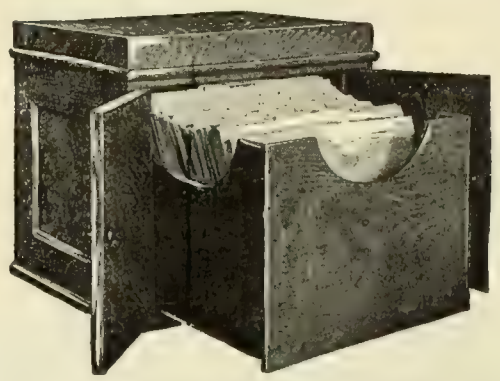


Ask the Plan and Purchase Department of The Independent for further suggestions



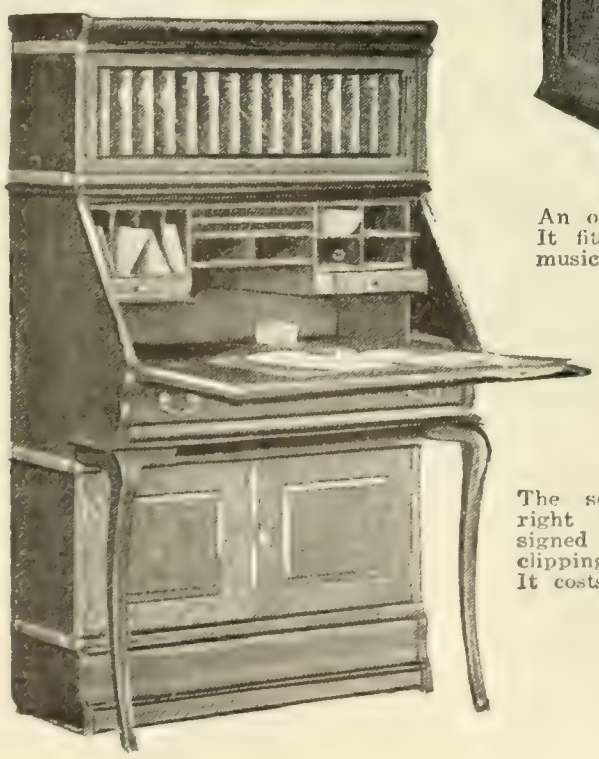
This little telephone attachment permits talking in a low voice, almost a whisper. Cost, $2.50 to $4

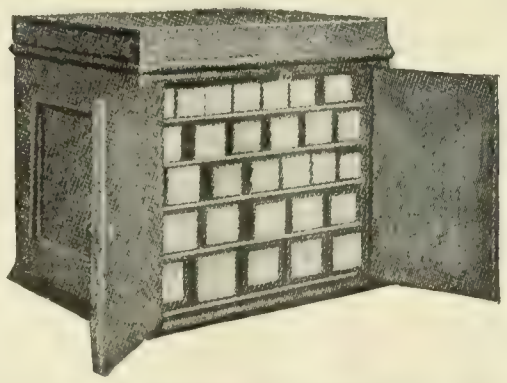
On this calendar a red line moves over each completed day. It has an attractive leather frame and stand. Cost, $1.50 to $4



Right by the easy chair, under the lamp, is the place for this book trough and magazine rack. It costs $9 to $12

A radium clock that will tell you the time in the dark. It looks well on a desk or in a boudoir, and the leather case folds flat to protect it when traveling. $18 to $65

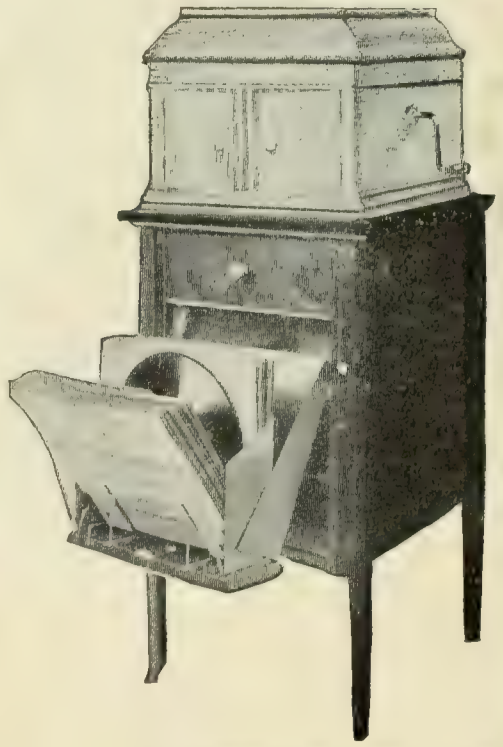




A movable, adjustable, convenient, friendly, 100% efficient electric lamp. You'll find a use for it in every room of the house, and probably on the porch, too. It costs $10

No more piles of sheet music disfiguring the top of the piano! Put them away in a cabinet like this, indexed and accessible. Cost, $12 to $15

The desk below is a model of space-saving. It provides a place for you to keep your books and writing materials and phonograph records, and it looks well in the room. Cost, $60.50 to $78



An orderly cabinet for piano-player rolls. It fits on top of the cabinet for sheet music illustrated above. Cost, $9 to $13

The scrapbook on the right is especially designed for pictures and clippings on the war. It costs from 50c to $1

An unusually good way to keep phonograph records is in a cabinet like this that is also a stand for the machine. The disc records are filed in envelopes and indexed and the tray pulls out so that you can run thru them easily. Cost, $15 to $25

OVER THERE WITH PERSHING

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

ONE of the quickest ways to rise in the world is to get close to the man at the top. The history of any great enterprize merely shows how a great leader picked and trained for his organization the men who could and would be leaders themselves. If you want to earn fast promotion, you should find, and learn from, the recognized leader in your business or profession.

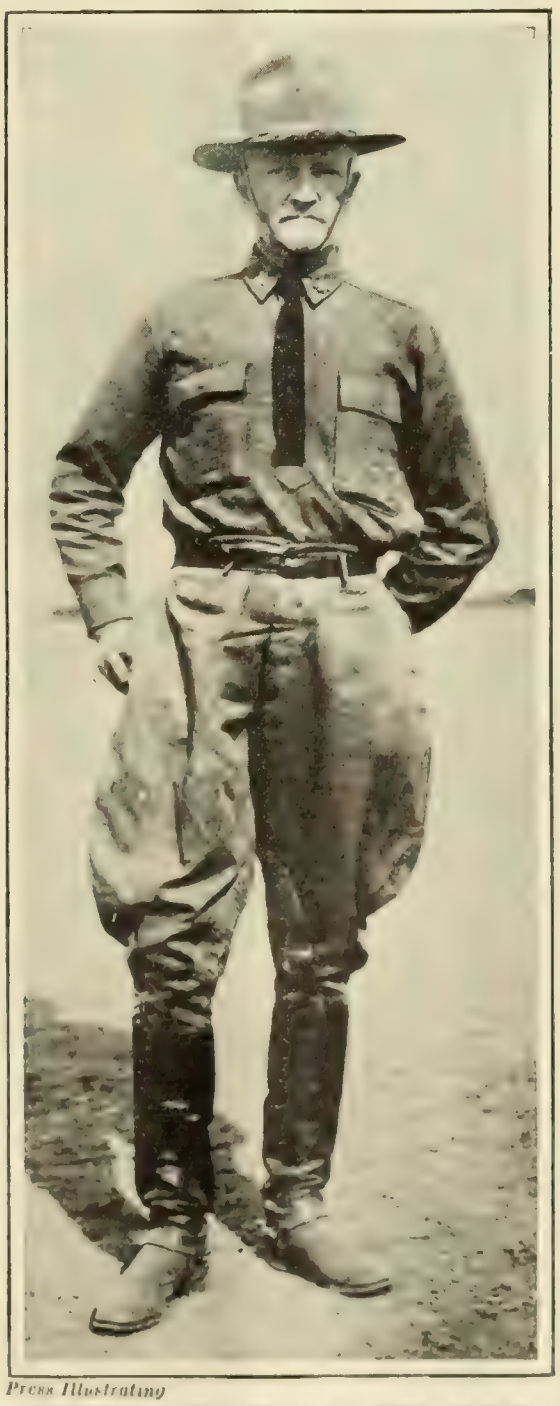
War, to the finish of the Kaiser, is now the business and profession of the young and strong men of this nation. So the question of how to be first in war should be the personal problem and overwhelming purpose of each of the 5,000,000 men who may be called upon to help save the world from destruction.

Who is the leader in the business of making war? How can you meet him? How and what can you learn from him? These are questions that every man of military age and a vertical spine should be asking at once, with his head, heart and hands bent on reaching the right answer.

Who is the military man all American young men should follow and study? General Pershing. He is the best trained and best equipt leader of the best trained and best equipt army the United States ever saw. He is the first commander of an American army to put war on a straight business footing, that every business man the world over is bound to respect. He is the only general in the world war with enough man power and material resources back of him to ensure victory. He is the first and only warrior, since time began, to lead a host of millions of powerful men from one country to another, solely on a mission of defense and deliverance equal to that of the early Crusades, but every man of the expedition armed from tip to toe with the science and experience of the modern war machine.

If you had been present fifty million years or so back yonder, when the world was made, and if the fates had offered you a cosmic field glass, to look down the ages and across the map of the world, spying out the best time and place in which to be a soldier and do a soldier's work—you couldn't have settled the matter better than to choose this war to fight in, this country to fight from, this crusade to fight for, this man Pershing to fight with!

How can you know and study Pershing? You don't have to meet him face to face—tho you are likely to if you go to France. It isn't how a man looks to you, or how he shakes hands with you, that makes you acquainted with him, but rather how he lives and works, thinks and feels, plans, moves, and pushes on to his goal!



The time to study a big man is when he is living—not a hundred years after he is dead. You can emulate a living hero—you can only imitate a dead hero. The man determined to succeed can do nothing better than watch, closely and persistently, a big man who is now doing big things.

How and what can you learn from Pershing? As an American soldier actual or potential, what can you make your first and best move along this line? The most important feature in a lofty structure is the foundation; likewise, the most important feature in a lofty human career is the foundation. Let us observe the foundation of this career.

John Joseph Pershing was born September 13, 1860, in Laclede, Missouri. He came from Missouri and is still "from Missouri"—nobody can fool him. He has always been different from most young Americans, who are fooled in their expenditure of money, fooled in their choice of friends, fooled in their ideas about work, fooled in their preparation for a career, fooled in their attitude toward life.

Pershing was born in a one-story house that was little more than a cabin. The elder Pershing was originally a section foreman, later a country storekeeper. Young John was highly favored—he had no "social standing." The man who stands on his own feet has no need, no desire, for a social standing.

The elder Pershing had been thru the mill. He had learned how to meet and overcome adversity. This lesson he planted early in the mind and heart of the boy. Furthermore, he impressed on the lad very clearly, and somewhat sternly, that the family expected him to achieve something worth while, and he had no time to waste if he was going to be ready. So young John formed the habit of looking ahead, planning everything out, following a straight business method, working steadily and patiently toward the accomplishment of a given purpose. From boyhood, when he set his jaw on a proposition he had the grip of a bulldog. Nobody ever considered the boy a genius, and he gave no sign of special talent for military leadership. As a rule, it isn't the genius who goes to the top—it is the ordinary man who thinks, works, plans, fights and prays while the genius, poor fool that he is, dreams of a garland of fame crowning a bed of roses.

Press Illustrating

GENERAL PERSHING AT THE FRONT

But John made a business of getting his lessons. If he was a trifle short on brilliance, he was very long on backbone. Therefore he carried with him such an air of self-determination, self-propulsion, self-possession, self-conviction, as to make him a leader at an early age. His teachers liked him because he was studious and conscientious; his parents liked him because he was obedient and thoughtful; the boys liked him because he was fearless and independent; the girls liked him because he was courteous and gentle; everybody liked him because he was truthful and clean.

The boy knew how to respect and obey the word of his elders. Not many youths are like him today. As Americans, we disregard the advice of experience probably to a greater degree than the people of any other nation. We have substituted the ambition of action for the authority of age. This folly has already cost us billions of dollars in preparing now, thirty years behind time, to hold our own against the organized discipline of Germany, based on the wisdom of age and experience. A youth who has never learned to obey will never learn to command.

Do not conclude, from this recital of precocious and preëminent virtues, that young John was a pale, precise, goody-goody boy of the sissy or mollycoddle type. Far from it. He had, for example, the regular appetite of a regular boy; he devoured apple pie with a relish; he found that a certain kind-hearted lady, whom the neighbors affectionately called Aunt Susan, made extra good apple pie—thereupon he made a friend of Aunt Susan, who fed him on the best pies in town.

The boy did not plan to be a soldier. He expected to study law. But he did not know where to get the money or opportunity for a legal education. So he kept his eyes open for every possible chance in that direction. Fate lifts the man who does no leaning. The best chance a youth ever gets is the one he *makes* by a resolution to advance.

One day, while a normal schoolboy, he saw a notice in a newspaper of an examination for a cadetship at West Point. He wondered if he could make it. He thought if he won the cadetship he might learn a lot of things that would be useful in the later practise of law, and perhaps the connection he might form at West Point would open the way to the study of law. But he had no "pull" of any kind, he didn't know anybody who could help him out, and his friends thought the idea foolish if not altogether crazy, of going to a military school when you expected to be a lawyer!

But John had his mind set—and he saw no obstacles. When you stop to look at a hindrance in your path, you have lost sight of the thing you are going after. And if your friends never call you foolish, the world will never call you wise. When people doubt your wisdom, the way to answer them is to keep your eyes and ears open, and your mouth shut.

John wasted no time shooting off blank cartridges of ambition. He made his method of study for the cadetship as businesslike as his purpose was bold. He inquired all about

the examination, found the application would be based on certain exact forms of knowledge, and the applicant who knew the most would be appointed. John went to it. John won. How did he win? Because, out of a large number of applicants, many of them brighter and wealthier than himself, he knew enough to answer *one question more* than any of the others. At every turn upward in the narrow path of Fate, there is room for only one man—the man who knows one thing more or who does one thing better than all the other men who walk beside him.

John's first position was the headship of a colored school in the village—an undesirable job at a miserably poor wage. But the regular teacher had left, suddenly, no one there but John Pershing could and would take his place and fill out the regular term, so the little colored children would not fall behind in their studies. He taught that school as well as tho he had been a private tutor of a millionaire youth at a big salary. The clue is here to a secret of Pershing's great success: Do the nearest thing, as well as it can be done.

The young man's idea of promotion ran something like this: Get prepared, and *forget* being promoted. The plan seemed to work, as it raised Pershing from an Indian fighter on a Western prairie in 1887 to commander of the American armies on the battlefields of France in 1917. He has earned every promotion, and always by the habit of *finding and filling a great need for public service.*

THIS war, unlike any other war, has made the American army a giant business organization. The newspaper correspondents in France when Pershing arrived sent back as their first report the news that the general tackled the war project with the speed, energy and efficiency of a corporation president handling a huge business concern! This fact means something more than the achievement of maximum results by the American forces. It means that you are going to get a business training of a new and highly valuable sort, by the largest American business organization ever known. When you come back from the war, the results of this training will shortly appear, and will be immensely advantageous to you. Let us note a few of the business methods and principles adopted by General Pershing.

The largest corporations are generous with employees. This policy is not only fair - -it pays. Our Government is generous with its soldiers. Not only is the American fighting man given a salary higher than that of any other soldier in the world, but the expense of training, supplying and caring for him is the greatest by far. To every time that Germany spends $14 on putting a man in the field, our Government spends on the same object more than $40.

Another principle of good business is to see that employees are well fed. A soldier in France, writing home, says in plain American language, "We get good grub, and plenty of it." An American soldier has a daily ration of better quality, larger quantity and more variety than any other soldier on the fighting front. The meals include plentiful amounts of the same food the soldier has when he is home—fresh and canned vegetables, potatoes and rice and other cereals, white bread and white sugar, stewed fruits, coffee, and other American dishes. And every soldier has an allowance daily of twenty ounces of fresh beef, or sixteen ounces of bacon or salmon. There are no "meatless" and "wheatless" days in the army—only the poor civilian who stays at home has to do without meat and wheat. Furthermore, twice a week, Sunday and Wednesday, the American soldier gets American pie—real pie with a luscious filling and a well-done crust. It may be that the early boyhood fondness of General Pershing for American pie has something to do with this commendable feature on the bill of fare.

Another modern first aid to business is the card index plan. This has been worked out fully, so that the record, location and condition of every fighting American who goes to France will be known to the Government at Washington, without error and without delay. If you should happen to be hurt, prompt notification will be sent your nearest relatives in the United States. So long as your friends do *not* hear from you, they may know with absolute certainty that you are safe. The many spies and poison-mongers of the Kaiser in this country will attempt to frighten thousands of American families whose boys are in France. Don't let your family give the slightest heed to the paid liars of the Prussian gang—tell your family to remember you are safe, unless they receive an official communication to the contrary from Washington.

Another business principle of today is to prevent, as far as possible, accidents and injuries of all kinds to employees. The marvels of medical science in the present war have reduced the mortality rate beyond all comparison. If you go to France under Pershing, you will have ninety-four chances in a hundred to come back alive. Should you be wounded enough to go to a hospital, you have ninety-five chances in a hundred of a short stay and a happy recovery. On such a big stake as you are playing for, a 6 per cent risk is a mighty low hazard.

Another business procedure is the delegation of authority and responsibility. The German army officers have neglected this principle—they will be found, ultimately, to have organized the German army to death. The German soldier is a machine. The American soldier is a man. This fact, this difference, will finally spell victory for the American. The German hates to fight alone, he is at a great disadvantage in the open, in the air, in all hand-to-hand personal encounters. He has not been taught to think and act for himself. *You will* be taught just this. When Pershing gives you an order, he leaves you to carry it out. He treats you like a man of intelligence and initiative. The method works in war, as it does in business.

The ideal of a broad-gauge business concern is to be a genuine democracy, where men are judged, rewarded, promoted, strictly on merit. But our homes, colleges and churches have yet to attain this ideal—most of them allow some form of pedantry or snobbery to flourish apace. Not so in Pershing's army. Here every man learns practical democracy.

Another business rule is conformity to a scientific method and a fixt schedule. Army life and training will here be invaluable to you. Every day will be a short course in personal efficiency. You could hardly duplicate it anywhere—certainly not without paying a large fee to a modern efficiency engineer for special advice. Your whole day under Pershing, from 5:30 a. m. to 6 p. m., is timed for you to the minute, and the most effective action for every possible occasion is demonstrated by experts, to the finest detail. When you return from France, your knowledge of time-study and motion-study will be a great asset, wherever you are, whatever you do.

Another excellent business procedure is to give employees the right sort and amount of recreation. You will get this under Pershing. No other army in history provided such a wealth of sports, amusements and relaxations. Two hours every evening are spent thus. Wednesday afternoon is a half holiday. Sunday belongs to the soldier, with the daily machinery of war put aside. Your work in France will be hard, but only hard enough to be healthful.

Another business principle holds that personal feelings must be subordinated to the good of the company. The sooner you learn this lesson, the better soldier you will be. You will probably find your most unruly feeling is your natural abhorence of the idea of killing a man. You cannot afford to indulge this feeling—you may lose your life because of it. Remember that when you are killing a Prussian you are *not* killing a man. The Prussian you are fighting has ceased to be a man. He is only the embodiment of a hellish idea. You are killing the idea—not the man. The Kaiser has already killed his soul worse than you can kill his body. The most merciful thing you can do is to kill as many Germans as possible, and as quickly as possible.

Another business principle demands that the leader of the enterprise be a born leader, able to stir ambition, loyalty and enthusiasm. A stronger, better leader than Pershing would be hard to find. He resembles Kitchener in appearance, and even more in action. He is always on the go. He has the fire and snap that American youths admire. The right qualities of leadership are that a man should be stern but not harsh, quick but not rash, keen but not cruel, proud but not haughty, firm but not prejudiced, clean but not prudish, calm but not hard, shrewd but not selfish, brave but not heedless, kind but not soft. Pershing has these qualities.

YOU have the biggest, hardest job ever given to a soldier to complete. But, if you are a man, you would not want an easy job. The American boys at the front are glad they went to war. They have come to glory in the game. All thru the letters they write back home runs a strain like this—"making a soldier of me made a man of me." One brave splendid fellow, dying, voiced the feeling of the others when he sent a last message to his comrades and friends: "It was worth far more than it cost."

The future of the world is up to you. The safety of your home and loved ones depends on you. The faith of a hundred million people looks to you. The hope of Christiandom lies in you. The strength of a man to defend his own surges to victory thru you. And the light of a just God leads you on.

We have marching orders for you—orders straight from Pershing. He has spoken to you thus: "Hardship will be your lot, but trust in God will give you comfort; temptation will befall you, but the teachings of our Saviour will give you strength. Let your valor as a soldier and your conduct as a man be an inspiration to your comrades and an honor to your country." Then Pershing set his jaw, and made another remark, for you to heed, remember, and make good. "Germany can be beaten, Germany *must* be beaten, Germany WILL be beaten."

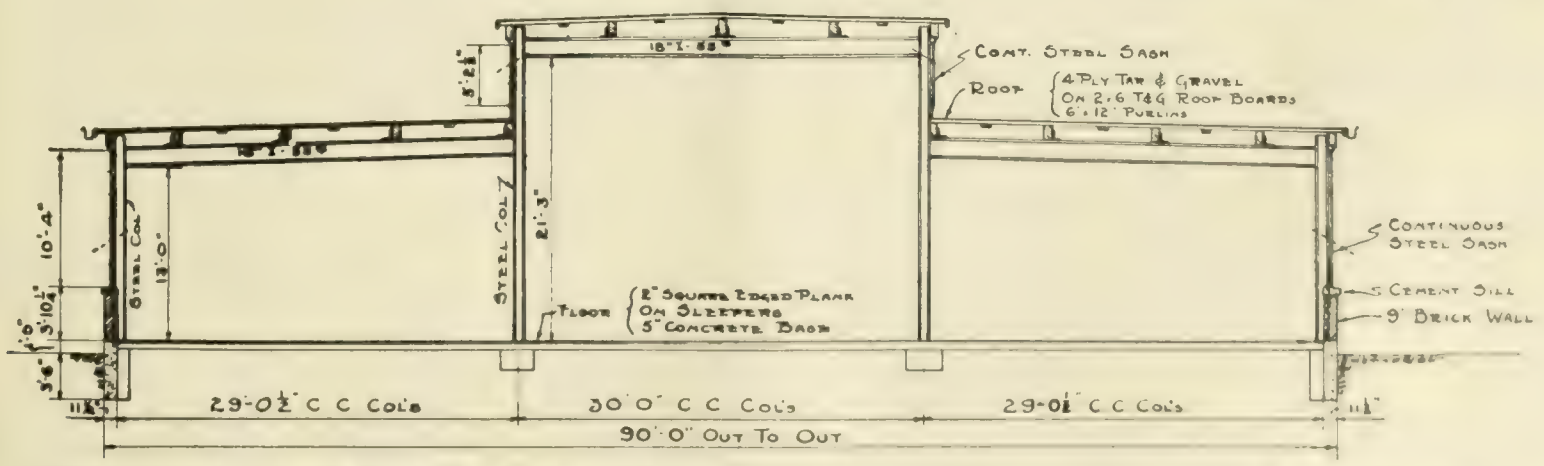
Follow these marching orders, and in years to come, when the peace of consecrated power that you have brought the world fills your own life with blessing and the hearts of your loved ones with a great joy and pride in the deeds you have wrought, you will be infinitely glad, thru life and perhaps thru eternity, because you were one of our boys—Over There with Pershing.

Interior of an Austin Standard No. 2 Factory-Building recently completed for the Cleveland Tractor Co., Cleveland, Ohio.

18,000 Square Feet in 26 Days —4 Days Ahead of Time

THE Cleveland Tractor Company moved into this building 26 working-days after date of order. The building was ordered October 11, 1917. The owner's acceptance is dated November 22. Notwithstanding 9 days of heavy rain, the building was ready 4 days ahead of time.

The building is an Austin Standard No. 2 30-day Factory-Building, 90 feet wide and, in this case, 200 feet long.



This was not a "rush" job. Austin Standard Buildings are ready in design and detail; basic costs are known and the essential materials are in stock ready for shipment.

Three standards are sold on guaranteed 30-working-day delivery; four standards on guaranteed 60-day delivery, and two standards (multiple story buildings) in longer time.

The Austin Company takes the entire responsibility from design to delivery, guaranteeing cost and time of completion.

NEWS OF EFFICIENCY

MONTHLY ARTICLE OF THE EFFICIENCY SOCIETY

The Big "Bit" of the Y. W. C. A.

The National Board of the Young Women's Christian Association has organized a War Work Council for the more effective assistance of the nation in the present hour of crisis. The members of the Council come from every section of the country and the scope of their work extends even to Russia. $1,000,000 is set aside for the support of volunteer helpers and the maintenance of cafetarias and social centers for the women of Europe who are in need of the assistance which the Y. W. C. A. can give them. $900,000 is to be expended in establishing hostess' houses at every training camp and cantonment in the United States. Thirty-two of these houses are already built or building. No hostess' house is ever erected except at the special request of the commandant of the camp, assuring the Y. W. C. A. that it is needed.

Nor are the women of America forgotten. Thousands of women and girls have been called to work for the Government in emergency factories at industries created by the war. Frequently these girls find no good place to eat or sleep in the mushroom industrial centers that have sprung up around the cantonments. To solve this housing problem the sum of $500,000 has been appropriated. Cafeterias will be built in this country as they are planned to be built in Russia. In one way and another the Y. W. C. A. expects to spend the whole of a $4,000,000 budget on war work by the first of next June and to make every penny of it count.

The Lafayette Association

One of the best conceived plans for organizing enlightenment about the war has been worked out by the war extension service of the University of North Carolina. The war information leaflets published by the university define with some detail the different methods available by educational institutions for instructing the public. One is the establishment of extension centers in the different parts of the state where courses may be given by qualified members of the university faculty on modern international politics under the auspices of a local director. Other suggested methods are more informal public lectures, correspondence courses with college credit, reading courses without credit, the preparation and publication of bibliographies relating to the war, the distribution of approved books to rural or small town libraries, the publication of pamphlets and articles by members of the university faculty, the preparation of a weekly university news letter telling of the patriotic work done in the state and its distribution to the press, and the preparation of debate subjects and outlines, patriotic programs and essay competition subjects for schools and private societies or community centers. Many of these things, perhaps all of them, are now being done by state universities in various parts of the country, but North Carolina none the less deserves credit for combining them in one comprehensive plan.

Among other interesting suggestions of the war extension service of the university there is one for the organization of state "Lafayette Associations" for the study of American history and the organization of local patriotic effort. The public schools, including alike students, parents and graduates, will form the framework around which these associations may be built. Besides the immediate task of war service, the associations are urged to foster community feeling by "the revival of folk customs, ballads and songs; a Harvest Home festival; a Shakspere festival; a pageant of county history at the school commencement; in some cases even dramatic representation of aspects of community life such as has been successfully carried out in certain communities in North Dakota."

How the Advertiser Protects the Buyer

In the early days of commerce the man who bought or sold had to make a study of two things, the value of commodities and the value of precious metal which then, as now, was the recognized medium of exchange. Money had to be weighed as carefully as coal must be weighed today and examined for impurities and adulterations as carefully as we must now test jewelry. What made the difference? One thing; a Governmental symbol stamped on the coin; in other words a trademark. Today only very suspicious people bite every coin they take in or make it ring on the counter and only a lunatic would carry the kitchen scales every time he went to the bank.

The trademark has done almost as much for some commodities as Government milling has done for gold and silver. As Secretary John Sullivan, of the Association of National Advertisers, recently put it: "A well-known trademark is an asset of priceless value for a good article, but it would be sure death for a bad one, for in that case it would be not a guarantee but a *warning* to the buyer. It would help him to identify the bad as well as the good; to avoid the one and choose the other. The greatest achievement of modern advertising is that for the first time in the history of the world's merchandizing it protects the buyer; it makes buying both easy and safe."

The Automobile Industry Mobilized

At a recent conference of the Automobile Industries Committee with army and navy officials, Chairman A. W. Copland, of the committee, pledged the men, material and equipment of 550 automobile plants and 1080 parts and accessories makers for the war requirements of the nation. Among the men enlisted in the national service is Henry Ford, erstwhile pacifist and always an organizer of efficient production. He agreed to stop the manufacture of pleasure cars and devote his plant to the production of tractors, ambulances, aircraft engines and other war necessities. It is estimated, to mention only one of many economies achieved by the patriotic action of Mr. Ford, that 200,000 tons of chrome vanadium steel will be released in a year for military purposes thru the closing of the plant to pleasure car manufacture. Within a short time after Mr. Ford's offer was accepted by the Government his plant was handling $300,000,000 worth of orders for airplane parts. Vice-President Klingensmith, of the Ford Motor Car Company, said that the output of the company could be increased to 3000 motor trucks a day, if the plant were wholly given over to truck construction.

Henry Ford himself has left the automobile for the ship. He joined the staff of experts of the Emergency Fleet Corporation where he now serves without pay. His specialty will be the providing of speeding up ideas and short cuts to rapid manufacture by introducing into shipbuilding the detailed division of labor which put the automobile within reach of the farmers' pocketbook.

What Is a Labor Shortage

For productive manufacture two things are necessary: labor and capital; or, since money is, after all, only a way of handling and exchanging labor and materials, let us rather say labor and natural resources. In respect to most of the staple commodities necessary to feed and clothe the people and, at the present time, to arm them and carry them to the front, the United States is abundantly supplied from the generous hand of nature. When we speak of a coal shortage we do not mean that the coal veins of the country have been worked out; we mean either that there are not enough miners to work them or that there is not the equipment ready to extract and transport the coal. When we ask why there is not enough machinery to get the coal and not enough rolling stock to carry it cheaply to the consumer we discover again that the machine parts factories, the railroad companies and the makers of railway supplies can find iron ore enough in America for their needs but they lack the labor necessary to get it and make it into standard equipment. If we reproach the farmer for his untilled acres and ask why he does not raise more wheat or live stock he reminds us, with a note of exasperation in his voice, that he can't get a good hired man for love or money. The shipping shortage, likewise, proves on examination to be a shortage of lumbermen, carpenters, engine builders and trained sailors.

But the population of the United States is more than 100,000,000; the aggregate population of all the nations at war with Germany is more than ten times that. If "labor" were a simple, uniform commodity that you could dip up by the bucketful wherever there was population all our difficulties of manufacture, food production and transportation would have been solved long ago. The President would simply have proclaimed a labor conscription and dumped the unemployed of one city onto the abandoned farms, sent the unemployed of another to the munitions factories or the coal mines, and recruited the railroads and the shipyards from the slums of a third center of surplus population. Why didn't he? Because if it takes six months to make a civilian into a moderately competent soldier it takes at least as long an apprenticeship to turn a tramp into a good farm hand or make a ditch digger into a skilled miner, and very much longer to educate an efficient naval architect, wireless operator or railroad manager. The so-called labor shortage, then, is not a shortage of labor quantity but of labor quality. When we say "not enough copper," "not enough milk," "not enough paper," let us *think* "not enough industrial education." The world will run short of wood or petroleum some day, perhaps, as the advocates of conservation warn us, but the one essential commodity of which we *now* feel the lack is trained intelligence.

Learn Paragon Shorthand in 7 Days

The complete course arranged for home study can now be purchased for only

$5.00

UNCLE SAM wants you the minute that you are ready to help.

Big business houses are looking everywhere for shorthand writers. Look in the "Want Ad" columns of any daily paper in the land and you will find that never before has there been such a demand for shorthand writers.

The Government is asking all newspapers to tell their readers that it needs shorthand writers to help win the war.

The New York Times says:

"A call has been issued for 500 stenographers in the gun division of the Ordnance Department in Washington."

The New York Evening Sun begins with these headlines:

"Tests begun for stenographers—5000 men and women needed at Washington."

You can learn the Paragon System of Shorthand in SEVEN DAYS. It is exactly what we represent it to be—an American invention successfully used for many years by thousands of shorthand writers. Paragon Shorthand writers are to be found in all parts of the world. In England, Continental Europe, Australia, New Zealand, Canada, South America, Canal Zone, China, Philippine Islands, and wherever English speaking people are to be found. It is being used in the simplest kind of work and in the most elaborate. Paragon Shorthand is being used in the offices of the largest firms and railroads in the land. It is being used in the service of the United States Government as well as in court and convention reporting.

Simple, Accurate, Easy to Read

Paragon Shorthand is simple, accurate and rapid, and what is most important of all, *easy to read* after it is written. Bear in mind it is nothing like the old fashioned systems that can be learned only after many weary months of hard study.

Ask any man or woman who has ever started to learn Paragon Shorthand—we have their names. They always finish strong. But we know that if you ask any stenographer who has only studied one of the old so-called "standard" systems, you will probably be told that it is utterly impossible to learn any system of shorthand in seven days.

Yet the fact remains, as any of the thousands of Paragon Shorthand writers will tell you, that they *did* learn it in seven days. And so can *you!*

The Speed of Paragon

With Paragon you can learn your shorthand in seven days—all of it. Then comes speed, easily acquired with practice. Many students testify that in two or three weeks they were able to write Paragon rapidly enough for all practical needs—many reporting from 100 to 125 words a minute.

Used in Government Service

"I learned Paragon Shorthand from the *home-study course*—the lessons alone—without any further aid whatever. At the end of a week I could write the system nicely. I am now using it in the Government service, Treasury Department, Washington, D. C., and am getting along O.K. On account of my efficiency as stenographer, my salary has been increased. I owe my rapid advancement to Paragon Shorthand."—E. C. ALLEY, Room 426 Winder Bldg., Washington, D. C.

In Court Reporting

"I have been the Official Court Reporter for the Ninth Judicial District of Louisiana for a number of years, using Paragon Shorthand exclusively. Some years ago I learned this system in seven lessons. With Paragon Shorthand I am able to do any kind of work with as great rapidity as the occasion may demand."—J. MARTIAN HAMLEY, Lake Providence, La.

In Public Schools

"As a result of competitive tests, Paragon Shorthand was unanimously adopted as the exclusive system for the Atlanta High Schools. The classes we have already graduated in Paragon are by far the best we have turned out during my twelve years' connection with the schools."—W. C. LOWE, Head of the Shorthand Departments, 18 Avery Drive, Atlanta, Ga.

Paragon is also being taught in the High Schools of Alton, Ill., Lafayette, Ind., Johnstown, Pa., and elsewhere.

In Big Corporations

"I am getting along fine with Paragon Shorthand. It is all you claim for it. It is easy to write, and as for speed—there's no limit."—JOHN WALLER, JR., Standard Oil Company, Sugar Creek, Mo.

By Business Men

"I am using Paragon Shorthand in making my notes in the daily routine of the work. It is of incalculable help in aiding me in making my own notes of private business matters relating to my work in auditing, and I wish I had taken it up long since."—JOHN F. CAHILL, Auditor, Florence Electric Light & Utilities Co., Florence, S. C.

Try This Lesson Now

Take the ordinary longhand letter *d* Eliminate everything but the long downstroke and there will remain / This is the Paragon symbol for D. It is always written **downward.**

From the longhand letter *e* rub out everything except the upper part—the circle—and you will have the Paragon E. o

Write this circle at the **beginning** of / and you will have Ed. /o

By letting the circle remain **open** it will be a **hook,** and this **hook** stands for **A.** Thus /o will be **Ad.** Add another **A** at the end, thus /o and you will have a girl's name, **Ada.**

From *o* eliminate the initial and final strokes and o will remain, which is the Paragon symbol for **O.**

For the **longhand** *m* , which is made of 7 strokes, you use this **one** horizontal stroke —

Therefore, —o would be **Me.**

Now continue the **E** across the **M,** so as to add **D**—thus —o and you will have **Med.** Now add the **large** circle for **O,** and you will have —o (medo), which is **Meadow,** with the silent **A** and **W** omitted.

You now have 5 of the characters. There are only 26 in all. Then you memorize 26 simple word-signs, 6 prefix abbreviations and one rule of contractions. That is all.

Our records show that in addition to the thousands of young men and women who need shorthand as a help in their business careers, other thousands—business men, professional men, students, clergymen and literary folk—would like to know Paragon Shorthand as a mere matter of convenience. Still others—fathers and mothers—would like to give their sons and daughters this wonderful advantage in order that they may be able to be self-supporting any time it may be necessary.

Many of these persons who have not a direct need for shorthand but merely want it as an instrument of efficiency and a daily time saver would buy the complete course of Paragon Shorthand at a popular selling price. Therefore, we have decided to make the price so low that everybody, not merely the favored few, can have Paragon Shorthand. We would rather sell 100,000 courses at $5.00 than 10,000 courses at $25.00.

Our New Price $5

This is exactly the same Course that has been taught for 15 years by the inventor—personally by mail—at a regular fee of $25 with separate examinations after each lesson. The author has now arranged his whole course in Seven Simple Lessons with which you can teach yourself at home—in seven evenings—with the Seven Lessons and the ingenious self-examination method devised by the author.

Think of it! For Five Dollars you can have a complete education in shorthand—a life-long help—not only for yourself, but for your wife, your children, or any other member of your family or some relative needing your help.

Send $5.00 and if after three days' examination you are not pleased with your investment we will gladly refund your money and pay the cost of mailing the course both ways.

We reserve the privilege of withdrawing this offer without notice.

PARAGON INSTITUTE HOME STUDY DEPARTMENT

119 West Fortieth Street, New York City

PARAGON INSTITUTE HOME STUDY DEPARTMENT, 119 West 40th Street, New York City

Enclosed find $5 for which you are to send the complete Paragon Shorthand Course postage prepaid. If not entirely satisfied I may return it within 3 days after its receipt and have my money refunded without question.

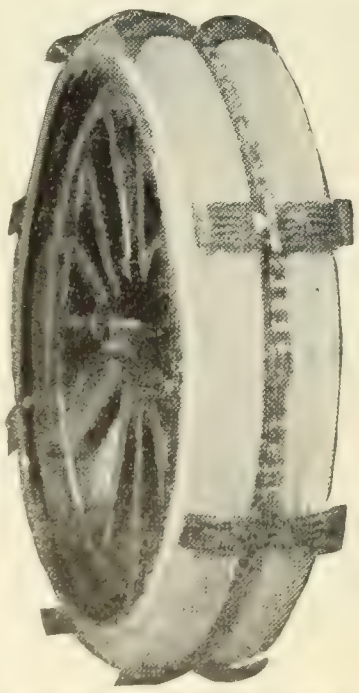
HOW TO DELIVER THE GOODS

BY CLARKSON LLOYD

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

HERE are two pictures. They are not posed or retouched pictures. They are simple snapshots taken at random by a news photographer in the course of a day's assignments. And you can see living pictures just like them in any city on any day when snow is on the ground.

A man prominent in the motor truck business told me recently that the hardest people to interest in trucks are they who have been brought up with horses and who cling to horses for *sentimental* reasons.



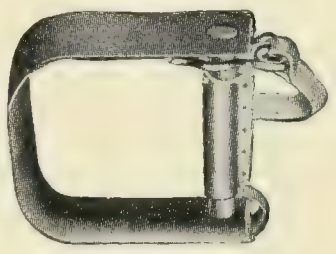
To me there is something very sentimental in the picture showing the horse reclining on the snow. The owner of this horse, who prefers letting the animal break its leg or wrench a few tendons to harboring a piece of machinery, must be sentimental almost to the point of being maudlin.

When there were no such things as motor trucks we had to use horses. And in the summer months, when the poor brutes keeled over from the heat, and in winter, when they slid around and got hurt, we could only feel sorry about it. There was no visible remedy. Goods had to be transported, horses had to transport them.

Today it is different. Horses are no longer essential. There is a truck for every hauling need. They range in carrying capacity from five hundred pounds up to seven and even ten tons. Their motive powers, gasoline, electricity and steam, make them adaptable to every conceivable kind of hauling problem—yes, even to the troublesome house-to-house delivery problem, necessitating innumerable starts and stops.

Quite aside from the sentimental or humanitarian aspect of the subject, you have the economic and efficiency side.

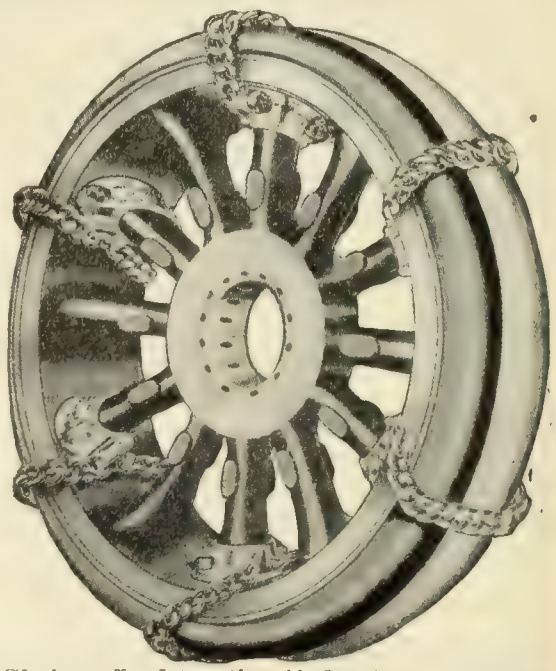
Have you ever watched a horse team pulling a big load on a slippery day? Its speed is usually in the neighborhood of four miles an hour — barring accidents. Which is not speed at all, but merely a degree of slowness. And it is seldom maintained steadily. Every so often one horse will begin to slip. Then it gets into a panic and keeps on slipping. And the driver is obliged to stop for a while, standing still while the horse regains its composure. For if he does not stop the horse will fall. And what's an hour more or less to a driver?



Equipt to drive thru snow

If you were to go into the office of the horse user it is quite likely that you would find it full of adding machines, visible typewriters, dictating machines, time clocks and other modern equipment. This apparent paradox springs from the strange—but common—truth that the last place the average man looks in for leaks is his shipping department.

I may be wrong, but I believe that an ounce of motorized efficiency in the delivery department is worth several hundredweight of pretended admiration for horseflesh.



At this time, it is of prime importance to get things done. Delays, which in normal periods might be of little importance, may today be the cause of serious trouble. Horse transportation systems are wasteful, of time, of money, of men, of labor—all things that should be conserved. Motor trucks are a war time economy which demand the serious consideration of every business man.

Illustrated on this page are those devices designed to keep trucks moving thru the thickest snow and slush. Tho somewhat different in design they are similar in principle in that they afford traction on surfaces which the average smooth-tread truck tire would not grip. I shall be glad to give you the addresses of the manufacturers on request.

A device that gives grip to a smooth-tread tire

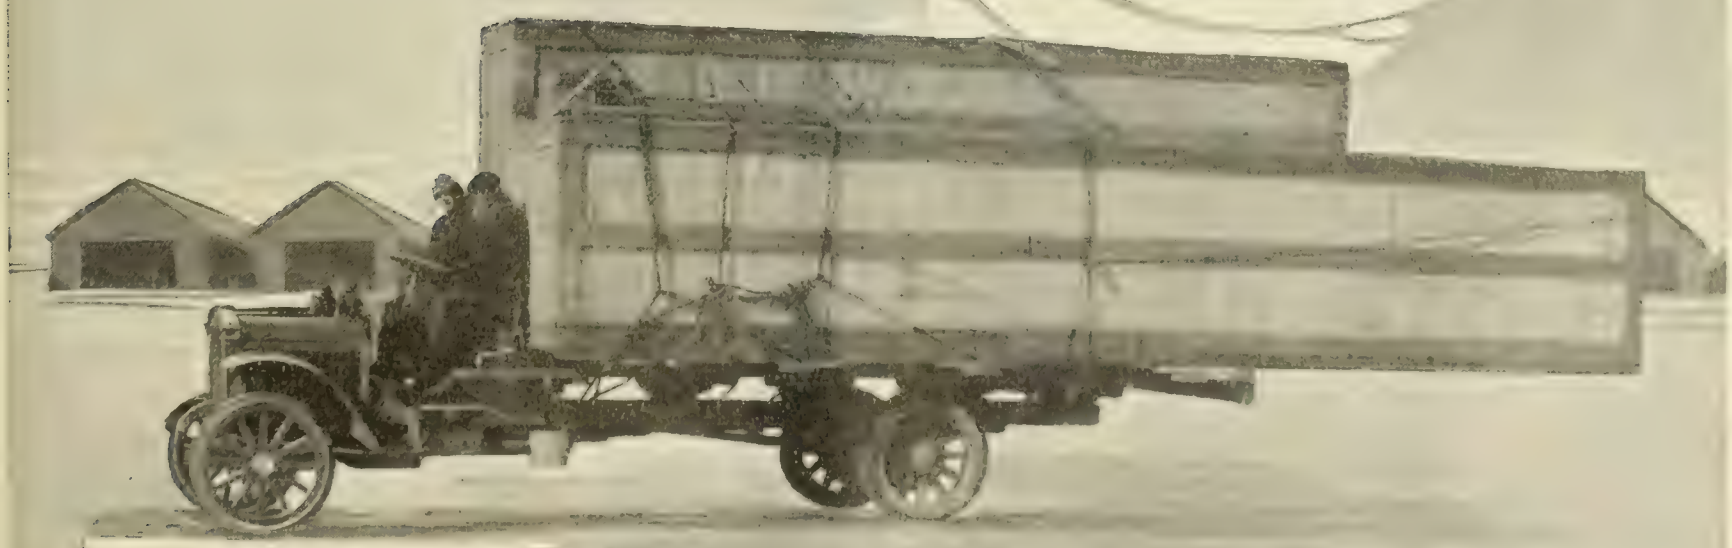
Most motor trucks are equipt with magneto ignition and, as you doubtless know, cranking an engine on the magneto on a cold day is rather arduous. This is because it is hard to turn over an engine by hand fast enough to make the magneto produce a spark hot enough to ignite low grade gas in a cold engine. There are two remedies. One—the obvious one—is to install a battery and coil for starting purposes. This gives easy starting, but adds a unit that demands attention. And unless a generator be added also—which is expensive—the battery, half the time, will be out of the car, being charged. The alternative is to equip the magneto with what is known as an impulse starter. This is absolutely mechanical. It simply revolves the magneto armature faster than its ordinary starting speed and furnishes a hot spark.

Chains afford traction if the tires won't grip

The Motor Truck—
First Aide to Aviation

In the aviation corps, a degree of dependability hitherto unthought of is essential.

Repair parts, fuel, labor must be mobilized with clock-like certainty. The lives of highly trained men and the most vital issues hinge upon each unit doing promptly and perfectly the duties placed upon it. Trucks must meet regular routine unfailingly and still be equal to emergency demands.



Federal 100% All-truck construction makes the Federal ideal for the most severe of field requirements. For eight years; Federals have demonstrated their stamina, day in and out under the hardest conditions.

Federals are built for one purpose only—the maximum of service. They stand for "Performance" wherever trucks are used.

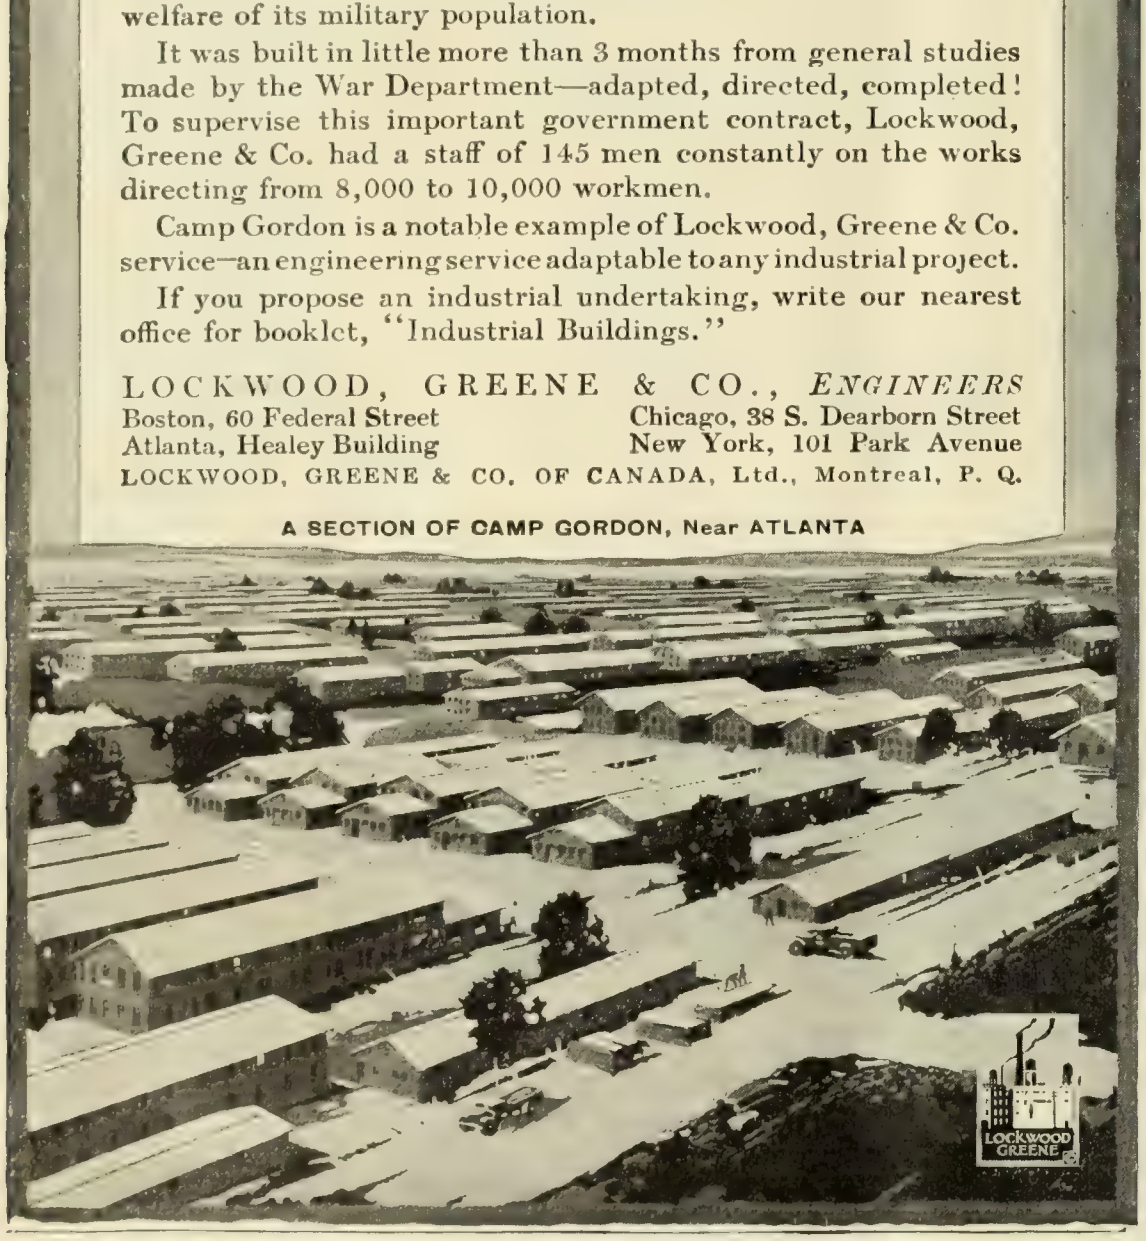
LOCKWOOD, GREENE & CO.
ENGINEERS

A FEW miles out from Atlanta is Camp Gordon, model war-city. This great cantonment, in which now dwells and drills a part of the nation's new army, is a marvel of engineering achievement. So vast is it that it takes 15 minutes for a fast train to pass by.

Camp Gordon consists of block after block of barracks, warehouses and other structures, including a base hospital of 28 buildings. It is thoroughly equipped in every way to insure the welfare of its military population.



It was built in little more than 3 months from general studies made by the War Department—adapted, directed, completed! To supervise this important government contract, Lockwood, Greene & Co. had a staff of 145 men constantly on the works directing from 8,000 to 10,000 workmen.

Camp Gordon is a notable example of Lockwood, Greene & Co. service—an engineering service adaptable to any industrial project.

If you propose an industrial undertaking, write our nearest office for booklet, "Industrial Buildings."

What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its **25th** year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send **15c** to show that you might like such a paper, and we will send the Pathfinder on probation **13** weeks. The 15c does not repay us, but we are glad to invest in new friends. **The Pathfinder, Box 39 , Washington, D. C.**

Remarkable Remarks

ELSIE JANIS—I am by nature enthusiastic.

ED HOWE—I do not love my neighbor as myself.

FRANCISCO VILLA—I will be magnanimous in victory.

GEORGE M. COHAN—Far be it from me to slam Broadway.

MR. BALFOUR—No sane man will try to democratize Germany.

MRS. JACK LONDON—God bless all women of the British Isles.

ADMIRAL VON TIRPITZ—Our military security lies in Belgium.

GENERAL SMUTS—Keep your eye on the future in South Africa.

W. L. BROWNELL—The man who thinks he can, is right about it.

EMPEROR WILLIAM—We are fighting for faithfulness, justice, and truth.

IRVIN S. COBB—Switch engines are notorious for keeping early hours.

W. H. TAFT—How many men would care to appear in vivid pink pajamas?

JOHN D. ROCKFELLER, JR.—One needs no letters of introduction to reach God.

CARDINAL GIBBONS—I have a firm and abiding faith in the perpetuity of the nations.

PRESTON M. NOLAN—A live bulldog can readily be distinguished from a dead one by twisting his tail.

DR. B. WALLACE HAMILTON—Never use a sweet or highly flavored tooth paste or dentifrice for children.

EX-AMBASSADOR GERARD—The Kaiser told me he would stand "no nonsense from America after this war."

DAVID LLOYD GEORGE—The war has been prolonged by particularism; it will be shortened by solidarity.

DR. H. J. HAISTLETON—Euthanasia, by God-given drugs, relieves the pain and takes away the horror of death.

HERBERT N. CASSON—No sensible, normal person has ever yet analyzed himself for the benefit of the human race.

RABINDRANATH TAGORE—Let the lives and the hearts of the sons and the daughters of my country be one, my God.

EX-PREMIER PAINLEVÉ—A single front, a single army, a single nation—that is the program requisite for future victory.

DEPUTY ALBERT FERRY—There is only one means of existence, that is to hold out until the great American army can arrive.

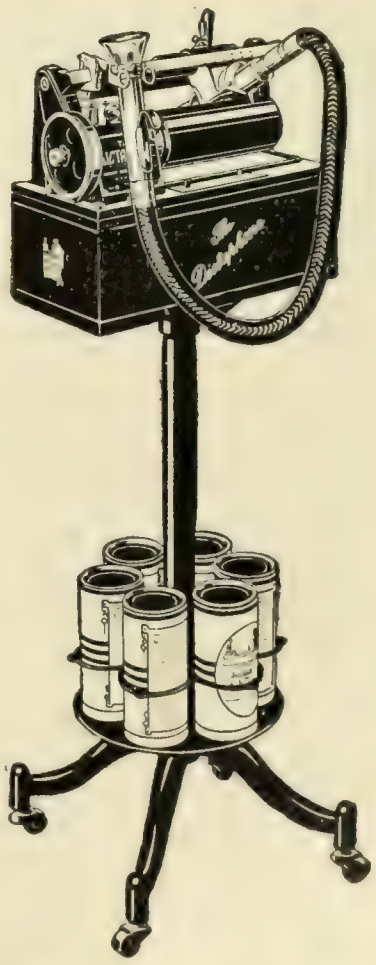
LOVAT FRASER—Each autumn Germany saves herself by devouring a kingdom. Belgium in 1914, Serbia in 1915, Rumania in 1916.

PROF. J. MCKEEN CATTELL—In my laboratory we have found that one-fourth of the negroes surpass in intelligence the average of whites.

JOHN M. OSTALSON—Remember that while the baby is certainly going to be an added expense, it may also be a tremendous stimulus.

WOODROW WILSON—There are so few good people in Washington who know anything about what the people in the United States are thinking.

GRACE LEE DAVIDSON—Any ordinary electric light bulb may be transformed into a small pumpkin face by the use of an attractive paper shade.



LUKE MCLUKE—Too many old men put in their last years buying stained glass windows for churches when they ought to be learning to shovel coal.

CHANCELLOR J. H. KIRKLAND—German sympathizers had three years to get out of the United States. Those who have elected to remain must now keep quiet.

PRESIDENT LOREE of the D. & H. R. R.—There is more seating capacity in the country's passenger automobiles than are on all the railroads and street car lines combined.

When Four Men Want to Dictate To One Stenographer

"A" was boss, so he got her first. That made it bad for B because he had an especially important letter to get out right away. C was even worse off, because, although he was promised the stenographer at 11 o'clock, he didn't get her until after lunch. Then A thought of some more letters to write, so he butted in.

With The Dictaphone on each important desk, A, B, C, and D all dictate at the same time. No need of A's butting in. He dictates the letters he thinks of later, at the time he thinks of them. And one girl easily takes care of the work of all four.

The Dictaphone is ideal in a small office. In a large office the economies affected by The Dictaphone run into thousands of dollars a year.

You will come to The Dictaphone as thousands of other business men in your vicinity already have done. Notify The Dictaphone any time you want to be shown—in your office, on your work.

A Red Cross Christmas

TO THOSE WHO FEEL POOR

I write as your brother.

We are a large family.

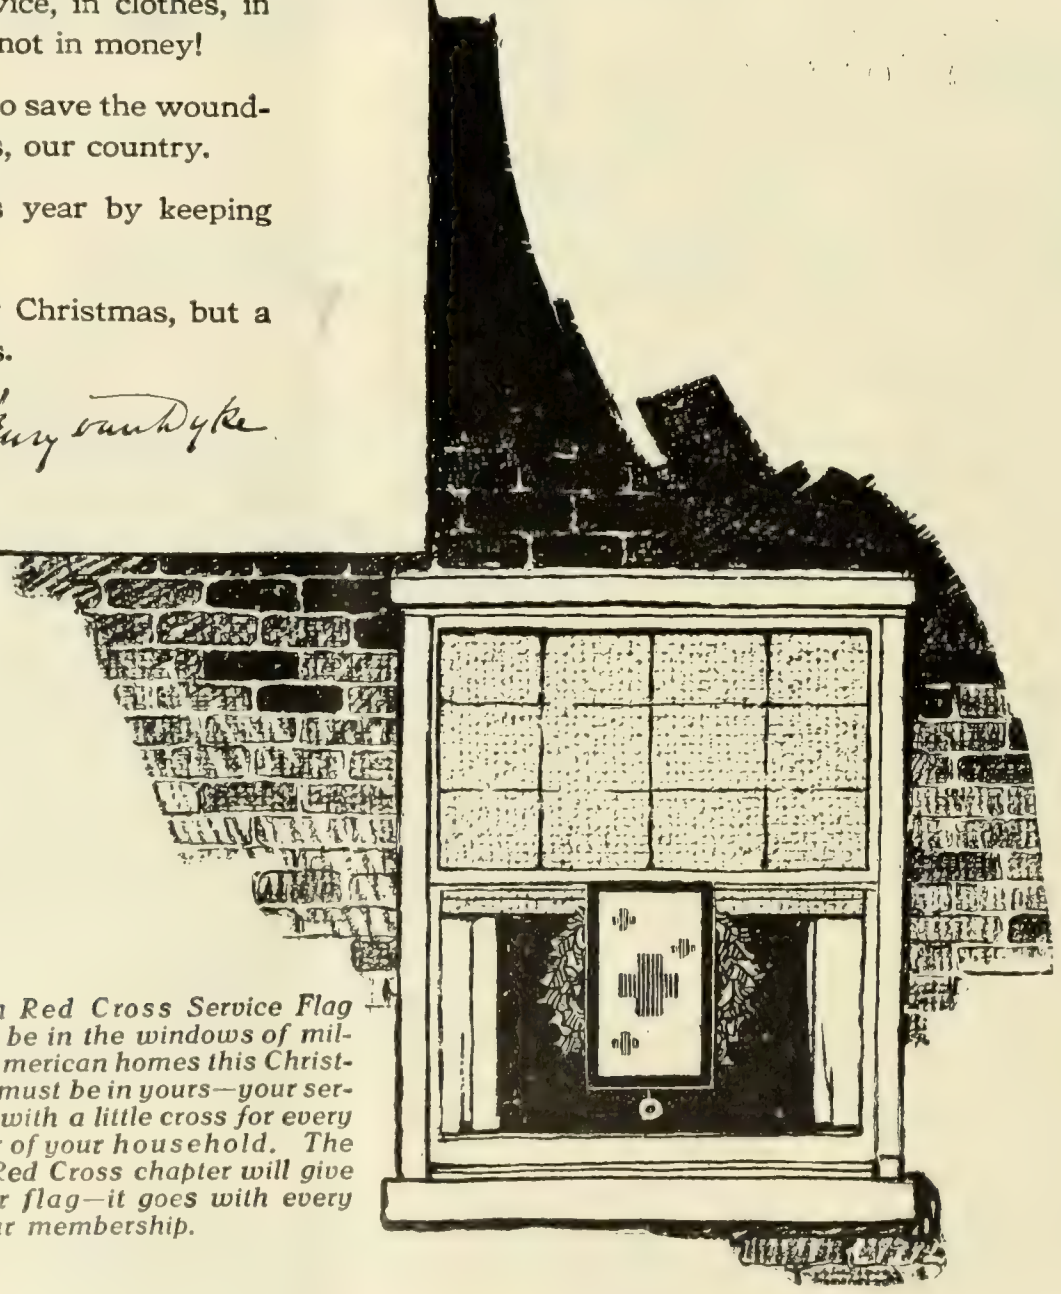
This world-war, made in Germany, against which we are fighting, has sent our incomes down and our expenses up.

The pinch hurts, but it is not going to kill us.

We still have enough and something to spare.

Though we feel poor, don't let us be impoverished by selfish fear!

Let us save in food, in service, in clothes, in luxuries and joy-rides—but not in money!



Let us use that by giving it to save the wounded, the suffering, our friends, our country.

Let us keep Christmas this year by keeping up the Red Cross.

Then it will not be a poor Christmas, but a rich Christmas to our hearts.

Henry van Dyke

JOIN

Here is a Red Cross Service Flag that will be in the windows of millions of American homes this Christmas. It must be in yours—your service flag with a little cross for every member of your household. The nearest Red Cross chapter will give you your flag—it goes with every one dollar membership.

TEN MILLION NEW

the RED CROSS

A Service Flag for every Family to make this a RED CROSS Christmas of Mercy

ON this, our country's first Christmas in the most terrible of all wars, there should be a Red Cross Service Flag in millions—fifteen millions—of homes at least.

When your membership dollar is sent on its errand of mercy, a work of relief, which is the noblest thing in the world today, is aided.

Your Red Cross does not ask you at this time for large contributions.

It asks you to become part of it. *Your* Red Cross asks you to be one of ten million more Americans to give one dollar toward world relief.

The merest outline of Red Cross work could fill this whole magazine—go to your local Red Cross chapter—have your rightful share of service. The Christmas spirit *is* the Red Cross spirit. Let a greater Red Cross be America's Christmas gift to our boys and our Allies.

What *is* Your American Red Cross?

An all American, largely volunteer organization devoted to practical service to suffering mankind—in times of peace as in times of war.

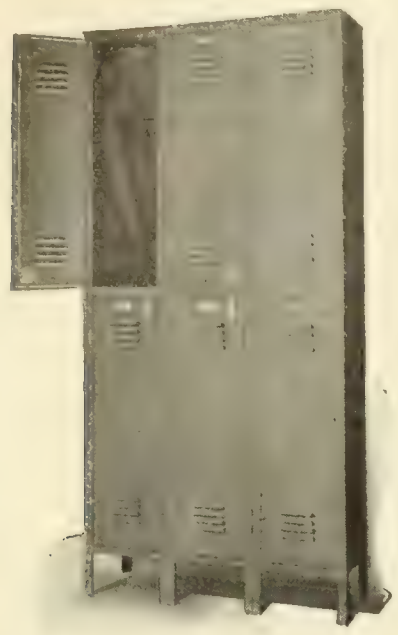
Congress authorizes it.

President Wilson heads it.

The War Department audits its accounts.

Pershing in France approves it.

It is working for *your* Army—*your* Navy—*your* Allies.



It is working for you.

Join the Red Cross now—start your $1 on its errand of mercy.
Be a member—it is your right.

MEMBERS BY XMAS

The Publishers of The Independent have donated this space to the American Red Cross in the belief that its readers will heartily respond.

DURAND
Steel Lockers

TYPE L. D.

BEFORE you buy lockers investigate Durand Steel Lockers. Their reputation is a good guide in purchasing; their superiority is a lasting satisfaction to their purchaser.

Durand Steel Lockers are fire-proof, practically indestructible, sanitary and convenient. They are adapted for offices, factories, schools, clubs, gymnasia and wherever lockers are used.

Write today for illustrated catalogue,

We are also manufacturers of steel shelving, steel bins and general steel factory equipment.

Whatever your job you can make this big money. Write for the Famous Duratex Guaranteed Goods proposition and our Handy Pocket Outfit Furnished Free. It tells the whole story. Experience not necessary. No canvassing, no deliveries; just orders in the office every day. Liberal cash payment for each order. An Hour in the Evening, 10 Minutes at Noon can make you $50 extra. Your spare time is worth $50 a week to you. Write for it and full particulars at wholesale. Write today.

GOODELL & COMPANY, Duratex Bldg., New York

Mr. Purinton's War Service Question Box

Prof. F. J. M., Indiana. "What can I do? Am teaching high school during winter months, and in summer working as employee and supervisor on a farm of 120 acres. Have college diploma, but cannot decide what to do."

Why not volunteer to help train the proposed army of 2,000,000 boys in the U. S. Boys' Reserve as auxiliary farmers? A goodly number of these lads from twelve to nineteen years of age live near you—some are in your classes. Write the U. S. Department of Labor, Washington, D. C., for suggestions along this line. You could start a class in patriotic farm and garden work, teach your boys theory and preparation in winter, then take a lot of them with you to the farm in summer, or scatter them on various farms nearby. You could evolve a system of locating, enlisting and utilizing all the vacant backyards and empty plots in your township, thus rendering waste land productive and idle boys useful at the same time. Ask advice from U. S. Department of Agriculture at Washington; from your State Agricultural College; and from editors of national farm journals.

Mr. J. B. B., Illinois. "Have had many years' experience in producing food crops, but want to be more efficient in the war crisis. (a) Where shall I obtain information on best food crops for war usage? (b) Can I purchase an individual plant for drying *vegetables* by the new process recently described in *Scientific American?* (c) How can I learn about California and Oregon grant land lately released by Southern Pacific Railroad for Government homesteads?"

(a) Write National Emergency Food Garden Commission, Maryland Building, Washington, D. C.; also Herbert C. Hoover, Washington; also U. S. Department of Agriculture; also Agricultural Department of your State University.

(b) Ask publishers of *Scientific American*, 233 Broadway, New York; and consult addresses under (a). Investigate the "Granger" Evaporator, from Grange Sales Association, Lafayette Building, Philadelphia.

(c) Write Secretary Franklin K. Lane, Interior Department, Washington, D. C. Apply also to Southern Pacific Company, 165 Broadway, New York.

Miss R. M. O., Ohio. "As a director of several woman's service organizations, I am asked many questions I cannot answer. (a) Does or will the U. S. Government need all the hospital supplies now being made? (b) Cannot the Government furnish its own hospital supplies? (c) Can said supplies be given to the Government in any other way than thru the Red Cross? (d) Will the Government or American Red Cross furnish raw materials for women to make up? (e) Why are the Government and its soldiers being made objects of charity?"

(a) Probably more than are being made. If the war lasts three years (time figured by military experts), we shall have to *increase* our present quota of hospital supplies, to back up, and bind up, all our wounded soldiers—and in "our" we include the French, English, Russian and Italian soldiers, they are all ours now.

(b) No. The cost to the Government of war items, such as food, clothing, arms, ammunition, equipment, stores and supplies, was about $42,000,000 in 1915. The cost of these items to the Government in 1917 will be about $1,680,000,000. If your *household* expenses were this year forty times what they were in 1915, how much money would *you* have left for doctor's bills?

(c) Inquire of any large hospital near you, or of Army Department, also Navy Department, Washington.

(d) Ask American Red Cross, Washington, D. C.

(e) The "objects of charity" are those of us who can't go and fight! Millions of men are facing a horrible death with a smile, that life for us may be sweet and safe. All the money we have would not begin to pay back our debt to our soldier boys.

Prof. A. S. B., South Dakota. "For several years I have specialized in the history of Latin American countries and their relations to the United States. I read French and speak Spanish. Am interested in consular service, want to prepare myself for it later, tho now exempt according to the present bill. Can you give me any information?"

Apply to the Chief of the Consular Bureau, Herbert C. Hengstler, Washington, D. C. You would probably secure valuable data from the Pan-American Union, Washington, D. C. (address inquiry to the Director-General); also from the Pan-American Society of the United States, whose Secretary is Harry Erwin Bard, 15 Broad street, New York.

You could largely increase your possibilities for usefulness by studying now a mail course in Foreign Trade, such for example as the one given by the Business Training Corporation, 66 Cameron Building, New York. Write for particulars. After the war, the man who knows international trade principles may become an especially valuable citizen.

A Minister from Nebraska. "I am a college graduate and post graduate, with experience on the lecture platform, and in city Y. M. C. A. work. Often give patriotic addresses, which have been well received by the press, and by school and church leaders. How can I best serve my country?"

Preach a war sermon once a month till the war is over; with your text from literature of the Department of Agriculture, the Department of Labor, the different national leagues of service; and your aim to get all your hearers to go home and do some one thing to help win the war. Turn your midweek prayer meeting, once a month, into a war service experience meeting, where members can tell of their patriotic work—methods, incidents, objects, results. Prepare a national directory of defense, relief and economy measures and organizations; try to have all church members engage in some regular kind of war activity. Let all know of The Independent War Service Bureau, and our desire to help them help their community and country. Watch metropolitan newspapers for inspiring accounts of war labor, generosity, sacrifice; read clippings to congregation every Sunday.

Mr. J. A. B., Minnesota. "I have read your Independent articles with great interest, but am sorry to say that I have missed some of them. Will these articles be published in book form? How can I obtain the numbers I have missed?"

Write The Independent for a complete list of my efficiency articles, with dates of publication. Select the numbers you want, mail ten cents for each to The Independent—or twenty-five cents if the number is more than six months old.

But you would better consult first my recent books, "Efficient Living" and "The Triumph of the Man Who Acts." These include most of The Independent articles that appeared prior to November, 1916. Books may be had, price $1.45 each, postpaid, from The Independent.

Mr. J. A. R., New Hampshire. "I am a young college student, looking for a life work. Modern farming appeals to me with greatest force. Please recommend a list of books particularly on farm efficiency and wholesale truck farming, according to the new business principles in agriculture."

You would be interested in the "Cyclopedia of Horticulture" (Macmillan); also in the farmers' bulletins and other agricultural publications of the U. S. Department of Agriculture, Washington, D. C.; also in the text-books employed as a basis for educating farmers at the agricultural extension department of your State University, and other practical institutions such as Cornell University, Ithaca, New York (send for catalogs).

We would advise you, instead of buying many books now, to subscribe for two or three farm journals and keep a scrapbook or file of clippings on all new ideas, methods or devices. A few prominent journals: *The Country Gentleman*, Curtis Publishing Company, Philadelphia; *The Farming Business*, North Dearborn street, Chicago; *System on the Farm*, A. W. Shaw Company, Wabash and Madison, Chicago; *Rural New Yorker*, 333 West Thirtieth street, New York; *Farm News*, 225 Fifth avenue, New York; *Agricultural Digest*, 2 West Forty-fifth street, New York.

Words of the Week

CAMION—The French name for an army baggage truck.

JUNKERTUM—Rule by a class of land owning nobles.

JUNKER (Yoonker)—A member of the German aristocracy.

NO MAN'S LAND—The region between hostile lines of trenches exposed to the fire of both sides.

SYNDICALISM—Syndicalism is a French term for revolutionary trades unionism. The American I. W. W. correspond closely to the French syndicalists.

MESOPOTAMIA—The region of the Tigris and Euphrates valleys east of the Arabian deserts. In ancient times this was the home of the civilizations of Chaldea and Babylon.

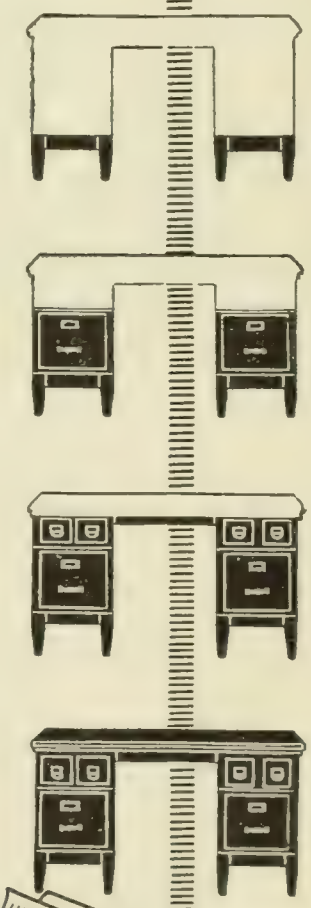
CONSTITUTIONAL DEMOCRATS—A Russian political party in favor of carrying on the war and establishing a republican form of government with security for private property. They are opposed to the Bolsheviki and even to the more moderate Socialism represented by Kerensky.

PAINLEVÉ—Paul Painlevé, who was French Premier until the recent elevation of Clémenceau to that position, first attained fame as a professor of mathematics. Early in the war he was made Minister of Inventions and later Minister of War. He followed Premier Ribot and remained chief of the French Government for about two months.

TANK—Nickname for the armored automobile which is used to break down entrenchments during an attack. The tanks are not carried on wheels but on "caterpillar" tractors. The idea for the tank was borrowed from types of agricultural machinery used in America. Tanks were first employed by the British at the battle of the Somme.

BARRAGE—When soldiers advance to an attack it is now the custom to protect them by firing artillery over their heads at the enemy trenches which have not yet been taken. The obvious purpose of this "barrage," or protective artillery fire, is to give the enemy something to think about besides shooting the advancing infantry. A good barrage will often knock the opposing trenches to pieces and reduce the task of the infantry to rounding up prisoners.

I. W. W.—The "I. W. W." is the common abbreviation for the labor organization called the Industrial Workers of the World. It differs from the "regular" trades unions of the American Federation of Labor in two respects: it is organized by "industries" and not by "crafts" (that is to say, all grades of workmen engaged in mining or in cloth manufacture are in the same organization without distinction), and it aims not to improve the position of the workingman in the present industrial system but to overthrow "capitalism" altogether.



DR. JAMESON—On November 26, 1917, Sir Leander Starr Jameson died in London. He won his reputation as an associate of Cecil Rhodes in South Africa. Altho a physician by profession, he led a victorious army against African tribesmen who were raiding European settlements in Rhodesia, and later, in 1895, made an unwise attempt to overturn the Boer Government in the Transvaal by force of arms. As the leader of this so-called "Jameson raid" he was arrested by the Dutch, turned over to the English authorities and sentenced to prison. After the Boer War he took an active part in South African politics and at one time was Premier of Cape Colony.

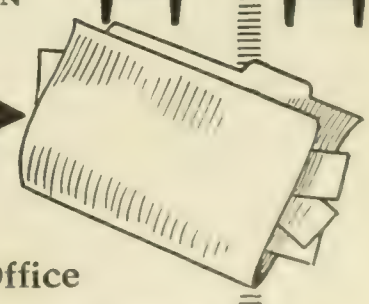
The DESK with BRAINS

Built by yourself according to your own ideas.

Thousands of combinations are possible. We carry in stock all standard size sections for every known office record. This enables you to build a desk according to your individual requirements—a desk that increases efficiency and adds pleasure to your working hours.

The Desk is Different from the Ordinary Stereotyped Box-Drawer Kind

HOW often have you said to yourself, "I would like a desk built according to my own ideas. I want to make the space beneath my desk top work for me." Here is the "Desks with Brains" which enables you to build a desk according to your own ideas of what your personal desk should be. Do not be satisfied with the ordinary stereotyped style of desk. Have a desk of your own, and built according to your individual requirements.



Regardless of whether or not you are now contemplating the buying of a desk, we urge you to at once write for our literature and building blocks. We want you to find out exactly how desirable you can make a desk. We want you to try out these building blocks and on paper build your own desk.

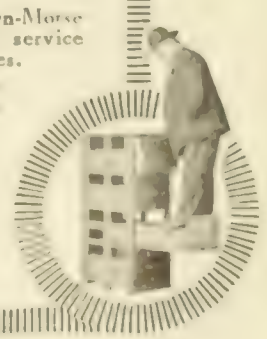
After you have built a desk on paper, compare it to the one you now use. You will at once recognize the increased efficiency the new desk offers you. You will no longer be satisfied with the old type inefficient desk when you can get this "Desk with Brains" built according to your own ideas and for your individual use.

Write at once for the "Desk with Brains" building blocks. They are free and will be mailed on request.

BROWNE-MORSE COMPANY
11-35 McKinney Ave. MUSKEGON, MICHIGAN

Write to-day for these Desk-With-Brains building blocks. They are free.

Browne-Morse Filing Equipment For Every Office



In the same manner in which the "Desk with Brains" is far ahead of any other desk, so our filing equipment incorporates the latest and best ideas. It makes for 100 per cent efficiency in filing. It combines quality, expert workmanship and durability.

No matter what your filing requirements are Brown-Morse filing equipment will fill every demand and give you service that cannot be surpassed by any other filing appliances.

The Browne-Morse line includes everything that is required in an office for filing, and we urge you to go to the Browne-Morse dealer for your requirements.

On request we will mail you free of charge, the complete catalogue of Browne-Morse filing equipment and filing supplies.

PRESIDENT WILSON'S MESSAGE TO CONGRESS

(*Continued from page 509*)

interpretations to what I took the liberty of saying to the Senate in January. Our entrance into the war has not altered our attitude toward the settlement that must come when it is over. When I said in January that the nations of the world were entitled not only to free pathways upon the sea but also to assured and unmolested access to those pathways I was thinking, and I am thinking now, not of the smaller and weaker nations alone, which need our countenance and support, but also of the great and powerful nations, and of our present enemies as well as our present associates in the war. I was thinking, and am thinking now, of Austria herself, among the rest, as well as of Serbia and of Poland. Justice and equality of rights can be had only at a great price. We are seeking permanent, not temporary, foundations for the peace of the world, and must seek them candidly and fearlessly. As always, the right will prove to be the expedient.

What shall we do, then, to push this great war of freedom and justice to its righteous conclusion? We must clear away with a thoro hand all impediments to success, and we must make every adjustment of law that will facilitate the full and free use of our whole capacity and force as a fighting unit.

One very embarrassing obstacle that stands in our way is that we are at war with Germany, but not with her allies. *I therefore very earnestly recommend that the Congress immediately declare the United States in a state of war with Austria-Hungary.* Does it seem strange to you that this should be the conclusion of the argument I have just addrest to you? It is not. It is in fact the inevitable logic of what I have said. Austria-Hungary is for the time being not her own mistress, but simply the vassal of the German Government. We must face the facts as they are and act upon them without sentiment in this stern business.

The Government of Austria-Hungary is not acting upon its own initiative or in response to the wishes and feelings of its own peoples, but as the instrument of another nation. We must meet its force with our own and regard the Central Powers as but one. The war can be successfully conducted in no other way. The same logic would lead also to a declaration of war against Turkey and Bulgaria. They also are the tools of Germany. But they are mere tools and do not yet stand in the direct path of our necessary action. We shall go wherever the necessities of this war carry us, but it seems to me that we should go only where immediate and practical considerations lead us and not heed any others.

The financial and military measures which must be adopted will suggest themselves as the war and its undertakings develop, but I will take the liberty of proposing to you certain other acts of legislation which seem to me to be needed for the support of the war and for the release of our whole force and energy.

It will be necessary to extend in certain particulars the legislation of the last session with regard to alien enemies; and also necessary, I believe, to create a very definite and particular control over the entrance and departure of all persons into and from the United States.

Legislation should be enacted defining as a criminal offense every willful violation of the Presidential proclamations relating to enemy aliens promulgated under Section 4067 of the Revised Statutes and providing appropriate punishment; and women as well as men should be included under the terms of the acts placing restraints upon alien enemies. It is likely that as time goes on many alien enemies will be willing to be fed and housed at the expense of the Government in the detention camps, and it would be the purpose of the legislation I have suggested to confine offenders among them in penitentiaries and other similar institutions where they could be made to work as other criminals do.

Recent experience has convinced me that the Congress must go further in authorizing the Government to set limits to prices. The law of supply and demand, I am sorry to say, has been replaced by the law of unrestrained selfishness. While we have eliminated profiteering in several branches of industry it still runs impudently rampant in others. The farmers, for example, complain with a great deal of justice that, while the regulation of food prices restricts their incomes, no restraints are placed upon the prices of most of the things they must themselves purchase; and similar inequities obtain on all sides.

It is imperatively necessary that the consideration of the full use of the water power of the country and also the consideration of the systematic and yet economical development of such of the natural resources of the country as are still under the control of the Federal Government should be resumed and affirmatively and constructively dealt with at the earliest possible moment. The pressing need of such legislation is daily becoming more obvious.

The legislation proposed at the last session with regard to regulated combinations among our exporters, in order to provide for our foreign trade a more effective organization and method of coöperation, ought by all means to be completed at this session.

And I beg that the members of the House of Representatives will permit me to express the opinion that it will be impossible to deal in any way but a very wasteful and extravagant fashion with the enormous appropriations of the public moneys which must continue to be made, if the war is to be properly sustained, unless the House will consent to return to its former practise of initiating and preparing all appropriation bills thru a single committee, in order that responsibility may be centered, expenditures standardized and made uniform, and waste and duplication as much as possible avoided.

Additional legislation may also become necessary before the present Congress adjourns in order to effect the most efficient coördination and operation of the railway and other transportation systems of the country; but to that I shall, if circumstances should demand, call the attention of Congress upon another occasion.

If I have overlooked anything that ought to be done for the more effective conduct of the war, your own counsels will supply the omission. What I am perfectly clear about is that in the present session of the Congress our whole attention and energy should be concentrated on the vigorous and rapid and successful prosecution of the great task of winning the war.

We can do this with all the greater zeal and enthusiasm because we know that for us this is a war of high principle, debased by no selfish ambition of conquest or spoliation; because we know, and all the world

knows, that we have been forced into it to save the very institutions we live under from corruption and destruction. The purposes of the Central Powers strike straight at the very heart of everything we believe in; their methods of warfare outrage every principle of humanity and of knightly honor; their intrigue has corrupted the very thought and spirit of many of our people; their sinister and secret diplomacy has sought to take our very territory away from us and disrupt the union of the states. Our safety would be at an end, our honor forever sullied and brought into contempt were we to permit their triumph. They are striking at the very existence of democracy and liberty.

It is because it is for us a war of high, disinterested purpose, in which all the free people of the world are banded together for the vindication of right, a war for the preservation of our nation and of all that it has held dear of principle and of purpose, that we feel ourselves doubly constrained to propose for its outcome only that which is righteous and of irreproachable intention, for our foes as well as for our friends.

The cause being just and holy, the settlement must be of like motive and quality. For this we can fight, but for nothing less noble or less worthy of our traditions. For this cause we entered the war and for this cause will we battle until the last gun is fired.

I have spoken plainly because this seems to me the time when it is most necessary to speak plainly, in order that all the world may know that even in the heat and ardor of the struggle and when our whole thought is of carrying the war thru to its end we have not forgotten any ideal or principle for which the name of America has been held in honor among the nations and for which it has been our glory to contend in the great generations that went before us.

A supreme moment of history has come. The eyes of the people have been opened and they see. The hand of God is laid upon the nations. He will show them favor, I devoutly believe, only if they rise to the clear hights of His own justice and mercy.

The Colors of War

IT was in an evacuation hospital that we saw the pyjamas that they had requested from us. The hospital is in enormous tents with wooden platforms running along between them. A sanitary train draws up to these and takes the wounded away as soon as they are able to travel.

That night there was a concert. The tent was gaily decorated with green garlands and branches. A small stage had been erected at one end. We went early to see the wounded brought in.

In they came, three rows of stretchers, and such color! Clad in our gay pink and blue pyjamas with lots of our bright-colored pillows around them to make them more comfortable. We wished that the women who had made those pyjamas could have seen the delight of the soldiers over them. They begged for the pink ones. They are the favorites, because they are gayer and more cheerful.

"Pink looks well on me, doesn't it?" said one, as he stroked the sleeves of his jacket.

There were over seven hundred men in that tent. During the pauses of the music we could hear the booming of the guns but a few miles away. And we were so thankful that into that grimness we could bring some color—some cheer.

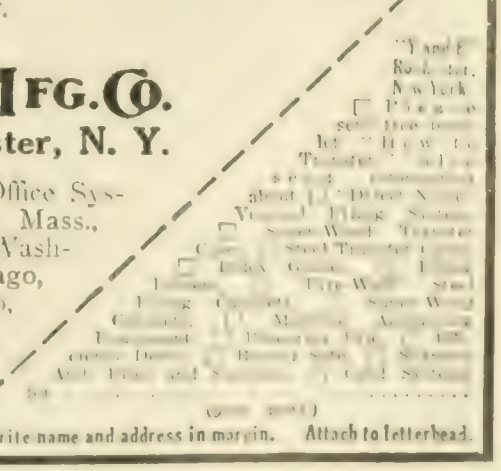
You can't make enough pyjamas! And do make them gay!

This is the newest and most complete and dependable set of directions on how to transfer papers and records. Get a copy and read it yourself; then hand it to your file clerk. It shows, step by step, how to do the work and then how to perfect the filing systems for next year. Free upon request. Check coupon.

Get the "Y and E" Booklet, "How to Transfer the File"

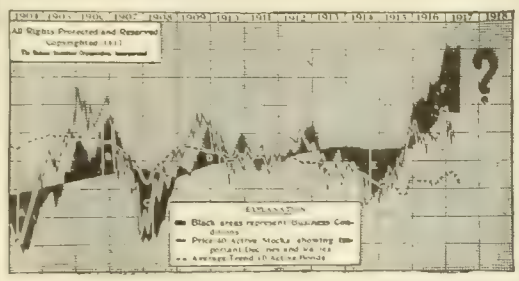
CLEAN out your files early in the year, every year; and store all the old records in *"Y and E" Transfer Cases*. This not only separates your records into yearly periods and gets them out of the way but makes them at the same time *quickly accessible* and well protected.

"Y and E" REG. U.S. PAT. OFF.
Transfer Cases
File Folders, etc.



We carry a complete line of the finest Transfer Cases (Steel, Wood and Juteboard), Folders, Guides, etc., for all sizes and kinds of files.

After you have made the transfer, you can save money and confusion for next year by installing The "Direct Name" Vertical Filing System. This is the system that 70,000 American concerns have now installed—the *one best* system of vertical filing, which overcomes all the five cardinal difficulties with ordinary filing systems: (1) time lost in filing, (2) lack of an accuracy check, (3) executives' and clerks' time lost in finding, (4) confusion at transfer time, (5) expense in keeping up the system.



Mail coupon for the booklet "How to Transfer," indicating any of our 4,000 Filing Devices and Office Systems in which you may be interested. Or inquire at the "Y and E" store in your city.

WALTER G. HENDERSON, Treasurer.

IS RUSSIA PLAYING GERMANY'S GAME?

(*Continued from page 507*)

of external danger. They were powerless to help, largely as a result of the irresponsible acts of demagogs. Yet the experience was proving valuable for these same Intellectuals. They will come into their own, by showing that they are needed and can help; they will be more genuine and less doctrinaire in their leadership.

The demagogs — the Bolsheviki — were most powerful. What they talked sounded most promising—in fact they promised anything and everything to everybody "of the people." Also much of what they said was true, and it was difficult to "disarm" them. Prince Lvov, and later Kerensky, would not use brutal force to suppress them. One had to let them hang themselves. In July the Bolsheviki attempted at last "rebellion," and Lvov then took more energetic measures of repression. For a moment the Bolsheviki seemed to be disarmed, shown up. Lvov explained to me: "Now we shall have revolution without Bolshevikism, and all the negative aspects of the revolution can be classed as Bolshevikism." Lvov was premature, for the Bolsheviki became more of a force. Also he saw only the negative side of this same Bolshevikism. A few days later, after the first Bolsheviki uprising of July, Prince Kropotkin, the veteran revolutionist, also pushed to one side as "bourgeois" by the Lininites, exclaimed to me: "If only one would institute immediately better conditions of life for the workmen, then the Bolsheviki would cease to have such disproportionate influence. But they do have something on which to stand, and the sooner we admit it, the quicker will we be out of the woods."

Some of the "improvements" advocated by the Bolsheviki were leading to social suicide—the theories would not work. Should one condemn them wholesale for this reason? In fact what one was doing was testing out the theories, and showing to what extent and within what limits they would work. The net result of the experiment will be that the workmen of Russia will never return to the state of things that prevailed before the revolution, and here is the gain. Perhaps the result of the experimenting will reach beyond the limits of Russia. It would seem that the workmen of other countries have taken warning by the excesses of the movement in Russia. Then also the manufacturers of other countries may have profited by the lessons which the Russian manufacturers have learned this last summer. Arthur Henderson, of England, and Albert Thomas, of France, spent much of their time at the Council of Workmen and Soldiers Deputies when they came to Russia last June. They saw the constructive work that was being done by these men; they must have noted also the disrupting forces at work, and the impractical theories advanced. Have they been able to transfer their experience as observers in Russia, to their own fields of work in England and France? As the present writer came thru Sweden and Norway, he was told that the Russia revolution had helped to consolidate the constructive socialist workers.

It is only fair to add that the conflict between classes, which has become so sharp in Russia, was in a certain measure one of what we called the "sins of the old régime." "Divide and rule" was in fact one of the slogans of the old crowd. Strange as it may seem, the old crowd did actually stir up the workmen against their employers, and in an active manner, thru police "provocatory agents." And the employers,

ENGLISH LESSON PLANS

(*Continued from page 495*)

4. Explain the following quotations, and show in what ways they represent the noblest ideals of the human race: (a) Full, impartial justice; (b) The voices of humanity that are in the air; (c) We shall be free to base peace on generosity and justice; (d) The thought of the plain people . . . is the air all governments must henceforth breathe; (e) The only possible antidote is the truth; (f) Justice and equality of rights can be had only at a great price; (g) Permanent . . . foundations for the peace of the world; (h) As always, the right will prove to be the expedient.
5. Write an oration, suitable for graduation exercizes, on the following quotations: (a) A supreme moment of history has come; (b) The hand of God is laid upon the nations.
6. Show in what ways President Wilson's mastery of phrasing somewhat resembles the same power in Carlyle, or in Shakespeare.

on the other side, knew that any tendency on their part to do something for their workmen would attract attention, and possibly lead to disagreeable consequences for themselves, not from the workmen, but from the authorities. We often wondered if the old crowd were continuing the same game. Tho there was no evidence of a real "counter-revolution"—an attempt to restore the old autocratic regime—yet many were suffering in their private interests, as the inevitable, and desired, consequences of the Revolution began to take more definite form. Many had "lived too well under the old regime." So there was here a fertile field for counter-revolutionary propaganda. But in the case of many it was simply the slowness of the process, for they were having to change their habitual attitude. Here is where we had the "sin of the old régime." As Anatole France has written of the French Revolution, one cannot change the habits of mind of a people in a few months, even with revolution.

I have tried to give a few illustrations to show what the Revolution meant in its relation to the workmen problem. The same readjustment has been going on among the peasants, in the government offices and in the stores, and in the households, as to the position of the domestic servants. "Democratize," "consolidate the conquests of the Revolution," were some of the slogans. And it has been a radical revolution, penetrating to the very foundations; the old habits of mind were still holding sway, but were being broken gradually; much sham was being exposed, and the realities made apparent to all. It was a general "show-down"; there could be no bluffing; it was an open game with the hands exposed.

It was because of this attitude of mind that the demand for the definite formulation of war aims was put forward. From this point of view one might even find justification for the "parley," which Lenine and Trotsky advocate. It will be interesting to see how the Germans react and behave. If the German soldiers were to talk the whole matter over with Russian soldiers—but of course the Germans will send officers drest as soldiers, and the Russians will be represented by Bolsheviki, who with their cynicism, their intellectual dishonesty, do not represent the simple, direct Russian peasant. The idea of such a parley is of course contrary to all the "rules" of diplomacy and war. But the Russian Revolution is doing many unheard-of things, which perhaps at a later date we shall find not so bad after all.

The Bolsheviki have tended to discredit many of the really good ideas of the Revolution, by the manner in which they have attempted to carry them out, regardless of consequences. We therefore wait impatiently for the "showing up" of the demagog. But we should understand the spirit of the Revolution, and stand by its fundamental ideas. The Bolsheviki may have served a useful purpose. In all justice we must admit that they have contributed to some of the ideas of the Revolution. And again, we wish the fundamental ideas of the Revolution to win out. That is why some of us are strong for the Revolution, despite its excesses, of which, on the whole, there have been very few. For the Revolution has been one of the greatest awakenings in history, and one of the positive gains of the war. In their present frame of mind the Germans can derive no permanent advantage from the Revolution. Should they be able to do so later, then it will be also to our advantage, to the advantage of all mankind.

THE NEW BOOKS

Essays in Reconstruction

BERTRAND RUSSELL, in his new set of essays, *Political Ideals*, sustains the intense sincerity and the spiritual idealism so marked in "Why Men Fight." In this new book he appeals with compelling earnestness for the triumph in the new England of such intellectual forces which will make for the best development of the individual. Indeed, he says, "Political and social institutions are to be judged by the good or harm that they do to individuals. Do they encourage creativeness rather than possessiveness? Do they embody or promote a spirit of reverence between human beings? Do they preserve self-respect?"

Russell, who has burst on this world at war with a searching intellect and a poetic simplicity, considers in his five essays what sort of a world we are going to work for. His appeal is to the spirit as well as to the intellect. "In dark days," he begins, "men need a clear faith and a well-grounded hope; and as the outcome of these, the calm courage which takes no account of hardships by the way." Many will not accept the war convictions of this noted English philosopher; but they demand respect. His love for England despite his present attitude strikes a pathetic note. Russell is, after all, an Englishman, one of those brave men England seems to have produced unfailingly thru the centuries.

After a consideration of capitalism and the pitfalls of socialism he turns to a discussion of individual liberty and national independence and internationalism. He makes clear the problem of the need for reconciling huge organization with individual initiative. In international affairs he advocates an international authority endowed with an army and a navy, the only military force in the world, thus giving effective sanction to the decisions of the proposed international authority. He declares for an international spirit but a national development. "What is to be desired is not cosmopolitanism, not the absence of all national characteristics that one associates with couriers, *wagon-lit* attendants and others who have had everything distinctive obliterated by multiple and trivial contacts with men of every civilized country. Such cosmopolitanism is the result of loss, not gain. The international spirit which we should wish to see produced will be something added to love of country, not something taken away." So that men will want no longer for their country "things which can only be acquired at the expense of others, but rather those things in which the excellence of any one country is to the advantage of all the world."

Your Part in Poverty, by George Lansbury, editor of the London *Herald* and sometime Member of Parliament, is an address to the comfortable classes to enter into the fight against social evils and the demon of poverty with the same heroic self-sacrifice that they have displayed in their defense of Belgium and their devotion to England. Like "Political Ideals" which ends with "Life and hope for the world are to be found only in the deeds of love," Lansbury's book is a product of spiritual tone and fervent faith. In an introduction, prefaced by the Bishop of Winchester, the writer says, "we may disagree on methods, we may fall out about theology, but we cannot disagree on the one thing that matters: to believe in a God of Love, to accept Love as the greatest factor in life, and to translate into deeds of every day that belief and acceptance."

There is broad charity in Mr. Lansbury's criticism of those who possess and an earnest appeal to the innate love of man for man. Even in his chapter on business, a sermon on the text, "business is business," he offers sympathy for the overwrought business man. He presents a picture of the life of the workingman as well as a statement of how the church has failed in its great duties. But sympathy both for the church and for the working man are not lacking. He prophecies an awakening. "They are discovering that religion is not merely a matter of creed, but a matter of life and conduct also, and tho churches have failed, science and scientific men have failed also." *Your Part in Poverty* is another example of an enthusiastic spirit of social progress that many see in the spiritual conviction of English hearts and the sincere desire of English minds.

Sidney Webb presents the problem of the English worker who has surrendered for the period of the war those trade restrictions and customary methods which have protected his wages, his conditions of work and his hours of labor. The Government has made solemn promises to restore these conditions when peace returns. In *Restoration of Trade Union Conditions* this authority on English trade unions asserts that such restoration is impossible, for the last three years have brought about an industrial revolution second only to the great industrial revolution of 1780 to 1825. We cannot go back to pre-war times. A sham restoration of the "conditions" would be a greater betrayal of the workmen than a flat refusal to do so. He proposes new settlements based on a charter for labor, the prevention of unemployment, standard rates, no limitation of output and freedom for the English worker.

Political Ideals, by Bertrand Russell. Century. $1. *Your Part in Poverty*, by George Lansbury. Huebsch. $1. *The Restoration of Trade Union Conditions*, by Sidney Webb. Huebsch. 55 cents.

Word Conservation

TRUTH is said to lie at the bottom of a well (which seems, by the way, to prove that truth itself will prevaricate if it gets in a hole), and one confirmation of the old saw is certainly *The Well of English and the Bucket*, a pleasant volume of essays by Prof. Burges Johnson, of Vassar College. Professor Johnson is a refutation of Shaw's theory that they who can, do, and they who can't, teach. He is able not only to teach the students in his English classes how to write but he can give them good models from his own light, lucid and vigorous pen. Some of the essays in the book have appeared previously in periodicals; The Independent published one of the best, "Ethics of the Pen," in its issue of October 6, 1917, under the title "Making My Pen Behave."

Doubtless Professor Johnson's book contains much that will be considered educational heresy. He holds the opinion that technical grammar has next to no bearing on a school boy's skill in composition; that a little ten-year-old cannot grasp the significance of "an object complement completes the predicate by naming that which receives the action exprest by the verb"; that it is the first duty of a college English department to teach the student to express his meaning with accuracy; that the newspaper is a first class textbook of English composition, and that those who have no skill in literary expression themselves should not undertake to teach composition or even to write Guides to Short Story Writing. One excellent bit of advice which Professor Johnson gives is to respect the dignity of emphasizing words, from the solemn oath down to the harmless, necessary "very." "I would say to you, if I had arbitrary power over your speech or your written correspondence, 'this week I will allow you only two *verys*'; and tho for a time such restraint may make you self-conscious, yet it will force you to grope about for musty treasures in the storehouse of your memory, and furbish up old adjectives and adverbs, even drive you now and again to a careful appraisal of your best slang; and when this temporary self-consciousness shall pass, not only your vigor of speech, but your exactitude and clarity of thought will be the better for it."

The Well of English and the Bucket, by Burges Johnson. Little, Brown & Co., Boston. $1.25.

Powerful War Fiction

SIX fiction war stories under the title *The Fighting Men*, by Alden Brooks, are planned as representative of the militant spirit of as many nations, including the United States. If the actual fighting line is not so much in evidence, the compelling impulses which urge men to it, the dominant traits of those who do, in truth, represent these peoples, their weaknesses as well as their strength, are presented with unusual power and insight. Readers, however, should be warned that the grim shadow of war hovers over these pages, that such humor as there is only intensifies the depth of the shadows, and that the only satisfaction to be gathered is in that spiritual resilience by which man, at his supreme crisis, rises by self-sacrifice to hights which before the war was perhaps hardly estimated with justice.

A collection of letters written by an American in the French army is comprized within *Kelly of the Foreign Legion*. These young Americans seem to have grown taller, to pass before us with heads more erect, to stand waiting with unflinching confidence their "going over the top," bidding us, too, have heart and courage for the task which must be done. This is the view we glimpse of Russell A. Kelly, while narrating his experience as a Soldier of France. We emphasize the fact that he was a soldier of France, because, according to the author, the Germans have refused to accord Americans serving in the French Foreign Legion the rights of prisoners of war when captured, and to infer their summary execution. If a single American has been so treated—it is feared Kelly may have met this fate since he is now long reported as missing—then the very worst atrocity has been committed, for the person of the uniformed prisoner is inviolate where even a shred of honor remains to an army.

The Fighting Men, by Alden Brooks. Scribners. $1.35. *Kelly of the Foreign Legion*, by Russell A. Kelly. Kennerley. $1.

Food Will Win the War 572

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. COMPOSITION.

The Story of the Week.

1. Write a postal card inducement for joining the Red Cross.
2. One of your friends is now stationed in China. Write him a letter telling about the most important events in the United States during the past week.
3. You wish to encourage some of your friends to do war-service work. Make a speech based on the torpedoing of the "Jacob Jones."
4. You have a relative in Halifax. Write a letter that will bring a sense of comfort and consolation.
5. Prepare an enthusiastic, and somewhat emotional, graduation oration on the capture of Jerusalem.
6. Imagine that you took part in the recent Italian aerial drive. Write a vivid account of your experiences.
7. One of your friends is a blind man, unable to read any papers. Give him an account of the Portuguese Revolution.
8. Write the letter that the Belgian Government might have written when it offered aid to General Pershing, and the letter that General Pershing might have written in answer.
9. Give an oral explanation of the reasons for Rumania's recent action.
10. Give an oral summary of the recent military movements on the West Front.
11. You hear a friend speak pessimistically about the war. Give him a summary of recent hopeful events.
12. Write a postal card inducement for joining the Red Cross.

Editorial Articles.

1. In a single paragraph of clear exposition show what should be the Government's solution of the railroads' difficulties.

Plastics and Elastics. By Edwin E. Slosson.

1. What is the advantage of beginning the article in the simple narrative style?
2. In what different ways does the author gain your interest? Why is the gaining of interest so necessary in writing? Try to write a really interesting letter.
3. Give a clear, oral explanation of the making of celluloid.
4. How does the author emphasize his subject?
5. Write a summary of the items of new information that you have learned from the article.
6. Write a short article concerning some subject with which you are familiar. Try to make your work as clear and as interesting as Dr. Slosson's.

In a Red Cross Canteen. By George Buchanan Fife.

1. The article is a remarkable example of descriptive effect, and "atmosphere." Point out the subjects described. Does the article have any narrative value? Explain.
2. Point out examples of sense-appeal.
3. Point out examples of pathos, of emphasis, of high emotion.
4. By what means is the "atmosphere" produced? What is the effect of the article?
5. By what rhetorical means has the author made his work interesting?

What Russia Wants. By Samuel N. Harper.

1. Write a brief of the article. What reasons prompted the author to adopt the arrangement that has been followed?
2. Write a short commentary on the article, first, summing up Mr. Harper's principal points, and second, giving your own thoughts on the subject.

Food Will Win the War.

1. Read the article. Prepare a speech for your school assembly, showing that any boy or girl may help win the war.

Burning Up Our Resources. By W. E. Underwood.

1. Prepare an address suitable for your neighborhood association, showing how every one may help in preventing the destruction of property.

Working Together for Good. By James Cardinal Gibbons.

1. Select sentences that are somewhat epigrammatic. Explain every such sentence. What is the advantage of using epigrammatic sentences? What English, and what American authors, are noted for their epigrams?
2. What is the spirit of the article? What is the principal thought?

Financing the War. By F. A. Vanderlip.

1. Read the article. Prepare a convincing speech urging your friends to buy War Savings Stamps.

SECTION II. LITERATURE.

The New Books.

1. Explain the following expressions: convincing simplicity; local flavor; atmosphere of reality; touching detail; significant contributions; literary permanence; splendid fervor.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. A French View of the United States—"As Others See Us."

1. Correct the errors indicated in the first paragraph of this editorial.
2. How do you account for the mistaken notion of our form of government referred to in the third paragraph?
3. How far is the indicated judgment of American commercial methods just?

II. The Railroad Situation—"The Railroads and the War," "Congestion of Freight."

1. What are the arguments in favor of Government operation during the war? What are the arguments against it?
2. What is the attitude of the railroad operators toward Government control? What evidence of this did you find in the daily press?
3. What method for solving the problem of Government necessities and the rights of stockholders did the British Government adopt?

III. The Conservation of American Resources for War Purposes—"Financing the War," "Food Will Win the War," "Burning Up Our Resources."

1. Arrange the recommendations for conservation contained in the three articles in parallel columns. What elements are common to all three?
2. "We have some advocates of business as usual," says Mr. Vanderlip. What do you think of this policy?
3. "More important than the $2,000,000,000 [the amount of the War Savings Certificates] is the habit of thrift," etc. Are you participating in this scheme for raising money? Is it affecting your habits in any way?
4. Why is the Food Administration concentrating its efforts upon the conservation of wheat, meat products and sugar? What plans are suggested for making this conservation effective?
5. According to Mr. Underwood, besides our enemies in Europe, we are fighting two enemies at home—waste and carelessness. What proofs does he offer? What remedies does he suggest?

IV. The International Significance of the Russian Revolution — "What Russia Wants," "Chaos in Russia," "Bolsheviki Diplomacy."

1. "The Russian Revolution was interpreted as promising a more effective prosecution of the war." Explain why this promise has failed.
2. Why have the Socialists of Russia demanded that Russia give up "her century-long aspiration to control this outlet" [Constantinople]?
3. What effect has the Russian formula, "No annexations and no contributions," had upon the war policies of the Western Allies?
4. Discuss the immediate results of the establishment of an armistice between Russia and Germany? What, in your judgment, will be the probable ultimate outcome of this armistice?

V. The Balkan States and the War—"Rumania Coerced."

1. Review the history of the political rivalries and the open hostilities which existed between the Balkan states previous to the outbreak of the war. What part did England, Russia, Austria and Germany play in these earlier rivalries?
2. Review the circumstances which led each of these Balkan states—Serbia, Montenegro, Bulgaria and Rumania—to take sides in the war. What is the present political condition of each of these states?
3. Why has Greece thus far not formally entered the war?
4. Why has Rumania been forced to enter into an armistice with the Central Powers?

VI. The Conquests of the Holy Land—"Jerusalem Delivered."

1. Jerusalem has been the prey of successive conquerors for the past 2500 years. Write a brief history of these conquests, beginning with that of Nebuchadnezzar in 586 B. C.
2. Make a special study of the history of the Holy Land under either (a) Roman dominion, or (b) Saracen and Turkish dominion.
3. "More than seven centuries ago Richard the Lion Hearted strove to plant upon the walls of the Holy City the red cross of St. George." Write a brief essay with this sentence as a title.
4. Why have the British expended so much effort upon the campaign which has ended in the capture of Jerusalem?

VII. National Prohibition — "It's an Ill Wind—"

1. What is the situation now of the national prohibition amendment to the Federal Constitution?
2. How many states have passed prohibition laws? Which states are they? Which was the first state to "go dry"?

Visions *of* Security
That Obscure Visions *of* Danger

As you look with satisfaction at your fire insurance policies you realize that fire is a constant menace and feel secure in your protection against such a misfortune.

But how about the many other things that may happen which will cause you financial loss? Nobody knows from what quarter misfortune may come. Your paymaster may be robbed, your employes hurt, your clerks may prove dishonest, your goods may be lost in transit, your automobile may be wrecked, your own earning capacity may be affected by sickness or accident. These and many other losses may come any time and when they do come they may cause a greater loss than a fire. If the theory of insurance is sound you should apply it to protect you and your property from every possible loss. .

What a comforting feeling of security it will give you to know that you are protected from every possible danger through the sound reliable

THE RAILROADS AND THE WAR

THE railroad problem has become acute. It needs a prompt, intelligent and courageous remedy. For the transportation lines of a nation are to the body politic what the circulatory system is to the human body. Circulation is life to the individual, transportation is life to the nation.

There are two ways *not* to solve the railroad problem. One is by attacking the railroads for what they have done or not done in the past. It is the present and the future that concern us now.

The other way is to attack the Interstate Commerce Commission because it has not done something or other that it was never intended to do. The Commission was established to regulate railroad rates and railroad service. It has performed its task wisely and well.

These are ways *not* to solve the problem. The way *to* solve it is to study the new and abnormal conditions that our entrance into the Great War has created and then work out the new method of handling our railroad operations that will best fit those conditions. Forget the past, study the present, face the future with far vision, impartial judgment and fearless action.

The prime factor of efficiency in war is concentration of responsibility. Napoleon declared that battles have been won by poor generals, but no battle was ever won by a debating society.

The railroads of the United States need for the duration of the war a single head—with power. Every experience of the Great War, in every country and every sphere of activity, proves it. The present conditions in the transportation field in the United States confirm it.

That single head must be a great head—the problem is a great problem. He must be a trained railroad man—railroad transportation is a highly technical business. He must be appointed with no shadow of a suspicion of "politics" in the selection—"politics" taints what it touches.

He must be given unquestioned power—administrative efficiency comes from the granting of full authority and holding to complete responsibility. He must be a man who will command the confidence of the people—this is the people's war on behalf of the people's ideals. He must be a man who will command the respect and allegiance of the railroad managers and operators—he must work thru them and with them and if he have not their hearty support, his appointment will spell disaster.

The railroads will not be long in coming to hearty approval of this radical innovation and cordial coöperation with their governmental commanding officer. The railroad men of America are proving themselves in this great national crusade for democracy and humanity high-minded and self-sacrificing public servants—the exceptions, if any, are too few for notice. Whatever is best for their country and their country's cause they will accept cheerfully and whole-heartedly.

When the nation undertakes in this war emergency to operate its railroads itself it must see to it that the owners of the railroads, a million and a half of investors in railroad securities, are fully protected in their property rights. In time of war private interests must give way to the public welfare, but governmental commandeering must not involve spoliation.

Government operation under a supreme head acting thru the present railroad organizations should come at once. Neither time nor the enemy will wait.

IT'S AN ILL WIND—

THE resolution to submit to the states a national prohibition amendment to the Federal Constitution has been reported favorably to the House. The resolution passed the Senate at the last session. When it passes the House it will only remain for the Legislatures of thirty-six states to ratify the amendment, and the thing will be done. The United States will have ceased to permit the manufacture and sale of beverages containing the narcotic, habit-forming drug, ethyl hydrate, commonly known as alcohol.

The ratification of the amendment will take time. But it should not take too much time. Already twenty-seven states have prohibition laws; their Legislatures, to be consistent, should approve the amendment promptly. The other nine ratifications will perhaps be harder to get. But war speeds everything up; there are particular reasons why it should accelerate the progress of prohibition.

The manufacture of alcoholic drinks uses up foodstuffs. Congress and the President have recognized this fact by forbidding the manufacture of distilled liquors and cutting down the percentage of alcohol that may be permitted in beer. But why, in these days of food shortage the world over, should a single pound of any kind of foodstuff whatever be permitted to be turned from food into drink?

The consumption of alcoholic drinks lowers efficiency. Army officers know it, railroad officials know it, manufacturers know it—everybody knows it but those who will not look the facts in the face.

The habit of consuming alcoholic drinks injures health. Doctors know it, health records prove it, mortality statistics confirm it.

The drinking of alcohol produces vice and crime, misery and poverty. The police, the prison officials, the social workers, the students of social and economic phenomena, the ministers, the lawyers, the wives and children of the drinkers—all know it beyond the peradventure of a doubt.

Not one single positive, constructive argument can be advanced in good faith in favor of the use of the narcotic, habit-forming drug, ethyl hydrate.

Alcohol must go because it does no man any good to drink it and many men much harm. It must go because it does society no good to have men and women drink it, but much harm.

Perhaps it needed war to bring us to our senses on this vital and much bemuddled question. It's an ill wind—

GENERALIZATIONS ARE GENERALLY TOO GENERAL

"An epigram sacrifices truth to brevity."—W. H. Taft.

Even this one.

AS OTHERS SEE US

THE entrance of the Americans into the European arena has aroused some natural curiosity as to who these strange people are. This curiosity the press hastened to gratify, so we have an opportunity of learning how we look to our allies. For instance, *Le Fait de la Semaine* (The Week's Work) devotes an entire number to *Ce qu'un Français doit savoir des Etats-Unis.* This ten cent guide to "What a Frenchman Needs to Know about the United States" contains much useful information—as well as some amusing misinformation. The latter begins on the first line of the first page in "the notions on the press," where we learn that the leading New York daily is the *Washington Post.* The only Socialist organ is the *New York Evening Post.* The *New York World passe pour inspiré par le président Wilson.* The *Herald* is *très lu et très apprécié* and *The American* is *un des journaux dits "sensationnels" de la "Presse Jaune."* Outside of New York, the *Providence Journal* is, as we should expect, one of few worth mentioning, which reminds us that *The Manchester Guardian* has installed a regular correspondent at "Providence, Massachusetts." Among the periodicals we find *The Harper's Weekly, hebdomadaire, très lu dans la classe moyenne; très influent.* Quite so, and even more so since it passes under the name of The Independent. Our esteemed contemporary, *The Outlook,* is classed as *républicain radical, très apprécié dans les milieux puritains,* and *The Atlantic Monthly* as a *sorte de Revue des Deux Mondes.*

The only map in the pamphlet dates from 1579 and shows three-fourths of America French and the other fourth Spanish. But it appears in the following chapter on the history that some emigrants did later come from England and that they rebelled against the mother country but with no success until the arrival of French troops under Lafayette, Estaing and Rochambeau.

Under "Politics" it is explained that tho it is customary, as a matter of convenience, to allude to the United States as a "sister republic," yet it has not a true parliamentary government in the sense of France and England. There is no cabinet responsibility and Congress has no power to change the government. The American system, therefore, resembles the German more nearly than the French, altho during the Second Empire France was under a similar régime. "In short, the United States by its constitution possesses a dictator as president."

But in spite of our failure to establish a democratic form of government we have a national ideal and ambition, for the mission of America is nothing less than the spreading of democracy over the entire earth. Since there is now so much discussion over university administration it is reassuring to learn that American universities are "ideal republics, paternally governed by savants or sages, who are also administrators, organizers and men of action." This sounds confusing—but, then, so is the system it describes. Coeducation, it appears, tends to discourage marriage because the young girls, thru constant association with members of the opposite sex, have an opportunity to discover their real value. This is rather hard on the men and also overlooks the fact that the marriage rate of coeducated young people is considerably higher than among the graduates of the segregated colleges. But we are relieved to learn that a woman may remain single in America without disgrace.

American commercial methods come in for extensive attention and high praise. By means of chronometragy and other devices of the efficiency expert, the processes of manufacture have been expedited and simplified. The American business man, besides having a bureau in a *gratte-ciel* provided with a *classeur vertical* and a *caise enregistreuse,* is endowed with all the commercial virtues; he is honest, loyal, energetic, orderly, practical, idealistic; he possesses personal magnetism, perfect health and a thoro knowledge of psychology; in short, would grade 100 on an efficiency scale.

Some of the succeeding chapters on the arts and sciences are almost as short as that on snakes in Iceland. "The literature of the West" is chiefly represented by Walt Whitman of Staten Island and "the literature of the East" by Mme. Edith Wharton, one of whose works, *"Chez les Heureux du Mondes,* The House of Birth, has been much read and highly appreciated in France." It seems that the translator of the novel's title was not as familiar with Ecclesiastes as he should have been. The chapter on American music is reduced to two sentences and contains but two names, Theodore Thomas and John Knowles Paine. But the author, Firmin Roz, consoles us for our cultural deficiencies by saying that the increasing infusion of Latin blood will ultimately overcome the Anglo-Saxon elements and then American genius may blossom out in science, art and literature. Apparently M. Roz has not heard of the illiteracy clause of the new immigration bill, which will shut out the majority of the Latin immigrants on whom depends our future in the fine arts.

But, on the whole, we have no reason to complain of the authors of this introduction to America. They have been to our virtues very kind and to faults a little blind. The perspective is not the same as ours and familiar things always seem strange in foreign words, but as an estimate of national character this will compare favorably with what the old geographies used to tell us of the French: "The French are a gay people, fond of dancing and light wines."

SELLING THE NEXT LIBERTY LOAN

WHILE the second Liberty Loan campaign had as its chief salient the appeal to patriotism, there was another angle in the line of offense that should not be overlooked. This was a campaign for money, essentially a "selling proposition." How were the principles of salesmanship applied?

The Loan was superbly advertised; it was sold by as able a set of salesmen as ever appealed to the people. The effort was cumulative to a spectacular extent. At the end of each day it was announced in every district how far that district was behind its quota. With the diminution of the allotted period activities were doubled and tripled. It was dinned and dinned into our ears that Saturday, October 27, was to be the climactic point, the day of wonders, the final chance to slip the widow's mite into the pocket of Uncle Sam. The emotions of the rank and file were induced to such a pitch that its willingness to give was limited only by its pocketbook.

What was the state of the pocketbook of the rank and file on Saturday, October 27? Flat. Especially was this true in the case of salaried men. If the closing date of the Loan had been over the line into November, many another American dollar would in a fine fervor of patriotism have started on its anti-Teuton mission.

A kindergarten principle of salesmanship, that of selling when it is easy to buy, had been violated. Even with this handicap, the Loan was a success. In the scheduling of the next Liberty Loan, however, let us hope that psychology and salesmanship will prevail, and that the climax will be more auspiciously placed.

THE CHRISTMAS MESSAGE, 1917

BY FRANKLIN H. GIDDINGS

PROFESSOR OF SOCIOLOGY AND THE HISTORY OF CIVILIZATION, IN COLUMBIA UNIVERSITY

CHRISTMAS is not always merry, but the new year may always be happy. It is not possible to be merry while the world is plunged in unexampled war, and civilization is battling for life; but to save civilization men go happily to death, knowing for what cause they die.

The festival of the New-born Year has been observed since man began to think. Men of the Old Stone Age kept it, we safely may guess. Christmas is a Christian feast not yet two thousand years old. It celebrates a promise of peace and good will. It reminds us of supreme sacrifice for supreme ends. Yet, curiously, we keep Christmas—or most of us do—in a Pagan way, and enter upon the New Year with at least something of Christian hope and purpose in our hearts.

The promise of peace has not been fulfilled. Since Jesus and the Apostles taught their gospel in Palestine there has been more war in the world than there was in all the millennium that went before. There is more war in the world today than there ever was in any former year since recorded history began.

No wonder then it is, that some are asking: "Has Christianity failed?" Has it been, all these centuries, but one more of those unnumbered delusions that men have hugged to their souls only to waste their energies and quaff the dregs of disappointment at the end?

The answer that truth-telling men must give is the qualified one that more often than not has to be made to apprehension. Language has not yet attained precision. Most of our words carry more than one meaning, and not many words bear so many meanings, or meanings so diverse, as the words "Christian" and "Christianity." There is a Christianity that has broken down, and there is a Christianity that never yet has failed, and that will sustain the hearts of men so long as the world shall last.

THE Christianity that has failed is the bastard gospel of the salvation of the unfit. No message of hope, no offer of help is ever proclaimed that is not instantly seized upon by the foolish and the wicked to further evil ends and save themselves from merited disaster. The Christian gospel of salvation of sinners from sin was early perverted into a promise of salvation for the sinning, a moral impossibility. It is this perversion which has industriously been promulgated by pestiferous revivalists, and which, I fear, is the only Christianity that half or more of the total membership of the Christian churches has ever grasped.

I am only a layman, and I make no pretense to theological knowledge. But all my life I have read and enjoyed the books of the Bible, and I claim to be fairly familiar with what they appear to say. With a good deal of confidence, therefore, I venture to affirm that one will search in vain in the words attributed to Christ and his disciples for the perverted Christianity that I have described. They taught a religion of the salvation of the fit. Never, on any occasion, did they offer salvation to the morally unfit.

Let us look at the facts. The New Testament makes salvation depend upon faith; that is not questioned. But nothing is easier than to profess faith when no reality exists. A test of the genuineness of faith, therefore, is called for, and the gospels name it unequivocally. The test is repentance. The faith of the unrepentant is insincere and it avails nothing. What, then, is repentance? A further test is called for, and this test also the gospels name. The test of repentance is found in "works meet for repentance." And what, finally, are these? Surely not the mere ritual observances of a ceremonial law, against which Paul protested. Again the New Testament answer is simple, explicit and definitive. To render works meet for repentance is to "cease to do evil" and to "learn to do well."

HERE, then, is what the Christian offer of salvation turns out to be when it is examined with intellectual honesty. Salvation is promised to those and to those only who, inspired by the person and example of Christ, feel faith in such person and example, repent of sin and, thenceforth ceasing to do evil, learn to do well.

This is a religion, I repeat, of the salvation of the fit. It holds out no promise of any kind to evildoers of any description who do not cease to be evildoers. On the contrary, it expressly warns them of impending damnation. The wheat and the tares will be left to grow together until the harvest, but then the wheat will be garnered and the tares will be burned.

This religion is consonant with our modern scientific knowledge and with the character of that civilization in defense of which America and the allied nations of western Europe are pouring forth their treasure and their blood. In the language of Darwinian evolution the "fit" are those that are adapted to the environment in which they attempt to live. The adapted survive, the non-adapted perish. Civilized human society is a moral environment which calls for intelligence, comprehension, sympathy and good faith. It demands that contracts and treaties shall be more than scraps of paper. It demands that men and women shall earn their bread by useful industry and not live as parasites upon others. It demands that they shall deal honestly with one another. It insists that they shall help one another and mitigate misery. It commands them to abstain from cruelty and from acts of brutality and destruction. Like the unperverted Christian gospel it admonishes us to cease to do evil and learn to do well, as the sole condition of salvation.

Civilization has not failed, unperverted Christianity has not failed. They are one and the same. The Imperial German Government has distorted both, as it has distorted the doctrine of Darwinian evolution. It conceives the survival of the fit as the survival of the ruthless savage. It has wholly failed to comprehend the moral environment to which men must become adapted in a civilized world. It does not understand where and why it is that the survival of the fit has ceased to be the survival of the fit for the jungle.

The cause for which we fight must not and shall not fail. And because it will not fail a happy New Year will come when peace on earth will begin. This is the Christmas Message of 1917.

THE STORY OF THE WEEK

On the West Front

The Germans have been massing troops on the west front, apparently with the intention of delivering a tremendous blow at some point on the French or British lines; perhaps with the hope of breaking thru and reaching a triumphant decision over France before it is possible for the American army to give any important aid to the Allies. For this purpose they have drawn many divisions from the now quiescent Russian and Rumanian fronts, including numerous Austrian and Hungarian troops, which are now on the western front for the first time. There has been exceptional activity in the air, too, on both sides; the Allies trying to observe where the Germans were massing their troops and were therefore likely to attack, and the Germans trying to prevent them from doing so.

Several minor attacks have been made by the Germans at various points in the Cambrai region, with indecisive results. The chief of these was made between Bullecourt and Queant, ten miles from Cambrai, on December 12. At one point slight gains were made by the Germans, but at all others they were completely repulsed with heavy losses. Along the French front, from the Aisne to Verdun, attacks were made daily; not in great force, but with the apparent intention of masking preparations for a really heavy blow, probably in the neighborhood of Rheims. These were all repulsed by the French with little difficulty.

Blunders at Cambrai

As at Balaklava, so at Cambrai: "Some one had blundered." The great forward rush by General Byng was one of the most brilliant achievements of the war. But because of some blunder, now being officially investigated but not yet disclosed, it was soon neutralized. The Germans on December 7 retook Marcoing and the Bourlon Wood and much other territory, until fully one-third of all that General Byng had gained had been relinquished by the British. In thus falling back the British have shortened their line by eight miles, and have correspondingly strengthened it, so that they are probably able to withstand any further attacks that may be made upon them. But they have lost all hope of capturing Cambrai and of breaking the German lines of communication which center there, they have lost their hold on the Scheldt River, and the prestige of their splendid stroke has been sacrificed.

A Destroyer Destroyed

Details have been received of the torpedoing of the United States destroyer "Jacob Jones" by a German submarine, off the European coast on the afternoon of the December 6, a disaster in which more than seventy lives were lost and only forty-four were surely saved. The vessel had been at target practise and had just completed that work when she crost the path of a submarine which was entirely submerged and invisible, save for her periscope. The torpedo struck her amidships, in a vital spot, instantly killing about fifty of her men. There was no time for the survivors to do more than to leap to the life rafts, without preparation of any kind against the cold and the sea. In seventeen minutes the stricken hulk sank beneath the waves. The survivors drifted on the rafts for seventeen hours, and suffered privations and exposure which proved fatal to several, before they were rescued. The Germans are reported to have acted with their accustomed brutality. After the sinking of the "Jacob Jones," while the survivors were many of them in the water struggling to get upon the rafts, the submarine rose to the surface and some of her men came upon deck. Some of the Americans cried to them for rescue and one of them did so in German. Thereupon the Germans selected that one man and took him aboard, presumably because since he knew German they could question him, and callously left the others to drown.

News of the World, London

NOW SHE'LL SAIL!

"You see, sir, she's been floundering about because she had no rudder," explains Foreman Lloyd George to John Bull and Miss Columbia. "We've fixed her up with one now, and in future she'll sail topping"

Work of the U-Boats

The British Admiralty reported on December 12 that in the week fourteen British merchant vessels of more than 1000 tons each and seven smaller vessels had been sunk either by submarines or by mines. This was not much different from the report of the preceding week, and was precisely like that of two weeks before. Italian losses at the same time were one steamer of more than 1500 tons, one of less than that size, and three small sailing vessels.

These figures, tho far below those of last spring and summer, indicated an unrelenting pursuance of the submarine campaign on the lines which have been familiar since the early part of the war. At the same time there were rumors of an impending change of plan, to be effected probably in the spring, when it is said the Germans will begin using much larger submarine vessels, similar to those which visited American ports. These, it is said, will be sent far out to sea, perhaps clear across to American waters, to prey upon merchantmen in mid-ocean, or even just as they emerge from American ports.

Italian Lines Holding

The Teutonic forces on the Italian frontier are believed to have received considerable additions of troops from the Russian front, and to have been making plans for a grand attack for the purpose of breaking thru to the Venetian Plains before the further oncoming of winter. Italian aviators have reported them to be massing near Foza, and to be constructing elaborate defensive works at Monte Grappa. Several attacks were made, chiefly on the Asiago Plateau, all of which the Italians repulsed with little difficulty to themselves but with heavy losses to the enemy. At some points the Italians have assumed the offensive, and have made some gains, notably in the seizure, in a night surprize, of a bridgehead on the Piave. The grand attack is yet to come, if it is to come at all.

Meantime the weather makes for the advantage of the Italians. Heavy snows have fallen in the mountains where the

THE GREAT WAR

December 7—Germans gain ground on Asiago Plateau, and wrest Marcoing from British. United States declares war against Austria-Hungary.

December 8—Italians check German advance and make great and successful counter raid with aeroplanes. News of loss of United States destroyer "Jacob Jones" on December 6.

December 9—Artillery actions on both sides at Cambrai. French repulse several German attacks.

December 10—Jerusalem surrendered to British army. Hungarians capture and Italians recapture bridgehead on the Sile in the Piave Delta.

December 11—Much artillery activity on French and British fronts. Germans massing reserves for grand attack near Cambrai.

December 12—German attack near Cambrai repelled. Italians make gains. General Allenby enters Jerusalem, afoot. Investigation ordered into British disaster at Cambrai.

December 13—German attacks in Italy repulsed with heavy losses. German troops withdrawn from Italy for French and British fronts.

Germans are and thru which they must make their way for the further invasion of Italy.

Italy's War in the Air The desperate struggle on the Italian battle front was marked on December 8 with what is described as the most formidable aerial "drive" yet seen in the war, and one which gave portentous earnest of what may be done when the thousands of aeroplanes which are now being constructed in this country are placed in action. A fleet of one hundred and fifty Italian aeroplanes swept over the Teutonic lines, dropping bombs by the thousand, and pouring from machine guns mounted on the monster Caproni planes a torrent of shot upon the hostile troops. As the vessels sailed at only a short distance above the earth, their aim was accurate and the destruction wrought was enormous. It is stated that whole batteries were demolished, fortifications were destroyed, stores of ammunition were blown up, troop trains were scattered, motor truck columns were disorganized and railroad and supply depots were reduced to ruins. This raid was made in daytime and was repeated at night, at the latter time four tons of bombs being dropt upon the Teutonic lines. The Italians appear to have a decided superiority over their foes in aerial warfare, and their exercize of it contributes largely to their success in holding back the invaders at the line of the Piave.

"Jerusalem Delivered" Another Tasso, and some one something more than he, might well be called upon to celebrate the final deliverance of Jerusalem from Turkish rule. Few incidents of the war have more strongly appealed to imagination, to sentiment and to romance. More than seven centuries ago Richard the Lion Hearted strove to plant upon the walls of the Holy City the red cross of St. George, which he had adopted as England's banner. His effort was in vain; but now it is that same English banner that marks the fulfilment of his design. The achievement had been practically assured nearly three weeks before in the capture of Jaffa, the ancient Joppa, which permitted the British under General Allenby to advance straight toward Jerusalem. By November 22 the army was within five miles of the city, and there remained merely the task of surrounding it, cutting all its lines of communication, and thus compelling its surrender without a bombardment or battle which might involve damage to historic buildings and holy places. This was effected on December 10, and the next day the British troops occupied the city and established a military government over it. The British flag was raised in token of conquest, and the French and Italian flags were also raised over the various buildings belonging to those countries.

From the diplomatic point of view this event must be galling to the Central Powers, seeing the manner in which the city has been Germanized and regarded as little more than an appanage to Prussia ever since the Kaiser's spectacular visit to it, and seeing that formerly the sovereigns of Austria added "King of Jerusalem" to their other titles. It immensely impairs the prestige of the Turkish Sultan, and rallies the Jews of all countries to a stronger sympathy with the Allies. Strategically, from the military point of view, it doubtless marks the end and complete failure of the German-Turkish attempt to seize the Suez Canal, cut the British line of communication with India, and invade Egypt. It also practically completes the severance of Palestine and Arabia from the Turkish Empire, and bars the Sultan from the holy cities of the Mohammedan world, Medina and Mecca. His influence as "Caliph of Islam" will probably suffer vast diminution, and his capacity for mischief among the Mohammedans of India will become negligible.

The future of Jerusalem and of Palestine was presumably forecast by Mr. Balfour, the British Foreign Secretary, a month before, when on November 9 he wrote to Lord Rothschild: "The Government view with favor the establishment of Palestine as a national home for the Jewish people, and will use their best endeavors to facilitate the achievement of this object, it being clearly understood that nothing will be done that may prejudice the civil or religious rights of existing non-Jewish communities in Palestine."

Since the capture of Jerusalem this sentiment has been repeated, and has received sympathetic support from America, and the general assumption is that an independent Jewish state will be erected in Palestine, under a guarantee of neutrality from the Allied Powers. The Jews of all lands are accordingly rejoicing in this prospective consummation of their "Zionist" designs, and their return to their ancient fatherland and capital after so many centuries of exile.

The War Against Austria The declaration of war against Austria-Hungary, confidently anticipated last week, was made on December 7 by both Houses of Congress. In the House of Representatives only a single vote was recorded against it, that of Meyer London, a Socialist member from New York, who thus voted not thru sympathy with Austria but because of opposition to all war. In the Senate the vote was unanimous

THE CRUSADERS TAKE JERUSALEM AT LAST

The city of Jerusalem, for centuries under Turkish rule, was captured on December 10 by the British forces under General Allenby

on the part of all present. Robert La Follette, the only senator who would have voted against it, absented himself —being engaged, he afterward explained, in drafting an amendment which would have made it possible for him to support the act.

This action by Congress was promptly followed by the application of the Espionage act and other laws for the control of aliens to Austrians and Hungarians, tho not yet as strictly to Germans.

Investigating War Work

Growing dissatisfaction with administrative tardiness in equipping the army and preparing it for active service reached a climax on December 11, when the Senate took steps toward a searching investigation into both the War Department and the food and fuel administration. This action was preceded by some very explicit statements by Senator Wadsworth before the Military Affairs Committee and in an authorized interview. Mr. Wadsworth said:

> Not one army cantonment is adequately equipt with ordnance. . . . In no camps are there light arms for half the men. There are not magazine guns enough in any camp. Many men in training have to use wooden magazine guns. At Camp Meade, Camp Yaphank, Spartanburg and Camp Fulton, I talked with men whose machine gun battalions had never seen a machine gun. . . . They used broomsticks in drill. . . . In the matter of clothes the soldiers are worse off than in equipment. Many men have no overcoats. Thousands are wearing light weight summer underclothing.

Similar statements concerning the lack of arms had frequently been made before, and it had been announced that further levies under the conscription law would not be summoned until spring, because of the lack of winter clothing.

The investigation was promptly begun by the Military Affairs Committee. Major General Crozier, Chief of Ordnance of the Army, being first examined, on December 12. He stated that before the actual declaration of war, on April 2, practically no preparations for the impending conflict were made by his department; that thereafter the work of equipment was not fairly begun until June 15; and that full headway was not reached until September 6, more than five months after the declaration of war. He admitted that the training camps were insufficiently supplied with arms, but declared that all troops that had been sent abroad were adequately equipt. Further inquiry, however, elicited the fact that their equipment in cannon was not of American manufacture, but was supplied entirely by British and French arsenals; not a single cannon having been sent over from this side; nor was there a prospect that any would be sent before next spring or summer. General Crozier added an elaborate explanation of the embarrassments and difficulties with which the department had to contend in expanding its work from the supplying of an army of 100,000 in time of peace to the supplying of an army of several millions in time of war. He blamed the Secretary of War, Newton D. Baker, for much of the delay, particularly in supplying machine guns, and also for the scarcity of fuel. Mr. Baker in reply admitted that there had been delay, but exprest confidence in his ability to explain it satisfactorily, and declared that all arms plants were now being operated to their full capacity.

The President reappointed General Crozier as Chief of Ordnance, immediately after his giving of the testimony.

Belgian Aid for America

Belgium is aiding America in the war. Its Government has turned over to General Pershing for use in the transportation service of his army about six hundred locomotives. These are all that were left to it of the former equipment of the Belgian railroad system. At the outbreak of the war Belgium had 1700 locomotives in France, saved from the Germans. Of these 1100 were turned over to the Allied armies for their use, and the remainder were kept to form the nucleus of a new railroad equipment after the war. But now, as a token of appreciation of what the United States has done and is doing, they are given to our army, to assist it in its work for Belgium's complete redemption.

THESE GUNNERS HAVE MADE FIVE SAFE TRIPS WITH TRANSPORTS

Chaos in Russia

Revolution and counter revolution seem daily to be plunging Russia into deeper chaos. Little is known of the meetings of the new Constituent Assembly, nor are expectations of its beneficence particularly sanguine, seeing that the Bolsheviki leaders threaten to dissolve it or to annul its proceedings if it ventures to adopt a course contrary to their dictates. Meantime, in advance of anything which it may do, they have decreed the abolition of all the courts in the empire, and the substitution therefor of new tribunals arbitrarily created by themselves. They have also declared all land to be the property of the State.

Opposition to the Bolsheviki régime increases. General Korniloff, the former commander in chief of the Russian army, whose removal by Kerensky had much to do with the latter's fall from the Premiership, has joined forces with General Kaledines, the Hetman of the Cossacks, and a Cossack and Ukrainian army, said to be at least 400,000 strong, has been organized and is reported to be moving northward and westward with the purpose of capturing Moscow and of cutting off the Bolsheviki at Petrograd from the vast food and other supplied of southern Russia. These Cossacks, and also the women's army known as the Battalion of Death, have fought several engagements with the Bolsheviki forces, to the general discomfiture of the latter. An acute crisis is reported at Moscow, where the Bolsheviki have placed machine guns in the streets in a desperate effort to overawe the populace and to prevent the advance of any counter-revolutionary force.

Bolsheviki Diplomacy

The armistice between Germany and Russia was made effective, but the Bolsheviki leaders postponed for a week the discussion of terms of peace, in order to have time for acquainting the Allied governments with their course. The British envoy at Petrograd strongly criticized their course, pointing out that it was incumbent upon them to discuss the matter with the Allies and to come to an agreement with them, before opening negotiations with the enemy. When the negotiations with the Germans began, the Russians naïvely proposed that the Germans should evacuate the Russian territory which they had seized about Moon Sound and that during a six months' armistice the Germans should not shift their forces from one front to another. These proposals were regarded with surprize and absolute disapproval by Germany, and the counter prosposals were made that as the price of peace Russia should surrender all territory west of a line drawn from the eastern side of the Gulf of Riga to the eastern

boundary of Galicia, comprizing about 120,000 square miles and between twenty and thirty million inhabitants, should give Germany control of the entire Russian wheat crop for a term of years, and should admit all German manufactures into the Russian Empire free of duty, thus making Russia an industrial and commercial appanage of Germany. The character of these proposals convinced even the Bolsheviki leaders that there was little hope of peace on terms satisfactory to Russia or compatible with Russian interests.

Japanese and Bolsheviki

The announcement that on December 6 Bolsheviki forces had gone to Vladivostok, Siberia, caused much concern because of the vast stores of military supplies at that port, sent thither from Japan and the United States for use in the war against Germany. It was feared that the Bolsheviki would seize these and use them in the civil war in Russia. This anxiety led to the recommendation by the American Consul there that a detachment of the Japanese army should occupy the railroad terminal at Vladivostok, where all these supplies are stored. This would make it impossible for the Bolsheviki or any other Russian factionists to get possession of the supplies or to ship them to European Russia, without the assent of the Allies. It would also facilitate the advance of Japanese troops westward into European Russia should there be occasion for such a movement and should the Japanese Government decide to make it. There have been suggestions in high Japanese quarters that such an invasion might be undertaken if the Bolsheviki undertook to surrender Russia altogether to Germany.

Chinese troops have occupied Harbin, the important railroad center in Manchuria, and the Russian military commander there and the numerous employees of the Chinese Eastern Railway system, have refused to recognize the orders which have been sent thither by the Bolsheviki.

Rumania Coerced

The uncertainty as to the course to be taken by Rumania in relation to the Russian lapse was ended on December 10, when it was officially announced from Berlin that the Rumanian army as well as the Russian had entered into an armistice along the whole front from the Dniester River to the mouth of the Danube. Rumania appears to have been forced into this action by the threats of the Bolsheviki junta at Petrograd, to the effect that all supplies of food and war material would be cut off and the Russian troops would be withdrawn from the Moldavian front, exposing Rumania to a German invasion against which she would have no defense. It is recognized by the chief Allied powers that Rumania yielded to necessity with much reluctance. "Rumania's actions," said the French Premier, M. Clémenceau, in his newspaper, "are largely dictated to her by those of Russia; we should not, therefore, be surprized by her decision, which was not taken, but only submitted to." Other authoritative French journals declared that the governments of the Allied Powers must stand loyally by Rumania and help her to extricate herself with honor from the tragic situation in which Russian disloyalty had placed her.

BACK TO BLIGHTY

These wounded British prisoners, sent to Switzerland and finally exchanged, had a triumphal procession thru the city when they got back home

Portuguese Revolution

A revolution has occurred in Portugal bearing a striking resemblance, on a smaller scale, to that of the Bolsheviki in Russia. It was organized by Sidonio Paez, a major of artillery, who had been professor of mathematics in the University of Coimbra and also Portuguese Minister to Germany, and Machado Santos, who had been imprisoned for leading a mutiny at Abrantes in 1915, and was directed not so much against the venerable President of the Republic, Bernardino Machado, as against his Cabinet, the Prime Minister of which was Affonso Costa. It broke out during Senhor Costa's absence in Paris, where he was in attendance at the Inter-Allied Conference. There were three days of fighting, in which much blood was shed, and then, on December 9, in order to avoid further loss of life and demoralization of the army, the Cabinet resigned; altho it had commanded the support of a large majority in Parliament. The Prime Minister on his way back from Paris was intercepted at Guardia and placed under arrest. President Machado was then asked to resign, and upon his declining to do so was told that he must consider himself under arrest; and he was acutally placed in prison. "A provisional government" was then formed, with Major Paez at its head; professing to represent the people of Portugal, tho in fact having the support of a meager minority of the Parliament.

The disquieting feature of the affair, at first sight, was that the Government which had been overthrown was that which had given Portugal's adherence to the cause of the Allies against Germany, and it was not unreasonably suspected that, as in Russia, German intrigues had been behind the movement. Major Paes, however, hastened to issue a proclamation declaring that the "provisional government" would continue the international policy of that which it had overthrown, particularly its agreements with the Allies respecting the war. It was then decided to dissolve Parliament and order a new general election.

For Prussian Reforms

The introduction of a bill for the reform of the Prussian electoral system, on December 6, gave rise to an animated and illuminating debate in the Lower House of the Prussian Diet. The measure was introduced by the Imperial Chancellor, who described it as an act of necessity, intended to abolish a system which had long been an anachronism and to give the kingdom in its place something in accord with the spirit of the present day. Hearty support was given by the Prussian Minister of the Interior. The leader of the Conservative party, however, while expressing readiness to support loyally the King and Emperor in any measure which might be necessary, strongly deplored some features of the bill and of the manner of its introduction. He regarded it as regrettable that for the first time in the history of the Empire the Chancellor was a non-Prussian (the Chancellor is a Bavarian) and as an abandonment of the sound constitutional

principle that the Emperor should appoint whom he pleased regardless of political considerations or the attitude of the Reichstag. The appointment of the present non-Prussian Chancellor was a concession to the Reichstag, and was a step toward parliamentary rather than autocratic government, which the Conservatives could not approve. This was one of the most outspoken reaffirmations of the divine right of autocracy that has been heard for years.

Germany's Air Craft A correspondent who professes to be accurately informed, reports that Germany now has with her army in the field about 300 squadrons of aeroplanes, numbering about 2500 in all. Of these, 23 are bombarding squadrons, 40 are "chasers," 30 are protecting squadrons, 80 are patrol squadrons, and 100 are artillery squadrons. In addition there are garrison squadrons, training squadrons and the hydro-aerpolanes of the navy. Of the 45 Zeppelins which have been built, 27 have been lost, namely: 5 destroyed in Germany, by accidents, etc.; 5 in neutral countries adjoining Germany; 15 in England or on their way to or from England; and 2 at sea. Five of the survivors are out of use, 4 are used as training ships, and 9 are still in more or less active service about the North Sea.

The Halifax Disaster The disaster at Halifax, recorded last week, proved to be about as bad as the first appalling reports had indicated. The death roll was officially fixed at 1266, tho circumstances may make it impossible to determine the exact figures to within several hundred. Fully 25,000 were rendered homeless. The situation was aggravated and the work of relief was much hampered by the prevalence day after day of the most violent wintry storms of snow and wind, coupled with intense cold. Supplies and aid were however, rushed to the scene from Canada and from the United States, the Red Cross Society taking a leading part in the work, and the stricken city with indomitable resolution and buoyant courage is now engaged in the task of rebuilding. Investigation has failed to determine the precise responsibility for the disaster. Suspicions of German plots have been widely entertained, but have not thus far been substantiated. Practically all the Germans resident in Halifax have, however, been arrested and interned or placed under surveillance, and the helmsman of the ship "Imo," the erratic course of which caused the disaster, has been held, in suspicious circumstances, as a German spy. Precautionary measures have been taken in New York harbor and elsewhere against the occurrence of such disasters thru accident or thru design.

A Bumper Year in Crops Final estimates of the Department of Agriculture mark 1917 as the greatest year ever known in American agriculture. With the exceptions of winter wheat, rice, flaxseed, hay and

Paul Thompson

THE GREATEST SACRIFICE

Mrs. Cunningham has four sons. Michael is fighting in France; Edward is in the navy; Robert is at a training camp. When James, the youngest, was called to serve, the other sons urged him to claim exemption as their mother's sole support. But Mrs. Cunningham's patriotism more than met the test, and James went off to camp, too

cotton, all important crops show a considerable increase in yield over the preceding year, while many of them, including corn, oats, rye, potatoes, sweet potatoes, beans, onions, cabbages and tobacco, surpass the records of all former years. The corn crop is the greatest ever known of any product, amounting to 3,159,494,000 bushels and worth $4,053,672,000. The oat crop is of 1,587,286,000 bushels, worth $1,061,427,000. The potato crops is of 442,536,000 bushels, worth $543,865,000. In all cases excepting winter wheat, hay and cotton there was an increase in the acreage planted; and—which is peculiarly gratifying—in the case of nearly all the chief crops, particularly corn, wheat, oats, buckwheat and potatoes, there was a noticeable increase in the yield per acre. As the prevailing conditions of weather were not more than ordinarily favorable, this last circumstance seems to indicate improved methods of culture; one of the chief needs of American agriculture.

Congestion of Freight The congestion of freight on the railway lines continues, tho the situation is improving, and the conviction is strengthened that some radical action will be necessary for the general improvement of the transportation service, either by giving the railroads relief from burdensome restrictions and perhaps actual aid in the form of Government credit, or by taking them over by the Government itself. Against the latter proposal it is pointed out that the Government is already overburdened with a multiplicity and magnitude of duties, and that the manner in which it is performing some of them does not promise for it any greater efficiency in railroad management than that which the companies themselves now display.

Meantime the General Operating Committee of the Eastern trunk line railroads has ordered a strict embargo on all freight intended for export, from North Atlantic ports, excepting that consigned by the United States Government itself. That means that the roads are coöperating in the expeditious forwarding of supplies from the Government for our army across the sea, and for our allies. To the necessities of that essential service, all private export trade is to be sacrificed. Arrangements are also being made for such coöperation and coördination of effort between the railroads and the steamship lines as will assure the prompt transfer from the one to the other of all freight reaching tidewater terminals, so that there will be no accumulation and congestion at those points.

New War Trades Committees The Council of National Defense on December 7 abolished its former system of Industrial Advisory Committees, and replaced them with War Trades Committees of the various industries which are organized for coöperation with the Council. This was done with full recognition of the admirable work done by the former committees, but with a desire to discontinue the embarrassing situation in which men were apparently called upon to act as Government agents or advisers and at the same time as representatives of the industries. The new committees will be selected and constituted by the industries which they represent, and the Council of National Defense will appoint trade experts as its agents to negotiate with them.

The Merchant Marine Progress is reported in the work of shipbuilding. The construction of "fabricated ships" of uniform design has begun and is being prest with all possible expedition. A contract was made on December 12 with a Boston corporation for the building of twenty cargo steamers of reinforced concrete, and the Federal Shipping Board is planning itself to construct a number more. It will also construct numerous barges and tugs for use on the Mississippi River, so that increased water carriage may relieve the overpressure upon the railroads.

It has been decided that the Shipping Board and the Navy Department shall exercize a joint control over the personnel of the merchant service. The bulk of the vessels under the American flag, engaged in carrying ordinary merchandise, whether coastwise or transoceanic, will retain the character of merchantmen and will be manned by civilian sailors. Troopships and vessels carrying whole cargoes of munitions or other supplies for the army will be practically naval vessels and will be manned by naval crews. It is estimated that no

fewer than 58,000 officers and men will be needed effectively to man the new vessels which the Shipping Board expects to put into commission within the next twelve months. Any citizen between the ages of twenty-one and thirty-one, in good physicial and mental condition, will be eligible for this service, tho preference will be given to those who have already had experience at sea.

Join the Red Cross President Wilson on December 11 issued a proclamation urging all citizens to join the Red Cross, as a patriotic duty, and to do so during the "Drive Week," which comes to a climax at 7.30 on Christmas Eve, when every household should show in its window the Red Cross flag carrying a small red cross for every Red Cross member in the household. A candle in the window should illuminate the flag. On the cover of The Independent this week is the poster by which the Red Cross will urge forward this campaign. As President Wilson's proclamation said:

> You should join the Red Cross because this arm of the national service is steadfastly and efficiently maintaining the overseas relief in every suffering land, administering our millions wisely and well and awakening the gratitude of every people. Our conscience will not let us enjoy the Christmas season if this pledge of support to our cause and the world's weal is left unfulfilled.

Soliciting Unlawful The Supreme Court of the United States on December 10 rendered, by the divided yet emphatic vote of six to three, one of the most interesting decisions of recent time in the matter of disputes between labor and capital. Two concerns in West Virginia, the Hitchman Coal and Coke Company and the Eagle Glass Manufacturing Company, had established the "open shop" system, employing non-union labor. The labor unions thru walking delegates solicited the non-union men to join them and sought thus to unionize the establishments and then, thru strikes, to compel the proprietors to abandon the "open shop" system. The proprietors sought injunctions to restrain the unions from such soliciting, which were granted by Judge A. G. Dayton, of the United States District Court for the Northern District of that state. It was on an appeal against his decision that the case came before the Supreme Court, and his action was sustained and his injunctions were confirmed by the vote of six to three, as stated.

The Supreme Court recognized the right of workmen to form unions, and also the equal right of the proprietors to operate "open shops." It held that in this case the unions, in soliciting the men to join them, were not simply making a bona fide effort to increase their membership, but were doing it chiefly if not solely in order to compel the proprietors to change their method of doing business. Their "picketing" might be peaceful, and their solicitations of workmen might be void of violence or menace. But they were endeavoring to persuade the men to break the contracts which they had voluntarily made with their employers, in order to coerce the employers; and against such action the proprietors of the establishments were entitled to protection. It is obvious that general application of this principle in labor disputes will have far-reaching and important effects.

BY THE ROCKET'S RED GLARE

Signaling practise in the trenches. Rockets and flares are used to send messages at night

The Rockefeller Foundation The Rockefeller Foundation announced on December 10 that plans already approved involved the expenditure during 1918 of $5,050,000 for war work, and that additional enterprises now in contemplation might cause that sum to be doubled. The Foundation is generally devoting itself chiefly to the promotion of health and the advancement of medical education and research. During the war it is however, giving a large part of its resources to war relief and the welfare of American soldiers. The sum for war work named above will be administered chiefly thru the Red Cross, the Young Men's and Young Women's Christian Associations, the Jewish Camp Welfare the Training Camps Commission, etc. In addition the Foundation has appropriated for its regular work against yellow fever, malaria, hookworm, etc. the sum of $1,076,000; for the tuberculosis commission in France, $424,000; for medical colleges in China, $918,000; for grants to other medical schools, societies, etc., $627,657; and for instruction and research in America in medicine and physical and mental health $300,000.

THE WAR IN THE U. S. A.

An attack from the first line trenches of a training camp, where the soldiers are living and learning to fight under the same conditions as they must meet in France

FINANCING THE WAR
Your Job and Mine

BY F. A. VANDERLIP

As president of the National City Bank, New York, and of the New York Clearing House Association, Mr. Vanderlip has met large responsibilities and solved many difficult problems of national finance. He was at one time Assistant Secretary of the Treasury and has recently been appointed chairman of the National War Savings Committee. In "Financing the War: What Uncle Sam Is Doing," Mr. Vanderlip will continue his analysis of war finance in the next issue of The Independent.—THE EDITOR

THE financial problem is running into figures that none of us can understand, totals that none of us can appreciate. We have seen appropriations amounting to nearly $20,000,000,000, but we do not know what $20,000,000,000 means. We are beginning to learn one thing, however, about the war, and that is, it is not fought with appropriations, it is not fought with money, it is not fought with Treasury credits. It is fought with things, goods, with the productions of our industrial establishments plus an army. But the productions of our industrial establishments are absolutely necessary to the life and efficiency of that army, and so instead of measuring the size of this war in dollars, we must come to measure it in things to be produced.

We have some advocates of business as usual. You will hear men say that we must have prosperous times as a background to offer these vast loans, and that we ought to do all we can to keep all sorts of business going—going at as high a speed as possible. The business man says, even tho he is engaged in the luxury business, that he must live, and that the luxury business should go on in order that he may live. There are going to be a lot of people who go into this war who will not live, they are going into it to die, and it is not as important as that loss of life whether or not a business man lives or dies. When we comprehend that the whole manufactured output of this country is normally, let us say, $25,000,000,000: that now we must constantly produce goods entirely different in form to what we have been producing to a substantial proportion of $19,000,000,000—is it not obvious that we must stop producing some of the goods we have been producing?

When we entered this war there was a labor situation more favorable to labor than any situation we had ever had before in the country; fullest employment of labor that we had ever had and at the highest wages. But we imposed upon that labor situation the demand that it produce, let us say, twelve to fifteen times all the manufactured products. Now is it not obvious that we are demanding of labor something that it cannot perform if we are asking it to produce all these things that it has been producing, plus this new demand? There is the reason why we have got to practise economy. It is not that we must practise economy to save money to loan to the Government; the reason lies deeper than that. We must not employ labor to produce unnecessary things in competition with the Government's demand for labor. That, it seems to me, is the thing that we must all understand. No matter how much money you have in your pocket, no matter how well you are able to buy whatever you need, if you are buying an article that is not necessary to health and efficiency, you are employing labor in competition with the Government. Everything that is unnecessary ought to be questioned before we spend the money for it. If we can get along without it and maintain our health and efficiency, I think it is our patriotic duty to release the labor which would produce something for the purpose of the Government.

Now to the maker of luxuries that sounds pretty hard. I today had a delegation from the great jewelry houses come out to me in the country, and I want to say I was proud of those men. They were broad, they were patriotic, they were ready to make sacrifices, Now it is a little hard to see, let us say, how a jewelry manufacturer, or a jewelry artizan, is going to help win the war by being let out of his job when the greatest need of the country is for farm labor and for shipbuilders. But shortly there will be that transition. I do not mean that the artizan from the jewelry shop will become a farm laborer, but he will make, perhaps, some of the instruments that are to go on the 20,000 aeroplanes that we are making, or he may find work to do of some other sort—perhaps some far less highly skilled, but it will move on down by degrees and finally there will be an added man for the farm, or an added riveter in the shipyard. And it won't do to say we will wait until the demand takes these men. I think the men must be made to help fill the demand by first cutting down on the part of all of us for the demand for labor that is unnecessary. I said to these gentlemen today—if your stocks are sold and if there is an effective demand for more, you will fill it, won't you? And they said yes, they supposed they would, altho they cited instances where because of the great need for platinum material by the Government they had turned down orders calling for its use.

Secretary of the Treasury McAdoo and Mr. Vanderlip

We hear a good deal of talk about not interfering with the Christmas trade—that all these Christmas goods are made; that they are on the shelves; that to refrain from buying them will not release any labor. You clean those shelves and they will be filled again. It is only the full shelves that will reach back into the workshops and stop the wheels there. If the shelves are emptied, that private industry will come into competition with the Government.

I want to say something to you about the particular work that I am now engaged in, because I believe if it is properly presented to the public it is going to be a medium of teaching this lesson of thrift that the Government wants, this lesson of national economy, which will prevent every person, no matter what his personal economic position may be, from buying a thing which unnecessarily employs labor. The Secretary of the Treasury asked Congress to authorize an issue of War Savings Certificates. He had the experience of England, which had undertaken an issue of war saving certificates with very considerable success, and Congress was [*Continued on page 559*

IN A RED CROSS CANTEEN

BY GEORGE BUCHANAN FIFE

LITERARY EDITOR OF THE NEW YORK "TIMES"

A little band of refugees—old men, old women and wornout mothers with timid children

UPON a low platform a comedian, with reddened nose and plastered hair, his body squeezed grotesquely thin in a tailless dress coat and skin-tight trousers, grimaced and sang the adventuresome songs of the Paris "concerts." Beside him a pianist, whose head bobbed wildly over the keyboard, plucked out the merry accompaniments, now with an adroit pause in a verse and now with the meaningful emphasis of a strong, crashing chord.

And below, looking up thru the gray haze of cigaret smoke that drifted above their long table, three hundred French soldiers, each with an American flag stuck in his tunic, watched the singer with glistening eyes and rocked and roared in their mirth. They laughed at the battered silk hat on the back of his head, at the oily curl pasted on his forehead, at his spindly arms and legs and his too-big shoes. They nudged one another with rough jests.

"Ohé, mon p'tiot—sss?—that's the way you looked before you came into the army!"

"So much the better—it's the way you look now!"

They laughed at his songs with high, hearty laughter, and a hug of the nearest man or a prodigious slap on his back. When the comedian related, with many droll winks, just what happened when "Elle Bavardait Chez la Concierge," they banged on the table until they almost wrecked it. That was too good! They must have that one over again! "Bis! Bis! Bis!" So he sang it from the very beginning and after each verse they all joined in the chorus—whether they knew it or not. For what mattered a few wrong notes? They were happy, their belts were tight, they liked the song—why not sing it? They'd be too busy to sing tomorrow.

It was not easy to believe that these three hundred laughing men would be on the firing line within twenty-four hours. But here they were, from every arm of the military service, in the basement of the Gare du Nord, in Paris, awaiting the trains which would carry them back to the front and all its grim business of war. The canteen is open all the time, for there are seven trains a day from that station to take the men back to the front, but Thursday is the gala night.

With a singular sort of timidity, yet noisy in their heavy, hob-nailed boots, the first of these "poilus" had come to the canteen as early as half-past eight o'clock. They found that the long, narrow, low-ceiled room—once a luggage repository—had been transformed for them. A white-covered table, flanked by benches end to end, ran its entire length. Set out upon this were a regiment of "pinard" bottles—the red wine of the soldiers' rations—and battery after battery of sliced sausage and war bread and great mugs for coffee. Overhead, from light to light, hung paper festoons of the tricolor and on every pillar the shield of the French Republic crested by a stand of the Allied flags with the American ensign and the Geneva Cross at the center. It was bright and cheerful and undeniably a pleasant place to come to before leaving Paris.

This, and the repeated invitation, "Come, it's all ready—sit anywhere you wish," from Madame Courcol and the staff of Red Cross volunteers, soon had the soldiers slipping out of their dusty, worn accouterments and jostling one another shyly to the benches. The first squad was quick to discover the platform and the piano opposite the center of the table, and here the men crowded together, jesting themselves into ease.

The "pinard," the sausage and bread and innumerable cups of coffee went their inevitable way with a soul-cheering swiftness. An invading army could have done no better. Then came the cigarets and the singing and the uproars of laughter and applause.

To aid in the godspeeding "on their way up again" of these already tried soldiers, many of the best known singers of the Paris "café-concerts" have volunteered their services. The musical program was quite as informal as the supper and it began the moment the cigarets were lighted. Madame Courcol, in the gleaming white frock and nun-like headdress of the French war nurse, slipt away for an instant from the table where she had been urging the men to eat "just one more sausage sandwich," and waved a hand to Bergeret. He sprang upon the platform, gave a flourishing nod to the pianist and burst into "Son Clairon," the infantry bugle song which is known in the French camps from St. Quentin to Belfort.

The opening bars brought a clatter of applause which the pianist answered with a series of laughing nods as he peeped over the piano at the singer. And as Bergeret caught up the hearts of the men they began to mark time to his notes, first with heads and hands, and finally with their glasses, anything they could pick up, but never so loudly as to mar the song. It was that they could not sit still with the bugle calling to them. And when the song ended there was a hurricane of applause and then the rhythmical clapping in threes, which is the French for "What's the matter with Bergeret? He's all right."

In a well-timed moment between songs, a number of the canteen workers distributed among the men big basket loads of Red Cross "surprize bags." These were just what their name implies, small sacks of bright-colored stuff, each containing a pipe, a packet of tobacco, cigarets, soap, a wash-cloth, needles and thread and pins and some buttons on a string—by no means an unwelcome companion at the front. There was much joking among the men as they dove into their bags to discover what they held.

There was no gainsaying the enjoyment of the men. It was a night of rare mirth for them; the singing of songs they knew, the drolleries of their "concert" favorites—two hours of easy contentment and laughter. Yes, above all, the laughter.

And that is one side of the Thursday night canteen in the basement of the Gare du Nord.

AT the upper end of the long, bright room, where many of the soldiers had shouldered off their dusty gear as they shuffled in, an obscure, half-opened doorway gave entrance to another and much smaller gathering place.

Thru this narrow opening, as the evening grew, the smoke of the countless cigarets drifted in in a bluing mist, and with it all the mirth and clamor of the men. It bore the rollicking songs, the beat and ring of the piano, the uproar of laughter and applause as a tangible, pervading thing. It deepened the shadows on floor and wall—and on the faces of those who sat so still, so unconcerned upon the benches there.

For these were a little band of ref-

ugees from Dunkerque; old men, old women and wornout mothers with timid wondering children. They had straggled back from their war-ridden city—three hundred of them once in a single day—bound for "somewhere else in France"—anywhere that they might find a home-place and peace. That there were no young men among them is the war's own story.

Here they were, stopping to set down their wearying packs, to have food and light and warmth—the North Sea winds are cold in autumn—to have such medical care as they might require, to get good milk for their babies, and to rest for a night, for as many nights as they wished, before taking up their journeyings again.

Nor was this all. At a high counter enclosing a bank of shelves just beyond their doorway, a "vestiaire" and his assistants were constantly on duty to supply them and their children with what they might need of stout shoes and stockings and underwear. The needs of many were pitiful. One woman, large and heavily built, had traveled all the way from Dunkerque, nearly a day's journey it had been, in a pair of fancy evening slippers—a gift at starting—into which she had not been able to get her heels.

THE greatest surprize that awaits these refugees—and it's all a surprize from beginning to end—is the gift to each mother of five francs for every child of hers with her. They do not quite understand this, nor even the explanation that it comes from an American woman who is doing many things in humanity's name in France. Life has been so hard for them that unusual and specific consideration, when all France is in need, seems to puzzle their tired heads and they just give it up. And on this Thursday night, when they had stumbled in upon the weekly canteen entertainment, there was the noise of music and laughter—of all things laughter! There had been no laughter in Dunkerque.

In dingy mounds along the walls of the room where they were gathered, lay such of their belongings as they had been able to cling to and carry away with them. These were mainly packs of clothing, and in the smoky dimness of the place, grewsomely suggestive of the distorted bundles that the brancardiers bear back out of No Man's Land at night.

Here the refugees were having their big sausage sandwiches, their "pinard" and beer and coffee, but they took them all in a dazed sort of silence. When they talked together it was in little groups in undertones. Many of them constantly glanced toward the narrow doorway as if they expected to see some one or something come in. The old women sat with their thin hands idle in their laps, their old men silent beside them. Only the children made noises as they crept inquisitively about, daring even to peep out at the tumult and laughing beyond.

Suddenly from the back of the room came a shrill cry of complaint, the cry of a child. It made a loud, disturbing noise in that quiet room, but not a soul turned to see what it was all about. The mother, after futile efforts to quiet her baby, got up and with her two other children trailing after her skirts, began pacing up and down.

There was as much of apology as distress upon her drawn face as she said to one of the Red Cross men at the doorway, hugging her dirty, noisy little bundle to her breast, "He doesn't often cry like this. He's tired."

When the man offered a bit of chocolate as a cureall, the child, a mite of two, turned about, gazed in silence at the sweet and reached for it. As the grimy little paw closed over it the mother looked up with a quick brightening of her eyes.

"Thanks, Monsieur; that's the first candy he's ever had."

In sore straits most of the refugees come to the railway station. Few have more than a meager roll of clothing, a railway ticket and a dozen copper coins. Some have even less, with a brood of children into the bargain. One woman, and she was only forty-three years old, had seven daughters with her and the eldest daughter had her two children.

"Where are we going? To the Midi, where it's quiet and sunny. I've no husband any more. My daughter, here, her man is in a hospital at Bordeaux with a leg gone. He'll come after a while. There must be a home ready for him by that time, you know, Monsieur."

A tremendous clamor in the big outer room cut her short. Hamel, of the "Petit Casino," had come upon the platform and three hundred soldiers were demanding at the top of their lungs that he sing "Ils Ne Passeront Pas!" the song which commemorates the cry of the defenders of Verdun in the red days of 1916.

The woman with the many daughters must have heard the outburst and the beginning of the song. But she turned away from the doorway without the least interest in any of it and went back to her bench. So far as she was concerned, they had already passed!

AS soon as Hamel began, the great room was hushed. The soldiers sat in their places. Not a man moved. Then came the chorus:

Ils n'pass'ront pas!
On les aura, ils n'pass'ront pas!
Nos poilus resolus sont trop braves.
Les Français n's'ront jamais esclaves
Les têt's de Boch's aux appetits cruel et bas.
Ils n'pass'ront pas!
On les aura, ils n'pass'ront pas!
Le succès est forcé pour nos armes,
Français oublions nos alarmes
On les aura,
Ils n'pass'ront pas!!

The singer, with head aloft and hand out-flung, for one moment held them still.

Ils n'pass'ront pas!

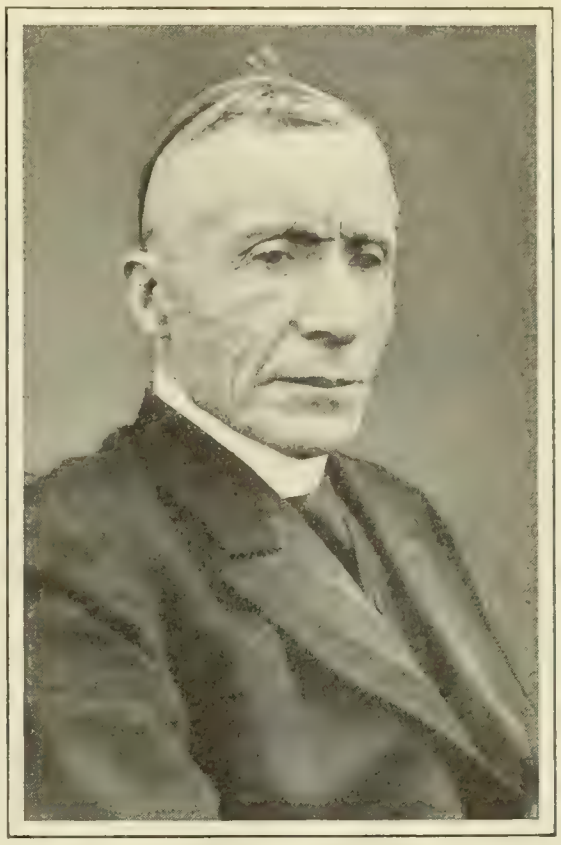
It was the determination, the defiance, the very soul of France—their France! And with a mighty roar they rose to it—three hundred of them, soldiers all—and the room semed quite too small to hold so prodigious a sound. The bottles and the bread-crusts danced upon the table. It was all Hamel could do to get to the second verse. Then came another outburst, and this time, and third also, the soldiers sang the chorus with him, shouting with one mighty voice the last line of it, which is spoken without accompaniment. It is a challenge which stirs one to the heart.

But the refugees in their little room were apart from it all, sitting in their bent groups and either talking in their endless undertones or staring, silent, at the floor. Two or three of the less timid children were playing about the table legs.

Madame Courcol, standing with the Red Cross squad at the end of the long room, glanced at her watch.

"It's all very wonderful, isn't it?" she asked. "It's good to send them up in that spirit. But we must get them out now, it's half-past ten. We have our refugees to put to bed. Oh, yes, they sleep here in this big room every night after the soldiers have gone. [*Continued on page 571*

Looking up thru a gray haze of cigaret smoke three hundred poilus roared with mirth



WORKING TOGETHER FOR GOOD

BY JAMES CARDINAL GIBBONS, ARCHBISHOP OF BALTIMORE

AFTER the Bible, the study of mankind is the most important and instructive pursuit for any one. The first step toward the accomplishment of this noble aim is to obtain a thoro knowledge of man, his springs of action, his yearnings and desires, his passions and emotions, his vices and temptations, and the arguments and motives, as well as the means that are best calculated to promote his spiritual progress. From this study of mankind we can derive the advantage of the habit of moderation in our judgment of human beings.

This study is equally necessary to statesmen and lawyers as well as to ministers of the Gospel, to say nothing of other callings. The secret of O'Connell's influence over the people of Ireland was that he had sprung from the peasantry, had lived among them, knew their grievances and aspirations. Napoleon, tho a poor shot, was the greatest general of his age. He said with truth of himself: "I know man." President Wilson, who now directs the destinies of our beloved country, is a man of strong faith, virility of soul, genuine charity, magnanimity of character. But no man is exempt from some of the imperfections incident to humanity. The public man who has never committed an error of judgment, or who was never betrayed into any delinquency, will hardly ever be credited with words or deeds worthy of being transmitted to posterity.

I have lived a longer time than almost any man now in public life. It must be very difficult for the present generation to reconstruct for themselves the world into which I was born, things are so completely changed. The Napoleonic wars were still a living memory. Many people who were by no means old when I was a boy had seen General Washington, and when I was ten years old men who were as old then as I am now were fourteen years of age at the time of the Declaration of Independence. Slavery was in existence in the Southern states, and was to remain in existence until I was a grown man and a priest. Machinery was just coming into use, but nobody dreamed of the extent to which it would be employed later on. Electricity in all its uses was almost undreamed of. Men knew from the experiments of Benjamin Franklin that it might possibly be used, but the telegraph, telephone and electric light had still to come. Railroads were a new invention. The Catholic Church, both in England and in this country, was a small and very deprest body. I was eleven years old when Newman became a Catholic. Those two great movements which were to spread Catholicism so marvelously thruout the English-speaking world—I mean the exodus of the Irish people after the famine and the entrance of a large body of Anglicans into the Catholic Church—were still to come. In short, I may say that when I

CARDINAL GIBBONS

was a young man we were still living on the legacy of the eighteenth century.

The inventions of the age have been beneficial by opening up new lands and by making transit easy and rapid, thus recalling some of the conditions which conduced to the original spread of the religion of Jesus.

Being a genuine and world-wide religion, Catholicism could not but come into contact with the powers in which rests the social authority. The Catholic Church, by her own constitution, is deeply sympathetic with our national life and all that it stands for. She has thrived in the atmosphere of liberty, that equal justice which is dealt out to all. She is the oldest historical and *continuous* government on the earth, and it is no small index of the value of our institutions and their durability that they make provision for the life and the work of so vast and so aged a society. It would also seem to show that, thru a long course of centuries, Catholicism held as its own genuine political teachings only such as were finally compatible with the most perfect and universal citizenship known to history.

AT the present time, during these days of the gravest problems that have ever weighed upon our American Government, to achieve those ideals of justice and humanity which compelled our entrance into the war, guided, as we are, by the sublime teachings of Christianity, we have no other course open to us but that of obedience and devotion to our country. One may easily see the folly and grave disobedience of unjust and ill-tempered criticism of national policies. We must bend our efforts to point out to our fellow men that they in all probability see the present situation from only one angle, whereas the Government sees it from every viewpoint, and is therefore alone in the position to judge of the expediency of national affairs.

I say this because the Church is a bulwark of American democracy. It stands for law and order, for liberty, for social justice, for purity. It works for the loyal observance of the Constitution and obedience to the Government. It seeks to make better citizens, to destroy civic corruption, to spread the doctrines of right living and right thinking.

The time has come for all to think, to act, to work together. This means especially with reference to Capital and Labor. Reports come from time to time of dissatisfaction between employees and employers.

Inspired by sincere affection for the hardy sons of toil, and with an earnest desire for their welfare, I address to them a few words.

YOUR country needs you, now more than ever. If Capital be in the wrong, please remember that wartime laws are in operation which amply protect the workman from obvious injustice. I advise the worker to cultivate a spirit of industry and rely upon the sympathy of the President, whose heart is always with him. It would be a vast stride in the interests of peace and of the labor classes if the policy of arbitration were more fully availed of for the adjustment of disputes between employers and employees. Many blessings would result from the adoption of this method; for, while strikes, as the name implies, are aggressive and destructive (and at the present time might affect the success to our arms and struggle), arbitration is conciliatory and constructive. The result in the former case is determined by the weight of the *purse*, in the latter by the weight of the argument.

The Catholic Church has always been the staunch, unwavering friend of the working classes. Ever since the Reformation, the relations between capital and labor became more and more contrary to the principles of the Gospel, so that eventually labor unions were recognized as lawful by the Holy See. The Saviour of mankind never conferred a greater temporal blessing upon mankind than by ennobling and sanctifying manual labor, and by rescuing it from the stigma of degradation which had been branded upon it.

Do not let us forget that the Church has ever been the protector of free industries, and as she has changed the absolute monarchies of the old Roman Empire and indeed the later monarchies of the middle ages, as she changed the Roman Insula generally with its hordes of slaves into the medieval town, so now would she enfranchise the working classes.

Obedience is not an act of servility we pay to man, but an act of homage we pay to God.

Baltimore, Maryland

CHRISTMAS EVE IN FRANCE

BY JESSIE FAUSET

Oh little Christ, why do you sigh
As you look down tonight
On breathless France, on bleeding France,
And all her dreadful plight?
What bows your childish head so low?
What turns your cheek so white?

Oh little Christ, why do you moan,
What is it that you see
In mourning France, in martyred France,
And her great agony?
Does she recall your own dark day,
Your own Gethsemane?

Oh little Christ, why do you weep,
Why flow your tears so sore
For pleading France, for praying France,
A suppliant at God's door?
"God sweetened not my cup," you say,
"Shall He for France do more?"

Oh little Christ, what can this mean,
Why must this horror be
For fainting France, for faithful France,
And her sweet chivalry?
"I bled to free all men," you say,
"France bleeds to keep men free."

Oh little, lovely Christ—you smile!
What guerdon is in store
For gallant France, for glorious France,
And all her valiant corps?
"Behold I live, and France, like me,
Shall live for evermore."

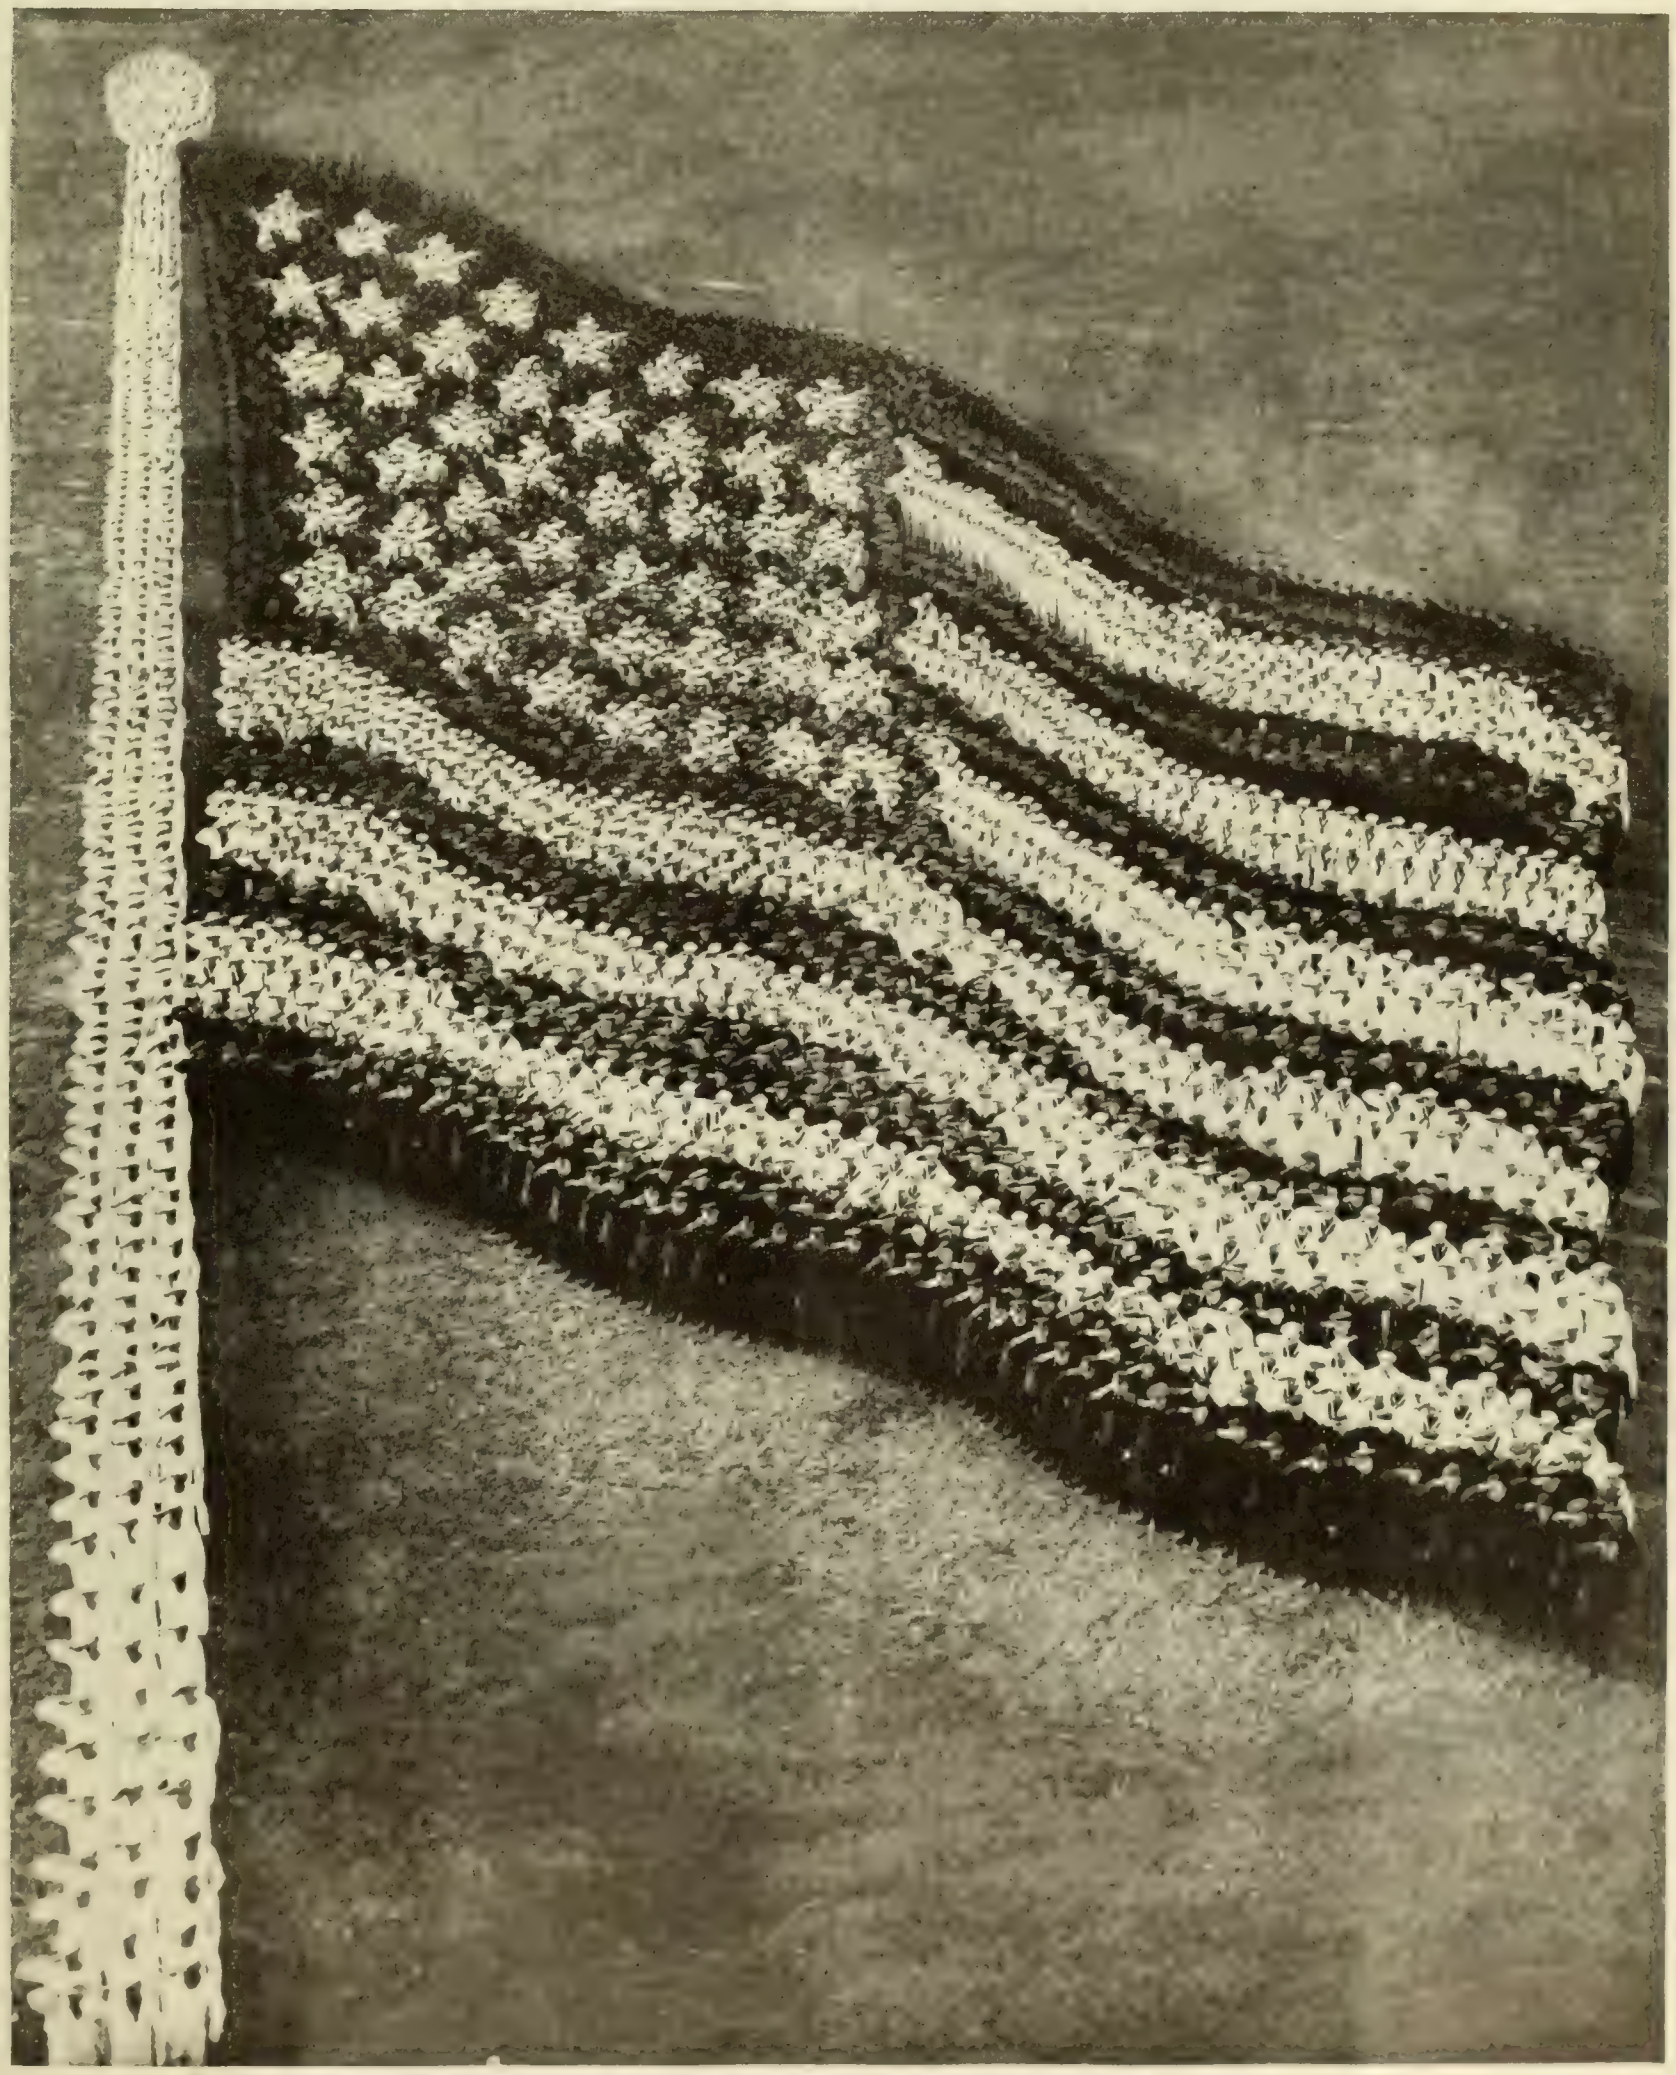
WHAT RUSSIA WANTS

BY SAMUEL N. HARPER

Professor Harper's interpretation of the Russian revolution, begun in The Independent of December 15, is based on an unusually thoro knowledge of the situation and its background. He was sent to Russia in 1916 by the University of Chicago to carry on research work for the department of Russian language and institutions. Since his return to this country Professor Harper has been translator for the missions sent to Russia by the American Government—THE EDITOR

THE Russian Revolution was interpreted as promising a more effective prosecution of the war. This was the correct interpretation, emphasized in all the official statements issued by the leaders of the Revolution of March. The Tsar was overthrown so easily because the country was in danger, and he had been unable to unite the country for defense. It was thought that the "internal enemy"—German intrigue—had been defeated by the Revolution. "Now we must, now at last we can defeat the external enemy," was one of the slogans of the Revolution during the first period.

But the Revolution also represented the revision of everything—of all institutions, of all social values, and also of war aims. Only a few months before the Revolution the Russian Government had announced in the Duma the Allies' agreement that Russia take possession of Constantinople at the final settlement. At that time the attitude among most liberals, both in and outside Russia, was favorable to this acquisition of territory by Russia. One recognized Russia's need of an outlet. Also one felt that the Turks had at last forfeited any right to a place in Europe, ruling over Christians, and that this strategic position should be taken from them. Professor Milyoukov, the first Foreign Minister of Revolutionary Russia, was a strong champion of Russia's claim to Constantinople. The majority of his party, the largest and strongest liberal party of Russia, supported their leader on this point. As Foreign Minister in the new Provisional Government, Milyoukov emphasized this claim, and he announced that the new Russia would consider itself bound to its allies under the treaty obligations entered into by the Government of Nicholas II.



This public, official announcement of attitude toward existing obligations was necessary. But it naturally raised the question: What exactly are these obligations? The more radical Socialists demanded the publication of all treaties. The abolition of secret diplomacy has often been urged, and by many serious and responsible thinkers. Here was an attempt to put into actual practise a theory so frequently advocated. But could such a step be taken at that particular moment? Milyoukov did not believe that it could, and he refused to demand of the Allies that they throw their cards on the table. Milyoukov was the man who had exposed the German intrigue that was permeating the old Government and many fields of Russian life. He knew that this intrigue had not been completely eliminated. The demand that the cards be thrown on the table was an honest appeal in the case of many who supported it. It could not be complied with under existing circumstances. Milyoukov believed that the Germans would be able to take an unfair advantage of such a step.

In order to show that they were sincere the Socialists of Russia demanded that Russia relinquish all claim to Constantinople, and free the Allies of any promise they had made to the former Russian Government with regard to Constantinople. Milyoukov issued an official statement, which seemed to indicate that Russia had definitely given up her century-long aspiration to control this outlet. This announcement, tho somewhat vague and open to a broader interpretation, was a blow to many Russians, who understood it as a definite and final relinquishment. One writer compared the act to the refusal of a drink by a man dying from thirst. For these Russians had thought that it was clear to every one, especially to all Russians, that Russia required this outlet. But one must interpret the desire to give up all claim to Constantinople in terms of the Revolution. It indicated first of all a desire to terminate the war—victoriously of course—as early as possible, so that the conquests of the Revolution could be consolidated and its fruits enjoyed. In the second place it was a statement of the unselfish, non-imperialistic aims of the new, revolutionary Russia. Finally, perhaps the German intrigue, still at work in Russia, had a hand in this matter.

THE PEACE FORMULA

UNDER the pressure brought to bear by the Socialists, Milyoukov resigned. The Socialists continued to insist on a definite and public formulation of the war aims of the Allies, in order to eliminate any possibility of secret treaty obligations. After the resignation of Milyoukov a coalition government was formed including a group, tho a minority, of Socialists with the Socialist Kerensky transferred to the more important ministry of war. This second Provisional Government issued a statement, in which the Russian formula, "No annexations and no contributions," appeared for the first time in an official document. For weeks, in fact almost from the first days of the Revolution, this expression had been used and discussed in [*Continued on page 568*

NEWS-PICTORIAL

© *Great Lakes Recruit, from International Film*

WHEN SAILORS STAND UP FOR THE STARS AND STRIPES

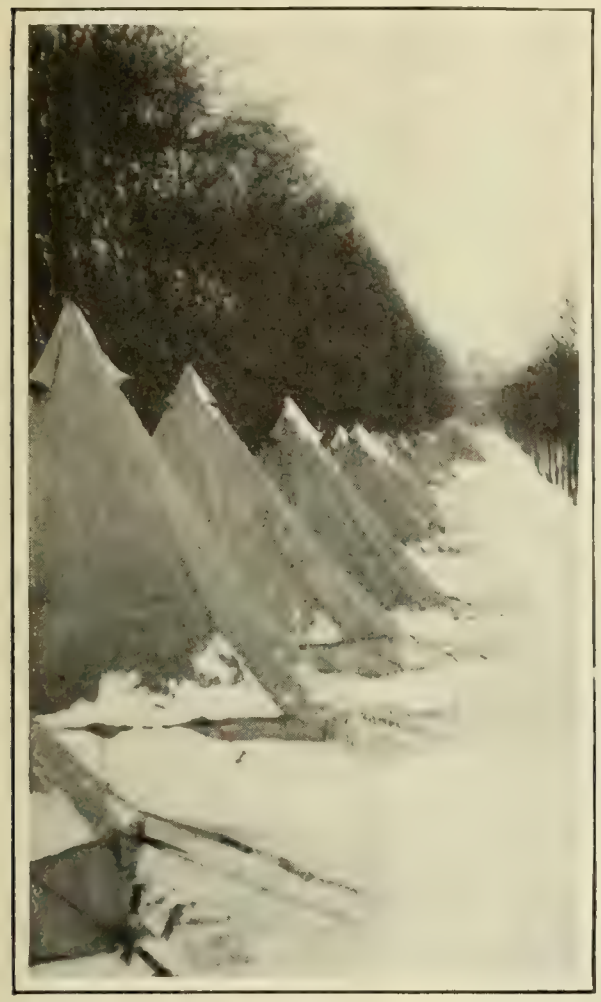
This flag, photographed from a naval biplane, is made by ten thousand recruits at the Great Lakes Naval Training Station

WHERE THE "IMO" AND "MONT BLANC" COLLIDED

This photograph, taken from the Halifax side, shows the immediate effects of the explosion which was felt for a radius of sixty miles and caused the death of about two thousand people. The "Mont Blanc" is buried under the debris in the foreground and the Belgian relief ship is lying on the opposite shore

ONE OF FOUR THOUSAND HOMES

This house fared better than most. It stands high on the hill and a group of women were there watching the burning boats when the explosion came



THE BREAD LINE OF HALIFAX REFUGEES

Twenty-five thousand people suddenly deprived of their homes had to be fed and cared for by the city authorities of Halifax. A relief depot was established in the Armory where those who could came for supplies. The children above are provisioning their families

IN HALIFAX

A blizzard increased the horrors of the Halifax disaster by hindering the work of rescuers, delaying relief trains and adding bitter cold and snow to the sufferings of the homeless. Six hundred army tents were hurriedly pitched on the city common to give what little shelter they could to the survivors

Photographs © International Film

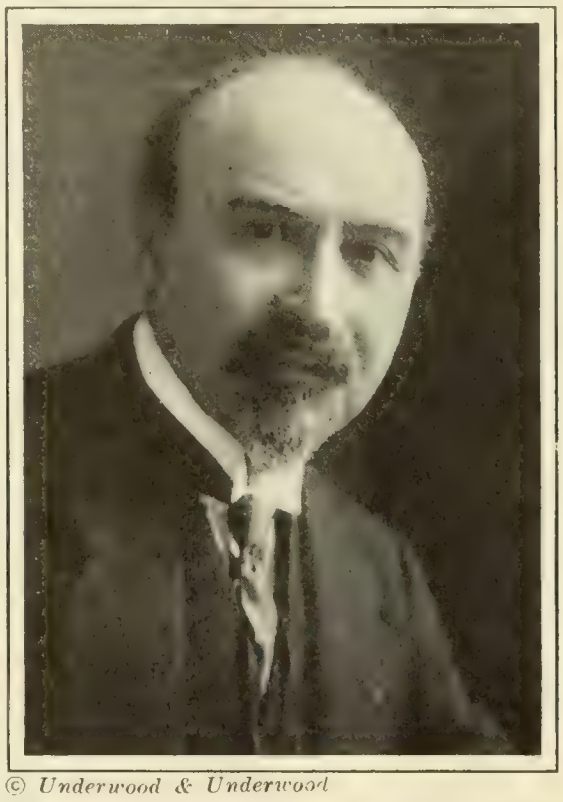
PREMIER BORDEN WATCHING THE RESCUE WORK

Sir Robert Borden, Prime Minister of Canada, is at the extreme right of this photograph, which shows a group of the rescuers who are still recovering bodies from the Halifax ruins. Canadian soldiers and American "Jackies" aided by citizen volunteers have done most of the work of digging in the mass of wreckage for victims of the explosion. In one schoolhouse where there were five hundred and fifty children only seven escaped. One of the miracles was the rescue of a little child and a puppy, who were found, both uninjured, in a room, the walls of which had remained intact, altho the rest of the house had collapsed. They had been there two whole days without food. The child, snuggled up close to the dog, was near exhaustion from cold, hunger and fear

THE DEVASTATED DISTRICT OF RICHMOND

More utterly demolished than any section of Belgium or France, this two mile area was shattered by the explosion and then swept by fire. The people in their homes were either crushed under the debris or were burned to death, almost without a chance of escape

CREATIVE CHEMISTRY

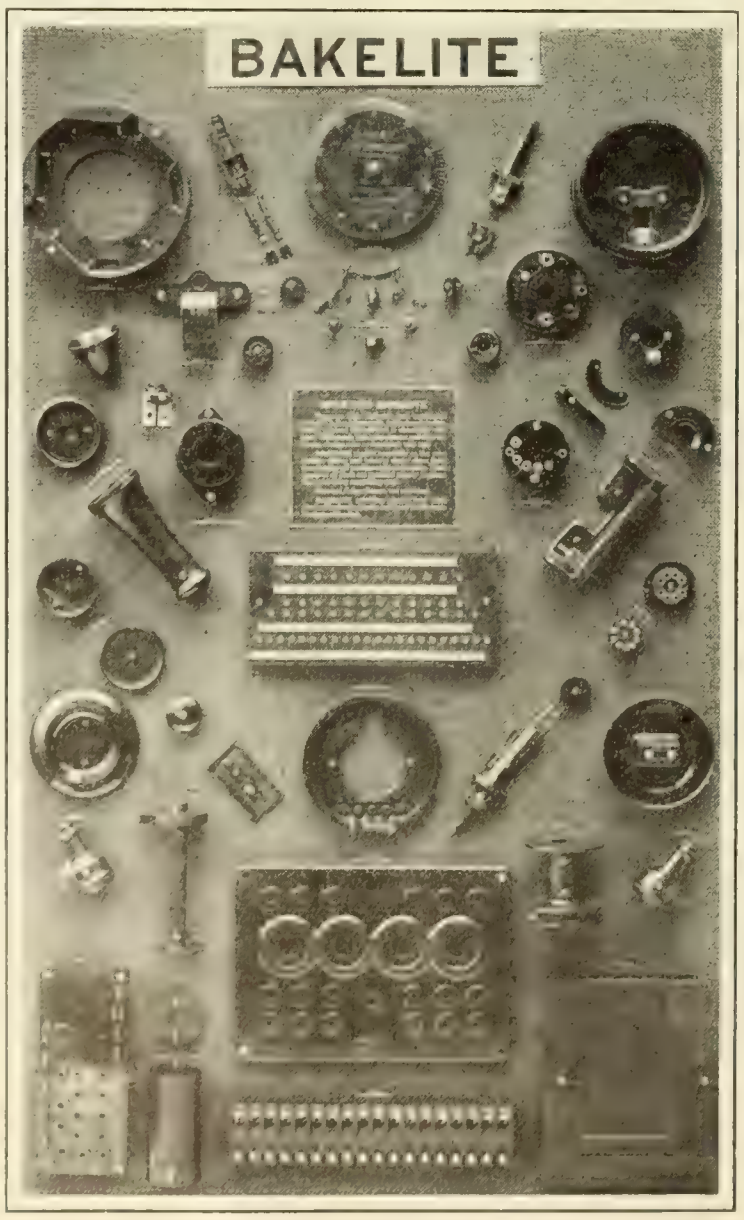


A Popular Explanation of Recent Progress in Chemical Industries

BY EDWIN E. SLOSSON

PLASTICS AND ELASTICS

IN my last article I told how Alfred Nobel cut his finger and daubing it over with collodion was led to the discovery of high explosive dynamite. I remarked that the first part of this process—the hurting and the healing of the finger—might happen to anybody but not everybody would be led to discovery thereby. That is true enough, but we must not think that the Swedish chemist was the only observant man in the world. About this same time a young man in Albany, named John Wesley Hyatt, got a sore finger and resorted to the same remedy and was led to as great a discovery. His father was a blacksmith and his education was confined to what he could get at the seminary of Eddytown, New York, before was sixteen. At that age he set out for the West to make his fortune. He made it, but after a long, hard struggle. His trade of typesetter gave him a living in Illinois, New York or wherever he wanted to go, but he was not content with his wages or his hours. However, he did not strike to reduce his hours or increase his wages. On the contrary, he increased his working time and used it to increase his income. He spent his nights and Sundays in making billiard balls, not at all the sort of thing you would expect of a young man of his Christian name. But working with billiard balls is more profitable than playing with them—tho that is not the sort of thing you would expect a man of my surname to say. Hyattt had seen in the papers an offer of a prize of $10,000 for the discovery of a satisfactory substitute for ivory in the making of billiard balls and he set out to get that prize. I don't know whether he ever got it or not, but I have in my hand a newly published circular announcing that Mr. Hyatt has now perfected a process for making billiard balls "better than ivory." Meantime he has turned out several hundred other inventions, many of them much more useful and profitable, but I imagine that he takes less satisfaction in any of them than he does in having solved the problem that he undertook fifty years ago.



The reason for the prize was that the game on the billiard table was getting more popular and the game in the African jungle was getting scarcer, especially elephants having tusks more than 2 7/16 inches in diameter. The raising of elephants is not an industry that promises as quick returns as raising chickens or Belgian hares. To make a ball having exactly the weight, color and resiliency to which billiard players have become accustomed seemed an impossibility. Hyatt tried compressed wood, but while he did not succeed in making billiard balls he did build up a profitable busness in stamped checkers and dominoes.

© *Underwood & Underwood*

Mr. Backeland invented velox and bakelite

Setting type in the way they did it in the sixties was hard on the hands. And if the skin got worn thin or broken the dirty lead type were liable to infect the fingers. One day in 1863 Hyatt, finding his fingers were getting raw, went to the cupboard where was kept the "liquid cuticle" used by the printers. But when he got there he found it was bare, for the vial had tipped over—you know how easily they tip over—and the collodion had run out and solidified on the shelf. Possibly Hyatt was annoyed, but if so he did not waste time raging around the office to find out who tipped over that bottle. Instead he pulled off from the wood a bit of the dried film as big as the thumb nail and examined it with that " 'satiable curtiosity," as Kipling calls it, which is characteristic of the born inventor. He found it tough and elastic and it occurred to him that it might be worth $10,000. It turned out to be worth many times that.

Electrical fixtures and other objects made of bakelite

Collodion, as I have explained in previous articles, is a solution in ether and alcohol of guncotton (otherwise known as pyroxylin or nitro-cellulose), which is made by the action of nitric acid on cotton. Hyatt tried mixing the collodion with ivory powder, also using it to cover balls of the necessary weight and solidity, but they did not work very well and besides were explosive. A Colorado saloon keeper wrote in to complain that one of the billiard players had touched a ball with a lighted cigar, which set it off and every man in the room had drawn his gun.

The trouble with the dissolved guncotton was that it could not be molded. It did not swell and set; it merely dried up and shrank. When the solvent evaporated [*Continued on page 558*

Remarkable Remarks

GEORGE M. COHAN—New York is all right.

IRVIN S. COBB—I am an abandoned farmer.

JOHN D. ROCKEFELLER, JR.—God always keeps his promises.

CARDINAL GIBBONS—The needle is mightier than the sword.

DAVID LLOYD GEORGE—Of the submarine I have no longer any fear.

KATE DOUGLAS WIGGIN—Armies are not recruited from boarding houses.

PRESTON M. NOLAN—The big things of life are never done by a fussy man.

SECRETARY MCADOO—Uncle Sam is the best debtor on the face of God's earth.

LADY DUFF-GORDON—I have seen a diamond tiara worn with a badly cut gown.

AMBASSADOR JUSSERAND—Long live the generous United States, the friend to France.

DR. CHARLES E. JEFFERSON—Without the shedding of blood there is no remission of sins.

WILLARD WATTLES—I never knew how small the world was till I put my arms around it.

BILLY SUNDAY—Charlie Chaplin, with his cane and mustache, is worth the $600,000 he gets.

ELIHU ROOT—So long as military autocracy continues, democracy is not safe from attack.

CHANCELLOR J. H. KIRKLAND—Young ladies have no longer any right to wear silks and satins.

ED. HOWE—The name of Ty Cobb does not appear in Who's Who in America. What do you know about that?

EX-AMBASSADOR GERARD—It is a fact that prosperous merchants in Berlin before the war had seven meals a day.

WINSTON CHURCHILL—We have become the most conservative of the nations of the western world, we once were the most radical.

EX-AMBASSADOR MORGENTHAU—There are less than one hundred men in America who are capable of thinking internationally.

GABRIELLE D'ANNUNZIO—Yesterday America was a great material mass blinded by wealth, today it is a spiritual glory, ardent and militant.

GEORGE BERNARD SHAW—Do not suppose you are fighting to punish the Germans for being wicked. They are wicked, being human, but no wickeder than you.

JANETTE Y. NORTON—In stuffing a chicken it should not be filled to the bursting point as the dressing will swell and if it bursts it gives a most untidy appearance to the fowl.

DAVID BELASCO—The women who have come under my direction and listened well with their eyes have invariably been the ones who have climbed to the hight of their profession.

CHANCELLOR VON HERTLING—The German Government is not autocratic and the experiences of the last three years have not shown that the democratic system is preferable.

WILLIAM T. HORNADAY—Germany now resembles a rat in a pit—furious from countless defeats, insane with baffled hate and rage and wild with a fearful certainty of her finish.

AUSTIN HARRISON—If Alsace-Lorraine is ultimately handed over to France, we shall have to maintain conscription, and probably an army of at least 500,000 men permanently in France, ready for all emergencies.

EX-AMBASSADOR GERARD—The bodies of the men killed in the war, if laid head to heel, would reach from New York to San Francisco, from San Francisco back to New York, and back again as far as Kansas City.

Safeguarding the Public's Health

FOUR thousand workers are employed and three hundred and eighty-three yards maintained by the Pullman Company throughout the country, for the cleaning of the cars, and stocking them with fresh supplies.

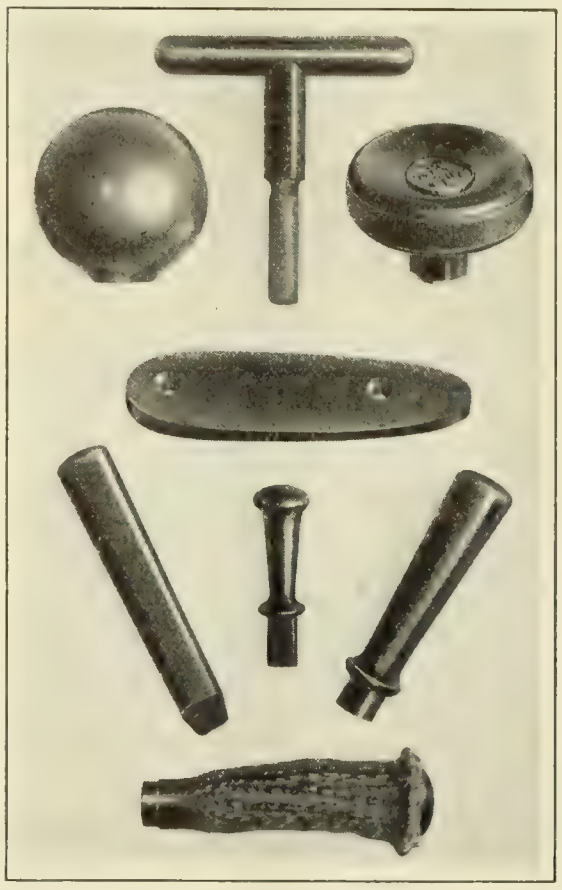
At the end of every trip all seats and cushions are unlimbered, and every cranny is vacuum cleaned. Mattresses, blankets and pillows are hung in the open air and sunlight. All used linen is removed and fresh linen neatly stocked; water coolers are sterilized with steam; the washrooms are cleansed with disinfectant solution.

At frequent intervals carpets are removed and renovated and the monolithic floor thoroughly scrubbed; the walls and ceilings are washed with soap and water. The polished steel interior of a Pullman is easily kept clean, and cannot shelter germs. Thorough fumigation is given every car regularly.

The laundering of bed linen and blankets is done according to the most exacting standards; the smallest permanent stain or scorching causes them to be discarded. Mattresses, pillows, and all upholstery are frequently emptied and their contents renovated.

There is probably no other public place where health and cleanliness are more vigilantly guarded than in the Pullman car.

THE PULLMAN COMPANY
Chicago



it left a wrinkled, shriveled, horny film, satisfactory to the surgeon but not to the man who wanted to make balls and hairpins and knife handles out of it. In England Alexander Parkes began working on the problem in 1855 and stuck to it for ten years before he, or rather his backers, gave up. He tried mixing in various things to stiffen up the pyroxylin. Of these camphor, which he tried in 1865, worked the best, but since he used castor oil to soften the mass articles made of "parkesine" did not hold up in all weathers.

Another Englishman, Daniel Spill, an associate of Parkes, took up the problem where he had dropt it and turned out a better product, "xylonite," tho still sticking to the idea that castor oil was necessary to get the two solids, the guncotton and the camphor, together.

But Hyatt, hearing that camphor could be used and not knowing enough about what others had done to follow their false trails, simply mixt his camphor and guncotton together without any solvent and put the mixture in a hot press. The two solids dissolved one another and when the press was opened there was a clear, solid, homogeneous block of—what he named—"celluloid." The problem was solved and in the simplest imaginable way. Tissue paper, that is, cellulose, is treated with nitric acid in the presence of sulfuric acid. The nitration is not carried so far as to produce the guncotton used in explosives but only far enough to make a soluble nitrocellulose or pyroxylin. This is pulped and mixt with half the quantity of camphor, prest into cakes and dried. If this mixture is put into steam-heated molds and subjected to hydraulic pressure it takes any desired form. The process remains essentially the same as was worked out by the Hyatt brothers in the factory they set up in Newark in 1872 and some of their original machines are still in use. But this protean plastic takes innumerable forms and almost as many names. Each factory has its own secrets and lays claim to peculiar merits. The fundamental product itself is not patented, so trade names are copyrighted to protect the product. I have already mentioned three, "parkesine," "xylonite" and "celluloid," and I may add, without exhausting the list of species belonging to this genus, "viscoloid," "lithoxyl," "fiberloid," "coraline," "eburite," "pulveroid," "ivorine," "pergamoid," "duroid," "ivortus," "crystalloid," "transparene," "litnoid," "petroid," "pasbosene," "cellonite" and "pyralin." The last, manufactured by the Dupont de Nemours Company, has become as well known as Hyatt's original "celluloid."

Celluloid can be given any color or colors by mixing in aniline dyes or metallic pigments. The color may be confined to the surface or to the interior or pervade the whole. If the nitrated tissue paper is bleached the celluloid is transparent or colorless. In that case it is necessary to add an antacid such as urea to prevent its getting yellow or opaque. To make it opaque and less inflammable oxides or chlorides of zinc, aluminum, magnesium, etc., are mixt in.

Without going into the question of their variations and relative merits we may consider the advantages of the pyroxylin plastics in general. Here we have a new substance, the product of the creative genius of man, and therefore adaptable to his needs. It is hard but light, tough but elastic, easily made and tolerably cheap. Heated to the boiling point of water it becomes soft and flexible. It can be turned, carved, ground, polished, bent, prest, stamped, molded or blown. To make a block of any desired size simply pile up the sheets and put them in a hot press. To

A few of the things made of condensite

get sheets of any desired thickness, simply shave them off the block. To make a tube of any desired size, shape or thickness squirt out the mixture thru a ring-shaped hole or roll the sheets around a hot bar. Cut the tube into sections and you have rings to be shaped and stamped into box bodies or napkin rings. Print words or pictures on a celluloid sheet, put a thin transparent sheet over it and weld them together, then you have something like the horn book of our ancestors, but better.

Nowadays such things as celluloid and pyralin can be sold under their own name, but in the early days the artificial plastics, like every new thing, had to resort to *camouflage*, a very humiliating expedient since in some cases they were better than the material they were forced to imitate. Tortoise shell, for instance, cracks, splits and twists but a "tortoise shell" comb of celluloid looks as well and lasts better. Horn articles are limited to size of the ceratinous appendages that can be borne on the animal's head, but an imitation of horn can be made of any thickness by wrapping celluloid sheets about a cone. Ivory, which also has a laminated structure, may be imitated by rolling together alternate white opaque and colorless translucent sheets. Some of the sheets are wrinkled in order to produce the knots and irregularities of the grain of natural ivory. Man's chief difficulty in all such work is to imitate the imperfections of nature. His whites are too white, his surfaces are too smooth, his shapes are too regular, his products are too pure.

The precious red coral of the Mediterranean can be perfectly imitated by taking a cast of a coral branch and filling in the mold with celluloid of the same color and hardness. The clear luster of amber, the dead black of ebony, the cloudiness of onyx, the opalescence of alabaster, the glow of carnelian—once confined to the selfish enjoyment of the rich—are now within the reach of every one, thanks to this chameleon material. Mosaics may be multiplied indefinitely by laying together sheets and sticks of celluloid, suitably cut and colorded to make up the picture, fusing the mass, and then shaving off thin layers from the end. That *chef d'œuvre* of the Venetian glass makers, the Battle of Isus, from the House of the Faun in Pompeii, can be reproduced as fast as the machine can shave them off the block. And the tesserae do not fall out like those you bought on the Rialto.

The process thus does for mosaics, ivory and coral what printing does for pictures. It is a mechanical multiplier and only by such means can we ever attain to a state of democratic luxury. The product, in cases where the imitation is accurate, is equally valuable except to those who delight in thinking that coral insects, Italian craftsmen and elephants have been laboring for years to put a trinket into their hands. The Lord may be trusted to deal with such selfish souls according to their deserts.

But it is very low praise for a synthetic product that it can pass itself off, more or less acceptably, as a natural product. If that is all we could do without it. It must be an improvement in some respects on anything to be found in nature or it does not represent a real advance. So celluloid and its congeners are not confined to the shapes of shell and coral and crystal, or to the grain of ivory and wood and horn, the colors of amber and amethyst and lapis lazuli, but can be given forms and textures and tints that were never known before 1869.

Let me see now, have I mentioned all the uses of celluloid? Oh, no, there are handles for canes, umbrellas, mirrors and brushes, knives, whistles, toys, blown animals, card cases, chains, charms, brooches, badges, bracelets, rings, book bindings, hairpins, campaign buttons, cuff and collar buttons, cuffs, collars and dickies, tags, cups, knobs, paper cutters, picture frames chessmen, pool balls, ping pong balls piano keys, dental plates, masks for disfigured faces, penholders, eyeglass frames, goggles, playing cards—and you can carry on the list as far as you like.

Celluloid has its disadvantages. You may mold, you may color the stuff as you will, the scent of the camphor will cling around [*Continued on page 562*

FINANCING THE WAR

(*Continued from page 548*)

asked to authorize something similar to the English issue. The legislation was contained in the last Liberty Loan Bill. The Secretary is authorized to issue War Savings Certificates, and it is provided that they shall not exceed an amount of $2,000,000,000; that they shall run for five years and that no person may hold over $1000. The rest is left to the discretion of the Secretary.

The plan which has been devised and which has met with the Secretary's approval is going to offer to the American people, I believe, the simplest form for savings that was ever presented to a people; and certainly none was ever presented with a stronger security, for it is the obligation of the United States that is being offered. The plan is to sell the obligation in the form of a large stamp which will be attached to a certificate. The value of the obligation is measured by the number of the stamps that are attached in the twenty places on the certificate, and there are places for twenty stamps of this series of 1918 War Savings stamps. The maturity of all of these will be five years from the first of January. The price at which it will be sold will vary, increasing each month. For the advance sale in December and for the month of January the price is $4.12, and it advances during the year a penny each month so that in next December it is $4.23. Now the average price at which these stamps are sold, if calculated at 4 per cent compound interest quarterly, will amount to $5 at the end of the period, and that is what will be given in redemption of the stamps on the first of January, 1923.

When the purchaser buys his first stamp, he is given this certificate, his name and address inscribed on it and the stamp attached to the first place on the certificate. He now has got the incentive to go on to fill this by putting twenty stamps on the remaining spaces, the value of which at maturity is $100. But whether he puts any more stamps on or not, all his rights are the same. That is to say for each stamp he holds at maturity he will receive $5. But if in the exigencies of life it is necessary for him to get his money before the date of maturity the Government offers to give it to him. He can get it at any post office in the United States on ten days' notice. The price at which the Government will redeem is printed on the certificate, a rising price each month, so that the small investor is put in the situation of owning a security that cannot go down.

Now that is going to raise, I think, $2,000,000,000. That is pretty important, but it does not look as important as it used to, because we are growing used to these billion dollar units. But I believe that is one of the least important of three things that it is going to do. More important than the $2,000,000,000 is the habit of thrift which this is going to instil into this spendthrift people. These stamps are going to be the easiest article to buy in the United States, and I cannot but believe this system will strongly tend to build up habits of thrift.

But that is not the most important thing. The most important thing is to win this war, and to do this we have got to get into the minds of the people that they must save; that the war is going to be financed out of the savings of the future; that it is going to be won in the workshops by the industries, and that they must be relieved from doing unnecessary things. This is the great lesson that I believe these War Savings Certificates will carry to the whole

Hosiery *and* Neckwear *at* McCutcheon's

*Reg. Trade-Mark

Fancy Silk Hose, vertical or circular Stripes. Plain or Richelieu rib. Some with cotton tops and soles. Colors: Purple, Copenhagen, Navy, Emerald, Champagne, Red, and Gold. Also plain Black Silk, and Black and White Stripes. **Special, $1.15 a pair.**

Black Lisle, medium weight, 40c a pair.

Cottons, medium weight, Black or White, regular and out sizes, 50c a pair.

Colored Silk Hose, all the new shades, $1.50 a pair.

Black Silk Hose, $1.15, 1.25, 1.75 to 3.00 a pair.

Golf Hose, plain White, colored Clocks, $1.95 a pair. White ribbed, colored Clocks, $1.75 and 2.50 a pair.

English Golf Hose, plain tops, Plaid boots, $3.95.

Neckwear

Collar and Cuff Sets of imitation Filet Lace, $1.00.

Stocks and Jabots of Net, and Net trimmed with Lace, $1.00, 1.25, 1.75, 3.95. Real Filet Lace Stock and Jabot, $8.95, 12.95 up to 22.50.

A new importation of French Neckwear, consisting of fine Collars, Collar and Cuff Sets, Guimpes, etc., at moderate prices, are being shown.

PERKINS & CO. Lawrence, Kans

people, and the measure in which that lesson is learned, the measure by which we release the workshops to the work of the war, will be the measure of our efficiency in fighting the war.

This is becoming almost a war of mechanics, a war of instruments, a war in which there must be vast expenditures to accomplish what sometimes seems like a very small result. On the western front in ten consecutive days there was shot $90,000,000 worth of shells—$9,000,000 a day for ten consecutive days. Now it is expenditures of that sort that will enable us to make an impression on that front, and to make an impression without the horrible loss of life that was incident to the first onslaught.

Many will lose their lives, and as we learn that we will be willing to make sacrifices, willing to furnish money and to release the workmen in the shops to do the work of the war. We want economy in something more than money, too. That is to say, we want to refrain from expending brains, and experience and vision on unnecessary things, and center our attention on the war, on the problems arising out of the war, on future reconstruction after the war. These are the greatest problems that ever were presented to a human mind, and they demand all the brains, all the experience, all the vision that any of us and all of us have got. We must center our attention on these problems, try to do something, try to help, but whatever we do let us not expend our abilities in criticism.

Washington is not perfect I hardly need to say, but Washington is doing its best. If we are making sacrifices to provide the Government with money, if we are making sacrifices to leave the workshop for the work of the Government, I think we are entitled to efficiency from the Government, but we have no right to criticize unless we know something about what we are criticizing.

Just as the soldiers have got to be controlled and disciplined, this whole country has got to be controlled and disciplined for this war. And if we come out of it disciplined in character, if we in some measure become a thrifty people, if we have a better understanding of our responsibilities, our responsibilities to society and the Government, we shall have learned a lesson that will pay in a large measure for the cost, whatever it is.

New York City

ART FOR ART'S SAKE

A good story is told of the late Carroll Beckwith when he was a young man lately returned from Paris schooling, and facing the task of making the reputation he presently achieved. He had taken his first studio in the Sherwood, then just completed. That building was erected by a man of wealth who had a liking for philanthropy and a taste for art, but also an irresistible temptation to make money. It was an attractive building, for the studios were well designed and remarkably cheap; and it was quickly filled with young artists—many of them now celebrated—among whom the genial proprietor made constant visits of fatherly acquaintance. As the end of the first year approached he began to say confidentially to this and that artist that he especially liked his work, and, quite "on the quiet," would give him $100 for an example of it. So Beckwith and others happily painted and delivered excellent paintings, which were promptly paid for; whereupon every man found his rent for the next year raised by exactly $100—and the cats came out of their bags.

ARE YOU AN ORDINARY PERSON?

IF so you will wait until some one wheedles you into buying necessary insurance, or you will go without and suffer.

I do not solicit or sell insurance; but I tell my clients where they can get just what they want and need in the best market. All forms of insurance considered by an expert who is also a practical insurance man.

If you are an UNUSUAL PERSON

THE NEW BOOKS

New England Folks

BROMLEY NEIGHBORHOOD, by Alice Brown, is surely one of the best American novels of the year. First of all it is an interesting story about people whose personalities are presented with homely and convincing simplicity and truth. Moreover it has the strong local flavor that gives a book the background and atmosphere of reality. No reader of the book needs the information given in the first chapter, that Bromley is a country neighborhood in a part of New England that looks back upon pure English traditions. It is all plainly told in the blood and sinew of the story itself, in the characters and their ideals and behavior. And yet the characters are not mere New England types. They are individuals also. Thomas Neale, who grimly orders his family to bed every night with the phrase "a hard day tomorrow" typifies the harsh and forbidding qualities of New England, but he is a real farmer—not simply a type. Mary Neale, his wife, represents the best in New England character, but she is a real human being with faults and dignity and little personal ways of her own to which we become accustomed. As we read the book, too, we feel that the behavior of these characters is inevitable, since they are what they are. We understand why Ellen marries the wrong lad and then refuses to live with him and why she learns too late which lad she loves. We understand why Miss Brown does not leave her lovers in each other's arms in the last chapter and why she gives them, instead of a fictional felicity, the thing life always gives, a vista of struggle and discipline in the quest of beauty and truth.

Bromley Neighborhood, by Alice Brown. The Macmillan Company.

Under Fire

OF all the great mass of war literature—poems, diaries, essays, letters and novels—one wonders how many will be read fifty years from now by a generation for whom, unlike us, each slight detail of the war has not a poignant personal interest. *Under Fire, the Story of a Squad*, by Henri Barbusse, will make, one may venture to prophesy, even better reading fifty years hence than it does now. On its spacious canvas the picture of war—war stripped of its romance and fiery exaltation, war with its mud and filth and cold and vermin, its unspeakably dreary monotony and its endless misery of rain—is too cruelly unsparing to be read with mere enjoyment. We are almost too near the horror for a cool appreciation of the art. The book is written from the viewpoint of the poilu—the stoical, dirt-caked, heroic, common soldier. It has the vast scope of a novel by Victor Hugo, including in its panorama the whole complex and varied organism of the armies, and the wide ruined stretches of the battlefields of France. Yet the experiences of each member of the squad are told with intimate and touching detail. Every phrase of that agonized and magnificent existence becomes familiar to us—their discomforts, their pitiful planning, only too often disappointed, for dry shelter and decent food during their next "rest"; their quarrels and grumbling, their simple and yet shrewd philosophy of the war, their wounds and death.

Barbusse has the essentially French ability of creating atmosphere. The action moves in vivid patches and flashes of color against a gray background of mud and drizzling rain:

> The day matures. A little more light has trickled thru the mists that enclose the earth. But the sky has remained overcast, and now it dissolves in rain. With a slowness which itself disheartens, the wind brings back its great wet void upon us. . . . The water penetrates to the deep joy with which dinner endowed us, and puts it out. Space itself shrinks; and the sky, which is a field of melancholy, comes closely down upon the earth, which is a field of death.

As Barbusse was writing a chapter of his book from his notes, Marque, one of his comrades of the squad, came up to him and asked him if he were going to put in the "big words we use." Barbusse assured him that everything would be written just as it occurred.

> "Do you want my opinion?" said the poilu. "Altho I know nothing about books, it's brave to do that, because it isn't usually done and it'll be spicy if you dare do it—but you'll find it hard when it comes to it—you're too polite."

Barque was right; the "big words" do give a Rabelaisian "spice" to the conversations; and surely the book is not the sort of thing that is "usually done."

This group of men for whom Barbusse is so to speak the spokesman feel no bitterness against the German privates, whom they consider the blameless and helpless tools of their officers. But they despise the slackers in "that doubly damned hell they call the rear," and they hate above all else those preachers, politicians, capitalists who foster the spirit of war whether thru well-meaning blindness or for their own selfish ends.

> "And they are legion . . . not only the warrior caste . . . not only the mighty by birth . . . not only these, but whole multitudes who minister consciously or unconsciously to their fearful privilege." It is in Equality, "word of sublimity," that the hope of the wounded world lies. Equality will put an end to the monstrous injustice of war.
>
> "When all men have made themselves equal, we shall be forced to unite. And then there'll no longer be appalling things done in the face of heaven by thirty million men who don't want to do them."

Under Fire, the Story of a Squad, by Henri Barbusse. E. P. Dutton. $1.50.

For France

OUT of a splendid enthusiasm for the spirit moving the French people, this book, consisting of a compilation of contributions made by American authors and publicists, is well worth the time spent in the reading. While there is much repetition of sentiment in it, and while some of the writers are so emotional and temperamentally strung that they are unable to give vision to their words, there are, nevertheless, in this very full anthology of America's love for France, a number of notable and significant contributions. Such, for example, is Mr. Owen Wister's address in French. There is humor also in the book—humor coupled with a certain deep understanding of the differences between America and France, as in George Ade's tribute to Lafayette. Spiritual fervor is in some of the poetry, most particularly in a sonnet written by Charles Rann Kennedy. But from the standpoint of literary permanence the volume is sorely lacking.

For France, edited by Charles Hanson Towne. Garden City: Doubleday, Page & Co. $2.50.

CREATIVE CHEMISTRY

(*Continued from page 558*)

it still, tho is not usually objectionable except where the celluloid is trying to pass itself off for something else, in which case it deserves no sympathy. It is attacked and dissolved by hot acids and alkalies. It softens up when heated, which is handy in shaping it tho not so desirable afterward. But the worst of its failings is its combustibility. It is not explosive, but it takes fire from a flame and burns furiously with clouds of black smoke.

But celluloid is only one of many plastic substances that have been introduced to the present generation. A new and important group of them is now being opened up, the so-called "condensation products." If you will take down any old volume of chemical research you will find occasionally words to this effect: "The reaction resulted in nothing but an insoluble resin which was not further investigated." Such a passage would be marked with a tear if chemists were given to crying over their failures. For it is the epitaph of a buried hope. It likely meant the loss of months of labor. The reason the chemist did not do anything further with the gummy stuff that stuck up his test tube was because he did not know what to do with it. It could not be dissolved, it could not be crystallized, it could not be distilled, therefore it could not be purified, analyzed and identified.

What had happened was in most cases this. The molecule of the compound that the chemist was trying to make had combined with others of its kind to form a molecule too big to be managed by such means. Financiers call the process a "merger." Chemists call it "polymerization." The resin was a molecular trust, indissoluble, uncontrollable and contaminating everything it touched.

But chemists—like governments—have learned wisdom in recent years. They have not yet discovered in all cases how to undo the process of polymerization, or, if you prefer the financial phrase, how to unscramble the eggs. But they have found that these molecular mergers are very useful things in their way. For instance there is a liquid known as isoprene (C_5H_8). This on heating or standing turns into a gum, that is nothing less than rubber, which is some multiple of C_5H_8.

For another instance there is formaldehyde, an acrid smelling gas, used as a disinfectant. This has the simplest possible formula for a carbohydrate, CH_2O. But in the leaf of a plant this molecule multiplies itself by six and turns into a sweet solid glucose ($C_6H_{12}O_6$), or with the loss of water into starch ($(C_6H_{10}O_5)$ or cellulose ($(C_6H_{10}O_5)$.

But formaldehyde is so insatiate that it not only combines with itself but seizes upon other substances, particularly those having an acquisitive nature like its own. Such a substance is carbolic acid (phenol) which, as we all know, is used as a disinfectant like formaldehyde because it, too, has the power of attacking decomposable organic matter. Now Prof. Adolf von Baeyer discovered in 1872 that when phenol and formaldehyde were brought into contact they seized upon one another and formed a combine of unusual tenacity, that is a resin. But as I have said, chemists in those days were shy of resins. Kleeberg in 1891 tried to make something out of it and W. H. Story in 1895 went so far as to name the product "resinite" but nothing came of it until 1909 when L. H. Baekeland undertook a serious and systematic study of this reaction in New York. Baekeland was a Belgian chemist, born at Ghent in 1863 and professor of Bruges. While a student at Ghent he took up photography as a hobby and began to work on the problem of doing away with the dark-room by producing a printing paper that could be developed under ordinary light. When he came over to America in 1889 he brought his idea with him and four years later turned out "Velox," with which doubtless the reader is familiar. Velox was never patented because, as Dr. Baekeland explained in his speech of acceptance of the Perkin medal from the chemists of America, lawsuits are too expensive. Manufacturers seem to be coming generally to the opinion that a synthetic name copyrighted as a trademark affords better protection than a patent.

Later Dr. Baekeland turned his attention to the phenol condensation products, working gradually up from test tubes to ton vats according to his motto: "Make your mistakes on a small scale and your profits on a large scale." He found that when equal weights of phenol and formaldehyde were mixt and warmed in the presence of an alkaline catalytic agent the solution separated into two layers, the upper aqueous and the lower a resinous precipitate. This resin was soft, viscous and soluble in alcohol or acetone. But if it was heated under pressure it changed into another and a new kind of resin that was hard, inelastic, unplastic, infusible and insoluble. The chemical name of this product is "polymerized oxybenzyl methylene glycol anhydride," but nobody calls it that, not even chemists. It is called "Bakelite" after its inventor.

The two stages in its preparation are convenient in many ways. For instance, porous wood may be soaked in the soft resin and then by heat and pressure it is changed to the bakelite form and the wood comes out with a hard finish that may be given the brilliant polish of Japanese lacquer. Paper, cardboard, cloth, wood pulp, sawdust, asbestos and the like may be impregnated with the resin, producing tough and hard material suitable for various purposes. Brass work painted with it and then baked at 300° F. acquire a lacquered surface that is unaffected by soap. Forced in powder or sheet form into molds under a pressure of 1200 to 2000 pounds to the square inch it takes the most delicate impressions. Billiard balls of bakelite are claimed to be better than ivory because, having no grain, they do not swell unequally with heat and humidity and so lose their sphericity. Pipestems and beads of bakelite have the clear brilliancy of amber and greater strength. Fountain pens made of it are transparent so you can see how much ink you have left.

Celluloid is more plastic and elastic than bakelite. It is therefore more easily worked in sheets and small objects. Celluloid can be made perfectly transparent and colorless while bakelite is confined to the range between a clear amber and an opaque brown or black. On the other hand bakelite has the advantage in being tasteless, odorless, inert, insoluble and non-inflammable. This last quality and its high electrical resistance give bakelite its chief field of usefulness. Electricity was discovered by the Greeks who found that amber (*electron*) when rubbed would pick up straws. This means simply that amber, like all such resinous substances, natural or artificial, is a non-conductor or dielectric and does not carry off and scatter the electricity collected on the surface by the

friction. Bakelite is used in its liquid form for impregnating coils to keep the wires from shortcircuiting and in its solid form for commutators, magnetos, switch blocks, distributors and all sorts of electrical apparatus for automobiles, telephones, wireless telegraphy, electric lighting, etc.

Bakelite, however, is only one of an indefinite number of such condensation products. As Baeyer said long ago: "It seems that all the aldehydes will, under suitable circumstances, unite with the aromatic hydrocarbons to form resins." So instead of phenol, other coal tar products such as cresol, naphthol or benzene itself may be used. The carbon links (—CH_2—, methylene) necessary to hook these carbon rings together may be obtained from other substances than the aldehydes, for instance from the amines, or ammonia, derivatives. Three chemists, L. V. Redman, A. J. Weith and F. P. Broek, working in 1910 on the Industrial Fellowships of the late Robert Kennedy Duncan at the University of Kansas, developed a process using formin instead of formaldehyde. Formin—or, if you insist upon its full name, hexamethylene-tetramine—is a sugar-like substance with a fish-like smell. This mixt with crystallized carbolic acid and slightly warmed melts to a golden liquid that sets on pouring into molds. It is still plastic and can be bent into any desired shape, but on further heating it becomes hard without the need of pressure. Ammonia is given off in this process instead of water which is the byproduct in case formaldehyde. The product is similar to bakelite, exactly how similar is a question that the courts will have to decide. The inventors threatened to call it Phenyl-endeka-saligeno-saligenin, but, rightly fearing that this would interfere with its salability, they have named it "redmanol."

A phenolic condensation product closely related to bakelite and redmanol is condensite, the invention of Jonas Walter Aylesworth. Aylesworth was trained in what he referred to as "the greatest university of the world, the Edison laboratory." He entered this university at the age of nineteen at a salary of $3 a week, but Edison soon found that he had in his new boy an assistant who could stand being shut up in the laboratory working day and night as long as he could. After nine years of close association with Edison he set up a little laboratory in his own back yard to work out new plastics. He found that by acting on naphthaline—the moth-ball stuff—with chlorine he got a series of useful products called "halowaxes." The lower chlorinated products are oils, which may be used for impregnating paper or soft wood, making it non-inflammable and impregnable to water. If four atoms of chlorine enter the naphthalene molecule the product is a hard wax that rings like a metal.

Condensite is anhydrous and infusible, and like rivals finds its chief employment in the insulation parts of electrical apparatus. The records of the Edison phonograph are made of it. So are the buttons of our blue-jackets. The Government has recently ordered 40,000 goggles in condensite frames to protect the eyes of our gunners from the glare and acid fumes.

The new synthetics are playing an important part in the war. According to an ancient military pun the endurance of an army depends upon the strength of their soles. The new compound rubber soles are being tried out on some of our soldiers and the Germans attribute their success in making a little leather go a long way in the army to the use of a new synthetic tanning material known as "neradol." There

are various forms of this. Some are phenolic condensation products of formaldehyde like those we have been considering, but some use coal tar compounds having no phenol groups such as naphthalene sulfonic acid. These are now being made in England under such names as "paradol," "cresyntan" and "syntan." They have the advantage of the natural tannins such as bark in that they are of known strength and can be varied to suit.

This very grasping compound, formaldehyde, will attack almost anything, even molecules many times its size. Gelatinous and albuminous substances of all sorts are solidified by it. Glue, skimmed milk, blood, eggs, yeast, brewer's slops, may by this magic agent be rescued from waste and reappear in our buttons, hairpins, roofing, phonographs, shoes or shoe-polish. The French have made great use of casein hardened by formaldehyde into what is known as "galalith" (i. e., milk-stone). This is harder than celluloid and non-inflammable, but has the disadvantages of being more brittle and of absorbing moisture. A mixture of casein and celluloid has something of the merits of both.

The Japanese, as we should expect, are using the juice of the soy bean, familiar as a condiment to all who patronize chop-sueys or use Worcestershire sauce. The soy glucine coagulated by formalin gives a plastic said to be better and cheaper than celluloid. Its inventor, S. Sato, of Sendai University, has named it, according to American precedent, "Salolite," and has organized a million dollar Satolite Company at Mukojima.

There seems to be no limit to these compounds and every week the journals report new processes and patents. But we must not allow the new ones to crowd out the remembrance of the oldest and most famous of the synthetic plastics, hard rubber. This is American-made in a double sense, for when Columbus discovered Santo Domingo he found the natives playing with balls made from the gum of the caoutchouc tree. The soldiers of Pizarro, when they conquered Inca-Land, adopted the Peruvian custom of smearing caoutchouc over their coats to keep out the rain. Europe took it up but the stuff was too sticky and smelled too bad in hot weather to become fashionable in fastidious circles. In 1825 Mackintosh made his name immortal by putting a layer of rubber between two cloths. But it was left to a Yankee inventor, Charles Goodyear, of Connecticut, to discover the solution to the problem. He had worked for ten years on it, spending all his own money and all he could borrow from his friends, when one day in 1839 he happened to drop on the hot stove of the kitchen that he used as a laboratory a mixture of caoutchouc and sulfur. To his surprize he saw the two substances fuse together into something new. Instead of the soft, tacky gum and the yellow, brittle brimstone he had the tough, stable, elastic solid that has done so much since to make our footing and wheeling safe, swift and noiseless. It was, you might say, a lucky accident, but such luck is most apt to come to those who like Goodyear have worked ten years for it.

Goodyear found that he could vary this "vulcanized rubber" at will. By adding a little more sulfur he got a hard substance which, however, could be softened by heat so as to be molded into any form wanted. Out of this "hard rubber" "vulcamite or ebonite" were made combs, hairpins, penholders and the like and it has not yet been superseded for some purposes by any of its recent rivals.

Since I am here chiefly concerned with

"Creative Chemistry," that is, with the art of making substances not found in nature, I have not spoken of shellac, asphaltum, rosin, ozocerite and the innumerable gums, resins and waxes, animal, mineral and vegetable, that are used either by themselves or in combination with the synthetics. What particular "dope" or "mud" is used to coat a canvas or form a telephone receiver is often hard to find out. The manufacturer finds secrecy safer than the patent office and the chemist of a rival establishment is apt to be baffled in his attempt to analyze and imitate. But we of the outside world are not concerned with this, tho we are interested in the manifold applications of these new materials.

QUESTIONS AND READING REFERENCES

What is the meaning of the *xylo, ite, lith, oid* and *pyr* used in these various trade names? If you invented a substance of this kind what would you call it?

Think of some new use for the artificial plastics.

Read about the life and struggles of Goodyear, the inventor of vulcanized rubber.

Examine various resinous objects such as buttons, combs, hairpins, fountain pens, phonograph records, toys, transparent cards and photographic films to see if you can find out what they are made of. See if they can be cut, scratched, polished, bent or broken. Test electrical properties by rubbing with woolen cloth to see if they will pick up paper. See if you can detect the odor of rubber or of camphor (indicating celluloid). Put thin pieces into boiling water or on warm stove and see if they can be bent. See if small fragments can be set on fire. Try the effect of warming with dilute acids or alkalies in a test tube.

The speeches made when Hyatt was awarded the Perkin medal by the American Chemical Society for the discovery of celluloid may be found in the *Journal of the Society of Chemical Industry* for 1914, p. 225. In 1916 Baekeland received the same medal, and the proceedings are reported in the same *Journal*, v. 35, p. 285.

A comprehensive technical paper with bibliography on "Synthetic Resins" by L. V. Redman appeared in the *Journal of Industrial and Engineering Journal*, January, 1914. The controversy over patent rights may be followed in the same *Journal*, v. 8 (1915), p. 1171, and v. 9 (1916), p. 207.

For casein see Tague's article in Rogers' "Industrial Chemistry" (Van Nostrand). See also Worden's "Nitrocellulose Industry" and "Technology of the Cellulose Esters" (Van Nostrand); Hodgson's "Celluloid" and Cross and Bevan's "Cellulose."

For references to recent research and new patent specifications on artificial plastics, resins, rubber, leather, wood, etc., see the current numbers of *Chemical Abstracts* (Easton, Pa.) and such journals as the *India Rubber Journal, Paper, Textile World, Leather World* and *Journal of American Leather Chemical Association.*

The General Bakelite Company, New York, the Redmanol Products Company, Chicago, the Condensite Company, Bloomfield, N. J., the Arlington Company, New York (handling pyralin), the Goodyear Tire and Rubber Company, Akron, Ohio, give out advertising literature regarding their respective products.

BURNING UP OUR RESOURCES

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

MONEY is not the requisite of our winning the war. We must win this fight with things: the products of the fields, forests, mines, streams, factories and shops. Money now is simply the lubricant, the drop of oil on the bearings of the great machine. Our money is indestructible, but the things absolutely necessary to making war are not. The enemy understands that. Thru his secret agents among us he is destroying them by fire as rapidly as he can. We have not realized it, but the truth is that Germany has been fighting us right here for more than eighteen months. Her weapons have been the bomb and the torch.

We are also fighting several other enemies. We do not always recognize them, for they are of our own breeding and stick close to us. The name of one is Waste; that of the other Carelessness. The latter has been at work as an incendiary for many years and has grown to rare proficiency. Unpreventable fires consume their thousands, but preventable fires eat up millions.

For several years past, fearing, doubtless believing, that we eventually would be compelled to defend ourselves against the Teutonic menace, the leading fire underwriters of the United States as represented in an associated capacity thru their National Board, began putting their data into shape for use at a moment's notice. When the declaration of war was made all that the National Board of Fire Underwriters had, its records, its employees and its machinery, were promptly offered to the Government, and as promptly accepted. That great organization is as truly on the fighting line as are our men now in the French trenches.

The information which it possesses about our industries is invaluable in this crisis. It immediately became a part of the military capital of the nation

The furnishing of data respecting the physical conditions of thousands of manufacturing and storage plants was just a beginning. It became necessary to perfect an organization to prevent those plants from being burned. We cannot fight without them. Trained inspectors were needed to point out application of the proper remedies. The National Board now has 3500 men thruout the country doing this work daily, combing thousands of plants for defects. The Board's scientific staff known as the Underwriters' Laboratories, located at Chicago, is inspecting for the Government roll roofing, fire hose, insulated wire and other fire-preventing accessories. In another direction it is doing equally as valuable work. Its presses have turned out tons of educational literature, tersely written for the guidance of the managers of every sort of factory.

Here are some of the questions the fire underwriters are asking: Will our troops in France have rifles, hand grenades, masks, helmets, clothing, shoes and ammunition? Will they be backed by artillery and adequate ammunition? Will they be aided by thousands of aeroplanes? Will the roads behind the battle lines be populous with our motor trucks loaded with abundant supplies? Will we produce the transports for troops oversea and cargo vessels in ever-increasing number?

We cannot win the war with less. Then our present industrial plants must be preserved against fire and new ones must be established. Our grain and cotton storage and loading houses must be protected. Our mines, docks and shipyards must be made safe against fire. Every building and every product must be guarded against both the alien enemy and the native Carelessness.

During the eleven full calendar months of this year which have already elapsed, property valued at $241,000,000 has been destroyed by fire in the United States and Canada. Investigation has shown that an average of eighty per cent of our fire waste is preventable. In this case nearly $193,000,000 worth of things to fight with—not money—has been permitted to be annihilated. Fire annihilates material useful to man. Keep that in mind. It would not matter so much if we were burning up bales of dollar bills worth $200,000,000 or $300,000,000 a year, but when the stuff thus removed consists of factories, machinery, finished products, food, cotton, coal and all the other materials which we must use if we are to win the war, why the thing becomes tragic.

PREVENTION IS THE WORD

WHAT we must do is to prevent the destruction of property by fire. We must eliminate every discoverable cause of fire, not only in industrial plants but everywhere, for mighty consequences have followed contemptibly small causes. One-half of Chicago was destroyed in 1871, scores of people lost their lives and thousands were impoverished and rendered homeless, when a cow in a lowly quarter of the city kicked over a lighted kerosene lamp. And I may say, in passing, that an even one hundred fire insurance companies were bankrupted by that conflagration.

Prevention is the word.

How? To the householder, I say: See to it that all flues are in good repair; zinc under all stoves; metal ventilated collars around stove pipes; furnaces kept clean and in good repair; chimneys free of soot; use of only closed lanterns or other lights in attics and cellars; ashes deposited in metal cans only; no curtains near gas jets; matches in metal boxes only and out of the reach of children; all electric wires properly insulated; order and cleanliness—particularly as regards accumulations of discarded furniture, clothes, etc., in attics, and sweepings and trash in cellars and around the house.

The cellars of retail stores are great fire-breeders. They generally contain a chaotic mass of broken packing cases, empty barrels, straw and excelsior, paper boxes and the odds and ends of every unsightly thing that is banished from the main floor. All that is needed to start a fire is a careless specimen of Young America and his cigaret. Clean it all out.

AS to industrial plants. It is a long story and I lack room in which to put it. But let us look briefly at a few of the essentials. They will fall under a dozen or more main heads. There is Cleanliness: Is there any refuse or sweepings lying about under benches, behind steam-pipes or radiators, and are those places clear of combustible materials? What is the condition of clothes lockers? Is there any oily waste outside of waste-cans and are the latter in good repair? There are a score of questions to be answered under this heading.

How about Heating? Is all woodwork or other combustible material too close to smoke-stacks, furnaces, stoves or boilers? Has anything been put to dry on steam-pipes or boiler? Is the fuel supply safely stored? Can gas or electrically heated irons be set on combustible materials?

In what condition is the Dry Room, if there is one; are its contents a safe distance from steam pipes; are the screens and air ducts in good order?

Then there is the factor of Lubrication: Are any of the bearings dirty or improperly oiled? How about the storage of oils, gasoline or other inflammable mixtures?

Are safety matches used exclusively? Is smoking forbidden? What is the condition of the illuminating apparatus? There are a number of hazards to be guarded against when the lighting is done electrically.

I am not going into this part of my subject in detail because it is all detail and voluminous, and I cannot squeeze it in here. But I am going to ask every manufacturer to coöperate with the work of the National Board of Fire Underwriters, 76 William street, New York, and to begin doing so by requesting that organization to send him its pamphlets and blanks. The management of the Board, as already indicated, is virtually in the Government service, using all its means to protect our material resources against fire and will respond to every call for its assistance and advice. In the meantime, such requests as it makes on its own account for improvements, for the removal of hazards, and for the addition of fire-prevention and fire-fighting appliances should be promptly acted upon.

"THE YEAR OF JUBILEE IS COME"

By SUSAN HAYES WARD

SOME years ago I heard a man of note and judgment declare in a public meeting that he knew of no organization, except the Jesuit Society, so efficiently conducted and so wisely adapted to its purpose as are the Missionary Boards of the Congregational Church.

It was a little more than fifty years ago that women who had been organized in various large cities to help the Sanitary and Christian Commissions disbanded and naturally looked about for some other work to do.

Dr. N. G. Clark, a secretary of the American Board, believed that missionary work for women and children in heathen lands should be intrusted to women, and he interested two influential Boston women, Mrs. Albert Bowker and Mrs. Homer Bartlett, who were ready and eager to devote time and money to this work. He showed them letters from missionaries abroad who were urging him to have unmarried women sent out as missionaries, and assured them that there were devoted women waiting to be sent.

After months of planning a conference of forty women was held on January 2, 1868, in a chapel of the Old South Church of Boston, and a missionary society formed, incorporated, later, under the name of the Woman's Board of Missions. Mrs. Bowker was made president and Mrs. Bartlett treasurer. Vice-presidents and secretaries made ten officers in all, and, later, twelve managers were added and more vice-presidents. Two of the first ten are still living. Their ideal was to have an auxiliary society in each church, and twenty auxiliaries would be required for a branch. The Woman's Board includes in its field New England, and the states of the Eastern coast as far as Florida, going as far West as Ohio, which is included in the Board of the Interior, formed later with headquarters in Chicago.

The Woman's Board had twenty-four branches but has just organized its twenty-fifth in Tampa, Florida, as a jubilee addition, and it includes in its organization a great variety of contributory societies, Sunday schools, mission bands, cradle rolls—and many others.

To avoid the necessity of going in debt the board adopted the plan of sending no missionaries till they had money sufficient for their pledged work for the following year. Their first year's receipts were about $5000, and their first pledge to the American Board was the support of seven missionaries and eleven Bible women. Their first missionary is still living and working in her girls' school in Inanda, South Africa. In the pageant just given in the jubilee days of the board, one of the most touching scenes was the representation of Mrs. Andraws, tenderly scanning the work of her little black charges. The seven missionaries have increased, numbering now 128, and schools, colleges, hospitals have been established in many lands.

But in fifty years, if schools prosper, school houses decay or schools outgrow their cramped quarters, so five years ago the board suggested to its constituency that they raise $250,000 to be spent upon land and buildings, to be used as it came in; and it apportioned the work to the various branches. This was to be its golden gift. It also suggested a gift of life—new auxiliaries, enlarged membership and more missionaries.

The responses to this appeal have been marvelous—asking for $250,000

Insurance Service of The Independent

A constantly increasing number of readers are securing valuable information through the Insurance Service Department conducted by W. E. Underwood, Director.

they received $255,417.90. At the first session of their anniversary meeting they asked for an offering of $350 for work in Ceylon; they received $580. They had asked for 500 senior societies; the response was 598. For 250 new contributing junior societies they were answered with 597. The meetings were crowded and at the evening meeting in Tremont Temple, where the Rev. Edward C. Moore, D.D., president of the American Board, presided, there was not an empty seat, every gallery was packed, and Mrs. Franklin Warner, Mrs. Karmarkar, the native doctor from Bombay, four missionaries from Turkey who, despite the horrors they had witnessed, only urged love and forgiveness of enemies, and John R. Mott, LL.D., held their overwhelming audience spellbound.

The only apparent failure in the whole jubilee was in the number of new missionaries secured. The board had asked for fifty, but only twenty-two were pledged.

The Woman's Board had just received an appeal from missionaries in the Philippines begging them to begin work there, and an appeal was made to that big audience for the $5000 necessary to begin the work. As the heaped baskets were carried up to the platform one would think that twice the sum had been given, and the spirit of consecration seemed so to fill the place that had Dr. Moore called then for volunteer missionaries the missing twenty-eight might have been supplied.

Boston, Massachusetts

WHAT RUSSIA WANTS

(*Continued from page 552*)

the various revolutionary committees and councils. The Russian formula really read: "Peace without annexations and contributions, with the rights of peoples to determine their own destinies." This was the kind of peace for which the new Russia promised to continue to fight. It was a formula of peace terms, as war aims. And the Allies were urged to call a conference, at which a common statement of war aims would be proclaimed. At the same time the Russian Socialists agreed to participate in a conference of Socialists of all countries, even enemy countries, also to discuss peace terms as war aims. The formula given above was the Russian suggestion, as a basis for discussion at both conferences.

It is difficult to summarize in a few words the history of this Russian formula. When I arrived in Petrograd several weeks after the first official announcement of the formula, I went first to my friends among Russian liberals, to ask what the authors of the formula really had in mind. I was told that they were always very vague themselves in their answers, and deliberately so, whenever they were called upon to define. It seemed that they would or could not state definitely just what they would consider an annexation, and what in their opinion would be a "self-determination."

Again, I was told, the authors of the formula would not commit themselves to a clear definition of "contributions," purposely confusing the two ideas of punitive indemnity and indemnity as reparation for damage done. When I discussed the formula with Socialists who supported it, I found that this criticism was in some measure correct. They were unable always to specify, but at the time they were honest in their advocacy of the formula. When small groups of us tried to read specific content into the formula outlining what we thought the more radical elements in Russia would accept, we found ourselves

becoming hopelessly involved, and often wondered if it could be done.

I discussed the formula with Milyoukov and read his speeches and articles on the subject. He condemned the formula as dangerous and perhaps even dishonest. "Made in Germany" was his first comment to me. He was correct in this statement. "No annexations and no indemnities" does have a German origin. And the "self-determination of peoples" has been a slogan used by German intrigue to make trouble in another country—they never recognized it as applying to themselves or their own allies. Both sections of the formula with the use of the word "indemnity" instead of "contribution," can therefore be traced to Germany. But it was in Russia that the two parts were brought together, the second clause qualifying the first. I suggested to Milyoukov that the formula had clearly secured a strong hold on the broader masses, tho it might not be very clearly understood by them, so that it would have to be used, and properly interpreted. We started in to interpret it for Russia, and Milyoukov insisted on bringing under it the securing of Constantinople, as necessary to the security of Russia. This line of thought brought us to the English formula, "reparation and security."

My discussion of the formula with Russia's foremost authority on international affairs again showed me how difficult it would be to attempt the specific statement, in concrete terms, of the readjustment that must be accepted, in order to secure a democratic and permanent peace. But the formula had penetrated deeply in Russia, and today it still holds sway, representing for many an honest appeal to the Allies to "purify their motives." It has been urged, and first in Russia, that such a move would serve as a strong weapon against the enemy, for it would in turn deprive the German Government of a weapon which it is constantly using.

The German Government interprets the failure to make such a statement as clear indication that the Allies are really wishing, and fighting, to crush Germany. By convincing its people of this fact, the German Government is able to maintain its absolute control, and also demand, and get, one more sacrifice from the people for the "cause of self-defense." Separate statements, now from one, now from another of the Allies, have not met the situation. The failure to make a common statement, in rather specific terms, has been used by the German masters at intrigue, both in and outside Germany. This has been clear to those who have worried over this problem, and especially to those who were trying to follow the course of events in Russia. The fact that these same intriguers would perhaps be able to take even greater advantage of such a frank statement of war aims did not solve the problem, and was not the answer that satisfied one.

I have referred to the Russian formula as a kind of appeal to the Allies to "purify their motives." Again this view of the formula is in line with the real spirit of the revolution. A Kerensky, for example, who was a strong champion of the formula, did not believe that the Allies had disgracefully selfish war aims. But as a revolutionist and Socialist he wished to get to the root of the matter in a frank and fundamental way. The extremists, the Bolsheviki, used this formula as one of the main planks of their platform. They proclaimed openly that all of the Allies, America included, had selfish aims. The Bolsheviki made capital of the fact that the Allies would not discuss war aims in a common conference, and even refused to allow their Socialists to go to

1917

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures against Marine and Inland Transportation risk and will issue policies making loss payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the Company has insured property to the value of $29,903,820,962.00
Received premiums thereon to the extent of - - $301,565,931.44
Paid losses during that period - $149,414,735.48
Issued certificates of profits to dealers - - - - - - - $94,086,050.00
Of which there have been redeemed $86,410,870.00
Leaving outstanding at present time $7,675,180.00
Interest paid on certificates amounts to - - - - - - - - - - $23,871,310.65
On December 31, 1916, the assets of the Company amounted to - - - - - - - - - - - - $17,458,990.74

The profits of the Company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

Stockholm to discuss aims as representatives of parties.

Such statements and arguments bore a disturbing resemblance to what one heard from German intriguers, and from the German rulers. The Russian extremists seemed therefore to be playing the German game. But even if they were doing so, and consciously, yet they were also responding to a deep-rooted, tho vague feeling, of the tired Russian people—that one ought not to go on until one was quite sure what one was fighting for, so that one would know when one had accomplished the end in view.

It has seemed to some of us that this formula, interpreted as a demand for a common statement of war aims tho an honest idea, for many, had been used so dishonestly that it would have to be abandoned. But the President's statement that the formula is still an honest one, despite the dishonest use that has been made of it, has suggested the present discussion of the formula. For the formula has again come to the foreground, and this time with the backing of America. Perhaps now it may be possible to do what before was impossible—formulate a common statement of war aims for all the Allies, thus reading a specific content into the Russian formula.

The Bolsheviki have promised to work only for a general, democratic peace. They have arranged a truce for a week. They wish to negotiate an armistice. They promise definitely that they will not accept an armistice on the Russian front, which will allow the transfer of German troops to the western front. Trotsky and Lenine may be intellectually dishonest, fanatics, but they would not be dishonest to the point of breaking such a definite promise. But now Trotsky issues an official ultimatum, a kind of warning. The Allied Governments are given a week in which to define their attitude toward a general armistice and a general peace. If the Allies decide that they cannot enter into such negotiations, then, says Trotsky, "they must declare clearly and definitely before all mankind the aims for which the peoples of Europe may be called to shed their blood during the fourth year of the war."

The President in his recent message has defined our war aims, and in most concrete terms. Perhaps now it will be possible to make a common statement, not because of the "warning" of the Bolsheviki, but because we now find it possible to do so. Such a statement will disarm the Bolsheviki. Tho they do not represent the sane majority of Russians and may soon be overthrown, the Bolsheviki answer to an instinctive desire to know what must be done before the war can be safely brought to a close. Such a statement would meet with the approval of large groups of strong patriots in all countries. It would also disarm the intriguers at work in all the Allied countries. Finally, such a statement would, as so many have worded it, serve as an effective "political offensive" against the German rulers.

Chicago

TWO TOMMIES

Two British soldiers went into a restaurant at Salonica and asked for Turkey with Greece. The waiter said:

"I'm sorry, gentlemen, but I can't Servia," whereupon the Tommies cried: "Fetch the Bosphorous!"

When that gentleman arrived and heard the complaint, the manager said:

"Well, gentlemen, I don't want to Russia, but you cannot Rumania."

And so the poor Tommies had to go away Hungary.—*Scottish-American.*

WILLIAM de KRAFFT, Secretary.

IN A RED CROSS CANTEEN

(*Continued from page 550*)

It's only on Thursday nights that we have the concert. There are the beds, see! One hundred of them, given by the American Red Cross."

"It's quiet here," Madame Courcol went on, "and they get a splendid night's rest and breakfast. Those who cannot take an early train may remain until it is time for them to go. We do all we can for them."

While she was speaking one of the station employees pushed his way thru the press at the entrance and went into the little room of the refugees. He called a train departure and looked inquiringly from group to group. There was no response and he called again. Then, from one of the dim, far corners, a half dozen of the refugees rose wearily to their feet, took up their misshapen bundles and, without a word, followed him out.

One of them was a bent old woman in a rusty bonnet. Her load was a thick black valise, bulging between its rope wrappings, and dragging her down till it almost touched the floor. A sergent-de-ville, on duty by the entranceway, saw her as she came thru the door and made his way to her.

"Permit me, Madame," and he touched his cap with a smile.

The little old woman looked up and stopped as she felt a strange hand close upon the grip of her valise. Whether she thought he was trying, for some unexplained reason, to take it away from her or whether she felt quite capable of managing it herself was not evident, but she refused to let go until, with a laugh, the sergeant swung it out of her hand.

"Go ahead, Madame," he said, "I'll follow—go ahead, please."

So off they tramped, and after them the other refugees in the little party, and all without one look toward the long room where a comedian was now grimacing and singing an impertinent Paris song while three hundred hilarious soldiers rocked with laughter.

FOOD WILL WIN THE WAR

LESSONS IN AMERICA'S PART IN THE WORLD'S FOOD PROBLEM, PREPARED BY THE UNITED STATES FOOD ADMINISTRATION FOR THE INDEPENDENT

AMERICA'S FOOD PROBLEM

"OUR problem," says the Home Card of the Food Administration, now hanging in twelve million American kitchens, "is to feed our allies by sending them as much food as we can of the most concentrated nutritive value in the least shipping space. These foods are wheat, beef, pork, dairy products, and sugar. Our solution of this problem is to eat less of these, and more of other foods of which we have an abundance, and to waste less of all foods."

To quote Mr. Hoover, "We hold it in our power, and our power alone, to keep the wolf from the door of the world. This is a problem greater than war. It is a problem of humanity."

The United States holds the key to this problem. We have always been the greatest granary, food store, and butcher shop in the world, and our resources have by no means reached the limit of our development. Food, regular, good and sufficient for our mighty fighting armies—our own and our allies—for the working men and women behind the trench lines, for the old people, women and children, must be supplied if the war is to be won, and we can supply it.

WHY CONSERVATION IS NECESSARY

Millions of men in Europe have been withdrawn from farm and field to fight, and many thousands have been sent into factories to equip the fighters with munitions of war. This means that less food is produced in the countries of our allies. Moreover, the hard work of war activities has meant an increased demand upon food supply. The decreased food production and increased food demand have made a yawning chasm in Europe which only America can bridge.

Now from the forecasted harvests of this country and Europe, and from our combined stocks of animals, we learn that we shall have to use the available supply with the utmost care and wisdom in order to have enough for all.

WHEAT IS NEEDED FIRST

France, Great Britain, Italy and Belgium need for their normal use nearly six million bushels of wheat more than they can produce. The Central Powers control the grain available in Russia, Bulgaria and Rumania, so that our allies cannot draw upon these supplies. Australia and India are practically cut off because of the long journey, the shortage in shipping and submarine danger. The South American crop was a failure, and the new harvest cannot reach Europe until next spring.

In short, the Allies need 577,000,000 bushels of wheat and we have a surplus of 208,000,000 bushels. Out of this surplus a certain amount must be kept for friendly neutrals. Therefore, if we continue to consume as much wheat as usual, there will be a deficit in round figures of 400,000,000 bushels.

HOW CAN AMERICA HELP?

Some of us have not understood why we must send wheat instead of corn, since corn is plentiful and of high food value. Why not keep our wheat, and let our allies have corn? There are several good reasons:

(1) Cornmeal cannot be shipped long distances without spoiling in transit.

(2) Corn cannot be shipped in the grain because few mills in Europe except in Italy are equipt to grind it.

(3) Cornmeal can best be used in home-baked breads, as corn bread is not suitable for bakery distribution. In France very little home baking is done, and most of the houses are not equipt for baking. In America, on the other hand, home baking is the rule.

Remember that our allies are already using as large a proportion of other cereals with wheat as is practicable with bakery bread. Their wheat is adulterated fourteen per cent in the milling. Before it can be made into bread, a further admixture of twenty per cent of other cereals is required—as high as fifty per cent allowed. Thus, the minimum adulteration is thirty-four per cent. The Food Administration is asking Americans to do much less than the Allies are already doing. It is asking them to use twenty per cent of other cereals in place of that much wheat, and to send to Europe the wheat thus released. This will only partly make up their shortage, but it will help.

OTHER FOODS NEEDED

Meat is another food especially needed that we must export in larger quantity. The people who are fighting and making war supplies need more meat than they would in peace times. But the reproduction of cattle, sheep and hogs has lessened by 33,000,000 in Europe and they have been compelled to "eat into the herd" to an alarming extent. Also an extra demand for wool and leather clothing for soldiers has meant a decrease of animals.

From the 1st of July, 1915, to the 30th of June, 1916, we exported more than 1,500,000,000 pounds of animal products and fats. We are selling faster than we can produce them. Of course this condition calls for increased production, but it also means that for the present conservation is of the gravest importance: to save out of what we have. Fats are fuel which fighters must have. We must send lard, bacon and other fats to our allies. To do this we shall have to reduce our own consumption. In many cases we use much more of these commodities than we need and waste them shockingly.

Another necessary food staple that our allies must have is sugar. They formerly got it from Russia, Germany Austria and Java. Now they are dependent upon us and the sources which supply us.

One other aspect of food conservation as a war measure should be mentioned. Wars are paid for out of the people's pocket. If we wish to avoid financial troubles we ought to carry on this war to a great extent paying "as we go." If we reduce the waste and unwise use of food by only six cents a day for each person in our population we shall have saved more than two billion dollars a year.

EVERY AMERICAN MUST HELP

Each one of us wants to help, but sometimes we feel stunned by these huge sums and amounts. A million dollars, a million bushels! We gasp, "But how can I do anything? I am only one, and I have no millions to give or save." Then is the time to recall the old rime about the "little drops of water, little grains of sand." These vast amounts are composed of dollars, quarters, dimes, nickels, pennies; they are composed of shovelfuls, basketfuls, cupfuls, teaspoonfuls. Just remember that if each individual saves one pound of wheat flour a week and six cents' worth of meat, fats and sugar a day, it will mean enough to win thru.

AUTOCRACY VERSUS SELF-GOVERNMENT

We are in this war and must do our share in winning it. One of our chief tasks is to supply food for our allies and their armies. We must decide how this is to be done. As time goes on it will get no easier to ship food and supply ourselves. We can meet the situation by force or by voluntary effort. The one way is autocracy; the other is self-government—democracy. It is the ideal, hope and aim of the Food Administration that our saving and our organization for saving shall be voluntary and democratic. Democracy is the faith for which our men are dying in France today. Every man, woman and child left here at home must stand back of every soldier "over there" and help in the daily service of conservation.

"AND A PULL ALL TOGETHER"

Every single person in this democracy has the opportunity of the centuries to take part in the greatest adventure for democracy ever known. Democracy is worth it. Your right to your own life, to liberty, and to the pursuit of happiness is worth your service, your cooperation, your devotion.

HOW TO STUDY THIS NUMBER

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. COMPOSITION.

The Story of the Week.

1. Challenge any member of your class to debate with you on universal military training.
2. Write a paper presenting the arguments for National Prohibition, emphasizing its importance as one phase of wartime efficiency.
3. You have been asked to give a patriotic talk at a public mass meeting. Tell what is now being done to aid and protect the people of the United States, both at home and abroad.
4. Write a poster appeal for the Food Administration on the conservation of sugar.
5. A company of soldiers from your neighborhood are about to leave for camp. Give a talk in which you show how good conduct, and ability, may lead to high rank.
6. You hear some one express doubts about the results of the war. Show him, from Colonel House's report, that there is every reason to believe in ultimate victory for the United States and its allies.
7. Write an essay on the psychological effect of the German air raids on London.
8. You have a cousin in Canada. Write the letter your cousin might have written about Canadian conscription.
9. Write a short composition in which you compare the British methods in the attack on Jerusalem with the knightly deeds of the crusaders.
10. Write a paragraph in which you try to account for the difference in the British and German ways of waging war.
11. Read the account of Lloyd George's speech. Give, in direct discourse, all that he is here reported to have said.
12. Write a single short item about the recent German raid at sea.
13. Read the advertisement, "America Divided," on the last page. Write a letter to your congressman asking for equable postal rates. Give your reasons in full. If the article has convinced you, send the letter to your congressman.

Editorial Articles.

1. Write a graduation oration on the restoration of the Jews to Palestine.

The First Americans Who Have Fallen in France.

1. Using the French soldier's letter as a starting point, write a thoughtful, patriotic essay on the American soldier and the work he is likely to perform in the war.

Fair Play—and Foul. By Park Benjamin.

1. Make a carefully prepared brief of this article.
2. In a single paragraph tell what chivalry sailors have always been accustomed to show. In a succeeding paragraph show how Germany has violated her solemn agreement, and has acted contrary to the established usages of civilization.
3. Show how specific instance has been used to advantage in the article.
4. Imagine that you are, in some future time, to be a member of the American commission to present terms to Germany that she must accept. Draw up an indictment in which you list Germany's offenses against the laws of nations and of humanity.
5. Write a paragraph of contrast on the German, and the American, treatment of prisoners.

Old King Coal. By Donald Wilhelm.

1. Make a summary of the serious thought of the article.
2. Tell in what ways the author's style has aided in presenting the thought clearly, interestingly, and emphatically.

The Case Against Smokes. By George J. Fisher, M. D.

1. Summarize the reasons presented here for avoiding the use of tobacco.

SECTION II. LITERATURE.

Vale 1917. By John Kendrick Bangs.

1. Show in what ways the poem has (a) pleasing arrangement, (b) careful choice of words, (c) figurative language, (d) climax, (e) noble thought, (f) poetic beauty.

SECTION III. WORD STUDY.

1. Give the derivation and the meaning of every one of the following words prominent in the news of the week: diplomatic, Zeppelins, *status quo ante*, trawlers, tapestry, redemption, unique, scrupulously, coördinated, stupendous.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. American Political Parties—"The National Party."

1. The author evidently believes that the new National Party is the offspring of the Progressive Party. What are the grounds for this belief?
2. "For better or for worse the American people seem to be wedded to the two great party system." What proofs does history offer that this is true? Is the system better or worse than the continental European system?
3. "Third parties have their part to play as educational institutions," etc. Mention some third party in our earlier history that illustrates the truth of this statement.
4. Explain the last sentence in the editorial.

II. National Organization for War—"The Conduct of the War," "Uncle Sam's Big Job," "Conditions in the Camps."

1. "The inevitable has happened." To what conditions does this sentence refer? Why does the author assume that these conditions are inevitable? What remedies does he suggest?
2. How do the conditions at the beginning of this war compare with the conditions at the beginning of the Spanish-American War? the beginning of the Civil War?
3. "With this," says Mr. Vanderlip, "we have begun to have very unusual experiments with political economy." What are some of these experiments?
4. What remedies does Mr. Vanderlip suggest for conditions which exist in (a) our coal and steel production, (b) our railroad system, (c) our ocean borne transportation?
5. Why is he so enthusiastic about the Federal Reserve Banking System?

III. The Training of Our Army—"The Lack of Guns," "As to Universal Training."

1. Why does Secretary Baker refuse to look forward to universal military training? Do you agree or disagree with his point of view?
2. What evidences have you that the training of our army is being carried forward efficiently? Are there any evidences of inefficiency?

IV. The Political Background of the War—"Another German Ballon D'Essai," "Lloyd George's Speech," "Colonel House's Report," "Inter-allied Council," "An Illusive Peace Plan," "Tirpitz the Terrible."

1. How far do the announced German peace terms approach the political aims of the Allies? What territorial desires of the Allies are still left unfulfilled?
2. What, according to the editorial, is the test which we must apply to all German proposals for peace? Applying this test, have the present proposals any interest to us?
3. Why is Lloyd George convinced that "there is no halfway house between victory and defeat"? What is your opinion?
4. What has been the result of the Inter-allied Conference in Paris? Does the Conference seem to have brought us nearer to peace or to have carried us farther away?
5. Compare Lloyd George's statements with those of von Tirpitz. Upon what things do the two men agree? wherein do they differ?

V. Naval Warfare—"Fair Play—and Foul," "German Raids at Sea."

1. What is the point which the author intends to make in this article? What sentence brings out this point most clearly?
2. Look up the history of one or more of the naval battles referred to by Mr. Benjamin. Write out the story of these battles in a dramatic way.
3. What was the purpose of the Hague Convention referred to in this article? How far have the rules adopted by this Convention affected the conduct of this war?
4. "The submarines of Germany are running amuck," etc. What are the facts which justify this statement?

VI. Coal Supply and the War—"Old King Coal."

1. Write two paragraphs, one describing Dr. Garfield's personality and his method of work; the other, his problems as Coal Administrator.
2. Do you agree with the order in which Dr. Garfield arranges the various claims upon our coal supply?
3. In what ways can you and your family help in solving the problem which the coal shortage presents?

THE HEARTHSTONE OF THE JEWS

Now that Jerusalem is restored, the Tabernacle, under Turkish rule the Mosque of Omar, becomes again the shrine of Jewish religion .

The Independent

WITH WHICH IS INCORPORATED

HARPER'S WEEKLY

ZION AND THE ZIONISTS

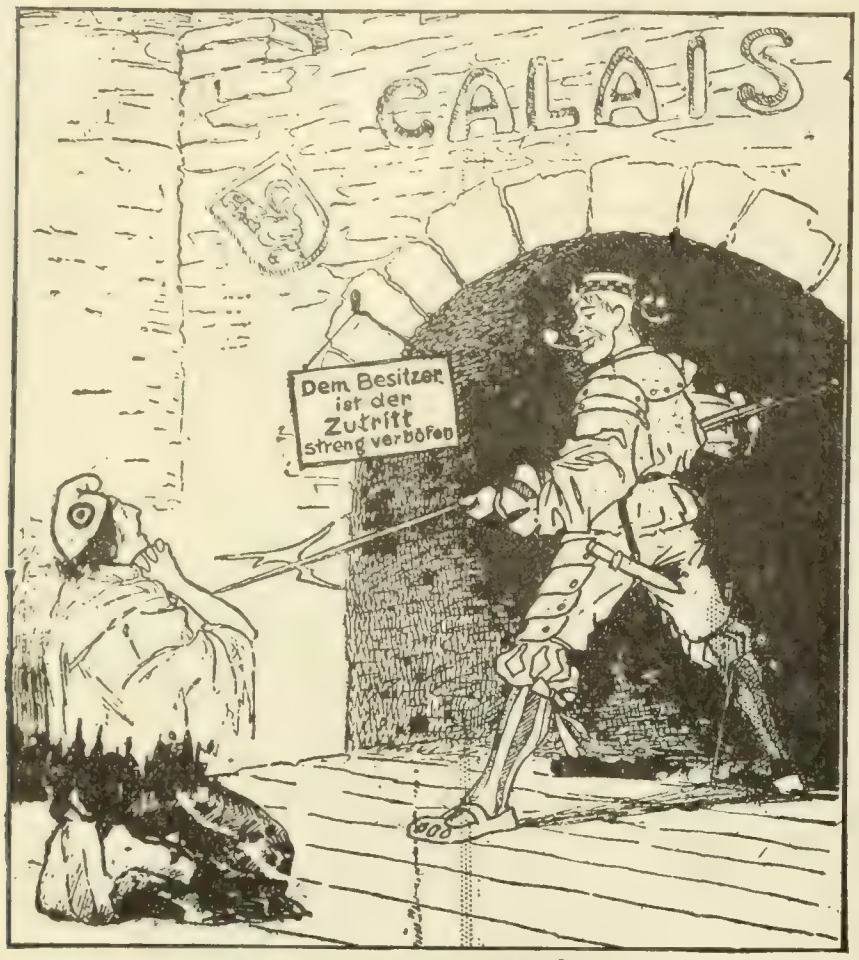
THE capture of Jerusalem by the British forces has almost eclipsed the more important military operations in Europe. This is not unnatural, for besides the unique historical and religious interest attaching to the City of David its occupation is one of the landmarks of the war, for it means—if the Allies win—the establishment of a new nation on the face of the earth. If longing, faith and prayers have any potency such must be the outcome, for no exiled people have remained so long and devotedly attached to the land of their forefathers as have the Jews to Palestine. Now the restoration of the Chosen People to their Chosen Land seems imminent, for the prophecies have been substantiated by the promise of the most powerful alliance of nations that the world has ever known. On November 3 last the British Secretary of State for Foreign Affairs, Arthur J. Balfour, wrote to Baron Rothschild, vice-president of the British Zionist Federation, as follows:

His Majesty's Government views with favor the establishment in Palestine of a national home for the Jewish people, and will use its best endeavors to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rites of existing non-Jewish communities in Palestine or the rights and political status enjoyed by Jews in any other country.

This pledge marks the culmination of the Zionist movement which, launched by the pamphlet of a Viennese Jew, Theodor Herzl, in 1895, has since enlisted the support of a large proportion of the Jews of all countries. The most diverse elements of the race, differing from one another in language, native land, religious faith, financial interests and political ideals, have been brought together under the banner of Zionism. Among its zealous advocates may be found conservatives and radicals, orthodox and atheists, materialists and idealists, cosmopolitans and exclusives, the backward-looking and the forward-looking, the self-sacrificing and the self-seeking, the fanatics and the practical, the prosperous and the persecuted; those whose Judaism is founded upon the idea of race but who have little use for its religion; those who question the existence of a Jewish race but are devoted to the faith, and those who are indifferent to both racial and religious claims but are willing to stake their all upon a social ideal, a Messianic Kingdom materialized; all these discordant elements have somehow become enthused with a single aim and whatever else they may be they are nationalists. The various motives have resulted in a unified movement.

One foresees that Palestine will be a lively place when they all get together there and start to settling their differences. Some are evidently looking for a restoration of the old theocratic régime as nearly as possible like the idealized picture presented in the Old Testament. Some are determined at once to establish a socialistic state that would make any utopias from Plato to Wells seem like a bourgeois dream. Yet even these extremes are not irreconcilable, for the Mosaic law may give grounds for very radical legislation on questions of labor, land and property. It is interesting also to note that while some Christian communities—such as Germany and Massachusetts—are still denying to women the rights of citizenship, the Jewish colonies in Palestine started on an equal suffrage basis without any opposition.

The Zionists are determined to have a separate language as well as a separate nationality. Yiddish, which is the tongue of most of the Jews in Russia and America and in which much good literature has appeared, is essentially a German dialect tho printed with Hebrew characters. Otherwise the Jews speak the language of their native lands and to many of them Hebrew has been merely a Sabbath language of which they knew little more than the Catholic knows of Latin. But now that Hebrew is to be the language of restored Israel, it has to be revised and modernized. Its vocabulary, originally more limited than Greek and Latin, has to be expanded to meet the demands of life and science in the twentieth century. In making it a spoken language, comprehensible equally to the Sephasdim and Askenazim branches of the race, the vext question of accent and pronunciation have to be settled. Expert linguists and philologians, of whom the Jews have no lack, are eagerly engaged on this task, hardly less difficult than the creation of a new language like Esperanto or Volapuk.



Except for its unique historical, religious and sentimental associations Palestine would hardly have been picked out as the most promising place for a colony. It lacks coal and oil, and the demands of modern industry cannot be met by wind and water. No doubt the productivity of the arable portions of Palestine can be greatly increased by scientific agriculture—in fact this has been demonstrated—but the richest source of income will be the tourist industry. Palestine is a Holy Land for three religions, Jewish, Christian and Mohammedan, and drought will never drive away pilgrims. The guardianship of the holy places with equality of access by devotees of the three religions and their warring sects will be a hard thing to handle. It has caused many riots and wars from the Crusades to the Crimean.

But the British, under whose protection the new state will probably be placed, have had great experience and success in dealing with racial and religious conflicts. Some sort of international supervision will doubtless be exercized at first. An American governor is suggested—Mr. Brandeis, Mr. Straus or Mr. Morgenthau, also Mr. Roosevelt, altho this is one of the few races to which, so far as we have heard, he has no blood relationship.

The Magna Charta of the Zionist state which we have quoted above stipulates that it shall not act to the detriment of the other races in Palestine or the Jews in other countries. Palestine is now twice as densely populated as the United States. It contains some 700,000 inhabitants, of

whom the Jewish colonists before the war numbered only about 15,000. But the native inhabitants could not be any worse governed than they have been under Turkish rule and they will certainly be more prosperous. The personal devotion, business ability and financial resources that have been manifested in the Zionist movement will be next applied to Palestine and will undoubtedly restore it to more than its ancient prosperity. The land has too long laid waste and if anybody is willing to undertake the job of making it again a center of civilization they ought to have a chance. Nobody seems anxious to do it except the Jews and nobody could do it better. Whoever has a right to the land, the Turks have not.

But while we are sure that the establishment of a Jewish state would be a good thing for Palestine we are skeptical about its advantages to the Jews, either those who go there or those who stay where they are. One of the primary motives of Zionism was to provide a City of Refuge for the persecuted Hebrews. But the revolution in Russia will relieve them largely from oppression if, as we are often told, the Russian is not naturally cruel and intolerant but was incited to pogroms by pressure from above. Rumania and Poland, it is to be hoped, will be kept under sufficient control to prevent their former ill treatment of the Jews. In other lands racial antipathy and religious animosity have lost their venom. The Jews suffer from petty prejudice but not from massacres, and instead of being confined to pales and ghettos they are merely excluded from certain clubs and hotels. This is not less reprehensible on the part of the dominant race and hardly less offensive to the victims, but at least it does not prevent them from preserving their religious rites and racial purity to any degree they desire. But it is hard to see how the Jewish "problem," such as it is, will be alleviated by giving them a racial residence. Whenever Jews argue that they are an unassimilable race, eternally alien to the lands they live in, they are playing into the hands of their enemies. Whenever the Zionist says they ought to go to Jerusalem the Anti-Semite says "Amen."

But the Jews are not going to Palestine, anyhow, not any large proportion of them. Even if Palestine has a boom like California or Australia it would not perceptibly reduce the Hebrew population elsewhere. It would not even provide for their natural increase. When the United States was established there were some 3,000,000 Jews in Europe. Now there are some 9,000,000 there as well as 2,000,000 in North America. If half this number should go to Palestine it would have a greater population than in the days of Solomon.

A complete segregation of the Jews, if possible, would be a great loss to the rest of the world. In every country the Jews contribute more than their share to the literature, music, art, science, political progress and commercial development. In each of these spheres they serve as a medium of communication. They are born internationalists, tho that has not prevented them from being patriots, too, as the present war proves. The Jews have constituted the cement of the modern world and such cement will be more than ever needed in the future to repair the present breakage.

So we rejoice over the news of Jerusalem delivered. We are glad that the Jews who want to be by themselves will have a place to go to, and we are pleased that the place is too small to hold them all and we hope they will have increasingly less reason for desiring to leave their present homes.

ANOTHER GERMAN BALLON D'ESSAI

A statement of possible German peace terms has materialized out of the air in Washington. It differs in some respects from its predecessor ghost that appeared last August. It goes without saying that it does not state terms which are acceptable *en bloc* to the Allies. No first proposal of peace terms was ever acceptable on sight, or ever expected to be. Peace making is like bargain and sale—the seller's asking price and the buyer's offer are merely points of departure.

This fact does not relieve us from the obligation of scrutinizing this group of proposals carefully. But one question is vitally important to be answered before we begin our scrutiny: To what test shall we submit any peace terms to determine their acceptability? With what rod shall we measure them?

The answer is simple; it must never be lost sight of. It is contained in the answer to the question: What are we fighting for?

We are fighting to defeat the militaristic, autocratic, and imperialistic ideas that possess the German nation. We must exorcise them from the German mind or we must render the German body powerless to force them upon its neighbors thruout the world.

The German nation has proceeded upon the assumption that what it needs and what it wants, that it should have. It has declared the righteousness of its purpose to seek those ends by ruthless force. It has asserted, not that might makes right, but that the German will makes right; and that the rest of the world shall be made by German might to acknowledge that right.

It is that belief and that purpose which the Allies are fighting to confute. Until their confutation is a fact, no peace would be a good peace. When their confutation is achieved, the question of terms of peace will be an easy one.

So as each successive trial balloon rises into sight from beyond the German trenches, we have our test ready to apply. Would the acceptance of such terms of peace mean that the German idea of military imposition upon the world of the German will had been defeated? Would it mean that the German will to conquest and to aggression had been rendered powerless for the future? When these questions can be answered in the affirmative, the rest is mere detail.

We do not believe that the present mysterious proposals permit an affirmative answer to these questions.

THE CONDUCT OF THE WAR

THE inevitable has happened. The executive departments of the Government concerned in the prosecution of the war are under fire in Congress. Charges of inefficiency, of bungling, of indecision, of dilatoriness, are made and, after investigation, found to be supported by evidence. It seems clear that we have not done as well as we should.

No nation that ever went to war did as well as it should —not even Germany, which was thoroly prepared for war because it intended to have war. We ourselves have always won the wars we fought rather in spite of our mistakes than because of our freedom from them. It is apparently inevitable that the machinery of a time of peace should crack under the strain of war.

It is well for us that we are realizing quickly some of our failures and our negligences. If we but have the courage and the honesty to bare them ruthlessly to the light, and the wisdom to take the drastic measures necessary to correct them, we need have no regrets.

Frankness is the first demand of the moment. The attitude of Secretary of War Baker before the Senate Committee indicates that it will be forthcoming. He met the critical inquiries as to the activities of his department with perfect and engaging candor. The heads of other departments, bureaus and commissions would do well to follow his lead.

The second demand is for decisive and radical action wherever investigation shows it to be necessary. No half measures will meet the requirements of the case. The red tape that binds and hampers the processes of the War Department must be ruthlessly slashed. Caution must be sacrificed to action.

A Department of Munitions, with a Secretary in the

Cabinet, should be created by Congress. It should be headed and manned by civilians, of high business ability. Munition making is no proper part of a soldier's job. The Great War will be largely won by weight of metal. England discovered this fact and took the necessary steps to supply that weight. We cannot do better than follow her example.

There is something uncanny about the experience of the Government's attempt to build ships. One chairman of the General Shipping Board and three general managers of the Emergency Shipbuilding Corporation have come and gone. We are building ships, but whether we are building them as fast as we can we hope the Senate Committee will find out. For no one else seems to know. It should make every effort to discover also where the evil spirit lurks that disturbs the progress of the shipbuilding program. Perhaps we need a Cabinet officer entrusted with this vital task. No greater problem confronts us; for by lack of ships the war can be lost.

This is the Senate's moment. Thru its committees it is performing an indispensable service in bringing the truth to light.

Then the President's time will come. For on him, and him alone, devolves the ultimate responsibility for the actual conduct of the war. He must select the men who shall carry on the war in its every phase, and initiate the policies and the plans by which it shall be prosecuted. His moral responsibility is the greater since we the people cannot call him to account as can the British or the French their chosen leaders. The British Premier, who corresponds as closely as may be in executive function to the President of the United States, is automatically removed from office whenever public opinion as exprest in the House of Commons disapproves his course of action. The President, on the other hand, is elected for a fixt term of office and can be removed during that time only by impeachment or the hand of God. This very immunity ought to make him more ready to listen to criticism, more amenable to the public will, more sensitive for the honor of his administration.

THE NATIONAL PARTY

A new party enters the field—the National Party. This most interesting attempt to unite the liberal and radical noncomformists of the country seems to be the offspring of the remnant which clung to the rigging after the good ship "Progressive" sank beneath the waves and the "intellectuals" who abandoned the Socialist Party after it adopted its unadulterated program of pacifism and pro-Germanism.

The National Party's program is easily the best now before the American people. It is radical, but probably not too radical for the great reconstructive days ahead. It runs the whole gamut of political and social reform, endorsing, as might be expected, woman suffrage, labor legislation, national prohibition, industrial democracy, agrarian improvements, proportional representation, the initiative, referendum, and recall, the single tax, and a world organized for democracy and enforced peace.

We scarcely look for any revolutionary achievements by this new party. For better or for worse the American people seem to be wedded to the two great party system. Indeed, we recall no public measure of the first importance that has ever been put thru in the United States by a minority party or even one of the great parties alone. Our political history, we surmise, will show that until the bulk of the American people—that is, the voters of both great parties—are ready for a change, no vital measure like the income tax, a revision of the tariff, or a federal reserve banking system, can be put on the statute books.

Third parties have their part to play as educational institutions and political gadflies, but as instruments to execute the popular will, the American people will apparently have none of them. When the country goes dry, it will not be because a majority of the people vote the Prohibition ticket; and when Socialism is ushered in, it will scarcely be by the Socialist Party. Therefore, when the admirable program of the National Party is enacted into law—as in time it surely will be—we rather expect to see the Elephant still trumpeting and the Donkey still braying that they did it.

NAVAL DISCIPLINE

LAST summer a brief paragraph in the newspapers announced that one of our superdreadnaughts had run aground somewhere on the Atlantic coast, and had got off safely. We are now told that a court-martial has sentenced the captain (name given) to twenty numbers reduction in his grade—half of which penalty the reviewing authority recommends be remitted.

The "Articles for the Government of the Navy" provide that such punishment as a court-martial shall adjudge may be inflicted upon any person in the Navy who, thru inattention or negligence, suffers any vessel of the Navy to be stranded or run upon a rock or shoal or hazarded." The charge is a very grave one, and usually upon conviction carries exemplary punishment. The present penalty on its face seems wholly incommensurate with a finding of guilty. In fact it is difficult to see why it is at best other than a merely nominal and colorable infliction, if indeed it is any penalty at all. The announcement of the sentence includes no statement that the defendant has even been relieved of his command.

"Reduction in numbers" means that a certain number of juniors whose names immediately follow that of the delinquent upon the Navy Register are advanced over his head. So long as promotion in the Navy depended on mere seniority, the individuals always maintaining their relative positions and going up thru the grades like elevator buckets, this might involve considerable pecuniary loss owing to enforced stay in the lower paid grade and even prove disastrous to a career; especially to captains, who might find the advanced juniors still absorbing the vacancies in the Admiral's grade at the time when they themselves were retired from active service because of having reached the statutory age limit. But in August, 1916, the seniority system gave place to selection, and promotion in the command grades became dependent upon the choice of a Board of Admirals, subject to Presidential approval. As this may fall upon any one in a given grade, quite regardless of his seniority position therein, reduction in numbers is no longer serious as affecting necessarily either promotion or pay, and in any other aspect is nugatory. It may be disagreeable to find oneself preceded by one's juniors in official gatherings, in which some or all might happen to be present, but would that possible annoyance be an appropriate retribution, for example, for nearly ripping the bottom out of a fifteen million dollar dreadnaught?

Besides, what kind of a penalty is it which is identically the same in effect as what might happen to the same person without any dereliction on his part at all? What difference is there between putting ten men above the captain of the "Texas" solely because of his present misfortune, and putting ten men above the captain of the "Texas" solely because a constellation of Admirals has selected them for promotion?

As the efficiency of the Navy is far more dependent upon men than upon material, and upon its Admirals and Captains most of all, and efficiency rests primarily on the maintenance of discipline, it would be interesting to know what palliative circumstances the court-martial found which justified its present sentence. As there is to be an investigation of the Navy by a Congressional Committee, the whole matter may be commended to the careful attention of that body.

THE STORY OF THE WEEK

THE GREAT WAR

December 14—Germans gain ground near Ypres. Italians repulse attacks at Col Beretta.

December 15—Germans and Austrians capture Col Caprille. British advance beyond Jerusalem.

December 16—Bolsheviki make truce with Germany. French repulse German attack in Champagne.

December 17—German destroyers raid British convoy, sinking eleven vessels. British aid Italians to repel Germans.

December 18—Germans make fruitless attack upon line where Americans were first posted. Germans make air raid upon London.

December 19—Germans and Austrians capture Mount Asolone. General Sarrail recalled from Macedonia.

December 20—French repulse great German attack in Lorraine. German "Christmas peace" offer published.

On the West Front The anticipated "grand drive" of the Germans on the western battle front has not yet occurred, tho the Teutonic forces there, strengthened by large levies from the now quiescent Russian front, are said to number 154 divisions, or only one less than last July, when the pressure against the French lines was at its maximum. Artillery duels and minor attacks and counter-attacks have been of daily occurrence during the week, with no important results. On December 14 the Germans gained a little near Polygon Wood, and the British improved their position east of Bullecourt. The next day indecisive patrol engagements occurred on the Cambrai and Ypres fronts. The German Crown Prince was baffled in a series of assaults upon the French lines in Champagne, and there was a marked increase of German artillery fire near Langemark, in Belgium. On December 17 active artillery fighting was reported from the region of the Rhone-Rhine Canal, where the American troops first engaged in the war; tho whether they are still there is not disclosed. German patrols were easily repulsed by the British near Passchendaele, and German attacks were foiled by the French in the Argonne, on December 19. The heaviest attack of the week was made by the Germans in Lorraine and Upper Alsace on December 20, but it was at all points repulsed with great losses.

The Italian Conflict The Teutonic forces arrayed against the Italian lines are reported to be 750,000 strong. Little progress is being made in the invasion, however, and indications multiply of a deadlock for the rest of the winter. After four days of hard fighting the Germans on December 14 captured Col Caprille. The next day the Italians took the offensive against the Austrians in the Piave Delta, with armed motor-boats and aeroplanes, destroyed an enemy bridge, captured several enemy positions and took many prisoners. German attacks in the region of Col Caprille were repulsed with heavy losses. Monte Solarolo was the scene of the next operations, and there on December 17 and 18 the Austrians and Hungarians made some gains and took 1000 Italian prisoners; and on the latter date they took by storm the Italian positions on Monte Asolone, with 2000 prisoners. Teutonic forces also crost the lower reaches of the Piave, but were promptly driven back with much loss. While the possession of Monte Asolone was of much advantage to the invaders, the Italians held them in check, and on December 20 resumed the aggressive against them.

More Aerial Raids About a score of German aeroplanes raided England on the night of December 18. Five of them succeeded in reaching London and dropping bombs upon that city, killing ten persons and wounding seventy, but doing little other damage. Outside of London five persons were hurt. One of the raiders was hit by British gunfire and was lost in the sea off the coast of Kent, two of its three men being captured alive by a British trawler. Another is believed also to have been destroyed at sea. No British aircraft were lost. At almost the same time British naval aeroplanes successfully bombarded the Engel aerodrome and arsenal behind the German lines in Flanders.

German Raids at Sea While their illegal and inhuman submarine warfare is failing to achieve its boasted purpose, the Germans have again resorted to a more honorable form of activity at sea. News came on December 17 that a squadron of German destroyers or cruisers, or perhaps both, had succeeded in eluding the vigilance of the British guard ships and had got out into the open North Sea. There it attacked a fleet of British and neutral merchantmen and their naval convoy, bound from a Scottish port to Norway. Firing was begun at a distance of 3500 yards, with deadly accuracy, and within half an hour the Germans had won a complete victory, apparently without loss to themselves. One of the two British destroyers was sunk and the other badly damaged, tho she succeeded in returning to port. Four armed British trawlers, used as mine sweepers and U-boat guards, were also sunk; these being all that were with the fleet. One British merchantman and five neutral merchantmen suffered the same fate, the six having a total tonnage of about 8000 tons. Apparently this British disaster was the result of some blunder, since the destroyers and trawlers were intended to protect the merchantmen against nothing more than submarines and mines, and the escort of cruisers, which had been as-

SENT OUT TO SEARCH FOR THE WOUNDED

This Red Cross expedition suggests the gallant tales of war adventure that we used to read about before August, 1914

Mathewson & Winn, Atlanta

GERMAN PRISONERS IN THE U. S. A.

A couple of interned sailors learning the great American game at the German prison camp in Georgia

signed to the task of protecting them against just such raids as this, was not at hand when needed. An official investigation of this circumstance is now in progress. The German destroyers got back to home ports in safety.

The same day it was announced that on December 12 German destroyers had made a raid clear across the North Sea and had sunk two neutral merchantmen and a trawler just off the English coast, near the mouth of the Tyne. It was also reported that German raiders were believed to be in the China seas, near Singapore, and the Philippine Government issued a warning to that effect to shipowners.

Jerusalem Unscathed

Detailed reports of the capture of Jerusalem suggest a noteworthy contrast between British and German methods of waging war. The rule and practise of the Germans, in Belgium and France, have been to do as much damage as possible, even to the places and buildings which were most precious to the world for their artistic beauty, their historic interest or their sacred character. It was thus that the incomparable Cathedral of Rheims, the unique Cloth Hall at Ypres and other quite irreplaceable structures were purposely destroyed. When the British were before the walls of Jerusalem, on the other hand, it was ordered that there should be no bombardment of the city, nor any firing upon any part of it with artillery lest some precious building should be damaged or some sacred spot be desecrated. The Turks took advantage of this and used artillery freely, placing many of their guns outside the walls, confident that the British would not reply in kind since they could not do so without endangering the city. The same policy was pursued on each side at Bethlehem. The outcome was that the British, tho at the risk of greater loss of life than would have been involved in artillery assault, depended solely upon rifle fire and bayonet charges, and thus captured both Jerusalem and Bethlehem without damage to the holy places. It is to be recorded to the honor of the Turks that they did not themselves follow the example of their German allies in destroying whatever they could not defend, but scrupulously refrained from harming the places which they were compelled to surrender.

They are reported, however, to have maltreated some Christian priests, and to have looted the Church of the Holy Sepulcher of its treasure and jewels. The latter act was, however, apparently committed by Germans, or at German orders, since the loot is said to have been taken to Berlin.

Colonel House's Report

Col. E. M. House, the confidential diplomatic agent of the President and head of the American delegation to the recent Inter-Allied Conference at Paris, returned to this country on December 15 and made a personal report to the President on his mission. He exprest himself to this effect: That the word "peace" was not uttered, either officially or unofficially, in all his conferences during twenty-eight days in Europe, but all discussion was directed toward the intensification of war efforts; that there was complete agreement among the delegates to the conference as to plans, both military and economic, when the sessions of that body were concluded. A plan for financing, fighting and rationing the war and the fighters was agreed upon; that the morale of the French and British people never has been better during the war, even the French pacifists, of which there are a few, admitting that the spirit of the nation is more militant than ever before; and that Russia still is a complete enigma to both European and American statesmen.

Inter-Allied Council

One tangible and lasting result of the recent Inter-Allied Conference was the organization in London on December 15 of an Inter-Allied Council, consisting of representatives of America, Great Britain, France and Italy, with the other Allied nations privileged to share in its deliberations so far as their own special requirements are concerned. Oscar T. Crosby, Assistant Secretary of the Treasury of the United States, was chosen president of the Council. One of the British members is General Smuts, the former Boer leader in South Africa and now one of the foremost champions of British imperialism. The meetings of the Council will be held alternately in London and Paris. The Council has made this formal statement concerning itself and its work:

> This is the first permanent inter-Ally body in which the United States is represented. It results from the efforts initiated by Secretary McAdoo and has for its primary object consideration of the needs of the Allied governments for purchases in the United States. Purchases in neutral countries will also receive the council's consideration. A coördinated study of needs will be made, and when conclusions are reached the corresponding financial needs will be considered. The council's recommendations will then go to the Secretary of the United States Treasury and the Allied governments concerned.
>
> The council will indicate the priorities desired by the respective governments, but final decision as to priorities between these and the demands of the United States for the latter's own purposes will be made in Washington.

Russian Anarchy

The anarchical condition of affairs in Russia continues, and if possible grows worse. The Bolsheviki cabal which is now in power seems to be pressing peace negotiations with feverish and reckless haste, as if intent upon concluding some sort of treaty before it is itself driven out, as there is much likelihood of its being. The military truce went into effect on December 16, and is to prevail until January 14. During that time there is to be no transference of troops or regrouping of forces on either side, "excepting those begun before the agreement was signed"—a provision which practically leaves the Germans free to shift forces as they please. During the truce, in hours of daylight, there may be free intercourse between the respective armies, not more than twenty-five persons on each side participating together. During the truce, negotiations for peace are to be conducted.

The German and Austro-Hungarian Foreign Ministers promptly hastened, on December 18, to Brest-Litovsk, there to meet and confer with Leon Trotsky, the Bolsheviki Foreign Minister, on terms of peace. Mr. Trotsky invited the governments of the Allied Powers to participate in the negotiations, but his invitation seems to have been ignored. At the same time Philip Scheidemann, the German Socialist leader, went to Stockholm, to engage in conference with Vorlofsky, or Orloffsky, the newly appointed "plenipotentiary" of the Russian Workmen's and Soldiers' government. It was un-

officially but plausibly reported on December 20 that the Germans had rejected the Russian peace proposals, and that the Bolsheviki delegates had in consequence been recalled from Brest-Litovsk to Petrograd.

Meantime, according to admissions by the Bolsheviki themselves, the elections for the Constituent Assembly appear to have gone against that faction and in favor of the Social Revolutionists, by a decisive majority. Whether the Assembly will be permitted freely to assemble and deliberate is uncertain. The Bolsheviki threat not to permit it to do so unless it favors the Bolsheviki régime has not been withdrawn. On the contrary, efforts seem to have been made to establish something like a reign of terror. Some members of the Constituent Assembly have been arrested, and on December 16 Leon Trotsky, speaking for the Bolsheviki government, said to some of his opponents:

> You are perturbed by the mild terror we are applying to our enemies. But know that within a month this terror will take the terrible form of the French revolutionary terror—not the fortress but the guillotine.

Civil war continues. The Cossacks of the Don region are in open revolt against the Bolsheviki, Siberia is organizing for independence, the former Prime Minister, Kerensky, was reported on December 18 to be approaching Petrograd with an army. The governing body of the Ukraine defied the Bolsheviki and persisted in supporting the Cossack General Kaledines, the "mad monk" Iliodore organized an army in Samara and defeated both Bolsheviki and Cossacks, the Grand Duke Nicholas is said to have organized a formidable monarchist movement in the Caucasus, and general chaos and dismemberment of the empire seemed to be impending.

The judicious announcement was made on December 19 that work on locomotives ordered for Russia in this country had been stopped, and that many of those already built but not yet shipped would probably be retained for use here.

An Illusive Peace Plan

Encouraged by the treachery of the Russian Bolsheviki to the Allies, the German Government is reputed to have formulated "Christmas peace proposals." These comprize: A plebiscite (under German control) to determine the future of Alsace-Lorraine; Germany to be remunerated for the loss of her colonies (which were never profitable to her but a source of constant loss), and to use that indemnity (at her own pleasure) for the rehabilitation of the lands which she has ravaged; Poland, Lithuania, Courland and other provinces to be taken from Russia and made "autonomous" under Teutonic suzerainty; the Turkish Empire (including Palestine) to be restored intact; Rumania, Serbia and Montenegro to be restored, and Serbia to have egress to the sea; a peace conference to deal with questions of disarmament, freedom of the seas, etc. This plan for a "German peace" was put forth on December 20. On the same day Mr. Lloyd George in the British House of Commons declared that complete restoration of all lands overrun by the Teutons, and "full compensation for the losses caused," were fundamental bases for peace, so far as Great Britain was concerned.

Lloyd George's Speech

The British Prime Minister made another "fighting speech" on December 14, to the Benchers of Gray's Inn, in which he took strong ground against any peace thru compromise. "I warn the nation," he said, perhaps, as some surmised, referring to Lord Lansdowne, "to watch the man who thinks there is a halfway house between victory and defeat. There is no such house." Such men, he continued, thought that the war might be ended now, by some sort of peace—the setting up of a league of nations with a system of arbitration and disarmament, and with all nations binding themselves by treaty to abide thereby. That, he said, would be the right policy after victory, but before victory it would be a farce. "Who would sign such a treaty? Among others, I presume, the people who have so far successfully broken the last. Who would enforce the new treaty? I presume, the nations that have so far not quite succeeded in enforcing the last." He added that he would regard the making of peace now as a betrayal of the great trust which had been confided to him and to his colleagues. Referring directly to Lord Lansdowne and his recent letter, he said that he was persuaded that that gentleman did not mean the letter in the sense in which it was generally interpreted, and was willing to believe that all the time he was in accord with the policy of the Government; but he regretted that Lord Lansdowne did not make his intent more clear. Mr. George's speech has been much commented upon and discussed, pro and contra; the weight of opinion being in its favor.

Tirpitz the Terrible

Grand Admiral von Tirpitz, the author of the U-boat warfare and the foremost advocate of "frightfulness," recognizes that the German campaigns thus far have fallen far short of success. "Up to the present in this war," he told the Hamburg branch of the Fatherland Party, "Great Britain has won rather than lost. Peace based on the *status quo ante*, or on renuncia-

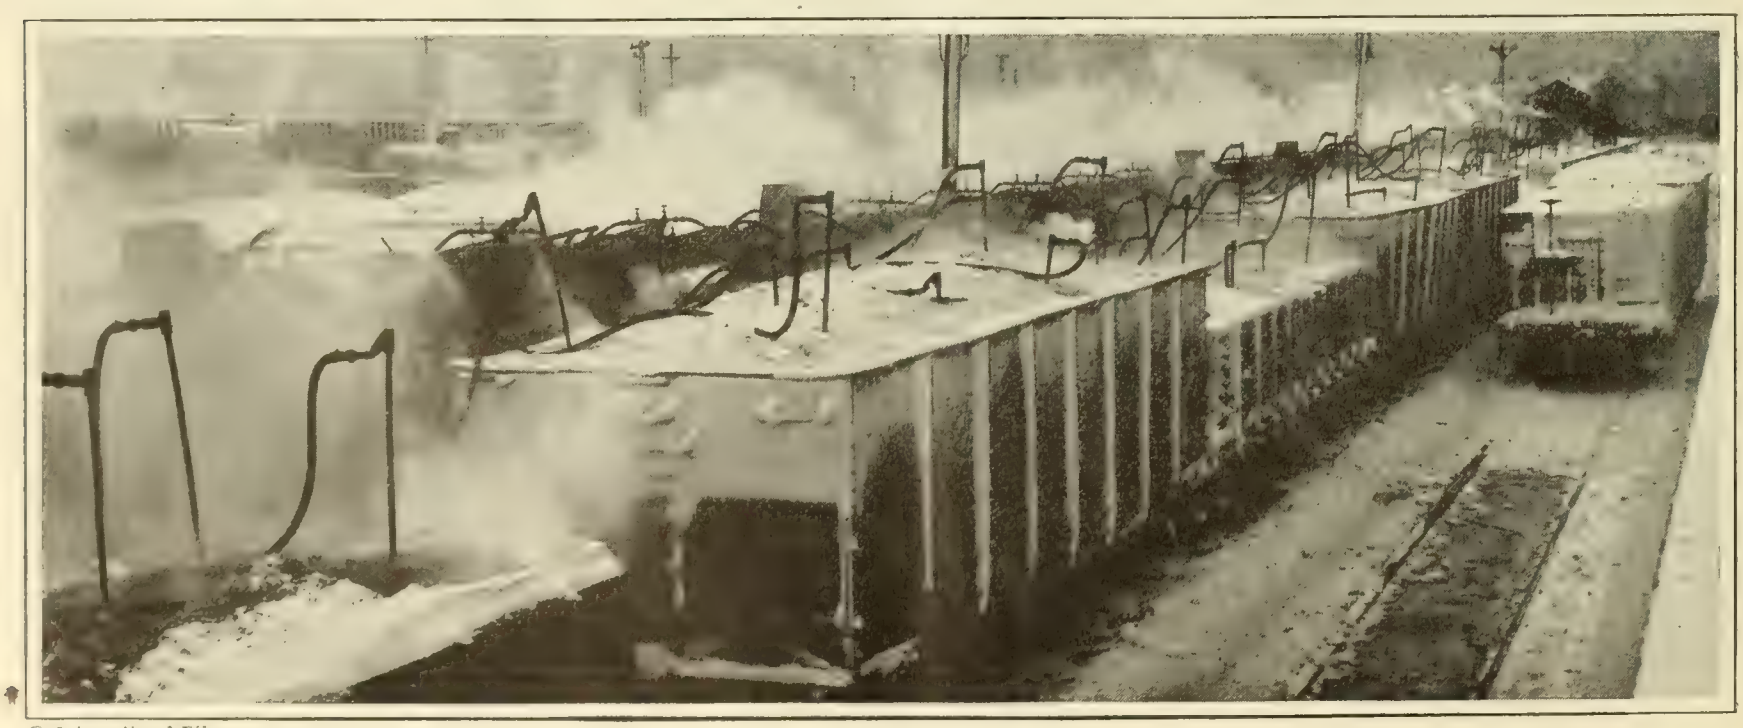
THE PRUSSIAN WAY WITH PRISONERS

An American who spent the first three years of the war in Germany and Belgium got this photograph of a squad of British prisoners forced to dig trenches for Germany



tion, therefore, is out of the question for Germany." He demanded, therefore, an inexorable prosecution of the war, and exprest confidence in ultimate German success thru the destruction of shipping with U-boats. Meantime the Kaiser has just issued a decree creating a new German Imperial Navy Department to have exclusive charge of the U-boat service, which has hitherto been under the Dockyards Department of the Navy.

Disasters in Germany Something like an epidemic of disasters, in the form of explosions and fires in munitions factories, seems to be prevailing in Germany. Two, widely separated, were reported on December 16. One was near Kiel, and involved the destruction of an extensive factory devoted to the making of bombs for use on Zeppelins and aeroplanes. The factory was demolished and many workmen were killed. The other was at the great Zeppelin works at Friedrichshaven, on the Lake of Constance, where a great explosion cost many lives. It will be recalled that on November 22 one of the largest military and industrial chemical works in Germany, at Griesheim, near Frankfort, was destroyed by the effects of an explosion. No explanation of these disasters has been offered, and there is nothing to show that they were not purely accidental.

Canada for Conscription A vivid reflection of the energy and valor of Canadian troops on the fighting line was perceptible in the general parliamentary elections which were held on December 17 thruout the Dominion, in which the existing Union Government of Sir Robert Borden won by a substantial majority over the opposition led by the veteran Sir Wilfrid Laurier. The paramount issue in the campaign was, at least nominally, that of conscription. Sir Robert Borden was fully committed to the execution of the selective draft law which is now on the statute books, while Sir Wilfrid Laurier was opposed to it until it should be submitted to a referendum of the nation, pledging himself, of course, to abide by the result of the referendum, whatever it might be. It is difficult to avoid the conclusion, however, that—perhaps involuntarily—the division was made chiefly on the old racial lines. Ontario, Manitoba, and all the western provinces save Alberta; which was almost evenly divided, went overwhelmingly in favor of the Government; while the great French province of Quebec went as strongly for the Opposition. This latter result had been anticipated, but there had been some uncertainty as to the outcome of the polling in Ontario and the west, largely because of the untried factor of some 500,000 women who were permitted to vote because of their relationship to men who are or have been in active service. Apparently these women voted pretty solidly for the Government and its war policy. The votes of the 300,000 soldiers at the front are yet to be reported, but it is confidently assumed that they will almost unanimously be in favor of the Government. The whole result, therefore, is interpreted as a confirmation and vindication of the Government's course, and as a notice to the world that Canada is in the war for a fight to a finish.

Next Year's Harvests The outlook for next year's harvests is not at present as good as might be wished. The Government had urged a campaign for a billion bushels of wheat, to secure which 47,337,000 acres of winter wheat should be planted. Adverse conditions of weather and shortage of labor caused only 42,170,000 acres to be planted. That is the largest acreage on record, but the condition of the crop is now so unpromising that a yield of only 540,000,000 bushels is forecast, leaving 460,000,000 bushels to come from spring wheat if the billion mark is to be reached. In the last ten years the average yield has been 14.4 bushels to the acre, but next year not more than 12.8 bushels are looked for. This year the crop of winter wheat was only 418,000,000 bushels, and in 1916 it was 481,000,000, while in the five years preceding the latter it averaged 543,000,000. Next year's estimate therefore falls slightly below that five years' average, tho it considerably exceeds the figures of the last two years. In 1914, with the largest acreage known, 42,012,000, the crop was 684,000,000 bushels.

Nation-Wide Prohibition A long step toward nation-wide prohibition of the liquor traffic was taken on December 17 and 18, when on the former date the House of Representatives by a vote of 282 to 128, and on the latter the Senate by a vote of 47 to 8, adopted for submission to the states for ratification a proposed amendment to the Federal Constitution forbidding the manufacture, sale, transportation, importation or exportation of intoxicating liquors for beverage purposes. A similar instrument had been adopted by the Senate alone in August last, with provisions that it must be ratified by the states within six years, and should go into effect immediately upon ratification. The House on December 17 amended it so as to extend the time for ratification to seven years, and to give one year's grace thereafter for liquor manufacturers and dealers to adjust their affairs before it became effective. The Senate on December 18 accepted it with these changes. Senator Borah, of Idaho, gave warning that it was, in his opinion, unconstitutional; holding that Congress had no right to prescribe a time limit within which ratification by the states must be effected. The action of Congress was immediately reported officially to the various state governments, and it is expected that some Legislatures will ratify the amendment during next year's sessions, Affirmative action by thirty-six states will be necessary. Twenty-seven states have already adopted state-wide prohibition, and if all these should adopt the Federal amendment, as many assume they will, only nine more states would have to be secured

A HURRY CALL FOR COAL

To relieve the immediate need of coal a day and night force was set to work thawing out and unloading the frozen carloads at the big coal depot of the Lehigh Valley Railroad. This photograph shows the steaming process by which the coal was thawed

WILL TRUCK TRAINS SUPPLANT THE RAILROADS?

The Council of National Defense, coöperating with the Michigan State Preparedness Board, started this motor-truck train on December 14 from Detroit to the Atlantic seaboard. Thirty-two trucks were sent, each of three-ton capacity, driven by army chauffeurs. If officials decide that the test trip was successful trucks may be used on a big scale to relieve the freight congestion on the railroads

for ratification. Doubt is felt by some, however, concerning the approval of the Federal amendment by all the prohibition states, since a number of these are in the South and are wedded strongly to the principle of State Rights, which a national prohibition law or amendment would, it is urged, violate. While, therefore, they favor prohibition as a state act, they are disinclined to have it imposed upon the states by the nation.

Investigations in Recess Congress on December 18 took a recess until January 3, after ordering investigations into practically every department of war activity of the administration, which are to be conducted during the recess. These investigations comprize the food and fuel administrations, the sanitary conditions of the training camps, the equipment of the army with rifles, machine guns, cannon and other supplies, the operations of the Shipping Board, the work of the Navy Department, railroad transportation, publicity, and other details. All these investigations are entirely free from the suspicion of partizanship, and are meant to be constructive and helpful to the Government rather than destructive and embarrassing. Altho the President had intimated that after the recess he would present his plans for solving the railroad problem, and it had been suggested that Congress should await that presentation, the Senate ordered an investigation of the recent recommendation of the Interstate Commerce Commission, to the effect that the Government should take over the operation of the roads, unless Congress wishes to permit their practical unification and to grant them financial assistance. A resolution was also introduced into the Senate asking the Committee on Public Information to inform the Senate of the salaries or other allowances paid to its head, George Creel, and his staff.

The Lack of Guns Mention was made last week of the investigation into the lack of rifles, pistols, machine guns and cannon for our army, both in the training camps and at the front, and to General Crozier's testimony that there had been much delay. Medill McCormick, a Representative from Illinois, who had just returned from France, testified before the Senate Committee that in lending cannon to our expeditionary forces the French Army was depriving itself of equipment which it urgently needed for its own use, and that unless this country speeded up its production of ordnance and ammunition, France would be put in peril of losing the war. General Crozier, being recalled, charged much of the delay to "red tape," for which, he said, Congress itself was largely responsible. Manufacturers, too, took time to get ready. Leading private manufacturers of arms, on the other hand, testified that they had anticipated the Government's needs and had got ready in advance to furnish supplies with all possible expedition, and then had to wait while the Army Ordnance Bureau refused or failed to act. "It was," said one, "utterly impossible to make the Ordnance Department realize the possibilities of war, and we simply folded our tents and went home." They agreed, however, that the War Department's decision to change the types of rifles and machine guns was wise, even tho it caused some delay, since it assured to our army a far better equipment than it otherwise could have had. The new machine gun they declared to be "absolutely the best ever invented."

Meantime, the Senate indefinitely postponed action on the President's reappointment of General Crozier as Chief of Ordnance, and the Secretary of War appointed Brigadier-General Charles Wheeler to be Acting Chief in his place.

As to Universal War Training Some surprize was felt and openly manifested at the intimation by the Secretary of War in his annual report that he was not in favor, at least at this time, of universal military training. He said that the War Department did not seek legislation on the subject, "chiefly for the reason that the formation of a permanent military policy will inevitably be affected by the arrangement consequent upon the termination of the present war"; and he exprest a hope that the future had in store some "relief from the burden of armament and the destruction and waste of war." It was naturally assumed that these utterances of Mr. Baker's had the approval of the President, and it was reported upon what appeared to be competent authority that the President deprecated the adoption of universal training at this time because he believed that the United States could enter upon peace negotiations at the end of the war more effectively and with a freer hand if it had not committed itself to such a policy. Thus he is said to hold that this country could not consistently or with convincing force advocate a policy of general disarmament if it had committed itself to a system of universal military training. Some earnest dissent from these views was exprest in Congress, but it was felt that the Secretary's report and the President's alleged sentiments had made it improbable that any important legislation on the subject would be enacted at this session.

Conditions in the Camps Some disquiet has been caused by reports of unfavorable sanitary conditions in the training camps, and of lack of clothing and other equipments for the soldiers. It was announced on December 14 that in the week preceding 171 of the 300,000 National Guardsmen in camp had died of pneumonia. At the same time among twice that number of men in the National Army only forty-seven died of that disease. The contrast was said to be due chiefly to the fact that the Guardsmen were living in tents and the Army in substantial wooden barracks. It was said that in addition to living in tents the Guardsmen were suffering lack of fuel and insufficient clothing. The Government practically admitted that it had not suitable quarters for all the men who had been conscripted or who had enlisted, for it closed some of its recruiting stations, and at others told men who had enlisted to go back home and wait until they were called, which would be when there was room for them. General Sharpe, the Quartermaster General of the Army, however, declares that adequate supplies of clothing for all men in the service are now available, and that proper transportation facilities will assure a meeting of all wants. There have, he says, already been distributed to the troops about 6,000,000 blankets, more than 2,000,000 overcoats, more than 8,000,000 pairs of shoes, more than 12,000,000 winter un-

dershirts, and other articles in proportion.

Immediately upon the heels of this assurance, however, came a report from Major General W. C. Gorgas, the Surgeon General of the army, concerning his personal inspection and observation of four of the great training camps. He said that he found soldiers wearing summer clothing in winter weather and without overcoats, and in consequence suffering and dying from pneumonia. Tents were overcrowded in such a way as to induce the spread of disease. Facilities for segregation of those suffering from communicable diseases were lacking. Hospital facilities were poor or incomplete. There were brought into camps already crowded thousands of men who should have been segregated under inspection until their sanitary condition was ascertained. Another report made to the Council of National Defense was that four-fifths of the shoes provided for the army were too short for the men to wear with comfort. The prompt sequel to these reports was the recalling of Major General George W. Goethals to active service and the appointment of him to be Acting Quartermaster General in place of General Sharpe.

The Sugar Famine

The Senate committee which is investigating the sugar famine had before it, as its chief witnesses, Claus A. Spreckels, president of the Federal Sugar Refining Company, and Earl D. Babst, president of the American Sugar Refining Company—keen competitors and rivals in trade. Mr. Spreckels declared that the sugar shortage in the eastern states was due to the fixed import price prescribed by the Food Administrator, Mr. Hoover, which led to the shipping of large quantities from Cuba thru New York to Canada, where refiners were permitted to pay higher prices. He also threw much blame upon Mr. Babst, and upon George M. Rolph, general manager of the California-Hawaiian Sugar Refining Company, who, tho agents of the Food Administration were, he said, unduly active in securing supplies of raw sugar for the American Sugar Refining Company. Mr. Babst vigorously denied these charges and made counter charges against Mr. Spreckels; and Mr. Hoover in interviews as earnestly denied the imputations which had been made against his administration, and asked to be called by the investigating committee as a witness so that he might publicly vindicate himself, a request which the committee did not grant. Mr. Hoover declared that the animus of Mr. Spreckels' attack upon him had been the fact that the action of the Food Administration had reduced the profits of his sugar refining establishments.

Shipping Board Tribulations

The decision of the Senate to investigate the operations of the Federal Shipping Board was concurrent with another controversy in that Board and consequent resignation of the General Manager of the Emergency Fleet Corporation. This officer, Rear Admiral Harris, had a sharp disagreement with Mr. Hurley, the chairman of the Shipping Board, over the expenditure of the appropriation of $12,000,000 for the housing of employees at the shipbuilding yards; the former gentleman wishing to proceed at once, with all possible expedition, and the latter insisting upon waiting to consult the housing committee of the Council of National Defense. Charles Piez was appointed General Manager in place of Rear Admiral Harris, as the fourth to fill that place in as many months.

The Federal Shipping Board was authorized on September 7, 1916, and was appointed on December 22, 1916. It organized at the end of January, and in April it organized the Emergency Fleet Corporation and appointed General Goethals, the builder of the Panama Canal, its General Manager. After a prolonged deadlock between the chairman, Mr. Denman, and General Goethals the former was practically removed by the President and the latter resigned under pressure. Rear Admiral Capps was appointed general manager and Mr. Hurley became chairman. On November 15 Rear Admiral Capps resigned and was succeeded by Rear Admiral Harris, who a month later also resigned.

Such has been the record of the Board, whose work was said to be the most urgently imperative of all before the country.

The Ill-Fated "F" Boats

Another tragic disaster to the unfortunate "F" class of American submarine boats was reported by the Navy Department as having occurred on the afternoon of December 17 "in a fog in home water." The "F-1" was rammed and sunk by the "F-3," nineteen men being lost with her.

The "F-3" was practically uninjured and returned to port with five survivors from the lost vessel. Both vessels were cruising on the surface when the disaster occurred. It is thought that the sunken boat can be raised and repaired.

THE LADIES' AID

Here are four of the pioneers in wartime work for women. Postwomen have passed the novelty stage already, but Eleanor Regan (at the left) was one of the first to serve. Mrs. Julia Laughlin, a station master of the Chicago and Northwestern Railway, holds the first executive position ever given a woman in the operating department of a railroad. She checks baggage, handles mail, announces trains and runs the telegraph office. New York has the first woman subway porter, but she doesn't find it so different from the cleaning she has done in office buildings. At the extreme right is one of the women street car conductors, already employed in many of the larger cities

UNCLE SAM'S BIG JOB

BY F. A. VANDERLIP

Mr. Vanderlip's article in The Independent last week discussed the problem of financing the war as "Your Job and Mine" and gave straightforward, sound advice to the average man on his part in paying for the war. Mr. Vanderlip showed convincingly the fallacy of "business as usual" when it employs labor to produce unnecessary things in competition with the Government's demand for labor and emphasized the need of economy, not so much of money, as of labor and of goods. As chairman of the National War Savings Committee, Mr. Vanderlip explained the issue of War Savings Stamps, which will raise $2,000,000,000 and teach "this spendthrift people the habit of thrift."—THE EDITOR

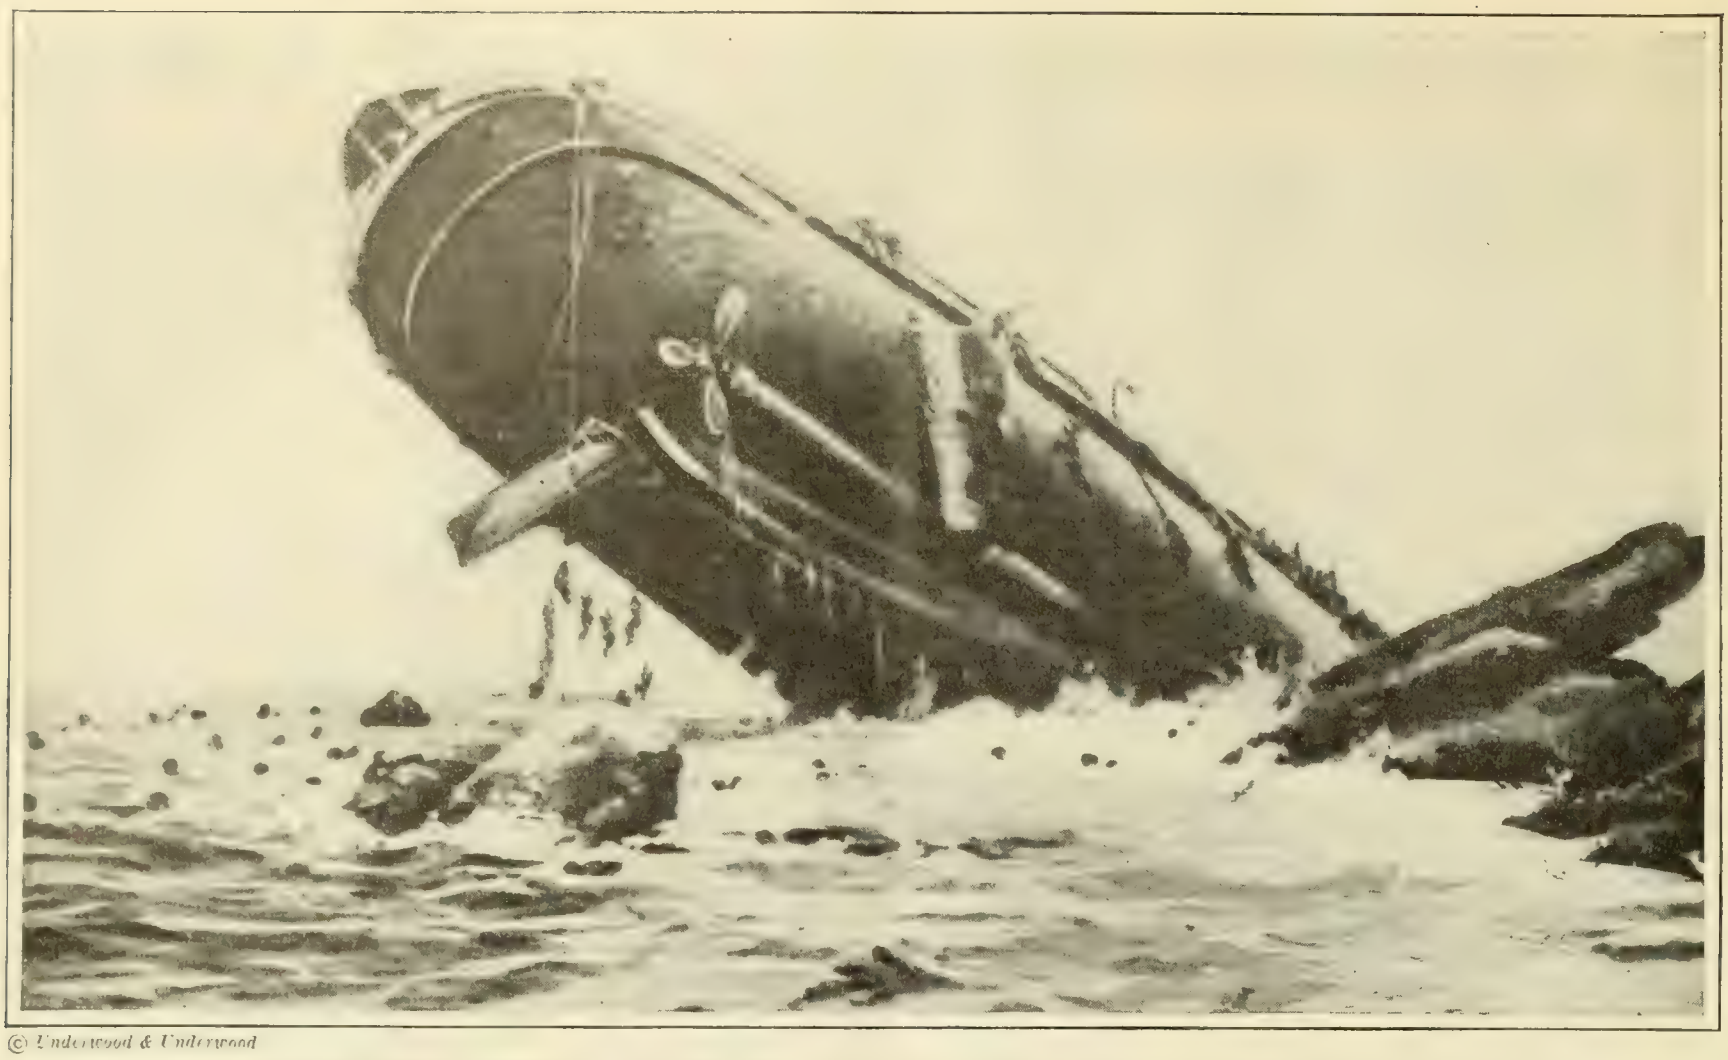
THE figures of the last census, the figures for 1914, put the value of all manufactured products in the United States for everything that came out of the factories at $24,003,000,000, and here we have nineteen billion and some odd hundred millions appropriated, most of which is to buy these things that have got to be made. We are going to undertake to spend in one year nineteen billion dollars, whereas the expenditures of the Treasury, since its first organization with Hamilton down thru the War of 1812, the Civil War and the Spanish War, for expenditures of every sort that has gone out thru the Treasury foots only $26,300,000,000. That measures something of the size of this great problem.

Now as I have said, appropriations are not going to aid. The appropriations came very readily, but the outbreak of the war found us in a complete state of unpreparedness. I do not think that we need to have any qualification at all. It was as incomplete as could be conceivable. Whatever there was needed was to be done. Nothing was ready, and men charged with the duty of doing these things each in his own field felt the enormous responsibility that was on his shoulders, made plans to effectively do the particular thing that he had in hand and asked for appropriations. Congress granted these appropriations almost without question.

NO one, I suppose, had any idea at all but what the credit of the United States was unlimited, that we could raise any amount of money that might be necessary, and when the amount ran into such figures we rather lost all sense of what it meant. With this we have begun to have very unusual experiments with political economy. We first found that it was not appropriations that we were short of, or Treasury credits that we were short of; it was steel, it was coal, it was some of the great raw materials. A demand was being made greater than could be filled. The result of that, under the old method of price fixing, of supply and demand, would have led us into an impossible situation. We might have gotten any sort of prices, and so the Government, I think, very wisely, adopted the course of price fixing in some of the great staples.

Probably some mistakes have been made. Obviously a mistake was made as to coal, and instead of stimulating productions to the highest possible point, a thing that there was a great necessity for doing, the price that was fixed has resulted in a considerable decrease in production. Steps are being taken now that this is recognized to rectify it. The price fixing of steel, novel as it was, tremendous as the responsibility was, has on the whole resulted, I believe, well.

The next thing that became obvious was that there was going to be a great congestion in transportation, and almost overnight as important a thing was done with the railroads as was done in England. Not as complete, for in England the management was not taken out of the hands of the people who were managing the railroads, but it was all centered in the control of the Government, and overnight the Government found itself in complete control of the whole railway net. Here the railroads showed great patriotism in subjecting themselves to the will of a board made up of railroad executives. Now it has been of vital necessity to see what has happened from this dual system of management which we have upon our railroads. The dual theory of control has at once broken down in a crisis, and that theory of control which prevents combination, which prevents pooling, has been brushed aside. No matter what the law is, the law of necessity is greater, and it was obvious at once that the pooling of railroads, the pooling of the equipment of railroads, was one of the ways of getting efficiency.



The tendency as I have observed it in Washington is toward further steps in that direction. There will be greater congestion. The task that is to be put up to the railroads is greater than they can meet. Every means possible will have to be devised to make them more efficient, to make them equal to handling this vast tonnage that is being offered, that is not well distributed that is packed in certain localities because of the tremendous orders that have been given for Government work. The roads have got to be handled if they are to give their full efficiency from a practical centralized management.

THE next trouble that developed was with the ocean borne transportation. It was of course evident with the destruction that was going on and the increased demand for service that was coming, that the neck of the bottle of our whole operations would be the shipping. Some one said that we should first build our ships, and organize our Shipping Commission afterward. That was not feasible, but we have had a good deal of bad luck with organizing the Shipping Commission. I think that one man on that Commission has cost the country $300,000,000, but that does not measure it. He has cost the country three months of time, and that is a good deal more than can be measured in money.

The task that the Shipping Commission has is one of the greatest that was ever put up to any men. It is no simple thing to undertake to build in a year 6,000,000,000 tons, particularly when every shipyard is full, when men are fully employed, when we are without experience in a large way in this sort of construction.

A curve showing available shipping as compared with the probable demands indicates very clearly that that situation is not going to improve for some months. It will probably grow more critical until at least the spring months of next year. There is today 1,000,000 tons of French shipping awaiting shipment. Now there is the important thing of all things. We can train soldiers, we can build aeroplanes, we can carry on all these acts of preparation, but their effectiveness is measured by the number of men fully equipped that can be put upon European soil and maintained there, and that is governed wholly by the amount of shipping. So that I believe the most important thing that the Government has in hand is the construction of ships—the construction of ships faster than they can be sunk, or the discovery of some means to prevent their being sunk so rapidly.

NOW the raising of money for all these things to the great total of $19,000,000,000 is not going to be an impossible task. When we had our first Liberty Loan proposed by the Secretary of the Treasury, and were told that it would be $2,000,000,000 it was a shock to every experienced banker. No one had really counted on the war starting out on quite such a scale as that. We did not see how it was going to be done. We had to invest money, and it seemed almost impossible that there could be such a sum made available at one time for this one investment. And there came a revelation of our financial strength. Not only was the $2,000,000,000 subscribed for over fifty per cent, but the amazing thing of it is that it was absorbed, went into the strong boxes of investors. It lingered only very briefly in the portfolios of the banks as collateral for loans. But $2,000,000,000, big as it is, did not measure very much by what was needed for this fiscal year, and so the next loan came and again the same success. The number of people who have subscribed has been another amazing feature. At the time the first Liberty Loan was offered, we [Continued on page 603

A torpedoed British transport. The crew and soldiers are sliding down the life-ropes and in the water

FAIR PLAY—AND FOUL

BY PARK BENJAMIN

THE Articles of War provide that "if any person in the navy strips off the clothes of or pillages or in any manner maltreats any person taken on board a prize, he shall suffer such punishment as a court-martial may adjudge"; and conforming thereto the Naval Regulations require of every commander that he shall cause "all under his command to observe the rules of humane warfare and the principles of international law."

These rules crystallize a practise of all civilized navies for probably three centuries, if not longer. They rest upon a certain marine chivalry—a brotherhood among sailors, who, being always battling with wind and water, in time developed a sort of free masonry which caused them mutually to extend helping hands when battles between themselves were decided, and never more readily than when the struggle was bitter and long. When one reads Sir Walter Raleigh's story of the magnificent fight of the little "Revenge" against a whole Spanish squadron, and pictures Sir Richard Grenville, bravest of the brave, brought wounded and dying on the deck of the enemy flagship, one always likes best that part of the story which tells how "the Spanish admiral used Sir Richard with all humanity and left nothing unattempted that tended to his recovery, highly commending his valor and worthiness, and greatly bewailing the danger wherein he was"; albeit those were the days when the British mariner, prisoner to Spain, had little hope of a deliverance, save with the aid of the Holy Inquisition at its next *auto da fé*. There was another and cogent reason why the fighting sailor preferred to treat his captives with humanity—rough in kind as it often may have been—and that was because he had no desire to imitate his mortal foe, the pirate. Victory and not plunder was his aim. He fought the enemies of his country, but exterminated the enemies of the human race. As long as the first fought fair, he honored them as cordially as he despised the second. He would board valiantly and kill opponents with pike and cutlass, but when the resistance ended, no one walked the plank or was slaughtered in cold blood. He would not serve other honest seamen in that way, and if his affair was with pirates, there were generally none left alive to be dealt with in any way.

NAVAL history is full of instances of the sailorman's chivalric humanity. When the captured "Chesapeake" was taken to Halifax, her Captain Lawrence ("Don't give up the ship") was buried with military honors from those against whom he had fought. A British officer who was one of his pall-bearers later commanded the "Boxer" in her fight with our "Enterprise." Mortally hurt, he sent his sword to the dying American captain, who passed away with it in his hands. And then all the people of Portland, Maine, reverently received both bodies and buried them with equal honors, side by side. And there was Perry, after the Battle of Lake Erie, visiting the commander of the British squadron and offering sympathy and every available comfort; and at the subsequent funeral of the officers killed in action on both sides, their messmates, British and American, walked two and two, while the drums and fifes of both squadrons, victor and vanquished, played the "Dead March" and the minute guns of all the ships sounded the requiem.

In others of these happenings the very humor of them best shows the humanity. Captain Hull of our "Constitution" and Captain Dacres of H. M. S. "Guerrière" were friends before the war of 1812. One day in bantering one another over the merits of their respective ships, Dacres bet Hull a hat that if the two vessels ever should meet the British frigate would prove the stronger. Strangely enough they did afterward meet in battle. Dacres came alongside the "Constitution" to deliver his sword. There he found Hull at the side ladder grasping his hand and helping him on board.

"Give me your hand, Dacres," said Hull. "I know you're hurt. No, I don't want a sword from one who knows how to use it as well as you do. But Dacres"—by this time both had reached the quarterdeck—"Dacres, I'll just trouble you for that hat!"

And the surgeons of the "Constitution" went on board the shot-riddled hull of the "Guerrière" and helped the wounded, until the water rose high within her, and then the boats of the victor took off every one before she sank.

Half a century later Lieut. Commander James Jouett, U. S. N., commanding the gunboat "Metacomet" at Mobile, was ordered by Admiral Farragut to go get the Confederate gunboat "Selma," which was making herself generally obnoxious. The ships were

pretty evenly matched and the fight was rather lively, but in the end the "Metacomet" got the better of it and the captain of the "Selma" came to give up his sword. The captain's name was Murphy, and in former days he had been an excellent officer of the United States Navy and known to everybody in it and especially to his most intimate friend Jouett as "Pat."

Jouett, who always had a fine taste for good living, had managed before the action to obtain from Pensacola some unusually toothsome supplies juicy steaks and canvasbacks, sundry fluids of generous character, and so on. When the "Selma's" flag came down he sent some orders to his steward and awaited the arrival of his enemy. "Pat" came over the gangway with great and mournful dignity.

"Sir," he began, "I have come with feelings of deep regret to offer my—"

"Oh, get out, Pat," broke in Jouett, gathering him under his arm. "I don't want your sword. Come and get something to eat."

And with that he dragged the astonished Murphy into his cabin, where an enticing table had been spread. "Pat" looked at it gravely—and hungrily.

"Jim," said he slowly, "if I had known you had that yere grub, I would sho' have surrendered long ago."

Most of us can remember, and Spain has not forgotten, the uniformly kind treatment accorded by the navy to its captives of the Spanish War. Admiral Cervera's tendered sword was refused, the crew of the "Iowa" when he came on board cheered him, and the wardrooms of the fleet stripped themselves to provide clothing. The Spanish officers were quartered at the Naval Academy under merely nominal restraint, and Annapolis made social lions of them. Nothing like rigor characterized the treatment of the enlisted men in their northern places of detention. As for individual episodes perhaps simple humanity reached its limit when the crew of one of our blockading ships on the Cuban coast having discovered that a lighthouse keeper, whose supplies had been cut off, could not get proper food for his sick baby, regularly sent him every morning a can of condensed milk.

The only attempt in modern times to set aside the sea rule of humanity was by the Committee of Public Safety during the French Revolution which issued a decree prohibiting the captains of war vessels from giving quarter. Evidence that it was ever obeyed is lacking. The enemy ignored it. And when the "Vengeur" after her heroic fight with the "Brunswick" and the "Ramillies" in succession, lay a dismasted and helpless wreck rolling heavily in the sea, but still serving her guns, the British ships which drew near to administer the *coup de grace* sent their boats instead of round shot and rescued four hundred of her people before she took her final plunge.

Nothing is more strictly enjoined upon all civilized navies than that captives must be treated with humanity, that their personal property must be preserved and protected, that they must be given properly cooked food and the use of whatever of their effects may be necessary for their health—and this is just as binding upon the captors as is the requirement that the prisoners be efficiently guarded and deprived of all means of escape and revolt.

The German Empire gave its solemn adhesion to the International Convention signed at the Hague on October 18, 1907, wherein taking into consideration the eventuality of war and animated "by a desire to further the interests of humanity and the growing demands of civilization" it agreed that "the lives of individuals and private property . . . are to be respected." How this has been observed on land the world knows and knowing has supped full of horrors. Ancient nations whose ambassadors had been insulted, or resenting special acts of cruelty or bad faith or dealing with barbarians, massacred their prisoners or sold them into slavery. But they left the poisoning of wells to the highly-cultured German of today. Cæsar's swift galleys boarded the Breton ships and killed every one on them, for the Veneti had been treacherous and had laid hands on the sacred persons of Roman ambassadors. But the pagan Cæsar, "constitutionally lenient," as Froude says, left to the Christian ruler who usurps his title the bloodlust which indiscriminately slaughters the helpless wounded at sea.

WE are now face to face with ample proof that the rule of humanity has no existence in the Teuton mind. The submarines of Germany are running amuck —recklessly destroying friend as well as foe. They have not only sunk inoffensive passenger carriers, but they have shelled the non-combatants seeking safety in the boats. They have wilfully and deliberately sunk vessels of mercy conveying food and supplies to the despoiled Belgians. And their crowning infamy is the repeated destruction of hospital ships even when their own wounded were on board; persisting, says the International Red Cross Committee of Geneva in its vigorous protest to the German Government, "in a resolution which is in contradiction to its humanitarian conventions which it has pledged itself solemnly to respect."

It has been well said that this note from the greatest humanitarian society in the world is a protest without precedent against an unprecedented crime.

Now, it being manifest that Germany has put herself out of the sea brotherhood and its immemorial rule of humanity, what are we going to do about it? The demand for general reprisals—or rather retaliations—has been urgent in Great Britain since the Zeppelin attacks began, and Mr. Lloyd George is reported to have said that repayment will be made with compound interest. Whatever may be the case on land, the question on the sea is more of prevention than of punishment. Destroyers, depth bombs, sentinel airships and all the destructive apparatus now in use, not merely in large measure annihilate submarines but prevent them. Can we apply another preventive? Our enemies abroad charge us with undue sentimentality—with failing to bring murderers and lynchers to justice, with condoning abuses and shortcomings which other nations sternly suppress, with exhibiting a mawkish and morbid sympathy for the outcast and degenerate, and generally with belonging to what Nietzsche calls the "botched and bungled" who substitute a weak and vacuous idealism for the healthy exercize and cultivation of the "will to power." And it is further charged that we are over likely to exhibit our sentimentality to the pariah nation now arraigned at the world's bar—to its encouragement and comfort. Are we?

Contrast the following:

(1) Not long ago a German submarine took off the crew of a merchant vessel and then sank her. The apparently rescued sailors were gathered on the submarine's deck. The submarine closed her hatches and submerged, drowning every soul.

(2) Since then a United States destroyer damaged a German U-boat so that she came to the surface. The rest is quoted from an official account made public by the Navy Department:

> The submarine's hatch flew open and the Germans scrambled out, coatless and shoeless, ready to swim for it. They lined up with hands in the air, shouting "Kamarad!"
>
> The destroyer moved close up and heaved a line, which the Germans made fast. This was no sooner done than it became apparent some of the crew had opened the sea-cocks, for the submarine began to sink. The Germans leaped into the water. Some American bluejackets jumped into the sea to rescue the injured. As the last German was lifted aboard the hawser parted and the U-boat disappeared.
>
> Hot coffee and dry clothing were given the Germans, who were otherwise made comfortable for the run to the base. One of their number, a machinist, died on the way of shock and exposure. He was buried with full military honors from the deck of the destroyer, the American commander officiating at the funeral service.

Are "full military honors"—such as we pay to men who have fought and died gloriously for their country and the very same which we wish we could give to our own sons lost in the destroyer torpedoed five hundred miles from land the other day—are these rightfully accorded to savages who kill women, children and the wounded? If so, on what theory? Do we mark our detestation not only of the ghastly brutalities, which have sickened every honest man who goes down to the great deep in ships, but of the treachery which scuttled the surrendered vessel and which since time immemorial has justified the sharpest retribution, by coddling the perpetrators with creature comforts? Is that preventive of future atrocities or just the reverse?

The writer asked of a distinguished Italian officer of long experience with German militarists what effect on them such proceedings might be expected to have. His answer was, "They laugh at you."

New York City

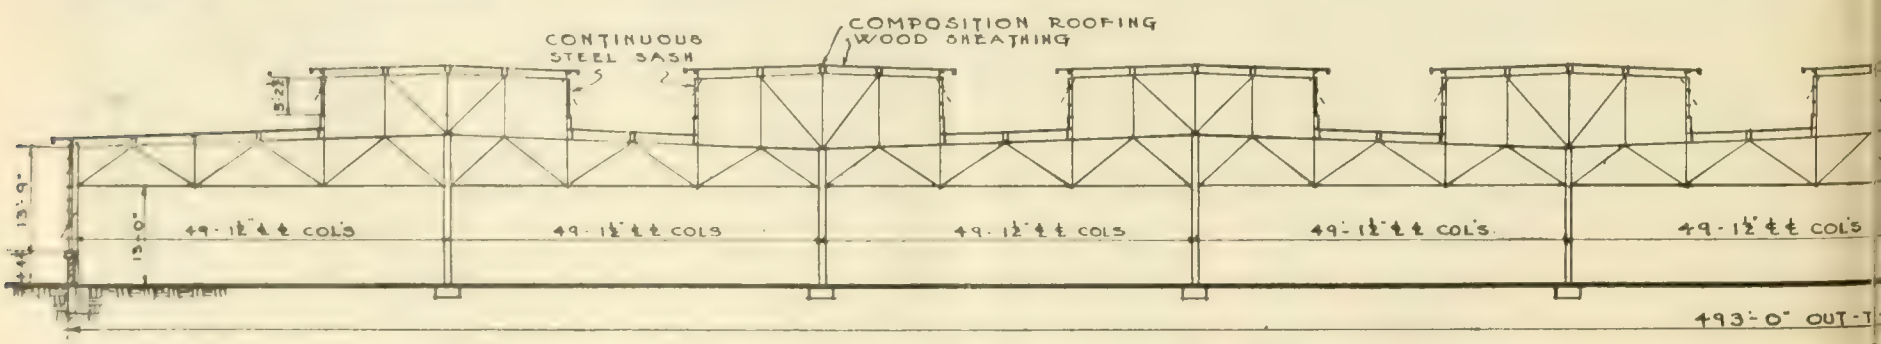
In 30 working-days, from *date of order,* this Owner occupied 120,000 square feet of the Austin Standard No. 3 Factory-Building shown above.

Austin Standar

Cover Large Area

Austin Standard No. 1, 60 feet wide, Standard No. 2, 90 feet wide, and standard No. 3, 100 feet wide are erected complete, singly or in combination, in any reasonable length in multiples of 20 feet, in 30 working-days from date of order.

Austin Standard No. 4, sawtooth roof with 20 foot by 30 foot panels; Austin Standards Nos. 5, 6, and 7, typical foundries and heavy machine shops, with side aisles 30 feet wide and center aisles 41, 47, and 57 feet wide respectively, are erected complete, any length in multiples of 20 feet, in 60 working-days from date of order.



WE take the entire responsibility for th satisfactory delivery of complete factory buildings, guaranteeing our delivery schedul under a bonus and penalty contract.

The structural materials for Austin Standar Factory-Buildings are under contract, in transit and in stock ready for shipment and rapi erection.

Designs and details are ready for direct application t your problem, or for such revision as may be necessary Basic costs are known. All the preliminary work is don and the Austin organization is ready.

The Austin Company—A National Organization

Cleveland	16210 Euclid Avenue	Eddy 450
Detroit	Penobscot Building	Cherry 389
Indianapolis	Merchants' Bank Building	Main 642
New York	217 Broadway	Barclay 888
Pittsburgh	House Building	Court 119
Philadelphia	Bulletin Building	Spruce 1291; Race 401
Washington	Bellvue Hotel	Main 255

This section shows how Austin Standard No. 3 Building can be extended laterally to any required width. By adding an extra monitor where the buildings join, Aus Standard No. 3 can be built in any dimensions that are multiples of 20 feet in length and 50 feet in width.

In 55 calendar days, the entire building, 600 feet by 900 feet, 540,000 square feet, was ready for occupancy.

Factory-Buildings

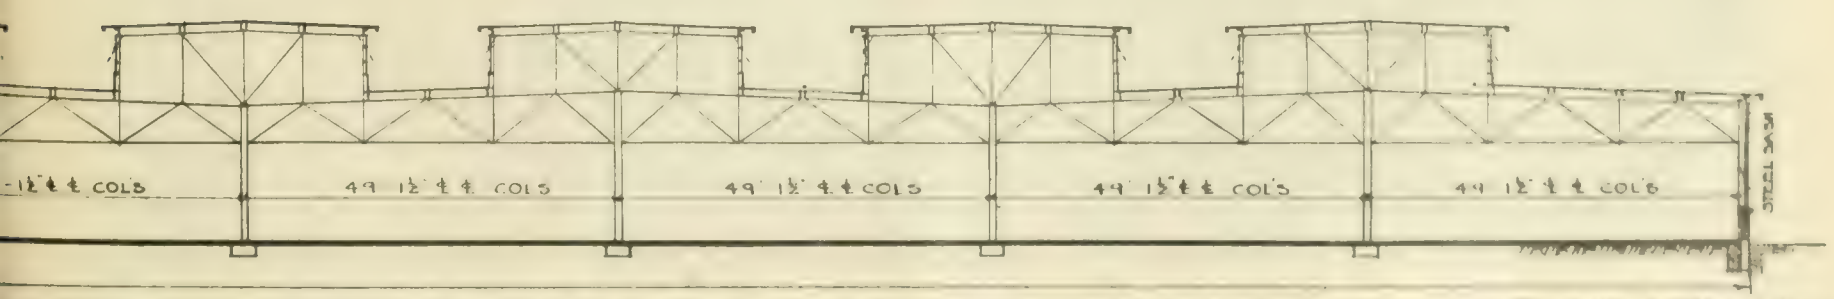
30 Working-Days

WITHIN 30 working-days from the *date-of-order* we delivered complete 120,000 uare feet of Austin Standard No. 3 Building. ypical interiors of this building are shown ove, cross-sections in detail below.

The schedule on this work called for the delivery of 0,000 square feet in 90 working-days. We turned over e building, 900 feet by 600 feet, in 55 *calendar* days, ducing our schedule by more than one-half.

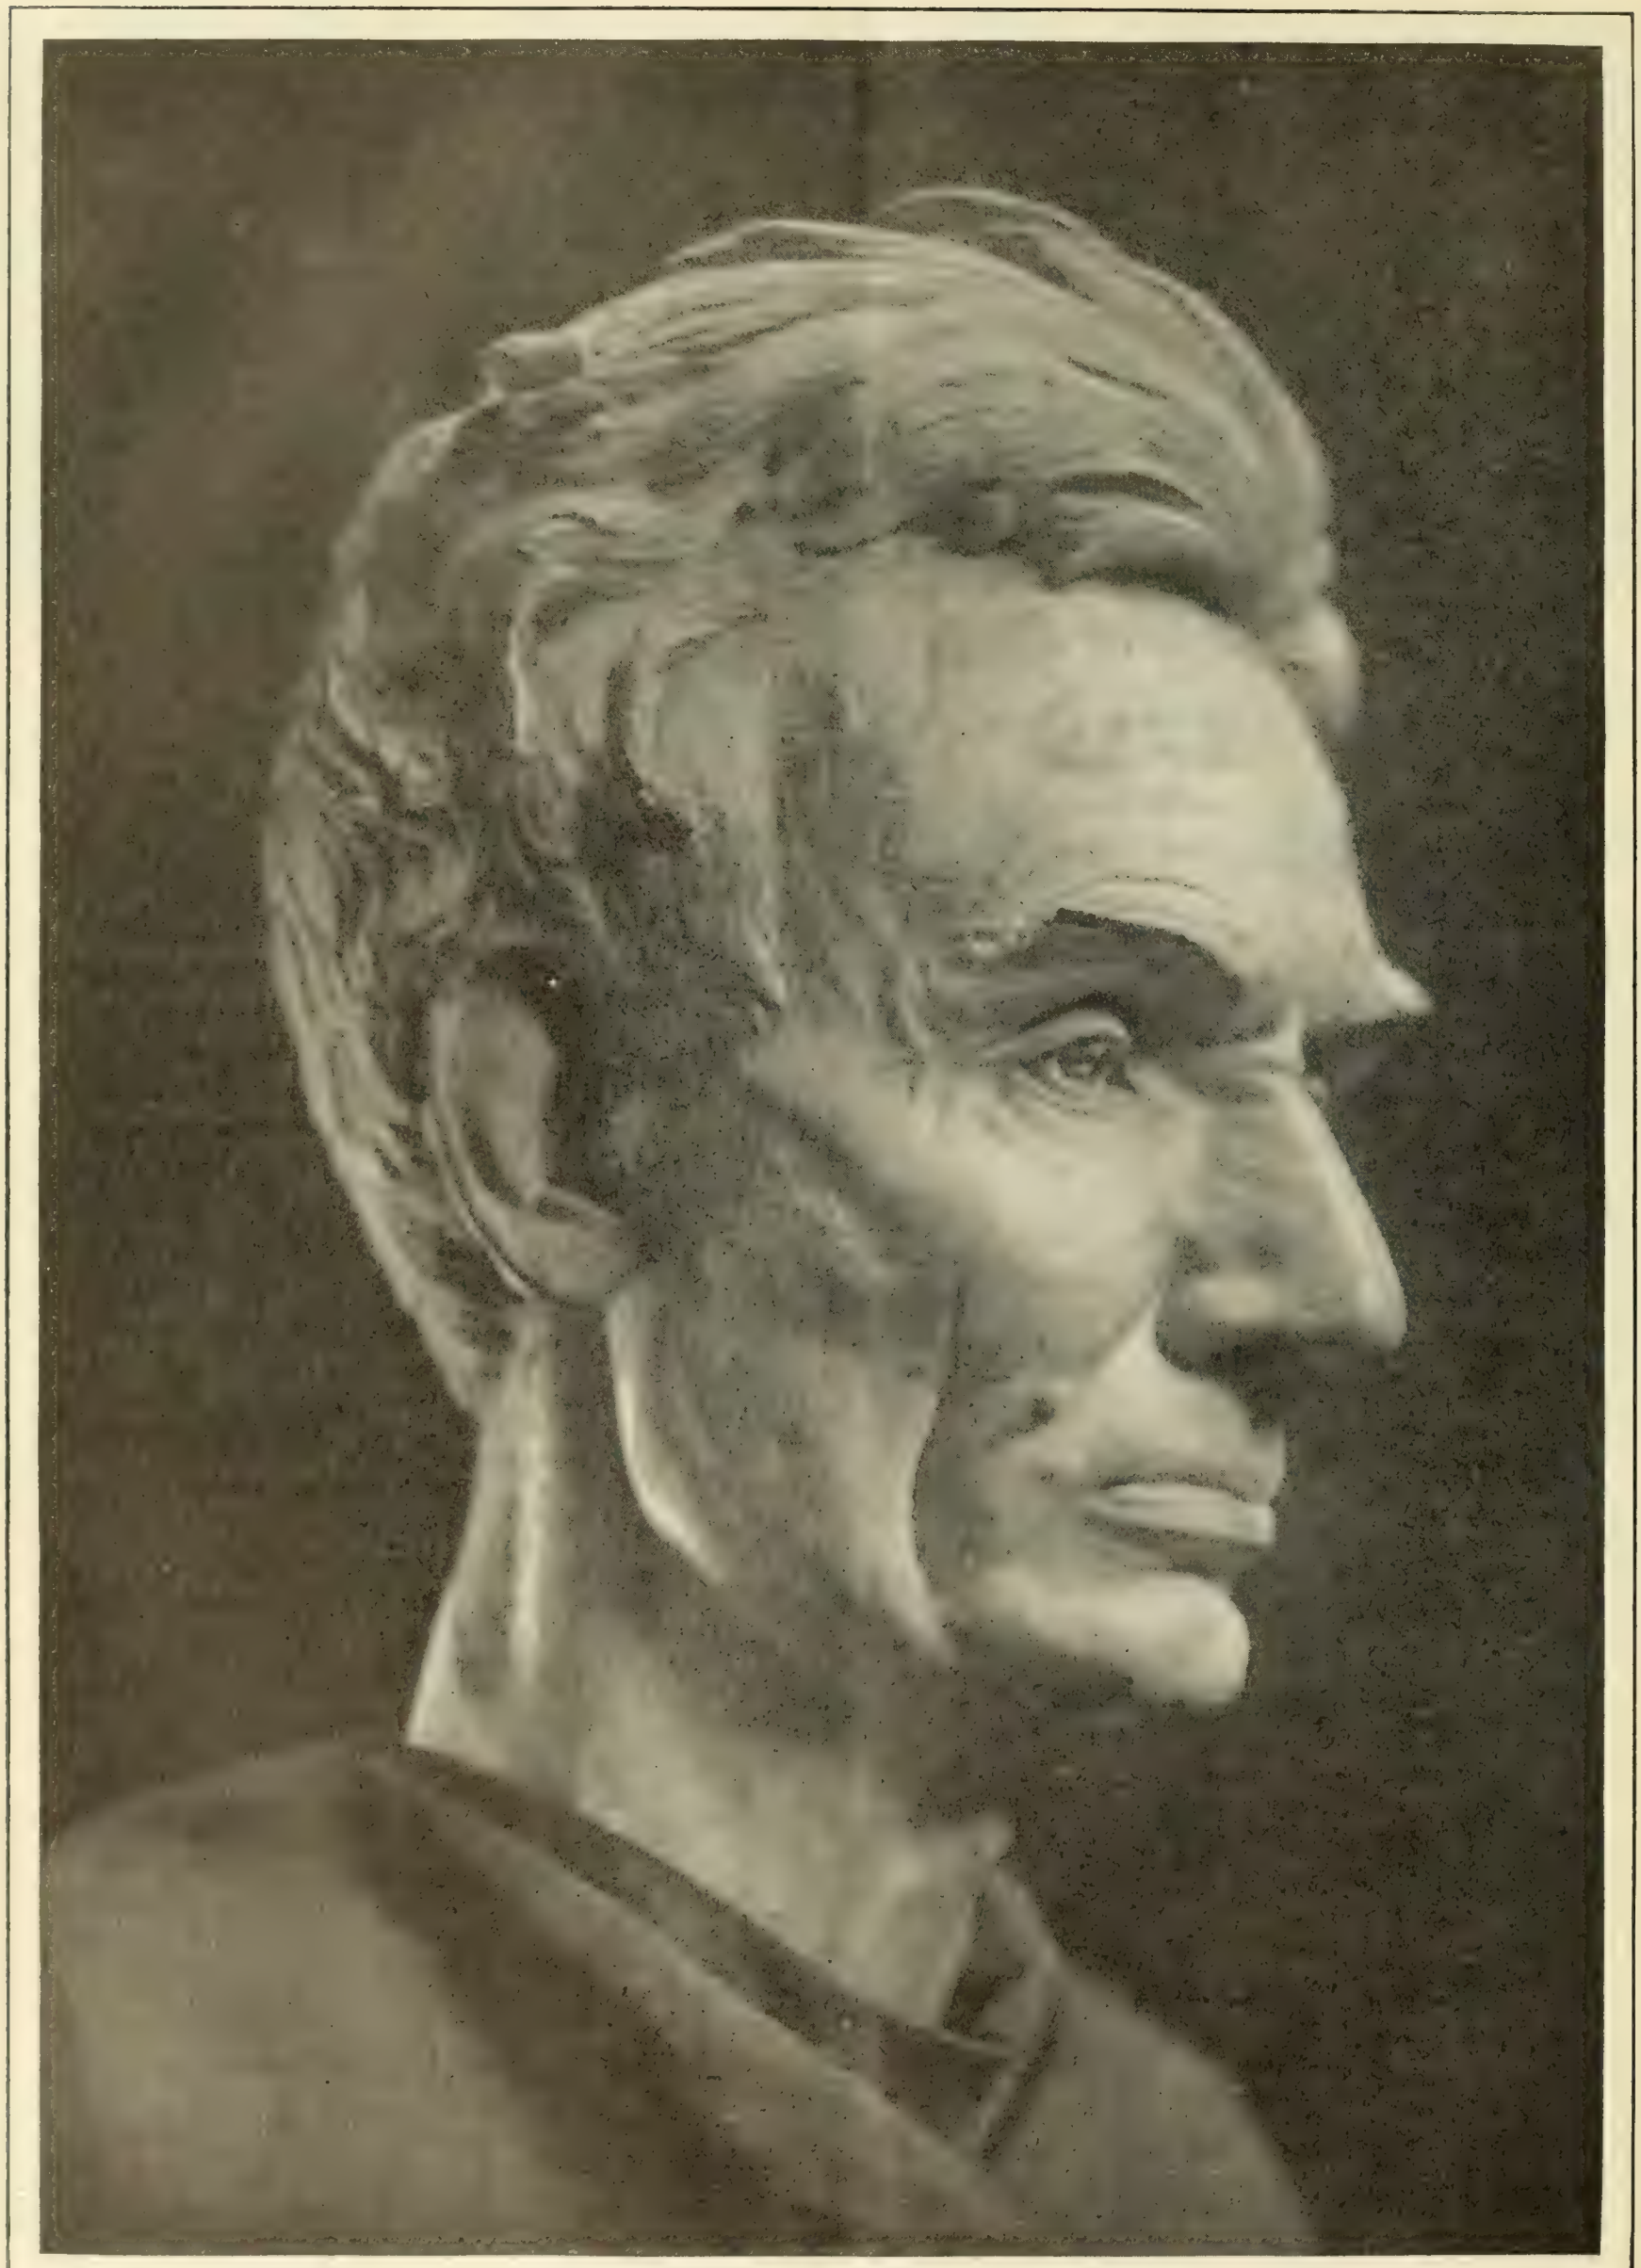
Our proven ability to deliver factory floor-space cov- ing any reasonable area, and to deliver on time or ahead time, is being used by the United States Government, e General Electric Company, Nordyke & Marmon and any other leading organizations.

In special work as well as Standard, Owners have found a certain sureness of results in retaining us to handle, from start to finish, industrial building problems of any size or kind.



We do the engineering work, either in our office, or we lend you our engineers to act as a part of your staff, to develop your own ideas in your own plant.

Unit responsibility, as developed and applied to the production of industrial buildings, means much to the manufacturer who needs a good building, at a fair cost, delivered in quick time.



Write, phone or wire the office nearest the proposed work

The Austin Company

INDUSTRIAL BUILDERS

e building shown above, nine Austin Standard No. 3 Buildings, 600 feet long, were placed side by side as shown in this section. The entire building, 540,000 uare feet of well-lighted, clear-working factory floor space, was delivered in 55 calendar days. This cross section shows five Austin Standard No. 3 Buildings.

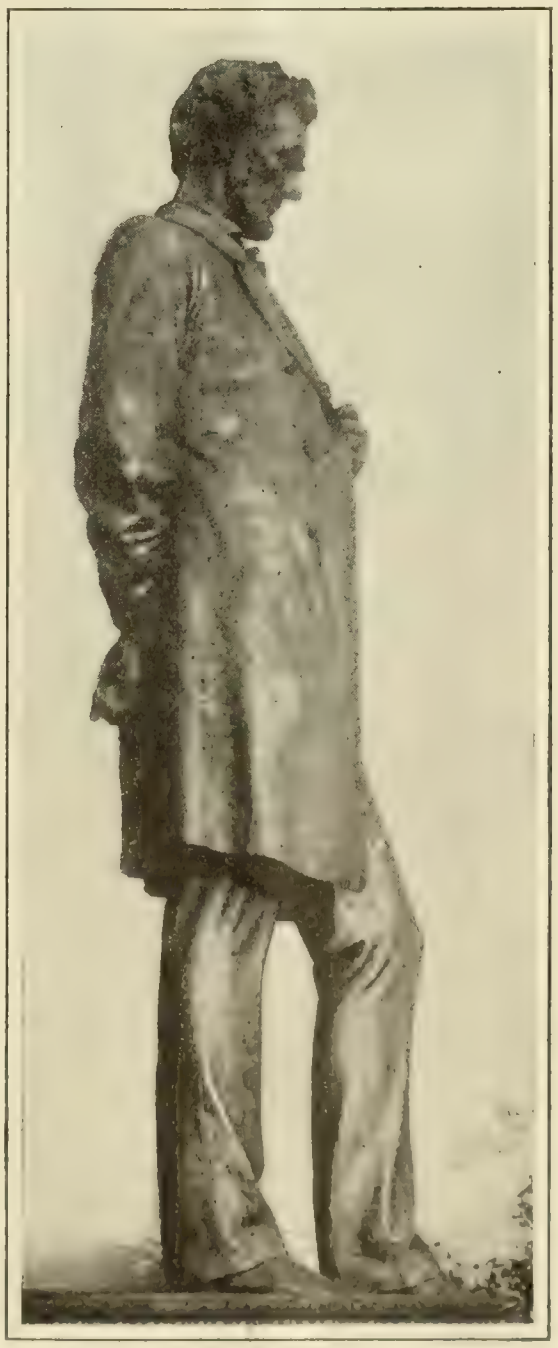
THE BARNARD LINCOLN

THE ELECTION OF LINCOLN

A POPULAR REFERENDUM ON THE BARNARD STATUE AND FIVE OTHERS



LINCOLN is a live issue. We have called for a referendum of our readers on many questions of vital importance but they have never displayed a greater interest or more decided opinions than in response to the request we made in our issue of November 3 for an expression of opinion on the relative merits of the Lincoln statues. The generous proposal of Charles P. Taft to send a replica of the new bronze statue by George Grey Barnard to be set up in Parliament Square, London, started a violent controversy between those who like and those who dislike—say rather those who worship and those who abominate—this sculptor. This was to be expected, for we have all remarked, with Hawthorne, "how invariably every sculptor uses his chisel and mallet to smash and deface the marble work of every other." But that the controversy has spread so far beyond artistic circles is surprizing and also encouraging, for we can only have a national art by having popular appreciation, and a monument to a national hero erected in a public place, whether Cincinnati or London, must submit to public censorship. G. K. Chesterton in discussing the question of the acceptance of the Barnard statue by the British Government is careful to avoid passing any judgment on the work, for he has of course never seen it, but he as a conservative and a democrat is naturally disposed to give more weight to the verdict of the public than to the opinion of an "advanced" group of artists. He says:

Artists are proud of being unpopular. That sort of superior person is still superior to everybody, especially to the other artists of the school immediately preceding him. He contemns Whistler's impressionism but he copies Whistler's impudence. . . . It seems absurd that a thing should not be popular when its whole object is to be public. The most exquisite art may be a puzzle to the mere passerby but if it is elaborately erected on a pedestal, merely in order to impress him, it seems a pity that it should only puzzle him. Art may not be meant as a mere reproduction of nature, but if an image is put up on purpose to commemorate Lincoln, it might not unreasonably remind us of him. If a public statue is only a private taste, it may much more properly be a private statuette. Lincoln would not perhaps have had much sympathy with any politician standing on a stone pedestal and looking down on the pedestrians in the street. But he would have had even less sympathy with an artist standing on a spiritual pedestal and looking down on the citizens of the state. He might himself have been surprized at the New York statue of Liberty enlightening the world but he would have been even more amused at a Futurist statue, on the same scale, of Liberty mystifying the world.

This then gives us justification—tho we needed it not—for our appeal to the readers of The Independent. Over twelve hundred voters took part in the referendum. It was made the subject of debate in many classes and clubs. Since not all of our correspondents gave relative ranking to the whole six candidates we have converted the ballots into proportional preferences by multiplying the first choices by six, the second choices by five and so on down. The result of voting on the sculptor of the best statue of Lincoln is as follows:

St. Gaudens	9820
Patrick	3356
Borglum	2841
French	1467
Ball	1356
Barnard	1207

The verdict of our readers is emphatic. The statue of Lincoln by Augustus St. Gaudens which stands in Lincoln Park, Chicago, is by long odds the favorite. Next is that by J. Patrick in Edinburgh. Third in favor is the sitting figure by Gutzon Borglum in Newark, New Jersey. Fourth place is given to the new statue designed by Daniel Chester French for the Lincoln Memorial at Washington. Fifth is the Boston statue by Thomas Ball. Lowest of all in the estimation of our readers is that by George Grey Barnard, which is the present storm center.

Press Illustrating

Of the 1205 preferential ballots cast, nearly 600 favored the St. Gaudens statue first

But the champions of Barnard make up in the warmth of their devotion for the fewness of their numbers. Here is one letter:

Phidias saw in the rough Pentelicus rock the symmetrical lines from which he afterward chiseled the classic figures of the Parthenon. Barnard saw his Lincoln in the rough, too, but somehow his chisel failed to follow the ideal lines of the ancient Greek. Our sculptor felt the spirit of democracy guiding the hand that made his Lincoln look like the same Lincoln who gave us the Gettysburg speech, like the same Lincoln of tender, loving, human sympathies and living soul, who looked out beyond the vanities of personal adornment. Barnard has gotten away from the sham fine tailored and well groomed Lincoln and given us back the homespun, cowhide-booted, democratic Lincoln; he has told us that Lincoln's wedges and maul were more potent at rail splitting than was the hammer of Thor at splitting the thunders of Jove.

Let our critics fix up a Beau Brummel type of Lincoln statue, showing their ideal to have worn a boiled shirt and powdered wig if they want to, but we will stay by Barnard's homely, dreamy-eyed ideal.

Kathleen Boyd

Traverse City, Michigan

Let us hear next from one who once hated Lincoln but later learned to love him, from the retired bishop of West Texas who after the war rose from the plow to the episcopate:

I vote for the Barnard Lincoln. First, because I hate shams and love the real, and this statue represents the real Lincoln. The Lincoln who, as a great gawky boy, sprawled on the cabin floor before the fireplace, and by the light of a pine knot began with his books, without a teacher, at the foot of the ladder, and by indomitable pluck and dogged perseverance worked his way unaided to the top.

It is the Lincoln who mauled rails, and thereby learned his first lessons in meeting and overcoming the knotty difficulties and discouragements that went before and followed after him at every stage of his career, in his grim determination to rise above the poverty in which he had been reared and to reach the high position to which he attained.

None of the statues is so well calculated to produce this type of man as that by Barnard. A poor boy would give no more than a passing glance to the St. Gaudens statue. But he would stop and gaze at that of Barnard. He would, from time to time, come back to it, and say, "If that poor boy could do it, why not I?" And so he would be led to try.

J. O. Johnston

Kenville, Texas S. C. V. A. N. Va

But, on the other hand, here is a man who saw Lincoln at just the period that Barnard represents and who takes the statue as a personal insult:

I heard the debate at Quincy, Illinois. I have had the Carpenter Emancipation Proclamation in my house ever since you distributed the pictures. And my little girl five years old used to point to Mr. Lincoln and announce, "That is my papa." In fact my neighbors and friends call me Mr Lincoln. [*Continued on page 600*

The First Americans Who Have Fallen in France

FROM A LETTER WRITTEN BY A FRENCH SOLDIER WHO HAS FOUGHT IN THE TRENCHES SIDE BY SIDE WITH "LES AMERICAINS." HE WRITES TO HIS "MARRAIN" TO THANK HER FOR LOOKING OUT FOR HIS WIFE AND CHILD, WITH WHOM HE HAS JUST SPENT A FURLOUGH. "I TOLD HER TO HAVE COURAGE, THAT THINGS WOULD SOON BE BETTER," HE SAYS. "BUT, BELIEVE ME, MADAME, THIS IS NOT THE END OF THIS TERRIBLE WAR. I DO NOT EXPECT TO SEE THE END OF IT." HIS NOTE IS IN PENCIL, WRITTEN IN SIMPLE, ILLITERATE FRENCH, BUT IT CARRIES THE BRAVE SPIRIT OF THE SOLDIERS OF FRANCE AND A STIRRING TRIBUTE TO OUR OWN MEN FIGHTING OVER THERE

I came back from my furlough and reached here just in time to go into the trenches. You can well guess that I was low spirited, but after a few days our courage came back.

We are now right in the midst of the Americans, but I assure you we were in a quiet section till the moment the Bosches began to get cross and started to attack the Americans to make them prisoners, and at the same time attacked us also. They killed some and we have had the honor of burying the first Americans who have fallen in France. You will see this doubtless in the papers. It is the —— division and they have taken a photograph of us. I tell you they are very good soldiers. They do not surrender easily. They defended themselves to the death. We found them with their throats cut because they would not be taken prisoners and the Bosches killed them.

OLD KING COAL

BY DONALD WILHELM

STRATEGY, diplomacy, force, are factors in that Capital game called these days in certain industries "The Government Will Get Us If We Don't Watch Out." Subtle give-and-take, the gloving of the hand, the iron shocks of secret impacts and the curious relationships of individuals who fight and give no quarter yet greet and smile in clubs and at luncheons—these are the stuff of Washington stories nowadays that are never told.

The public—to illustrate—does not know that every Cabinet member has his Colonel House and the head of almost every bureau his Little Houses. It does not know the forces shaping publicity. It had no means of knowing, thus, the nicety with which Secretary McAdoo took to himself the glory for the pension bill, which Judge Julian W. Mack of Chicago, one of the score of Jews, by the way, for the first time lending their rare and fine abilities to the Capitol, and a sub-committee reporting to Mr. Gompers, worked night and day for weeks to devise and frame.

AND the public has heard rather little of Francis S. Peabody, former chairman of the Coal Production Committee of the Council of National Defense. His real story is one of the many Washington stories that have never been told!

And it has heard hardly more of Professor Harry Augustus Garfield—a big man, son of President Garfield, who is doing a big tide-rip job in directing certain currents in the submarine aquatic industrial sport which was referred to heretofore, in the first paragraph.

Now, the better to understand Garfield let us glance at Peabody. Mr. Peabody, then, is a Yale man and a gentleman from Chicago. He went from Yale with a hundred dollars, in the general direction of Chicago; he came from Chicago, where he owns the Consumers' Coal Company, one of the very largest in the world, with some hundred millions, more or less. Dr. Garfield was and is a Williams College man, who when a boy, while his father was in the White House, was to the Washington manner bred; and having studied law, too, at Columbia, Oxford and The Inns of Court, London, was at various times a professor, which word meant, generally, before four belligerent nations drafted professors to head their war cabinets and one nation drafted a professor to lead the world, something akin to "profess" plus good vigorous Irish for "Sir."

Francis S. Peabody has a marvelous faculty for manipulating men—it was fun to sit at his elbow and watch him manipulate the coal operators by him in Washington duly assembled, while he was having the time of his life shying his castor into the governmental ring, driving his coal-black horses with a certain air of mirth. He knows *finesse*, and I will take it on my own responsibility to bet that he knows bridge, chess and poker. He knows Stevensonania and has a set of which he is very proud, and he is a good golfer, a royal entertainer, and he can make an audience laugh at veritable ghosts of Sherman anti-trust laws, even. But Mr. Peabody's knowledge of the classics is less than Dr. Garfield's knowledge of coal (for Dr. Garfield was lawyer and syndicate manager in putting together two railroads in his native Ohio, to open up a new coal field, the Piney Fork Field), and his knowledge of patriotism is less than his knowledge of the classics; and tho he was forceful and fascinating as chairman of the Coal Production Committee, the President, who likes not to play a dummy hand, made him master of pyrotechnics and explosives—and made Dr. Garfield the Fuel Administrator.

THUS we came to have a Professor of Coal.

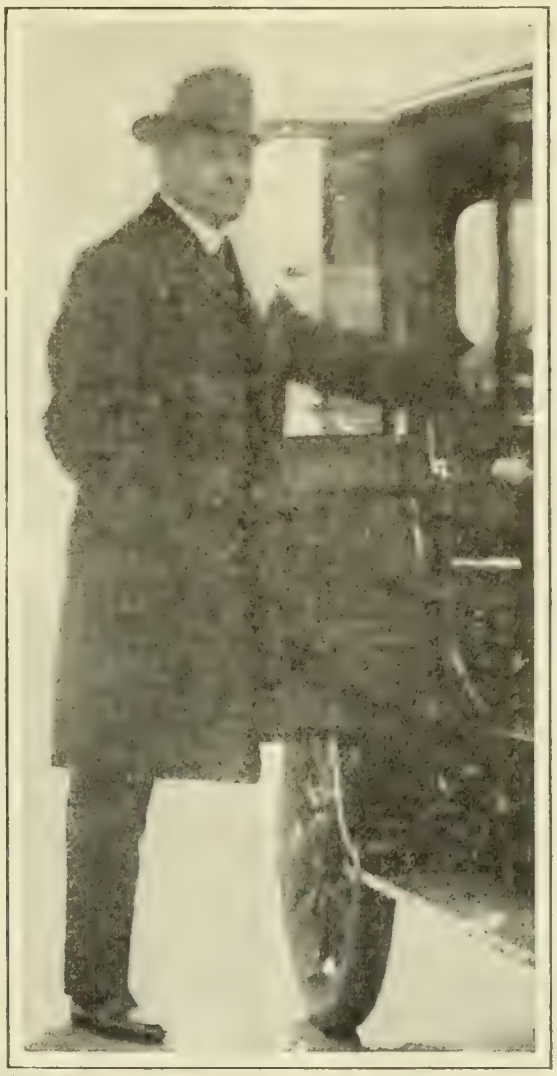
And there still persisted, despite the personification of Fate in the chin of that other professor, the President, a notion that this professor merely profest and smiled and sirrah'd!

And there was mirth, thus, in the mouths of the capricious.

But when the men on the coal-black horses went riding down the line they came up against a statuesque and finely poised individual who knew enough Latin to be able to swear in a language that was Greek to them. They found him to be terse and unacademic; in action, however, quite open to reason; a big man physically, with large humanitarian and business interests, with an excellent executive mind and in his big shoulders and chest a tremendous lot of unexpected force.

I found him first in his office in the old Hotel Gordon, with Mr. Hoover. And the other day I found him in an

office that was, till the Government commandeered it, an excellent corner residence. There, having got thru a busy hallway, past watchladies and others on duty, I got to the head of the staircase, to a landing that afforded a graphic and illuminative instance of the difficulties that confront an administrator in these the pioneer days of our war. To the right—as you sit in this pink little niche of a noisy hallway—there are doors. To the left there are doors. You are sitting in a doorway, facing double-doors. To the right are stenographers, busy. To the left are stenographers. There are stenographers in front of you and behind you, even in the fine large room with the great eighteen-foot carved mantle and the large old oil painting there above the big fireplace, on the walls whose paper is like tapestry. There are stenographers everywhere, and office boys twisting up and down the "maids' back stairway," racing to and fro over the bare boards, tripping, incidentally, over three old dodgers doubtless from mine fields somewhere in the West—doubting Thomases finding much to smile at, a little disturbed at this, the majesty of the U. S. A.!



"But this," said Dr. Garfield, in his office, rising, "is only temporary. We shall be moving again, very soon."

He took his seat there in the middle of the "front bedroom," at his desk beneath the chandelier.

I said, "You're busy—"

"Very busy," smiling.

"Well, all I want to know," I told him, "is how this problem of yours comes home to you—"

© G. V. Buck

The Fuel Administrator, Harry A. Garfield

"This problem of ours—and our hopes—?"

"—yes, and expectancies!"

He settled his hands together, a keen gray-eyed, impresive figure.

"Coal and coke, oil and natural gas," he said, evenly, swiftly, straight to the point, "all come in, but just now the important thing—the thing the public is most concerned about, with the war on, and winter approaching, and the heaviest of demands on our industrial establishments, is coal."

"And the problem—?"

"The problem is how best to continue the normal and usual supply of coal to the domestic consumer and at the same time furnish coal needed in essential war industries, by the Government for usual and for extraordinary war purposes, and, as far as possible, to supply it to plants not directly concerned in the prosecution of the war—those in the so-called non-essential industries."

He paused a moment, spoke apologetically for using the English language hurriedly—pointing out "Of course there will be surplusage, which you must trim out"—then he went on with convincing clarity and directness.

"THE first thing to do," he said, "obviously is to look out for the Government's supply of coal"—which, it might be added in passing, is in itself a very large order! For it means that every ship of our steadily increasing navy—every ship and every transport—recurring irregularly, without warning, usually, needs coal and must at once have it, unless it happen, of course, to be an oil burner. And much of this coal, incidentally, is low volatile, or smokeless, of particular kind, which by no means all mines can supply.

"The army needs large quantities next. Much is needed for other governmental agencies"—the lighthouses, to take a random example. They need it bagged and shoved in thru their very windows, as it were! "Then come the other needs—the war industries; domestic needs; public utilities."

He paused again to point out that domestic needs and public utilities may well be coupled together since more and more, in direct ratio to the scarcity of kitchen labor, Americans are taking refuge in apartments and are dependent therefore upon gas and electricity.

"Nor can you separate public utilities from manufacturing," he added, insistently, "and from the problems of transportation."

"But the need of coal is patent," he pointed out, smiling.

"The task of the Coal Administration," I suggested, "is to meet that need?"

He nodded and his fine face settled. "Yes," he said succinctly.

NOW it goes without saying that there are all sorts of reports raising their heads here and there to indicate that production has fallen off. As compared with previous years, however, production fell off when the coal men were in charge and the labor situation at least once was wofully disturbed. And the labor situation has been from the start, it is worth stating here from the writer's own knowledge, a terrible

How to Run the Range

Reduce hours of running stove.

Running stove to heat tank water is not economical. Save the water.

Use fireless cookers.

Keep smoke passages in stove clean. If scraper is lost, get another.

Break lumps of coal to egg size.

Dampers are secret of saving.

When stove must be run hours a full fire-box carefully controlled by dampers is more economical.

With a big fire a little air is needed over coal as well as thru it. If soft coal is used allow just enough air to come thru to make flames so short they will not reach second row of lids.

Close the top draft damper when the flames get shorter than the first row of lids.

Save bits of coal from ashes; use when fire is hot.

When fire is well started close damper as much as possible.

To carry fire over night fill fire-box, cover tightly with ashes, close all dampers. To start, open damper below grate and one in stove pipe, break up coke in fire-box, rattling into ash-pan.

How to Run the Furnace

Study directions. If lacking, send to maker for them.

Keep ashes clean under grate.

Keep a full fire pot, level with bottom of firing door, thinner if draft is poor or coal fine; thinner if weather is warm, with no ash on grates if cold.

Attend furnace as regularly as you attend meals.

Anticipate demand for heat; "pushing" is wasteful.

Small charges of coal, at more frequent intervals, are most economical. But do not shake, slice or poke fire frequently.

Shaking and cleaning twice a day is enough. Stop shaking when it begins to be bright under grate

A fresh fire or a large fire requires air thru door damper.

To check fire close ash-pit door, open check draft in pipe. Never check by leaving firing door open.

Main damper in smoke pipe should be partly closed if draft is too strong for control by check-draft.

Sift the ashes.

Use weather strips, double windows, pipe covering, heating drums, extra radiators.

one to handle. The Coal Production Committee itself settled about two hundred strikes. And about a month ago strikes had been so epidemic that whereas the country as a whole—all industries—in normal times had on average only about thirty-five strikes a month, there was then, an average for several months, so the Department of Labor ascertained, of more than 350. It is little wonder thus, that Dr. Garfield, in going straight at his difficulties, and that is characteristic of the man, mentioned labor first.

"The difficult problems are two," he said, "and the first of these two is labor."

"And the second?"

"The second," he said somehow a little differently, "is car supply."

He went on:

"The miners thruout the country," he said, "are, for the most part, cooperating with the Government in a very satisfactory way. We have appealed to their loyalty with success. And we realize that now is no time to settle labor and capital questions by resort to drastic measures."

"In other words—?"

"IN other words," he said succinctly and his eyes narrowed a little, "the Fuel Administration, like the Government generally, takes the position that in time of war there should be no utilization of the occasion either to extend the union or to fight the union."

He paused just a second. For he had enunciated — what congressmen and many others have long been looking for, asking for—the attitude of the Government toward labor. It was not believed there was any "attitude."

"When I find a disturbed condition in a labor field," he went on, "I notify the coal operators and the miners to come here and meet one another face to face and confer with me and with one another. We always begin these conferences with the assumption that the mines must be kept continuously at work and the production must be kept in the ascendency."

His attitude, toward operators and miners both, is not a complaisant one. He can settle his jaw, close his heavy fist and bring it down atop his desk, so operators testify, quite as conclusively as that other professor, the President.

That, in fact, is a striking thing about this man. Time after time he has telegraphed coal operators or told them, "If you don't open and operate your mine the Government will take it over," and yet Dr. Garfield, were you to meet him in a parlor, note his fine brow and clear, sensitive, mobile skin, talk to him of art and literature, would astound you with his gentleness. And he has talked to miners quite as frankly, in idiom to them quite as understandable. He starts with the assumption, as he says, that the mines must be kept going as they have never gone before. We must think of him, thus, as a man of force, a powerful captain in the current of industrial production. It is he, in fact, who is forcing the railroad situation, forcing it to come out from under its ivy camouflage; it is he who is (these are merely the writer's conclusions) not averse at all to the new draft program exempting, pending coöperation, the men in certain industries.

"Production must be increased," he said, skirting skilfully many a dangerous point. "We will allow nothing to stand in the way of that result."

There was a little pause.

"And now," I suggested, "car supply—please!"

"So far as car supply is concerned," he said, "the transportation facilities have been enormously strained by the increase in manufacturing. One has only to glance at the export statistics and at the figures for domestic production to realize that never before has the United States been called upon to transport so many commodities. Cars that normally were intended for coal are being used for all sorts of manufactured products."

He went on—and in reading all he said it should be remembered that he was speaking, not after, but more than a week before the railroads announced their plan for pooling of the eastern roads:

"It is plain that we must get along with transportation facilities as they are. For there isn't time to add materially to the trackage, nor to build bridges, nor to add to the number of locomotives and cars. The problem is" —his forefinger came down graphically to an imaginary point on his knee—"to make efficient use of what we have."

Then he added: "The railroad men are alive to the necessity. The railroad War Board has been dealing with the problem. It may be necessary to restrict the use of the cars and to give priority to food and fuel and other commodities essential to the prosecution of the war. It isn't merely a question of cars, but it is a question of the joint use of truckage by competing roads, and the pooling of coal so as to enable trains starting, say, from the Pittsburgh district to drop off car after car as is necessary as they progress, say, toward the Northwest."

IT is hard to apprehend what is in the mind of a man one is interviewing, and hardly fair perhaps to suggest that Dr. Garfield had in mind two factors that might rouse suggestions such as these above: In the first place an eminently successful plan for lake and tidewater pooling of all coal destined for shipment reduced classifications from literally hundreds to only a very few. Coal is deposited at these pools just as money is deposited in a bank, with different kinds assembled on particular tracks, so that all a transport needs do if wants, say, low volatile, is to take the cars waiting there. The other sustained suggestion for pooling has been advocated consistently for a long time by the Federal Trade Commission. It has been described by Commissioner Davies in The Independent and presupposes the Government's taking over all the coal produced for distribution, to pool it and distribute it.

"What is happening now," he said "is that the classifications are so many that when you start with a trainload of coal there is constantly delay by reason of cutting out cars of different kinds, making it difficult to get ahead. Now if all these classifications except a few—say gas coal, coking coal, etc. —were wiped out the problem would be tremendously simplified.

"It may be necessary," he said conclusively, at last, "to restrict the use of cars and to give priority to food and fuel and other commodities essential to the prosecution of the war."

He paused. Doubtless he was aware that the Food Administration Counsel was waiting to the right of him, the three old operators there in the waiting room, to the front of him, transportation agents, an official from the Bureau of Mines, others, all about, plus a day's unanswered letters.

I rose.

But he beckoned me down and smiled. "You spoke of expectancies!"

"You'll solve your problems, that's one expectancy," I ventured.

He rose, smiling.

"At least," he said, "we appreciate what the problems are."

He put out his hand:

"And we know that each is well on the way to solution."

Then he bowed.

It seemed characteristic for him to end an interview thus pleasantly.

Washington, D. C.

VALE 1917

BY JOHN KENDRICK BANGS

Good-by! Good-by, thou saddest of sad years!
Full hast thy cycle been of human tears,
And teeming with the tribulations sore
Of hideous War,
And yet from out thy flaming Hell of Wo
Some gifts of Hope have risen all aglow
With pride, and fraught with gain,
Despite thy pain:
The Hosts of Heroes unafraid to die
For Liberty;
The countless ranks of Men of sturdy heart
Ready to do their sacrificial part
To ease the stress
Of other men's unrighteousness;
The strivings of the Human Soul to do
Innumerable deeds of Service true
To lift the world from out its sorrow vast
To Peace, and Love, and Brotherhood at last!
I'll hold thee in remembrance for thy Good,
And not upon thy grievous Evils brood.

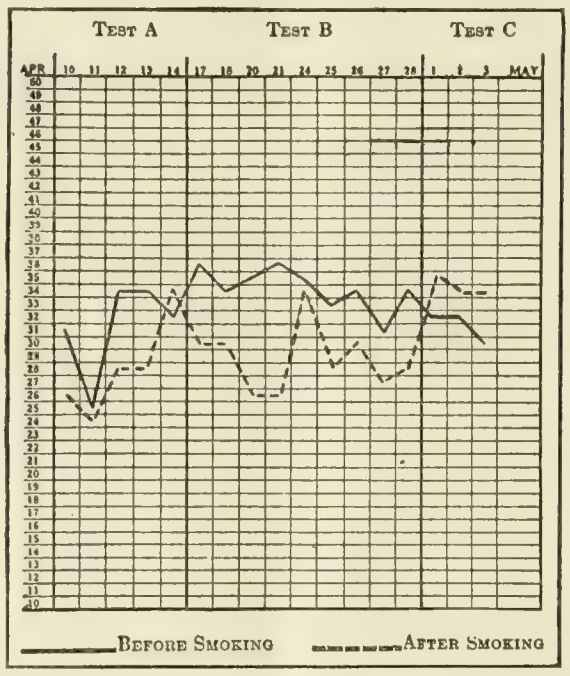
IT'S A FETE DAY FOR THE FRENCH PEASANTS WHEN THE RELIEF TRUCK COMES TO DISTRIBUTE SUPPLIES

THE CASE AGAINST SMOKES

BY GEORGE J. FISHER, M. D.

IS it harmful to smoke? Does smoking rest one or does it tend to make a man irritable? What is the effect of a habit which is so general? Does it decrease efficiency? Does it lower vitality? These are questions I have tried to find an answer for. No one had in my judgment given an adequate answer to them. I approached the question dispassionately, for I am not fanatic about the matter. I simply wanted to know the truth so that I would know how to advise young men accurately.



For the past four years I have had a series of experiments made at the Y. M. C. A. College at Springfield, Massachusetts, under the direction of Prof. Elmer Berry, upon young men between the ages of twenty-one and twenty-five, men of exceptional physical vigor who were being trained as physical directors. The plan in the experiments was to use smokers and non-smokers alike so as to note the effect of smoking on each, to have them go thru a given test first without smoking and then try the same test after smoking. As a rule we used a single cigar or a cigaret.

In our first experiment we tested the effect of smoking a cigar on the heart rate and blood pressure. A single cigar increased the heart rate and blood pressure. The most significant thing about this experiment was the apparent disturbance to the heart in that it took some considerable time for the heart to return to normal, longer than we could wait to measure.

IN the next experiment a year later we tried to go into this problem further and gave a series of exercizes before and after smoking, taking as before the heart rate. This series of tests revealed as did the others that smokers have a higher heart rate than non-smokers and that the return to normal after exercize is much delayed after smoking. For illustration, in 74 out of 118 smoking tests, or 62.72 per cent, the heart rate was increased and did not return to normal in fifteen minutes. In 72 out of 74 tests in which the men did not smoke fully 97 per cent *did* return to normal in less than fifteen minutes, the average time being only five minutes. The smoker does not become fully habituated to smoking.

At the same time that the latter test was given some tests in muscular precision were made by having the men draw lines with a pen on a chart between narrow columns. Every time the sides were touched an error was registered. To test the large muscular coordinations the men were required to lunge at a target with a fencing foil. In these two tests all the men showed a loss in precision. This was a great surprize to us. I did not dream that a single cigar or the smoking of two cigars which were used in the target thrust would show any appreciable effect.

This led us in our next experiment to make some experiments on the effects of smoking upon baseball pitching. Twelve men, all baseball players, both smokers and non-smokers, were used. The men in the tests had ten throws at a target which were recorded. Then each thrower smoked a cigar, taking thirty minutes for the purpose, after which they had ten more throws which were recorded. In another test the men rested in the thirty minute interval instead of smoking. In another test the men smoked two cigars, using sixty minutes between the throws. In this way it was clearly discovered what effect resting or smoking one cigar or smoking two cigars had upon accuracy in pitching. An official baseball was used, fast, straight balls were thrown, the men winding up for the throw as baseball pitchers do. The chart on this page shows the group averages of the men in Test A after smoking one cigar, in Test B after smoking two cigars, in Test C when resting and not smoking.

In Test A, after smoking one cigar, there was a loss of twelve per cent in accuracy. In Test B, after smoking two cigars, there was a loss of 14½ per cent. In Test C, during which no cigars were smoked, there was an increase in accuracy of nine per cent, so that the real effect of the smoking should be judged by comparing the scores made after a rest and those after smoking.

We then determined upon a further test of coördination and because of the interest in the war we selected rifle shooting. The Wesson Revolver Club Range of Springfield was used and Mr. Wesson furnished the rifles and ammunition. Five shots at a target twenty yards distant were fired, then either a rest or smoking was indulged in, then five more shots were fired. The prone position was used. Five tests were made in the first test; the men rested thirty minutes between the two periods of shooting. In the second the men smoked one cigar, in the third test two cigars were used in a period of sixty minutes, in the fourth test two cigarets were used, in the fifth the men again rested. Briefly the results were these. In test number one, when the men did not smoke, they showed an *increase* in accuracy of seven per cent. In the second test, after smoking one cigar, there was a *loss* in accuracy of 4.8 per cent. In the third test, in which the men smoked two cigars, there was a *loss* in accuracy of six per ment. In the fourth experiment, after smoking two cigarets, there was a loss in scoring of 1.8 per cent. In the fifth experiment, in which the men did not smoke, there was a *gain* in accuracy.

THESE tests which I have been having made, covering a number of years, are exceedingly interesting. I do not claim they are conclusive.

As far as we have gone, however, we seem to be compelled to believe that smoking is not beneficial. It quickens the heart rate, affects in slight degree the blood pressure, disturbs the circulatory apparatus so that it takes some considerable time for the heart to return to normal. Smoking affects muscular precision in such fine movements as writing and in such larger movements as lunging at a target with a fencing foil or in baseball pitching and also in rifle shooting.

These experiments were made upon men twenty-one to twenty-five of unusual physique, men accustomed to smoking and those unaccustomed; both groups were affected and in all the experiments there was a remarkable consistency in the character of the results obtained. The case seems to be against tobacco.

In the light of such facts as these what should be our attitude in furnishing tobacco to soldiers? If smoking disturbs the heart, what effect will it have on endurance? If smoking affects accuracy in baseball pitching, what will be the effect upon bomb throwing? If smoking makes for inaccuracy in lunging at a target, what will be the effect in lunging at an enemy with a bayonet? And if men, after smoking, do not shoot as well at twenty yards, what will be the result at a greater distance?

These experiments were made in a well-ventilated place in each instance and after the men had smoked but one or at most two cigars, and two cigars were more severe than one. Most men do not stop with one or two cigars, but have a tendency toward many in a day.

I am not willing to say that soldiers should not smoke. Those habituated to it seemingly get great comfort from smoking. I do not believe, however, that we should encourage them to smoke incessantly nor incite the young soldier who has never smoked to indulge. I am wondering whether special funds for tobacco are wise and I question the wisdom of placing tobacco in *every* comfort kit. We take it for granted that a soldier will smoke. We are urging him to do so, and incidentally I believe we are doing harm.

New York City

PHANTASMS OF WAR

Sugar

BY AMY LOWELL

"There is no sugar," said my cook,
"Even the sugar-bowls are all empty."
"There is no sugar," said the grocer,
"And it is impossible to say when there will be any."

No sugar!
It is inconceivable.
We have always had sugar.
From Liverpool to Nagasaki,
From Odessa to Buenos Ayres.
Peoples may differ as to creeds and customs,
But the whole world agrees about sugar.
Tea, chocolate, coffee:
That is character, or perhaps, climate.
But sugar!
Lump.
Granulated.
Powdered.
Cut into slabs by mechanical processes.
Sliced from sugar loaves with a kitchen knife.
Melted,
Spun,
Glazed,
Twisted,
Run off as molasses,
Strained thru silver sifters,
Stirred into puddings,
Beaten up with whips,
Coral tinted and sprinkled over meringues.
Why, the word means honey,
And yellow striped bees across a slant of sunshine!
Through the twisted letters, bees crawl,
Emerging from a fox-glove bell,
Striking the magnificence of gold and black against its spotted mauve.
Humming-birds quiver before nasturtiums,
Vibrating—green—red—black—green.
Long tongues spear the heart of nasturtiums.
A handful of seeds,
A penny packet to turn into sugar.
And yet there is none!
Not a pinch at the bottom of any of the sugar-bowls.

What is Cuba doing,
Or Brazil?
Are all the sugar-canes cut down?
Where are the pointed hats
And the red bandannas?
Where are the stevedores,
With rings in their ears,
Carrying long sugar-sacks up a wooden plank?
Where are the chains and the donkey-engines
Dumping sugar into holds?
What is the Panama Canal thinking of
Not to open free to the sugar ships?
One, two, three, four, five,
Tally with your chalk on an old board as they swing them down.
Skin the eyes of the look-out,
Snap him into a taut wire
Spearing for submarines.
Scrutinize the barometer
A hundred times a day.
Set your fore-foot dancing thru the blue, hot sea
So fast, it cuts a swimming eel fairly amidships,
Severs him double,
And skims thru his division
Point perfect for Long Wharf.

Wide plains,
With little red balls under them.
Beets like a hidden pavement under the plains.
A Roman floor forsooth!
Do mosaics have any colors to equal these?
Red as the eyes of cats in firelight,
As carbuncles under a lemon moon,
As the sun swirling out of a foggy sky.
Round as apples,
Footed as tops,
You spin yourselves deep into the earth
And swell and fatten.
Sugar in a crimson coat,
Leaping, green-feathered, at the sun,
Waving and flickering,
Tempting the rabbits.
Top-shaped beets
Taking their ease in open cars.
Rail-run beets, slowly jerking and stopping,
Progressing across a continent.
The refineries would give gold for you,
The groceries are gaping.
Hurry, Beets!
Or we shall repudiate you and take to carrots.
Your little pointed noses will all go out of joint,
And you will rot on sidings
If you wait too long.

Sugar!
Sugar!
Tall blue cones of sugar
Gazing down from the shelves of grocers' shops.
Lines of sugar-barrels ranged on the wide floors of warehouses.
Soft little five-pound sacks of sugar,
Yielding as a kitten when you lift them.
Sugar cubes crowning cut-glass dishes.
Sugar oozing out of fruits and trees,
Heaping up in flowers,
Dripping from the legs of insects.
Cinnamon, allspice, mace, and nutmeg,
But above all,
Sugar!
Think of the desserts of a century.
Think of the currant cakes and cookies,
Of the syllabubs, and tarts, and pastries.
Imagine all civilization crystallized into sugar:
Sherbets of Smyrna and India,
Almond paste of Germany,
Brioches and *ba-bas* of France,
Bath-buns and plum-cake of England.
Reflect on the delicacy of syrups—rose—mulberry,
On the grace of candied violets,
On the square vigor of peppermint drops,
On the exotic taste of Turkish delight.
Consider the honey and eels of ancient Rome,
The sweet poisons of the Renaissance,
Napoleon stirring his coffee and manœuvring wooden soldiers,
Hawthorne buying black-jacks
On his way to his office
In the Salem Custom House.
Stirrup-cups and christenings,
Wakes, and weddings, and festivals.
Sugar in spirit-boats adrift on the rivers of Japan;
Confections hammered into coffins and sealed in halls of painted granite;
Sweetened wine, poured upon the feet of idols,
Cooled by the faint wind of feathered fans;
Sweetened bread, eaten to the sound of chanting,
Turned flesh and symbol at the tinkling of a bell.
Out of chaos to candy:
A march of sugar.
From East to West,
Marching in the pouches of the immigrants.
Wars were fought for the Spice Islands,
Now war has revenged itself in sugar.

Dust sticks to the wheels of the factories,
The wharves are deserted,
The freight cars are heaped with ammunition.
So the order of the world is changed:
Sugar first,
And afterwards?

The sugar-bowls are all empty,
And the grocer says he does not know when he will be able to fill them.
Ah well, my friends, these things do not really matter.
There is still the thunder-colored aconite,
And gentian, and rue, for bees.
And there are still the blood-skinned beets,
Waiting to be crushed, pulped, and eaten.
Thunder-sugar—blood-sugar—
Monumentum ære perennius.
War!

THE ELECTION OF LINCOLN

(*Continued from page 591*)

So I felt scandalized by your picture and am glad to know that Robert Lincoln feels just as I do. Mr. Lincoln and all his intimate friends, I think, were satisfied with Carpenter's picture. I am not satisfied with any, but like the Chicago one best. That neck of Mr. Lincoln in your picture of a few months ago is a sure enough cartoon.

JAMES RALEY

San Antonio, Texas

We have also the testimony of a feminine eye-witness of the Lincoln-Douglas debate:

As a girl of thirteen I once saw and heard our immortal Lincoln. It was during the senatorial campaign of 1858. My father had been a member of the Illinois legislature in 1856 and 1857, representing for his district the young Republican party.

Lincoln was then a member of the Springfield Bar and the astute and trusted adviser of the hard-pushed Republicans. My father's acquaintance with him at that time laid the foundation for a lifelong reverent and admiring affection for the great man, and the children of his family grew up loving and honoring him. To have stood before him and listened to his earnest words and to have been able to carry ever after the memory of the face and form I count one of the important experiences of my life. The Barnard statue, as it appears from the printed reproductions, seems to me a gross and impertinent caricature to be characterized precisely by the words which Mr. Robert Lincoln has used.

MAUDE LITTLE MACY

Grinnell, Iowa

A retired lieutenant-colonel of the United States Army who knew Lincoln says:

Almost four years I was a Lincoln soldier. I shook hands with him in 1861, saw him at Antietam in 1862, saw him twice at Fredericksburg in 1863 and again in 1865, near Petersburg. Barnard may have the Lincoln soul in his younger manhood, but he has made a disgraceful botch of Lincoln the President, the kind of a Lincoln the world wants to hear about and remember. J. A. WATROUS

Milwaukee, Wisconsin

We must, of course, give precedence to the few now living who remember the martyred President as he was:

In the fall and winter of 1862-3 I had charge of a ward of wounded men in the Patent Office Hospital. In those days the President held occasional evening receptions for the public, called then "levees." Going, with one of my nurses, on a certain occasion, I had several opportunities to study the face and form of Lincoln—twice as he stood in the reception line, once as he sat alone in another room, and again in the great East Room as he chatted with Secretary Chase and his daughter. Memory recalls the impression of strength, dignity, nobility. Nothing in the Barnard statue, either in face or form, corresponds to this recollection. Nor indeed do any of the statues you present fully meet this mental image those of St. Gaudens and Borglum perhaps coming nearest. Surely the English people must wish to see Lincoln as he was in the days of the Civil War, and certainly the Barnard statue does not so represent him.

WILLIAM HOYT COLEMAN

Philadelphia, Pennsylvania

Mr. Graham, superintendent of the New York State Women's Relief Corps Home, reports that Mrs. Graham, who saw Lincoln several times in Washington, prefers the St. Gaudens statue, and he adds:

Let me say to Mr. Barnard that no man who ever swung an ax or sledge assumes the cringing clodhopper attitude shown by the bent knees of his statue; nor do men who have been active physically or as public speakers, and who have red blood in their veins, when standing, take the position given the hands.

Our doctor's criticism is that such a position is feminine. In my opinion, the shape of the head and the expression of the face is second only, among the statues shown, to the French statue, in its unlikeness to the man. (He never posed.) I regret to learn that this statue is to occupy so prominent a place in Washington.

Oxford, New York J. S. GRAHAM

The Quartermaster of the Phil Sheridan Post No. 4, G. A. R., sends us a vote for Barnard and also a Lincoln anecdote. But are we to understand that the Barnard statue represents Lincoln in the attitude of making that remark?

I knew him as a citizen at Springfield in 1858; later he was a business caller in the office of the *Lincoln Herald*, of which I was publisher; heard him make a political speech during the same year. After the election in 1858, in which Mr. Douglas defeated Mr. Lincoln for the Senate, Mr. Lincoln visited Colonel Baker, editor of the *Springfield Journal*, where I heard him make the characteristic remark: "I feel like the boy who stubbed his toe—I am too big to cry, and too badly hurt to laugh."

My choice among these pictures is the Barnard statue. CHARLES A. CLARK

Boise, Idaho

But some people feel differently about it:

The Barnard statue is "Impossible." Looks like he had the stomach ache and was trying to conceal it.

DAVID Y. THOMAS

Fayetteville, Arkansas

Personally, I admire the Barnard statue greatly, but think it might be misinterpreted in Europe. (I overheard an irreverent Junior term it "the Barnyard Lincoln.")

ETHEL R. FARNHAM

Nevada City, California

St. Gaudens represents Lincoln as a dignified statesman—the isolated Lincoln, whose greatness we could not fathom—the lonely Lincoln who sought no one's advice but settled the nation's great problems thru painful meditation.

Barnard in his attempt to give us the Lincoln we love, goes to the other extreme and accentuates the ungainly features, especially the body and neck. The face is excellent, and if I could put the head of Barnard's work on the body of St. Gaudens' representation, I would choose this composition. ARTHUR S. ERICKSON

Los Altos, California

Here is a new candidate brought into the field:

In the State House grounds the foundations are in progress for a statue of Lincoln made by O'Conner. The committee chosen to visit his home in Worcester, Massachusetts, before the full decision of acceptance, were unanimous in their admiration and praises of it. Why not suggest an investigation of this statue before accepting another? NETTIE O. DOWN

Springfield, Illinois

From an artist born in Europe and brought up close to the old masters comes this opinion:

I *dislike* the Barnard statue intensely the more that it *is* a likeness, but caricatured by this modern effort to *astonish* unwholesomely if it can't be done worthily.

I am not surprized that Lincoln's son repudiates this monstrous affectation of the would-be *great* sculptor—the elongation of the already unnaturally long throat, the attitude of Puvis de Chavannes's sickly fisherman—one that you feel sure if you are pensive that Lincoln never took—the "beetle crushers" for feet! Every physical fault exaggerated, and the real salient energy and modesty of the man left out. FLORENCE MCKUBIN

Baltimore, Maryland

Gutzon Borglum, the cowboy sculptor, has admirers as fervent as George Barnard:

I choose the Borglum statue, and how anyone should for a moment hesitate, in considering any other, is inconceivable to me, for here we have Abraham Lincoln sitting among the people whom he loved, not standing on a pedestal above them. And here we see him as we have always known him, sweet-spirited, patient, kind—ready to give comfort, encouragement—the Abraham Lincoln of high ideals. The ease in which he is here sitting is in itself a wonderful piece of work. In every way does it stand out in sharp contrast to that of Barnard's.

Mrs. WARREN D. HALL

Montgomery, Alabama

Where it is in a way to be a gift from one nation to another nation, it is vital that it should not be a statue to which any considerable number of people object. The Barnard statue certainly brings out many of the homely qualities of Lincoln and would be a desirable statue to have placed near his birthplace, but is wholly unsuited to have placed in London. D. KING.

Boston, Massachusetts

We have placed the Edinburgh Memorial first, for obvious reasons; altho technically it is inferior to the Barnard statue, which represents forcibly, no doubt, the Lincoln of the backwoods; but it is the figure of a John Brown type of man, fanatical in its seriousness, and without a trace of a sense of humor, even in the pose, while he lost it wholly in his face, altho the photograph showing the left side is truer to the picture of Lincoln than the cut showing the right side.

We have placed the Ball statue second, on account of the sculptor's good intentions, which were more nearly realized than those of Barnard.

Third comes the Barnard statue, wishing most heartily that he had not so nearly deserved Mr. Ruckstuhl's editorial billingsgate in the lower two-thirds of the figure. He certainly is a clodhopper from the hands down, and a prisoner at the bar from the hands up—a protestant in any line; only the handcuffs are needed.

EDWIN A. MOORE

Kensington, Connecticut

We will conclude these citations with the exceptionally competent opinion of the author of "Personal Recollections of Lincoln," which we reviewed in our issue of October 9, 1916.

Mr. Barnard's mother was born in Springfield, Illinois, and his grandfather was George G. Grubb, a skilled bridge builder whom I recalled in my memory of seventy years ago when I went with my father, whose official duties required his inspection and payment for several of the wide-span bridges that were the first of that special construction erected over streams in Illinois. These relations in my early years caused me to feel at liberty to write Mr. Barnard, asking the favor of an approved cut, or photograph, of his model of the statue and at the same time I called his attention to Mr. White's criticism an referred him to my own description of Lincoln's physical vigor and well muscled body as described in my "Personal Recollections of Abraham Lincoln."

Mr. Barnard very graciously responded to my letter. This reply I take the liberty of giving here:

454 Fort Washington Avenue,
New York City.

MY DEAR MR. RANKIN:

Had I known such a "kin" to Lincoln were alive I should certainly have gone to him.

The next best is to read your book, which I have ordered at once.

The letter you wrote and the kindness it exprest I am deeply grateful for.

Did you know my grandfather, George (Grey) Grubb, who lived in Springfield in Lincoln days and was a friend of Lincoln's. My mother, too, was born in your town. I am sending you a

photograph of "Abraham Lincoln" from my bronze statue (going to Cincinnati). This statue is already done; the great head, fifteen feet high, I am now at.

My vision of Lincoln is far from the official Lincoln. Neither his soul nor heart nor body could be *official*. They were heroically *human. How I wish I could drop in and talk with you.* It is a great page torn from my life not to be able to do this—perhaps this summer I may be able to. Most gratefully yours,

January 15, 1917. GEORGE GREY BARNARD.

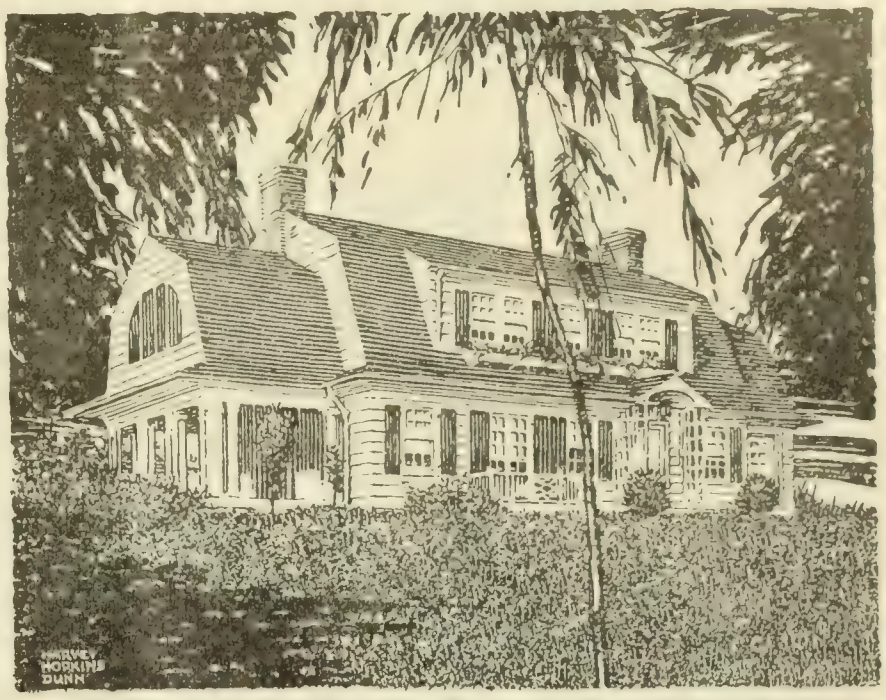
On a careful view of the photograph I felt such keen disappointment about Barnard's conception and imaginary presentment of Lincoln that I could not write the sculptor my serious disapproval of his work, which in nearly every particular distorted and minimized the vigorous and forceful Lincoln I had known from 1847 to 1861, and had been so close to as a student in his law office the last three years he was in Springfield. I had also looked for a reply from Mr. Barnard to my citations in my book, which he had in his letter to me said he would "immediately send out and get." No further word ever came to me from him. In the words of President Lincoln's son, Robert T. Lincoln: "He had scorned the use of the many existing photographs of President Lincoln and taken as a model for his figure a man chosen by him for the curious artistic reasons that he was six feet four and one-half inches in height; was born on a farm fifteen miles from where Lincoln was born; was about forty years of age, and had been splitting rails all his life. The result is a monstrous figure, which is grotesque as a likeness of President Lincoln and defamatory as an effigy."

HENRY B. RANKIN

Springfield, Illinois

In The Independent of February we gave a full page illustration of the Barnard statue and an interview with the sculptor. In the issue of November 3 we told of the opposition it had aroused. Here we need only add that the Council of the National Academy of Design has declared its disapproval of the Barnard statue with the words:

In a work of this kind all must agree that character and likeness are essentials. But to us this presentation does not convey the recognized characteristics of Lincoln. In it we are unable to discern evidence of his genius or humor or any of those lofty qualities which are invariably associated with his great name.



But all this criticism of the Barnard work has not shaken the faith of either the American Peace Centenary Committee that gives the statue or the British committee that receives it. The secretary of the latter says:

The British committee will stand by its acceptance of the American committee's generous gift of the Barnard statue, and in due course and at the proper time this statue will be erected in London, and I have no doubt will be warmly welcomed there.

I think we have the right to say to the critics of the Barnard work that they should give fair play in the first place to the American and British committees, thru whom this project was initiated; in the second place to Mr. Charles Phelps Taft, who is by no means a novice in relation to good and bad art, and in the third place, to Mr. George Grey Barnard, who is a sculptor whose works are perfectly well able to be their own vindication, both in Europe and America.

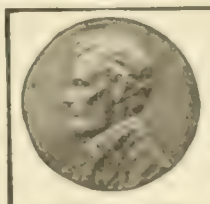
Altho we have thus impartially presented the views on both sides of the discussion, it must not be inferred that the editor has no opinion of his own. We hold very decided views on the subject and we have exprest them in the only proper way—that is, by casting our vote in with those of our readers in the sum total given above.

May we also add that altho the question seems to be settled so far as the Barnard statue is concerned, since this is ready for shipment as soon as shiproom can be found, it is open to the admirers of the St. Gaudens or any other statue to imitate Mr. Taft's generosity and send to London, Paris and Petrograd their own ideal of Lincoln.

AN INVITING EXTERIOR

should mean an hospitable interior. No one factor is more necessary to a warm, home-like inside-the-house atmosphere than perfect woodwork. Above all, beware of dead-looking trim which will neutralize every attempt to carry out your chosen decorative scheme.

ARKANSAS SOFT PINE



affords particular home builders the ideal woodwork for rich browns, deep mahogany or dainty silver gray and enamel tints. It is free from every deterrent effect on stains or enamel.

Our book explaining why and how will be sent on request. If interested in home plans, let us know at once. Arkansas Soft Pine is Trade Marked and sold by dealers East of the Rockies.

What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of 15c in stamps or coin will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's Capital, for the Nation; a paper that prints the news of the world and tells the truth. And it is now in its 25th year. The Pathfinder fills the bill without tampering the principles that have made it 25 years. If you want to keep posted on what is going on in the world, it is a decided saving of time or money, this is your medium. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would like a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper and we will send the Pathfinder 13 weeks. The 15c does not repay us, but we are glad to invest in new friends. The Pathfinder, Box 39 , Washington, D. C.

FOOD WILL WIN THE WAR

LESSONS IN AMERICA'S PART IN THE WORLD'S FOOD PROBLEM, PREPARED BY THE UNITED STATES FOOD ADMINISTRATION FOR THE INDEPENDENT

What Conservation Means

IN last week's lesson we discussed the reasons why conservation of food is necessary, the causes of the present shortage of food, and the effort now being made by the United States Food Administration to accomplish the necessary results by voluntary effort rather than by compulsion.

Briefly, conservation means *wise use*. Now wise use of food includes the following: the careful selection, preparation, cooking and serving of food; the storing, canning, preserving, drying, salting and pickling of surplus food supplies.

It means also the intelligent substitution of certain foods which are not suitable for shipment, for other foods which are needed for our soldiers and those of the nations associated with us in the war.

To do these things we need only mix a little brains and energy with our patriotism. In so far as we help do any one or more of these we have helped to conserve food and to win the war.

The United States Food Administration asks us not to forget that we owe it to our country and to ourselves "to eat wisely and well." What we must guard against is waste; and what we must learn to do is to use food substitutes. When we study the matter we will find that some of us are eating more than we need. Some of us are not. Mr. Hoover says that 70 per cent of cur people are "as thrifty and careful as any in the world." It is the other 30 per cent that can reduce the amount they eat and cut out waste.

From the standpoint of health, sound economy and patriotism, this 30 per cent ought to bring its eating down to a scientific basis. Overeating and waste should be abolished. Small savings are not to be despised. Consider this: one single slice of bread wasted or saved each day in the 22,000,000 homes of our country would amount to 501,875,000 pound loaves of bread a year; a pat of butter wasted or saved each day would amount to 167,291,545 pounds a year. When food is so vital a weapon in the war it is treason to waste it.

The 70 per cent who are as thrifty as they know how to be cannot well eat less. Indeed they are not expected to do so. But what they can do is to substitute as far as possible other foods for certain staples so that the meat, wheat, sugar, fats and dairy products that we must send across the ocean may be released.

To conserve as we should we will have to know something of the nature of foods, and the needs of the body. It would be deplorable if thru ignorance we went without the nourishment we ought to have. From the Department of Agriculture or from the United States Food Administration pamphlets can be obtained telling about these very matters. Any one who can read has no reason for remaining ignorant about food values and good food combinations. For instance, it would be foolish to have potatoes, rice and macaroni at the same meal. These are all starchy dishes and one at a meal is enough. It is the duty of every patriotic American to learn what the various food elements are, and how to combine them intelligently. A certain amount of each we must have or lose health and strength.

In next week's lesson we will discuss what our enemies have done in conserving food.

THE NEW PLAYS

What Is Your Husband Doing, cheap and suggestive comedy. (Thirty-seventh Street Theater.)

Business Before Pleasure is an hilarious comedy—clever and absurd situations—very well done. (Eltinge Theater.)

L'Elevation, starring Grace George, is a war melodrama—interesting psychology and cleverly wrought. Miss George is ably supported. (Playhouse.)

The Gipsy Trail, by Robert Harsam. A genuinely wholesome comedy of pseudo-adventure and romance. Well written and well acted. (Plymouth Theater.)

Leave It to Jane, a musical comedy founded on George Ade's Indiana classic "The College Widow." The music is as full of pep and zing as the words and the words are the abbreviated text of "The College Widow." What more praise! (Longacre Theater.)

Jacques Copeau has transported his *Theatre du Vieux Colombier* from Paris to New York and made his debut with Molière's farce, *Les Fourberies de Scapin*, famous for its reiterated line, *Que diable allait-il faire dans cette galère?* The Old Dovecote may play an important role in establishing an *entente cordiale* between America and France.

The Grass Widow, a musical comedy with an unattractive plot, but fairly witty. The songs are catchy and the effects of chorus and dancing are good. (Liberty Theater.)

The new Greenwich Village Theater is a tribute to the Little Theater Movement. Of a group of three interesting plays *Efficiency* is predominant and gripping. (Greenwich Village Theater.)

Mrs. Fiske says *Madame Sand* is just the play for her—and we agree! Written with Phillip Moeller's usual cleverness and admirably cast. Outside the title rôle the honors go to José Reuben. (Criterion Theater.)

Justine Johnstone *is* pretty. And T. Roy Barnes plays the part of The Plot with humor. But the best feature in *Over the Top*, a musical revue, is the American aeroplane attack on the German trenches. (Forty-fourth Street Roof Theater.)

The *Washington Square Players'* best bill of the season. *Neighbors*, by Zona Gale, and *The Girl in the Coffin*, by Theodore Dreiser, are excellently chosen and produced. There is a colorful pantomime, too, and a critic's comedy. (Comedy Theater.)

The Wooing of Eve, announced by the author, J. Hartley Manners as a "thoroly artificial and sentimental" comedy, affords Laurette Taylor a not unwholesome medium for bringing out the "Old Adam" in herself and her lover. The usual insinuating sex appeal. (Liberty Theater.)

UNCLE SAM'S BIG JOB

(*Continued from page 585*)

made some careful calculations as to the number of people who were in the habit of investing in bonds, and that number appeared to be about 350,000. Nine million and six hundred thousand invested in this second Liberty Loan, and it is to that vast number that we are to look for the series of loans to follow.

Fortunately, we have had a banking situation, a banking law, which permitted us to handle the vast financial transaction connected with these loans. All these things have rested on this Federal Reserve Banking System, and at has been of the most incalculable value to the country and to our finances that we have been able to handle all these big transactions, that we have been able to meet every draft that has been made upon the banking interests, that we have been able to discharge all these obligations without any serious difficulty. The wisdom and strength of this system have stood a great test. But there are greater tests ahead. In the next twelve months a number of corporate securities are going to mature. They have got to be met. Just how that is going to be done, facing as we must the competition of the Government for funds, just how corporations are going to be supplied not alone with the funds to meet maturing obligations, but the funds for expansion in cases where expansion is necessary, all that, are among the problems that the banking community must meet. They are the greatest problems they ever faced, but I believe they are going to be handled successfully.

The problems of the banks, the problems of the financial market, are greatly complicated by this railroad situation that was with us before the war. Now the railroads, if they are to be put in a position to discharge their duties, need a billion dollars a year of fresh capital. You can argue that the rates are high enough, that their control is wise, that Congress and the Commission have been just, but the investor does not think so, and unless the investor can be convinced that the outlook for the railroads promises a satisfactory place to put his money, he is going to put it somewhere else.

Now for several years no investor has wanted a partnership in the railroad business. There have been no new stock issues to speak of. This lack of attractiveness of partnership has led to an increased ratio of bonds to stock, until the roads stand on an inverted pyramid; the base of the stock is too small for the load of bonded obligations that they carry. The situation is not stable, but they must have this fresh capital. Where is it coming from? It could come from the Government. There is talk now of the Government buying some large amount of equipment and selling to the railroads on time. It will not be surprizing if the Government does something of that sort. But friend and foe alike of the railroads, as far as I can judge, there are few who want Government ownership of railroads. So I would hazard the guess that we will this winter see some extremely interesting developments, and it may be quite possible that there will be devised some plans sound enough so that the public confidence will again be restored. There must be fundamental changes. The situation cannot stand still, and we are either moving inevitably toward a Government ownership that the Government itself does not wish to undertake the responsibility for, or we must have legislation which will regain for the railroads the confidence of the investor.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

THE NEW BOOKS

Nuggets of Wisdom

DR. FRANK CRANE, whose articles have gained him such wide popularity thru the newspaper medium, has published another book, *Christmas and the Year Round*. In the first essay, "Christmas Means the Indestructibility of Joy," Dr. Crane writes:

> Christmas means that when this world and all its purposes and deeds are wound up, and the last men and women stand at the end of time and contemplate the complete story of humanity, they will not wail and hang their heads, but they will shout and exult.
>
> The truest, most everlasting element of mankind is play, accompanied with laughter.

Dr. Crane puts a great deal of common sense philosophy into his essays in a spirited, readable form and this newest product is packed with optimistic humanism and wisdom.

With reference to Charles Brooks's "Journeys to Bagdad" some one aptly stated that "it is as difficult to quote from as to name one's favorite Shakespearean play or to quote one's best-loved verse in the Bible." This holds equally to his later volume, *There's Pippins and Cheese to Come*. Rarely does one find a book so loaded with quiet humor, literary charm, ease of expression and delicate fancy. His reminiscences of child days are especially pleasing. The essays are appropriately and artistically illustrated by Theodore Diedricksen, Jr.

The reader of essays of a religious tone will be pleased with this last collection of Dr. Marvin's prose and verse titled *The Top of the Wine-Jar*. The book is divided into twelve sections under the varied heads, God, Religion and Immortality, Philosophy and Opinion, Oracles and Counsels, Toil and Endeavor, Civics, Heroism, Patriotism, Woman, Love, Home, Kindness to Animals and Nature. The author's speculations of the possible immortality of the lower animals are fascinating and appreciative glimpses of historic literary folk add greatly to the value and interest of the book.

W. C. Brownell in his *Standards* has cleverly written a thin volume of masterly essays with a rich and widely varied vocabulary that well serves to project intellectual and art pyrotechnics. In his included chapter on "Modern Art," the conservatives will clap their hands at his characterization of it, as a combination of sincerity with extravagance, so extreme, as to appear mystification. His survey of art and letters is also noteworthy.

Michael Monahan writes in the closing chapter, Philosophy in Little of *New Adventures:*

> I have got thru caring much about style—what I care for is a man or a woman who has *lived*. Mere style is the affectation and worship of pedagogs or pinheads.

While we disagree in a measure with the author's last statement, we wish to credit him with a style that is free and original. His treatment is bold, audacious. Especially interesting are the two chapters "Mannahatta" and his artistic short stories, "Nocturne" and "Yearnings." On the whole the human greatly overbalances the literary interest.

Certain books, like certain persons, possess the undefinable but endearing quality which we call charm. Margaret Sherwood's little volume of essays, *Familiar Ways*, are charming in their delicate humor, their spirit of gracious leisurely meditation. They have, too, a magic trick of transforming commonplaces into things of beauty and significance.

Christmas and the Year Round, by Frank Crane. John Lane Company. $1. *There's Pippins and Cheese to Come*, by Charles S. Brooks. Yale University Press. $2. *The Top of the Wine-Jar*, by Frederic Rowland Marvin. Sherman, French & Co. $1.50. *Standards*, by W. C. Brownell. Charles Scribner's Sons. $1. *New Adventures*, by Michael Monahan. Doran. $2. *Familiar Ways*, by Margaret Sherwood. Little, Brown Company. $1.25.

Fiction of All Sorts

TOTE-ROAD AND TRAIL, by Douglas Malloch, is a volume of verse about the lumber camps and the men who work in them. Mr. Malloch has vigorous emotions and opinions as strong as big timber but he lacks the flashing imagination that would make magical poetry of his experiences. He is not the Masefield, the Kipling of the woods. If it were written with a finer spiritual insight and more vivid images and phraseology his verse might become eloquent poetry.

William Caine's *Three's a Crowd* is a trivial and conventional novel built up around three characters that have become stale types in modern fiction, the rich, exquisite and extravagant American girl who thinks the world is her plum cake, the noble and desirable Englishman who marries her and repents, and the cause of it all—the indulgent American mother. Patriotism suggests the protest, "We are not all like that—we American women. Some of us are poor. Some of us are good wives and mothers."

How many of us remember the words we could not spell when we went to school, the prizes we won or failed to win for good behavior, the first cautious adventure in the world outside of the walls of home, the first friendships founded on congeniality rather than necessity, the first crushing sorrow and the first perception of the irony of life in the days when we could not understand why grown-ups were always making the world a difficult place to live in comfortably? Those who love to bring back memories of childhood by participation in the joys and sorrows of children, will find great pleasure in J. J. Bell's new volume of short stories about children, called *Kiddies*. Several of the stories are about the well known and well beloved "Wee Macgreegor" and others have to do with Jack, the lonely son of a Scotch sailor, with Charlie Robb and his ugly uncle, with Hilda's deep desire for silk stockings and suedes and with the wee grandson who cured Sam Logie of heart disease. The stories are canny and full of dry humor and quaint pathos. In each one of them Mr. Bell shows a very real understanding of the ways and motives of "the weans."

Why Not Marry points out that the home is the place to find warmth, appreciation and rest and attempts to show that successful marriage can be managed by going into it in the right way. The economic responsibilities of husband and wife, the mistakes of courtship, the reasons why nice girls say "no," the discussion of the wage-earner versus the home-maker all make the book very interesting.

Jeanette Lee has written a detective story about a little woman in gray who is the head of the Newberry Detective Agency. Altho the author leads the reader to expect miraculous sleuth work on the part of Millie Newberry, one is sadly disappointed. The story is rather well constructed but there is not sufficient suspense to hold the interest.

Samuel Hopkins Adams has sketched all kinds and sorts of people in a quiet community full of good will in *Our Square and the People In It. Extricating Obadiah* is Joseph Lincoln's latest Cape Cod yarn. It takes us into the atmosphere of the Cape Cod country and gives us an appreciation of the Cape folk. *Crumps* is the story of the transformation of an artist into a machine gun officer. It shows what the Canadians have gone thru at the front and will bring us face to face with what our boys are to meet "Over There."

Miss Wylie has given us quite an original piece of work in *The Shining Heights*. The scenes of the tale are mostly English and there is a moral as well as a psychological problem developed in the course of the story. *Vanguards of the Plains* is a romance of the Santa Fé trail with all its heroic adventure. A charming story is *At the Sign of the Oldest House*, by Juliet Wilbor Tompkins. Not only does the book please while reading but it leaves a satisfied feeling after.

After Mr. Hope's wife wrote a book that became popular, Mr. Hope, a man high in the profession of law, became the ignominious husband of Mrs. Hope. The problem of regaining the interest and affection of Mrs. Hope is amusingly and naïvely solved by the erstwhile prosaic Mr. Hope.

The Optimist, by Susan Taber, includes a dozen stories of unusual character. The stories take up many sides of life and many kinds of people and tho the dominant moods vary, the humorous is woven thru them all.

Zona Gale, who became nationally recognized as a successful author some years ago when she produced her remarkable Friendship Village stories, has given us a delightful new novel, *A Daughter of the Morning*. A refreshing story of a whimsical country girl whose chance meeting with an author rouses her to her own potential powers.

When the Sun Stood Still, by C. T. Brady, is a charming story of old Hebrew lore retold with a love interest that captivates by its simplicity from start to finish. The warlike spirit of the Jews shown in their early history is dilated upon and an historical event is used as a turning point in the tale. This new book of Dr. Brady's is a welcome release from the eternal triangle complications.

Tote-Road and Trail, by Douglas Malloch. Bobbs-Merrill. $1.25. *Three's a Crowd*, by William Caine. Houghton Mifflin. $1.50. *Kiddies*, by J. J. Bell.
